REGULATION
OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL
ON THE EUROPEAN SYSTEM OF NATIONAL AND REGIONAL ACCOUNTS
IN THE EUROPEAN UNION

(ESA 2010) - (ANNEX A - CHAPTER 23)

CHAPTER 23

CLASSIFICATIONS

INTRODUCTION

- 23.01 The classifications in the ESA 2010 are fully in line with the new coding of the 2008 SNA, the NACE Rev. 2, the CPA 2008 (at the levels of aggregation used in the transmission programme), COFOG, Coicop, COPNI and COPP. Only a very limited number of additional codes have been introduced.
- 23.02 The accounts are built around a small number of conceptual elements, in particular sectors, transactions and classifications of the items subject to transactions and other flows, especially assets and liabilities. For each of these elements, a hierarchical classification exists. Accounts can be compiled at greater or lesser degrees of detail by using higher or lower levels of these hierarchies.
- 23.03 The entries in the accounts are divided into types designated by one or two letters as follows:
- (a) S codes relating to sectors;

- (b) P codes relating to transactions in products;
- (c) NP codes relating to transactions in non-financial non-produced assets;
- (d) D codes relating to distributive transactions;
- (e) F codes relating to transactions in financial assets and liabilities;
- (f) K codes relating to other changes in assets;
- (g) B codes relating to balancing and net worth items;
- (h) L codes relating to balance sheet entries;
- (i) AN codes relating to non-financial assets (both produced and non-produced);
- (j) AF codes relating to stocks of financial assets and liabilities.

- 23.04 In the context of a production approach of GDP, tables by industry and the input-output framework, use is also made of two European classifications: NACE Rev. 2 for economic activities and CPA 2008 for products by economic activities. NACE Rev. 2 is the European version of ISIC Rev. 4. Also, for an expenditure approach of GDP, CPA 2008, COFOG (classification of expenditure according to purpose: classification of the functions of government) and Coicop (classification of individual consumption according to purpose) are used; the latter two classifications are established by UN.
- 23.05 Apart from COFOG and Coicop, the functional classifications include also COPNI (classification of the purposes of non-profit institutions serving households) and COPP (classification of outlays of producers by purpose). These classifications are used for functional analysis of the expenditure by corporations, government, households and non-profit institutions serving households and for functional satellite accounts.

(¹) Employers' contributions appear in both the generation of income account and allocation of primary income account as payable by employers and receivable by employees. In the secondary distribution of income account, these amounts are payable by households and receivable by those administering social insurance schemes. In order to show exactly the same value in each case, the deduction of the charge that represents part of the output of the schemes and final consumption of the beneficiary households is also shown in the secondary distribution of income account as a separate item. The social insurance scheme service charges item (D.61SC) is thus an adjustment item only and not a distributive transaction in itself.

- ⁽¹⁾ All balancing items can be measured gross or net of consumption of fixed capital. The code for gross balancing items is constituted of the code of the item plus the letter 'g'. Similarly, the letter 'n' attached to a code indicates the net value.
- ⁽²⁾ This is not a balancing item in the structure of the accounting system. It is the total of the right-hand side of the capital account. However, as a significant component of changes in net worth, it is coded with the other components of the latter.
- ⁽³⁾ For the rest of the world, this refers to changes in net worth due to current external balance and capital transfers.

CLASSIFICATION OF BALANCE SHEET ENTRIES (L)

For a single balance sheet, as for the financial account, the only codes necessary are those giving the details of assets by type, using AN and AF codes. However, an account can be drawn up showing the stock levels at the start (LS) and end (LE) of a period, and the total changes between them (LX). All three codes need to be qualified by asset types. The LX entries are the sum of the entries of P.5, NP, F and K codes for the assets in question for the period covered.

From the entries in the opening balance sheet a value of net worth (B.90) can be calculated. The difference between this and the value of B.90 in the closing balance sheet must be equal to the balance of all the LX codes, which must also be equal to the value for B.10.

LS	Opening balance sheet
LX	Changes in balance sheet
LE	Closing balance sheet

⁽¹⁾ Costs of ownership transfer on non-produced assets (AN.116) are treated as part of fixed capital formation, that is the acquisition of fixed assets. However, when stock levels are itemised, the value of these costs of ownership transfer is included with the non-produced assets to which they refer and so are not shown separately as part of AN.11. In the case of land transferring, the costs of ownership transfer on all land are to be included with land improvements (AN.1123). The item AN.116 is included in the full list, shown below, for presentation purposes only.

Financial assets (AF)

There is a one-to-one match between the codes shown for transactions in financial assets and liabilities (F codes) and those for stock levels or positions (AF codes) for the same assets and liabilities. In practice, though, balance sheet data may be less detailed and not exist beyond the first-level breakdown, shown below. If desired, the AF codes can be disaggregated in line with the detail provided for F codes, as follows:

CLASSIFICATION OF SUPPLEMENTARY ITEMS

The general convention is that a supplementary code begins with X and is linked to the code of a standard item by building on the code of that item.

Non-performing loans

The following codes apply to stocks and flows of non-performing loans. Since loans have the code AF.4 and F.4, the supplementary codes begin XAF4 for stocks and XF4 for flows.

The codes for stocks are:

XAF4_NNP	Loans: nominal value, non-performing
XAF4_MNP	Loans: market value, non-performing

and the associated flows:

XF4_NNP	Loans: nominal value, non-performing
XF4_MNP	Loans: market value, non-performing

In both sets of codes, the underscore is a placeholder for the detailed codes for loans where relevant, for example, on the balance sheet:

XAF41NNP	Short-term loans: nominal value, non-performing
XAF42MNP	Long-term loans: market value, non-performing

Capital services

The following codes apply to capital services.

XCS	Capital services
XCSC	Capital services — Corporations

XOC	Other costs of capital — Corporations
XCSU	Capital services — Unincorporated enterprises
P.51c2	Consumption of fixed capital on gross mixed income
XRU	Return to capital — Unincorporated enterprises
XOU	Other costs of capital — Unincorporated enterprises

Pensions table

The following codes apply to the supplementary table described in the chapter on pensions. Different codes are proposed for the columns and rows of the table.

----------	--------------------------------------

Listed and unlisted debt securities

Supplementary items on debt securities are coded with X as prefix plus the F or AF code plus a 1 for listed and 2 for unlisted, for example:
