- 2.1.1 The second to last Member State of employment without requiring any minimum period of insurance or (self-)employment in this State

*Example: A worker resides and works in Member State A for five years. Afterwards he or she works in Member State B for three weeks. Then he or she moves his or her residence to Member State C and takes up employment there, but is dismissed after only two weeks.*

Referring to the second to last Member State of employment without any condition for the person concerned of having completed there the same minimum period of one or three months would be unreasonable. If the institutions' interests are relevant, why should the second to last Member State be less protected against claims of persons with only short careers than the last Member State?

- 2.1.2 The Member State of employment where the minimum period of one or three months of insurance or (self-)employment was lastly fulfilled

*Example: A worker resides and works in Member State A for five years. Afterwards he or she works in Member State B for three weeks. Then he or she moves his or her residence to Member State C and takes up employment there but is dismissed after only two weeks. The unemployed person must make him*

*or herself available to the employment services of Member State A, the institution of which provides the benefits.*

This option would pursue the objective to make a Member State pay the benefits where the unemployed had completed periods for a relevant time span. However, this could lead to situations where it would be quite difficult for the unemployed person to register as a person seeking work with the employment services of that Member State; to be subject to the control procedure organised there; and to adhere to the conditions laid down under the legislation of that Member State. As the CJEU pointed out, “*the circumstances which must exist for the condition as to availability to be satisfied cannot have the direct or indirect effect of requiring the person concerned to change his [or her] residence.*”<sup>188</sup> Particularly in cases where the person concerned has moved his or her place of residence to the last Member State of employment, further amendments to the Regulation would be required to avoid impairments of the unemployed person’s situation that would raise huge legal concerns with regard to violation of the Treaty.

What further amendments could be necessary will be analysed under 2.2.3 (see 2.2.3).

### 2.1.3 The Member State of residence

This option can only apply to persons falling under Article 65 of Regulation (EC) No 883/2004 who in principle have the right to make themselves available in the Member State of last employment. It would be the most reasonable solution for this group of persons, as the Regulation is built on the assumption that the Member State of residence provides the most favourable conditions for finding new employment and because this is the alternative offered to them already under the current legal framework.

---

<sup>188</sup> Judgment in *Naruschawicus*, C-308/94, EU:C:1996:28, paragraph 26.

#### 2.1.4 The previous State of residence

This option could apply to workers who worked and resided in the same Member State when they became unemployed, but have fallen under Article 65 of Regulation (EC) No 883/2004 before.

*Example: A worker resides in Member A and works as a frontier worker in Member State B for five years. He or she terminates his or her employment in Member State B and moves his or her residence to Member State C. He or she is employed there for only three weeks and is then dismissed by his or her employer.*

As the minimum insurance period in Member State C is not fulfilled, this Member State is not competent to apply the aggregation provision and provide benefits. At first sight it would appear reasonable to impose this obligation on Member State B instead, because this is the second to last Member State of employment and the worker has paid contributions for five years to the scheme of that State. However, at that time he or she was a frontier worker. If he or she would have become unemployed while residing in Member State A, his or her Member State of residence would have provided the benefits and Member State B would have provided reimbursement under Article 65(6) only. It seems doubtful whether the obligation to provide benefits can be imposed on Member State B now. It would seem more in line with the current structure of the Regulation that the previous Member State of residence A had to substitute the last Member State of employment C. If so, then the second to last Member State of employment B would have to provide reimbursement to Member State C under Article 65(6).

## 2.2 *Identification and assessment of how the proposed options and sub-options presented by the EC would respond to certain criteria (social, economic and political pros and cons)*

### 2.2.1 Clarification

As pointed out in the mandate only “*most Member States apply the ‘aggregation rule’ after one day of insurance*”. It follows that some Member States interpret Article 61(2) in a way that also longer periods can be required in order to trigger aggregation if this finds a reasoning in the national legislation applied.

The provision in its current version speaks about “periods” of insurance and (self-)employment, terms that can be considered not fully clear and subject to different interpretations if in national legislation a “period” is a longer period than one day (e.g. one week). Against this backdrop the legal situation could be clarified by explicitly stipulating in Article 61(2) that one or three months of insurance or (self-)employment are required in the last Member State of employment in order to impose on this State the obligation to apply the aggregation provision.

However, the same clarity could be achieved by amending Article 61(2) without changing its substance. What should be relevant is the political intention of the legislature to apply a minimum threshold of one day, of 30 days or of 90 days. If the intention is clear it is up to the legal technique of the legislature to reflect this in a proper wording. Also the Administrative Commission could make this clarification in a decision, as proposed for Option 1, notwithstanding the non-binding effect of such decisions. The aim of clarity alone cannot justify substantial amendments that significantly change the legal position of large groups of migrant workers to their detriment.

### 2.2.2 Simplification

Providing for a minimum threshold of one or three months instead of one day in order to apply aggregation under Article 61 of the Regulation would be neutral under the aspect of simplification when focusing on Article 61 only.

However, we have shown that inserting a minimum threshold into the aggregation provision would most likely require extensive amendments of other provisions as well, particularly of Article 64, 65 and 65a. Also the procedures would be more complicated by involving at least one more Member States that would have to substitute the obligations of the last Member State of employment.

We come to the conclusion that neither the Regulation nor the procedures would be simpler if Sub-options 2a or 2b were implemented.

### 2.2.3 Protection of rights

Within the current legal framework the one-day rule in the aggregation provision under Article 61(2) applies to unemployed persons who make themselves available in the Member State of last employment, i.e. to persons who during their last employment resided in the competent Member State and to persons other than frontier workers who fall under Article 65 and make themselves available in the competent Member State. By introducing a minimum threshold of one or three months for applying aggregation under Article 61, a significant number of persons would not be entitled to benefits in the last Member State of employment and thus lose a right which is currently awarded to them.

This loss of right in the last Member State of employment could be mitigated by awarding a new right in another Member State. As regards persons other than frontier workers who fall under Article 65 it was proposed that they should be referred to their Member State of residence when not fulfilling the minimum period of insurance or (self-)employment. Compared to the *status*

*quo* this would be a clear loss of rights as these persons would lose their right of option. Nevertheless, this loss of right would seem to be acceptable as the right of option is a privilege within Regulation (EC) No 883/2004 and imposing on them the obligation to make themselves available in their Member State of residence complies with the general rule for frontier workers.

For unemployed persons other than frontier workers several alternative models were discussed under point 2.1. Requiring a minimum period of insurance or (self-)employment in their Member State of last employment which is also their Member State of residence would deprive these persons of their right to make themselves primarily available to the employment services in this State (which is both their Member State of last employment and their Member State of residence). This would be a clear change of concept of Chapter 6 because currently another Member State only comes into play when the export rule under Article 64 applies.

The obligation to make oneself available in a third Member State, be it a previous Member State of employment or the (previous) Member State of residence, can be to the detriment of the unemployed person, as in many circumstances this obligation cannot be fulfilled without transferring the place of residence or habitual stay to this Member State.

*Example: A mother resides and works in Member State A for two years. She moves her residence with her family to Member State B, her State of origin, and takes up employment there but is dismissed by her employer after only three weeks. If Member State A, as second to last State of employment, is competent for the person she can either make use of an amended export provision (see below) and receive benefits for up to three (six) months, or she would have to go back to Member State A and reside or habitually stay there again by perhaps leaving her family behind.*

Implementing Sub-options 2a and 2b would raise significant concerns with regard to the protection of rights of the unemployed and to their legal

certainty, if no additional amendments to the Regulation would be implemented.

Adopting provisions that the last Member State of employment is not competent and substituted by another Member State, if a minimum period of insurance or (self-)employment was not completed, could put unemployed persons in a difficult or maybe even desperate position if no accompanying amendments to the Regulation were implemented. In many cases going back to a previous State of employment or residence will be incompatible with the current life situation and the personal goals of the person concerned. As pointed out, the CJEU has held that the circumstances which must exist for the condition as to availability to be satisfied cannot have the direct or indirect effect of requiring the person concerned to change his or her residence.<sup>189</sup> It follows that certain accompanying amendments would be absolutely necessary to avoid violations of the freedom of movement of workers.

The situation could be mitigated if the person concerned was enabled to seek work in his or her Member State of residence while receiving benefits in cash from the competent Member State under Article 64 of the Regulation. However Article 64 stipulates quite harsh conditions and limits to allow an unemployed person to seek work in a Member State that is not competent while retaining entitlement to unemployment benefits. Particularly it requires that before his or her departure, the unemployed person must have registered as a person seeking work with the employment services of the competent Member State and have remained available there for at least four weeks after becoming unemployed.

First of all the unemployed person should not be forced to go back to the competent Member State to register with the employment services in that State. He or she should have the possibility to register with the employment services of the Member State of residence and submit a claim to benefits there,

---

<sup>189</sup> Judgment in *Naruschawicus* EU:C:1996:28, paragraph 26.

being subject to the control procedure organised there, and adhere to the conditions laid down under the legislation of that Member State. The institution must forward the registration and claim to the institution of the competent Member State. The date of registration with the employment services in the Member State of residence must apply in the institution of the competent Member State.

Secondly, the unemployed person must not be committed to being available to the employment services of the competent Member State for at least four weeks after becoming unemployed. This deviation from the general rule is already laid down in Article 65a(3) for former self-employed frontier workers who make themselves available in their Member State of residence only.<sup>190</sup> The situation of these persons is to a certain extent comparable with the situations discussed in this report.

A minimum threshold to apply aggregation by the last Member State of employment and to determine a previous Member State as competent can create situations where the unemployed person cannot go to the competent Member State in order to seek work without completely changing his or her current life situation. We therefore suggest that the competent institution may extend the export period up to the end of the period of entitlement to benefits as already provided for under Article 65a(3), last sentence, or up to six months without discretion. It should even be discussed that the unemployed person is granted a right to that extension of the export period.

#### 2.2.4 Administrative burden and implementation arrangements

Only implementing a minimum threshold of one or three months for applying aggregation would not create any additional burden or require new implementing arrangements. One could even say that the administrative burden for the institution in the last Member State of employment would be

---

<sup>190</sup> And where the Member State of last employment is competent under Article 65a(1).

reduced, because a significant number of applications for benefits could be rejected.

However, as was shown, applying a threshold in the aggregation provision would not make the legal situation simpler if another Member State would have to take over the obligations of the last Member State of employment. This would necessitate the development of a new procedure which could cause administrative costs for the institutions involved to be higher than under the current legal framework. The Administrative Commission would have to develop new forms and SEDs. It goes without saying that identifying the competent Member States and handling all necessary formalities would require a quick procedure, as the unemployed person must know within hours or days the competent Member State.

*Example: After an amendment, Regulation (EC) No 883/2004 stipulates that a threshold of three months applies in Article 61(2) and imposes on the Member State where the minimum threshold of three months of insurance or (self-)employment was lastly completed to take over the obligations of the last Member State of employment. A person works and resides in Member State A for three years. He or she moves his or her residence to Member State B and works there for two months. Then he or she moves his or her residence to Member State C and is dismissed after only two months of employment.*

*Member State C knows that it is not obliged to apply aggregation and provide unemployment benefits. However, it cannot simply reject an application by the person concerned but must support him or her to find the competent Member State. In our example information exchanges between the unemployed person and Member State C and between Member States A, B and C seem to be necessary before the unemployed person can be definitely referred to the employment services of Member State A.*

### 2.2.5 No risk of fraud and abuse

Reducing the risk of fraud and abuse is one of the central tasks of applying a threshold for aggregating periods of insurance or (self-)employment. The terms “fraud and abuse” must be restricted to cases of bogus employment only.

*Example 1: A worker resides and works in Member State A for two years. He or she is dismissed by this employer and moves his or her residence back to Member State B. The unemployment benefit paid by Member State A would be exported for three months only. In order to circumvent this limited period of entitlement, the unemployed person agrees with a friendly entrepreneur in Member State B to take up bogus employment and be dismissed after one week.*

*Example 2: As above, but the worker takes up employment in Member State B without fraudulent agreement with the employer, but with the intention to terminate the employment by his or her own choice after only one week in order to receive unemployment benefits from Member State B.*

Within the current legal framework Member State B would have to pay unemployment benefits by aggregating periods completed in other Member States and as long as provided for by national legislation. If a minimum threshold would apply in Article 61(2) of the Regulation, Member State B would not apply aggregation and the unemployed person would probably fall under the competence of Member State A again if the legislature amended the Regulation accordingly.

Cases of short-term employment without a bogus nature cannot be described as fraud and abuse. If in the example above the worker takes up normal employment and is dismissed after one week for whatever reason this would oblige the institution in the last Member State of employment to pay benefits to a person who had contributed to the scheme for a very short time only, but this is not a fraudulent or abusive situation.

Undoubtedly a threshold of one month or three months could reduce cases of fraud and abuse, as it would make it more difficult to create fraudulent and abusive situations for a longer period; a period of three months more than a period of one month.

It is doubtful whether the changes would be significant. Why should the unemployed person and the employer in Example 1 not agree on bogus employment of one month or three months? Why should the unemployed person in Example 2 not terminate the employment by his or her own decision after one month or three months?

It seems that the consequences of a threshold would be much bigger with regard to normal cases of short-term employment. This will be discussed under the next point.

#### 2.2.6 Potential financial implications

Applying a threshold of one or three months in Article 61(2) would release the competent Member State from the obligation of providing benefits to unemployed persons after very short periods of employment. This would correspond to the financial interests of paying benefits only to persons who have contributed for a relevant period to the scheme concerned. It would have a positive impact on the finances of the last Member State of employment. It goes without saying that the positive financial impacts for the last Member State of employment would be much more significant when applying a three-month threshold. On the other hand, it should not be forgotten that – when not abolishing the one-day-rule under the current legal framework – in the longer term the competent Member State of last employment (usually the place of current residence) is likely to benefit from the jobseeker's future employment through future insurance contributions and associated contributions to the competent Member State's economy. Particularly in times of demographic changes any loss of human resources may be regrettable.

Furthermore, we have explained that the obligation to provide benefits of the last Member State of employment should be substituted by a different Member State. Therefore, the savings for the last Member State of employment by not paying benefits for persons who did not complete the minimum period of insurance or (self-)employment under its legislation could – at least partly – be compensated in other cases where it must take over payment obligations for persons where it was not the last Member State of employment but for example the second to last Member State of employment.

Another financial concern could be that imposing on an unemployed person the obligation to make him or herself available to the employment services of a Member State other than the last Member State of employment could mean that this person must move his or her place of residence or habitual stay to another Member State in order to fulfil the requirements of the national legislation of that State. Of course a move of residence or stay gives rise to costs and it could be argued that the Member State where the unemployed person must make him or herself available would have to reimburse these costs, at least to a certain extent.

However, if a one-month threshold is applied, it is questionable if this quite severe measure would be appropriate, given the many concerns and detriments for the unemployed persons, because the difference in periods of contributing to the unemployment scheme of the last Member State of employment would in most cases amount to only a few days or weeks.

### 2.3 *Alternative proposal*

In order to reduce the financial burden for the Member State of last employment where not at least one month or three months of insurance or (self-)employment were completed, a new reimbursement mechanism could be installed. Analogous to Article 65(6) to (8) of Regulation (EC) No 883/2004, the benefits provided by the institution of the place of last employment should

continue to be at its own expense. However, the competent institution of the Member State where the person concerned lastly completed at least one month or three months of insurance or (self-)employment should reimburse to the institution of the place of last employment the full amount of the benefits provided by the latter institution during the first three months. The amount of the reimbursement during this period may not be higher than the amount payable, in the case of unemployment, under the legislation of the debtor Member State.

As elaborated above, introducing a minimum period of insurance or (self-)employment for aggregation under Article 61 of the Regulation could impair the position of unemployed migrant workers to find new employment. To avoid this and at the same time take into account the just financial interests of the institutions, a new reimbursement mechanism could shift the financial burden at least partly to a Member State where relevant contributions have been paid, while safeguarding the right of unemployed persons as they are currently provided. This proposal follows the model of Article 65(6) to (8) of the Regulation, which is the method currently applied in Chapter 6 of the Regulation to reconcile the interests of both the unemployed persons and of the institutions. The obligation of the Member State of residence to provide benefits to frontier workers, although the Member State of last employment received the contributions, seems to be comparable with the obligation of the Member State of last employment to pay benefits to migrant workers after a very short period of employment. Why should the solution not be the same one? Problems of interpretation that were posed by Article 65 should be avoided. In particular it should be clarified, that reimbursement is only due if the person concerned was entitled to benefits in the debtor State.<sup>191</sup> In principle a new reimbursement mechanism should follow the same criteria as applied in Article 65(6) to (8) in order to facilitate administration by the institutions.

---

<sup>191</sup> We refer to the discussion about Decision U4 and the position of one Member State not to apply this decision.

#### 2.4 *Concerns about unequal treatment of workers within Chapter 6 of Regulation (EC) No 883/2004*

Regulation (EC) No 883/2004 currently builds on the assumption that the Member State of residence provides for the most favourable conditions to find new employment. Although this is explicitly laid down only for persons falling under Article 65(2), first sentence, it must be noted that other migrant workers not falling under Article 65, who must make themselves available in the competent Member State, by definition usually also reside in this State. The analysis of these basic principles of the Regulation reveals that the implementation of a minimum threshold to apply the aggregation rule under Article 61 of the Regulation could give rise to concerns as regards equal treatment of different groups of workers. As the one-day rule in Article 61(2) applies “*except in the cases referred to in Article 65(5)(a)*”, this minimum threshold would not apply to workers falling under Article 65(2) of the Regulation.

*Example: Mr X and Mr Y both move their residence from Member State A to Member State B. Mr X works for an employer in Member State B. Mr Y works for an employer in Member State C and goes back to his home in Member State B every day. After two and a half months both workers are dismissed by their employers. Under the current legal framework both workers would be entitled to benefits in Member State B, because the competent institution in this Member State would take into account their periods of insurance or (self-)employment completed in other Member States. If Option 2b were adopted, Mr X would not be entitled to benefits in Member State B because – as he did not complete the minimum period of three months under the national legislation of this Member State – the institution would not aggregate. Mr Y, however, would still be entitled to benefits in Member State B, because Mr Y falls under Article 65 of the Regulation and the institution in Member State B would take into account his periods completed in other Member States. Mr X would be denied aggregation although he has completed two and a half*

*months of insurance under the legislation of Member State B. Mr Y could rely on aggregation although he has completed no period in Member State B at all.*

Furthermore it must be noted that under Article 65(6) of Regulation (EC) No 833/2004 the competent institution of the Member State to whose legislation the person concerned was last subject must reimburse to the institution of the place of residence the full amount of the benefits provided by the latter institution during the first three months after only one day of insurance in that State.

The 2012 trESS Think Tank Report on the coordination of unemployment benefits<sup>192</sup> proposed that the competence to provide unemployment benefits should be exclusively with the institutions of the State of last (self-)employment. By introducing a minimum threshold to apply the aggregation principle under Article 61 of the Regulation this proposal could find new support, because equal treatment of frontier workers and non-frontier workers within the legal framework of the Regulation could be achieved.

	Clarification	Simplification	Rights	Administr. burden	Fraud and abuse	Financial implications
Option 2a/b	+	≈	-	-	+	?

### Option 3

**Option 3:** instead of introducing a minimum period for aggregation, only the **calculation** of unemployment benefits changes: i.e. in case of short

<sup>192</sup> C. G. de Cortázar (ed.), E. Rentola (ed.), M. Fuchs & S. Klosse, trESS Think Tank Report 2012 ‘Coordination of unemployment benefits’.

employment in the new Member State, the calculation will also be **based on the salaries earned** in the previous Member State(s).

**Sub-option 3a: the salary earned in the previous Member State is also taken into account** for the calculation of the unemployment benefit by the competent Member State, if less than **one month of insurance or (self-)employment** is completed.

**Sub-option 3b: the salary earned in the previous Member State is also taken into account** for the calculation of the unemployment benefit by the competent Member State, if less than **three months of insurance or (self-)employment** are completed.

## **1** *Unemployment benefits – legislation in the Member States*

If we are to give answers to the questions under Option 3, we have to begin with a short analysis of how unemployment benefits are shaped and conceived in the Member States as far as calculation of benefits is concerned. From the legislation studied it clearly appears that unemployment benefits are conceived mainly as income replacement benefits. The unemployed person has lost his or her income which regularly is the basis for his or her living expenses. The unemployment benefit compensates the loss of this financial basis. To serve this purpose the unemployment benefit has to be shaped correspondingly. As a consequence, the manner in which the calculation of benefits is carried out is of the utmost importance.

Apart from a system in which only a flat rate is paid, two conceptions are available. The first one takes into account the income earned at the moment when the employment relationship ended. In other words, the income received most recently is the most important factor of calculation which mainly determines the level of the unemployment benefit.<sup>193</sup>

---

<sup>193</sup> Other factors like the length of the employment relationship or the members of the family may play a role.

The second approach relies for the calculation of the benefit on income earned during a longer period which precedes the occurrence of unemployment (income earned during a reference period).

The first approach is very rarely taken.<sup>194</sup> Most other countries prefer reference periods, ranging from three months to twelve months, and in very few cases up to 24 months.<sup>195</sup>

The first approach is to the advantage of the unemployed person if he or she had a higher income when he or she became unemployed compared to his or her income in the past. But, of course, if the reverse true, the method is to his or her disadvantage. To put it simple, the method builds on chance.

The second approach, however, extends the account of earnings to a longer period and, as a consequence, the determination of the relevant income is done on a basis less dependent on chance. It strikes a balance between periods of low and high levels of income and creates an average income.

Experience from some Member States shows that the second approach is mainly chosen. According to the mandate the amount of the unemployment benefit depends on average earnings gained during a certain preceding period (normally 12 months).

## **2 *Calculation of unemployment benefits under coordination law***

In principle, coordination of unemployment benefits has to serve the same purpose as does national legislation. But in contrast to what is needed in the national arena, coordination has to deal with the transnational dimension. Coordination has to offer solutions for the situation in which the unemployed person has earned income in different Member States.

---

<sup>194</sup> The Netherlands take the last daily wage into account. Belgium refers to the average salary earned in the last position. See European Commission, Paper on Automatic Stabilisers, Brussels, 04 October 2013, p. 36.

<sup>195</sup> See European Commission, Paper on Automatic Stabilisers, Brussels, 04 October 2013, p. 36.

However, the main purpose of unemployment benefits, i.e. to secure the financial basis of the person concerned, is no different from what is required by national unemployment benefit schemes. To facilitate income replacement is therefore the main aim which Article 62 is indebted to.<sup>196</sup>

Article 62 of Regulation (EC) No 883/2004 requires the calculation of benefits on the basis of the amount of the salary in the State of last employment (Article 62(1)). Article 62(2) requires the same mode of calculation if the legislation of a Member State provides for a reference period. A different rule applies for persons covered by Article 65(5)(a) of the Regulation. The institution of the place of residence takes into account the income received in the Member State of last activity.

### **3** *The perspective of Option 3*

#### **3.1** *Sub-options 3a and 3b*

Both sub-options derogate from what is now established in Article 62(1) and (2) of Regulation (EC) No 883/2004, insofar as they require taking into account also salary earned in a previous Member State. This renders them similar to what applies for workers in the terms of Article 65(5)(a). In principle, Sub-options 3a and 3b are identical, but they differ in respect of the time span which renders the extension to salaries received in a previous Member State necessary.

#### **3.2** *Assessment of Sub-options 3a and 3b*

According to point 5) of the mandate, the analytical report is required to identify how the proposed options and sub-options would respond to the

---

<sup>196</sup> This is also the conception of unemployment cash benefits by the consistent case law of the CJEU; see for example the judgment in *Knoch*, C-102/91, EU:C:1992:303, paragraph 44; the judgment in *Meints*, C-57/96, EU:C:1997:564, paragraph 27.

criteria specifically listed. In addition, under its heading “Considered amendments” the mandate makes it very clear that basing the calculation of the amount of the unemployment benefit on very short periods of employment may lead to arbitrary results. Against this background the assessment of Sub-option 3a and 3b will be made.

### 3.2.1 Clarification/Simplification

From the clarification and simplification point of view the envisaged amendment is not much different from the existing calculation rule. The new rule would not create many difficulties of interpretation. Besides the income earned in the competent State income received in the previous State has to be taken into account pursuant to the rules of the competent institution. This is an operation which for other cases is provided for in Article 5(a) of Regulation (EC) No 883/2004. For this reason, the amendment envisaged is clear and simple.

### 3.2.2 Administrative burden and implementation arrangements

#### **1.15.3.1.1 Exchange of information**

The present mode of calculation in Article 62(1) of Regulation (EC) No 883/2004 is simple and easy to apply from the administrative viewpoint. The competent institution can exclusively rely on the income earned in its country and the data are available. In contrast to this, calculation under the envisaged amendment has to be extended. Earnings received in the previous Member State have to be put into the calculation. To get the income data needed for calculation the competent institution has to address the institution of the previous Member State and information has to be forwarded from the latter to the former.

As a consequence and compared to the administrative burden under the current law, a second administrative step has to be taken, which thus increases the

burden of the handling of cases. This additional activity is certainly a disadvantage of the amendment. However, the additional burden could be facilitated if use were made of the information channel which serves for cases for which Article 62(3) of the Regulation applies. To get the data about the income earned in the previous State, the implementing rule in Article 54(2) of Regulation (EC) No 987/2009 could be extended to the situation under the amendment. Another or additional way could be the use of current forms for aggregation of periods including the data on income.

Apart from taking into account income earned in the previous Member State the competent institution applies its legislation. Particular rules existing in the previous Member State must not be applied. In particular ceilings provided for in the legislation of the previous Member State may not be taken into account by the competent institution.<sup>197</sup>

#### **1.15.3.1.2 Effects on the length of the awarding process**

A critical point of the amendment envisaged could be that it increases the length of the awarding of the benefit. Whether this would really be the case, is an open question, since the institutions are familiar with this situation, as it is identical or similar to what the calculation of the unemployment benefit requires from them in application of Article 62(3) of Regulation (EC) No 883/2004. But even if a certain delay occurred, the unemployment benefit could in favour of the claimant be awarded on a provisional basis according to what is laid down in Article 7 of Regulation (EC) No 987/2009.

#### **1.15.3.1.3 Implementing arrangements**

The realisation of the amendments under Options 3a and 3b would need a change of the wording in Article 61(1) of Regulation (EC) No 883/2004 in order to take into account income received in the previous Member State. The

---

<sup>197</sup> See the judgment in *Grisvard and Kreitz* EU:C:1992:368.

following sentence could be added to Article 61(1): “If insurance or (self-)employment completed in the competent Member State was less than one month/three months, salary earned in the previous Member State is also taken into account as if it had been earned in the competent Member State.

It has already been said (see above ‘Exchange of information’) that an extension of the duty resulting from Article 54(2) of Regulation (EC) No 987/2009 would be reasonable to conform with the requirements under the new mode of calculation.

### 3.2.3 Protection of rights

As every provision of Regulation (EC) No 883/2004, the provisions in Chapter 6, too, have to be guided by the wording, spirit and purpose of Article 48 TFEU. In the *Fellinger* case, in which it had to be decided which income is relevant for frontier workers, the CJEU also made an important statement about the general rule in Article 68(1) of Regulation (EC) No 1408/71 (now Article 62(1) of Regulation (EC) No 883/2004)<sup>198</sup> and held that the previous wage or salary which normally constitutes the basis of calculation of unemployment benefits is the wage or salary received from the last employment of the worker. In such a manner unemployment benefits are regarded as not to impede the mobility of workers and to that end seek to ensure that the persons concerned receive benefits which take account as far as possible of the conditions of employment, and in particular of remuneration, which they enjoyed under the legislation of the Member State of last employment.<sup>199</sup>

Nevertheless, we should keep in mind that the CJEU made a short hint at exceptional cases where the general rule alone was not fully appropriate. Obviously the CJEU referred to the then existing provision in Article 68(1), second sentence, of Regulation (EC) No 1408/71, which required that if the

---

<sup>198</sup> Judgment in *Fellinger* EU:C:1980:59, paragraph 7.

<sup>199</sup> Judgment in *Fellinger* EU:C:1980:59, paragraph 7.

person concerned had been in his or her last employment in that territory for less than four weeks, the benefits had to be calculated on the basis of the normal wage or salary corresponding in the place where the unemployed person is residing or staying to an equivalent or similar employment to his or her last employment in the territory of another Member State. This provision was not taken up by Regulation (EC) No 883/2004, and we think with good reason, because its application was burdensome and lacked certainty of law. Nevertheless, this abrogated provision contains a grain of salt of sound reason which may be useful to take into consideration with regard to the amendment discussed here. It is a strong argument to say that the exclusive calculation on the basis of the income from the last (self-)employment is not quite adequate if the time of employment completed in the competent Member State is very short. Sub-option 3a expresses this line of thought.

#### **1.15.3.1.4 *Advantages and disadvantages of the current calculation scheme***

The current scheme puts exclusive emphasis on the income earned in the Member State of (self-)employment. Income received elsewhere is irrelevant. This provision favours unemployed persons who earn a higher income in this Member State compared to that acquired in the previous State. And it disadvantages persons in an inverse income situation. As said above, Article 62 of Regulation (EC) No 883/2004 makes the benefit level dependent on chance.

This seems to be acceptable if the person concerned has completed a significant time in the Member State of (self-)employment. But is this solution acceptable if the period completed is very short, in the extreme case one day? The envisaged amendment seems to state it is not. To give an answer to this problem one has to check relevant criteria, whereby the yardstick is the protection of rights.

#### **1.15.3.1.5 *Equality of treatment/indirect discrimination***

In legal doctrine doubts have been cast upon the compatibility of Article 62(1) of Regulation (EC) No 883/2004 with provisions on the free movement of workers in view of the disadvantage for a worker who moves from a high-income country to a low-income country and becomes unemployed. Calculation of his or her unemployment benefit is done on her or his low wages in her or his country of employment. There are authors who criticise Article 62(1) of Regulation (EC) No 883/2004, saying that it is a wrong legal policy provision, but leaving it open to question whether the provision is a violation of Article 45 or 48 TFEU.<sup>200</sup> Yet many an author goes a step further. With reference to the aforementioned situation (movement from a high-wage country to a low-wage country) the argument of indirect discrimination is formulated. An author in the leading Austrian commentary on social security coordination discusses just this situation characterised by low wages for a very short period in his or her Member State of last employment in contrast to a higher income in the previous State and concludes the following<sup>201</sup>: “*In this way the person concerned can be treated worse than a person who has completed his or her periods of insurance and as a consequence his or her income basis in one and the same country. Article 62 may consequently lead to an indirect discrimination of migrant workers.*”<sup>202</sup>

#### **1.15.3.1.6 Justice and fairness**

Against the current provision in Article 62 of Regulation (EC) No 883/2004 we may also formulate doubts under the aspects of fairness and justice. It seems to be not quite fair or just if, in some cases, a person without having paid a reasonable amount of contributions and consequently being only weakly integrated<sup>203</sup> into the unemployment scheme is treated on an equal

---

<sup>200</sup> See for this opinion R. Waltermann, ‘Arbeitslosigkeit’, in (2006) *Europäisches Arbeits- und Sozialrecht* 2, 9140, paragraph 25.

<sup>201</sup> E. Felten, in B. Spiegel (ed.), *Zwischenstaatliches Sozialversicherungsrecht*, Manz, Wien, 2012, Article 62(1).

<sup>202</sup> Translation by Maximilian Fuchs.

<sup>203</sup> It has to be reminded that the CJEU in its consistent case law has held that with regard to unemployment benefits a real link of the person claiming the unemployment benefit and the labour market is an important element. See the judgments in

footing with other insured persons who have been living and working in this Member State for a longer time.

As was shown above (see above, 1) national unemployment benefit systems usually provide for statutory reference periods. From this we may derive that it is widely held that a sound system of defining the level of unemployment benefits should take into account a longer stretch of time to guarantee a level of benefits which corresponds to and is in line with contributions to an unemployment benefit scheme. In this way the level of benefits is defined not dependent on a very short income situation which by chance may favour or disadvantage the unemployed person, but based on the preceding income situation which compensates for possible lows and highs of earnings. The current law is not in line with the ideas behind statutory reference periods in national legislation, since even with the existence of such reference periods there is a gap in logic between national legislation and the mode of calculation in Article 62 of Regulation (EC) No 883/2004, since Article 62(2) requires the application of the calculation scheme of 62(1). If the period of income earned in the Member State of last (self-)employment is very short, the aim which national statutory reference periods wish to achieve is impeded.

*Example: A worker W has worked in Member State B for five months, earning a monthly salary of € 2,000. After that she takes up employment in Member State A where he or she draws a monthly salary of € 3,000. After two weeks he or she becomes unemployed. The reference period in this Member State's legislation is six months.*

On the basis of the present rule in Article 62(1) and (2) of Regulation (EC) No 883/2004 the reference period has to be respected, but the income to be used as calculation basis is exclusively that of the Member State A. In other words the reference period under national law loses its inherent logic, the logic

---

*D'Hoop*, C-224/98, EU:C:2002:432; *Ioannidis*, C-258/04, EU:C:2005:559; *Vatsouras and Koupatantze*, C-22/08, EU:C:2009:344.

requiring that income earned over a time span of six months has to be taken into account in order to establish a balanced and rational calculation basis. On the other hand, under the present law the momentary income at the time of becoming unemployed exclusively prevails. With good reason one can call this result, relying on the wording of the mandate, arbitrary. The dissatisfaction with this discrepancy between coordination law and domestic law could possibly be the reason why some Member States' institutions do not comply with Article 62 of Regulation (EC) No 883/2004. The competent institution in the case reported by the German expert (see below, 'Mapping') applied national rules for short-term (self-)employment against the clear wording of Article 62 of the Regulation. In addition, Article 62(1) could be a barrier to access to unemployment benefits. The calculation model reported for the Contribution-based Jobseekers' Allowance in the UK (see below, 'Mapping') provides for a 26-week minimum limit for national insurance contributions which the claimant must have paid during a fixed period before the occurrence of unemployment in order to become entitled to the allowance. For the worker in the example above, leaving out income in Member State B seems to deprive him or her of the allowance. Against this background sub-option 3a and to a higher degree Sub-option 3b further the protection of rights in a more balanced way than the present provision of Article 62 of Regulation (EC) No 883/2004.

It cannot be denied that the new law could be to the detriment of those migrant workers who in their new employment receive a higher income compared to the income earned in the previous Member State. As a consequence the level of the unemployment benefit could be significantly lower. However, this is in line with the logic of the new mode of calculation: balancing the income fluctuations. Moreover, it is not against what is required by Article 45 and Article 48 TFEU. It is consistent case law of the CJEU that "*Treaty rules on freedom of movement cannot guarantee to an insured person that a move to another Member State will be neutral as regards social security. In view of the*

*disparities existing between the schemes and legislation of the Member States in this field, such a move may, depending on the case, be more or less financially advantageous or disadvantageous for the person concerned.*<sup>204</sup> To argue that a migrant worker having worked for a very short period in a Member State should be treated in the same way, if it is about calculation of benefits, as persons who have worked in this Member State for a longer period and have paid contributions to the unemployment benefit scheme correspondingly, is difficult to justify.

#### 3.2.4 No risk of fraud and abuse

We have already discussed this topic above under Option 1 and 2. A few observations may be added. In some countries there is an ongoing discussion about fraud and abuse of social rights with regard to immigrants, in particular those from low-income countries. A less critical argument is called social or benefit tourism. On second thoughts the arguments do not hold water.<sup>205</sup> Free movement of workers is an essential principle of market economies. The right to free movement realises what economists call efficient allocation of resources. This economic thinking was already present in the Spaak Report.<sup>206</sup> The Spaak Report envisaged, by means of eliminating obstacles to the free movement of factors of production, that labour movements were stimulated from Member States of low productivity to industrial regions and sectors where productivity and demand for labour were highest.<sup>207</sup> Consequently, the EEC Treaty enshrined the freedom of movement of workers as a fundamental right. This fundamental right is secured by guaranteeing free access to employment and a ban on discrimination. This right is furthermore flanked by social security coordination, which extends freedom of movement and equal treatment to the arena of social security.

---

<sup>204</sup> See for this the recent judgment in *Jeltes* EU:C:2013:224, paragraph 44.

<sup>205</sup> Cf M. Fuchs, 'Freizügiger Sozialtourismus?', (2014) *ZESAR*, 103 et seq.

<sup>206</sup> 'Rapport des Chefs de Délégation au Ministre des Affaires Étrangères', 1956.

<sup>207</sup> Cf S. O'Leary, 'Free movement of persons and services', in P. Craig & G. De Búrca (ed.), *The Evolution of EU Law*, Oxford University Press, Oxford, 2011 (2<sup>nd</sup> edition), 499 (503).

Therefore, the exercise of these rights can never represent abuse or fraud. To speak about fraud and abuse is justified only for a quite different behaviour that takes place. For example, it is well known that a – fortunately only very small – portion of immigrants falsifies documents or violates their duties of information in order to become entitled to social security benefits from the host State. To prevent this or fight against this is an affair of criminal law and of the law enforcement authorities. It cannot be entrusted to coordination law.

We think that from the angle of abuse and fraud the mode of calculation of benefits used under the regime of coordination presumably plays a minor part. But it should be remembered that in the economic theory on unemployment insurance the problem of moral hazard plays a role.<sup>208</sup> Reference is made to the behaviour of unemployed persons who might be tempted to stay unemployed and receive the unemployment benefit instead of taking up a job even if the income is lower. As a consequence, it is requested that unemployment insurance is shaped in a way that avoids incentives which could contribute to such behaviour.

*Example: A person, after working in a low-wage country, has got a well-paid job in another Member State and becomes unemployed after less than a month. Although he or she could get a job in the former Member State, he or she is not inclined to take up employment there due to the high level of the unemployment benefit (compared to the salary to be expected) acquired after a very short time of employment and based on the exclusive relevance of income earned in this country of employment.*

The current law may favour to behave in this way.<sup>209</sup> The envisaged amendment of the calculation model could possibly be a disincentive to prefer

---

<sup>208</sup> R. Chetty, 'Moral hazard vs. liquidity and optimal unemployment insurance', in (2008) *Journal of Political Economy*, 116 (2), p. 173-234.

<sup>209</sup> See for this argument also E. Felten, in B. Spiegel (ed.), *Zwischenstaatliches Sozialversicherungsrecht*, Manz, Wien, 2012, Article 62(1), who writes that Article 62(1) has effects restricting freedom of movement, "when persons, who despite menacing unemployment rather accept the loss of employment instead of taking up lower-paid employment in another EU country, in order to avoid a lower benefit level in the case of later unemployment" (translation by M. Fuchs).

unemployment to entrance into the labour market in a low-wage country, since the unemployment benefit would be significantly lower due to the taking into account of the former income in this country.

### 3.2.5 Potential financial implications

As far as financial implications are concerned the current law shows a clear tendency to put a financial burden on the Member State of (self-)employment. This risk allocation is totally justified as long as the competent institution has received a sufficient amount of contributions by the now unemployed person. But here again justification is doubtful if only a short time of employment has created the right to an unemployment benefit.

If we assume migration from low to high-wage countries as the typical case, the latter are disadvantaged since they have to shoulder the expenses for unemployment benefits on the basis of their wage levels without getting corresponding contributions if the period of (self-)employment is short. Compared to this situation a one or three-month clause decreases this disparity, since wages earned prior to the employment in the competent Member State have to be taken into account. Certainly in cases of migration from a high-wage country to a low-wage country the inverse is the case. Apart from the fact that this is the statistically rarer situation in labour migration, we would value the protection of rights higher than the financial interests of the institutions affected. The reason is that the unemployed persons deserve the protection, since they have earned this protection through their contributions. We should not forget that critics of the amendments might use the financial argument with reference to the numerous immigrants who after a certain amount of time return to their country of origin. In this respect it has to be considered that the Member State of origin does not apply aggregation if claims are made, since Article 61(2) of Regulation (EC) No 883/2004 precludes it. And, obviously the institution of the Member State of origin benefits from the one-month/three-month rule.

The mandate requires answers to how the envisaged amendments under Option 3 respond to the specified criteria. Therefore, the foregoing analysis laid emphasis on elaborating the cons and pros which can be identified vis-à-vis the current law and its prospective changes, and its effects on the parties involved: the unemployed persons and the institutions which administer the award of unemployment benefits. However, persons not unemployed but in work and financing the benefits must not be forgotten. National unemployment schemes need to be shaped in a way that they obey sound economic requirements. A balance has to be found between the interests which result from the need of protection, the economic use of financial resources and a smooth administrative operation. Since secondary law has to be in accordance with primary law, questions of compatibility with Article 48 TFEU had to be raised.

Is a change of the current law recommendable? It depends. It depends on the preferences of the reader, observer and, needless to say, of the decision-making bodies. It is quite possible that who studies the presentation of the cons and pros is in favour of the *status quo* as laid down in Article 62 of Regulation (EC) No 883/2004. Its simplicity and its easy administration may convince him or her, putting less weight on aspects of fairness and justice or compatibility problems. Then again other experts may consider administrative problems to be rather easily solved, thinking that the increase in administrative burden is slight and the experience with the same administrative practice which applies for frontier workers will help to manage the handling of cases. They might see clear advantages with regard to the protection of the unemployed and a better realisation of the aims, which are inherent to national unemployment benefit schemes, on the coordination level. It has to be reminded that the mandate formulates as one of the objectives to ensure that the financial burden for paying unemployment benefits does not arise in situations where mobile EU workers have not yet made a significant contribution to the scheme of the new Member State. As was shown above, the

present law does not live up to this aim in cases of migration from low to high income countries if the person concerned becomes unemployed after a very short time of (self-)employment. Moreover, Article 62(1) of Regulation (EC) No 883/2004 requires to exclusively base the calculation on the income of the Member State of last employment, even when the income period is very short, in the extreme event only one day. It follows that the risk of what the mandate describes as arbitrary results when the calculation of the amount of the benefit is based on very short periods of employment, can materialise. Further weighing strategies could be continued.

	Clarification	Simplification	Rights	Administr. burden	Fraud and abuse	Financial implications
Option 3a/b	≈	≈	+	≈	+	+

## Conclusion

In our report we have outlined the pros and cons with regard to Options 1, 2 and 3 as they were formulated and explained in the mandate. The Executive Summary contains an abridgment of the arguments we considered decisive for the assessment of the different options.

In a nutshell, the report can be summarised as follows:

To decide in favour of Option 1 would mean the preservation of the legal *status quo* as it is laid down in Article 61(1) of Regulation (EC) No 883/2004. For a number of reasons, the mandatory uniform application of Article 61 of Regulation (EC) No 883/2004 in the Member States is not achieved. Several disadvantages may be stated of the present legal situation (weak integration of the unemployed person into the labour market of the new Member State, the

financial burden for this State for lack of significant contributions to its unemployment benefit scheme) due to the fact that even a one-day employment is sufficient to enjoy the benefits with application of the aggregation principle. On the other hand, Article 61 of Regulation (EC) No 883/2004 is easy to apply and offers legal certainty and in particular substantially protects the rights of unemployed persons. And, for the increased financial burden of the State of last employment a remedy could be the introduction of a reimbursement scheme whereby the one contained in Article 65 of Regulation (EC) No 883/2004 could serve as a template.

Option 2 contains the introduction of a qualifying period (one month/three months) the completion of which is necessary for the application of the principle of aggregation. With a view to Article 48 and Article 45 TFEU and the corresponding case law of the CJEU, serious doubts may be cast on the solutions proposed under Option 2. As a consequence, to avoid the risk of violation of primary law, protection of the unemployed persons has to be secured through the substitution of the State of last employment by a different Member State. Our analysis shows that all solutions for the definition of the “right” State have significant drawbacks. The assessment of Option 2 puts emphasis on the disadvantages with regard to nearly all the criteria which the mandate considers as relevant. The release of the financial burden of the Member State of last employment, the most important advantage resulting from Option 2, could be realised on another route which would at the same time avoid the disadvantages mentioned before. A reimbursement scheme as proposed above could offer the necessary compensation.

In cases of short employment in the new Member State, instead of a minimum period for aggregation, Option 3 wishes calculation to also be based on the salaries earned in the previous Member State(s). Its simple application and administration speaks in favour of the present calculation model in Article 62 of Regulation (EC) No 883/2004, since there is no need to seek information about the income in the previous State. The main dilemma of the present

calculation scheme is the fact that it is based on chance. It is in favour of migrant workers coming from low-wage to high-wage employment and is to the detriment in the inverse case. The financial burden of the Member States concerned increases or decreases correspondingly. The balancing effect which is achieved in most Member States which provide for reference periods is not achieved at the coordination level. Therefore, in legal doctrine many an author considers Article 62 of Regulation (EC) No 883/2004 as wrong legal policy and it is argued that indirect discrimination in terms of free movement of workers may take place. The mandate, especially the objective described under (2), intends that the financial burden to pay unemployment benefits does not arise in situations where mobile EU workers have not yet made a significant contribution to the unemployment scheme of the new Member State. Under the present law, this aim is hard to achieve in many cases.

## Mapping

According to point 6 of the mandate a mapping has to be included of the specific impact of the proposed amendments in eight to ten Member States with the highest number/share of EU emigrants and immigrants. Information was gathered from **France, Germany, Italy, the Netherlands, Poland, Romania, Spain** and the **United Kingdom**.

In principle most of these Member States apply the one-day rule. However, in **France** there is no specific national law or administrative circular which takes a precise position on the “one-day rule”. Circular Unédic 2010-23 of 17 December 2010 only provides that “*the latest period of employed activity must have been completed in France*”. In practice, central social security authorities as well as the French central unemployment institution (*Unédic*) consider that a literal interpretation of Article 61 should prevail. This means that aggregation may start after one day of work in France or even less (in some cases, aggregation has seemingly been implemented for migrants who had worked a few hours under a so-called ‘*chèque emploi service*’, a simplified

system of salary payment). However, the French national expert pointed out that since no domestic rule expressly consolidates the one-day rule, local unemployment institutions may alternately decide that one day is not sufficient for the purpose of aggregation. A uniform application in France of the one-day rule is therefore not guaranteed.

If the State of last employment is **Greece**, the competent institution, where the application is submitted, is obliged to take into consideration the periods of insurance and employment completed in another Member State. However, according to the Greek national expert, a one-day insurance/employment period completed in Greece is often treated by the Greek institution as a deceitful/abusive action, targeting at the granting of the unemployment benefit. Thus, a period longer than one day, completed in Greece, is mostly required. However, while periods of very short work in a Member State can give rise to further examination by the institutions, we believe that the automatic assumption that most cases concerned are about deceitful or abusive action seems to be problematic and a thorough examination on a case-by-case basis is required.

The **United Kingdom** works in qualifying weeks. So for example to meet the first contribution condition for Contribution-based Jobseeker's Allowance (JSA(C)) a claimant must have paid, or have been treated as having paid, national insurance contributions for at least 26 (weeks) times the Lower Earnings Limit (LEL) for that tax year. The United Kingdom does not aggregate insurance from another Member State until the minimum period of insurance of one week in the United Kingdom has been completed, i.e. 'registered' on the system.

Although we cannot provide data for **Finland** and **Denmark**, it should be noted that these two Member States have introduced a specific waiting period for the purpose of aggregating periods of unemployment insurance in their respective national legislations.

Section 9 of Chapter 5 of the **Finnish Unemployment Security Act 1290/2002** reads as follows (translation):

*“Insurance and employment periods completed in another State*

*If periods of insurance or employment completed in another State must be included in the previous employment requirement under a social security agreement concluded by Finland or the provisions of the Social Security Regulation or the Basic Regulation, these periods shall only be taken into account if the person concerned has pursued an activity as an employed person in Finland for at least four weeks or as a self-employed person for at least four months immediately before becoming unemployed.”*

§2 of the **Danish Ordinance No 490 of 30 May 2012** on the Danish unemployment insurance provides that if a person who has not been a member of a Danish unemployment insurance fund within the last five years, but has been insured in another Member State, this person’s periods of insurance completed in another Member State will be taken into account only under the following conditions:

Firstly, the person must apply in writing for membership of a Danish unemployment insurance fund within eight weeks after he or she ceased to be covered by the other Member State's unemployment insurance scheme.

Secondly, within this eight-week period the person must have taken up employment or self-employment in Denmark.

Thirdly, prior to unemployment the person must have worked continuously on a full-time basis, i.e. for at least 296 working hours in the past 12 weeks or three months, or, for partially employed persons, 148 working hours in the past 12 weeks or three months. In the case of self-employment, the equivalent condition is eight full weeks within a period of 12 weeks or three months prior to the unemployment.

It is a huge concern how migrant workers could cope with a situation where they are denied aggregation and benefits in the last Member State of employment if a threshold of one or three months was implemented. In Finland and Denmark this situation can already occur because of their national legislations. If relevant data were available, one could analyse how the persons concerned in these two Member States cope with the situation.

As for the numbers of cases concerned **France** provided data for the year 2014, the other Member States for 2013. **Germany** and **Italy** did not provide data. The Italian national expert explained that INPS is not able to detect in detail the required information, nor to give an estimate of such data, since there is currently no EU-wide system and information exchanges are still paper-based, not having implemented the Electronic Exchange of Social Security Information (EESSI) procedure. The difference in numbers between **France** and other Member States, particularly the **United Kingdom**, is remarkable.

Periods in last State of employment	F R	N L	P L	E S	R C	U K
1 day	n · a ·	n · a ·	n · a ·	n · a ·	n · a ·	n · a ·
1 day to 1 month	3 , 7 8 4	2 6	1 1 5	1 , 1 9 5	2	1 7
1 month to 3 months	1 , 2 2 0	2 7	2 6 5	5 3 4	2	1
3 months or more	2 , 5 7 1	1 0 7	6 8 2	7 4 2	8	1 2
Total	7 , 5 7 5	1 6 0	1 , 0 6 2	2 , 4 7 1	1 2	3 0

**Poland** was also able to provide data of rejected claims in 2013: 1,062 benefits faced 454 negative decisions. On the basis of up to one month insurance in Poland, 49 claims were rejected (115 benefits awarded); on the basis of more than one and less than three months of insurance in Poland, 113 claims were rejected (265 benefits awarded). The data do not show the reasons for the rejections.

The Department for Work and Pensions of the **United Kingdom** stated in a note accompanying the provided figures that these cases represent a small subset of job-seeking EEA migrants in the United Kingdom. In the same period around 90,000 JSA income-based (listed as a special non-contributory benefit in Regulation (EC) No 883/2004) claims were made by EEA migrants. In addition, 3,594 migrants used the Regulation to import their unemployment benefit into the United Kingdom. In isolation therefore the data provided does not serve to fully illustrate the United Kingdom's concerns with the social security coordination Regulations in this area or more widely.

A particular interest was in the share of nationals of the Member State concerned who claimed unemployment benefits after very short periods of work in the last Member State of employment. There is the assumption that nationals of the receiving State could use the one-day rule when going back to their Member State of origin in order to circumvent the limited export period under Article 64 of the Regulation. Only one Member State could give precise data on the share of nationals in the figures above. In **Romania** factually all of the migrant workers concerned were Romanian citizens. In **Poland** the share is estimated to amount to 90%. As for **Spain** it was not possible to obtain a breakdown by nationality of the persons concerned and there is no information in order to make a reliable estimation of the percentage of Spanish nationals among them. However, the national expert pointed out that it is logical to think that the persons concerned probably have a strong link with Spain as far as they want to receive an unemployment benefit in Spain. It can be assumed that

they have information regarding the amount of these benefits and their length. Therefore, the expert believes that a significant percentage of them are expected to be Spanish nationals that want to come back to Spain after a period abroad.

The **German** national experts reported a case which shows that the competent institution did not take into account income pursuant to Article 62 of Regulation (EC) No 883/2004, since the income received by the Belgian frontier worker in Germany was earned within less than 150 days. According to German law, in these cases a fictitious income forms the basis for calculation. The *Landessozialgericht* of the Land Nordrhein-Westfalen held that the arguments against the current law in Article 62 of Regulation (EC) No 883/2004 cannot justify the non-application of Article 62 in view of the clear wording. The *Bundessozialgericht* confirmed the judgment (its reasons are not yet published).

## Introduction

Within the framework of the FreSsco project, the European Commission mandated an Ad Hoc Analytical Study Group of FreSsco experts to provide a legal analysis in order to assess the impact of possible amendments to the EU social security coordination rules which would clarify its relationship with Directive 2004/38/EC as regards economically inactive persons.

Since the coming into force in 2010 of the modernised social security coordination Regulations, i.e. Regulations (EC) No 883/2004 (BR) and (EC) No 987/2009 (IR), there has been both political and legal debate about the rights of migrant EU citizens who are not economically active. Several Member States have raised concerns about the possible abuse of the right of free movement of workers.

Against this backdrop, requests for preliminary rulings were submitted by national courts to the Court of Justice of the European Union (CJEU) aimed at interpreting current EU law, notably the relationship between Regulation (EC) No 883/2004 and Directive 2004/38/EC, with regard to access of inactive migrants to welfare benefits of the Member States.

Following the two recent rulings in cases *Brey*<sup>210</sup> and *Dano*,<sup>211</sup> the CJEU clarified that in the case of economically inactive EU mobile citizens, the income-related special non-contributory cash benefits falling under the scope of Regulation (EC) No 883/2004 are to be treated as social assistance within the meaning of Directive 2004/38/EC. This means that they do not need to be paid during the first three months of residence, and thereafter only if the recipient has a legal right of residence in the host Member State.

In view of these judgments, the European Commission (EC) considers it may be necessary to amend the social security coordination rules, to take into

---

<sup>210</sup> Judgment in *Brey*, C-140/12, EU:C:2013:565.

<sup>211</sup> Judgment in *Dano*, C-333/13, EU:C:2014:2358.

account the direction taken by the CJEU. The aim of the possible amendment is to ensure the uniform application of these judgments in the Member States and to provide more legal clarity for EU citizens, the Member States and their social security institutions.

The FreSsco network was asked to perform a legal analysis of possible amendments of Regulation (EC) No 883/2004 following judgments of the CJEU in the *Brey* and *Dano* cases. The objective of the report is thus to analyse the three possible amendments proposed by the EC:

- **Option 1:** *Status quo*: direct application of the case law of the CJEU in *Brey* and *Dano*, allowing for derogations from the equal treatment principle as regards persons who do not have a legal right of residence, or have resided for less than three months in the host State.
- **Option 2:** amendment of Regulation (EC) No 883/2004 to take into account the case law of the CJEU.
  - **Sub-option 2a:** limitation of the equal treatment principle for income-related special non-contributory cash benefits, under Regulation (EC) No 883/2004 by referring to the provisions of Directive 2004/38/EC.
  - **Sub-option 2b:** removal of the income-related special non-contributory cash benefits from the material scope of Regulation (EC) No 883/2004. The equal treatment principle and other provisions from the Regulation no longer apply.

## Executive summary

In the *Brey* and *Dano* rulings, the Court of Justice of the European Union (CJEU) clarified that in the case of economically inactive EU mobile citizens, the income-related special non-contributory cash benefits (SNCBs) falling under the scope of Regulation (EC) No 883/2004 are to be treated as social assistance within the meaning of Directive 2004/38/EC (Residence Directive). As a consequence thereof, the FreSsco network was asked to perform a legal

analysis of possible amendments of Regulation (EC) No 883/2004 following judgments of the CJEU in the *Brey* and *Dano* cases. The objective of the report is thus to analyse the three possible amendments proposed by the EC:

- **Option 1:** *Status quo*: direct application of the case law of the CJEU in *Brey* and *Dano*, allowing for derogations from the equal treatment principle as regards persons who do not have a legal right of residence, or have resided for less than three months in the host State.
- **Option 2:** amendment of Regulation (EC) No 883/2004 to take into account the case law of the CJEU.
  - **Sub-option 2a:** limitation of the equal treatment principle for income-related SNCBs, under Regulation (EC) No 883/2004 by referring to the provisions of Directive 2004/38/EC.
  - **Sub-option 2b:** removal of the income-related SNCBs from the material scope of Regulation (EC) No 883/2004. The equal treatment principle and other provisions from the Regulation no longer apply.

The purpose of the report is to identify and assess how the proposed options respond to the following criteria:

- clarification;
- simplification;
- protection of rights;
- administrative burden and implementation arrangements;
- risk of fraud and abuse;
- potential financial implications.

The differences between the three proposed options appear to be narrow. Whereas Option 1 (legislative status quo) entails that access to social assistance is subject to a condition of legal residence in the host Member State such as defined by the recent case law of the CJEU, Option 2a aims at

reaching an equivalent effect with the transposition of the CJEU case law into Regulation (EC) No 883/2004 (limitation of the principle of equality of treatment for SNCBs). Option 2b would have a broader impact: by deleting the category of SNCBs, ‘mixed benefits’ may no longer take advantage of any of the coordination principles.

The assessment of these three options takes into account the fact that it is still unclear how the *Dano/Brey* cases are to be interpreted. How will the CJEU analyse further claims to SNCBs by jobseekers, former workers, family members or workers with low income? May the existence of a ‘genuine link’ between the claimant and the Member State where the claim is made support the right to social assistance and how would this link be assessed? How will the requirement of ‘financial solidarity’ impact the access to social assistance? No response is available yet.

Even if the objective of unifying the regime of social assistance for migrants into one single instrument could improve clarity and simplicity, the complex and unstable legal context makes it necessary to highlight the drawbacks of the European Commission proposals. The rapporteurs also kept in mind the objective to preserve the coherence of coordination rules and to protect the social rights of mobile citizens within the European Union.

1. The deletion of SNCBs as a distinct legal category (Option 2b) would have consequences going far beyond the CJEU case law. It would raise the cost of administering SNCBs, decrease legal certainty and threaten the protection of the rights of migrants and hinder the fight against fraud, abuse and error. In particular, it will not answer the question of how to treat Union citizens’ entitlement to SNCBs in future cases, leaving these types of social benefits without any specific regulation somewhere between the rules of Directive 2004/38/EC, Regulation (EC) No 883/2004 and EU primary law.
2. The limitation of the principle of equality of treatment for SNCBs (Option 2a) would raise the delicate question how to concretely insert Article 24 of the

Residence Directive into the coordination regime. A thorough analysis shows that none of the sub-options envisaged for the insertion of Article 24 are satisfactory. The fact that the CJEU case law is not stable yet makes it even less reasonable to set rules aiming to limit the equal treatment principle for SNCBs. The amendment of the coordination Regulations would in any case undermine the historical compromise of Regulation (EEC) No 1247/92 on SNCBs.

3. The proposal to retain the status quo (Option 1) would give the CJEU time to refine its case law. In this respect, this option could be a reasonable choice. Nevertheless, it also has many drawbacks. Member States' discretion to grant entitlement to SNCBs would be considerable, a situation which would be ill-adapted for migrant situations. Some Member States could take advantage of this possibility to exclude non-active Union citizens from access to SNCBs. Many deprived migrants might find themselves without social assistance. There could be a flow of cases before courts concerning the interpretation in concrete cases of the Residence Directive (in connection with coordination rules) and of Treaty provisions. Without EU guidance, national welfare institutions may go through a period of turbulence. Option 1 is not supposed to be a long-term option. The CJEU case law should be considered as a work in progress. A wait-and-see position should be appropriate for the next few years by analogy with what happened with the patient mobility case law. Later, legislative action should be taken at its best on the basis of a matured case law.

A common consequence of the three propositions is that protection of citizens' rights would be in danger. Administrative burden would also increase. There would be no guarantee that the overall expenses of social assistance by EU countries in favour of migrants would diminish. As far as fraud and abuse are concerned, the risk of double payment in the Options 1 and 2a) seems to be largely reduced by the Regulation even if undue payments could increase for practical reasons. On balance, Option 2b would hinder the fight against fraud,

abuse and error more than facilitate it. The coherence and the rationale of the coordination rules would be undermined.

The discussion within our small group of experts showed how difficult it would be to achieve a solution to which everyone could entirely agree. The report is the result of a compromise on some points, but the main legal analysis, arguments and outcomes are supported by the entire group. To help the reader more easily identify our conclusions concerning the different factors in relation to each option we used a system of marks where (++) means ‘very positive’, (+) means ‘positive’, (=) means neutral, (-) means ‘negative’, (--) means ‘very negative’, and (?) means ‘unclear’. The following table presents the results of our evaluation of the three options.

	Clarification	Simplification	Rights	Admin. burden	Fraud & abuse	Financial impact
Option 1	-	-	-	-	=	?
Option 2a	-	--	--	-	=	?
Option 2b	--	--	--	--	-	?

In conformity with the mandate, three categories of alternative proposals are made in the report with the objective to promote a balanced relationship between both instruments, taking into account the free movement of Union citizens and the principle of proportionality:

1. If the option of a status quo (Option 1) was further explored, some initiatives would need to be taken to clarify the relationship between Regulation (EC) No 883/2004 and Directive 2004/38/EC, for instance by drafting guidelines. The main goal of such guidelines would be to strike a

correct balance between the equal treatment provision of Regulation (EC) No 883/2004 and legal residence requirements for non-active persons.

2. If an explicit integration of the relevant articles of Directive 2004/38/EC into the SNCB title of Regulation (EC) No 883/2004 were to remain on the agenda, it would be possible to translate the residence requirements of Directive 2004/38/EC explicitly into the text of Regulation (EC) No 883/2004 through an ‘Option 4’ which would connect the social assistance rights to the length of stay.

3. Instead of adapting Regulation (EC) No 883/2004, it would be conceivable to protect its coherence. A first option would be to remove all doubts about the relationship between Regulation (EC) No 883/2004 and Directive 2004/38/EC by defining a status of *lex specialis* for the coordination Regulation. A second option would be to provide a definition of social assistance in Directive 2004/38/EC that would not encompass SNCBs included in Annex X of Regulation (EC) No 883/2004.

## 1 Legal background

### 1.1 Rules applicable before special non-contributory cash benefits (SNCBs)

With regard to the material scope of the coordination rules, ancient Regulation (EEC) No 3/58 and Regulation (EEC) No 1408/71 (in its initial version of 1971) made a basic distinction between social security and social assistance. Whereas the old regulations applied to all social security schemes, they did not cover social and medical assistance.

In several cases brought before the Court of Justice of the European Union (CJEU) in the 1970s and 1980s, the delineation between the fields of social security and social assistance was discussed by individuals and national institutions. Supporting a dynamic interpretation of the field of application of social security coordination rules, the CJEU ruled that the concept of social security should be interpreted broadly. The reasoning was especially adapted to hybrid/mixed benefits, which have simultaneous ties with social security and social assistance. In *Frilli*<sup>212</sup> for instance, the CJEU ruled that “*Although it may seem desirable, from the point of view of applying the regulation, to establish a clear distinction between legislative schemes which come within social security and those which come within assistance, it is possible that certain laws, because of the classes of persons to which they apply, their objectives, and the detailed rules for their application, may simultaneously contain elements belonging to both the categories mentioned and thus defy any general classification*”.

The attraction of benefits aiming to guarantee a subsistence level in the area of social security was explained in the same case by the fact that they confer on recipients a “*legally defined position giving them the right to a benefit which is analogous to a social security benefit*”. Mixed benefits have “*a double function; it consists on the one hand in guaranteeing a subsistence level to*

---

<sup>212</sup> Judgment in *Frilli*, C-1/72, EU:C:1972:56.

*persons wholly outside the social security system, and on the other hand in providing an income supplement for persons in receipt of inadequate social security benefits*". The CJEU concluded in *Frilli* that these benefits come within the field of social security "covered by Article 51 of the Treaty and within the regulations adopted in application of that article".

This reasoning was repeated on many occasions about invalidity,<sup>213</sup> disability<sup>214</sup> or old-age<sup>215</sup> benefits. The term 'benefits' was also understood in the widest possible sense as referring to all benefits including all fractions thereof, chargeable to public funds, increments, revaluation allowances or supplementary allowances.<sup>216</sup> Provided that they were awarded on the grounds of legally defined criteria, all benefits connected to a social security risk falling within the scope of the regulations were covered by coordination rules irrespective of the fact that they were classified as 'social assistance' under national law.<sup>217</sup>

Most welfare benefits therefore fell in the field of application of the coordination Regulations. The principles of equality of treatment, of aggregation and of export of benefits were entirely applicable. A migrant could not be denied a mixed benefit in a Member State where he or she was actually residing for the sole reason that he was not a national of that Member State. A person could not be precluded from acquiring or retaining entitlement to such benefits on the sole ground that he or she did not reside within the territory of the Member State in which the institution responsible for payment was situated.<sup>218</sup>

---

<sup>213</sup> Judgment in *Biason*, C-24/74, EU:C:1974:99.

<sup>214</sup> Judgment in *Stanton Newton*, C-356/89, EU:C:1991:265.

<sup>215</sup> Judgment in *Giletti*, C-379, 380, 381/85 and 93/86, EU:C:1987:98.

<sup>216</sup> E.g. the judgment in *Biason* EU:C:1974:99, paragraph 14.

<sup>217</sup> E.g. the judgment in *Giletti* EU:C:1987:98, paragraph 10.

<sup>218</sup> Judgment in *Giletti* EU:C:1987:98, paragraph 17; judgment in *Biason* EU:C:1974:99, paragraph 22.

Nevertheless, the expansion of the case law was not limitless. First, discretionary benefits and general minimum income remained excluded from the scope of coordination rules. Second, in *Stanton Newton*<sup>219</sup> the CJEU made a subtle distinction based on the status of the migrant worker. It ruled that “*legislative provisions of a Member State cannot be regarded as falling within the field of social security within the meaning of Article 51 of the Treaty and Regulation 1408/71 in the case of persons who have been subject as employed or self-employed persons exclusively to the legislation of other Member States*”. Otherwise, “*the stability of the system instituted by national legislation [...] could be seriously affected*”. The limit fixed in *Stanton Newton*, not far from the modern concept of ‘genuine link’, was justified by the fact that the provisions of Regulation (EC) No 1408/71 “*cannot be interpreted in such a way as to upset the system instituted by national legislation*”.

## **1.2 The concept of SNCBs and the rationale of Regulation (EEC) No 1247/92**

The CJEU was aware of the problems deriving from its case law on national social protection schemes. It however considered that “*these difficulties, taken as a whole, can only be resolved within the context of a legislative action taken by the Community.*”<sup>220</sup>

It took years for Member States to amend Regulation (EEC) No 1408/71. The initial proposal from the European Commission was issued in 1985<sup>221</sup> whilst the vote of the Council occurred only seven years later. Regulation (EEC) No 1247/92 of 30 April 1992 instituted the category of “special non-contributory cash benefits” with the design to impose specific rules for benefits which fall simultaneously within the categories of social security and social assistance.

---

<sup>219</sup> Judgment in *Stanton Newton* EU:C:1991:265.

<sup>220</sup> Judgment in *Frilli* EU:C:1972:56, paragraph 21.

<sup>221</sup> COM (85) 396 final, OJ C 240, 21.09.1985, p. 6-8.

Regulation (EEC) No 1247/92 was based on a compromise. One major advantage for migrant people deriving from case law was abolished: mixed benefits were no longer exportable. To make up for this important restriction to the free movement of workers, Regulation (EEC) No 1247/92 reinforced the principle of equality of treatment. Not only the condition of nationality was inapplicable, but all forms of indirect discrimination were eliminated through the principles of aggregation and assimilation.<sup>222</sup> Also, the restriction designed by the CJEU in *Stanton Newton* was removed: benefit entitlement was no longer conditional on the claimant having previously been subject to the social security legislation of the State in which he or she applied for the benefit, whereas this was the case prior to the entry into force of Regulation (EEC) No 1247/92.<sup>223</sup>

In *Dano*, the CJEU takes good note of this legislative compromise: “*The specific provision which the EU legislature thus inserted into Regulation 1408/71 by means of Regulation No 1247/92 is thus characterised by non exportability of special non-contributory cash benefits as the counterpart of equal treatment in the State of residence.*”<sup>224</sup>

The rationale of Regulation (EEC) No 1247/92 has been well explained by the CJEU. The system established “*contains coordination rules whose very purpose, as is clear from the sixth recital in the preamble to Regulation No 1247/92, is to protect the interests of migrant workers in accordance with the*

---

<sup>222</sup> See Article 10(a) of Regulation (EEC) No 1408/71 (amended): the institution of a Member State under whose legislation entitlement to SNCBs is subject to the completion of periods of employment, self-employment or residence shall regard, to the extent necessary, periods of employment, self-employment or residence completed in the territory of any other Member State as periods completed in the territory of the first Member State. Also, where entitlement to an SNCB granted in the form of a supplement is subject, under the legislation of a Member State, to receipt of a social security benefit and no such benefit is due under that legislation, any corresponding benefit granted under the legislation of any other Member State shall be treated as a benefit granted under the legislation of the first Member State for the purposes of entitlement to the supplement.

<sup>223</sup> Judgment in *Snares*, C-20/96, EU:C:1997:518, paragraph 50.

<sup>224</sup> Judgment in *Dano* EU:C:2014:2358, paragraph 54.

provisions of Article 51 of the Treaty.”<sup>225</sup> Discussing Article 70(4) of Regulation (EC) No 883/2004, which introduces the principle of the *lex loci domicilii* for SNCBs, the CJEU indicates that “that provision is intended not only to prevent the concurrent application of a number of national legislative systems and the complications which might ensue, but also to ensure that persons covered by Regulation 883/2004 are not left without social security cover because there is no legislation which is applicable to them.”<sup>226</sup> In *Snares*, the CJEU ruled that Regulation (EEC) No 1247/92 was compatible with Article 51 of the EEC Treaty (now 48 TFEU) even if the application of the specific coordination rules on SNCBs “could have the effect of diminishing the means of the person concerned”. The transfer of SNCBs was anyway immediate: the loss of SNCBs in the former State of habitual residence was immediately compensated in the new State of habitual residence.

### **1.3 SNCBs regime: What would have been Mr Brey and Ms Dano’s rights under the exclusive application of Regulation (EC) No 883/2004?**

#### *1.3.1 Regime*

Regulation (EC) No 883/2004 consolidates the category of SNCBs. It contains a precise definition of SNCBs such as set out in Regulation (EC) No 647/2005 of 13 April 2005 amending Regulation (EEC) No 1408/71. If it does not cover social and medical assistance, “[t]his Regulation shall also apply to the special non-contributory cash benefits covered by Article 70” (Article 3(5)). SNCBs are defined as “benefits which are provided under legislation which, because of its personal scope, objectives and/or conditions for entitlement, has characteristics both of the social security legislation referred to in Article 3(1) and of social assistance” (Article 70(1) BR).

---

<sup>225</sup> Judgment in *Snares* EU:C:1997:518, paragraph 48.

<sup>226</sup> Judgment in *Brey* EU:C:2013:565, paragraph 50.

Modernised rules of coordination state that SNCBs can either provide “*supplementary, substitute or ancillary cover against the risks covered by the branches of social security referred to in Article 3(1), and which guarantee the persons concerned a minimum subsistence income having regard to the economic and social situation in the Member State concerned*” or “*solely specific protection for the disabled, closely linked to the said person's social environment in the Member State concerned*” (Article 70(2)(a) BR).

One additional condition is inspired by the case law of the CJEU: the financing of SNCBs derives “*exclusively [...] from compulsory taxation intended to cover general public expenditure and the conditions for providing and for calculating the benefits are not dependent on any contribution in respect of the beneficiary. However, benefits provided to supplement a contributory benefit shall not be considered to be contributory benefits for this reason alone*” (Article 70(2)(b) BR).

Benefits meeting the regulation criteria and listed in Annex X follow the rules applicable to SNCBs. Both conditions are cumulative. It implies that benefits which are not listed in Annex X or which would be removed from Annex X by ruling of the CJEU<sup>227</sup> are subject to standard rules of coordination and in particular to the principle of export.<sup>228</sup>

If all conditions for belonging to the SNCB category are satisfied and if the claimant falls within the personal scope of Regulation (EC) No 883/2004, SNCBs are provided exclusively in the Member State where the persons concerned reside, in accordance with its legislation, and are provided by and at the expense of the institution of the place of residence (Article 70(4) BR). The principle of waiving residence rules does not apply (Article 70(3) BR). If

---

<sup>227</sup> The list of SNCBs in Annex has been reshaped by Regulation (EC) No 647/2005 to take account of CJEU case law (see e.g. the judgment in *Commission v Parliament*, C-299/05, EU:C:2007:608). The list of Annex X of Regulation (EC) No 883/2004 is directly inspired by this case law.

<sup>228</sup> Unless they would fall exclusively within the scope of ‘social assistance’: in this case, coordination rules do not apply.

Regulation (EC) No 883/2004 no longer explicitly provides that the principles of aggregation and assimilation apply to SNCBs, this is still the case since Article 5 and 6 BR apply to SNCBs which are in the scope of the Regulation.<sup>229</sup>

### 1.3.2 *Mr Brey and Ms Dano's status under Regulation (EC) No 883/2004*

In the past, access to SNCBs was analysed by the CJEU exclusively under coordination rules. If we disregard requirements from Directive 2004/38/EC, what would have been the status of Mr Brey and Ms Dano vis-à-vis benefits claimed in Austria and in Germany on the grounds of Regulation (EC) No 883/2004 only?

In the case of Mr Brey, the Austrian *Pensionsversicherungsanstalt* refused to grant him the compensatory supplement (*Ausgleichzulage*) provided for in Austrian legislation to augment his German retirement pension. Based on the concept of residence defined in the *Swaddling* case dealing with an SNCB,<sup>230</sup> it is likely that Mr Brey was habitually residing in Austria where he had the centre of his interests. The length of residence in the Member State in which payment of the benefit is sought cannot be regarded as an intrinsic element of the concept of residence.<sup>231</sup> Thus, since the *Ausgleichzulage* is listed in Annex X and follows the conditions to be categorised as an SNCB, it would have been granted to Mr Brey since he received only a low (German) old-age pension. This outcome would not have been reversed by the fact that Mr Brey had not been previously subject to Austrian social security. Indeed, the CJEU made clear that benefit entitlement is no longer conditional on the claimant having previously been subject to the social security legislation of the State in which he or she applies for the benefit.<sup>232</sup>

---

<sup>229</sup> See also the judgment in *Dano* EU:C:2014:2358, paragraph 49 and paragraph 53.

<sup>230</sup> Judgment in *Swaddling*, C-90/97, EU:C:1999:96.

<sup>231</sup> Judgment in *Swaddling* EU:C:1999:96, paragraph 30.

<sup>232</sup> Judgment in *Snares* EU:C:1997:518, paragraph 50.

In the case of Ms Dano, the Jobcenter Leipzig refused to grant her a benefit envisaged by German legislation, i.e. the subsistence benefit (*Regelleistung/Grundsicherung für Arbeitsuchende*). Again, since this benefit is listed in Annex X and meets the other SNCB regulations requirements to be classified as such, Ms Dano, who was a habitual resident in Germany under criteria set out in the *Swaddling* case, would have been granted the said benefit (also for the reason that, as said above, benefit entitlement is not conditional on the claimant having previously been subject to the social security legislation of the State in which he applies for the benefit).

#### **1.4 *The interplay between Regulation (EC) No 883/2004 and Directive 2004/38/EC: introductory elements***

Already in *Snares*, the CJEU touched upon the question of interactions between the predecessors of Regulation (EC) No 883/2004 and Directive 2004/38/EC. A person like Mr Snares, who ceased occupational activity and moved from the UK to Spain, may not have been in receipt of benefits of an amount sufficient to avoid becoming a burden on the social security system of Spain during his period of residence there.

How should the Regulation and the Directive interact? Neither the Regulation nor the Directive determine their mutual coordination. The Directive does not refer to the Regulation, nor vice versa. The interplay between both legal instruments leaves room for interpretation and makes a solution difficult. From an institutional point of view, there is no formal hierarchy between a regulation and a directive. Since both instruments were voted the same day (29 April 2004), anteriority may not be a relevant criterion to set. The principle *Lex specialis derogat legi generali* does not seem relevant either to design rules of interaction between both texts. Both legal instruments, however, are different in their legal character. This matters for solving the conflict between concurring legislative acts. The Regulation creates immediate and direct individual rights; the Directive, however, is addressed to the Member States

and makes them create domestic legislation in line with the EU Directive's standard. Therefore, both instruments have a different legal impact: the Regulation creates rights or duties, whereas the Directive empowers the Member States to take legislative action in the future. It raises the question to what extent provisions of a directive should/can be incorporated into a regulation.

The three propositions made by the European Commission have a common denominator inspired by the recent case law of the CJEU: they acknowledge that the application of Regulation (EC) No 883/2004 is without prejudice to requirements of Directive 2004/38/EC. This would be the result of the following CJEU assertion: *“The benefits [...] which constitute ‘special non-contributory cash benefits’ within the meaning of Article 70(2) of the regulation, are, under Article 70(4), to be provided exclusively in the Member State in which the persons concerned reside, in accordance with its legislation. It follows that there is nothing to prevent the grant of such benefits to Union citizens who are not economically active from being made subject to the requirement that those citizens fulfil the conditions for obtaining a right of residence under Directive 2004/38/EC in the host Member State”*<sup>233</sup>. The CJEU also ruled in the same spirit that it *“has consistently held that there is nothing to prevent, in principle, the granting of social security benefits to Union citizens who are not economically active being made conditional upon those citizens meeting the necessary requirements for obtaining a legal right of residence in the host Member State.”*<sup>234</sup>

The *Brey* and *Dano* case law has therefore addressed the relationship between the two regimes and opted for a priority of the residence approach over the coordination approach. Regarding this shift, it might nevertheless be worth

---

<sup>233</sup> Judgment in *Dano* EU:C:2014:2358, paragraph 83.

<sup>234</sup> Judgment in *Brey* EU:C:2013:565, paragraph 44.

recalling that the CJEU has expressed the view that applying the Residence Directive should not result in a step back from the *acquis*.<sup>235</sup>

Guided by the mandate,<sup>236</sup> by recent cases *Brey* and *Dano* and within the context of the more global question of access to social benefits<sup>237</sup> in the State of residence by economically inactive Union citizens, the report will take on board leading principles of the free movement of Union citizens and workers (and matching case law), social security coordination principles set out in the Treaty and the rationale of Regulation (EC) No 883/2004, in particular of SNCBs. The report will focus exclusively on income-related SNCBs, leaving aside SNCBs the aim of which is the protection for the disabled (see Article 70(2)(a)(ii)). Such benefits are indeed not targeted by the recent rulings of the CJEU.

