SLOVENIA

Statistical data submitted

The statistical data have been submitted by the "Veterinary Administration of the Republic of Slovenia" (VARs)

Comments of Slovenian authorities

In the Republic of Slovenia, data on the use of animals in experiments are collected on the basis of Article 24 of the Animal Protection Act (ZZiv-UPB2; UL RS 43/2007). Competent administrative authority for data collection is the Veterinary Administration of the Republic of Slovenia (VARs), a body within the Ministry of Agriculture, Forestry and Food. Organisations using animals in experiments prepare annual statistical reports in the form of tables required by the Rules on conditions for experiments on animals (UL RS 88/2006, 81/2009). These Rules are requiring data presentation on the number, species and origin of animals used in experiments, the number and species of animals used in experiments as to the purpose of use, including details on the use of animals in experiments for the human and animal disease study purposes, for manufacturing and assessing the quality of products and preparations intended for human medicine, dentistry and veterinary medicine, and toxicological testing. Data collection takes place for every calendar year in the form of eight EU tables, which have been harmonised within the EU as to form and scope. Animals actually involved in experiments within the data collection year only shall be presented in the tables. As required by the Animal Protection Act, the final statistical data on the number and species of animals used in experiments and on the types of experiments on animals have been made available to the public as information of public character ever since 2000.

As defined in the Protection of Animals Act, an experiment on an animal means a procedure on a live animal for experimental or other scientific purposes, which may cause pain, suffering, distress or lasting harm to the animal. An experiment on an animal includes other actions, which do or may lead to a birth of an animal in the circumstances as referred to above. The least painful methods of killing or the identification of animals shall not be regarded as experiments. An experiment commences, when an animal is prepared for use in an experiment for the first time, and ends at the point, where any subsequent observation is unnecessary. The use of animals shall be deemed an experiment in cases also, where anaesthetics, analgesics or other methods are used to prevent the suffering, distress or lasting harm to the animals. Before an experiment on animals may commence, the expert on animal welfare within the organisation conducting the experiment shall check whether an adequate animal species has been selected, and whether the test or method has been selected that requires the use of a minimum number of animals, animals with the lowest level of neurophysiological sensitivity, and which will cause the least pain, suffering or lasting harm, and yield satisfactory results. Scientific and research or educational procedures on organs, tissues and carcasses of animals, which had preliminarily been put to death using the required methods, shall not be defined as experiments on animals.

Experiments on animals shall be conducted by organisations only, which have been approved for conducting experiments on animals and duly authorised by VARS. Where in the search for results there are no other satisfactory scientific methods at hand, which would not require the use of animals in experiments, the use of animals shall be authorised for the following purposes: development, manufacture, and testing of quality, effectiveness and safety of medicinal products, foodstuffs and other substances or products for the purposes of avoiding, preventing, diagnosing or treating diseases, disorders and other anomalies or their effects on humans, animals or plants, and for the assessment, detection, remedy or improvement of physiological state in humans, animals and plants. Animals may further be used in experiments for the purposes of protecting the environment, in baseline research studies and, to a limited extent, for the educational and training purposes. VARS may authorise such experiments, provided that they are conducted within the higher education organisations and in accordance with the regulations governing higher education, or within the research organisations and in accordance with the regulations governing the research activities, and which are crucial for obtaining the expertise required by medical doctors in conducting surgery on humans, or by veterinary doctors in conducting surgery on animals, and provided that objectives attainable through experiments cannot be achieved through other teaching aids (videos, figures, models, preparations, etc.). Experiments for ethically inadmissible purposes, as testing of weapons, cosmetic preparations, tobacco or alcohol products, or for tests using muscle paralyzing substances and conducted without anaesthesia shall be prohibited.

Where an experiment is absolutely necessary and all other requirements are complied with, VARS may grant an authorisation for conducting the particular experiment or a sequence of experiments on animals to the user organisation and to the particular experiment leader and staff involved, within a limited period of time. The Authorisation shall specify *inter alia* the purpose of use of animals and the species, number and origin of animals authorised for use in the experiment. In its reasoning, the Authorisation shall list the conditions which shall be complied with before the experiment may commence. Experiments on animals shall not be conducted in cases where there is another acceptable, feasible and scientifically satisfactory and proven method available that does not require the use of animals. Animal species, which shall be reared as laboratory animals in the approved laboratory-animal rearing establishments, and which may be used in experiments, shall include: the mouse (*Mus musculus*), rat (*Rattus norvegicus*), guinea pig (*Cavia porcellus*), golden hamster (*Mesocricetus auratus*), rabbit (*Oryctolagus cuniculus*), dog (*Canis familiaris*), cat (*Felis catus*), quail (*Coturnix coturnix*) and non-human primates. Experiments on farmed animals, dogs and cats shall be authorised in cases only, where the purpose of experiment cannot be attained through experiments on other animal species. In exceptional cases, where an experiment is absolutely necessary in order to conserve an animal species, and where the animal in question is the only appropriate one for conducting the experiment, or where such an animal cannot be raised, the authorisation for experiment may be granted by VARS even if such an animal does not come from an organised and registered rearing establishment. Experiments on abandoned animals shall be prohibited.

In 2008, the total number of animals used for experimental and other scientific purposes amounted to 12,438 animals. Most used were laboratory rodents, i.e. 96,4%, and there follow rabbits with 2,5%, birds with 1,0%, and other animals with 0,06%.

All laboratory rodents and rabbits used originate from the approved rearing establishments, where one half of approved rearing establishments are situated nationally and the other half in the other EU Member States. Most rodents were used in pharmaceutical industry within the applied research projects for the manufacture and quality control of products and devices intended for human medicine, dentistry and veterinary medicine and, to a lesser extent, within their research and development for the assessment of toxicity. Less rodents were used in biological studies of a fundamental nature. Only a minor number of laboratory rodents and rabbits were used for other purposes, such as educational purposes, other non-defined purposes of use, and for diagnosing diseases. Rabbits were the more frequently used animals in sequences of experiments within the scope of experiments required for the assessment of quality of products intended for human medicine, dentistry and veterinary medicine. As regards farmed animals, three pigs originating from an agricultural holding were used in experiments, based on a preliminary consensus obtained from the animal keeper/breeder, for the educational purposes and training of surgeons in human medicine.

In the Republic of Slovenia, the mean of animals used in experiments in the recent 5 years amounts to around 12,700 animals. Most used are laboratory rodents with around 95%. In the past 2 years, no cats or dogs were used in experiments. Non-human primates are not used in experiments in the Republic of Slovenia. On adoption of relevant legislation and taking into account the 3R principles, and conducting official controls, the use of animals in experiments has decreased. Following the specific training of staff involved in experiments on animals, the responsibility of researchers has increased, and their attitude towards animals used in experiments improved, which is reflected in the accurate experiment protocols, careful selection of methods and subsequent consistent implementation of experiments. The use of validated alternative methods and/or cell cultures and tissues has played an important part in decreasing the number of animals used in experiments particularly in pharmaceutical industry.

TABLE 1: NUMBER OF ANIMALS USED IN RELATION TO THEIR PLACE OF ORIGIN

Origin versus species

1.1 Species	1.2 Total	1.3 Animals coming from registered breeding or supplying establishments within the reporting country	1.4 Animals coming from elsewhere in the EC	1.5 Animals coming from Member Countries of the Council of Europe which are parties to the Convention ETS 123 (excluding EC Member States)	1.6 Animals coming from other origins	1.7 Re-used animals
1.a. Mice (<i>Mus musculus</i>)	10313	4974	5339			
1.b. Rats (<i>Rattus norvegicus</i>)	1675	1142	533			
1.c. Guinea-Pigs (<i>Cavia porcellus</i>)	7	7				
1.d. Hamsters (<i>Mesocricetus</i>)	0					
1.e. Other Rodents (other <i>Rodentia</i>)	0					
1.f. Rabbits (<i>Oryctolagus cuniculus</i>)	307	29	278			278
1.g. Cats (<i>Felis catus</i>)	0					
1.h. Dogs (<i>Canis familiaris</i>)	0					
1.i. Ferrets (<i>Mustela putorius furo</i>)	0					
1.j. Other Carnivores (other <i>Carnivora</i>)	0					
1.k. Horses, donkeys and cross breeds (<i>Equidae</i>)	0					
1.l. Pigs (<i>Sus</i>)	3					
1.m. Goats (<i>Capra</i>)	0					
1.n. Sheep (<i>Ovis</i>)	4					
1.o. Cattle (<i>Bos</i>)	0					
1.p. Prosimians (<i>Prosimia</i>)	0					
1.q. New World Monkeys (<i>Ceboidea</i>)	0					
1.r. Old World Monkeys (<i>Cercopithecoidea</i>)	0					
1.s. Apes (<i>Hominoidea</i>)	0					
1.t. Other Mammals (other <i>Mammalia</i>)	0					
1.u. Quail (<i>Coturnix coturnix</i>)	0					
1.v. Other birds (other <i>Aves</i>)	129					
1.w. Reptiles (<i>Reptilia</i>)	0					
1.x. Amphibians (<i>Amphibia</i>)	0					
1.y. Fish (<i>Pisces</i>)	0					
1.z. TOTAL	12438					

Note 1: Column 1.5 concerns only those Member Countries of the Council of Europe which, at the beginning of the reporting period, are Parties to the Convention ETS 123. Thus an updated list of those countries has to be used when filling in this column.

Note 2: Only the white boxes need to be completed.

Note 3: The number of re-used animals in column 1.7 should be excluded from the total in the column 1.2

TABLE 2: NUMBER OF ANIMALS USED IN EXPERIMENTS FOR SELECTED PURPOSES

Purpose versus species

2.1 Species	2.2 Biological studies of a fundamental nature	2.3 Research and development of products and devices for human medicine and dentistry and for veterinary medicine (excluding toxicological and other safety evaluations counted in column 2.6)	2.4 Production and quality control of products and devices for human medicine and dentistry	2.5 Production and quality control of products and devices for veterinary medicine	2.6 Toxicological and other safety evaluations (including safety evaluation of products and devices for human medicine and dentistry and for veterinary medicine)	2.7 Diagnosis of disease	2.8 Education and training	2.9 Other	2.10 Total

SLOVAKIA

Statistical data submitted

The statistical data have been submitted by the State Veterinary and Food Administration of the Slovak Republic.

Comments of Slovakian authorities

The State Veterinary and Food Administration of the Slovak Republic (hereinafter "SVFA SR") is a competent authority in the Slovak Republic in the area of protection of animals used for experimental purposes. The SVFA SR approves in compliance with Article 6(2) letter i), (3) and (4) of the Act No. 39/2007 Coll. on Veterinary Care and on Amendment to Some Laws as later amended (Act No. 299/2009 Coll.), (hereinafter „Act No. 39/2007 Coll.“) and in compliance with Articles 8, 13 and 17 of the Ordinance of the Government of Slovak Republic No. 289/2003 Coll., laying down requirements for the protection of animals used for experimental purposes or other scientific purposes experimental, breeding and supplying establishments and all the experiments performed using animals. Each approved establishment is kept by the SVFA SR on the list of approved establishments on the website of SVFA SR www.svssr.sk in compliance with Article 39 of the Act No. 39/2007 Coll.

The SVFA SR is comprised of 8 Regional Veterinary and Food Administrations (hereinafter RVFA) and 40 District Veterinary and Food Administrations (hereinafter DVFA). All the employees of the veterinary administration in the field of animal welfare are veterinarians.

All kinds of establishments are approved by the SVFA SR based on results on assessment of the suitability of establishment in accordance with requirements of the Ordinance of the Government of Slovak Republic No. 289/2003 Coll. Animal welfare inspectors shall be obliged, in compliance with Articles 6, 7 and 8 of the Act 39/2007 Coll. to perform non-discriminatory controls of all approved establishments. The SVFA SR, as a competent authority, trained both theoretically and practically all the animal welfare inspectors (RVFA, DVFA) for the performance of the control. Controls are performed according to methodical instructions and checklists worked out by the competent authority in compliance with requirements laid down in the Ordinance of the Government of the Slovak Republic No. 289/2003 Coll. and in the Act 39/2007 Coll.

