¹ EC No: European Community (EC) number, the European Union's numerical identifier for substances.

² CAS No: Chemical Abstract Service Registry Number.

³ A *skin notation* assigned to the occupational exposure limit value indicates the possibility of significant uptake through the skin.

⁴ Measured or calculated in relation to a reference period of eight hours time-weighted average (TWA).

⁵ Short-term exposure limit (STEL). A limit value which must not be exceeded. The period to which it relates is 15 minutes, unless otherwise specified.

⁶ mg/m³: milligrams per cubic metre of air. For chemicals in gas or vapour phase, the limit value is expressed at 20° C and 101.3 kPa.

⁷ ppm: parts per million by volume in air (ml/m³).

⁸ During exposure monitoring, account should be taken of relevant biological monitoring values as suggested by the Scientific Committee on Occupational Exposure Limits for Chemicals Agents (SCOEL).