The report will thus proceed to an analysis of the status quo (part 2), of a limitation of the equal treatment principle for income-related SNCBs, under Regulation (EC) No 883/2004, by referring to the provisions of Directive 2004/38/EC (part 3), and of the removal of the income-related SNCBs from the material scope of Regulation (EC) No 883/2004 (part 4). Since case law of the CJEU is not stable yet,<sup>238</sup> the report will suggest alternative amendments to the European Commission propositions (part 5) before reaching final conclusions (part 6).

---

<sup>235</sup> Judgment in *Metock*, C-127/08, EU:C:2008:449, paragraph 59; judgment in *Lassal*, C-162/09, EU:C:2010:592, paragraph 30. See, however, the judgment in *Brey* EU:C:2013:565, paragraph 53.

<sup>236</sup> Which indicates that “the aim of the possible amendment is to ensure the uniform application of these judgments in the Member States and to provide more legal clarity for EU citizens, the Member States and their social security institutions”.

<sup>237</sup> The expression ‘social benefit’ used in this report has not been defined in EU legislation or in CJEU case law and is thus not an EU law concept unlike social assistance within the meaning of Article 24(2) of Directive 2004/38/EC or ‘social advantages’ within the meaning of Article 7(2) of Regulation (EU) No 492/2011. ‘Social benefit’ refers to all advantages falling under the Union citizens’ claim to non-discrimination (Articles 18/21 TFEU; Article 24(1), first sentence of Directive 2004/38/EC). It extends to all kinds of (social and other) advantages (in a wide sense) granted by national law. Thus, the concept of ‘social benefit’ is broader than the term ‘social assistance’ used in Article 24(2) of Directive 2004/38/EC such as interpreted in *Dano*.

<sup>238</sup> See, for instance, the opinion of the Advocate General in *Alimanovic* EU:C:2015:210.

## 2 Option 1: status quo: direct application of the case law

### 2.1 *Legal analysis of the proposal*

Option 1 sticks to the status quo by proposing a direct application of the *Brey* and *Dano* case law. As a starting point, these two rulings by the Court of Justice of the European Union (CJEU) will be presented (see 2.1.1). Next, the question will be discussed under which circumstances economically inactive Union citizens may claim access to income-related special non-contributory cash benefits (SNCBs) following this case law (see 2.1.2).

#### 2.1.1 *Background: the cases Brey and Dano*

##### 2.1.1.1 Brey (19 September 2013)

#### **a) *Facts and preliminary questions (paragraph 16 et seq)***

On 19 September 2013, the CJEU ruled on a request for a preliminary ruling from the Austrian Supreme Court (*Oberster Gerichtshof*). This case concerned two German nationals, Mr Brey and his wife, who moved to Austria in March 2011 and whose income at this time solely consisted of Mr Brey's invalidity pension (€ 862.74 per month and before tax) and a care allowance (€ 225 per month). Shortly after entry, Mr Brey applied at the responsible Austrian authority for a compensatory supplement. Though Mr Brey and his wife were granted an EEA citizen registration certificate, the application for the compensatory supplement was refused on the grounds that his low retirement pension did not suffice to establish lawful residence in Austria which requires having sufficient resources.

After a successful action of Mr Brey against this refusal, the Austrian authority brought an appeal against the judgment before the Austrian Supreme Court. This Court decided to refer the case to the CJEU and raised the question, as reformulated by the CJEU,

*“whether EU law – in particular, Directive 2004/38/EC – should be interpreted as precluding national legislation [...] which does not allow the grant of a benefit, such as the compensatory supplement [...], to a national of another Member State who is not economically active, on the grounds that, despite having been issued with a certificate of residence, he does not meet the necessary requirements for obtaining the legal right to reside on the territory of the first Member State for a period of longer than three months, since such a right of residence is conditional upon that national having sufficient resources not to apply for the benefit.” (paragraph 32)*

#### **b) Judgment of the CJEU**

First, the CJEU (again) confirmed that the Austrian compensatory supplement at issue in this case constitutes an SNCB within the meaning of Articles 3(3) and 70 BR and therefore falls within the scope of the coordination regime (paragraph 33 et seq). Next, the CJEU considered a solution based uniquely on the coordination regime which was proposed by the European Commission (EC). According to the latter, SNCBs have to be provided in the Member State of habitual residence (Articles 1(j), 70(4) BR) and the introduction of any further criteria applied uniquely to EU foreigners – like a criterion of legal residence – constitutes a violation of the non-discrimination principle enshrined in Article 4 BR (paragraph 37).

The CJEU, however, rejected this reasoning by limiting the scope of the coordination regime: Article 70(4) BR “sets out a ‘conflict rule’” determining the Member State responsible for granting SNCBs, but does not lay down criteria for entitlement to SNCBs which has to be determined by national legislation (paragraph 37 without dealing with the applicability of Article 4 BR, however).

Yet, the Member States do not enjoy unlimited discretion in this regard: the CJEU stressed that the criteria stipulated in national legislation have to comply with EU law. It then considered whether the requirement of sufficient

resources for legal residence and entitlement to the benefit at issue is in line with the right of all Union citizens to free movement (Article 21 TFEU) and to non-discrimination (Article 18 TFEU), as notably concretised by Directive 2004/38/EC. In view of the economic criteria on which a right of residence for economically inactive persons depends according to Article 7(1)(b) of Directive 2004/38/EC, the CJEU in principle answered this question affirmatively. However, it also drew attention to the fact that these criteria must, being restrictions of the general right to free movement of all Union citizens (Article 21 TFEU), in view of the status of Union citizenship and in line with Article 14(3) of Directive 2004/38/EC, not be applied without a proportionality assessment in each individual case (paragraph 44 et seq):

*“[T]he fact that a national of another Member State who is not economically active may be eligible, in light of his low pension, to receive that benefit could be an indication that that national does not have sufficient resources to avoid becoming an unreasonable burden on the social assistance system of the host Member State for the purposes of Article 7(1)(b) of Directive 2004/38/EC [...] However, the competent national authorities cannot draw such conclusions without first carrying out an overall assessment of the specific burden which granting that benefit would place on the national social assistance system as a whole, by reference to the personal circumstances characterising the individual situation of the person concerned.” (paragraph 63 et seq)*

Regarding the relevance of the coordination regime in this respect, the CJEU stressed that the Austrian SNCB at issue qualifies as social assistance within the meaning of Directive 2004/38/EC and thus must not be left out, as the EC submitted in view of SNCBs in general (paragraph 48), when assessing whether a person has become a burden on the national social assistance scheme (paragraph 47 et seq).

In conclusion, the CJEU held

*“that EU law – in particular, as it results from Article 7(1)(b), Article 8(4) and Article 24(1) and (2) of Directive 2004/38/EC – must be interpreted as precluding national legislation, such as that at issue in the main proceedings, which, even as regards the period following the first three months of residence, automatically – whatever the circumstances – bars the grant of a benefit, such as the compensatory supplement provided for in Paragraph 292(1) of the ASVG, to a national of another Member State who is not economically active, on the grounds that, despite having been issued with a certificate of residence, he does not meet the necessary requirements for obtaining the legal right to reside on the territory of the first Member State for a period of longer than three months, since obtaining that right of residence is conditional upon that national having sufficient resources not to apply for the benefit.” (paragraph 80)*

2.1.1.2 Dano (11 November 2014)

**a) Facts and preliminary questions (paragraph 35 et seq)**

The *Dano* case handed down on 11 November 2014 concerned two Romanian nationals, Ms Dano and her minor son, both habitually residing in Germany. They live with the sister of Ms Dano who supports them financially. In addition, Ms Dano receives a child benefit of € 184 per month as well as an advance on maintenance payments of € 133 per month, both financed by German public funds. Ms Dano has never worked in Germany nor did she move to Germany in order to seek employment. Still, German authorities granted her an unlimited certificate of free movement for EU nationals. In 2011 and again in 2012, Ms Dano applied for the basic provision for jobseekers (*Arbeitslosengeld II*), but the competent authority each time rejected her claim. Ms Dano’s challenge of the last decision was also dismissed by the court. Subsequently, she brought another action before the social court of first instance in Leipzig, which referred the case to the CJEU and raised the question whether it is in line with EU coordination (Article 4

BR) and free movement law (Articles 18/21 TFEU; Article 24 of Directive 2004/38/EC) to exclude economically inactive Union citizens from access to SNCBs.

#### **b) Judgment of the CJEU**

The CJEU first stressed that SNCBs fall within the scope of Article 4 BR (paragraph 55). Furthermore, it underlined that entitlement to the benefit in question has to be assessed in view of the principle of non-discrimination (Article 18 TFEU), which is given a specific expression in both Article 24 of Directive 2004/38/EC as well as in Article 4 BR. Regarding the former, even if SNCBs fall under the broad concept of social assistance used in Article 24(2) of Directive 2004/38/EC (paragraph 63), this exclusion does not apply *in casu* due to the specific circumstances of the case (residence in Germany for more than three months, but without seeking employment or being willing to work). Hence, only Article 24(1) of Directive 2004/38/EC applies, meaning that

*“a Union citizen can claim equal treatment with nationals of the host Member State only if his residence in the territory of the host Member State complies with the conditions of Directive 2004/38/EC.” (paragraph 69)*

According to Article 7(1)(b) economically inactive persons (like Ms Dano) must have sufficient resources and a comprehensive sickness insurance. Hence, the CJEU concluded, without referring to the relativisation of these criteria in its established case law (*Baumbast*,<sup>239</sup> *Grzelczyk*,<sup>240</sup> *Brey*), that

*“[a] Member State must [...] have the possibility, pursuant to Article 7 of Directive 2004/38/EC, of refusing to grant social benefits to economically inactive Union citizens who exercise their right to freedom of movement solely*

---

<sup>239</sup> Judgment in *Baumbast*, C-413/99, EU:C:2002:493.

<sup>240</sup> Judgment in *Grzelczyk*, C-184/99, EU:C:2001:458.

*in order to obtain another Member State's social assistance although they do not have sufficient resources to claim a right of residence.” (paragraph 78)*

Finally, regarding Article 4 BR,

*“[t]he same conclusion must be reached [...] The benefits at issue in the main proceedings, which constitute ‘special non-contributory cash benefits’ within the meaning of Article 70(2) of the regulation, are, under Article 70(4), to be provided exclusively in the Member State in which the persons concerned reside, in accordance with its legislation. It follows that there is nothing to prevent the grant of such benefits to Union citizens who are not economically active from being made subject to the requirement that those citizens fulfil the conditions for obtaining a right of residence under Directive 2004/38/EC in the host Member State.” (paragraph 83)*

### 2.1.2 Access to SNCBs under EU law<sup>241</sup>

Summing up, both *Brey* and *Dano* concern the access of economically inactive persons to income-related SNCBs. Notably, *Dano* declares the equality of treatment rule of Article 4 BR applicable to SNCBs (paragraph 46 et seq). This provision stipulates:

*“Unless otherwise provided for by this Regulation, persons to whom this Regulation applies shall enjoy the same benefits and be subject to the same obligations under the legislation of any Member State as the nationals thereof.”*

---

<sup>241</sup> Cf on this F. Wollenschläger, ‘Keine Sozialleistungen für nichterwerbstätige Unionsbürger? Zur begrenzten Tragweite des Urteils des EuGH in der Rs. *Dano* vom 11.11.2014’, (2014) *NVwZ*, 1628. Cf further D. Thym, ‘The elusive limits of solidarity: Residence rights of and social benefits for economically inactive Union citizens’, (2015) *CML Rev* 52, 17; H. Verschueren, ‘Preventing “benefit tourism” in the EU: A narrow or broad interpretation of the possibilities offered by the CJEU in *Dano*?’’, (2015) *CML Rev* 52, 363; F. Wollenschläger, ‘A new Fundamental Freedom beyond Market Integration: Union Citizenship and its Dynamics for shifting the Economic Paradigm of European Integration’, (2011) *ELJ* 17, 1.

However, this rule is not interpreted, as advocated by some,<sup>242</sup> as a claim to equal treatment irrespective of legal residence in the host Member State. Rather, it is interpreted in line with the rules applicable to the access of economically inactive Union citizens to social benefits in Member States other than their country of origin, notably Article 24 of Directive 2004/38/EC (paragraph 82 et seq). Hence, the decisive question for access to SNCBs is whether a person enjoys a right of residence in the host Member State according to Residence Directive 2004/38/EC.<sup>243</sup> This development might be termed a shift from a coordination approach to a residence approach regarding access to SNCBs.

Thus, to answer the initial question of access of economically inactive persons to income-related SNCBs, the well-established case law of the CJEU, beginning with its ruling in the *Sala* case of 12 May 1998,<sup>244</sup> as well as the respective provisions of the Residence Directive have to be presented. They confirm a (limited) claim of economically inactive persons to such SNCBs in the host Member State (see 2.1.2.1). It is important to stress that this finding has not been contradicted by the CJEU's ruling in the *Dano* case, although the latter might be open to a different reading (see 2.1.2.2). Finally, it is also very important to stress that *Brey* and *Dano* do not provide the complete picture. After all, these rulings do not concern first-time jobseekers, family members, persons with a permanent residence right, former workers retaining their status of worker or workers with low income, to all of whom specific rules apply which should also be presented (see 2.1.2.3).

---

<sup>242</sup> Cf e.g. Commission, the judgment in *Brey* EU:C:2013:565, paragraph 37; this approach was also followed in German case law, cf only LSG (Social Court of Second Instance) Bayern of 27 May 2014, L 16 AS 344/14 B ER, paragraph 23 et seq.

<sup>243</sup> According to the CJEU's case law, even a right of residence based uniquely on national law may be sufficient for a claim to equal treatment, cf the judgment in *Sala*, C-85/96, EU:C:1998:217, paragraph 60 et seq; judgment in *Trojani*, C-456/02, EU:C:2004:488, paragraph 37 et seq.

<sup>244</sup> Judgment in *Sala* EU:C:1998:217.

#### 2.1.2.1 Access of economically inactive persons to income-related SNCBs

Even if Directive 2004/38/EC requires sufficient (own) resources to profit from a right of residence as an economically inactive person in the host Member State, a Union citizen who becomes dependent on SNCBs may under certain circumstances retain his or her right of residence (a) and enjoy access to social benefits, including SNCBs, in the host Member State (b).

##### **a) The right of residence of economically inactive Union citizens**

Generally speaking, the right of residence of economically inactive Union citizens (not belonging to one of the groups being discussed below in 2.1.2.3) for a period of residence of more than three months depends on the fulfilment of certain economic criteria. In this respect, Article 7(1)(b) of Directive 2004/38/EC stipulates that:

*“[a]ll Union citizens shall have the right of residence on the territory of another Member State for a period of longer than three months if they [...] have sufficient resources for themselves and their family members not to become a burden on the social assistance system of the host Member State during their period of residence and have comprehensive sickness insurance cover in the host Member State.”*

However, these economic criteria must not be applied literally.<sup>245</sup> Already in its judgment in the *Baumbast* case, the CJEU relativised these conditions by applying the principle of proportionality to them. For, following the introduction of Union citizenship, they constitute a limitation to the right of free movement of all Union citizens guaranteed by EU primary law (Article 21 TFEU). Hence, the fact that a sickness insurance, other than required by secondary law, does not cover all possible risks, does not justify denying a

---

<sup>245</sup> Cf in more detail F. Wollenschläger, 'A new Fundamental Freedom beyond Market Integration: Union Citizenship and its Dynamics for shifting the Economic Paradigm of European Integration', (2011) ELJ 17(1), 15 et seq.

right of residence.<sup>246</sup> The same is true, according to the judgment in the *Grzelczyk* case, with regard to the temporary reliance of a student on social assistance.<sup>247</sup> Confirming this line of case law, in its judgment in the *Brey* case of September 2013 the CJEU concluded:

*“Lastly, it should be borne in mind that, since the right to freedom of movement is – as a fundamental principle of EU law – the general rule, the conditions laid down in Article 7(1)(b) of Directive 2004/38/EC must be construed narrowly [...] and in compliance with the limits imposed by EU law and the principle of proportionality [...] In addition, the margin for manoeuvre which the Member States are recognised as having must not be used by them in a manner which would compromise attainment of the objective of Directive 2004/38/EC, which is, inter alia, to facilitate and strengthen the exercise of Union citizens’ primary right to move and reside freely within the territory of the Member States, and the practical effectiveness of that directive.” (paragraph 70 et seq)*

Article 14(3) of Directive 2004/38/EC has codified the *Baumbast* and *Grzelczyk* case law. According to this provision “(a)n expulsion measure shall not be the automatic consequence of a Union citizen’s or his or her family member’s recourse to the social assistance system of the host Member State.” Moreover, following the CJEU’s understanding in *Brey*, even Article 7(1)(b) of Directive 2004/38/EC itself qualifies the criterion of sufficient resources by adding “not to become a burden on the social assistance system of the host Member State during their period of residence”.<sup>248</sup>

Recital 16 of the same Directive specifies the proportionality test:

---

<sup>246</sup> Judgment in *Baumbast* EU:C:2002:493, paragraph 90 et seq. Cf further the judgment in *Brey* EU:C:2013:565, paragraph 70, and, with a different conclusion, the judgment in *Trojani* EU:C:2004:488, paragraph 34 et seq.

<sup>247</sup> Judgment in *Grzelczyk* EU:C:2001:458, paragraph 37 et seq; in regard to the methodical difference with the judgment in *Baumbast* EU:C:2002:493, cf F. Wollenschläger, *Grundfreiheit ohne Markt*, Mohr Siebeck, Tübingen, 2007, p. 171 et seq.

<sup>248</sup> Judgment in *Brey* EU:C:2013:565, paragraph 63, 72, 77.

*“As long as the beneficiaries of the right of residence do not become an unreasonable burden on the social assistance system of the host Member State they should not be expelled. Therefore, an expulsion measure should not be the automatic consequence of recourse to the social assistance system. The host Member State should examine whether it is a case of temporary difficulties and take into account the duration of residence, the personal circumstances and the amount of aid granted in order to consider whether the beneficiary has become an unreasonable burden on its social assistance system and to proceed to his expulsion. In no case should an expulsion measure be adopted against workers, self-employed persons or job-seekers as defined by the Court of Justice save on grounds of public policy or public security.”*

In its judgment in the *Brey* case, the CJEU interpreted Article 7(1)(b) of Directive 2004/38/EC in line with these limitations. The latter provision implies that

*“[b]y making the right of residence for a period of longer than three months conditional upon the person concerned not becoming an ‘unreasonable’ burden on the social assistance ‘system’ of the host Member State, Article 7(1)(b) of Directive 2004/38/EC, interpreted in the light of recital 10 to that directive, [...] that the competent national authorities have the power to assess, taking into account a range of factors in the light of the principle of proportionality, whether the grant of a social security benefit could place a burden on that Member State’s social assistance system as a whole. Directive 2004/38/EC thus recognises a certain degree of financial solidarity between nationals of a host Member State and nationals of other Member States, particularly if the difficulties which a beneficiary of the right of residence encounters are temporary”. (paragraph 72)*

Finally, from a general point of view, the interpretation of the economic residence criteria as conditions of the right to free movement should be questioned. For reasons of legal certainty it should at least be considered

interpreting these criteria as a mere justification to end the right of residence, but not as conditions on which the existence of the right of residence depends – similar to the understanding of the *ordre public* exception, which permits restrictions on the right of entry and the right of residence on grounds of public policy, public security or public health (Article 27 of Directive 2004/38/EC).<sup>249</sup> This interpretation would, moreover, seem more convincing than applying the general non-discrimination principle also in cases of a residence only based on national law.<sup>250</sup>

#### **b) Access of economically inactive Union citizens to social benefits**

In its case law, the CJEU has not only relativised the economic conditions of residence for economically inactive Union citizens. Rather, it has also acknowledged a (limited) entitlement to social benefits, including SNCBs, based on the principle of non-discrimination enshrined in EU primary law (Articles 18/21 TFEU) and EU secondary law (Article 24(1), first sentence of Directive 2004/38/EC).<sup>251</sup> The latter reads:

*“Subject to such specific provisions as are expressly provided for in the Treaty and secondary law, all Union citizens residing on the basis of this Directive in*

*the territory of the host Member State shall enjoy equal treatment with the nationals of that Member State within the scope of the Treaty.”*

According to the CJEU’s case law (*Baumbast, Grzelczyk, Brey*), a Union citizen may rely on the non-discrimination principle<sup>252</sup> to compensate the situation where she or he does not have sufficient resources or a comprehensive sickness insurance. One condition is required, though: under the circumstances of the individual case, refusing a right of residence would be disproportionate in view of the legitimate objective behind the economic residence conditions to avoid Union citizens becoming an unreasonable burden on the social assistance system of the host Member State.<sup>253</sup>

This interpretation in favour of equality of treatment is reinforced by the fact that Article 24(2) of Directive 2004/38/EC excludes equal access to social assistance “*only during the first three months of residence*”, but not until a Union citizen has acquired a permanent right of residence (which is usually the case after a period of residence of five years<sup>254</sup>). It would mean, *a contrario*, that equality of treatment may be the rule after the first three months of residence. This corresponds to the approach of the Union legislature: in the initial proposal of the Directive the European Commission formulated an exclusion until having acquired a right of permanent residence. Subsequently, however, this exclusion was modified during the legislative process in favour of the current rule (exclusion only for the first three months of residence) in order to take account of the CJEU’s judgment in the *Grzelczyk* case.<sup>255</sup> In its judgment in the *Brey* case, other than in the *Dano* case, the CJEU referred to this provision as well as to Article 14(3) of Directive 2004/38/EC (paragraph 70).

---

<sup>252</sup> Article 18 TFEU; Article 24(1), sentence 1 of Directive 2004/38/EC.

<sup>253</sup> Cf above 2.1.2.1, a) The right of residence of economically inactive Union citizens.

<sup>254</sup> Cf Article 16 et seq of Directive 2004/38/EC.

<sup>255</sup> Cf Article 21(2) – first draft of the Directive, COM (2001) 257 final, OJ C 270E, 5.9.2001, p. 150, and the reasons for the modification, COM (2003) 199 final, OJ C 76, 25.04.2004, p. 13. Cf for more details F. Wollenschläger, *Grundfreiheit ohne Markt*, Mohr Siebeck, Tübingen, 2007, p. 275 et seq.

However, being able to invoke the principle of non-discrimination does not mean that an economically inactive Union citizen may (like nationals and economically active Union citizens) claim SNCBs from the very first day after having entered the host Member State and under all circumstances. Already Article 24(2) of Directive 2004/38/EC explicitly excludes, as just mentioned, equal access to social assistance during the first three months of residence. Furthermore, the CJEU made the claim dependent on an assessment of the duration of residence,<sup>256</sup> the personal situation of the claimant,<sup>257</sup> her or his integration into the host Member State,<sup>258</sup> the nature of the benefit in question<sup>259</sup> and the consequences for the national social system.<sup>260 261</sup> Hence, only (but at least) “a certain degree of financial solidarity between nationals of a host Member State and nationals of other Member States” (cf e.g. *Brey*, paragraph 72) has been acknowledged. Whereas the *Dano* judgment does not mention this principle,<sup>262</sup> the CJEU has been more explicit in its ruling in the *Brey* case:

*“In the light of all of the foregoing, the answer to the question referred is that EU law [...] must be interpreted as precluding national legislation [...] which, even as regards the period following the first three months of residence, automatically – whatever the circumstances – bars the grant of a benefit, such*

<sup>261</sup> Cf on the concept of a gradual integration of Union citizens in the host Member State C. Schönberger, *Unionsbürger*, Mohr Siebeck, Tübingen, 2005, p. 407 et seq; D. Thym, ‘Sozialleistungen für und Aufenthalt von nichterwerbstätigen Unionsbürgern’, (2014) *NZS*, 81, 87 et seq; F. Wollenschläger, *Grundfreiheit ohne Markt*, Mohr Siebeck, Tübingen, 2007, p. 253 et seq.

<sup>262</sup> Unlike Advocate General Wathelet in his opinion to this case (Opinion of Advocate General Wathelet in *Dano* EU:C:2014:341, paragraph 127).

*as the compensatory supplement provided for in Paragraph 292(1) of the ASVG, to a national of another Member State who is not economically active, on the grounds that, despite having been issued with a certificate of residence, he does not meet the necessary requirements for obtaining the legal right to reside on the territory of the first Member State for a period of longer than three months, since obtaining that right of residence is conditional upon that national having sufficient resources not to apply for the benefit.” (paragraph 80)*

The *Grzelczyk* case constitutes one further example of this approach for a limited, albeit not absolute claim to equal access to social benefits.<sup>263</sup>

Finally, it should be noted that important questions have been left open by the CJEU’s case law. It remains to be determined whether a Member State may only rely on the justification of protecting the national social assistance system when “*the grant of a social security benefit could place a burden on that Member State’s social assistance system as a whole*”,<sup>264</sup> which is a very strict test. Or, may unreasonableness also be assessed in view of the individual claimant? For this the judgment in the *Dano* case might be an authority.<sup>265</sup> A further crucial issue is whether a Member State may lay down general rules for

---

<sup>263</sup> Judgment in *Grzelczyk* EU:C:2001:458, paragraph 27 et seq.

<sup>264</sup> Judgment in *Brey* EU:C:2013:565, paragraph 72. Cf also the judgment in *Bidar* EU:C:2005:169, paragraph 56, which might read slightly less strict: “*On this point, it must be observed that, although the Member States must, in the organisation and application of their social assistance systems, show a certain degree of financial solidarity with nationals of other Member States (see Grzelczyk, paragraph 44), it is permissible for a Member State to ensure that the grant of assistance to cover the maintenance costs of students from other Member States does not become an unreasonable burden which could have consequences for the overall level of assistance which may be granted by that State*”.

<sup>265</sup> Cf the judgment in *Dano* EU:C:2014:2358, paragraph 74: “*To accept that persons who do not have a right of residence under Directive 2004/38 may claim entitlement to social benefits under the same conditions as those applicable to nationals of the host Member State would run counter to an objective of the directive, set out in recital 10 in its preamble, namely preventing Union citizens who are nationals of other Member States from becoming an unreasonable burden on the social assistance system of the host Member State.*” Cf also D. Thym, ‘The elusive limits of solidarity: Residence rights of and social benefits for economically inactive Union citizens’, (2015) *CML Rev* 52, 17, 27 et seq.

access to benefits (which facilitates administrative practice) or whether an individual assessment on a case-by-case basis is required.<sup>266</sup>

#### 2.1.2.2 *Dano*: a reversal of the CJEU's case law?

In *Dano*, the CJEU rejected a claim for income-related SNCBs by an economically inactive Union citizen who did not have sufficient resources to finance her living in the host Member State. Does this mean that the former case law with its limited claim to SNCBs for this category of persons, which has just been discussed, has been overruled? This is not the case, for the CJEU's ruling in *Dano* may be interpreted in two opposite ways. Not only may it be considered a reversal of the CJEU's former case law on Union citizenship granting economically inactive Union citizens a limited access to social assistance in the host Member State. It may also, in view of the particular facts of the case (Ms Dano did not intend to seek a job in Germany, but solely moved there in order to gain access to social benefits), be interpreted in line with the former CJEU case law.<sup>267</sup>

Some authors argue that with its clear rejection of Ms Dano's claim for entitlement to social assistance in Germany, the CJEU sets a "*prominent counterpoint to the expansive reading of Union citizenship in earlier case law*".<sup>268</sup> Understood as a reaction to anti-European developments within the Union in general and to the criticism in view of the CJEU allegedly promoting

---

<sup>266</sup> Cf for the former solution the opinion of Advocate General Wathelet in *Dano* EU:C:2014:341, paragraph 132: "*I also note that the Court has held, admittedly in a different context, that 'generally speaking, it cannot be insisted that a measure [...] should involve an individual examination of each particular case [...], since the management of the regime concerned must remain technically and economically viable'*"; cf also the judgment in *Förster* EU:C:2008:630. Emphasising the need for a case-by-case assessment: judgment in *Prete*, C-367/11, EU:C:2012:668, paragraph 51. Cf further D. Thym, 'Sozialleistungen für und Aufenthalt von nichterwerbstätigen Unionsbürgern', (2014) *NZS*, 81, 85 et seq.

<sup>267</sup> Similarly H. Verschuere, 'Preventing "Benefit tourism" in the EU: a narrow or broad interpretation of the possibilities offered by the ECJ in *Dano*', (2015) *CML Rev* 52, 363, 370 et seq.

<sup>268</sup> D. Thym, *VerfBlog* 2014/11/12, <http://www.verfassungsblog.de/en/eu-freizuegigkeit-als-rechtliche-konstruktion-nicht-als-soziale-imagination/#.VSS78I5OKt8> (7 April 2015).

“social tourism” in particular and therefore as a probably wise decision from a political point of view,<sup>269</sup> the ruling of the CJEU may be interpreted as generally excluding economically inactive persons from social assistance in the host Member State, without assessing their individual background or motivation for moving on a case-by-case basis. The general wording of paragraph 2 of the CJEU’s *dictum* may support such a broad interpretation.<sup>270</sup> It reads:

*“Article 24(1) of Directive 2004/38/EC [...] must be interpreted as not precluding legislation of a Member State under which nationals of other Member States are excluded from entitlement to certain ‘special non-contributory cash benefits’ within the meaning of Article 70(2) of Regulation No 883/2004, although those benefits are granted to nationals of the host Member State who are in the same situation, in so far as those nationals of other Member States do not have a right of residence under Directive 2004/38/EC in the host Member State.”*

Additionally, any reference to the principle of proportionality is lacking and one may instead read the introduction of a “*right-to-reside-under-Directive 2004/38/EC-test*” into the ruling.<sup>271</sup> To complete the picture, the opinion of Advocate General Wathelet in the *Alimanovic* case follows the same lines and does not mention the CJEU’s former case law, including *Brey*, when discussing the situation of “*a national of a Member State who moves to the territory of another Member State and stays there for less than three months, or for more than three months but without pursuing the aim of seeking employment there*”.<sup>272</sup>

---

<sup>269</sup> In this regard cf H. Verschuere, ‘Preventing “Benefit tourism” in the EU: a narrow or broad interpretation of the possibilities offered by the ECJ in *Dano*’, (2015) *CML Rev* 52, 363, 363 et seq; D. Thym, (2015) *CML Rev* 52, 17, 20 et seq.

<sup>270</sup> Cf H. Verschuere, *op cit*, (2015) *CML Rev* 52, 363, 377.

<sup>271</sup> Cf H. Verschuere, *op cit*, (2015) *CML Rev* 52, 363, 378.

<sup>272</sup> Opinion of Advocate General Wathelet in *Alimanovic*, C-67/14, EU:C:2015:210, paragraph 88 et seq.

Nonetheless, such an understanding of *Dano* as overruling the former case law of the CJEU on Union citizenship is questioned by the fact that the judgment does not mention the CJEU's former case law on Union citizenship with a single word, in particular its rulings in the cases *Baumbast*,<sup>273</sup> *Grzelczyk*<sup>274</sup> and *Brey*.<sup>275</sup> In these cases, the CJEU relativised the economic conditions of residence for economically inactive Union citizens moving from one Member state to another and also (in *Grzelczyk* and *Brey*) granted Union citizens limited access to social assistance in the host Member State even if not fulfilling the economic residence criteria.<sup>276</sup> Moreover, the *Dano* case is based on a very specific factual background. The CJEU explicitly underlines in its findings that Ms Dano is not only an economically inactive person, but also moved to Germany solely in order to gain access to social benefits (paragraph 66 et seq and 78 – emphasis added):

*“It is apparent from the documents before the Court that Ms Dano has been residing in Germany for more than three months, that she is not seeking employment and that she did not enter Germany in order to work. She therefore does not fall within the scope ratione personae of Article 24(2) of Directive 2004/38/EC. In those circumstances, it must be established whether Article 24(1) of Directive 2004/38/EC and Article 4 of Regulation No 883/2004 preclude refusal to grant social benefits in a situation such as that at issue in the main proceedings [...].”*

*A Member State must therefore have the possibility, pursuant to Article 7 of Directive 2004/38/EC, of refusing to grant social benefits to economically inactive Union citizens who exercise their right to freedom of movement solely in order to obtain another Member State's social assistance although they do not have sufficient resources to claim a right of residence.”*

---

<sup>273</sup> Judgment in *Baumbast* EU:C:2002:493.

<sup>274</sup> Judgment in *Grzelczyk* EU:C:2001:458.

<sup>275</sup> Judgment in *Brey* EU:C:2013:565.

<sup>276</sup> Cf in detail above, 2.1.2.1 a) The right of residence of economically inactive Union citizens.

Against this background, it is perfectly in line with the (former) CJEU's case law to deny access to the SNCB at issue, since such an exclusion does not seem disproportionate in view of the facts of the case.<sup>277</sup> For these reasons, a narrow interpretation seems to be favourable.<sup>278</sup>

#### 2.1.2.3 SNCBs for jobseekers, family members, persons with a permanent resident right, former workers retaining their status as workers and workers with low income

As a last and very important point, it should be emphasised that, irrespective of its wide or narrow interpretation, the judgment in the *Dano* case as well as the *Brey* case do not cover all situations in which access to SNCBs (of economically inactive persons) is at issue. Rather, specific rules apply to jobseekers (1), family members (2), persons with a permanent resident right (3), (former) workers (4) or workers with low income (5).

##### **a) SNCBs for jobseekers**

Since Ms Dano had not entered Germany in order to seek employment and the judgment consequently did not address this situation (cf paragraph 66), it has remained unclear whether and to what extent jobseekers are entitled to equal access to SNCBs (including the German SNCB at issue in the *Dano* case).

Residence Directive 2004/38/EC grants jobseekers an (unconditional) right of residence even for periods of residence exceeding three months “*as long as the Union citizens can provide evidence that they are continuing to seek employment and that they have a genuine chance of being engaged*” (Article 14(4)(b)). However, this privileged situation vis-à-vis other economically inactive persons (whose right of residence depends on the economic criteria

---

<sup>277</sup> Cf F. Wollenschläger, ‘Keine Sozialleistungen für nichterwerbstätige Unionsbürger? Zur begrenzten Tragweite des Urteils des EuGH in der Rs. Dano vom 11.11.2014’, (2014) *NVwZ*, 1628, 1630.

<sup>278</sup> Similarly H. Verschueren, *op cit*, (2015) *CML Rev* 52, 363; F. Wollenschläger, *op cit*, (2014) *NVwZ*, 1628, 1630.

stipulated by Article 7(1)(b) of Directive 2004/38/EC) goes hand in hand with an exclusion from entitlement to social assistance in the host Member State (cf Article 24(2)) of Residence Directive 2004/38/EC).

In *Dano*, the CJEU confirmed that this exclusion also applies to SNCBs. For, the concept of social assistance “refers to all assistance schemes established by the public authorities, whether at national, regional or local level, to which recourse may be had by an individual who does not have resources sufficient to meet his own basic needs and those of his family and who by reason of that fact may, during his period of residence, become a burden on the public finances of the host Member State which could have consequences for the overall level of assistance which may be granted by that State” (paragraph 63; also *Brey*, paragraph 61 *et seq.*).

However, this does not mean that jobseekers may be totally excluded from entitlement to SNCBs. First, in its *Collins* case law, the CJEU acknowledged that,

*“[i]n view of the establishment of citizenship of the Union and the interpretation in the case-law of the right to equal treatment enjoyed by citizens of the Union, it is no longer possible to exclude from the scope of [Article 45 para. 2 TFEU] – which expresses the fundamental principle of equal treatment, guaranteed by [Article 18 TFEU] – a benefit of a financial nature intended to facilitate access to employment in the labour market of a Member State.”*<sup>279</sup>

Nonetheless, the Member States may define conditions for entitlement such as an appropriate minimum period of residence, if these conditions are applied to ensure that “a genuine link exists between the person seeking work and the

---

<sup>279</sup> Judgment in *Collins* EU:C:2004:172, paragraph 63; cf further the judgment in *Vatsouras and Koupatantze*, C-22/08 and 23/08, EU:C:2009:344; judgment in *Prete* EU:C:2012:668, paragraph 51.

*employment market of that State*".<sup>280</sup> The CJEU's findings in *Collins* do not allow for a substantial residence requirement. In fact, a period of residence must not exceed what is necessary in order for the national authorities to be able to satisfy themselves that the person concerned is genuinely seeking work in the employment market of the host Member State (paragraph 63).

Moreover, the *Prete* case has even extended the aspects to be taken into account when assessing the genuine link to the labour market of the host Member State:

*"The existence of close ties, in particular of a personal nature, with the host Member State where the claimant has, following her marriage with a national of that Member state, settled and now habitually resides are such as to contribute to the appearance of a lasting connection between the claimant and the Member State in which she has newly established herself, including with the labour market of the latter"*.<sup>281</sup>

It is obvious that this case law does not justify a total exclusion of jobseekers from social benefits as provided for in Article 24(2) of Directive 2004/38/EC.<sup>282</sup> Consequently, in *Vatsouras*, the CJEU did not apply this exclusion to such benefits covered by Article 45(2) TFEU:

*"Benefits of a financial nature which, independently of their status under national law, are intended to facilitate access to the labour market cannot be*

<sup>280</sup> Judgment in *Collins* EU:C:2004:172, paragraph 69; cf the judgment in *Vatsouras and Koupatantze* EU:C:2009:344, paragraph 38; judgment in *Prete* EU:C:2012:668, paragraph 32 et seq.

<sup>281</sup> Judgment in *Prete* EU:C:2012:668, paragraph 50.

<sup>282</sup> Cf only LSG (Social Court of Second Instance) Nordrhein-Westfalen of 12 March 2014, L 7 AS 106/14 B ER; T. Kingreen, 'Migration und Sozialleistungen - Rechtliche Anmerkungen zu einem bayerischen Aufreger', (2014) *BayVBI*, 289, 294. Disagreeing, LSG Bayern, (2014) *NZS*, 308. Cf for more details and from a comparative perspective F. Wollenschläger & J. Ricketts, 'Jobseekers' Residence Rights and Access to Social Benefits: EU Law and its Implementation in the Member States', (2014) *FMW – Online Journal on Free Movement of Workers within the European Union* 7, p. 8, <http://ec.europa.eu/social/main.jsp?catId=737&langId=en&pubId=7690&type=1&furtherPubs=yes> (8 April 2015).

*regarded as constituting ‘social assistance’ within the meaning of Article 24(2) of Directive 2004/38/EC.*”<sup>283</sup>

This reasoning partially conflicts with *Dano*, i.e. if an SNCB is also qualified as a ‘Collins benefit’, for *Dano* has generally applied Article 24(2) of Directive 2004/38/EC to SNCBs. In this case, in view of the primacy of EU primary law over secondary law, the exclusion may only apply to the extent covered by the *Collins* case law.<sup>284</sup>

Even if an SNCB granted to jobseekers does not qualify as a ‘Collins benefit’ and thus only Articles 18/21 TFEU apply, it is questionable whether a complete exclusion of jobseekers is in line with these provisions of EU primary law. After all, if economically inactive persons may claim a limited access to SNCBs in the host Member State,<sup>285</sup> such a reasoning might all the more apply to jobseekers in view of their Janus-faced status as potential market actors.<sup>286</sup> Consequently, in *Vatsouras*, the CJEU held that “[i]n any event, the derogation provided for in Article 24(2) of Directive 2004/38/EC must be interpreted in accordance with Article 39(2) EC [=Article 45(2) TFEU].”<sup>287</sup>

However, Advocate General Wathelet has, in his opinion in the *Alimanovic* case (paragraph 98), excluded first-time jobseekers from access to social assistance (which seems questionable for the reasons just mentioned). He states

*“[t]hat exclusion is consistent, not only with the wording of Article 24(2) of Directive 2004/38/EC, in that it authorises the Member States to refuse,*

#### **b) SNCBs for family members**

Generally speaking, the residence right of family members of economically inactive Union citizens depends on the aforementioned economic criteria unless they enjoy an (unconditional) right of residence as economically active Union citizens themselves. Article 24(1), sentence 2 of Directive 2004/38/EC extends the claim for non-discrimination to family members of Union citizens. Hence, the same rules as discussed above apply.