Based on applicant's applications in the year 2008, the SVFA SR approved totally 3 new experimental establishments, from that 1 breeding establishment for breeding of experimental animals and 2 establishments for carrying out projects. 3 establishments were subjects of control due to increased number of animals in single-use capacity and another 3 establishments were subjects of control due to use of a new species of an experimental animal.

Total number of establishments in the Slovak Republic in the year 2008

Kind of establishment	Number
Experimental establishment	46
Experimental establishment with breeding of animals for own use	20
Breeding establishment	8
Supplying establishment	1
Total:	75

The SVFA SR approves the experiments performed upon animals based on the application for approval of the experiment submitted by an applicant - approved experimental establishment. Each application for approval of an experiment shall be submitted by an applicant in compliance with Article 20 of the Ordinance of the Government of the Slovak Republic No. 289/2003 Coll. in order to be judged by the Ethic Commission. Each approved experimental establishment shall have founded its own ethic commission comprised of minimum 5 members, out of which 1/3 must not be dependent from the experimental establishment. Ethic commission, on the submitted project of an experiment, shall assess observance of 3R, existence of alternative method contrary to presented project, justification of each experiment, use of the animals in the experiment and specification of species and number of animals in the experiment. An applicant may submit his/her project of an experiment for approval by the SVFA SR only after recommendation for submission, issued by the ethic commission. The SVFA SR has in compliance with the Act No. 71/1967 Coll. on Administrative Proceedings (Administrative Codex) minimum 30 days for assessment of an application for approval of the experiment. The SVFA SR as a competent authority shall issue a decision by which the performance of the experiment and administrative proceeding may be approved, refused, suspended or stopped. The SVFA SR in case of the need of professional consultation concerning the aim of the experiment, the need of use of the animals in the experiment and the number of used animals shall ask the members of the advisory body for their opinion – to the submitted application for approval of the experiment – with observance of rules of personal data protection and protection of trade secret data or intellectual property.

Table No. 1: Most of experimental animals originate in domestic breeding establishments or in experimental establishments with breeding of animals for use within that establishment. As far as foreign suppliers are concerned, the animals originate mainly from the EU Member States (Czech Republic, Hungary, Germany, Poland and France) as well as from countries are signatories to ETS 123. The number of 25 fish marked in column 1.6 as "animals coming from other origins" was entered incorrectly – these fish originate from the Slovak republic. We do apologise incorrect information being provided.

Table No. 2: The SVFA SR approved 273 experiments with use of experimental animals; stopped the proceeding in 4 applications; refused 5 applications for approval of the experiment and suspended the proceeding in 36 applications in the year 2008. The total number of 19,260 animals used does not reflect the number of approved experiments in the year 2008, because within the total of the number of animals used are included also the animals which were used in the year 2008 from the experiments approved in the year 2005, 2006, 2007 and 2008. Number of animals used in preparatory studies for performed projects is listed in the column 2.8. Animals were used for introduction of new surgical methods practised during projects. Some preparatory studies were approved as individual projects. Numbers of animals used for training of persons involved in projects were approved as pre-experiment within the project in some cases.

Table No. 3: Most animals indicated in the column 3.2 were used for evaluation of products and substances for human medicine (testing of new drugs, medical supplies, surgical supplies – collagen surgical implants). In the column 3.3 the animals were used for control of products/substances used in agriculture – mainly pesticide, herbicide, rodenticide products, growth stimulators for plants and biocide substances. In the column 3.4 the animals used for control of various chemical products/substances being a part of oils, lubricants and rubber industry materials are indicated. The orders for re-test of the same substance produced in various batches were done in several establishments. In some cases, whole series of standard toxicological safety tests were carried out with the same substance, depending on EU legislation (REACH).

Table No. 4: Explanation on column 4.5: Animals were used for the purpose of investigation of immune systems, infectious diseases and metabolism disorders in humans and in the column 4.6 in animals.

Table No. 5: In the Slovak Republic the experiments on animals are performed in compliance with the valid Slovak legislation, in which the legal acts of the European Communities and the European Union are incorporated. The experiments are performed in compliance with the valid legislation of the European Pharmacopoeia in the column 5.3 while in the column 5.7 the methods in control of human products/substances were used that were created by the experimental establishment as a modified method based on the approved pharmacopoeia methods or as a new individual method.

