Zimbabwe	14	0.12%

(\*) = number of inspections in relation to total number of inspections (%) conducted during the time period being considered in this report

- As mentioned earlier there is no discrimination between operators certified in the 44 EU / ECAC States (indicated in bold) and operators certified in the other non-European States. The fact that inspections on ECAC operators account for almost two thirds of the total number of inspections is a direct consequence of the fact that a vast portion of European air traffic is performed by operators from those states.

—

**APPENDIX C - Aircraft types inspected (by manufacturer)**  
*(Listed in alphabetical order)*

**Large airliners (over 100 seats)**

<b>No.</b>	<b>Aircraft Manufacturer</b>
1.	AIRBUS
2.	ANTONOV
3.	BOEING
4.	BRITISH AEROSPACE
5.	EMBRAER
6.	FOKKER
7.	ILYUSHIN
8.	LOCKHEED
9.	MCDONNELL DOUGLAS (now part of the Boeing Company)
10.	TUPOLEV
11.	YAKOVLEV

**Regional airliners (19-99 seats)**

<b>No.</b>	<b>Aircraft Manufacturer</b>
1.	ANTONOV
2.	AVIONS DE TRANSPORT RÉGIONAL (ATR)
3.	BOMBARDIER AEROSPACE
4.	BRITISH AEROSPACE
5.	CONVAIR
6.	DORNIER
7.	EMBRAER
8.	FAIRCHILD
9.	FOKKER
10.	LET
11.	LOCKHEED
12.	SAAB
13.	YAKOVLEV

### Commuter, business and general aviation aeroplanes

No.	Aircraft Manufacturer
1.	BEECH
2.	BOMBARDIER AEROSPACE
3.	BRITTEN-NORMAN
4.	CESSNA
5.	CIRRUS AIRCRAFT CORPORATION
6.	DASSAULT
7.	DIAMOND AIRCRAFT INDUSTRIES
8.	DORNIER
9.	FAIRCHILD
10.	GULFSTREAM
11.	ISRAEL AIRCRAFT INDUSTRIES
12.	PIAGGIO
13.	PILATUS AIRCRAFT
14.	PIPER
15.	RAYTHEON
16.	ROCKWELL
17.	SHORT BROTHERS
18.	SOCATA

### Helicopters

No.	Aircraft Manufacturer
1.	AGUSTA
2.	AEROSPATIALE
3.	BELL HELICOPTER TEXTRON
4.	EUROCOPTER
5.	KAMOV OKB
6.	MIL HELICOPTERS
7.	ROBINSON HELICOPTER COMPANY
8.	SIKORSKY

The distribution of SAFA inspections by aircraft manufacturers is in line with the volume of traffic performed with the respective types. In 2010, inspections covered also general aviation and helicopter operations, but the overall majority concentrated on commercial operations with aeroplanes.

## Appendix F.1 - Inspection items concerning the flight deck

*Ratio Number of Findings per Inspections: Flight Deck Items*

### F.1.1 – Defect notification and rectification

Whenever apparent defects are identified (for example during the crew’s pre-flight inspection) they are to be assessed whether still within the tolerances prescribed by the manufacturers, and reported in the Aircraft Technical Logbook (ATLB) so that they are addressed by the maintenance personnel during the regular maintenance activities. Findings recorded under this item concerned defects that were not indentified and/or not reported. In such a case the inspectors will require the operator to assess the defect and, depending on its severity, implement the required corrective actions and report it in the ATLB.

