Frau
Präsidentin des Nationalrates
Mag[a]. Barbara Prammer
Parlament
1017 Wien

GZ: BMGFJ-11001/0117-I/A/3/2008

Wien, am 24. Juli 2008

Sehr geehrte Frau Präsidentin!

Ich beantworte die an mich gerichtete schriftliche parlamentarische **Anfrage Nr. 4642/J der Abgeordneten Mag. Johann Maier und GenossInnen** nach den mir vorliegenden Informationen wie folgt:

Einleitend ist festzuhalten, dass in Ergänzung der nachfolgenden Ausführungen der von der AGES zusammengestellte Bericht 2006 an die EU betreffend Pestiziduntersuchungen übermittelt wird, der Bericht für 2007 ist in Ausarbeitung.

Statistische Auswertungen aus dem Bericht (wie sie in diversen Fragestellungen vorliegen) können aus EDV-technischen Gründen nur durch die AGES aus den Rohdaten erfolgen. Sobald die Ergebnisse der Auswertungen durch die AGES vorliegen (frühestens Anfang September 08), erfolgt die Beantwortung der offengebliebenen Fragen 4 – 19, 21, 22.

Frage 1:
Folgende gezielte Aktionen zur Untersuchung von Pestiziden wurden 2007 bundesweit bzw. in einzelnen Bundesländern durchgeführt:

Nationales Pestizid-Monitoring (Obst und Gemüse)
EU-Pestizid-Monitoring (Obst und Gemüse)
Weintrauben (Importkontrolle)
Kindernährmittel
„Kleinaktionen" Petersilie, Fisolen, Champignons, Hirse, und Buchweizen, Amaranth
Tierarzneimittelrückstands-Monitoring (Eier, Milch, Honig)

Radetzkystraße 2, 1031 Wien Telefon **+43 1 71100-4300** Fax **+43 1 71100-14300**
Internet **www.bmgfj.gv.at** E-Mail **andrea.kdolsky@bmgfj.gv.at**

Die entsprechenden statistischen Auswertungen für diese Aktionen sind in Ausarbeitung und werden nach deren Fertigstellung zur Verfügung gestellt.

Frage 2:
2006: 2112 (Produkte: Obst und Gemüse, Getreide, verarbeitete Lebensmittel, Baby Food) wurden auf Pestizidrückstände untersucht. Die Probenzahlen sind dem EU-Bericht 2006 entnommen (inkl. verarbeiteter Lebensmittel)

Die Aufschlüsselung der Probenzahlen 2006 nach Herkunft (siehe auch EU-Bericht Tabelle A-1):

Jahr	Österreich	EU (ohne AT)	Drittstaaten
2006	983	991	325

Frage 3:
Details sind dem Bericht an die EU, Tabelle A-2 zu entnehmen.
Bezug nehmend auf die Zulassung ist festzuhalten, dass zwar einerseits auch auf in Österreich nicht zur Anwendung zulässige Wirkstoffe untersucht wurde, aber diese möglicherweise in anderen Staaten legal angewendet werden dürfen.

Frage 20:
Grundsätzlich wird angemerkt:

Bezugnehmend auf die Zulassung ist festzuhalten, dass zwar einerseits auch auf in Österreich nicht zur Anwendung zulässige Wirkstoffe untersucht wurde, aber diese möglicherweise in anderen Staaten legal angewendet werden dürfen. Zusätzlich wird darauf hingewiesen, dass Höchstwerte auch für nicht zur Anwendung zugelassene Pflanzenschutzmittelwirkstoffe festgelegt sein können.

Ergab die Analyse eine Überschreitung eines Höchstwertes, so wurde dies in Befund und Gutachten festgehalten und an die zuständige Lebensmittelkontrollbehörde weitergeleitet.

Seit 1. Jänner 2006 hat gemäß LMSVG die Lebensmittelaufsichtsbehörde bei Verstößen entsprechende Maßnahmen in Sinne des § 39 zu setzen. Parallel dazu erfolgt die Anzeige bei der zuständigen Strafbehörde.

Im Bereich meines Ressorts liegen außer bei gesundheitsschädlicher Ware keine einzelnen Berichte zu den konkreten behördlichen Maßnahmen für beanstandete Proben auf.

Wird eine Probe als „nicht sicher" bzw. „gesundheitsschädlich" beurteilt, so hat der Unternehmer gemäß seinen Pflichten im Art. 19 EU (VO) 178/2000 die Rückholung der Ware, Information der Geschäftspartner bzw. bei Gesundheitsschädlichkeit Information der Öffentlichkeit zu veranlassen.

Frage 23:
Eine unmittelbare Informationspflicht der Lebensmittelaufsicht bzw. der AGES gegenüber dem Bundesministerium für Gesundheit, Familie und Jugend besteht nur bei als gesundheitsschädlich beurteilten Waren. Eine umgehende Berichtspflicht über getroffene Maßnahmen bei Höchstwertüberschreitungen (ohne Beurteilung als gesundheitsschädlich) ist im LMSVG nicht vorgesehen.

Mit freundlichen Grüßen

Dr. Andrea Kdolsky

Dr. Andrea Kdolsky
Bundesministerin

Parl. Anfrage 4642/J

BEILAGE

YEAR 2006 REPORT ON THE AUSTRIAN MONITORING OF PESTICIDE RESIDUES IN PLANT PRODUCTS (FRUITS, VEGETABLES AND CEREALS)

COUNTRY: AUSTRIA

1. SUMMARY OF RESULTS

In 2006 a total of 1895 samples of fresh fruits and vegetables were analysed under the co-ordinated program, the national pesticide monitoring program and as routine samples. Beside that other products like cereals (26 samples), processed products (270 samples) and baby food (108 samples) were analyzed.

38,2 % of all samples of fruits and vegetables were from Austria, 46,1 % from the European market and 15,7 % from third countries. For cereals this rates were 73 %, 12 % and 15 % respectively. The rates for processed food were 71,9 %, 22,8 % and 5,6 %. Baby food was predominantly from the European market including Switzerland (100 %).

In 42,3 % of the samples of fruits and vegetables no pesticide-residues could be detected. 50 % of the samples had residues under the harmonized and/or national Maximum Residue Limits (MRL). In sum 92,3 % of these samples were in compliance with the regulations. 7,8 % of the samples of fruits and vegetables contained one or more pesticide(s) above the national or EU-MRL. 2,3 % of the samples were above the harmonized MRL´s.

In all analysed samples (2299)including processed food and baby food the percentages were 50,1 %, 43,3 %, 6,6 % and 2 % respectively.

In 819 samples (35,6 %) more than one pesticide was analysed. Up to 19 pesticides were found in some samples. The samples with more than 9 pesticides were in most cases grapes or peppers.

In the samples were analysed up to 315 different pesticides/substances. Totally 293 different pesticides were sought, of which 128 (43,6 %) were found. The most frequently found residues in fruits and vegetables were in the co-ordinated and national programme and routine samples (percentage): Maneb-group, Fludioxinil, Cyprodinil, Procymidone, Fenhexamid, Azoxystrobin, Iprodione, Imidacloprid, Carbendazim (sum) and Chlorpyrifos-ethyl.

2. ORGANISATION OF MONITORING PROGRAMMES AND SAMPLING

The national pesticide monitoring is done according to a nation-wide sampling plan designed by the Institute of Applied Statistics and System Analysis (Joanneum Research, Graz) in co-operation with the Federal Minister of Health and Women. The plan was based on data concerning dietary consumption, production and import of fruits and vegetables and results of former measurements. Furthermore the results of earlier monitoring-programs, the analytical possibilities and the budgetary situation were taken into account, too. The co-ordinated programme of the European Commission was of course also done. Samples of leek haven't been analysed under this programm due to a missunderstanding

The samples were taken by trained officials from the local Food Inspection Service („Lebensmittelaufsicht").

3. QUALITY ASSURANCE

The analysis of the co-ordinated programme, the national monitoring programme and routine samples also were made by two laboratories for food control (Austrian Agency for Health and Food Safety, Institute for Food Control, Vienna and Institute for Food Control, Innsbruck together with the there located competence-centers for pesticide-analyses). One Laboratory in Vienna (Regional Institute for Food Control in Vienna) and Graz (Austrian Agency for Health and Food Safety, Institute for Food Control, Graz) analysed routine samples.

The analytical methods were adopted from published methods of the Dutch federal laboratories („Analytical Methods for Pesticide Residues in Foodstuffs", 6th Ed., General Inspectorate for Health Protection, Ministry of Public Health, Welfare and Sport, The Netherlands) and validated in the laboratories. The fruits and vegetables were analysed up to a maximum of 262 pesticides. The methods used were a GC multimethod with ECD-, NPD- and FPD-detection. GC/MS-methods are primarily applied for confirmation purposes of the other GC methods. New in 2006 was the establishment of the methodology of LC/MS.

All laboratories involved in the co-ordinated programme and the national monitoring programme including the routine samples got the accreditation in the year 1998.

4. OTHER INFORMATION

Due to the fact, that there were some commodities for the national programme isolated, of which higher risk for residues was identified in the last years, these specific data are representative for the Austrian market, but the monitoring has to be seen partially as „targeted monitoring". It was the aim, to reflect to the results of the last years and to choose special commodities of interest for further examination. This type of monitoring is foreseen for the next years.

Furthermore the routine sampling includes special samples, of which European alerts were given, too and thus the number of exceedance is higher than by doing statistical based sampling over all commodities and time of the year.

Table A 2 - Part II-Cereals: Summary table of pesticides sought and found
Surveillance sampling only

(cereals)
(pesticides covered by Directives 76/895, 90/642 and by the national programmes)
(sum of samples of national and co-ordinated programme)

Reporting country: Austria
Year of sampling: 2006

Number of different pesticides* sought:	
Number of different pesticides* found:	
% pesticides found from pesticides sought:	

SRM a single residue method contains less th
counted according to the residue definiti

*report pesticides (isomers, metabolites) according to the residue definition in the EU Directives or national legislation
SRM - single residue methods, MRM - multi-residue methods.

Column 1	Column 2	Column 3	Column 4	Column 5
Pesticide* (listed in alphabetical order of the English name of the pesticide)	Total number of samples analysed for specific pesticide	Number of samples with residues at or above reporting level	% samples with residues at or above reporting level	Reporting level (mg/Kg)**

EU Quality control procedures (ref. Doc.SANCO/10232/2006)

Element number	Content
1	Accreditation
2	Sampling, transport, processing and storage of samples
3	Pesticide standards, calibration, solutions, etc.
4	Extraction and concentration
5	Contamination and interference
6	Analytical calibration and chromatographic integration
7	Analytical methods and analytical performance
8	Proficiency testing and analysis of reference materials
9	Confirmation of results
10	Reporting of results

Only proficiency tests regarding fruits, vegetables and processed food are mentioned