Table No. 6: The Slovak Republic has elaborated the valid legislation for the control of drugs – Act No. 140/1998 Coll. – Act On Medicinal Products and Medical Devices as amended; for the control of chemical substances and preparations the Act No. 163/2001 Coll. on Chemical Substances and Preparations; Decree of the Ministry of Economy No. 2/2005 Annex 5 Part B Methods B, that are conformable to OECD methods. In the column 6.3 the number of animals used in compliance with the European Pharmacopoeia are indicated, in the column 6.7 a total of 4 rabbits and 70 mice were used in product quality testing: testing of efficiency on and harm to animals. These projects are usually carried out mainly according to European Pharmacopoeia 4 and Slovak Pharmacopoeia but this single project was performed in accordance with obligatory safety control test described in producer's documentation.

Table No. 7: In the column 7.2.1. the animals were used only in the 'limit test'. Tests were performed mainly by OECD methods TG 402 and 403 while in the column 7.2.2. the OECD tests TG 423, B.1 tris were performed. In the column 7.2.3 mainly tests in compliance with OECD TG 407, 420 and tolerance studies were performed; in the column 7.12 were animals used in studies for determination of minimal lethal and maximal non-lethal dose of certain substance (food additive); determination of MDT minimal comparative dose of certain substances; harvesting of hepatic S9 fraction for testing of metabolic activation in vitro genotoxicity.

In compliance with Article 17 paragraph 4 of the Ordinance of the Government of the Slovak Republic No. 289/2003 Coll. each approved establishment shall be obliged, in order to maintain its authorisation, to submit yearly by the end of January for the previous year to the SVFA SR a notification on the number of animals used according to the specimen laid down in the Ordinance of the Government of the Slovak Republic No. 289/2003 Coll. Approved establishments shall be obliged to keep records about the number of GMO animals used in procedures. Based on collected data the SVFA SR shall work out on an annual basis a notification concerning the activity of the SVFA SR in which the numbers of approved establishments and approved or refused experiments, as well as numbers and species of used animals in the experiment for the respective year are published.

The purpose of inspections in approved establishments is to control the observance of requirements indicated in the Act No. 39/2007 Coll., in the Ordinance of the Government of the Slovak Republic No. 289/2003 Coll. and the compliance of the performed project in approved establishment with the project authorisation issued by SVFA SR. Finding of infringements laid down in the Act No. 39/2007 Coll. and in the Ordinance of the Government of the Slovak Republic No. 289/2003 Coll. is classified as an administrative delict for which a penalty may be imposed on a legal or natural person in compliance with the Act No. 39/2007 Coll.

The SVFA SR performs theoretical and practical trainings of all employees of veterinary administration in performance of control with regard to housing, care and protection of experimental animals.

The competent authority performs consulting services for the public in the field of animal welfare, organizes trainings for employees of approved establishments the purpose of which is interpretation of the valid legislation of the Slovak Republic in the field of animal welfare. The SVFA SR organizes also seminars and lectures aimed at protection of experimental animals used for experimental purposes. The owner, keeper and dealer of an animal – in compliance with the Article 37 of the Act. No. 39/2007 Coll. – shall be obliged to educate demonstrably the persons handling the animals so that such persons must avoid any acts that might cause injury or any other damage to the health of animals or unnecessary suffering thereof.