One important exception has to be noted, though. Following the CJEU’s case law, Article 10 of Regulation (EU) No 492/2011 implies an unconditional right of residence for children of EU workers attending general educational courses in the host Member State (irrespective of the right of residence of their parents). This right has also been extended to the parent who is acting as primary carer,<sup>288</sup> at least until the child reaches the age of majority or is still in need of the presence of that parent in order to complete education.<sup>289</sup> Since these persons enjoy a right of residence, they are also able to rely on the non-discrimination principle in order to gain access to social benefits, including SNCBs, be it on the basis of Article 24 of Directive 2004/38/EC (even if their

Uebersax (eds), *Jahrbuch für Migrationsrecht 2009/2010*, Stämpfli, Bern, 2010, p. 3, 20 et seq.

<sup>289</sup> Judgment in *Teixeira* EU:C:2010:83, paragraph 76 et seq.

residence right is derived from a provision of Regulation (EU) No 492/2011 and not directly from Article 24(1) of the Residence Directive), Article 4 BR, Article 7(2) of Regulation (EU) No 492/2011, Article 45(2) TFEU or Article 18 TFEU.<sup>290</sup>

**c) SNCBs for persons with a permanent residence right**

Pursuant to Article 16(1), sentence 1 of Directive 2004/38/EC, persons “*who have resided legally for a continuous period of five years in the host Member State shall have the right of permanent residence there*”. The right of permanent residence does not depend on economic criteria; moreover, access to social assistance and SNCBs has to be granted according to Article 24 of Directive 2004/38/EC.

**d) SNCBs for former workers retaining their status of workers**

Union workers within the meaning of Article 45 TFEU enjoy a comprehensive and absolute claim to equal treatment with national workers regarding access to social benefits (cf Article 7(2) of Regulation (EC) No 492/2011, Article 45(2) TFEU). In particular, no residence requirement may be justified.<sup>291</sup> It should be added, though, that with regard to frontier workers, in its recent case law, the CJEU has accepted the requirement of a “*sufficient link of integration with the society of that State*”.<sup>292</sup>

---

<sup>290</sup> Cf in this respect H. Verschueren, *op cit*, (2015) *CML Rev* 52, 363, 376.

<sup>291</sup> Cf e.g. the judgment in *Hoeckx*, C-249/83, EU:C:1985:139, paragraph 23 et seq; judgment in *Commission v Luxembourg*, C-299/01, EU:C:2002:394, paragraph 12, 14; judgment in *Fascogna*, C-157/84, EU:C:1985:243, paragraph 24; judgment in *Commission v Belgium*, C-326/90, EU:C:1992:419. Disagreeing e.g. J. Steiner, ‘The right to welfare: equality and equity under Community law’, (1985) *EL Rev* 10, 21, 41. Cf on this issue F. Wollenschläger, *Grundfreiheit ohne Markt*, Mohr Siebeck, Tübingen, 2007, p. 38 et seq; *idem*, *op cit*, (2011) *ELJ* 17, 1, 6.

<sup>292</sup> Cf the judgment in *Giersch*, C-20/12, EU:C:2013:411, paragraph 63 (return to State after studies (paragraph 79) or parent has worked in the State for a certain minimum period of time (paragraph 78, 80)); judgment in *Krier*, C-379/11, EU:C:2012:798, paragraph 53 (participation in the employment market and therefore contribution to the financing of social security (paragraph 53)); judgment in *Commission v the Netherlands*, C-524/09,

In view of access to SNCBs, it has to be highlighted that, under certain circumstances, a former worker retains her or his status of worker. The conditions are listed in Article 7(3) of Directive 2004/38/EC and relate to certain cases of temporary unability to work, involuntary unemployment and vocational training. According to the case law of the CJEU these reasons are not exhaustive. Hence, (appropriate) maternity leave does not lead to a loss of the status of worker.<sup>293</sup> Moreover, the application of Article 7(3) of Directive 2004/38/EC raises further questions beyond the scope of this analysis.<sup>294</sup>

Finally, in his opinion in the *Alimanovic* case, Advocate General Wathelet (paragraph 97 et seq) argued in favour of an entitlement of former workers seeking a new job to SNCBs (under certain circumstances), even if not fulfilling the criteria of Article 7(3) of Directive 2004/38/EC, if “*the existence of a genuine link with the host Member State*” may be established:

*“In that regard, in addition to matters that can be inferred from family circumstances (such as the children’s education), the fact that the person concerned has, for a reasonable period, in fact genuinely sought work is a factor capable of demonstrating the existence of that link with the host Member State. Having worked in the past, or even the fact of having found a new job after applying for the grant of social assistance, ought also to be taken into account in that connection.”*

### ***e) Social assistance for workers with low income***

It should be mentioned that the concept of worker in EU law is broad, so that also persons with low income or working only for a few hours per week may qualify as workers as long as the employment is “effective and genuine”.<sup>295</sup> The CJEU confirmed the status of worker for interns,<sup>296</sup> part-time employees working three to 14 hours per week<sup>297</sup> as well as employees with such a low income that they have to rely on social assistance.<sup>298</sup> Again, persons qualified as workers according to this case law enjoy a comprehensive and absolute claim to equal treatment regarding access to social benefits.<sup>299</sup>

#### *2.1.3 Conclusion*

The case law of the CJEU, in particular *Brey* and *Dano*, shows that rules of access by economically inactive Union citizens to social benefits are far from clear. Not only can several categories of inactive migrants be identified, but the CJEU rulings themselves are subject to various interpretations. Even if the approach of a limited claim to social benefits definitely prevails, the nature of the limits is still largely unknown.

## ***2.2 Assessment of the proposal (pros/cons)***

When looking to the impacts of the *status quo* proposal from a legal and practical angle, the evaluation is ambiguous.

---

<sup>295</sup> See, inter alia, the judgment in *Kempf*, C-139/85, EU:C:1986:223, paragraph 14.

<sup>299</sup> Cf above, 2.1.2.3 d) SNCBs for former workers retaining their status of workers.

### 2.2.1 Clarification

The *status quo* leaves open a series of fundamental questions. What should be the status of jobseekers, of workers with low income, of family members, of former workers retaining their status of workers? How to deal with persons who have a genuine link with the Member State where they claim social assistance? Do some differences have to be made between social assistance benefits according to their objectives or nature? Furthermore, the concrete application of the test of proportionality is another source of uncertainty. It is indeed unclear under which circumstances a Member State can deny a social assistance payment because of an unreasonable burden on its financial system.<sup>300</sup> In the *Brey/Dano* judgments, the CJEU underlined that the exemption from the equal treatment principle enshrined in Article 24(1) of Directive 2004/38/EC and Article 4 BR needs a clear and substantial justification by the specific circumstances of the given case. This case-by-case reasoning makes it difficult to identify a well-established general rule.

The case law emphasises<sup>301</sup> the right of the Member States to opt out from the equal treatment principle but also from the principles of EU coordination law. In the *Sala*<sup>302</sup> judgment, the CJEU held that it is not forbidden for the Member States to reduce the access to welfare benefits. But if this is done, it should be figured out on a clear and explicit legal basis, not through uncodified case law.

This possibility to give less credit to the principle of equality of treatment set out in Article 4 BR will have a great impact on the Member States, as they have a broad and diverging understanding of social assistance (see 2.3 below).

---

<sup>300</sup> Judgment in *Brey* EU:C:2013:565; H. Verschueren, 'Free Movement or benefit tourism: The Unreasonable Burden of Brey', (2014) *European Journal of Migration and Law* 16, 147-179, 170 et seq.

<sup>301</sup> Judgment in *Brey* EU:C:2013:565; H. Verschueren, *op cit*, (2014) *European Journal of Migration and Law* 16, 147-179, 160 et seq; H. Verschueren, 'Preventing "benefit tourism" in the EU: A narrow and a broad interpretation of the possibilities offered by the CJEU in *Dano*?', (2015) *Common Market Law Review* 52, 363-390, 370 et seq.

<sup>302</sup> Judgment in *Sala* EU:C:1998:217.

The latter concept is not restricted to means-tested benefits for needy persons, but it refers to a great variety of tax-financed social benefits, e.g. with regard to assisting persons with special needs due to sickness, unemployment or low income, persons of young or old age, with disabilities or an extraordinary burden to be borne (e.g. single parents, caretakers) or with regard to safeguarding the mobility of the persons entitled or other cases of elementary need. The material scope of the exemption is therefore vast and broad, but is defined by each Member State.

A further difficulty results from the various Member States' laws which define the conditions for benefit entitlement (see 2.3 below). The entitlement may not only depend on nationality, but also on minimum waiting periods. Member States do not necessarily have a coherent system to identify entitlement to social assistance. Among the national legislations a great variety of rules may be found. Further differences can be observed as to the formal requirements which are to be fulfilled when applying for benefits: registration, an examination of a person's employability, or the test whether a person has her or his habitual residence in a given Member State. There are many different criteria to determine a person's habitual residence. Therefore, when one compares the legislations of the Member States there is no common rule under which circumstances a social assistance benefit matures.

### *2.2.2 Simplification*

The modernised EU coordination legislation originated in the EU's 'SLIM' initiative<sup>303</sup>: Simpler Legislation for the Internal Market. To set 'simple' rules means to design legislation that is easy to be understood by the persons addressed and clear to apply by the administrations of the Member States.

---

<sup>303</sup> **Simpler legislation for the internal market (SLIM): a pilot project. Communication from the Commission to the Council and the European Parliament. COM (96) 204 final, 8 May 1996.**

Simplification of law is important to create a law which becomes relevant in social reality.

Under the auspices of simplification of coordination law, Option 1 is problematic. First, if abstaining from codifying case law may be seen as a way to avoid more complex rules in the coordination Regulations, the *status quo* will leave unanswered many questions about the interpretation of *Brey/Dano* (see 2.2.1 above). Second, the *status quo* would make the situation of non-active persons very complex with regard to social security coordination rules. In the *Pinna I* judgment<sup>304</sup> the CJEU held that it is not permissible for EU law to increase the disparities that stem from the absence of harmonisation of national legislation. That would be the indirect consequence of the *status quo*.

### 2.2.3 Protection of rights

The overall target of coordination rules is to protect migrants from any loss of social security protection whilst using the fundamental freedom of EU law.<sup>305</sup> For all persons covered by a national social security system, these rules avoid both a double coverage in two Member States' systems and the lack of coverage.<sup>306</sup> If different Member states define the personal scope of their social security systems differently, these objectives are in danger. In further judgments, as to the BR the CJEU held that it has “*not only to prevent the*

<sup>306</sup> Judgment in *Van der Vecht*, C-19/67, EU:C:1967:49; judgment in *Perenboom*, C-102/76, EU:C:1977:71; judgment in *Kuijpers*, C-276/81, EU:C:1982:317; judgment in *Ten Holder*, C-302/84, EU:C:1986:242; judgment in *De Paep*, C-196/90, EU:C:1991:381; judgment in *Sehrer*, C-302/98, EU:C:2000:322; judgment in *Commission v Germany*, C-68/99, EU:C:2001:137; S. Devetzi, *Die Kollisionsnormen des Europäischen Sozialrechts*, Duncker & Humblot, Berlin, 2000, 39 et seq; F. Pennings, *Introduction to European Social Security Law*, Kluwer Law International, The Hague, 1998 (2<sup>nd</sup> edition), 71 et seq.

*simultaneous application of a number of national legislative systems and the complications which might ensue, but also to ensure that the persons covered by Regulation No 1408/71 are not left without social security cover because there is no legislation which is applicable to them.*<sup>307</sup> The *status quo* might, however, have this effect if a person applies in the Member State of her or his residence for a social benefit which is to be qualified as an SNCB under the BR, but does not fulfil the criteria for this social assistance benefit in the legislation of the competent State.

Option 1 encourages a limitation of migrants' access to social benefits. A needy migrant, who entered a Member State as an unself-sufficient person, may not be entitled to social assistance benefits from her or his State of residence and will neither qualify – due to the lack of legal residence – for the social assistance benefits from his or her previous State of residence. This person is likely to be deprived of social protection completely.

The *Brey/Dano* case law leads to distinctions between the coordination of SNCBs at EU level on one side and social assistance payments by countries at national level on the other side. Both types of benefits become a matter of shared responsibility for the EU and the Member States. This is new, but not unique. Under EU law a principle of 'more favourable treatment' between EU law and the Member States' domestic rules is acknowledged. In the past, in particular in the *Bosmann*<sup>308</sup> and *Hudzinski*<sup>309</sup> cases, the CJEU set rules where social security coordination is built upon a European and a Member States level. When a Member State's law gives more rights to the beneficiary than the EU rule, the CJEU held that EU law should not hinder more preferential entitlements to family benefits. The recent *Franzen* case confirmed this methodology.<sup>310</sup> This way to cope with competing legislations from different

---

<sup>307</sup> Judgment in *Kits van Heijningen*, C-2/89, EU:C:1990:183, paragraph 12; judgment in *De Paep* EU:C:1991:381, paragraph 18.

<sup>308</sup> Judgment in *Bosmann*, C-352/06, EU:C:2008:290.

<sup>309</sup> Judgment in *Hudzinski*, C-611/10, EU:C:2012:339.

<sup>310</sup> Judgment in *Franzen*, C-382/13, EU:C:2015:261.

sources is, however, not translated into the *Brey* and *Dano* cases. If Member States' social assistance laws differ as to the nationality of the applicant, whereas EU law does not, the outcome is detrimental to the beneficiary.

The consequence of the *Brey* and *Dano* case law will be to restrict social assistance rights by the mere fact that the Member State of residence is changed. In this respect, the proposal does not contribute to widening the social protective function of the EU law.

#### *2.2.4 Administrative burden and implementation arrangements*

The *Brey* and *Dano* cases will increase the burden for national administrations. The assessment of 'legal residence' will need to be carried out in a reliable manner by a public body. Additionally, some Member States (see 2.3 below) may impose further tests to be applied by the administrations as to the employability, substantive work or successful search for work. Social administrations, which have to decide on social assistance benefits, will have to control many facts and situations occurring within the competent Member State. Distinctions will have to be made at national level between social assistance benefits, between claimants (jobseekers, workers with low income etc); the concept of 'financial solidarity' will have to be implemented; and the 'genuine link' principle needs to be concretised. Uncodified case law will make the missions of national welfare institutions hugely complex.

For instance, the assessment as to what degree a social benefit would constitute an unreasonable burden for a Member State's welfare administration is hard to make. How should this requirement be tested? Does the individual case count or is the trend in general the decisive indicator? Which are the determining factors to identify such a burden? Which burden qualifies as unbearable (see 2.1 above)? All these criteria are vague, contingent and depend on a variety of facts which also undergo changes over time. For both the administration and the judiciary this seems to be difficult to deal with.

Option 1 will increase administrative procedures, bureaucratisation of mobility and will also make fundamental freedoms more difficult to be utilised.

#### 2.2.5 *Avoiding the risk of fraud and abuse*

The debate on poverty migration within Europe is driven by the concern of a fraudulent creation of social entitlements by making use of the fundamental freedoms of EU law.<sup>311</sup> Following the economic theory on the 'welfare magnet',<sup>312</sup> a generous welfare system attracts migration of poor and welfare-dependent persons.

Notably the *Dano* case can at first glance be seen as an easy way to control fraud and abuse. Limits set by the CJEU should save countries from paying undue social assistance benefits. In the public debate the exemption of social assistance from the equal treatment clause is connected with the combat against fraud and abuse.

Does Option 1 entail risks of double payment? The *Dano* case does not modify the principle in accordance with which the Member State in which the person does not habitually reside (be it the home State or the host State) is in general free from "SNCB burden". In sum, the State of habitual residence is competent; any other State can refuse benefits on the ground that it is not competent. Therefore, the risk of double payment seems to be largely reduced by Regulation (EC) No 883/2004.

---

<sup>311</sup> K. Hailbronner, 'Die Unionsbürgerschaft und das Ende rationaler Jurisprudenz durch den EuGH?', (2004) *NJW*, 2185.

<sup>312</sup> C. Grulielli & J. Wanba. 'Welfare Migration', in A. F. Constant & K. F. Zimmermann (eds), *International Handbook on the Economics of Migration*, Edward Elgar, Cheltenham/Northampton, 2013, 489; G. J. Borgas, 'Immigration and Welfare Magnet', (1999) *Journal of Labor Economics* 17, 607-613; J. K. Brueckner, 'Welfare Reform and race to the Bottom: Theory and Evidence', (2000) *Southern Economic Journal* 66(3), p. 505-525; E. Eichenhofer & C. Abig, *Zugang zu Steuerfinanzierten Sozialleistungen nach dem Staatsangehörigkeitsprinzip?*, LIT, Münster, 2004.

This said, in a dual system, in which both the Regulation and Residence Directive 2004/38/EC would apply, the risk of double payment could increase for practical reasons. Entitlement to social assistance would largely depend on national rules, in a context of evolving CJEU case law. However, since Option 1 does not include a coordination rule, but simply integrates persons into the solidarity system of the host Member State without addressing the issue of the fate of claims in the country of origin, this may lead to double payments. In borderline cases, in which it is unclear whether or not a person is entitled to minimum income support, the indicators for a genuine link to the competent State will depend on a huge variety of indicators – related to residence and labour market integration – which are difficult to assess, potentially giving leeway to abuse. Because of the legal uncertainties surrounding the interrelation between the Regulation and the Directive, it would become unclear and dubious how to implement the law, both for administrations and courts. This uncertainty could also affect the lacking coordination between the Member States – especially between those who have to manage social assistance benefits for beneficiaries leaving this Member State, and those who have to decide which persons qualify for a social benefit because she or he has established a genuine link in the Member State of residence. It might occur that one Member State continues paying benefits to a beneficiary living outside that Member State and who can successfully apply for benefits in the Member State to which he or she has moved and where he or she tries to establish a genuine link. This creates a category of people “sitting on two stools”. In addition, where a document on the legal residence is issued by the administrations, it can be unclear on which facts such a residence is certified. Quite often the certificate is issued on the basis of the intention to take residence in the Member State, without further proof of whether the residence is actually taken. This practice jeopardises the reliability of the certificates. It also endangers the risk of double payments by both the out and the ingoing Member States as residence can be established easily and formally.

### *2.2.6 Potential financial implications*

The financial impact of the option is hard to assess. The first impression is that it might be possible to think that the overall amount of social assistance benefits paid will be lower in the EU area. However, since each EU Member State will define its own system of entitlement to social assistance, it is likely that the new case law will mainly shift the distribution of the financial burden between EU Member States: those with generous rules of entitlement or loose rules of control may have to pay more benefits.

As mentioned above, fraud may include situations where a migrant might simultaneously receive social assistance in two Member States.

### **2.3 A mapping of the impact in the Member States**

In the Member States examined, the right to social assistance depends on and definitely requires the applicant's permanent stay within the territory of the Member State. This form of stay is conceived as habitual residence, which depends on a permanent residence in a given State. This condition for entitlement to a social assistance benefit in all Member States is compatible with the conditions under which persons are entitled to an SNCB in the context of Regulation (EC) No 883/2004 (Article 11 of Regulation (EC) No 987/2009 (IR)).

In some Member States, like **Cyprus**, the notion of habitual residence is unknown, but the concept is applied in the context of defining a permanent stay. In the **United Kingdom**, the habitual residence test applies to many non-contributory benefits – above all also to EEA jobseekers. Exempted from the test, however, are EEA workers or self-employed persons (which have to do genuine and effective work) and their family members, if they are workers, self-employed, jobseekers, pensioners or self-sufficient, and, finally, persons who were in the past employed in the United Kingdom, and are temporarily ill, in vocational training, disabled or old.

To test whether a person has her or his habitual residence in a given Member State, a wide range of circumstances is taken into account in national legislation. A person's centre of interest is identified by criteria like the duration of stay, the employment, the living conditions and the relation to family members and further indicators that the person belongs to a given State socially. In **Hungary** the test is based upon the accommodation, the employment and the ability to guarantee the subsistence of the applicant and her or his family. In **Ireland** similar criteria apply, such as the length and continuity of stay, the nature of employment, the centre of interest and future intentions as to the change of permanent stay. In **Germany** a cumulative analysis of various indicators and in **the Netherlands** a global test apply as to a person's genuine link to the labour market and the society of the Member State. These criteria widely correspond with the rules established by Article 11 IR, which stipulates the same criteria than the habitual residence test under domestic law.

The legal concept of social assistance is broad and not to be restricted to means-tested benefits for needy persons. It also includes non-contributory social benefits to assist persons with special needs due to sickness, unemployment (**AT, DE, IE, IT, LV, and UK**), low income (**AT, DE, NL and UK**), their young (**NL**) or old age (**AT, DE, HU, IE, IT, LV, UK**), a disability (**AT, DE, HU, IE, IT, LV and UK**) or an extraordinary burden to be borne – e.g. for single parents (**IE and IT**), caretakers (**LV, LT**) – due to the mobility of the persons entitled (**UH, LT**), housing costs (**UK**) or other cases of elementary need (**IE, UK**).

In addition, **Austria, Cyprus, Germany, Hungary, Italy, Ireland, Latvia, Lithuania** and **the Netherlands** demand from the beneficiaries to have their legal residence within this Member State. For the **United Kingdom** this condition has to be fulfilled for child benefits, and by jobseekers with regard to entitlements for a means-tested universal benefit, including child and housing benefits. Further conditions for benefits are residence in accordance

with the Member States' laws on migration. In some Member States the requirements for a legal residence depend on a minimum period of previous residence, e.g. a minimum period of permanent stay of 20 years (for those under the age of 40 years) or 35 years (for those over the age of 18 years) in the Member State (**CY**); or 60 months and within this period a permanent residence in this State for at least 12 months (**LV**) before the benefit may be requested. In **Austria** the law on EU migration and EU migrants explicitly forbids to take residence without having sufficient resources to safeguard the migrant's subsistence or for purposes other than to take up employment. In this context, the concept of and, hence, the minimum requirements for an adequate employment are formally characterised by law. The right to residence can be temporarily restricted. In the **United Kingdom** this can be done for jobseekers after six months of inefficient search, a lack of linguistic abilities or substantial work.

In the context of the right to social assistance this means that the residence taken must be lawful under the Member State's law on the migration of EU citizens. In addition, there may be formal requirements such as having a personal number for identification, an explicit residence permit issued by the competent Member State (**AT, CY, HU, IE, IT, LV**) or a medical document concerning a person's employability (**LV, UK**). This law has to be in line with the requirements established by Directive 2004/38/EC. The interplay between the factual and the legal concept of residence is, however, not in all Member States clear and settled (e.g. **DE**).

A further fundamental distinction is made by the Member States with regard to the nationality of the beneficiaries. In some of the Member States, the social minimum protection for jobseekers is excluded for EU migrants. For them, if they come to the Member State where they take their habitual residence, an additional restriction is provided for. This can be based on a further period of up to three months as a jobseeker after the establishment (**AT**) in the labour market of the Member State of residence or of the beneficiary's nationality.

The decision on the beneficiary's right is singled out as to the specific circumstances of the individual case, insofar as the habitual and legal residence test is concerned. Further tests of the individual situation apply as to the fact and duration of an applicant's degree of labour market integration. In many countries the *Brey* and *Dano* judgments raised great public and academic attention and led to doubts within the administration and judiciary. Much concern was expressed regarding how to assess whether a social benefit could turn into an unreasonable burden for a Member State.

#### 2.4 General evaluation of Option 1

Retaining the *status quo* will leave the legal development open for further case law. In this respect, this is an acceptable proposition, given that the *Brey* and *Dano* rulings are far from covering all concrete situations. Risks of fraud and abuse are probably limited. Nevertheless, Option 1 raises problems outside and inside the coordination rules.

The *status quo* means that Member States may differentiate between their nationals and non-nationals with regard to access to social assistance. The treatment of poor people vis-à-vis social assistance will vary widely according to the country of residence. National rules are likely to become more and more restrictive, with all the usual problems when conflicting national laws apply to transnational situations. Many poor migrants will find themselves without social assistance. Still, there would be no guarantee that EU countries' overall expenditure on social assistance will diminish: migrants may simply shift from one Member State to another and double payment situations could increase.

The *status quo* allows an exemption from key principles of EU social security coordination law. How will case law interact with rules on SNCBs? With regard to this question, various practices might occur between countries and within countries. This case law affects the internal coherence of the coordination rules in general and of SNCBs in particular. It will also be the

source of practical problems for national and local social security institutions having to deal with several sources of law for the determination of social assistance rights claimed by non-active migrants: to what extent coordination rules will have to be left unapplied or adapted is not easy to determine.

Negative effects of Option 1 may, however, be the necessary counterpart if the legislature wants to wait until case law stabilises. In particular, the statuses of jobseekers, former workers, frontier workers, workers with low income and family members need to be clarified. The CJEU also needs to be more specific about the proportionality test concerning the ‘financial burden’ and how the principle of ‘financial solidarity’ impacts access to social assistance in concrete cases, in order to guarantee a uniform application and therefore legal certainty within the Union.

Option 1 is, however, not supposed to be a long-term option. Option 1 leaves room for further step-by-step developments in the case law of the CJEU, yet it results in legal uncertainty and leaves many questions open. Moreover, the ability of case law to lay down general rules going beyond specific cases is very limited. Furthermore, fundamental political issues are involved (the degree of social solidarity owed to economically inactive EU citizens) which, in view of democratic legitimation, should be addressed by the Union legislature. The CJEU case law should be considered as a work in progress with an unforeseeable future. Under these circumstances a wait-and-see position should be appropriate for the next few years. Later, legislative action should be taken at its best on the basis of a matured case law, in which the growing pains have been removed.

### **3 Option 2a: limitation of the equal treatment principle set out in Article 4 BR for special non-contributory cash benefits (SNCBs)**

#### **3.1 Legal analysis of the proposal**

##### *3.1.1 Incorporation of Article 24(2) of Directive 2004/38/EC into Regulation (EC) No 883/2004*

The codification of Article 24(2) of Directive 2004/38/EC into Regulation (EC) No 883/2004 (BR) could make sense. Let us recall that this provision states that “*the host Member State shall not be obliged to confer entitlement to social assistance during the first three months of residence or, where appropriate, the longer period provided for in Article 14(4)(b), nor shall it be obliged, prior to acquisition of the right of permanent residence, to grant maintenance aid for studies, including vocational training, consisting in student grants or student loans to persons other than workers, self-employed persons, persons who retain such status and members of their families*”.

Option 2a intends to incorporate rules on social assistance for migrants which the case law of the Court of Justice of the European Union (CJEU) regards as being intertwined. This option would, therefore, create symmetric rules in the freedom of movement law and the social security coordination.

Deviation from the equal treatment principle set out in Article 4 BR is legally possible. Such a revision could close the gap between the CJEU case law and Article 4 BR. Exemptions from the equal treatment principle would be explicitly stipulated in the BR. The key problem is to determine the best legal way to implement Option 2a.

### 3.1.2 Possible legislative solutions

The emergence of SNCBs was an outcome of the case law of the CJEU. It provided for a new, distinct and special system of social security coordination for mixed benefits. This system is built on special principles and establishes coordination principles on its own.<sup>313</sup> It is based on three interrelated principles: the applicable law is the law of the claimant's country of residence, the non-discrimination of persons as to their nationality and, finally, the non-exportability of the benefits applies.<sup>314</sup> This special coordination regime was built separate from the general coordination system, but at the same time took on board some of its principles. Such principles would be substantially affected by Option 2a.

First, the meaning of residence would not be the one found in Article 11 of Regulation (EC) No 987/2009. Residence is conceived as a factual concept. In the context of Directive 2004/38/EC, however, it is defined as a legal concept.<sup>315</sup> Second, the principle of equal treatment of persons, irrespective of their nationality, would be exposed to a profound change: differences between nationals and non-nationals would be permitted. The proposal would not only modify, but deeply alter the current system of coordination of SNCBs.

With regard to the incorporation of Article 24(2) of Directive 2004/38/EC into the BR, it should be noted that the Directive is not primarily about setting standards of social security coordination. It gives Member States the right to establish their own rules of social assistance entitlement. If Article 24(2) was incorporated into the BR, this rule would change its function from an option for the Member States to a necessity at EU law level.

---

<sup>313</sup> See 1 above

<sup>314</sup> See 1 above, H. Verschueren, 'Free Movement or Benefit Tourism: The Unreasonable Burden of Brey', (2014) *The European Journal of Migration and Law* 16, 169 et seq.

<sup>315</sup> See 1 above; and this despite the case law does not require the Member States to restrict the social assistance benefits to a legal residence.

On the basis of these preliminary remarks, it appears that Article 24(2) could be inserted into the BR in different ways:

- A first solution could be to introduce this provision as a general rule of coordination in Article 4 BR.
- A second solution could be to create a specific exemption in the context of Article 70 BR.
- A third solution could be to introduce Article 24(2) as part of Article 3(5) BR.
- Finally it could be examined to find an appropriate solution on the basis of the ‘genuine link’ concept in the context of Article 11(3) BR.

Each sub-option needs to be evaluated.

#### 3.1.2.1 Article 24(2) of Directive 2004/38/EC as an exemption of Article 4 BR?

Article 4 BR provides that “[a]ll persons shall enjoy the same rights and be subject to the same obligations under the legislation of any Member State as the nationals thereof”, “unless otherwise provided for” by the BR. Therefore, such an exemption could be made.

This sub-option would, however, be problematic, not only because it would go against Recital (5) BR, which declares that “it is necessary, within the framework of such coordination, to guarantee within the Community equality of treatment under the different national legislation for the person concerned”.

Sub-option a would indeed put too great an emphasis on social assistance. This branch of social protection is important, but – both from the social and the economic view – less important than the social security risk related branches. Article 4 BR applies to all rules of coordination and all social security benefits. The new exemption would set a false accent on benefits which are not at the heart of the coordination system.

Furthermore, in the Member States’ law, the distinction based on nationality is just one factor to exclude migrants from social assistance. There are other

factors, above all the lawful residence and labour market/society integration. Bearing those criteria in mind, it would not be sufficient to adapt the equality treatment principle to codify the CJEU case law.

It is therefore not recommended to incorporate Article 24(2) of Residence Directive 2004/38/EC into Article 4 BR.

### 3.1.2.2 Article 24(2) of Directive 2004/38/EC as an exemption of Article 70 BR?

Article 24(2) of the Residence Directive relates to social assistance as do the provisions on SNCBs. Since Article 70 BR refers to social assistance specifically, it would seem the appropriate place to integrate an additional provision on social assistance benefits. SNCBs have a hybrid character: they are part of both social security and social assistance legislation. The integration of rules into Article 70 BR could be done even if social assistance benefits as such are not listed as SNCBs and do not follow the general rules established by Article 70 BR. Therefore, a provision on social assistance could find its place in Article 70 BR.

There is, however, a problem to underline: social assistance payments may not necessarily be SNCBs, nor are SNCBs necessarily social assistance benefits.<sup>316</sup> A first difficulty would be to make a distinction between the two categories of benefits. This distinction should be added to the definition of SNCBs given by Article 70(2)2 BR. A second and major difficulty derives from the fact that if Article 24(2) was taken as a rule to abandon the principles established for SNCBs by Article 70(2) BR (entitlement based on residence, non-exportation and equal treatment of all EU nationals), internal coherence of the legal system of SNCBs would be affected in two respects. First, it would introduce a different notion of residence (legal *versus* factual). Second, the equal treatment clause – decisive for the SNCBs – would be left out for social assistance payments. Only the non-exportation clause would apply to both categories of

---

<sup>316</sup> Cf however the judgment in *Dano* EU:C:2014:2358, paragraph 63.

benefits. The integration of derogatory residence/equal treatment rules into Article 70 BR would establish a deep contrast within the provision itself. It is difficult to imagine that opposing imperatives would apply within the same Article aiming to coordinate social benefits of a similar character and both with a social assistance dimension.

Despite the fact that *Brey* and *Dano* emphasise that SNCBs fall under the meaning of ‘social assistance’ in Article 24(2) of Directive 2004/38/EC, it should not be recommended to incorporate this provision in Article 70 BR. The concepts of ‘social assistance’ and ‘SNCB’ differ; the first is broader than the latter. Article 3(5) BR excludes social assistance from the substantive scope of application of the BR: why should it become a concept within the BR? Additionally, Article 24(2) of Directive 2004/38/EC does not primarily concern coordination in the EU context, but non-coordination of benefits rights on the basis of Member States’ prerogatives. Finally, Article 24(2) of Directive 2004/38/EC allows distinctions for social benefits – above all nationality and lawful residence – which are unlawful under the BR. Therefore, to incorporate Article 24(2) of Directive 2004/38/EC would establish a profound contradiction between on the one hand the special coordination law – EU rules for SNCBs – and on the other hand the integration of a provision which allows the Member States to abandon the leading principles of the BR – and this in respect of ‘social assistance’ benefits which are in general and in substance completely excluded from the BR.

Our conclusion is that it is not recommended that Article 24(2) of Directive 2004/38/EC is integrated into Article 70 BR.

### 3.1.2.3 Article 24(2) of Directive 2004/38/EC as part of Article 3(5) BR

Article 24(2) of the Residence Directive could be integrated into the BR as a part of Article 3(5) BR. Pursuant to this provision, social and medical assistance benefits are excluded from EU coordination.

This solution would concur with the intention of Article 24(2) since it enables the Member States to establish rules about the transnational dimensions of their social assistance legislation without any EU law interference. This insertion would create coherence within EU coordination law.

Still, there is a first hindrance which makes this proposal problematic. It would revitalise the question whether the complete exclusion of a very broad range of social benefits (providing minimum means of existence from EU coordination) could be justified if they are at the same time regarded as social security benefits due to their characteristic as SNCBs. In this respect, the question arises whether the case law, which emphasises the double characteristic of these benefits as both SNCBs in the meaning of the BR and as social assistance benefits in the meaning of Directive [2004/38/EC](#) could be compatible with such legislation. Article 3(3) BR identifies SNCBs as a category of social security benefits. As long as this rule exists, it would be inconsistent with the EU rules to exclude social assistance benefits from the material scope of the coordination if they are at the same time qualified as SNCBs. The contradiction between the EU rules and the Member States' rules on social assistance benefits would be kept.

If Article 24(2) was integrated into Article 3(5) BR, this would also overrule the previous and constant case law of the CJEU as to which social assistance benefits with minimum protection characteristic should be conceived as social security benefits under the concept of SNCBs. This reasoning and ruling of the CJEU historically led to the incorporation of SNCBs into the BR.

Finally, the rationale of Article 24(2) is not the exclusion of certain categories of social benefits from the coordination regime. Its main intention is to exclude persons from entitlement to social benefits because they are not adequately integrated into the society of a Member State. This problem relates to the question which persons are covered under the BR by the legislation of a Member State, but it does not primarily relate to the question which subject matters should be conceived as part of EU coordination law.

Therefore, this option should also be disregarded.

#### 3.1.2.4 Solution on the basis of the ‘genuine link’ concept in the context of Article 11(3) BR

Whereas Article 11(3)(a) to (e) BR sets rules of conflict of law, Article 24(2) of the Residence Directive enables Member States to exclude persons from their social assistance legislation by rules they can establish. Therefore, could Article 24(2) be integrated in the form of a negative clause to the existing rules of conflict of law set out in Article 11(3)(a) to (e) BR?

Article 11(3)(e) BR could provide an exemption. Thus, according to rules of conflict of law a competent Member State could exclude migrants from social assistance – even if the benefits concerned are income-related SNCBs – if these migrants have neither a legal residence, nor a link to the labour market, nor the nationality of the competent State. In this proposal the other main rules on the coordination of SNCBs – in particular the ones examined (Articles 4, 70, 3(5) BR) – could be kept unchanged.

This solution would also coincide with the CJEU case law where a genuine link between the applicant and the Member State more or less overtly assumes a key role.<sup>317</sup> In this approach, it could be provided that social assistance benefits to which non-active persons are in principle entitled due to their residence in the competent Member State, can be restricted by the Member States’ legislation to migrants who have a legal residence, who have the nationality of the competent State and who are integrated into the labour market of this State.

This approach could combine the provisions on the freedom of movement with the social legislation in such a manner that the exclusion of unself-sufficient migrants, as in the cases *Dano* and *Brey*, could be adequately dealt with within

---

<sup>317</sup> This was the main argument in the opinion of Advocate General Wathelet in the currently pending case *Alimanovic*, delivered on 26 March 2015 (Opinion in *Alimanovic*, C-67/14, EU:C:2015:210).

the BR rules. The BR indeed translates the concept of a genuine link in Article 11(3)(a) and (e) BR into specific ties: the workplace for the workers' protection, the legal seat for the self-employed persons' protection and, finally, the residence as the key connecting factor for non-working persons.

This new provision could be enacted in Article 11 in conjunction with section (3)(e) and could be expressed in the following words: "*The Member States – competent on the basis of Article 11(3)(e) BR because of a residence in this State, may exclude persons from social assistance benefits who are neither nationals nor a legal resident nor integrated into the labour market of the Member State as a worker, self-employed person, jobseeker or family member.*"

### **3.2 Assessment of the proposal (pros/cons)**

When considering the four legislative alternatives reflected upon in the previous parts, the first three turn out not to adequately express the intention of Article 24(2) of the Residence Directive. Only Sub-option d is worth being explored. Therefore, this option alone will be assessed. The outcome of the evaluation is ambiguous.

#### *3.2.1 Clarification*

The proposal to introduce a negative clause in the provisions of the BR on applicable law might be regarded as unusual. One might argue that the integration of negative clauses in order to determine the applicable law would lead to a paradox. It may also affect the coherence of the system of rules of conflict of law.

Such a negative clause would need to be supplemented by an additional legal provision to allow the Member States to deny access to social assistance benefits on the basis of and in line with CJEU case law.

However, important problems of implementation would remain in practice and would have to be dealt with by each Member State separately. What is social assistance? What is legal residence? Who would be considered integrated into the labour market?

### *3.2.2 Simplification*

The introduction of a negative clause of conflict of law would be a way to better coordinate the CJEU's rulings on social assistance and the functioning of income-related SNCBs. In this respect, it should bring simplification.

However, the integration of the provision into the BR would increase the complexity of the rules incorporated therein. It would also enhance the difficulties mentioned in how to interpret the conditions under which the exclusive rule applies with regard to Article 24(2).

### *3.2.3 Protection of rights*

The proposal does not concern opening access to social rights or safeguarding social rights in transnational contexts, but restricts entitlement to social assistance to those who are not regarded as part of a Member State's society. Therefore, this proposal is problematic with regard to Recital 1 BR, which states that "*[t]he rules for coordination of national social security systems fall within the framework of the free movement of persons and should contribute towards improving their standard of living and conditions of employment.*"

### *3.2.4 Administrative burden and implementation arrangements*

The same problems as described in Option 1 would be observed. The proposal would not reduce the complex assessments and evaluations to be performed.

