Statement by Sweden

Explanation of vote – Kiribati

Sweden has been involved for some time in ensuring that ex-ante and ex-post evaluations are completed in good time ahead of decisions on new Protocols. In May 2012, an ex-post evaluation of the existing Protocol to the Fisheries Partnership Agreement between the EU and the Republic of Kiribati was presented, along with an ex-ante evaluation which included an analysis of the future Protocol's effect on sustainability.

The evaluation describes the scientific assessment carried out by the regional fisheries organisation (WCPFC). According to the WCPFC assessment, stocks of yellowfin tuna are approaching their maximum level of exploitation and fishing for juvenile fish is under pressure. As for bigeye tuna, the WCPFC assessment shows that the species is being overfished and that current levels of fishing are not sustainable.

According to the Council conclusions of March 2012, fishing under the Fisheries Partnership Agreement should be directed exclusively at surplus resources, and overfishing of stocks should be prevented. Since it cannot be guaranteed that the EU's fishing activities will be directed at a documented surplus, Sweden cannot support the proposal for a new Protocol for the Republic of Kiribati. Sweden has no fishing interests of its own in the Pacific and therefore abstains from the vote.