TABLE 1: NUMBER OF ANIMALS USED IN RELATION TO THEIR PLACE OF ORIGIN

Origin versus species

1.1 Species	1.2 Total	1.3 Animals coming from registered breeding or supplying establishments within the reporting country	1.4 Animals coming from elsewhere in the EC	1.5 Animals coming from Member Countries of the Council of Europe which are parties to the Convention ETS 123 (excluding EC Member States)	1.6 Animals coming from other origins	1.7 Re-used animals
1.a. Mice (<i>Mus musculus</i>)	6942	5229	1713			
1.b. Rats (<i>Rattus norvegicus</i>)	9692	6767	2789	136		
1.c. Guinea-Pigs (<i>Cavia porcellus</i>)	982	536	446			
1.d. Hamsters (<i>Mesocricetus</i>)	0					
1.e. Other Rodents (other <i>Rodentia</i>)	45	45				
1.f. Rabbits (<i>Oryctolagus cuniculus</i>)	679	646	33			
1.g. Cats (<i>Felis catus</i>)	18		18			
1.h. Dogs (<i>Canis familiaris</i>)	4		4			
1.i. Ferrets (<i>Mustela putorius furo</i>)	0					
1.j. Other Carnivores (other <i>Carnivora</i>)						
1.k. Horses, donkeys and cross breeds (<i>Equidae</i>)						
1.l. Pigs (<i>Sus</i>)	22	22				1
1.m. Goats (<i>Capra</i>)	5	5				
1.n. Sheep (<i>Ovis</i>)	9	9				
1.o. Cattle (<i>Bos</i>)						
1.p. Prosimians (<i>Prosimia</i>)	0					
1.q. New World Monkeys (<i>Ceboidea</i>)	0					
1.r. Old World Monkeys (<i>Cercopithecoidea</i>)	0					
1.s. Apes (<i>Hominioidea</i>)	0					
1.t. Other Mammals (other <i>Mammalia</i>)	21	21				
1.u. Quail (<i>Coturnix coturnix</i>)	120	120				
1.v. Other birds (other <i>Aves</i>)	696	438	258			
1.w. Reptiles (<i>Reptilia</i>)						
1.x. Amphibians (<i>Amphibia</i>)						
1.y. Fish (<i>Pisces</i>)	25				25	
1.z. TOTAL	19260					

Note 1: Column 1.5 concerns only those Member Countries of the Council of Europe which, at the beginning of the reporting period, are Parties to the Convention ETS 123. Thus an updated list of those countries has to be used when filling in this column.

Note 2: Only the white boxes need to be completed.

Note 3: The number of re-used animals in column 1.7 should be excluded from the total in the column 1.2

TABLE 2: NUMBER OF ANIMALS USED IN EXPERIMENTS FOR SELECTED PURPOSES

Purpose versus species

2.1 Species	2.2 Biological studies of a fundamenta l nature	2.3 Research and development of products and devices for human medicine and dentistry and for veterinary medicine (excluding toxicological and other safety evaluations counted in column 2.6)	2.4 Production and quality control of products and devices for human medicine and dentistry	2.5 Production and quality control of products and devices for veterinary medicine	2.6 Toxicological and other safety evaluations (including safety evaluation of products and devices for human medicine and dentistry and for veterinary medicine)	2.7 Diagnosis of disease	2.8 Education and training	2.9 Other	2.10 Total

FINLAND

Statistical data submitted

The data were submitted by the Ministry of Agriculture and Forestry

Comments of Finnish authorities

The years 2006-2008 have been a transition period after the new Act and Decree on Animal Experimentation for Finland (2006) came into force, and the national Animal Experiment Board took over the responsibility of granting authorisation for all the experiments with vertebrate animals in Finland. The number of animals used yearly in experiments has been reduced throughout these 3 years, partly due to change in authorisation practices.

In 2008 a total of 138,600 experimental animals were used in Finland, which is 17% less than in 2007. Of all experimental animals used 78% were rodents, and 74% mice (about 78,500 animals used) and rats (26,000, respectively). Fish accounted for about 21,000 animals, and birds other than quails about 5,500 animals. The use of other species was at the level 30 – 850 animals.

There was a decrease in the number of mice used in experiments in 2008 (-22%) in comparison to the previous year. Also use of rats was slightly decreased (-9%). The change was, however, at least partly due to change in authorisation practices.

When compared to year 2005, the total number of animals used was dropped from 256,826 (163,606 without fish) to 138,600 (117,522 without fish), which is 46% reduction (28% without fish). Here also, the reduction is mainly due to the change in authorisation practices.