### *3.2.5 Avoiding the risk of fraud and abuse*

Since entitlement to social assistance will depend on national rules in a context of unstable CJEU case law, there could be an increased risk of social tourism – non-active migrants moving to countries where entitlement conditions are the easiest to comply with or where administrative control is loose. More generally, the risk of fraud may increase since the assessment of the residence condition will be based on factual and unclear elements. The assessment of Option 1 in terms of fraud and abuse is largely transposable to Option 2a.

### *3.2.6 Potential financial implications*

The same observation made for the previous option applies to this option.

## **3.3 A mapping of the impact in the Member States**

The concept of legal residence differs between Member States. Some Member States demand a minimum period of previous residence. In **Cyprus**, legal residence depends on a permanent stay of 20 or 35 years. In **Latvia** residence is required of 60 months and within this period of permanent residence at least 12 months, before a person is entitled. Some Member States explicitly forbid to take residence without having sufficient resources to safeguard the migrant's subsistence or for purposes other than to take up employment (**AT, DE, HU, LV, LT, UK**). Consequently, the concept of and, hence, the minimum requirements for an adequate employment characterised by national law might vary.

Further complications result from distinctions made concerning the beneficiaries' nationality (**AT, CY, HU, IE, IT, LV**) or an additional restriction for a further period of up to three months for jobseekers after the establishment in the labour market of the Member State of residence (**AT**). This entails deviations from EU law by conflicting Member States' law. The

same is true for criteria according to which the benefits are accessible. As in the **United Kingdom**, a complex test is to be applied to determine whether a person has his or her habitual residence in a Member State or is substantially employed, active as a jobseeker or has the prospect of being considered as employable.

The different Member States have enacted various criteria to define the circumstances: identifications by means of an explicit residence permit issued by the competent State (**AT, CY, HU, IE, IT, LV**) or a medical document concerning a person's employability (**Latvia, UK**), which are to be fulfilled both in substance and in the procedure for a social assistance benefit.

Therefore, even if it could be feasible to define on EU level and within the BR criteria for social assistance benefits on the basis of the two cases, it would remain an open question how to cope with the on-going differences between the EU rules and the Member States' divergent and non-concurring laws on social assistance.

### **3.4 General evaluation of Option 2a**

It appears that it is very difficult to transpose the limitation of the equal treatment principle for income-related SNCBs into the coordination Regulations.

The analyses of four sub-propositions show that there is a great risk that the overall coherence of the SNCB system is undermined and that legal inconsistencies are generated within the coordination Regulations. In this regard, the last sub-proposition (the insertion of a negative rule of conflict) might be the only one without such effect, even if its complexity and the consequences it would have on the system of rules of conflict of law raise questions about its relevance.

In any case, since the equality of treatment is only one side of the question, a modification of the coordination rules dealing exclusively with this matter would not be sufficient to clarify rules applicable to social assistance.

## **4 Option 2b: Removal of the special non-contributory cash benefits (SNCBs) from the material scope of Regulation (EC) No 883/2004**

### **4.1 *Legal analysis of the proposal***

#### *4.1.1 Introduction*

Option 2b consists in the removal of the income-related SNCBs from the scope of Regulation (EC) No 883/2004 (BR). The CJEU included hybrid benefits in the scope of the Regulation, against the wishes of the Council. Two decades later the Council responded by devising the special system for SNCBs. As that system has now been destabilised by the CJEU, it is understandable that the option of removing the SNCBs from the scope of the Regulation holds some appeal. Option 2b would have the effect of subjecting all ‘social assistance’ within the meaning of Directive 2004/38/EC to a common legal regime: it would be governed by national law, Directive 2004/38/EC and the TFEU.

This section determines the impact of Option 2b on citizens and administrations. It identifies the provisions of the Regulation that are relevant to SNCBs and that would no longer govern SNCBs under Option 2b. Furthermore, it analyses the consequences of this change. Essentially, this section concludes that:

- Option 2b would replace Article 70 BR as far as income-related SNCBs are concerned and Article 6 BR with a difficult, case-by-case appraisal of whether a claimant has sufficient links with a Member State to claim its ex-SNCBs;
- the repeal of the provisions of the BR on equal treatment and assimilation is largely neutral, as the same rights and duties derive from the TFEU and Directive 2004/38/EC;
- Option 2b would complicate the cooperation and communication between social security institutions.

Overall, it seems that the attractiveness of Option 2b does not resist closer examination.

As a preliminary point, it needs to be specified that Option 2b is not relevant to persons who lack a right to reside. Such persons can be excluded from income-related SNCBs in the circumstances described under Option 1. Whether or not SNCBs are still covered by the Regulation has no influence on their legal position. In other terms, since Ms Dano and her son could not derive any protection from the Regulation, the inapplicability thereof would not in the slightest affect their rights.

The Regulation is however relevant to persons who have a right to reside in the State where they claim SNCBs. This concerns, *inter alia*, the nationals of that State and persons holding the status of long-term resident under Article 16 of Directive 2004/38/EC. Under national and international law,<sup>318</sup> the nationals of a State have a right to reside on its territory. For instance, while Irish nationals automatically satisfy the right-to-reside condition in Ireland, they may fail to actually qualify for SNCBs on other grounds. The Regulation might assist such citizens in claiming income-related SNCBs. The same is true for the categories of migrant citizens against whom right-to-reside conditions may not be enforced. Finally, Member States are free to set right-to-reside requirements or not. Where a State does not require the applicant for certain SNCBs to have a right to reside, persons, even where they do not have such a right, might derive protection from the Regulation. These three categories cannot be (or are not) denied benefits on the basis of *Dano*; they may therefore find the Regulation helpful in claiming benefits. The removal of income-related SNCBs from the scope of the Regulation is liable to have an impact on their legal position.

---

<sup>318</sup> E.g. the judgment in *McCarthy*, C-434/09, EU:C:2011:277, paragraph 29 and cases cited.

#### 4.1.2 Towards a case-by-case assessment of the real link

Under the current coordination framework, SNCBs are served in one Member State only, *i.e.* the State in which a person habitually resides.<sup>319</sup> If the institutions of different Member States hold different views on the location of a person's habitual residence, they must reach an agreement under Article 11 of Regulation (EC) No 987/2009 (IR). That provision demands “*an overall assessment of all available information relating to relevant facts*”. Its first paragraph contains a non-exhaustive list of indicators.<sup>320</sup> Article 11(2) IR provides that, in the event that the institutions fail to reach an agreement, the person's intention, as apparent from the circumstances, is decisive. Persons have one – and only one – place of habitual residence. In *Wencel*, the CJEU held that a person cannot have *more than one* habitual centre of interests.<sup>321</sup> It is generally accepted that everyone must have *one* place of habitual residence,<sup>322</sup> which may be located outside the EU.<sup>323</sup> As a result, every citizen who lives in a Member State can claim benefits in that Member State – and nowhere else.<sup>324</sup> Of course, right-to-reside conditions and other requirements may prevent a migrant from effectively enjoying SNCBs in the competent Member State.

---

<sup>319</sup> Article 1(j) BR and Article 70 BR.

<sup>320</sup> *I.e.* the duration and continuity of presence on the territory of the Member States concerned; the nature and the specific characteristics of any activity pursued, in particular the place where such activity is habitually pursued, the stability of the activity, and the duration of any work contract; his or her family status and family ties; the exercise of any non-remunerated activity; in the case of students, the source of their income; his or her housing situation, in particular how permanent it is; the Member State in which the person is deemed to reside for taxation purposes. There is no order of preference between those indicators (judgment in *I v Health Service Executive*, C-255/13, EU:C:2014:1291, paragraph 46).

<sup>321</sup> Judgment in *Wencel*, C-589/10, EU:C:2013:303, paragraph 48, paragraph 51.

<sup>322</sup> Cf Article 11 IR.

<sup>323</sup> European Commission, *Practical guide on the applicable legislation in the European Union (EU), the European Economic Area (EEA) and in Switzerland*, 2013, p. 42-43. Consider e.g. the situation of the claimant in the judgment in *Collins* EU:C:2004:172.

<sup>324</sup> The CJEU ruled that a worker could access an SNCB in his or her Member State of work in which he or she no longer lived, given that he or she had maintained all of his or her economic and social links to that State (judgment in *Hendrix* EU:C:2007:494).

Option 2b removes this guarantee of one single competent State. In some situations, a person may be able to claim benefits in more than one State. For instance, the national of a Member State may be deemed resident for the purposes of national law eight weeks after returning there. At that point, he or she might still be considered as resident in the State which he or she just left, and in which he or she worked and lived for several years. As a result, he or she would unduly cumulate similar benefits from each State. Obviously, Member States may enact anti-overlapping rules, but they might not be aware of the fact that similar benefits are awarded abroad.

Conversely, a citizen might fall between two stools, if he or she is not considered resident in any Member State and therefore receives no SNCBs at all. At first sight, it seems that Option 2b would enable a Member State to refuse SNCBs to persons who do have a right to reside, on the grounds that they have not lived in its territory long enough, that they are not domiciled there, etc. For instance, could a Member State require two years of prior residence?

The TFEU and Directive 2004/38/EC raise a number of important limits to Member States' ability to restrict the access to their income-related SNCBs. Residence requirements are intrinsically liable to negatively affect migrant citizens more than sedentary, national citizens. Therefore, they amount to indirect discrimination (when applied to foreign nationals) or to a non-discriminatory restriction of free movement rights (when enforced by a State against its own nationals). According to the CJEU, it is legitimate for a Member State to grant benefits such as SNCBs only to persons who have established "*a certain degree of integration into the society of that State.*"<sup>325</sup> The CJEU furthermore accepts that residence in that State during "*a certain length of time*" demonstrates such integration for economically inactive

---

<sup>325</sup> Judgment in *Bidar* EU:C:2005:169, paragraph 57.

citizens.<sup>326</sup> Yet, it insists that the condition must be proportionate. It is settled case law that “*a condition of residence may be disproportionate if it is too exclusive in nature because it favours an element which is not necessarily representative of the real and effective degree of connection and excludes all other representative elements.*”<sup>327</sup> The CJEU accepts that the following factors might indicate the existence of a genuine link: (stable) residence,<sup>328</sup> connections to a social security system,<sup>329</sup> family circumstances,<sup>330</sup> language skills,<sup>331</sup> nationality,<sup>332</sup> work,<sup>333</sup> work-seeking<sup>334</sup> etc.<sup>335</sup>

Member States who wish to introduce additional requirements must therefore tread cautiously. They are free to require that the recipients of their benefits demonstrate a real link. To that end, they may set residence-related conditions or other territorial conditions. However, they must ascertain, in each individual case, that these conditions do not go further than strictly necessary. In

---

<sup>326</sup> E.g. the judgment in *Bidar* EU:C:2005:169, paragraph 59; judgment in *Collins* EU:C:2004:172, paragraph 72; judgment in *Prinz and Seeberger*, C-523/11 and C-585/11, EU:C:2013:524, paragraph 38.

<sup>327</sup> Judgment in *Giersch* EU:C:2013:411, paragraph 72 and case law cited.

<sup>328</sup> E.g. the judgment in *Collins* EU:C:2004:172, paragraph 72; judgment in *Stewart*, C-503/09, EU:C:2011:500, paragraph 101; judgment in *Prinz and Seeberger* EU:C:2013:524, paragraph 38.

<sup>329</sup> E.g. the judgment in *Stewart* EU:C:2011:500, paragraph 97-99; judgment in *Commission v Germany*, C-269/07, EU:C:2009:527, paragraph 60.

<sup>330</sup> E.g. the judgment in *Thiele Meneses*, C-220/12, EU:C:2013:683, paragraph 38; judgment in *Martens*, C-359/13, EU:C:2015:118, paragraph 41.

<sup>331</sup> E.g. the judgment in *Prinz and Seeberger* EU:C:2013:524, paragraph 38; judgment in *Thiele Meneses* EU:C:2013:683, paragraph 38; judgment in *Martens* EU:C:2015:118, paragraph 41.

<sup>332</sup> *Ibid.*

<sup>333</sup> E.g. the judgment in *Hendrix* EU:C:2007:494, paragraph 57-58; judgment in *Commission v the Netherlands* EU:C:2012:346, paragraph 65; judgment in *Krier* EU:C:2012:798, paragraph 53; judgment in *Giersch* EU:C:2013:411, paragraph 63. The CJEU listed the former employment of the father of a dependent and economically inactive citizen as an indicator of her integration in the judgment in *Stewart* EU:C:2011:500, paragraph 100, and the judgment in *Martens* EU:C:2015:118, paragraph 41, paragraph 44.

<sup>334</sup> E.g. the judgment in *Collins* EU:C:2004:172, paragraph 70, paragraph 72; the judgment in *Vatsouras and Koupatantze* EU:C:2009:344, paragraph 39.

<sup>335</sup> The open-ended nature is emphasised in the cases mentioned in footnote 331. This does not mean that the Member States always have to take account of all social ties (see e.g. the judgment in *Förster* EU:C:2008:630; the judgment in *Geven* EU:C:2007:438).

particular, they must accept that a multitude of elements can prove the existence of a link. This real link test is neither particularly clear, nor easy to administer. It would however become standard practice if Option 2b were chosen. Any attempt to specifically limit the rights of (lawfully residing) migrant citizens to ex-income-related SNCBs would amount to restriction of their free movement rights, which needs due justification; the real link is virtually the only successful justification ground.

The *Stewart* case provides a topical example.<sup>336</sup> It concerned the UK short-term incapacity benefit in youth, a non-contributory benefit providing persons aged 16 to 25 who have a long-term disability with the necessary means to meet their needs. As will be demonstrated below, this benefit fulfilled all the conditions for being considered as an SNCB, except that the UK did not list it in Annex IIa. Ms Stewart was a British national suffering from Down's syndrome. She moved to Spain with her parents age ten. Her mother claimed the UK short-term incapacity benefit in youth on her behalf when she became 16. The claim failed because Ms Stewart resided abroad. UK law required the young invalid person to have been present in the UK for a period of at least 26 weeks in the 52 weeks immediately preceding the date of the application and to be present there on that date. The UK argued that the past presence requirement was proportionate, as it was short. It had to be satisfied only on the date of the claim and there simply were no other alternatives to determine the existence of a genuine link. The CJEU conceded that the existence of such a link can be proven by a stay for a reasonable period in the UK. Yet, the 26 weeks requirement was too exclusive. It excluded other elements that may demonstrate a real connection, such as the relationship between the claimant and the social security system (Ms Stewart was already entitled to the UK disability living allowance, and was credited with UK national insurance contributions); the claimant's family circumstances (her parents received UK pensions, and her father had worked in the UK); and the fact that the claimant,

---

<sup>336</sup> Judgment in *Stewart* EU:C:2011:500.

a UK national, had lived in the UK. According to the CJEU, these elements suffice to demonstrate the existence of a genuine and sufficient connection between Ms Stewart and the UK. The requirement of past presence was thus disproportionate and contrary to Article 21(1) TFEU. On the same grounds, the CJEU decided that the financial balance of the British schemes was not endangered, and that the condition of presence on the date on which the claim is made was disproportionate. In sum, an economically inactive person could not be required to reside in the UK when claiming a benefit that closely resembles SNCBs, because she had sufficiently strong attachments with the UK.

The same scenario risks unfolding for ex income-related SNCBs under Option 2b. Currently, SNCBs are conditional upon habitual and, where applicable, lawful residence. Option 2b seems to enable Member States to require more than just habitual and lawful residence. They could demand stronger attachments to their society, for instance durational residence. However, the TFEU could oppose the additional requirements of links, as soon as they are not strictly necessary. What is necessary is hard to predict, but it seems clear that rules that attach importance only to one single indicator (or just a very few indicators) are very vulnerable to a challenge under EU law. In answer to our earlier question, a Member State requiring citizens who have a right to reside to have lived on its territory during a number of years would most probably run counter EU law.

#### *4.1.3 The principle of equal treatment (Article 4 BR)*

Article 4 BR is a specific expression of the principle of non-discrimination laid down in Article 18 TFEU,<sup>337</sup> Article 45(2) TFEU, Article 49 TFEU and

---

<sup>337</sup> Judgment in *Dano* EU:C:2014:2358, paragraph 61.

Article 56 TFEU. In *Dano* the CJEU entirely aligned Article 4 BR to Article 24 of Directive 2004/38/EC.<sup>338</sup>

Option 2b would make little difference when compared to the current state of affairs. Persons lacking a right to reside have no right to equal treatment under either Article 4 BR or any other provisions mentioned above. Persons possessing a right to reside would be able to claim equal treatment under Article 24 of Directive 2004/38/EC and/or the aforementioned provision of the TFEU, even if they could no longer rely on Article 4 BR because Option 2b was enacted. As illustrated above, the principle of equal treatment and the prohibition on restrictions of free movement allow a citizen who has a sufficiently close connection to a Member State to challenge territorial conditions laid down in its legislation.

#### *4.1.4 The principle of equal treatment of facts (Article 5 BR)*

Article 5 BR lays down the principle of equal treatment of benefits, income, facts or events.<sup>339</sup> It essentially provides that, where the legislation of the competent Member State attaches legal effects to the occurrence of certain facts or events, that State must take account of equivalent facts or events taking place in another Member State as though they had taken place on its own territory (Article 5(b) BR). Article 5(a) sets out a similar rule: the receipt of social security benefits and other income in another Member State must be equated to the receipt of domestic benefits or income. Article 5 can be both beneficial and detrimental to citizens – we examine both situations in turn.

Article 5 BR allows the eligibility conditions to be satisfied in another Member State. That provision then benefits the migrant. For instance, SNCBs are regularly granted in the form of a supplement; their payment is often

---

<sup>338</sup> *idem*, paragraph 60 *et seq.*

<sup>339</sup> See further N. Rennuy, 'Assimilation, territoriality and reverse discrimination', (2011) *European Journal of Social Law*, 289.

conditional upon receipt of national social security benefits. Article 5(a) BR (previously Article 10(3) of Regulation (EEC) No 1408/71) provides that equivalent foreign benefits should be treated as national benefits. Consider a French SNCB which, by hypothesis, is only granted as a supplement to a French old-age pension. If a French institution wanted to refuse a person receiving a Spanish pension that SNCB, it would either have to demonstrate that the Spanish pension is not equivalent to the French pension,<sup>340</sup> or that its refusal is necessary to safeguard a legitimate interest.

Option 2b would not change this state of affairs. It is settled case law that, insofar as it is beneficial to migrants, the equal treatment of facts is required by the free movement rights laid down in the Treaty<sup>341</sup> and/or Directive 2004/38/EC.<sup>342</sup> A refusal to assimilate foreign facts amounts to indirect discrimination or to a restriction to free movement, as it only affects migrants. If the facts are equivalent, a refusal must be justified by demonstrating the legitimacy of the objective pursued and the suitability and necessity of the means deployed. The outcome of the French case would be identical.

Article 5 BR can also be relied upon to the detriment of migrants, where disentitling conditions are satisfied in another Member State. For instance, many SNCBs are means-tested or income-tested. Article 5(a) BR equates foreign income and means to domestic income and means. Whether the personal or familial income of the applicant reaches the upper limit for the grant of SNCBs is then determined by reference to the income he or she earns

---

<sup>340</sup> Cf the judgment in *Larcher*, C-523/13, EU:C:2014:2458.

<sup>341</sup> E.g. the judgment in *Roviello v Landesversicherungsanstalt Schwaben*, C-20/85, EU:C:1988:283 (Article 48 and Article 51 EEC Treaty); judgment in *O'Flynn v Adjudication Officer*, C-237/94, EU:C:1996:206 (Article 7(2) of Regulation (EEC) No 1612/68); judgment in *Elsen v Bundesversicherungsanstalt für Angestellte*, C-135/99, EU:C:2000:647 (Article 18 EC, Article 39 EC and Article 42 EC); judgment in *Kauer*, C-28/00, EU:C:2002:82 (Article 18 EC, Article 39 EC and Article 43 EC); judgment in *Duchon*, C-290/00, EU:C:2002:234 (Article 39(2) EC and Article 42 EC); judgment in *D'Hoop*, C-224/98, EU:C:2002:432 (the provisions on EU citizenship).

<sup>342</sup> E.g. the judgment in *Commission v Austria* EU:C:2012:605 (Article 18, 20 and 21 TFEU and Article 24 of Directive 2004/38).

in all the Member States. The same applies to rules precluding the overlapping of SNCBs with other social benefits. Member States must however be careful to avoid creating an unjustified non-discriminatory obstacle to the free movement of persons.<sup>343</sup>

Assimilation detrimental to migrants could still be performed if Option 2b were implemented. The CJEU held that Article 18 and 45 TFEU “do not prohibit — though they do not require — the treatment by the institutions of Member States of corresponding facts occurring in another Member State as equivalent to facts which, if they occur on the national territory, constitute a ground for the loss or suspension of the right to cash benefits”.<sup>344</sup> Accordingly, the UK was free to deprive a prisoner of social security protection, even though he served his sentence in Ireland instead of the UK.

In sum, the disappearance of Article 5 BR for SNCBs would not significantly affect the substance of the rights and duties of individuals and administrations.

#### 4.1.5 *The principle of aggregation (Article 6 BR)*

The so-called principle of aggregation laid down in Article 6 BR provides that, where the legislation of the competent Member State (“MS<sub>1</sub>”) provides that the acquisition or retention of benefits is conditional upon the completion of periods of insurance, employment, self-employment or residence, the competent institution must take into account periods of insurance, employment, self-employment or residence completed under the legislation of another Member State (“MS<sub>2</sub>”), as if they were completed under its own legislation. Whether periods were validly completed under the legislation of MS<sub>2</sub> is determined by that State’s institutions, which communicate their decision to MS<sub>1</sub>. For instance, in order to qualify for the Cypriot social pension, currently an SNCB, a person must have lawfully stayed in Cyprus for

---

<sup>343</sup> Judgment in *Somova*, C-103/13, EU:C:2014:2334.

<sup>344</sup> Judgment in *Kenny*, C-1/78, EU:C:1978:140.

20 years since reaching the age of 40, or for 35 years since reaching the age of 18. A person who now lives in Cyprus, but previously lived in another Member State, is entitled to the Cypriot pension after aggregation. The Cypriot authorities do not need to check whether the applicant actually lived abroad; they can simply ask the institutions of the Member State in question to make the necessary verifications.

Would the situation be any different under Option 2b? The CJEU has ruled on the question whether a Member State should aggregate in circumstances where Regulation (EEC) No 1408/71 does not apply. In one case, it held that periods completed in Germany that are comparable to those required by Greek legislation should be aggregated on the basis of Article 48 and 51 of the EEC Treaty (now Article 45 and 48 TFEU) for the purpose of determining the acquisition of a Greek old-age pension.<sup>345</sup> The discrimination arose because “*the problem of recognition of periods completed in other Member States of the Community confronts only workers who have exercised their right to freedom of movement.*”<sup>346</sup> In cases on economically inactive citizens, the CJEU tends to waive durational residence requirements as soon as they exceed what is necessary to establish the existence of a sufficient connection with the society of the State whose benefits are claimed. Therefore, it seems that the disappearance of Article 6 BR would not entail the end of all duties to aggregate. Should MS<sub>1</sub> wish to refuse to aggregate periods, it should either demonstrate that the periods at issue are not equivalent to the periods required under its legislation, or that the applicant has no genuine connection to its society. Both entail an individual and labour-intensive assessment of the facts of the case, which is unnecessary under Article 6 BR.

---

<sup>345</sup> Judgment in *Vougioukas v Idryma Koinonikon Asfalisseon*, C-443/93, EU:C:1995:394.

<sup>346</sup> Judgment in *Vougioukas v Idryma Koinonikon Asfalisseon* EU:C:1995:394, paragraph 41. In other cases, the CJEU found that periods of employment should be aggregated so as to determine *the amount* of a parental benefit (C judgment in *Rockler*, C-137/04, EU:C:2006:106; judgment in *Öberg*, C-185/04, EU:C:2006:107).

Article 6 brings about a certain administrative convenience, which would come to an end under Option 2b. The institutions of MS<sub>1</sub> (Cyprus, in our example) would have to determine whether periods of insurance, (self-)employment or residence were validly completed under the legislation of MS<sub>2</sub> – a law with which they are unfamiliar. They could no longer request MS<sub>2</sub> to apply its own legislation.

#### *4.1.6 Agencies (Title IV BR)*

The fourth title of the BR lays down the rules concerning different agencies. By extracting SNCBs from their field of action, Option 2b would deprive the Member States and the European Commission of:

- the forum that is the Administrative Commission, which facilitates cooperation;
- the technical assistance provided by the Technical Commission;
- the data of the Audit Board;
- the counsel of the Advisory Committee.

These are useful fora for monitoring, managing and possibly improving the provision of SNCBs.

#### *4.1.7 Administrative cooperation (Title V BR)*

Article 76 BR lays down duties of administrative cooperation, which are flanked by Article 77 BR in respect of data protection<sup>347</sup> and refined, with respect to fraud and error specifically, by Decision H5 of the Administrative Commission.<sup>348</sup> These guarantees are crucial for the verification of facts which materialised in another Member State, and thus for the prevention of fraud and

---

<sup>347</sup> See Article 2 to 5 IR.

<sup>348</sup> Decision No H5 of 18 March 2010 concerning cooperation on combating fraud and error within the framework of Council Regulation (EC) No 883/2004 and Regulation (EC) No 987/2009, OJ C 149, 8.6.2010, p. 5–7.

error. For instance, given the objective of SNCBs to guarantee a certain minimum standard of living, foreign income, means and benefits are routinely taken into account in order to determine whether a person qualifies. Likewise, the amount of SNCBs may depend on the circumstances of family members who live or work abroad. The Member State awarding SNCBs would struggle to control such conditions without assistance from other Member States.

Option 2b would deprive the Member States of the possibility to claim administrative cooperation in order to verify whether the conditions for receiving SNCBs are fulfilled. The TFEU does not endow social security institutions with a right to administrative cooperation.<sup>349</sup> Accordingly, a State seeking to check whether a person receives a pension from another Member State or earns a salary there, would be entirely dependent on the goodwill of the latter State.

Electronic exchange of data, when implemented, should greatly facilitate the flows of information and contribute to reducing error and fraud (Article 78 BR). This useful instrument for the national institutions would be inaccessible if Option 2b were put into effect.

The recovery of benefits that were erroneously paid may, by virtue of Article 84 BR, be effected in other Member States. Enforceable judicial and administrative decisions are in principle to be recognised and enforced upon request by the competent State.<sup>350</sup> If Option 2b were chosen, the institutions of the Member States may expect more difficulties to recover SNCBs that were wrongly paid.

---

<sup>349</sup> Article 4(3) TEU states that the Member States shall “assist each other in carrying out tasks which flow from the Treaties” and “shall take any appropriate measure, general or particular, to ensure fulfilment of the obligations arising out of the Treaties or resulting from the acts of the institutions of the Union.” This provision is limited to actions necessary for the compliance with EU primary or secondary law and the pursuit of EU objectives. Whether a Member State would be able to invoke it in order to request another Member State’s assistance in preventing fraud and error against its own legislation – a purely national objective, if SNCBs were removed from the scope of the BR – may be seriously doubted.

<sup>350</sup> More specific rules are laid down in Article 71 to 85 IR.

#### 4.1.8 *The complete irrelevance of Regulation (EC) No 883/2004?*

Contrary to what can be expected, the disappearance of the category of income-related SNCBs might not remove all the benefits which are now considered as SNCBs from the scope of the Regulation. Indeed, much in line with its early case law in which it emphasised that hybrid benefits have features of both social assistance and social security,<sup>351</sup> the CJEU might categorise certain ex-SNCBs as social security benefits. A recent sign in that direction is the 2011 *Stewart* case.<sup>352</sup> This would have far-reaching consequences, as those benefits would in principle be governed by the provisions of the Regulation for ‘classic’ social security risks.

In *Stewart*, the CJEU qualified the UK short-term incapacity benefit in youth as an invalidity benefit within the meaning of Regulation (EEC) No 1408/71. The sole condition for that characterisation was that, at the moment of the application, it was clear that the claimant had a permanent or long-term disability. The benefit in question is a non-contributory, non-means-tested weekly payment which provides persons aged 16 to 25, who are incapable of work due to sickness or disability, with the financial means to meet their needs. It does not seek to replace lost wages; on the contrary, it is open to those who have never worked. The short-term incapacity benefit in youth expires after one year, at which point it is replaced by the long-term incapacity benefit, which can be drawn until retirement age. The main eligibility conditions are a person’s age, his or her unfitness for work and his or her residence and presence in Great Britain. Whilst the CJEU did not examine the question from that angle, it seems that the UK short-term incapacity benefit in youth is an SNCB in all but in name. It is both ‘special’ and ‘non-contributory’ in the light of the case law of the CJEU. It is very similar to the Dutch benefit for young persons who are already suffering from total or partial long-term

---

<sup>351</sup> E.g. the judgment in *Frilli* EU:C:1972:56, paragraph 13.

<sup>352</sup> Judgment in *Stewart* EU:C:2011:500.

incapacity for work before joining the labour market. In *Kersbergen-Lap*, the CJEU decided that this Dutch benefit, which was not means-tested, was both special and non-contributory.<sup>353</sup> The UK short-term incapacity benefit is blatantly intended to provide “*solely specific protection for the disabled, closely linked to the said person's social environment in the Member State concerned*”, as stated in Article 70(2)(a)(ii) of Regulation (EC) No 883/2004. Only the fact that the UK did not list it in Annex IIa of Regulation (EEC) No 1408/71 stood in the way of its qualification as an SNCB. Yet, the CJEU, after a lengthy examination (paragraph 29-54), considered it as an invalidity benefit.

If a benefit that meets all the substantial criteria for being listed as an SNCB is qualified as social security, could the same not be true in respect of a benefit that used to be an SNCB, before Option 2b was enacted? There is a risk that some former SNCBs would be requalified by the CJEU as ‘social security’ within the meaning of Regulation (EC) No 883/2004. In theory, they would then be covered by all the provisions of that Regulation, including the provision on export. In *Stewart*, the residence condition was waived on the basis of that provision. It is however more likely that the CJEU would retain the non-export rule, given that it accepts that “*the grant of benefits closely linked with the social environment may be made subject to a condition of residence*”.<sup>354</sup> Even then, if certain former SNCBs were considered as social security, this would largely undermine Option 2b. An interpretation of former SNCBs as classic social security might be unlikely, but it certainly is possible.

#### 4.1.9 Overview

---

<sup>353</sup> Judgment in *Kersbergen-Lap and Dams-Schipper*, C-154/05, EU:C:2006:449.

<sup>354</sup> E.g. the judgment in *Snares* EU:C:1997:518, paragraph 42. The CJEU has been seen to bend the rules of the Regulations in order to avoid disrupting minimum subsistence benefits (judgment in *Office National des Pensions v Levatino*, C-65/92, EU:C:1993:149).

	Option 1	Option 2b
<b>Legal framework</b>	Regulation (EC) No 883/2004; Directive 2004/38/EC; TFEU	Directive 2004/38/EC; TFEU
<b>Decisive element for attribution of responsibility</b>	genuine link test / habitual residence	National law, which sets <i>inter alia</i> conditions of residence / real link
<b>How many Member States are responsible?</b>	In principle, only one  Exceptions: <i>Bosmann, Hendrix, Hudzinski and Wawrzyniak</i>	None, one, or more than one
<b>Equal treatment</b>	Article 4 of Regulation (EC) No 883/2004	Article 24 of Directive 2004/38/EC and TFEU are functionally equivalent to Article 4 of Regulation (EC) No 883/2004
<b>Assimilation of facts</b>	Article 5 of Regulation (EC) No 883/2004 (+ genuine link test?)	Article 24 of Directive 2004/38/EC and TFEU could be considered to be functionally equivalent to Article 5 of Regulation (EC) No 883/2004 (the genuine link test would be applicable)
<b>Aggregation of periods</b>	Article 6 of Regulation (EC) No 883/2004 (+ genuine link test?)	Article 24 of Directive 2004/38/EC and TFEU could entail a duty of aggregation; non-aggregation would be based on objective difference or be objectively and proportionately justified (e.g. the genuine link test). Competent Member State may have to apply foreign legislation.
<b>Administrative cooperation</b>	Duties of administrative cooperation  In future, electronic exchange of data  Recovery of benefits	Goodwill of requested Member State  No electronic exchange of data  No procedure on recovery

## 4.2 *Assessment of the proposal*

### 4.2.1 *Clarification*

Under the current state of affairs, the provision of SNCBs is regulated by the Regulation. The provisions of the TFEU are only relevant in exceptional circumstances.<sup>355</sup> Option 2b accords decisive importance to the open-ended prohibitions on discrimination and on non-discriminatory obstacles of the TFEU. For instance, the definition of ‘habitual residence’ and the procedure to reconcile conflicting views is lost. This may in turn lead to a lack of social protection, where no Member State deems the person concerned to reside on its territory; or to an excess thereof, in the less likely event that more than one Member State should consider the person resident. The strength of the real link that may be required is to be determined in the light of the TFEU. It is clear that “*the proof required to demonstrate the genuine link must not be too exclusive in nature or unduly favour one element which is not necessarily representative of the real and effective degree of connection between the claimant and this Member State, to the exclusion of all other representative elements*”.<sup>356</sup> This requirement of individualised assessment is labour-intensive, unpredictable and complex. The requisite type of link depends on the constitutive elements of the benefit, including its nature and purpose.<sup>357</sup> Despite more than a decade of intense litigation on the cross-border access to study grants from the perspective of the real link, the permissible degree of integration is still unclear. The development of a reasonably operational notion of a real link for SNCBs – a group of benefits that is less homogenous than study grants – is bound to be challenging.

The functions of Article 4, Article 5 and Article 6 BR could be taken over by the TFEU and Directive [2004/38/EC](#). Yet, this would come at a price in terms

---

<sup>355</sup> E.g. the judgment in *Hendrix* EU:C:2007:494.

<sup>356</sup> Judgment in *Prinz and Seeberger* EU:C:2013:524, paragraph 37 and cited case law.

<sup>357</sup> Judgment in *Commission v Austria* EU:C:2012:605, paragraph 63.

of visibility and clarity. Article 6 BR is an absolute rule, with no derogations. By contrast, *prima facie* restrictions of free movement can be objectively justified. Moreover, Article 6 BR dispenses Member States from the complex tasks of ascertaining whether periods were validly completed under foreign law, and of determining whether these foreign periods are equivalent to the required periods.

Finally, the risk of a qualification of former SNCBs as normal ‘social security’ cannot be excluded.

#### 4.2.2 *Simplification*

For the reasons mentioned under 4.2.1, Option 2b would not entail a simplification of the legal framework.

#### 4.2.3 *Protection of rights*

The Regulation is relevant to persons in possession of a right to reside and to persons lacking a right to reside, claiming SNCBs in a Member State that does not or may not make their payment conditional upon lawful residence. Option 2b would be detrimental to the protection of their rights. It might allow Member States to raise the level of connection required for the eligibility for SNCBs. Even where the TFEU is functionally equivalent to provisions of the Regulations, the loss in visibility might engender an enforcement deficit, where European rights translate less well into national practices. The loss in clarity and the complications in administrative cooperation are liable to result in unpredictability and to cause delays. Besides, migrants would lose procedural rights, such as the right to the provisional grant of benefits (Article 6 IR).

#### 4.2.4 *Administrative burden and implementation arrangements*

Option 2b would significantly raise the burden resting on the institutions administering SCNBs. As indicated above, the individual assessment that regularly replaces the mechanic application of the provisions of the Regulations is costly to the Member States. The refusal of SNCBs on territorial grounds is liable to raise an obstacle to free movement. Such restriction can be justified by positively demonstrating that, on the facts of the case, the measure is proportionate to the objective of ensuring a sufficient degree of integration (or by arguing that, *in casu*, the facts occurring abroad are not equivalent to the required facts). The institutions would lose the ability to claim the cooperation of their counterparts in other Member States. This significantly complicates the operation of SNCBs when certain relevant facts materialise abroad. For instance, where the overlap of SNCBs with certain foreign benefits is forbidden, administrations may struggle to obtain the necessary information. They would be deprived of the procedures to recover benefits unduly paid and, in future, of the advantages of the EESSI system. Besides, the Member States would lose the assistance of the four agencies.

#### 4.2.5 *Avoiding the risk of fraud and abuse*

Cross-border fraud, abuse and error is largely attributed to deficiencies in cooperation and in flows of information across borders. Imperfect though it may be in its implementation, the BR lays down an obligatory mechanism for administrative cooperation, upon which a Decision of the Administrative Commission builds further.<sup>358</sup> Once operational, the electronic exchange of data will further the fight against fraud, abuse and error.

---

<sup>358</sup> Decision No H5 of 18 March 2010 concerning cooperation on combating fraud and error within the framework of Council Regulation (EC) No 883/2004 and Regulation (EC) No 987/2009, OJ C 149, 8.6.2010, p. 5-7.

Whereas it is generally recommended to enhance cross-border cooperation and communication in order to tackle fraud and error,<sup>359</sup> Option 2b could have the opposite effect. If implemented, Member States would have to rely on bilateral agreements, memorandums of understanding or cooperation on other levels. Such a bilateral network cannot approximate the current framework in terms of scope (many Member States will not be mutually bound) or strength. Moreover, this might induce Member States to increasingly rely on privacy and data protection as reasons to refuse to share data.

An argument could be made that vague rules are inherently more difficult to circumvent than clear ones. Consequently, it may be inferred that the very opacity which Option 2b entails would in itself hinder fraud and abuse. In our view the promotion of vague legislation to prevent fraud and abuse is not convincing. It could be objected that the current notion of habitual residence resists circumvention if properly applied. In order to qualify for an income-related SNCB in a Member State, a citizen must have his or her habitual centre of interests there, as determined on the basis of a multitude of indicia (Article 11 IR). This centre of gravity test essentially prevents persons from claiming such benefits in a Member State without relocating their entire life there. Furthermore, it must be borne in mind that vagueness affects not only persons with fraudulent intent, but also all *bona fide* claimants.

Option 2b may enable Member States to exclude more persons from SNCBs. This could be framed as an increased leeway to ban “welfare tourists”. To do so in compliance with the TFEU, a State would however have to demonstrate either that the person in question, despite lawfully residing on its territory, lacks a sufficient link; or that the claim is abusive or fraudulent. Under the current framework, the Regulations “*cannot be relied on for the purposes of*

---

<sup>359</sup> 4<sup>th</sup> recital in the preamble to Decision H5, *ibid*; Y. Jorens, D. Gillis and I. Plasschaert, *Fraud and Error in the Field of Social Security Coordination, Network Statistics FMSSFE*, European Commission, 2014, unpublished report.

*abuse or fraud*'.<sup>360</sup> Persons who have their habitual centre of interests in a Member State within the meaning of the Regulations are very likely to have a genuine link with that State. These two elements reduce the added value of Option 2b in the prevention of fraud and abuse in comparison with the current framework, which does contain adequate guarantees regarding real links and abuse.

On balance, Option 2b would hinder the fight against fraud, abuse and error more than facilitate it.