### F.1.2 – Flight Crew License

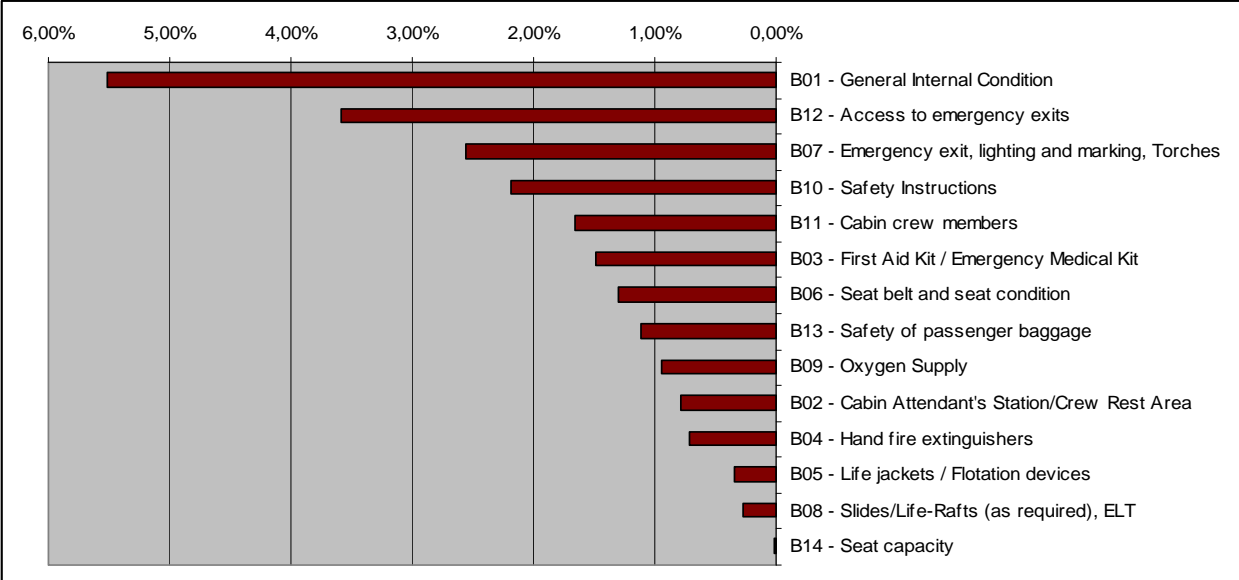

When checking the Flight Crew licences the inspectors verify if the holders are appropriately qualified for the privileges exercised, if the licence (the medical certificate) is valid, contains the necessary endorsements, or if any eventual limitations (e.g. the use of corrective lenses) are complied with. Most of the findings identified under this inspection item refer to pilots not holding the required English Language Proficiency endorsement. Having in mind that ICAO introduced a 3 years moratorium urging Contracting States to accept licences not endorsed with the required English Language Proficiency, the respective SAFA findings are categorised as cat. 1 (minor) or category 2 (significant) – depending on whether the licensing state has issued and files with ICAO a corrective action plan. As of March 2011, when the moratorium will expire, a licence not having the required English Language Proficiency endorsement will result in a category 3 finding.

### F.1.3 – General Condition

Under this inspection item inspectors verify the stowage of baggage/equipment in the cockpit, condition of flight deck windows, presence of reinforced cockpit door and its

locking/unlocking mechanism, and the means for the monitoring of door area. Most of the findings were affecting loose baggage/equipment in the cockpit (posing a threat to the integrity of the crew or of the aircraft instruments and controls during turbulent conditions) and means for the monitoring of the door area which were not in full compliance with the ICAO standards (not directly available from each pilot station).

**Appendix F.2 – Inspection items concerning passenger cabin**

*Ratio Number of Findings per Inspections: Cabin & Safety Items*

**F.2.1 - General internal condition**

The cabin crew members have to be able to perform their normal and abnormal duties without hindrance. The findings mainly revealed the poor condition of the cabin, loose carpeting impeding the crew to perform their duties, improper stowed luggage, catering equipment not correctly secured.

**F.2.2 - Access to emergency exits**

International standards require aircraft to provide means for the rapid evacuation of passengers in case on an emergency. Findings revealed under this item include emergency exits blocked by luggage or seats. Most of the times the deficiencies were corrected prior to the departure of the aircraft, either by removing the blockage or by redistributing the passengers so they can use other emergency exits.

**F.2.3 – Emergency exits, lighting and marking, torches**

The findings mainly concerned emergency exit lights which were not functioning properly, torches (flashlights) which were not available, in poor condition or not available in sufficient quantity and non-installation or inadequately functioning of floor proximity (emergency) escape path marking systems. These systems indicate the location of the emergency exits. They are important especially when there is a fire or smoke in the passenger cabin or when the normal cabin lights are not functioning. In case of major findings the aircraft were allowed to depart after the findings were eliminated or, depending on the circumstances, in accordance

with an operational restriction (for example in case of an unserviceable emergency exit some passengers would have to be offloaded)

## Appendix F.3 - Inspection items concerning general condition of aircraft

### *Ratio Number of Findings per Inspections: Aircraft Condition & Cargo Items*

#### **F.3.1 - General external condition**

Checking the general external condition means checking for apparent corrosion, cleanliness, presence of ice, snow, frost; legibility of markings, windshield delamination, damages, exterior lights etc. The majority of the findings concerned paint damage, illegible or missing safety markings, unserviceable exterior lights, missing or loose screws.

#### **F.3.2 - Powerplant and pylon**

The engine, the engine housing, the pylon (attachment of the engine to the wing or aircraft structure) and the access panels in the engine housing and pylon are carefully inspected. Findings reported relate to missing rivets/fasteners on engine cowlings and pylon panels, damage to the fan blades, damage of acoustic panels in the engine intake area, missing or deteriorated safety markings.

#### **F.3.3 – Wheels, tyres and brakes**

The condition and serviceability of the tyres and brakes are verified by the inspectors. Findings identified under this inspection include tyres worn or damaged beyond the acceptable limits (in which case the inspectors will require the replacement of the wheel), missing brake wear indicator pins.

#### **F.4 – Inspection items concerning cargo compartment**

##### **F.4.1 - Safety of cargo on board**

In several cases it was established that cargo in the cargo holds was not properly secured. Heavy items were not restrained, which might lead to damage of the aircraft in case of rapid acceleration / deceleration or air turbulence. In other cases, barrier nets were either not

installed or in poor condition thus not preventing the shifting of cargo. Cargo containers and pallets were in poor condition or cargo was loaded exceeding the loading limits (floor or height limits). Depending on severity of the findings corrective actions imposed by inspectors included: relocation or reloading of cargo, off-loading of unserviceable cargo pallets.

#### **F.4.2 - Dangerous goods**

“Dangerous Goods” are certain types of material/s needing special care and treatment because they are flammable, toxic, poisonous, etc. When properly packed, stored, labelled, protected etc., Dangerous Goods may be transported. Findings that have been recorded included improper storage and labelling of the Dangerous Goods carried onboard, unavailability of the required documents and manuals (Emergency Response Guide), missing authorisation for the transportation of Dangerous Goods and no proper notification to the Captain (NOTOC) of Dangerous Goods carried onboard. In those cases when major (cat. 3) findings have been identified the aircraft was allowed to depart only after corrective actions have been carried out (e.g. offloading of dangerous goods, repackaging and labelling).

#### **F.4.3 - General condition of cargo compartment**

Findings related to the general condition of the cargo compartment, such as damage to panels, deficiencies with the locking system, improper repairs of panels, and missing separation nets.