As in previous years, a major part of the animals (77%) was used for biological studies of a fundamental nature (2005: 87%, 2007: 82%). Animal use in 2008 for human and veterinary medicine research and quality control was 20% (2005: 9,3%, 2007: 15%), for toxicological and other safety evaluations 1,1 % (2005: 0,9, 2007: 1,2 %), for diagnosis of disease 0,1 % (2005: 0,2%, 2007: 0,24%), for education and training 1,0 % (2005: 1,8%, 2007: 0,89%) and other uses 1,00 % (2005: 0,9%, 2007: 0,48%) of the total number of experimental animals used.

The national Animal Experiment Board evaluated and was responsible for granting authorisation for all the experiments with vertebrate animals in Finland. The Board works on two levels: the local level in the form of four local subcommittees having the authority to grant an experiment when unanimous. In case of disagreement the decision is taken by the full national Board. In 2008 a total of 362 authorisations were granted by the Board: 287 for new experiment and 75 for changes in ongoing experiment.

In 2008 the Ministry of Agriculture and Forestry provided 40,000€ to the Finnish research community for studies to replace existing techniques using experimental animals with alternative methods.

TABLE 1: NUMBER OF ANIMALS USED IN RELATION TO THEIR PLACE OF ORIGIN

Origin versus species

1.1 Species	1.2 Total	1.3 Animals coming from registered breeding or supplying establishments within the reporting country	1.4 Animals coming from elsewhere in the EC	1.5 Animals coming from Member Countries of the Council of Europe which are parties to the Convention ETS 123 (excluding EC Member States)	1.6 Animals coming from other origins	1.7 Re-used animals

SWEDEN

Statistical data submitted

The statistical data have been submitted by the National Board for Laboratory Animals.

Comments of Swedish authorities

The Swedish Board of Agriculture hereby submits comments on the statistical data regarding the use of laboratory animals in Sweden for 2008.

According to the EU definition (directive 86/609/EEC), the number of laboratory animals used during 2008 in Sweden was 501,499 including reused animals and 484,604 excluding reused animals. This is a small decrease compared to the 505,600 animals reported for 2005 and reflects well the minor fluctuation in the number of laboratory animals used in Sweden that has been seen during the last 5 years.

From 1990 until 2002, the mean number of laboratory animals used in Sweden was about 315,000 with the highest number 1994 (approximately 351,000) and the lowest 1997 (approximately 267,000). From 2003-2008, however, there has been an increase in the number of animals used due to the fact that tagging of fish for assessment studies have been included. During 2008, the number of fish used for this purpose was 200,243. Apart from fish, mice and rats are the animals predominately used in animal experimentation in Sweden. During the last 10 years the trend has been an increase in the use of mice whereas the use of rats, rabbits and guinea pigs has decreased. The increased use of mice as laboratory animals is most probably due to the increased use of transgenic technique(s).

Specific use of animals

As in previous years, most laboratory animals used during 2008 were used for fundamental biological research. The large proportion of animals used for other purposes can be explained by the tagging of fish in assessment studies.

Only 2% of the animals were used in toxicological research, and the most common animals used in toxicological research were rats, mice and fish.

Swedish definition

According to Swedish legislation, all use of animals with a scientific purpose is defined as animal experimentation. Sweden therefore also collects statistical data on for example animals used in behaviour studies, feeding trials and animals being killed for the use of their tissues and organs. During 2008, 528,663 animals were reported being used for these purposes. In addition, Sweden also keeps statistical records on fish used in assessment studies, caught by trawling, netting etc. During 2008 the number of fish in this category was approximately 6,806,700.

TABLE 1: NUMBER OF ANIMALS USED IN RELATION TO THEIR PLACE OF ORIGIN

UNITED KINGDOM

Statistical data submitted

The United Kingdom statistical data for 2008 were prepared, quality assured and submitted by the "Home Office".

Within the United Kingdom (UK), Great Britain (GB) and Northern Ireland (NI) publish separate, annual statistical reports based largely on the number of procedures started rather than numbers of animals used.

In accord with our established practice the UK figures presented here have been recompiled from the original data in terms of animal numbers for the classes of animal use recorded in the EU statistical tables. It should be noted that the UK also regulates, and the UK domestic statistical reports enumerate, animals bred for the maintenance of colonies of genetically modified or harmful mutant animals, and that category of animal use largely accounts for the differences in the figures in the original GB & NI publications and those in this EU report.