#### 4.2.6 *Potential financial implications*

Member States may make some financial gains by excluding migrants who are not affected by *Dano*. For instance, whereas *Dano* does not affect the rights of German citizens to German SNCBs, under Option 2b Germany might find it easier to disallow their claims. This financial gain is however mitigated by increased costs in handling cases. If Option 2b were put into effect, Member States wishing to reject applications for their SNCBs would need to perform an individualised assessment. Moreover, difficulties in cross-border communication, an increased risk of fraud and error and a complication in the recovery of benefits wrongly paid might add to the operational costs.

### 4.3 *A mapping of the impact in the Member States*

Option 2b has a very diverse effect on citizens and Member States. The focus of this section lies on the notion of *habitual* residence, as issues pertaining to *legal* residence have been studied in the context of Options 1 and 2a. The following is an overview of the concept of residence as *currently* required by the laws of a number of Member States.

---

<sup>360</sup> E.g. the judgment in *Brennet v Paletta*, C-206/94, EU:C:1996:182, paragraph 24.

According to **Dutch** legislation, a person ‘resides’ in the Netherlands when he or she has a durable relationship of a personal nature with the Netherlands. This is determined on the basis of a number of factors such as the work and living circumstances, family relationships, the place where the children attend education, political or cultural activities, durable housing, finances, registration at the population register and possession of a residence permit for a short or longer period of time. It is not necessary for the relationship with the Netherlands to be stronger than the relationship with another State. In **Germany**, habitual residence is not defined; rather, it must be interpreted with regard to the specific benefit and its aims. Generally speaking, the circumstances must indicate that the stay is not temporary. **Latvia** requires the applicants of certain SNCBs (i) to be permanently resident on its territory, (ii) to have lived there for five years in total, and (iii) to have lived there continuously during the year preceding the application. **Italy** requires ‘real and habitual residence’, which it interprets in line with Article 11 IR. **Finland** also uses a concept of residence that is very close to that of Article 11 IR; in the event of divergence the European definition displaces the Finnish definition. In **Lithuania**, a person must be registered in the Resident’s Registry. Likewise, **Hungary** requires the place of habitual residence to be registered. Hungary essentially incorporates the criteria set in Article 11 IR. Under **Irish** legislation, habitual residence is understood as incorporating both a significant period of past residence and the intention to remain in Ireland for the foreseeable future. The main (but non-exhaustive) indicators are the length and continuity of residence in Ireland or in any other particular country; the length and purpose of any absence from Ireland; the nature and pattern of employment; the applicant’s main centre of interest; the future intention of the applicant concerned as it appears from all the circumstances. **Cyprus** requires applicants to reside on its territory for at least 12 consecutive months in order to qualify for two of its SNCBs.

It is a matter of speculation how Member States may react to the enactment of Option 2b. Yet, this short overview demonstrates that the definition laid down in Article 11 IR is not adopted in all Member States. This increases the likelihood of divergent views on the location of a person's habitual residence, rendering the reconciliation procedure more important.

#### **4.4 General evaluation of Option 2b**

It should be underlined at the outset that the *Brey* and *Dano* rulings in no way require the removal of SNCBs from the scope of the Regulation. They merely enable Member States to set a requirement of lawful residence, which affects only certain categories of applicants. For instance, the nationals of a Member State always have a right to reside on their territory.

The recommendation would be not to propose Option 2b. Removal does not answer the question of how to handle entitlement to SNCBs in future; without any regulation they would be somewhere between Directive, Regulation and primary law. The removal of SNCBs from the scope of the Regulation would be detrimental to both citizens and administrations. It would raise the cost of administering SNCBs, decrease legal certainty and the protection of migrants' rights, disincentivise mobility and, on balance, hinder the fight against fraud, abuse and error. The assessment is negative from every angle. Moreover, all provisions relevant to SNCBs have an added value for citizens and administrations. The repeal of any provision would thus be ill-advised.

## 5 Additional proposals

All three proposals of the European Commission (EC) clearly choose an adaptation of the social security coordination rules related to income-related special non-contributory cash benefits (SNCBs) in order to align them with the requirements of legal residence as laid down in Directive 2004/38/EC. The first opts for a *status quo*, allowing for derogations from the equal treatment principle in line with the decisions in these cases. The other two proposals relate to a limitation and, even further stretched, a removal of the equal treatment principle in the SNCB coordination rules.

However, as is clear from our above legal assessments, we are of the opinion that the current state of the case law should not be regarded as ‘stable’. The analytical reading of both *Brey* and *Dano* as such already reveals pending questions in the CJEU’s approach towards the limitation of the equal treatment principle based on legal residence requirements. Whereas the CJEU puts emphasis on a proportionality test in the *Brey* case, this test is absent in the *Dano* case. Although this can very likely be explained by the specific circumstances of each case, it should be stressed that this is still uncertain and that the above assessment makes clear that many other questions are pending.

The most pressing question at this stage, in our view preventing to depart from the *Brey/Dano* case law as a basis for law-making, is whether the *Dano* judgment should be interpreted narrowly or broadly.<sup>361</sup> From a purely legal perspective, it has been defended that the *Dano* judgment should be construed narrowly. As the CJEU’s decision relates to the limitation of a fundamental principle of EU law, it is to be narrowly interpreted. In this sense, it should be clear that the limitation of the equal treatment principle with regard to SNCBs can only be understood with full respect of the fundamental principle of free

---

<sup>361</sup> See 2.1 above.

movement of EU citizens and, even more important in view of the *Dano* judgment, the general principle of proportionality.

However, the present assessment shows that the current proposals as put forward by the EC do not take into account the principle of proportionality upon integrating the recent case law in Regulation (EC) No 883/2004. While Option 1 leaves the current state of EU law ‘as is’, this leaves room for a broad interpretation of the *Dano* judgment, excluding a proportionality test and a potential breach of the fundamental freedoms. It is apparent that in the current political climate, several Member States could take advantage of this possibility to illegitimately exclude non-active Union citizens from access to SNCBs. Option 2a merely proposes a referral to the provisions of Directive 2004/38/EC, which could also trigger a rigid ‘2004/38/EC-residence-test’ in the SNCB chapter of Regulation (EC) No 883/2004, i.e. excluding entitlement to SNCBs if there is no legal residence in line with the provisions of Directive 2004/38/EC. Option 2b even removes equal treatment with regard to SNCB entitlement.

In view of the above, it appears that the current proposals are only translating the impact of Directive 2004/38/EC on the coordination system for SNCBs in Regulation (EC) No 883/2004 as if clear priorities are set after the *Brey/Dano* judgments. In our view, this is not the case. In the *Brey/Dano* case law, the CJEU has applied the provisions of both instruments to the specific circumstances of each case, taking into account the specific argumentation of all parties involved. After only two decisions, no definitive rules of priority can be deduced. Only upon a clear intervention from the legislature, the relationship between both instruments can be definitively settled. As the instruments at stake do not refer to each other in their current versions, the CJEU can only apply the relevant provisions next to each other.

In other words, a proposal from the EC should not necessarily go in the direction in which the CJEU *prima facie* seems to be pointing in its recent case law, integrating legal residence requirements in the social security

coordination system. The main purpose of a legislative intervention should rather be to settle the relationship between both instruments, taking into account the free movement of Union citizens and the principle of proportionality. The integration of the latter into the current proposals could be considered a key issue to safeguard the protection of social rights for mobile citizens within the European Union.

In the light of the above and as explained in the impact assessments, both Option 1 and 2a do not sufficiently guarantee an adequate level of protection of citizens' rights when moving within the EU and should be further accommodated to safeguard full respect of the principle of free movement of EU citizens and the principle of proportionality. Next to this, it should be stressed that the European legislature can also opt for a clear-cut safeguard of the coordination principles from the impact of the residence requirements resulting from Directive 2004/38/EC. However, first of all, it should be considered whether the current state of EU law actually requires change in order to meet concerns related to the relationship between legal residence and equal treatment.

### **5.1 A 'status quo' from the perspective of Regulation (EC) No 883/2004**

Before embarking on the possible adaptation of the current proposals or exploring new proposals, it is useful to reflect on the current state of EU law in order to assess whether the alleged problems of benefit tourism have to be solved by new legislation. On the one hand, this implies an assessment of the *Brey/Dano* case law and the Member States' response to benefit tourism by stressing the importance of legal residence within the meaning of Directive 2004/38/EC when considering access to social benefits. On the other hand, this also requires an accurate view on the current state of EU law with regard to

equal treatment of mobile non-active EU citizens, considering the relevant secondary legislation and CJEU case law.<sup>362</sup>

It is essential to highlight the responses that are already laid down in the current system of social security coordination, notably in the coordination system for SNCBs. The Member States' main aim is to prevent non-active persons lacking a genuine link with the host Member State from having access to social benefits. One has to wonder whether the current SNCB regime does not already address these concerns. Indeed, it could be argued that the current SNCB regime – as it stands now – already ensures the existence of a genuine link between the claimant of such a benefit and the host Member State.

With regard to SNCBs, it was already analysed above that the European legislature and the CJEU both accepted the (factual) habitual residence condition of Regulation (EC) No 883/2004 as creating a sufficiently genuine link between the claimant and the host Member State for the entitlement to such mixed benefits. This was a crucial element of the balance achieved after the neutralisation of the export principle for these specific benefits.

In the light of the aforementioned case law, it should however be emphasised that this notion in Regulation (EC) No 883/2004 also seems to fit perfectly into the main tendency of the CJEU case law concerning the requirement of a certain degree of integration. The variety of elements that has to be taken into account to establish whether a person has his or her habitual centre of interest in a Member State indeed appears to be in harmony with the case law concerning the 'genuine link'.

This variety of factors was introduced by the CJEU's interpretation of the residence concept in Regulation (EEC) No 1408/71 and has now been codified in a further elaborated form in Article 11 of Regulation (EC) No 987/2009. According to this Article, in the event of a difference of views between the institutions of two or more Member States, an overall assessment of all

---

<sup>362</sup> See 2.1 above.

available information relating to the relevant facts should be performed in order to determine a person's centre of interest. The duration and continuity of presence on the territory is one element in this assessment, but cannot be more decisive than other relevant elements. This evaluation based on all the relevant individual circumstances of the case aligns with the way the CJEU has interpreted the establishment of a certain degree of integration between a claimant of certain social benefits and the granting Member State.

The case law of the CJEU has proven that EU law is sensitive to the Member States' desire of the establishment of a genuine link between a person claiming residence-based non-contributory benefits and the Member State granting the benefit. The residence concept of Regulation (EC) No 883/2004 also seems to meet these aspirations, both formally and substantially. It could thus be observed that the current residence concept of Regulation (EC) No 883/2004 might already contain the necessary safeguards to avoid benefit tourism, i.e. non-active citizens moving to another Member State with the sole purpose of obtaining social benefits without any genuine link with that State.

## **5.2 Integrating proportionality in the current proposals**

### *5.2.1 Status quo and proportionality*

If the option of a *status quo* would be further explored, it is crucial that further initiatives are taken at the European level to clarify the relationship between Regulation (EC) No 883/2004 and Directive 2004/38/EC. This could be done by providing further guidance to the Member States on how to apply the *Brey/Dano* case law in practice, i.e. when dealing with claims for SNCBs by non-active EU citizens. Logically, such administrative guidelines should serve the competent authorities of the Member States to have a clear view on how and to which extent requirements of legal residence can impact their decisions with regard to entitlement to SNCBs if the Member State concerned is to be

regarded as the Member State of residence in line with Article 11 of Regulation (EC) No 987/2009.

The main goal of these guidelines would be to strike a correct balance between the equal treatment provision of Regulation (EC) No 883/2004 and legal residence requirements for non-active persons. In this regard, the Member States should have a clear view on how to integrate the principle of proportionality. This would require further investigation into which criteria have to be taken into account. But, it is clear that – by analogy with the proportionality criteria of Directive 2004/38/EC – such assessment should take into account the duration of the residence, the personal circumstances of the individual and the amount of aid granted in order to assess whether the individual has become an unreasonable burden on the competent State's social assistance system.

#### 5.2.2 Referring to Directive 2004/38/EC and proportionality

A mere referral to Directive 2004/38/EC would have the same result as choosing a *status quo*. Therefore, it would be our recommendation to also draft clear guidelines (as described above) for the Member States on how to apply both instruments together, with full respect for the principle of free movement of Union citizens and according to the principle of proportionality.

Alternatively, rather than a mere referral to Directive 2004/38/EC, it might provide more clarity and legal certainty if the relevant articles restricting equal access to social assistance in Directive 2004/38/EC were to be translated and integrated into the SNCB title.<sup>363</sup> It can also be observed that the mere reference to the Directive will not be sufficiently transparent, neither for social security institutions nor for EU citizens. A mere reference requires a thorough knowledge of both systems and, in lack thereof, could lead to wrong

---

<sup>363</sup> On the other hand, this would also require a clear view on how both instruments would further interact in order to avoid another layer of complexity in the relationship.

application and loss of rights for citizens. In that regard, it might be better to translate the residence requirements of Directive 2004/38/EC explicitly into the text of Regulation (EC) No 883/2004.

The provisions on entitlement to SNCBs could be aligned with the provisions on equal treatment with regard to social assistance of Article 24 of Directive 2004/38/EC as follows:

- First three months: no entitlement to SNCBs without any assessment of legal residence;
- Between three months and five years: for entitlement to SNCBs, the competent authority can make an assessment of the legal residence taking into account the duration of the residence, the personal circumstances of the individual and the amount of aid granted in order to assess whether the individual has become an unreasonable burden on the competent State's social assistance system;
- Five years: full entitlement to SNCBs without any assessment.

For the first three months, it seems acceptable from a legal point of view that a claim can be rejected without a proportionality test. If the individual concerned already claims SNCBs almost immediately after arrival in the host Member State, he or she can be deemed to move to that Member State for the sole purpose of obtaining the SNCB concerned. This approach seems to be in line with the *Dano* case law.

However, even in the first three months of residence the proportionality principle should not be overlooked. The choice for a uniform and dominant residence duration requirement of three months without the possibility to demonstrate that the person already has a genuine link with the host Member State, would ignore this fundamental principle of Union law. An overall assessment of all the facts of the individual case should still be required in order to possibly overrule the waiting period. It could for instance be clarified that, during the first three months of residence within the meaning of Directive 2004/38/EC, a person

is not considered resident yet in the host Member State within the meaning of Regulation (EC) No 883/2004, “*unless this person can prove the opposite*”.<sup>364</sup> This last addition – which opens the possibility to provide proof of a genuine link with the host Member State – is important, given the need to take into account the principle of proportionality when restricting the free movement of Unions citizens, as already described above.

Next to this, it has to be recalled that the introduction of a three-month waiting period for SNCBs breaks the balance that was struck by the SNCB chapter and should be compensated to prevent mobile EU citizens from falling between two stools, contrary to the goals of Article 48 TFEU. If such a waiting period were introduced, the persons concerned should be considered as having kept their residence in the Member State of origin during this first period. The latter would thus still be the competent State as to the entitlement to SNCBs. If this necessary corollary of postponing the establishment of residence in a Member State was omitted, such a new regime for SNCBs could fall foul of the fundamental right to free movement as guaranteed by the Treaties and of the main aim of social security coordination.

An alternative option would be to seek a better sharing of the burden amongst the Member States. Such burden-sharing could be accomplished by retaining the responsibility for these persons in the Member State of origin via cost compensation between the Member States concerned. The latter would then still be financially responsible for the first three months. During this period, the institutions of the host Member State would consequently provide the SNCBs in accordance with its legislation on behalf of the institution of the Member State of origin, which would be obliged to fully reimburse the costs incurred by the host Member State.

---

<sup>364</sup> See the judgment in *Swaddling* EU:C:1999:96: an individual in the specific circumstances of Mr Swaddling should not be confronted with a waiting period of eight weeks.

Between three months and five years, the claimant is building up integration within the Member State concerned and has the opportunity to create a ‘genuine link’ or ‘certain degree of integration’ as has been constructed in EU citizenship case law. It will depend on the concrete circumstances of each case whether there is sufficient integration. Therefore, a proportionality test is indispensable, as the mere claim of an SNCB cannot result in an automatic expulsion and, logically, neither in an automatic refusal of the grant of the benefit concerned which could lead to expulsion. In our view, consideration 16 of the preamble provides inspiration for the proportionality test which has to be integrated. As to the ‘personal circumstances’, further guidance is probably needed. The explicit reference to a proportionality test should make it abundantly clear that each case has to be assessed on its merits and that an automatic refusal is prohibited.

It goes without saying that after five years<sup>365</sup> the claimant is entitled to full equal treatment with regard to SNCBs.

The abovementioned adaptations to the current proposals from the EC can be regarded as a mitigation of the effect which the integration of a hard ‘2004/38/EC-residence-test’, following a broad *Dano* interpretation, would have on the social protection of mobile EU citizens. It would guarantee that the proportionality principle is respected upon integration of legal residence requirements for access to SNCBs. However, nothing excludes that the relationship between the instruments concerned would be settled more drastically.

### 5.3 *Safeguarding SNCB coordination from residence requirements in Directive 2004/38/EC*

It has to be reiterated that the current proposals presented by the EC are only pointing in the direction of integrating the requirement for legal residence

---

<sup>365</sup> To be determined whether this should be a period of lawful and uninterrupted residence.

stemming from Directive 2004/38/EC into the EU social security coordination system of Regulation (EC) No 883/2004. The proposals thereby depart from the idea that the CJEU has had its final say on the relationship between both instruments.

It cannot be denied that the CJEU has clearly stated that nothing prevents that the requirements of the Directive have to be taken into account when applying Regulation (EC) No 883/2004. From a legal-technical point of view, this is absolutely correct and cannot be countered. Indeed, no provision is provided for in either instrument to arrange the relationship between them. However, the lack of such provision also means that, in principle, nothing prevents a conclusion in the other direction, i.e. that the coordination rules of the Regulation have to be taken into account when applying Directive 2004/38/EC. More precisely, the latter should not touch upon the coordination system which is aimed at preserving entitlement to social security benefits in the light of the free movement of Union citizens within the European Union. In that regard, it should be kept in mind that the European legislature can still provide for a clear provision on the relationship between Directive 2004/38/EC and Regulation (EC) No 883/2004.

It might be useful to take a step back and assess the historical background of the issue at stake. The requirement of sufficient resources and health coverage as conditions for legal residence were conditions in the former residence directives,<sup>366</sup> repealed by Directive 2004/38/EC, as well. The same goes for the SNCB chapter in the old Regulation (EC) No 1408/71. They functioned next to each other and there was no apparent friction. Clearly, it was obvious that the entitlement to SNCBs had to be decided on in the framework of the coordination Regulations and the residence directives did not intrude into the coordination system, which was and is based on a system of factual residence. This previous cohabitation of legal residence with respect to entitlement to

---

<sup>366</sup> Directives 64/221/EEC, 68/360/EEC, 72/194/EEC, 73/148/EEC, 75/34/EEC, 75/35/EEC, 90/364/EEC, 90/365/EEC and 93/96/EEC.

social security benefits of a mixed nature could be consolidated. It worked well until the political climate changed and some Member States decided to link both instruments.

A first option would be to remove all doubts on the relationship between Regulation (EC) No 883/2004 and Directive 2004/38/EC by accepting a status of ‘lex specialis’ for the coordination Regulation. This would explicitly affirm the current state of EU law and the normal application of Regulation (EC) No 883/2004. *In concreto*, this could be effectuated by inserting a safeguarding clause in Directive 2004/38/EC, confirming that the Directive does not affect the coordination rules of Regulation (EC) No 883/2004. Inspiration for such a clause could be found in Article 36(2) of Regulation 492/2011, which provides for the following clause in its final provisions: “*This Regulation shall not affect measures taken in accordance with Article 48 of the Treaty on the Functioning of the European Union*”.

In the same line of reasoning, a definition of social assistance could be provided for in Directive 2004/38/EC as not encompassing SNCBs that were included in Annex X of Regulation (EC) No 883/2004. This could be done in a general way, by equating “*social assistance within the meaning of Directive 2004/38/EC*” with “*social assistance within the meaning of Regulation (EC) No 883/2004*”. However, taking into account the *Brey* judgment, the legislature could also choose to integrate the CJEU’s definition of social assistance, excluding SNCBs listed in Annex X:

*“Social assistance within the meaning of this Directive is all assistance introduced by the public authorities, whether at national, regional or local level, that can be claimed by an individual who does not have resources sufficient to meet his own basic needs and the needs of his family and who, by reason of that fact, may become a burden on the public finances of the host Member State during his period of residence which could have consequences for the overall level of assistance which may be granted by that State. Social*

*security benefits as defined in Article 3 of Regulation (EC) No 883/2004 are not social assistance within the meaning of this Directive.*<sup>367</sup>

#### 5.4 Introducing a ‘fraud and abuse of rights’ in Regulation (EC) No 883/2004

The analysis of the *Dano* judgment appears to reveal that the CJEU mainly aims to tackle ‘benefit tourism’, i.e. moving to another Member State solely to benefit from the welfare system of the host Member State. In that regard, it could be observed that it would suffice to introduce an explicit coordination rule tackling fraud and abuse of rights by claimants. Such clause could be incorporated in the SNCB chapter, but could also be a general provision on fraud and abuse in the coordination Regulations.

It is acknowledged that one has to be very careful with the use of these concepts in EU law, as they have traditionally been interpreted very narrowly by the CJEU. There is no abuse when EU citizens and their family members obtain a right of residence under Union law in a Member State other than that of the EU citizen’s nationality, as they are benefiting from an advantage inherent in the exercise of the right of free movement protected by the Treaty,<sup>368</sup> regardless of the purpose of their move to that State.<sup>369</sup> However, both the CJEU and the EC define abuse as “*an artificial conduct entered into solely with the purpose of obtaining the right of free movement and residence*”.<sup>370</sup> A residence which in actual fact is a

---

<sup>367</sup> The EC’s task of thoroughly verifying whether a benefit is to be regarded as an SNCB or as social assistance would become all the more important.

<sup>368</sup> Judgment in *Centros*, C-212/97, EU:C:1999:126, paragraph 27 and the judgment in *Commission v Austria* EU:C:2012:605, paragraph 67-68.

<sup>369</sup> Judgment in *Akrich*, C-109/01, EU:C:2003:491, paragraph 55 and judgment in *Jia*, C-1/05, EU:C:2007:1, paragraph 31.

<sup>370</sup> One should keep in mind that, when the freedom of movement was extended from the economically active to the economically non-active population in the context of Union citizenship, there was a political agreement that freedom of movement should not be extended to economically non-active persons who take the freedom of movement as a means to get the highest possible social benefit. The idea was to deprive those citizens of the right to free movement, if they intended to change residence driven by the mere motive to get more social benefits.

“*fake residence*” (cf the problems mentioned with regard to “*addresses of convenience*”) would fall under such a concept of abuse. This of course cannot create rights under EU law.

It is however also apparent that in *Dano* the CJEU has further elaborated the concept of abuse of EU law and has allowed that “*the purposes of the move*” are taken into account by the host Member State. This can be regarded as a green light to integrate a fraud and abuse article in Regulation (EC) No 883/2004.

Article 35 of Directive 2004/38/EC could be a guiding article for this purpose, as it provides that Member States may adopt the necessary measures to refuse, terminate or withdraw any right conferred by this Directive in the case of abuse of rights or fraud, such as marriages of convenience. An “*address of convenience*” or a “*shift of residence with the sole purpose of obtaining social benefits*” could be treated in the same way and could consequently lead to the refusal, termination or withdrawal of the right to reside in a host Member State. A similar provision could be incorporated in Regulation (EC) No 883/2004.

## 6 Conclusion

### 6.1 *General evaluation of the proposals*

The propositions made by the European Commission (EC) have a common denominator: they acknowledge that special non-contributory cash benefits (SNCBs) do not need to be paid during the first three months of residence and thereafter only if the recipient has a lawful right of residence according to the economic criteria set out in Directive 2004/38/EC in the host Member State (which have been interpreted restrictively by the Court of Justice of the European Union (CJEU)).

The authors of this report need to underline that key questions about the meaning of the CJEU's case law remain unresolved. Is the CJEU's case law, notably as a consequence of the *Dano* judgment, to be interpreted broadly (general exclusion of economically inactive persons from social assistance in the host Member State, without any individual assessment) or narrowly (denial of access to social assistance when it is not disproportionate in view of the facts of the case)? How will the CJEU analyse claims of SNCBs by jobseekers, former workers, family members or workers with low income? In some cases, may the existence of a 'genuine link' with the country in which the claim is made justify entitlement to social assistance and how would this link be assessed in accordance with EU primary law? How will the requirement of 'financial solidarity' impact access to social assistance? It is hard to anticipate responses which partly depend on how Treaty principles will be applied by the CJEU.

In the light of these remarks, differences between the three options are narrow. Whereas Option 1 (*status quo*) entails that access to social assistance is subject to a condition of legal residence in the host Member State such as defined by the recent case law of the CJEU, Option 2a aims at reaching an equivalent effect with the transposition of the CJEU case law into Regulation (EC) No

883/2004 (limitation of the principle of equality of treatment for SNCBs). Option 2b would have a broader impact: by deleting the category of SNCBs, ‘mixed benefits’ may no longer take advantage of any of the coordination principles.

Even if the objective of unifying the regime of social assistance for migrants into one single instrument could improve clarity and simplicity, the complex and unstable legal context makes it necessary to highlight the drawbacks of the EC’s proposals.

Option 2b appears to be the most problematic one. The removal of SNCBs from the scope of Regulation (EC) No 883/2004 would be detrimental to both citizens and administrations. It would raise the cost of administering SNCBs, decrease legal certainty, endanger the protection of migrants’ rights, and hinder the fight against fraud, abuse and error. Above all, the *Brey* and *Dano* rulings in no way require the removal of SNCBs from the scope of the coordination Regulation.

Option 2a would raise beforehand the delicate question how to concretely insert Article 24 of Residence Directive 2004/38/EC into the coordination Regulation. It appears indeed that it is very difficult to transpose the limitation of the equal treatment principle into the coordination Regulation. The analysis carried out shows that there is a great risk of undermining the overall coherence of the SNCB system and of generating legal inconsistencies within the coordination Regulation. The fact that the CJEU case law is not stable yet makes it even less reasonable to set rules aiming to limit the equal treatment principle for SNCBs. In addition, is it consistent to combine two instruments which have very different institutional features? The amendment of the coordination Regulation would affect the historical compromise of Regulation (EEC) No 1247/92 on SNCBs.

The proposal to retain the *status quo* (Option 1) would give the CJEU time to refine its case law. In this respect, this could be a reasonable choice given that

*Brey* and *Dano* are far from covering all concrete situations. Nevertheless, Option 1 has many disadvantages. The *status quo* means that Member States may differentiate between their nationals and non-nationals with regard to access to social assistance. The treatment of poor people vis-à-vis social assistance will vary widely according to the country of residence. National rules are likely to be more and more restrictive with all the usual problems when conflicting national laws apply to transnational situations. Many poor migrants will find themselves without social assistance. There would be no guarantee that the overall expenditure by EU countries on social assistance would diminish: they may simply move from certain countries to others. There would be a flow of cases on the interpretation of Directive 2004/38/EC, whereas the implementation of the coordination Regulations as far as SNCBs are concerned would become more complex. Negative effects of Option 1 may, however, be the necessary counterpart if the legislature decides to wait until case law stabilises. Let us recall that for cross-border care, Directive 2011/24/EU of 9 March 2011 was published more than 10 years after the first *Kohll* and *Decker* cases. Option 1 is not supposed to be a long-term option. The CJEU case law should be considered as a work in progress. A wait-and-see position should be appropriate for the next few years. Later, legislative action should be taken at its best on the basis of a matured case law.

A common consequence of the three propositions is that protection of rights would be in danger. Inactive citizens will be deterred from exercising their right to mobility within the EU, not only because they will not know in advance their social assistance rights in the host Member State, but also because they may find themselves in situations where they have no entitlement to social assistance in any of the Member States they have a connection with. Some Member States may even take advantage of the new legal system to raise the level of integration required for the eligibility for social assistance. This evolution could lead to violations of the Charter of Fundamental Rights

of the EU and other international instruments such as the European Social Charter.

Administrative burden would increase under all three options. The concept of lawful residence will become central with a great risk of divergent concepts within the Member States. Should the concept of ‘genuine link’ continue to apply, it will be subject to recurrent problems of interpretation/evaluation. More generally, national institutions will have to permanently adjust to further rulings of the CJEU, which will be a source of unwanted administrative burden. In order to coordinate their actions, national administrations may be inclined to negotiate bilateral agreements, generating extra work for unsatisfactory results since they would be limited to signatories.

Concerning risks of fraud and abuse, the assessment of the three options is not simple. For Options 1 and 2a, the *Dano* case does not modify the principle in accordance with which the Member State in which the person does not habitually reside is in general free from "SNCB burden". Therefore, the risk of double payment seems to be largely reduced by Regulation (EC) No 883/2004. This said, in a dual system in which both the Regulation and Residence Directive 2004/38/EC would apply, the risk of double payment could increase for practical reasons. On balance, Option 2b would hinder the fight against fraud, abuse and error more than facilitate it.

As far as financial implications are concerned, savings made by some Member States thanks to stricter rules on access to social assistance would probably be compensated by extra administrative costs and new forms of fraud due to a lack of administrative cooperation. A precise financial analysis is at this stage impossible to carry out.

## **6.2 *Alternative/adapted proposals***

All three proposals of the EC opt for an adaptation of the social security coordination rules related to SNCBs in order to align them with the

requirements of legal residence as laid down in Directive 2004/38/EC. Alternative/adapted options are worth being explored. They aim to settle a balanced relationship between the Residence Directive and the coordination Regulations. The alternative propositions aim to preserve the coherence of coordination rules and to protect the social rights of mobile citizens within the European Union.

Three types of actions are envisaged.

If the option of a *status quo* (Option 1) was further explored, some initiatives would need to be taken at the European level to clarify the relationship between Regulation (EC) No 883/2004 and Directive 2004/38/EC. The main goal of these guidelines would be to strike a correct balance between the equal treatment provision of Regulation (EC) No 883/2004 and legal residence requirements for non-active persons.

If an explicit integration of the relevant articles of Directive 2004/38/EC into the SNCB title of Regulation (EC) No 883/2004 would remain on the agenda, it would be possible to translate the residence requirements of Directive 2004/38/EC explicitly into the text of Regulation (EC) No 883/2004 through an 'Option 4'. This option would connect the social assistance rights to the length of stay: first three months, between three months and five years/acquisition of permanent right of residence, over five years. Alternatively, it could be sufficient to insert an explicit rule into the coordination Regulations tackling fraud and abuse of rights by claimants.

Instead of adapting Regulation (EC) No 883/2004, it would be conceivable to preserve its coherence. A first option would be to remove all doubts on the relationship between Regulation (EC) No 883/2004 and Directive 2004/38/EC by defining a status of '*lex specialis*' for the coordination Regulation. Even if it could raise difficulties since both regimes would apply with potentially different results, a second option would be to provide a definition of social

assistance in Directive 2004/38/EC that would not encompass SNCBs included in Annex X of Regulation (EC) No 883/2004.

# Introduction

---

The purpose of this report is to provide further support to the Commission in drafting the Impact Assessment report for the revision of Regulations (EC) No 883/2004 and (EC) No 987/2009.<sup>371</sup> In preparation of this impact assessment a study has been made by a team of Deloitte Consulting and HIVA - Catholic University of Leuven under contract VC/2012/0949 'Study for and impact assessment for revision of Regulations (EC) No 883/2004 and (EC) No 987/2009' (hereafter the study).

The study provides among others socio-economic data and indicators to evaluate the mobility trends of the insured persons and their family members, as well as the related costs for the Members States' social security schemes.

The aim of this report is to provide further support to the Commission services to integrate directly the relevant data and statistics in the analytical part of the Impact Assessment report. This report provides a clear answer 'on what is the nature and scale of the problem, how is it evolving and who is most affected by it?' As well for the baseline scenario of the present situation, its further development, and the potential impact of the alternative options, this is documented in quantitative terms. Those quantitative pictures reveal size and scope of the problem, the baseline scenario and the impact and changes from the baseline scenario for several options.

---

<sup>371</sup> The authors would like to thank L. Aujean (DG EMPL.) for the helpful comments.

# 1 | Data collection, limitations and applied methodology

## 1.1 Data collection

Within the ‘Study for an impact assessment for revision of Regulations (EC) Nos 883/2004 and 987/2009’<sup>372</sup> it was the ambition to collect in 14 Member States administrative data on the coordination rules of LTC and unemployment benefits. This questionnaire referred explicitly to the old E-forms, the current Portable Documents and Structured Electronic Documents (SED) in order to obtain a well understanding of the data needs. Although those 14 Member States cover the complete range of welfare state regimes, this administrative data collection, in terms of involved Member States and in terms of available data, was too narrow to assess in detail the baseline scenarios and the different proposed options.

To obtain a more detailed quantitative view on the baseline scenario and the different options, mainly data from the EU Labour Force Survey (LFS)<sup>373</sup> and the EC 2012 Ageing Report was exploited. The LFS is the main source of information with regard to the labour market situation and labour market trends in the European Union. The main advantage of this survey is the data availability for all EU-Member States. The EC 2012 Ageing Report contains state of the art information on the coverage of social protection schemes and its budgetary cost in all EU countries including projections for the future presents projections.

## 1.2 Limitations

Regulation (EC) No 883/2004 is applicable to countries of the European Economic Area (EEA) and Switzerland. However, calculations have been made for only 27 Member States.

## 1.3 Applied methodology

Both figures below provide a first overview of the applied methodology to estimate/calculate the budgetary impact of the baseline scenario and the different options. It was the ambition to collect in 14 Member States administrative data from the competent institutions. Afterwards, the results would have been extrapolated to the EEA countries and Switzerland. Although those 14 Member States cover the complete range of welfare state regimes, this administrative data collection, in terms of involved Member States and in terms of available data, was too narrow to assess in detail the baseline scenarios and the different proposed options. As result, mainly data from the LFS, the

<sup>372</sup> Regulation (EC) No 883 of the European Parliament and of the Council of 24 April 2004 on the coordination of social security systems. Regulation (EC) No 987/2009 of the European Parliament and of the Council of 16 September 2009 laying down the procedure for implementing Regulation (EC) No 883/2004

<sup>373</sup> Council Regulation (EC) No. 577/98 of 9 March 1998 on the organisation of a labour force sample survey in the Community.

Ageing Report and the Audit Board Report was exploited to estimate the number of involved persons and the budgetary impact.

### 1.3.1 Unemployment benefits

Based on Labour force Survey (LFS) data, an estimation of the number of **cross-border workers** could be made (based on the question *‘What is the name and address of the local unit of the enterprise where you work?’* and variables ‘COUNTRYW’ (country of place of work) and ‘COUNTRY’ (country of residence) in the database). In the further analysis we considered all **workers who work in another country than the country of residence as cross-border workers. Workers who work in a neighbouring country are considered as frontier workers.** This is different from the legal definition.

National unemployment rates were applied to the number of cross-border workers to estimate the number of **unemployed cross-border workers**.<sup>374</sup> The national unemployment rates of 2010 (from 20 to 64 years) defined in the 2012 Ageing Report were used. **The unemployment rates of the country of employment and not of the country of residence have been applied** on the number of cross-border workers calculated by way of the LFS.

In order to **estimate the budgetary impact** of the baseline scenario, the estimated number of unemployed cross-border workers (based on the LFS and the unemployment rates of the 2012 Ageing Report) is multiplied by the annual unemployment benefit per unemployed person (unemployment benefit spending in 2010 prices / (labour force \* unemployment rate)) (data from the 2012 Ageing Report). This yearly expenditure assumes that the unemployed person did not find a job during the first year of unemployment. However, a more ‘realistic’ calculation of the yearly expenditure is taken up in this report by taking into account **the annual average duration of the payment of the unemployment benefit**.<sup>375</sup> However, also the amount of the **reimbursement claim** should be taken into account. The analysis assumes 3 months of claims (minimum scenario) where a distinction should be made between the claim made by the country of residence and the actual payment by the country of last activity.

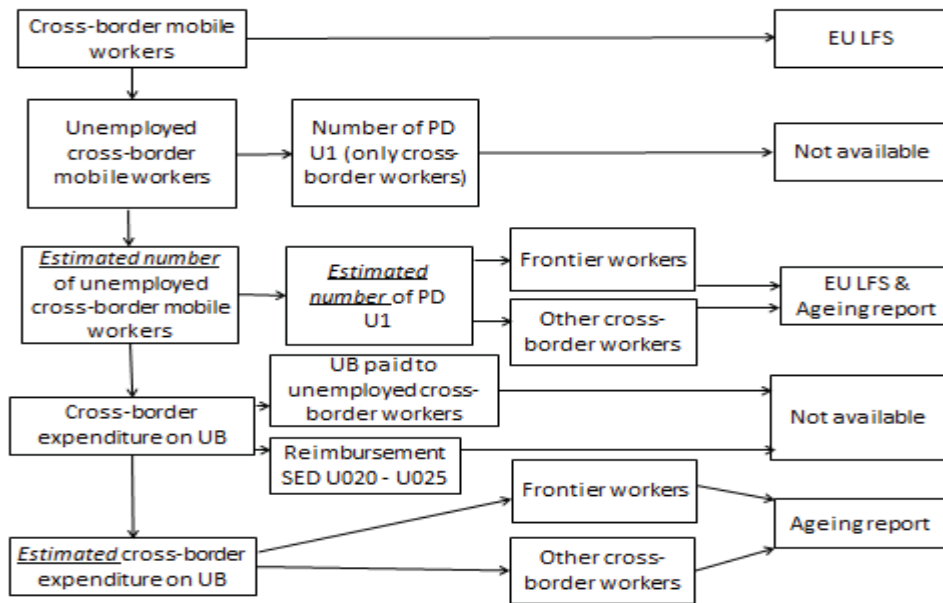

Under current rules unemployed frontier workers must claim unemployment benefits in the country of residence while unemployed other cross-border workers can choose to claim unemployment benefits in the country of last employment or in the country of residence. Due to the fact other cross-border workers can choose (between the country of last activity or the country of residence), an assumption has to be made about how many of them return to the country of residence and how many stay in the country of last activity. We assume that the unemployed persons will choose for the country which is paying the highest unemployment benefit.

---

<sup>374</sup> In order to support the use of national unemployment rates for cross-border workers, DG EMPL confirmed, on the basis of Eurostat EU-LFS data, that the overall characteristics of cross-border workers seem quite close to the average national workers (people working in the same country than their country of residence). No large differences in terms of highest level of education or age, two important factors when it comes to unemployment, appear.

<sup>375</sup> Calculations are based on the duration of the unemployment (which can be calculated with LFS data). If the duration of unemployment < 1 month, we assume a payment of the UB of 0.5 months; Between 1-2 months of unemployment = 1.5 months UB paid; Between 3-5 months of unemployment = 4 months UB paid; Between 6 and 11 months of unemployment = 8.5 months UB paid; 12 months and longer of unemployment = 12 months UB paid. This cut-off period of 12 months stems from the fact that the expenditure is calculated for only one year. It should be noted that the duration in unemployment may be underestimated since it is measured at a certain moment in time (e.g. he/she may still remain unemployed), see Employment in Europe 2008, chapter 2 and Employment and Social developments in Europe Review 2012, chapter 1.