Comments of United Kingdom authorities

In the UK, just over 2.26 million animals were used for the first time in procedures started in 2008, a rise of 393,000 (+21%) on the number reported for 2005. The increase was largely accounted for by increases in numbers of fish (+292,000) and mice (+160,000) along with a fall in the use of rats (-68,000).

2,039,577 (90%) of the animals used were mice (53%), rats (15%) or fish (21%).

Cold-blooded animals (fish, amphibia, and reptiles) accounted for 507,470 (22%) of the animals used.

Cats, dogs, equidae and non-human primates are accorded special protection in the UK and collectively amounted to 8,105 animals, 0,4% of the animals used – a reduction of 999 compared with 2005.

Non-human primates accounted for 3,354 animals, 0,15% of animals used, very slightly less as a percentage but 239 more as an absolute number than in 2005. (although there was a fall in the numbers of new world monkeys used, there was a larger rise in the number of old world monkeys used)

1,172,936, animals (52%) were used for fundamental biological studies, research and development and production and quality control relating to human medicine, dentistry and veterinary medicine.

Toxicological or other safety evaluation used 284,888 animals (13%) – an increase of 36,278 since 2005.

There was a marked increase in the number of toxicology and other safety evaluation experiments carried out in 2008 not to satisfy any regulatory requirements (94,185),

up 65,117 compared with 2005 (29,068) in 2005, largely due to an increase in such use of fish (+80,098).

176,362 animals (8%) were used for the production and quality control of products and devices for human medicine, dentistry or veterinary medicine – almost 66,000 more than in 2005. This increase was accounted for almost entirely by an increase in the number of mice (+48,000) and fish (+17,000).

Approximately 40% of animals used received some form of anaesthesia, hardly changed from 2005. For the other animals the use of anaesthesia would have been deemed to increase the severity of the procedure.

As in 2005 no animals were used in 2008 to evaluate the safety of either cosmetic products or cosmetic ingredients.

No animals were used in 2008 for monoclonal antibody production using the ascites method.

TABLE 1: NUMBER OF ANIMALS USED IN RELATION TO THEIR PLACE OF ORIGIN

Origin versus species

1.1 Species	1.2 Total	1.3 Animals coming from registered breeding or supplying establishments within the reporting country	1.4 Animals coming from elsewhere in the EC	1.5 Animals coming from Member Countries of the Council of Europe which are parties to the Convention ETS 123 (excluding EC Member States)	1.6 Animals coming from other origins	1.7 Re-used animals
1.a. Mice (<i>Mus musculus</i>)	1212243	1.206.713	1.809	173	3.548	
1.b. Rats (<i>Rattus norvegicus</i>)	343289	341.897	785	105	502	
1.c. Guinea-Pigs (<i>Cavia porcellus</i>)	29250	28.762	488	0	0	
1.d. Hamsters (<i>Mesocricetus</i>)	2851	1.247	1.604	0	0

5.z. TOTAL	589	12521	0	314	133732	29206	176362

Examples: 5.2 – France is testing due to a UK (or FR) specific requirement
5.3 - UK is testing according to EC legislation
5.4 – Spain is testing due to a Norwegian requirement
5.5 – Poland is testing due to a US specific requirement
5.6 – Germany is testing due to a Czech requirement (also an EC requirement)

Note: columns 5.2 - 5.5 refer to the legislation imposing that the test be carried out and not to the body which has issued the actual test method, guideline or protocol.
Example: a test required by French legislation and carried out in Belgium according to an ISO protocol must be coded as a national (FR) legislative requirement and be entered into column 5.2 in the tables submitted by Belgium.

Footnotes: 1) EC Member States: Austria, Belgium, Bulgaria, Cyprus, Czech Rep, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, United Kingdom
2) Member Countries of Council of Europe (non-EC): Albania, Andorra, Armenia, Azerbaijan, Bosnia and Herzegovina, Croatia, Georgia, Iceland, Liechtenstein, Moldova, Monaco, Norway, Russia, San Marino, Serbia and Montenegro, Switzerland, ‘the former Yugoslav Rep. of Macedonia’, Turkey, Ukraine