Figure 1.1 Applied methodology – Unemployment benefits

### 1.3.2 LTC

The fact there is no specific coordination regime and a common definition, difficulties appeared during the data collection on LTC. Member States do not explicit collect data on LTC and have not a common understanding of LTC benefits. At the moment, administrative data on LTC are only available in specific forms dealing with the coordination rules of the sickness chapter.

The number of those insured for health care living in another country than the competent country – which sometimes includes long-term care or to which LTC-insurance is closely linked – can be calculated based on the number of PD S1 - or E106 forms (insured person), E109 forms (family member of insured person) and E121 forms (pensioner and family member of pensioner). **The number of PD S1** was estimated by the sum of 3 categories:

- Cross-border workers (and their family members);
- Retired former cross-border workers (and their family members);
- Other mobile pensioners (and their family members).

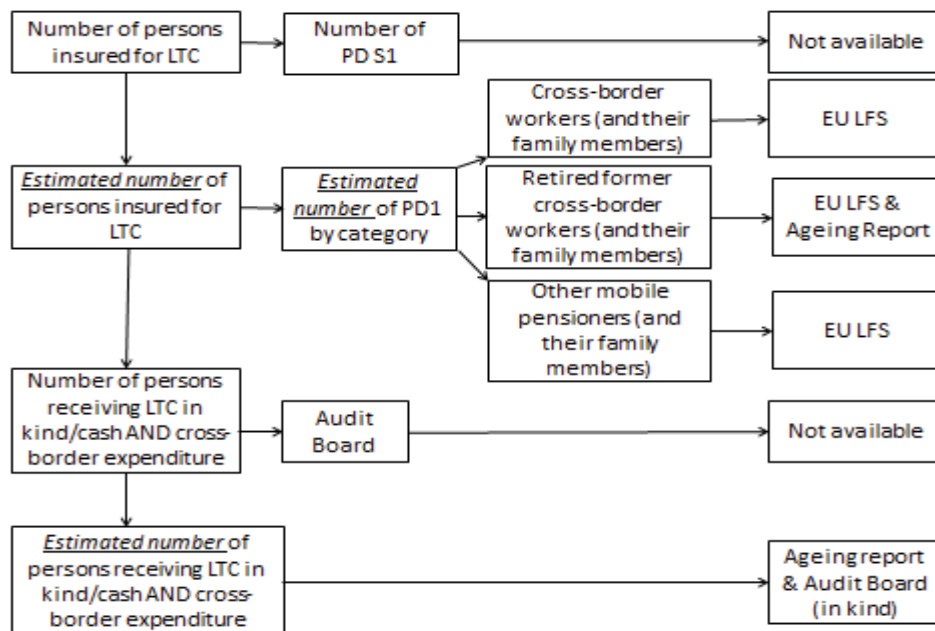

First, by way of the LFS, the number of cross-border workers were estimated. Second, we assumed in the calculation model that 20% of the cross-border workers will have an insured family member. Third, to estimate the total number of retired former cross-border workers, we applied the percentage of cross-border workers on the labour market to the number of pensioners in 2010 (figure from 2012 Aging Report- variable ‘Pensioners aged 65+’) and this by individual (former) working Member State. Fourth, an estimation of the number of migrant pensioners was calculated by using the LFS (= selection of ‘retired persons aged older than 60 at arrival’ of which country of birth= EU27 and country of residence=EU27). Final, we assume in the calculation model that 25%

of the pensioners will have also an insured family member. The sum of all these categories results in an estimate of the number of PD S1.

As next step we have estimated **the cross-border expenditure** on health care and long-term care based on figures from the 2012 Ageing Report (variables ‘Health care spending in 2010 prices per person’, ‘Population (million)’ and ‘Long-term care spending in 2010 prices (in billion Euros)’).

We calculated our estimates on average benefits for the total of the insured population. It is as mobile citizens (workers, pensioners, their family members) are using this system of LTC as if they were nationals. This involves a ‘potential’ overestimation of the number of users of cross-border LTC benefits and the related expenditure due to fact some MS consider their LTC benefit as not exportable. At the same time these estimates assume a complete ‘take-up’ of rights by mobile citizens which will not be the case in the baseline scenario. A distinction could be made between LTC benefits in kind, LTC benefits in cash and informal LTC by more detailed data from DG ECFIN.

Figure 1.2 Applied methodology - LTC

Source HIVA KU Leuven

## 2 | Analysis and results

### 2.1 Unemployment benefits

In the **baseline scenario**, frontier workers (people who work in one country and live in another, and return home daily or at least once a week) who become wholly unemployed must apply for unemployment benefits in their country of residence. Cross-border workers, other than frontier workers, may apply for unemployment benefits and register with the employment service in either the country of last activity or the country of residence (*right of choice*). The country of last activity will reimburse the institution of the country of residence an amount of the benefits provided to the returned frontier workers and other cross-border workers by the latter institution during the first three or five months.

**Option 2** implies that frontier workers also have the choice between applying for unemployment benefits and registering with the employment services either in the country of last activity or in the country of residence (*all cross-border workers have a right of choice*).

In **option 3**, the unemployed person should claim unemployment benefits and register with the employment services in the country of last activity. Reimbursement claims are no longer necessary.

**Table 2.1** Applicable rules baseline scenario and different options

	Option 1: Baseline scenario	Option 2: Right of choice	Option 3: Country of last activity
<b>Country of last activity</b>			
Other cross-border workers	UB paid to other cross-border workers when highest UB in country of last activity (rational decision)	UB paid to other cross-border workers when highest UB in country of last activity (rational decision)	UB paid to other cross-border workers
Frontier workers		UB paid to frontier workers when highest UB in country of last activity (rational decision)	UB paid to frontier workers
Reimbursement	Reimbursement claim paid of 3 or 5 months to country of residence	Reimbursement claim paid of 3 or 5 months to country of residence	No reimbursement
<b>Country of residence</b>			
Other cross-border workers	UB paid to other cross-border workers when highest UB in country of residence (rational decision)	UB paid to other cross-border workers when highest UB in country of residence (rational decision)	*
Frontier workers	UB paid to frontier workers	UB paid to frontier workers when highest UB in country of residence (rational decision)	*
Reimbursement	Reimbursement claim received of 3 or 5 months from country of last activity	Reimbursement claim received of 3 or 5 months from country of last activity	

\* A PD U1 could be issued by the country of residence to prove (self-)employed or insured periods in the country of residence to open unemployment rights in the country of last activity.

Source HIVA KU Leuven based on information from DG EMPL

Table 2.2 provides an overview of the figures we have used to estimate the number of unemployed cross-border workers and the cross-border expenditure related to unemployment benefits. The table shows that on average 1 million cross-border workers are employed in the EU27, of which on average 701.000 frontier workers are employed in a neighbouring country. For the first the MS is the country of last activity and competent country, for the latter the MS is the country of residence. The number of incoming and outgoing cross-border workers will differ between Member States. The total budgetary impact of the coordination regulation is the combination of both situations. E.g. Belgium employs 62 thousand incoming cross-border workers (of which 50 thousand incoming frontier workers) while 97 thousand cross-border workers live in Belgium but work in another country (= ‘outgoing cross-border workers’) (of which 93 thousand outgoing frontier workers). National unemployment rates were applied to the number of cross-border workers to estimate the number of unemployed cross-border workers. This results in an estimate of 73.7 thousand unemployed cross-border workers of which 45.2 thousand frontier workers. The annual unemployment benefit per unemployed person was taken to estimate the cross-border expenditure.

**Table 2.2 UB: Main parameters for estimating the baseline scenario and the different options**

Source LFS and 2012 Ageing Report

Reimbursement claims can be made by the country of residence to the country of last activity for fully unemployed frontier workers but also for other cross-border workers who have decided to register with the competent institution in their country of residence. The country of last activity shall reimburse the unemployed benefits provided in the country of residence during the first three months or five months (when the unemployed person during the preceding 24 months, completed at least 12 months of (self)employment in the country of last activity). However, the amount of reimbursement by the country of last activity to the country of residence cannot be higher than the amount payable under the legislation of the country of last activity (see art. 65, 6 Regulation (EC) No. 883/2004). This specific rule implies for the baseline scenario that the reimbursement will be 27% lower than the possible actual claim. The % difference between claim and actual payment will be influenced by the amount of the unemployment benefit paid in the country of last activity compared to this in the country of residence (last column of table 2.3). E.g. claims made to Poland (lowest estimated annual expenditure UB per person) will imply a high % difference (95%) with the actual payment while claims made to the Netherlands (highest estimated annual expenditure UB per person) will imply no % difference with the actual payment.

**Table 2.3 UB: estimated reimbursement claims and impact of maximum reimbursement country of last activity (baseline scenario)**

Source Estimate based on data LFS and 2012 Ageing Report

Tables 2.4 to 2.8 assume for the calculation of the ‘annual expenditure of UB’ that the unemployed person did not find a job during the first year of unemployment. However, a more ‘realistic’ estimate of the yearly expenditure is taken up in this report by taking into account the annual average duration of the payment of the unemployment benefit. For that reason, we discuss only tables 2.9 to 2.15. Tables 2.4 and 2.8 describe in more detail the calculations made in the [‘Study for and impact assessment for revision of Regulations \(EC\) No 883/2004 and \(EC\) No 987/2009’](#). For that reason, we keep them in this additional analysis. These tables were also presented in the [AC Working Party of 10 October 2013](#).

**Table 2.4 UB: estimated expenditure UB incoming cross-border workers becoming unemployed, baseline scenario, breakdown by country of last activity and country of residence and impact of reimbursement**

<b>Option 1: No policy change (Baseline scenario):</b> Frontier workers return; other cross-border workers take a rational decision (= highest UB)											
Country of employment (in .000)	Number of unemployed incoming cross-border workers (in .000)	Of which incoming unemployed frontier workers (in .000)	Expenditure			Cost without reimbursement			Cost with reimbursement		
			Estimated annual expenditure UB paid by the country of residence (in .000 €)	Estimated annual expenditure UB paid by the country of last activity (in .000 €)	Reimbursement country of last activity (3 months) (in .000 €)	% share of cost country of residence	% share of cost country of last activity	% share of cost country of residence	% share of cost country of last activity

\* Total cross-border expenditure: without taking into account the UB paid to unemployed EU migrant workers.

\*\* Total expenditure UB: ESSPROS data

Table 2.9 provides an overview of the applied methodology to estimate the ‘annual expenditure of UB based on the annual average duration of the payment of the UB’. On average 7.5 months (EU-27) the UB was paid to unemployed persons (calculated for the total year)<sup>376</sup>. The ‘annual expenditure of UB based on the average duration payment UB’ was estimated by multiplying the monthly expenditure (Annual expenditure UB in own country / 12) with the duration of the payment of the UB. This delivers a more ‘realistic’ view on the annual expenditure.

Tables 2.10 to 2.12 compare the budgetary impact of the different options. The calculation of the total expenditure takes not only the expenditure of the UB into account but also the amount of the claims received (as country of residence = creditor) and the amount of the claims paid (as country of last activity = debtor). These assumptions result in a total expenditure of € 378 Million for the baseline scenario, € 502 Million for option 2 (*right of choice*) and € 437 Million for option 3 (*provided by the country of last activity*). Both new options are more expensive than the baseline scenario. The expenditure increases with 33% in option 2 compared to the baseline scenario and increases with 16% in option 3. The budgetary impact differs between Member States. For 16 Member States the baseline scenario has the lowest budgetary impact (CZ, DK, DE, IE, GR, ES, CY, LT, LU, HU, MT, NL, AT, RO, FI, UK). Option 2 has only for 1 Member State the lowest budgetary impact (PT) while option 3 is least expensive for 10 Member States (BE, BG, EE, FR, IT, LV, PL, SI, SK, SE). Option 2 is for 16 Member States the most expensive option (BE, BG, CZ, DK, DE, IE, CY, LT, LU, HU, NL, AT, PL, RO, FI, UK). For 8 Member States the baseline scenario is the most expensive option (EE, FR, IT, LV, PT, SI, SK, SE) and for 3 Member states this will be option 3 (GR, ES, MT).

---

<sup>376</sup> Calculations are based on LFS data. If the duration of unemployment < 1 month, we assume a payment of the UB of 0,5 months; Between 1-2 months of unemployment = 1,5 months UB paid; Between 3-5 months of unemployment = 4 months UB paid; Between 6 and 11 months of unemployment = 8,5 months UB paid; 12 months and longer of unemployment = 12 months UB paid.

Table 2.9 UB: Annual average duration of payment UB and impact on annual expenditure UB

Source Estimate based on data LFS and 2012 Ageing Report

The budgetary impact of cross-border expenditure related to UB is ‘marginal’ compared to the total national expenditure. It is only 0.2% of the total EU-27 spending on unemployment benefits in the baseline scenario. But also the 2 other options will have a limited impact on the total budget. Only for Luxembourg we observe a high impact of the cross-border spending on the total national budget (4.4% of total expenditure). The budgetary impact increases considerably in option 2 (15.2% of total expenditure) and in option 3 (14.9% of total expenditure).

\* Total cross-border expenditure: without taking into account the UB paid to unemployed EU migrant workers.

\*\* Total expenditure UB: ESSPROS data

Source Estimate based on data LFS and 2012 Ageing Report

Table 2.14 presents the distribution of the cost taking into consideration the current rules. We have made our calculations from the perspective of incoming cross-border workers who become unemployed. The estimated 45 thousand incoming frontier workers who became unemployed have to return to their country of residence while the ‘other unemployed cross-border workers’ (about 28 thousand persons) have a right of choice. We assume that this group will take choose for the country with highest UB. The baseline scenario (taking into account the assumptions we had to made) implies that the country of last activity will pay 30% of the total expenditure (only for ‘other unemployed cross-border workers’ who choose for the country of last activity) and the country of residence 70% of the total expenditure (for the unemployed frontier workers and the ‘other unemployed cross-border workers’ who choose to return). These current rules imply that a Member State with a very high number of incoming frontier workers only has to pay a small part of the cost. E.g. almost all unemployed cross-border workers in Luxembourg could be considered as ‘unemployed frontier workers’ which imply that Luxembourg is only paying 1% of the total expenditure of UB paid to former cross-border workers employed in Luxembourg. However, this disproportion is corrected by a reimbursement procedure (the country of last activity shall reimburse the unemployed benefits provided in the country of residence during the first three months or five months). We assume in the calculation model a reimbursement of 3 months. This reimbursement procedure makes the distribution of the cost ‘more fair’. Now, the county of last activity will pay 43% of the cost (or an increase with 13 % points). E.g. Luxembourg will pay no longer 1% of the cost but 30%. At the same time, this reimbursement procedure is an incentive for the country of residence to keep the duration of unemployment below the reimbursement period (of 3 or 5 months).

The current rules assume that the amount of reimbursement cannot be higher than the amount payable under the legislation of the country of last activity (see art. 65, 6 Regulation (EC) No. 883/2004). This specific rule implies that in many cases the reimbursement by the country of last activity will be lower than the actual claim of the country of residence (see also Table 2.3). Table 2.15 summarizes the distribution of the cost by assuming that the amount of reimbursement is equal to the actual claim made by the country of residence. So the reimbursement procedure is no longer taking into account the amount of the unemployment benefit in the country of last activity but the amount of the unemployment benefit in the country of residence (= actual claim). The reimbursement based on the UB of the country of residence has a positive impact on the distribution of the cost. 46% of the cost will be paid by the country of last activity (which is an increase with 3% points compared to the calculations made in Table 2.14).

\* Only the annual expenditure of UB is taken into account while there will possibly be a shift of the social security system from the country of last activity to the country of residence. Source Estimate based on data LFS and 2012 Ageing Report

Unemployed workers have a limited possibility of export of unemployment benefits for 3 months, with a possible extension to 6 months (when he/she looks for work in another Member State). It is the competent institution of the Member State paying the unemployment benefits that may extend this period to 6 months.

Table 2.16 tackles the impact of the current rules by describing in detail the situation of the 'Belgian' unemployed persons who have looked for a job abroad (based on administrative data). In 2011, Belgium paid to 1 081 unemployed jobseekers at least 1 month an unemployment benefit during their period of export. Only 57 jobseekers received longer than 3 months an unemployment benefit. So, for this group we can assume they have received a prolongation of export. It implies that only 5.3% of the jobseekers who looked for a job abroad asked and received a prolongation. 481 of the 1 081 jobseekers were after their period of export no longer registered with the Belgian competent institution. It supposes a 'success rate' (% jobseekers abroad who have find a job) of 44%.<sup>377</sup> At the same time we observe that the 'success rate' will be higher for the group which received a prolongation of export (success rate of 53% or 30 out of 57 persons). However, this should be considered as a broad definition of the 'success rate'. The fact the unemployed person is no longer registered with the Belgian competent institution might be for different reasons: they have found work in the country of export, they have found work in Belgium, or they moved to another country.

**Table 2.16 Impact of prolongation period on finding a job abroad (success rate\*), Belgian case, 2011**

Country of export	Received at least 1 month an 'export benefit' (A)	Received longer than 3 months an 'export benefit' (B)	Theoretical prolongation (B/A)	Not longer registered after period of export (for total group) (C)	Success rate total group (C/A)	Not longer registered after period of export (for group which received longer than 3 months an 'export benefit') (D)	Success rate group longer than 3 months (D/B)	Success rate group lower than 3 months (C-D)/(A-B)

\* Broad definition of success rate: no longer registered in database.

Source Estimate based on data LFS and 2012 Ageing Report

Eurostat provides an overview of the distribution of the unemployed according to the duration spent in unemployment based (on LFS data) (see Figure 2.1). However, this period is measured at a certain moment which implies a possible underestimation of the duration of unemployment. The

<sup>377</sup> The success rates for Poland and Sweden are 10% and 12%. For the incoming jobseekers in the Netherlands a success rate of 22.8% was obtained (based on administrative data).

period to find a job abroad within 3 months can be considered as a very short period observing an average duration of unemployment of 15 months. Also, only 55% of the unemployed persons are unemployed for less than one year.<sup>378</sup> The cumulative figures can be considered as a proxy of an 'exit rate' which is seen as increasing with almost 15% points between 2 observed periods (less than 3 months = 22.7% and less than 6 months = 37.5%).<sup>379</sup> But of course the composition of the group of jobseekers looking for a job abroad may (totally) differ from the general group of unemployed persons we have describe in Figure 2.1.

**Figure 2.1** Distribution of unemployed according to duration in unemployment (in months), aged 15 to 64 years, 2012, EU-28

\* Duration of unemployment is the duration of the search for employment or the length of the period since leaving last job (measured at a certain moment which implies a possible underestimation of the average duration of unemployment).

Source Eurostat (indicator: 'Unemployment by sex, age and duration of unemployment')

## 2.2 Long-term care benefits

The number of PD S1 (persons who are insured for health care living in another country than the competent country) was estimated by the sum of 3 categories: incoming cross-border workers (and their family members), retired cross-border workers (and their family members) and migrant pensioners (and their family members). By counting these different categories together, we

<sup>378</sup> On the basis of the methodology developed in ESDE review 2012 ( chapter 1, section 1.3.2), the persistence rate in unemployment for persons (aged 15-64, EU-28) unemployed less than one year can be estimated for 2011-12 to be around 39%. In other words, 39% of those unemployed less than one year in 2011 were still unemployed one year later. However, due to the methodology used, this does not imply that all the remaining 61% (the 'exit rate') have necessarily found a job as they could have become inactive (or be again short-term unemployed after a spell in employment).

<sup>379</sup> On the basis of the methodology developed in ESDE review 2012 ( chapter 1, section 1.3.2), the exit rate of unemployment for persons (aged 15-64, EU-28) unemployed less than three months can be estimated for 2012 to be around 35% - while for persons unemployed less than 6 months, it would be between 52 and 55%. It means that there would be a gain around 17-21 % points in exit rate between 3 and 6 months of time in unemployment. It is to be noted that the gain in exit rate for persons unemployed between 6 months and one year is much lower (around 6 to 9 % points, i.e.: the difference between 61% mentioned in previous footnote and 52-55%).

estimated a total number of about 2 million insured persons living in another Member State than the competent Member State. Some 60% is determined by the present cross-border workers which imply some 40% is related to mobile pensioners or retired cross-border workers. Most PD S1 certificates were issued by Germany (18.6% of total), UK (11% of total) and Luxembourg (10.5% of total) while most of the PD S1 certificates were received by France (15.7% of total) and Germany (13.8%).

Source Estimate based on data LFS and 2012 Ageing Report

Based on the estimated number of PD S1 (Table 2.17), we have estimated the potential users of LTC. A distinction should be made between LTC benefits in cash and LTC benefits in kind. This is not only an important distinction in the LTC itself, but also in the coordination regulation. We apply on this total PD S1 the same percentages of use of LTC in cash or in kind as is the case in the total population of the EU 27. This is acceptable since the structure of this 'S1 population' is similar to the total population including active persons, retired persons and their family members. Those percentages of users are derived from the Ageing report 2012 (additional data was delivered by DG ECFIN, necessarily for making a distinction between LTC in kind, LTC in cash and informal LTC). For the baseline scenario we estimate that some 48 thousand mobile citizens are using LTC in kind and 45 thousand mobile citizens LTC in cash. The number of users will be multiplied by the average amount per dependent person using LTC in kind or in cash to obtain the cross-border expenditure related to LTC.

Source Estimate based on data LFS and 2012 Ageing Report

In the baseline scenario (current rules) LTC benefits *in kind* are provided according to the legislation of the Member State of residence (if they exist) and reimbursed by the competent Member State while LTC benefits *in cash* (if they exist) are provided and paid by the competent Member State. In Option 3.1, the Member State of residence shall provide LTC benefits (in cash and in kind) on the basis of its legislation and reimbursed by the competent Member State (with or without a supplement from the competent Member State if benefits in the Member State of residence are at a lower level). In Table 2.19 we assume that there is no supplement paid by the competent Member State. Finally, in Option 3.2 the competent Member State shall provide LTC care benefits to insured persons residing abroad (export).

Tables 2.19 to 2.22 compare the budgetary impact of the different options. For all options a distinction is made between LTC benefits in kind and in cash. This results in a total expenditure of € 995 Million for the baseline scenario, € 810 Million for option 3.1 (*provided by the Member State of residence without a supplement*) and € 1 277 Million for option 3.2 (*provided by the competent country*). Compared to the baseline scenario, option 3.1 is less expensive (a decrease of 19% of the expenditure). In option 3.1 the LTC benefit in cash is also provided by the country of residence and no longer by the competent country. It implies a considerably decrease of the budget which is needed to finance the cross-border use of LTC benefits in cash (from € 376 Million to € 191 Million or a decrease of 49%). Option 3.2 is more expensive compared to the baseline scenario (an increase of 28% of the expenditure). The higher expenditure is influenced by the fact that the competent Member State will provide the LTC benefits in kind and no longer the country of

residence. Because of this, the budget needed to finance the cross-border use of LTC benefits in kind increases with 46% (from € 618 Million to € 900 Million). The budgetary impact differs considerably between Member States. We do not observe a consistent 'best option' for all EU-27 Member States. For 6 Member States the baseline scenario has the lowest budgetary impact (BE, IE, FR, LT, LU, SE). Option 3.1 has for 8 Member State the lowest budgetary impact (CZ, DK, GR, IT, NL, AT, FI, UK) while option 3.2 is least expensive for 13 Member States (BG, DE, EE, ES, CY, LV, HU, MT, PL, PT, RO, SI, SK). However, option 3.2 is also for 12 Member States the most expensive option (BE, DK, IE, GR, FR, IT, LU, NL, AT, FI, SE, UK). For 5 Member States the baseline scenario is the most expensive option (CZ, DE, EE, CY, HU) and for 10 Member states this will be option 3.1 (BG, ES, LV, LT, MT, PL, PT, RO, SI, SK, FI).

\* In option 3.1 LTC benefits in cash are provided by the MS of residence. This will cause an important budgetary increase for some competent MS without or with few national social rights related to LTC benefits in cash (e.g. RO, SK, BG ...). This explains the high percentages of these MS.

The budgetary impact of cross-border expenditure related to LTC is only a fraction of the total national expenditure. It is 0.4% of the total EU-27 spending on LTC in the baseline scenario. Even option 3.2 (which is the most expensive option) has only an impact of 0.6% on the total LTC budget. Again, we observe the highest budgetary impact in Luxembourg (29.4% of total expenditure). The budgetary impact increases considerably in option 3.2 (40.9% of total expenditure) and less in option 3.1 (31.9% of total expenditure).

\* Total expenditure LTC: data 2012 Ageing Report

Source Estimate based on data LFS and 2012 Ageing Report

In Table 2.19 three different options were compared with each other. However, option 3.1 (*provided by the Member State of residence*) assumes that no supplement was paid by the competent Member State. In Table 2.20 we have estimated the cost when this supplement would be added to option 3.1. The amount of the supplement was estimated by subtracting option 3.2 (*provided by the competent Member State*) from option 3.1 (*provided by the Member State of residence without supplement*). If the difference is negative, no supplement will be paid. In total an additional supplement of € 520 Million has to be paid by the competent Member States. This increases the budget of option 3.1 (we call it option 3.1bis (*provided by the Member State of residence with supplement*)) to a total amount of € 1 330 Million. The budget needed for option 3.1bis (with supplement) increases with 34% compared to the baseline scenario. The total expenditure estimated for this option is even higher than for option 3.2 (*provided by the competent Member State*).

# Introduction

---

The purpose of the report is to provide the Commission with a statistical data analysis that will give insight of the characteristics of the work pattern of frontier and cross-border workers and the duration that cross-border and frontier workers on average spend in their current job. This report shows how the policy option (option 4) differs from the baseline scenario and the other options.

A new 'conflict rule' will be introduced according to which:

- A person receives the unemployment benefits in the country of residence, except:

- When the last 12 months of employment have been completed in another Member State. In that case, the country of last activity will become competent. It is not necessary that the person has continuously worked for 12 months in the other Member State without interruption or that he has worked there up to the date when he starts to receive unemployment benefits, but only that he has accumulated 12 months of employment before unemployment (e.g. with period of sickness) without having been employed anywhere else during this period.

There will be no reimbursement mechanism for the country of residence (we assume that the person has in the past paid contributions into that scheme).

## Applied methodology

Based on Labour force Survey (LFS) data, an estimation of the number of **cross-border workers** could be made (based on the question *‘What is the name and address of the local unit of the enterprise where you work?’* and variables ‘COUNTRYW’ (country of place of work) and ‘COUNTRY’ (country of residence) in the database). In the further analysis we considered all **workers who work in another country than the country of residence as cross-border workers. Workers who work in a neighbouring country are considered as frontier workers.** This is different from the legal definition.

For the new introduced option 4 a breakdown by the period of employment of the cross-border worker had to be made. The breakdown is extracted from the LFS variable ‘STARTIME’ (Time since person started to work).

Some limitations of the use of this indicator need to be taken into account.<sup>380</sup> There is a risk of underestimation of the duration as the indicator used is a measure of the employment spell in-progress (e.g.: not finished, as the person is 'not yet' unemployed). E.g.: people having currently worked 6 months may keep the same job still for few months/years/decades. However, on the other side, there is a risk of overestimation as it can be measured only for employed persons – and that there is therefore an over-representation of people with long job tenure. E.g.: people having become unemployed recently after having worked few months are not accounted for (same holds for those having recently lost their job after 10 years but they are less numerous).

Still, the ideal would be to know how much time unemployed previously cross-border workers have worked in the country of last activity. However, the employment history of currently unemployed persons is not available in any EU-LFS variable.

National unemployment rates were applied to the number of cross-border workers to estimate the number of **unemployed cross-border workers.** The national unemployment rates<sup>381</sup> of 2010 (from 20 to 64 years) defined in the 2012 Ageing Report were used. **The unemployment rates of the country of employment and not of the country of residence have been applied** on the number of cross-border workers calculated by way of the LFS.

In order to **estimate the budgetary impact** of the baseline scenario and the different options, the estimated number of unemployed cross-border workers (based on the LFS and the unemployment rates of the 2012 Ageing Report) is multiplied by the annual unemployment benefit per unemployed person (unemployment benefit spending in 2010 prices / (labour force \* unemployment rate)) (data from the 2012 Ageing Report). This yearly expenditure assumes that the unemployed person did not find a job during the first year of unemployment. However, a more ‘realistic’ calculation of the yearly expenditure is calculated by taking into account the **annual average duration of the payment of the unemployment benefit.**<sup>382</sup>

---

<sup>380</sup> Input received from DG EMPL, based on Employment in Europe 2009, chapter 2 and Employment and Social Developments in Europe Review 2012, chapter 1.

<sup>381</sup> In order to support the use of national unemployment rates for cross-border workers, DG EMPL confirmed, on the basis of Eurostat EU-LFS data, that the overall characteristics of cross-border workers seem quite close to the average national workers (people working in the same country than their country of residence). No large differences in terms of highest level of education or age, two important factors when it comes to unemployment, appear.

<sup>382</sup> Calculations are based on the duration of the unemployment (which can be calculated with LFS data). If the duration of unemployment < 1 month, we assume a payment of the UB of 0.5 months; Between 1-2 months of unemployment = 1.5 months UB paid; Between 3-5 months of unemployment = 4 months UB paid; Between 6 and 11 months of unemployment = 8.5 months UB paid; 12 months and longer of unemployment = 12 months UB paid. Based on LFS data we obtained an average duration of unemployment of 15 months. However, this average duration is measured at a certain moment which implies a possible underestimation of the duration of the unemployment (e.g. he/she may still remain

---

unemployed). However, the expenditure is calculated for only one year. This explains the cut-off at 12 months. This will result in an annual average duration of payment of the unemployment of 7.5 months.

## Analysis and results

### 1.19 Unemployment benefits

In the **baseline scenario**, frontier workers (people who work in one country and live in another, and return home daily or at least once a week) who become wholly unemployed must apply for unemployment benefits in their country of residence. Cross-border workers, other than frontier workers, may apply for unemployment benefits and register with the employment service in either the country of last activity or the country of residence (*right of choice*). The country of last activity will reimburse the institution of the country of residence an amount of the benefits provided to the returned frontier workers and other cross-border workers by the latter institution during the first three or five months.

**Option 2** implies that frontier workers also have the choice between applying for unemployment benefits and registering with the employment services either in the country of last activity or in the country of residence (*all cross-border workers have a right of choice*).

In **option 3**, the unemployed person should claim unemployment benefits and register with the employment services in the country of last activity. Reimbursement claims are no longer necessary.

In **new option 4**, the country of last activity will pay the unemployment benefit of unemployed former cross-border workers employed longer than 12 months in this country while the country of residence will pay the unemployment benefit of unemployed former cross-border workers employed no longer than 12 months in the country of last activity. No reimbursement mechanism is foreseen in this option.

**Table 2.1 UB: Applicable rules baseline scenario and different options**

	Option 1: Baseline scenario	Option 2: Right of choice	Option 3: Country of last activity	Option 4: cut-off by period of employment
<b>Country of last activity</b>				
Other cross-border workers	UB paid to other cross-border workers when highest UB in country of last activity (rational decision)	UB paid to other cross-border workers when highest UB in country of last activity (rational decision)	UB paid to other cross-border workers	UB paid to cross-border workers longer than 12 months employed in the country of last activity
Frontier workers		UB paid to frontier workers when highest UB in country of last activity (rational decision)	UB paid to frontier workers	
Reimbursement	Reimbursement claim paid of 3 or 5 months to country of residence	Reimbursement claim paid of 3 or 5 months to country of residence	No reimbursement	
<b>Country of residence</b>				
Other cross-border workers	UB paid to other cross-border workers when highest UB in country of residence (rational decision)	UB paid to other cross-border workers when highest UB in country of residence (rational decision)	*	UB paid to cross-border workers no longer than 12 months employed in the country of last activity
Frontier workers	UB paid to frontier workers	UB paid to frontier workers when highest UB in country of residence (rational decision)	*	
Reimbursement	Reimbursement claim received of 3 or 5 months from country of last activity	Reimbursement claim received of 3 or 5 months from country of last activity		

\* A PD U1 could be issued by the country of residence to prove (self-)employed or insured periods in the country of residence to open unemployment rights in the country of last activity.

Source HIVA KU Leuven based on information from DG EMPL

On average (2010 and 2011) 256.8 thousand cross-border workers (or 25% of the total number of cross-border workers) are currently no longer than 12 months employed in their country of employment compared to 775.5 thousand cross-border workers (or 75% of the total number of cross-border workers) who are currently longer than 12 months employed in the country of employment (Table 2.2). However, ‘the connection’ to the labour market of cross-border workers will differ between Member States. E.g. currently 86% of the incoming cross-border workers in Luxembourg are longer than 12 months employed in this country. It proves a ‘genuine link’ of most of the cross-border workers. At the same time this ‘genuine link’ will cause a budgetary cost. National unemployment rates were applied to the number of cross-border workers to estimate the number of unemployed cross-border workers. This results in an estimated number of 53.8 thousand unemployed former cross-border workers longer than 12 months employed in the country of last activity and 19.9 thousand unemployed former cross-border workers no longer than 12 months employed.

The breakdown by period of employment will influence the budgetary cost for the country of last activity and the country of residence (Table 2.3). A country will pay the unemployment benefit for the unemployed former incoming cross-border workers who were longer than 12 months employed (or 53.8 thousand persons) and for the unemployed former outgoing cross-border workers who were no longer than 12 months employed (or 19.9 thousand persons). E.g. Luxembourg will pay for 4.8 thousand unemployed former incoming cross-border workers (or 86% of the incoming

cross-border workers) and for 0.1 thousand unemployed former outgoing cross-border workers (or 24% of the outgoing cross-border workers) an unemployment benefit.

The budgetary cost (table 2.3) is estimated at € 87.9 million for the unemployed former outgoing cross-border workers and at € 590.7 for the unemployed former incoming cross-border workers. It results in a total expenditure of € 678.6 Million. However, this will be the estimated expenditure assuming that all unemployed persons did not find a job during the first year of unemployment. A more 'realistic' estimate of the yearly expenditure is calculated by also taking into account the annual average duration of the payment of the unemployment benefit. On average 7.5 months (EU-27) the UB was paid to unemployed persons (calculated for the total year)<sup>383</sup>. It results in a total estimated budgetary cost of € 384 Million.

Tables 2.4 to 2.6 compare the budgetary impact of the different options. The calculation of the total expenditure takes not only the expenditure of the UB into account but also the amount of the claims received of the reimbursement procedure (as country of residence = creditor) and the amount of the claims paid of the reimbursement procedure (as country of last activity = debtor). It results in a total expenditure of € 378 Million for the baseline scenario, € 502 Million for option 2 (right of choice), € 437 Million for option 3 (provided by the country of last activity) and € 384 Million for option 4 (cut-off of 12 months). All three options are more expensive than the baseline scenario. The expenditure increases with 33% in option 2 compared to the baseline scenario, with 16% in option 3 and only with 2% in option 4.

The budgetary impact differs between Member States. On 12 Member States the baseline scenario has the lowest budgetary impact (CZ, DK, IE, GR, LT, LU, HU, MT, NL, AT, RO, FI). Option 2 has only on 1 Member State the lowest budgetary impact (PT) while option 3 is least expensive for 8 Member States (BG, EE, FR, LV, PL, SI, SK, SE). Finally, option 4 has to lowest budgetary impact on 6 Member States (BE, DE, ES, IT, CY, UK).

Option 2 is for 12 Member States the most expensive option (BE, CZ, DK, DE, IE, CY, LU, NL, AT, PL, FI, UK). For 7 Member States the baseline scenario is the most expensive option (EE, FR, IT, PT, SI, SK, SE) and for 5 Member states this will be option 4 (BG, LV, LT, HU, RO). Finally, option 3 will has to highest budgetary impact on 3 Member States (GR, ES, MT).

---

<sup>383</sup> Calculations are based on LFS data. If the duration of unemployment < 1 month, we assume a payment of the UB of 0,5 months; Between 1-2 months of unemployment = 1,5 months UB paid; Between 3-5 months of unemployment = 4 months UB paid; Between 6 and 11 months of unemployment = 8,5 months UB paid; 12 months and longer of unemployment = 12 months UB paid.

Source Estimate based on data LFS and 2012 Ageing Report

Table 2.7 presents the distribution of the cost taking into account the applicable rules for option 4. We have made our calculations from the perspective of incoming cross-border workers who become unemployed. The estimated 53.8 thousand unemployed former incoming cross-border workers who were no longer than 12 months employed in the country of last activity will receive an unemployment benefit from their country of residence while the other 19.9 thousand unemployed former incoming cross-border worker who were longer than 12 months employed in the country of last activity will receive an unemployment benefit from the country of last activity.

It implies (taking into account the assumptions we had to made) that the country of last activity will pay 88% of the total expenditure and the country of residence 12% of the total expenditure. The distribution of the cost is mainly influenced by the fact 75% of the cross-border workers are longer than 12 months employed. However, also the amount of the unemployment benefit and the period of unemployment will influence the budgetary cost. Again, differences between Member States appear.

Table 2.8 presents the distribution of the cost taking into account the current rules in the baseline scenario. The baseline scenario (also taking into account the assumptions we had to made) implies that the country of last activity will pay 30% of the total expenditure (only for 'other unemployed cross-border workers' who choose for the country of last activity) and the country of residence 70% of the total expenditure (for the unemployed frontier workers and the 'other unemployed cross-border workers' who choose to return). However, this disproportion is corrected by a reimbursement procedure. Now, the county of last activity will pay 43% of the cost and the country of residence 57%.

Comparing the distribution of the cost for option 4 to the baseline scenario (after reimbursement), a much higher share of the cost is paid by the country of last activity (88% compared to 43%). Only Italy is confronted with a lower share of cost in option 4 (85%) compared to the baseline scenario (88%). For that reason, option 4 can be considered as 'more fair' compared to the baseline scenario.

**Table 2.7 UB: estimated expenditure UB incoming cross-border workers becoming unemployed, option 4, breakdown by country of last activity and country of residence (corrected by Annual average duration of payment UB)**

\* Only the annual expenditure of UB is taken into account while there will possibly be a shift of the social security system from the country of last activity to the country of residence

Source Estimate based on data LFS and 2012 Ageing Report

In table 2.9. the administrative burden of this new option is estimated based on the same assumptions used for the estimation of the baseline scenario and the other options.<sup>384</sup> However, the correction of the yearly expenditure by taking into account the annual average duration of the payment of the UB will imply a higher administrative cost as % of total expenditure for the baseline scenario and the other options. In the baseline scenario the total administrative cost is estimated at € 8.2 million of which 64% could be allocated to the country of residence. The share of the total administrative burden in the total budget is some 2.2%. A right of choice will decrease the administrative cost to 59% of the baseline scenario. The share of the administrative cost in the total budget is 1%. The lowest administrative cost is estimated for the option where the country of last activity is providing the unemployment benefit. The administrative cost is further reduced to 36% of the baseline scenario. The share of the administrative cost in the total budget is 0.7% for this option. For the new option it was already estimated that 53.8 thousand unemployed cross-border workers will receive an unemployment benefit from the country of last activity while 19.9 thousand unemployed cross-border workers will receive the benefit from their country of residence. Also, there will be no reimbursement procedure. This will imply an important shift of the administrative burden to the country of last activity compared to the baseline scenario. 39% of the administrative cost (estimated at € 4.2 million) could be allocated to the country of residence (compared to 64% in the baseline scenario). The administrative cost will decrease to 51% of the baseline scenario. . The share of the administrative cost in the total budget is 1.1%.

## INTRODUCTION

At the end of 2014, a questionnaire on the export of family benefits was discussed and launched within the framework of the Administrative Commission in order to obtain for the first time a general picture of the size and the budgetary cost of the phenomenon. Both aspects could be compared to the total number of persons entitled and their family members involved and the national public spending on family benefits. Member States were asked to report all types of family benefits covered by the definition of a 'family benefit' given by Regulation (EC) No 883/2004 on the coordination of social security systems<sup>1</sup> and to be applied by the provisions defined in Chapter 8 of this Regulation. These provisions, especially the ones on the applicable priority rules in the event of overlapping entitlements,<sup>2</sup> cover a broader range of situations than what is asked by the administrative questionnaire on the export of family benefits. First, the questionnaire did not cover, and hence no information will be available on, the supplement paid by the Member State of residence as the secondarily competent Member State. Second, no information will be available on the number of households for which no supplement should be exported because the family benefit paid by the Member State of residence is higher than the family benefit of the exporting Member State.

In total 30 Member States responded to the questionnaire (see also *Annex I*). 27 Member States provided overall data, 19 Member States were able to provide more detailed data on the export of family benefits and only 10 Member States were able to provide a breakdown by primary and secondary competences. It follows that some caution is required when drawing general conclusions especially given that some Member States which can be considered highly relevant in this respect, in particular Member States with a high level of incoming cross-border workers,<sup>3</sup> did not provide data on the export of family benefits.

This report first presents an overview of the total number of persons entitled to a family benefit (*section 1*). Afterwards, more detailed figures on the export of family benefits are presented (*section 2.1*), in total (*section 2.1.1*) and as a distribution between the primary and secondary competences of the reporting exporting Member State (*section 2.1.2*). Finally, a selection is made of the exported child benefits (*section 2.2*) in order to avoid double-counting and to ensure the comparability between the reporting Member States.

## 1. OVERALL PICTURE

Member States apply different types of family benefits in cash and in kind.<sup>4</sup> Besides the general scheme of child benefits also other types of family benefits are applicable, among others child care allowances, parental benefits, single parent allowances or supplements, allowances or supplements for children with disabilities etc. At European but also even at national level, these benefits show considerable differences in terms

---

<sup>1</sup> A 'family benefit' includes "all benefits in kind or in cash intended to meet family expenses, excluding advances of maintenance payments and special childbirth and adoption allowances" [mentioned in Annex I.] (Article 1(z) of Regulation (EC) No 883/2004).

<sup>2</sup> Article 68 of Regulation (EC) No 883/2004.

<sup>3</sup> Cross-border workers: working in a Member State other than the Member State of residence of the child(ren). Another important group with regard to the export of family benefits are migrants living in a Member State other than the Member State of the child(ren).

<sup>4</sup> This includes also tax expenditures towards families. These, however, fall outside the scope of this report.

of eligibility criteria, design and generosity.<sup>5</sup> *Table 2* summarises all family benefits listed by the reporting Member States. However, based on the 'exhaustive' list of family benefits reported in the MISSOC<sup>6</sup> tables (2014) and in the data set of public spending on family benefits in cash available in ESSPROS,<sup>7</sup> it appears that this list is to some extent incomplete. However, the MISSOC tables and the data of ESSPROS not necessarily correspond completely with data provided by the Member States and are therefore merely indicative (e.g. advances of maintenance and special childbirth and adoption benefits expressly fall outside the scope of Regulation (EC) No 883/2004, but are integrated in the MISSOC tables; the selection of 'cash benefits' via ESSPROS is broader (e.g. including parental leave benefits) than the 'cash benefits' defined by Regulation (EC) No 883/2004); also, Member States were asked to provide data on family benefits in cash and in kind). *Table 1* compares the data reported in the questionnaire with the data available in ESSPROS on public spending on cash family benefits. A total expenditure on cash family benefits of € 81.1 billion is reported. This implies that on average 64% of the EU-28 expenditure on cash family benefits is covered by the questionnaire. It turns out that some Member States only reported a fraction of their public spending on cash family benefits, in contrast to other Member States which have reported all types of cash family benefits.

### **1.1. An overview of the different types of family benefits by Member State**

The reported figures on the total number of persons entitled (i.e. households), the number of family members (i.e. children) involved and the corresponding expenditure on family benefits could be used as a denominator in order to calculate the impact of the export of family benefits to the total.

The average spending per family member or per person entitled varies markedly between Member States from a high average amount in Luxembourg, Germany and Ireland to a much lower average amount in Hungary, Romania, Greece and Latvia (*Table 2* and *Figure 1*). Also at national level this average amount varies significantly between the different types of family benefits (e.g. IE and LV). Not only the average amount per type of family benefit will differ, but also the eligibility criteria (universal or selective) between and within Member States. Child benefit schemes also appear to be less selective compared to other family-oriented benefits. On the contrary, other family-oriented benefits show on average a higher average amount per child or per household.

**Table 2 A global picture of family benefits**

MS	Type	Year	Total number of persons entitled	Number of family members involved	Total annual amount (in €)	Annual average amount per child (in €)	Annual average amount per person entitled (in €)	Average number of family members per person entitled

 Source Questionnaire on the export of family benefits

**1.2. The amount of the child benefit compared to the net earnings in the Member State of residence (of a one-earner married couple, at 100% of the average wage, with two children)**

Table 2 already showed clear differences in average spending between Member States. The annual average amount could also be compared to the net earnings of households (Table 3). In view of this report's topic, namely the export of family benefits, not only the net earnings of households residing in the same Member State as the competent Member State, but also those of the households residing in another Member State should be taken into account in order to assess the impact of family benefits on the net earnings of families. In so doing, also differences between Member States in the extent to which they support families in their daily living through the

payment of a family benefit will become clear and even the increase or decrease of this extent if those family benefits would be exported.

In this case the average annual amount per child (multiplied by two), by selecting only the national child benefit schemes,<sup>8</sup> is compared to the annual net earnings of a one-earner married couple, at 100% of the average wage, with two children. The case of a one-earner family is selected as this corresponds best with the prevailing export situation of primarily competent Member States.<sup>9</sup> However, these assumptions make the results reported in *Table 3* merely indicative.

**Box 1 – interpretation of Table 3 – Two examples**

An employee in Belgium whose children live in the Czech Republic is receiving a Belgian family benefit that amounts to 36% of the average earnings of a one-earner married couple with two children working in the Czech Republic.

An employee in the Czech Republic whose children live in Belgium is receiving a Czech family benefit that amounts to 4% of the average earnings of a one-earner married couple with two children working in Belgium.

The financial support of the child benefit to households living in the competent Member State, expressed as a percentage of the net earnings, varies markedly between Member States from only 2% in Greece to 18% in Poland and Slovenia (*Table 3*). In general, this amount is on average (EU-28/EFTA) equal to 10% of the net earnings.

The net earnings of households in the children’s Member State of residence will be of utmost relevance, since it reflects the ‘standard of living’<sup>10</sup> in those Member States. In the context of the export of a family benefit, the relation with the level of the financial support differs again to a high extent between the Member States of residence. The differences are even accentuated since nominal benefits from potential high-income level Member States with high levels of benefits are confronted with earnings in low-income level Member States. This could lead to a situation where a household residing in Bulgaria or Romania receives 1.9 times its net earnings as a result of the export of a family benefit of Luxembourg (*Table 3*).<sup>11</sup> The financial support as a result of the export will also differ from the financial support the household would receive from their Member State of residence.

<sup>8</sup> Some Member States provided information on several types of family benefits. Most of the time the ‘child benefit scheme’ was selected. However, it is not always sure that the term covers the same type of benefit. Also, some Member States reported only the sum of more than one family benefit (e.g. CZ, LU and MT).

<sup>9</sup> Other possible cases are, for example: a single person with two children, at 67% of the average wage; a one-earner married couple, at 33% of the average wage, with two children; a two-earner married couple, one at 100%, the other at 67% of the average wage, with two children etc (see Eurostat [earn\_nt\_net]).

<sup>10</sup> Sen (1984, p. 86) concludes that “*living standard can be seen as freedom of particular types, related to material capabilities. [...] It is in this sense that living standard can be seen as ‘economic freedom’.*” The ‘standard of living’ needs to be distinguished from the ‘cost of living’ but certainly also from ‘purchasing power standards’. For a more detailed discussion we refer to the analysis of the economic impact of the export of family benefits (Pacolet and De Wispelaere, 2015).

<sup>11</sup> The amount of the child benefit paid by Luxembourg is divided by the net earnings of Bulgaria and Romania.

**Table 3 The average annual amount of the child benefit compared to the net annual earnings in the Member State of residence of a one-earner married couple, at 100% of the average wage, with two children (as %)**

\* No data available for: BG, FR, LT, AT, SI, SK, SE, UK and CH.

\*\* For some Member States (RO, IT, IS, LI and NO) the average amount per child is not known. In that case the average amount per household is selected. In that case this amount is not multiplied by 2.

Source Questionnaire on the export of family benefits and Eurostat [earn\_nt\_net]

## 2. THE EXPORT OF FAMILY BENEFITS

Chapter 8 of Regulation (EC) No 883/2004 on the coordination of social security systems covers the EU provisions on the coordination of family benefits (Article 67 to 69). If family members live in a Member State other than the one where the insured person works and/or resides, family benefits can in some cases be exported to these family members. Because the entitlement to family benefits might arise in more than one Member State (based on residence, employment or receipt of a pension) Article 68 lays down some priority rules in order to define the 'primarily competent Member State'. In this respect, rights available on the basis of (self-)employment have priority.<sup>12</sup> However, when there is employment in two different Member States, it is the Member State of residence of the children<sup>13</sup> that will become primarily competent for the payment of the family benefits.

However, a Member State might have to pay a supplement (corresponding to the difference between the two family benefits) as the 'secondarily competent Member State' if the family benefit paid by the primarily competent Member State is lower than the family benefit the person entitled would have received from the secondarily competent Member State.<sup>14</sup>

Of the 19 Member States that provided quantitative data on the export of family benefits, only nine were able to provide more detailed figures on the primary and secondary competences of the exporting Member State (see *Annex I*).

### 2.1. All types of family benefits

Table 4 provides an overview of all exported family benefits in terms of numbers and expenditure reported by the different Member States. The export of child benefits will be discussed in more in detail in section 2.2 in order to guarantee the comparability of the figures.

#### 2.1.1. General overview

A total amount of some € 983 million related to the export of family benefits was brought into the picture by the reporting Member States (Table 4). As the export of child benefits will be discussed in a separate section of this report, in this section more attention will be given to the other exported family-oriented benefits.

- Germany exported parental leave (*Elterngeld*) to 1,426 households (or 0.2% of the total households entitled) and a childcare supplement (*Betreuungsgeld*) to 78 households (or 0.1% of the total households entitled).
- Ireland exported a family income supplement to 775 households (or 1.7% of the total households entitled) amounting to a public spending of € 4.7 million (or 1.8 % of total expenditure) and a domiciliary care allowance to only 6 households. The average amount exported by Ireland per entitled household for other family-oriented benefits (e.g. € 6,225 for a family income supplement) is much higher than the one related to the export of a child benefit (€ 1,412).

<sup>12</sup> Article 68 (1)(a) of Regulation (EC) No 883/2004.

<sup>13</sup> Article 68 (1)(b)(i) of Regulation (EC) No 883/2004.

<sup>14</sup> Article 68 (2) of Regulation (EC) No 883/2004.

## Export of family benefits

- Denmark exported an 'ordinary' child benefit (allowance for single parents) to 421 households (or 0.2% of the total household entitled) amounting to a public spending of € 1 million (or 0.4% of total spending).
- Latvia reported the exportability of a childcare benefit to 435 households (or 1.6% of the total households entitled) amounting to a public spending of € 344,000, a parent's benefit to 100 households (or 0.8% of the total households entitled) amounting to a public spending of € 303,000, a supplement to the family state benefit for a disabled child to 22 households, and finally a disabled childcare benefit to 6 households. Again, the average exported amount per entitled household for other family-oriented benefits (e.g. € 3,034 for a parent's benefit) appears to be higher than the exportable child benefit (€ 113).
- Hungary exported a child home care allowance to 118 households and a child-raising allowance to 2 households.
- The Netherlands exported to 15,810 households (or 1.9% of the total households entitled) or 26,026 children a child budget (*kindgebonden budget*) amounting to a public spending of € 20.7 million (2.2 % of total spending). 16,982 benefits or 65% of the total number of benefits were exported to Poland. Also, a childcare allowance (*kinderopvangtoeslag*) was exported to 1,556 households (or 0.4% of the total households entitled) or 2,238 children amounting to a public spending of € 4.9 million (or 0.3% of total spending). 1,274 benefits or 57% of the total number of benefits were exported to Belgium.
- Romania reported the exportability of a child-raising benefit to 24 households.
- By Slovakia, a parental allowance was exported to 2,935 households amounting to a public spending of € 4.3 million. This expenditure is much higher than their expenditure related to the export of child benefits (€ 1.5 million).
- The United Kingdom also reported, besides the export of the child benefit, the export of a child tax credit. This benefit was exported to 7,005 households or 11,735 children. 6,952 benefits or almost 60% of the total number of benefits were exported to Poland. Another 1,928 benefits (16% of total) were exported to Ireland.
- Norway exported a cash benefit to 1,919 families (or 3.7% of the total households entitled) amounting to a public spending of € 5.4 million (or 3.8% of total spending).

Source Questionnaire on the export of family benefits

### 2.1.2. Primarily or secondarily competent Member States

Table 5 and Figure 2 provide a breakdown between the primary and secondary competences of the reporting Member State. This distinction between both is very important as the numbers of exports and the amount these represent will differ between the primary and secondary competences of Member States and also will influence the total numbers and expenditure. The priority rules and the differences in the amounts of the family benefits will determine to a high extent the number of exports and the related expenditure as primarily or secondarily competent Member State. It follows that the context will vary between Member States. As a result, the share of the expenditure as primarily competent Member State varies from 97% of total expenditure on export in the Netherlands to 17% in Estonia. In total for the reporting Member States, in particular influenced by Luxembourg, 64% of the cross-border expenditure is paid as primarily competent Member State. The distribution between primarily and secondarily competent Member States will in particular be influenced by the partner being employed in the Member State of residence of the child(ren) (i.e. a low employment rate of the partner in the children's Member State will result in a high number of exports as primarily competent Member State) and by the level of the family benefits in the children's Member State of residence and in the Member State of employment of one of the parents (i.e. if the family benefit paid by the children's Member State of residence is lower than the family benefit which the person entitled would have received from the secondarily competent Member State, a supplement will be paid by the latter).

- Luxembourg paid a child benefit to 39,301 households (57% of the total households entitled living abroad) amounting to € 329 million as primarily competent Member State, and to 30,009 households (43% of the total households entitled living abroad) amounting to € 148.4 million as secondarily competent Member State. The fact that Luxembourg as a primarily competent Member State pays a higher average amount (€ 4,898) than as secondarily competent Member State (limited to the supplement) (€ 2,455) results in a higher share in the total expenditure as primarily competent Member State (69% of total expenditure related to export).
- Germany paid to 78,450 children (74% of the total households entitled living abroad) a child benefit as primarily competent Member State compared to 28,102 children (26% of the total households entitled living abroad) as secondarily competent Member State.
- Austria paid to 15,437 households a total amount of € 60 million as primarily competent Member State and to 48,391 households a total amount of € 87.3 million. This implies that 76% of the households entitled received only 59% of total expenditure related to the export of family benefits, because they were only entitled to receive a supplement (average of € 1,104).
- The Netherlands exported a child benefit to 13,346 households (66% of the total households entitled living abroad) and paid a supplement to 6,879 households (34% of the total households entitled living abroad). The fact that the Netherlands as a secondarily competent Member State had to pay a small average supplement (€ 105) compared to the average amount they had to pay as primarily competent Member State (€ 1,215) results in a very high share in the total expenditure as primarily competent Member State (97% of total expenditure related to export).

Source Questionnaire on the export of family benefits

## 2.2. Selection of the 'child benefits'

As could be observed, some Member States provided information on the exportability of several types of family benefits. In order to avoid double-counting, this section will discuss only one family benefit scheme of each of the reporting Member States. Most of the time the child benefit scheme was selected. But it is not always sure that the term covers the same type of benefit. As mentioned before, some Member States reported only the sum of more than one family benefit (e.g. CZ, LU, AT and MT). By selecting only one family benefit scheme per Member State, also a view on the Member State of residence of the children will be obtained.

### 2.2.1 General overview

Tables 6 to 8 provide detailed information on the bilateral cross-border flows of child benefits between the exporting competent Member States and the Member States of residence in terms of the number of persons entitled (*Table 6*), the number of family members involved (*Table 7*) and expenditure (*Table 8*). These total figures are the sum of the child benefits exported as primarily and as secondarily competent Member State. 19 Member States reported a total export of child benefits to some 324,000 households or 506,000 children amounting to a total expenditure of € 942 million. The cross-border tables provide a view on the 'main' exporting and receiving Member States. In particular, Luxembourg, Austria and Germany appear to be the 'main' exporting Member States in absolute terms. Luxembourg has even paid a total amount of € 477 million for family benefits exported abroad (*Table 8*). At the same time, a high number of child benefits were exported to France, Poland, Belgium and Germany. The detail of the cross-tables gives also a first impression of the strong concentration of the bilateral export of child benefits between Member States.

The share of each of the reporting Member States but also of the children's Member States of residence in the total export of child benefits will be discussed in more detail later on (*Tables 9 and 10*). Also, the number of exported child benefits could be compared to the total number of child benefits paid by the reporting Member State in terms of households entitled, family members involved and expenditure (*section 2.2.2*). Finally, the strong concentration of the export of child benefits will be discussed in more detail in *section 2.2.4*.

\* No data available for BG, FR, HR, IT, CY, LT, MT, AT, PT, RO, SI, SE, UK, LI and CH. The breakdown by Member State or residence provided by DK has not been reported given that for most of the cases the Member State of residence is unknown (for non-Danish citizens in particular).

Source Questionnaire on the export of family benefits

In absolute terms, most child benefits are exported by Luxembourg, Austria and Germany (*Table 9*). 21% of the total number of households entitled received a child benefit being exported by Luxembourg. This percentage increases even in terms of total expenditure. In that case Luxembourg paid 51% of total reported spending on the export of child benefits. The main reason for this is the high average amount paid per child (€ 3,740)<sup>15</sup> compared to the other reporting Member States. Also, the figures reported by Luxembourg do not make a distinction between types of family benefits. This implies that for Luxembourg a (much) broader definition of child benefit is applied compared to other reporting Member States. Austria represents 20% of the child benefits exported to the households entitled and 21% of the children involved. Their share in total expenditure is, however, much lower (16% of total expenditure). 19% of the child benefits exported to the households entitled were paid by Germany or to 21% of the children involved. Also Belgium (7% of the total persons entitled), the United Kingdom (6% of the total persons entitled), the Netherlands (6% of the total persons entitled) and Norway (5% of the total persons entitled) exported in absolute terms a quite high number of child benefits. Denmark, Ireland, Finland, Romania, Poland, Slovakia and Norway have a share between 1 and 5% in the total export of child benefits, while the Czech Republic, Estonia, Spain, Latvia, Hungary and Iceland have a share of less than 1% in the total export of child benefits in absolute figures. The impact of the export of child benefits in relative terms (as a percentage of the total number of child benefits paid by a Member State and the related amount) will be discussed in a separate section of this report. The number of child benefits being exported by the EU-15 to households living abroad covers 87% of the total households entitled but accounts for 96% of total expenditure.

The annual average amount paid per child varies between Member States from € 3,740 in Luxembourg to € 98 in Latvia (*Table 9*). Belgium, Denmark, Ireland, Finland, Austria, Estonia, Germany, Iceland and the Netherlands paid an average amount between € 900 and € 2,000. Finally the Czech Republic, Spain, Hungary, Slovakia and Latvia paid on average less than € 300. These total averages will be influenced by the proportionate distribution of the primary and secondary competences of the reporting Member States.

---

<sup>15</sup> However, there is a strong difference between the amount paid as primarily competent Member State (€ 4,898) and the supplement paid as secondarily competent Member State (€ 2,455) (see also *Table 5*).

Source Questionnaire on the export of family benefits

Data could also be analysed for the export of child benefits to the Member State of residence of the children. However, the missing data for a number of Member States, in particular Member States with a high level of incoming commuters, may lead to a distorted view of reality if the export of child benefits is reported by the Member State of residence. Most of the households that received a child benefit from abroad lived in France and Poland (*Table 10*). 25% of the child benefits were exported to France comprising 42% of total expenditure. This much higher share of France in the total expenditure is mainly explained by the fact that more than half of the households residing in France received a child benefit paid by Luxembourg. Also Belgium and

Germany have a much higher share in total expenditure compared to their share in the number of households or children receiving a child benefit, as again both Member States received a child benefit mainly from Luxembourg. These examples illustrate how much certain rights are 'derived' by an underlying reality of cross-border work. Furthermore, 25% of the child benefits were exported to households living in Poland. Finally, a high percentage of child benefits was exported to Belgium (10%) and Germany (8.5%). The number of child benefits being imported by a household living in the EU-15 covers 61% of the total households entitled, but accounts for 78% of total expenditure. Several Member States (e.g. BE, CZ, DE, LU, HU and NL) exported the child benefit mainly to their neighbouring Member States (*Tables 6 and 12*).

\* This is an incomplete picture due to missing data for BG, DK, FR, HR, IT, CY, LT, PT, SI, SE, LI and CH as reporting Member State. However, IT reported that the export of family benefits is increasing, especially to RO and ES. Also, no breakdown by Member State of residence was provided by AT, PL and LV and an incomplete breakdown provided by DK.

\*\* Total numbers differ compared to Table 9 as some Member States (AT, PL and LV) did not provide a breakdown by Member State of residence.

**Source** Questionnaire on the export of family benefits

Comparing the number of exported and imported child benefits and the related amount allows to obtain a more detailed view on the 'net figures' (*Figures 3 to 6*). These net figures correspond to a high extent to the impact of the export of child

benefits for several Member States. Despite the number of imported and exported child benefits being almost equal, the net budgetary cost may still vary markedly. This is especially the case for Belgium. In terms of budgetary implications, some Member States are net recipients (in particular PL, BE and probably also FR), while other Member States are net contributors (in particular LU and AT) (Figure 5). The cross-tables illustrate how the export in one Member State is the import in another. In each Member State the export and the import relate to a different group of persons. So netting reveals some statistical compensation, but only the gross flows serve to illustrate the number of persons involved.

Source Questionnaire on the export of family benefits

### 2.2.2 The percentage of export in the total number of child benefits

In relative terms, the impact of the export of child benefits (as a percentage of the total number of child benefits paid by a Member State and the related amount) is quite limited for most of the Member States. On average 1% of child benefits are being exported abroad, which represents 1.6% of total public spending on child benefits of 17 reporting Member States. Luxembourg is an important 'outlier' with regard to the export of child benefits. More than 50% of the child benefits paid by Luxembourg were exported abroad. The lower share of export in the total public spending of Luxembourg on child benefits could be explained by the lower average amount paid per child as secondarily competent Member State (supplement of € 2,455) compared to the average amount of the child benefit paid per child (€ 4,107) and the impact of this supplement on the average amount being exported per child (€ 3,740). Austria exported almost 6% of their child benefits amounting to some 3% of their public spending on child benefits. Belgium, Finland and Norway exported some 2% of their child benefits. The Netherlands, Denmark, Germany, Ireland and Poland exported between 0.5 and 1.5% of their child benefits, while Latvia, the United Kingdom, Estonia, Romania, Iceland, the Czech Republic and Spain exported even less than 0.5% of their child benefits. However, the impact is expected to level-off for most of the EU Member States, as stated above, when also the import of child benefits is taken into account.

Source Questionnaire on the export of family benefits

### 2.2.3 The impact of intra-EU mobility on the export of family benefits: cross-border workers and migrants

The number of child benefits being exported abroad is influenced by two main groups, namely cross-border workers (working in a Member State other than the Member State of residence of the child(ren)) and migrants living in a Member State other than the Member State of the child(ren). The share of both groups in the total number of child benefits being exported abroad was not asked in the questionnaire on the export of family benefits. However, by comparing the available information provided via the questionnaire with data from the Labour Force Survey, for each of the Member States the correlation can be investigated between the breakdown of the export of child benefits by Member State of residence and the breakdown of the cross-border workers' Member State of residence or the nationality of the migrants at working age.<sup>16</sup> Belgium, the Czech Republic, Germany, Luxembourg, Hungary and Finland show a strong correlation (greater than 0.8) between the breakdown of the number of child benefits being exported abroad and the breakdown of the number of incoming cross-border workers. We observe a strong correlation between the breakdown of the number of child benefits being exported abroad and the breakdown of the number of

<sup>16</sup> However, the export is not limited only to migrants at working age. Also retired migrants might export a family benefit.

migrants at working age by their nationality for the Czech Republic, Germany, Ireland, Spain, Luxembourg, the Netherlands, Slovakia, Finland, the United Kingdom, Iceland and Norway. The number of child benefits exported by Ireland and the United Kingdom (and perhaps also IT) are mainly influenced by the number of immigrants. Several Member States (e.g. BE, CZ, NL, LU, ES, NL and FI) might be influenced by both groups.

## 2.2.4 Concentration in bilateral Member States

As already stated above, both the export and import of child benefits are strongly concentrated in the EU-15 Member States. However, export is even concentrated in only a few number of bilateral flows between certain Member States. The export of child benefits from Luxembourg to France amounts to 14% of the total number of exports to households. In terms of spending, this single flow even amounts to € 250.7 million or 33% of total expenditure on the export of child benefits. Also the flows of export of child benefits from Germany to Poland (11% of total), from Luxembourg to

## Export of family benefits

Belgium (7% of total), from Belgium to France (6.5% of total), from Luxembourg to Germany (6% of total) and from the United Kingdom to Poland (5%) are considerable. Most of the main flows are geographically concentrated between neighbouring countries. The main 10 bilateral flows amount to 63% of the child benefits being exported abroad and the main 20 bilateral flows even amount to 78%.

## CONCLUSION

At the end of 2014, a questionnaire on the export of family benefits was launched in order to obtain for the first time a general picture of the size and the budgetary cost of the phenomenon. 19 Member States were able to provide more detailed data on the export of family benefits and only 10 Member States were able to provide more detailed figures on the primary and secondary competences of the reporting Member State. It follows that some caution is required when drawing general conclusions especially given the fact that some Member States which can be considered highly relevant in this respect did not provide data on the export of family benefits.

The relative impact of child benefits being exported abroad amounts to some 1% of the total number of child benefits paid by the reporting Member States. It is strongly related to the volume of cross-border workers. Only Luxembourg is confronted with a considerably high budgetary impact, as almost 50% of their public spending on child benefits is being exported abroad. In absolute terms, most child benefits were exported by Luxembourg, Austria and Germany. Luxembourg reported a total expenditure of € 477 million, which is more than half of total expenditure reported. Also in absolute terms, most child benefits were imported by France and Poland. The number of child benefits being exported by the EU-15 to households living abroad covers 87% of the total households entitled, but accounts for 96% of total expenditure.

The flow of child benefits is in particular concentrated in a limited number of bilateral (mostly neighbouring) Member States. The single flow between Luxembourg and France even amounts to a third of reported total expenditure on the export of child benefits. The number of child benefits being exported abroad is influenced by the number of incoming cross-border workers (working in a Member State other than the Member State of residence) and the number of migrants without family reunification. The numbers of child benefits exported by Ireland and the United Kingdom are mainly influenced by the number of immigrants. However, several Member States (e.g. BE, CZ, NL, LU, ES, NL and FI) might be influenced by both groups. The share of both groups in the number of exported child benefits is determined by the absolute number of incoming cross-border workers and migrants without family reunification, their household composition and the spouse's labour status.

The total number of family benefits being exported and the amount it represents will be a result of the primary or secondary competences of the Member State. The supplement paid by secondarily competent Member States sometimes represents a significant amount of total expenditure related to the export of family benefits. Among others, 31% of the amount paid by Luxembourg is linked to the supplement they have paid as secondarily competent Member State.

The export of a child benefit could have a considerable positive impact on the net earnings of the household living abroad and compared to the amount they would receive from the competent institution in their Member State of residence. This situation cannot be generalised to all households, as the average amount paid by the competent Member State should be compared to the amount paid by the Member State of residence. Nevertheless, due to the strong concentration of the number of exports in EU-15 Member States and in particular Luxembourg and Germany most of the households will benefit from the export compared to what they would receive if the Member State of residence paid the benefit and if no additional supplement was paid. A detailed analysis of the economic impact of those differences in amounts according to who is paying will be analysed in the impact study in preparation.

## INTRODUCTION

As a principle, unemployed migrant workers will claim benefits in the Member State of last activity. In some cases a recent migrant worker's period of insurance, employment or self-employment is insufficient to be entitled to an unemployment benefit. In that case additional periods completed by the person in a Member State other than the competent Member State are required.<sup>17</sup> For the aggregation of periods, the competent institution where the person applied for unemployment benefits must contact the institutions of the Member States to whose legislation the person has also been subject in order to determine all periods completed under their legislation. The Portable Document (PD) U1 or the corresponding Structured Electronic Document (SED) U002 certify periods of insurance, employment or self-employment completed by a worker in another Member State that are to be taken into account for the award of unemployment benefits. The PD U1 is issued to the worker, on his or her request, by the institution of the Member State where the person completed the periods of insurance, employment or self-employment.<sup>18</sup> The SED U002 is issued at the request of the competent institution. It should be noted that a migrant worker becomes subject to the legislation of a Member State as soon as he or she starts to work there (leaving aside the special case of posting). Hence, the aggregation rules become fully applicable as from that moment.

Furthermore, not only the period of insurance, employment or self-employment already completed by the unemployed recent migrant worker, but also the qualifying period, which varies markedly across Member States, will determine the number of PDs U1 or SEDs U002 requested by the competent Member States and issued by the Member States of origin.

The scope of the aggregation rules covered by PDs U1 not only includes unemployed recent migrant workers. The provisions are also applicable to unemployed frontier workers and cross-border workers other than frontier workers.<sup>19</sup> This group, however, falls beyond the scope of this questionnaire. The group of unemployed frontier workers and other cross-border workers involved and the budgetary consequences on public unemployment spending may even be larger compared to the number of unemployed recent migrant workers and the corresponding expenditure.<sup>20</sup> The fact that this risks to be marginal is also illustrated by the fact that some Member States provide much larger figures beyond the scope of this questionnaire.<sup>21</sup>

<sup>17</sup> Article 61 of Regulation (EC) No 883/2004.

<sup>18</sup> Article 54 of Regulation (EC) No 987/2009.

<sup>19</sup> Frontier workers (people who work in a Member State other than the Member State of residence, and return home daily or at least once a week – Article 1(f) of Regulation (EC) No 883/2004) who become wholly unemployed must apply for unemployment benefits in their Member State of residence. Cross-border workers other than frontier workers may apply for unemployment benefits and register with the employment service in either the Member State of last activity or the Member State of residence. See Article 65 of Regulation (EC) No 883/2004.

<sup>20</sup> The current system for coordinating unemployment benefits applicable to the different categories of cross-border workers was already subject to an impact assessment. In the process of this assessment a preparatory study was prepared (Doherty, R., Vandresse, B., Bulté, S., Bardaji Horno, M., Ulrich, M., Pacolet, J. and De Wispelaere, F. (2013), *Study for an impact assessment for revision of Regulations (EC) Nos 883/2004 and 987/2009*, Deloitte – HIVA KU Leuven, 295 p.). Based on the results of a questionnaire launched, it appears that more PDs U1 were issued to unemployed frontier workers and other cross-border workers compared to migrant workers.

<sup>21</sup> E.g. the United Kingdom refers to some 90,000 income-based Jobseeker's Allowances (listed as a special non-contributory benefit in Regulation (EC) No 883/2004) claims made by EEA migrants. Portugal refers to 3,274 unemployment benefits granted to unemployed frontier workers and other cross-border workers, while Belgium reports 2,785 unemployed frontier workers and other cross-border workers who will receive an unemployment benefit. Slovenia refers to 2,142 unemployment benefits granted to unemployed migrant workers, frontier workers and other cross-border workers of which 90% of the benefits granted to unemployed frontier workers and other cross-border workers. Finally, Italy reports some 900 PD U1

At the end of 2014 a questionnaire on the aggregation of periods for unemployment was launched in order to obtain for the first time an idea of the size of the phenomenon. The questionnaire only covered migrants who became unemployed in their Member State of last activity and needed additional periods completed in a Member State other than the competent Member State to be entitled to an unemployment benefit. As a result, not all unemployed migrant workers are covered by this questionnaire. 23 Member States provided quantitative data, of which three Member States were not able to provide a breakdown by Member State of origin and two other Member States were not able to provide a breakdown by length of insurance, employment or self-employment in the Member State of last activity. The missing data for a number of large Member States, in particular EU-15 Member States, may lead to a distorted view. As a result, some caution is required when drawing conclusions.

## 1. GENERAL OVERVIEW

In total 24,821 cases of aggregation of periods for unemployment were reported for 2013 by 23 Member States (*Table 1*). The cross table illustrates that some Member States of last activity (= competent Member State) and some Member States of origin more frequently report a limited number of cases. However, the reasons for this are not fully clear (large number of (re)migration, high level of unemployment, long qualifying period). Most of the cases concern France (33.6% of total), Bulgaria (16.6% of total), Spain (10.0% of total), Belgium (8.8% of total) and Poland (6.1% of total) as Member State of last activity (*Table 2*). Also, in 56% of the cases an EU-15 Member State was the Member State of last activity. Given that information from some large EU-15 Member States (e.g. DE and IT) is missing, this result is even an underestimation of the share of the EU-15 Member States.

28% of the reported cases of aggregation of periods related to a period of insurance, employment or self-employment of less than 30 days in the Member State of last activity (*Table 2 and Figure 1*). 14% of the cases were applicable to a period between one and three months, and 58% to a period of three months or longer. So, in the majority of cases of aggregation already a period of insurance, employment or self-employment of more than three months was completed by the unemployed migrant worker in the Member State of last activity.

Nonetheless, this distribution varies markedly between the EU-13 and the EU-15. 62% of the cases reported by the EU-15 concerned a period of insurance, employment or self-employment of less than three months compared to only 16% of the cases reported by the EU-13. But, the period already completed by the unemployed migrant workers also differs across the Member States of last activity. The length of insurance, employment or self-employment in most of the cases completed in Denmark (63% of the cases)<sup>22</sup> and the United Kingdom (57% of the cases) was less than one month. This in contrast to Hungary (97% of the cases) and Bulgaria (96% of the cases), which aggregated most of their periods on the basis of a period of insurance, employment or self-employment of more than three months.<sup>23</sup>

---

documents issued by an electronic procedure (no breakdown reported between unemployed recent migrant workers, frontier workers or other cross-border workers).

<sup>22</sup> There are 499 cases in a total of 569 cases (88%) where DK is both the competent Member State and the Member State of origin. Most of these cases concern Danish citizens from the Faroe Islands. However, the Faroe Islands are not covered by Regulation (EC) No 883/2004.

<sup>23</sup> Also in Croatia and Cyprus most of their limited number of cases are applicable to a period longer than three months.

Source Questionnaire on aggregation of periods for unemployment

It is also useful to determine the Member State of origin whose legislation the unemployed migrant worker has been subject to. The missing data for a number of Member States may also lead to a distorted view of reality if the numbers of cases are reported by the Member State of origin. Again some caution is therefore required when drawing conclusions.

In most of the cases the period of insurance, employment or self-employment of the Member State of last activity was aggregated with an additional period completed in the United Kingdom (25% of total) (Table 3). Remarkable is that some of the Member States of origin are 'immigration' Member States, such as the United Kingdom and Germany. This becomes even more obvious if the periods are aggregated. We observe that 73% of the cases come from the EU-15 and only 23% from the EU-13. This could be an indication of return migration<sup>24</sup> for the EU-13 Member States, but probably also of a high flow of migrants across neighbouring Member States (*cf. infra*).

The length of insurance, employment or self-employment that was already achieved by the unemployed migrant worker in the Member State of last activity and that should be complemented with an additional period completed in the Member State of origin varies across the EU-13 and EU-15 Member States of origin (Table 3 and Figure 2). Unemployed migrant workers who proved an additional period from an EU-13 Member State of origin had completed in general already a longer period of insurance, employment or self-employment (approximately nine in ten of the cases a period of three months and longer) compared to the unemployed migrant workers coming from the EU-15 (approximately seven in ten of the cases a period of three months of longer). For most of the Member States of origin already a period of longer than three months was completed in the Member State of last activity (more than

<sup>24</sup> In that respect, not only the Member State of origin but also the nationality of the unemployed recent migrant worker should be asked.

90% for CY, PT, RO, SI and SK). This is also the case for new EU Member States such as Bulgaria and Romania.

Source Questionnaire on aggregation of periods for unemployment

Figure 3 gives an idea of the number of cases of periods aggregated by the Member State of last activity (= competent Member State) on the basis of an additional period certified with a PD U1 of the Member State of origin. However, these 'net' figures do not change the conclusions already made. France, Bulgaria, Spain and Belgium are the main 'net recipients', and the United Kingdom is the main 'net contributor'.

Source Questionnaire on aggregation of periods for unemployment

## 2. A LIMITED SHARE IN THE TOTAL UNEMPLOYMENT FIGURE AND IN INTRA-EU MOBILITY

It is probably even more interesting to compare the absolute number of cases of aggregation to a denominator.

First, the number of cases where the aggregation with previous periods of insurance, employment or self-employment was needed could be compared to the total number of unemployed persons.<sup>25</sup> In general, only 0.1% of the unemployed persons had to rely on the principle of aggregation of periods.

Second, these cases of aggregated periods could be compared to the annual inflow of intra-EU migrants at working age.<sup>26</sup> An estimated average of 2.1% of the migrants at working age became unemployed and completed an insufficient period of insurance, employment or self-employment in order to be entitled to an unemployment benefit. However, for more than 50% of the inflow of intra-EU migrants in Bulgaria and Liechtenstein periods needed to be aggregated. Also for approximately 2.5% of the immigrants towards the EU-13 an additional period of insurance, employment or self-employment was required in order to be entitled to an unemployment benefit. In comparison, 'only' 1.9 % of the immigrants towards the EU-15 needed to rely on the aggregation principle. This might be the result of a high level of (return) migration towards Member States with a high(er) unemployment level.

<sup>25</sup> Note that no data is available on the total number of unemployed persons who were or became unemployed during the year. This implies a (small) overestimation of the share of the cases of aggregated periods in the total unemployment figure. However, also unemployment persons who required a PD U1 in previous years could still be unemployed.

<sup>26</sup> Taking into consideration that most of the Member States apply a qualifying period of 12 months.

**Table 4 The number of aggregations of periods in case of unemployment, as a percentage of the total number of unemployed persons and the total annual EU-27/EFTA migration inflow at working age**

### 3. IMPACT OF (RE)MIGRATION

For migrants who became unemployed in Belgium, Bulgaria, Denmark, Latvia, Lithuania, Luxembourg, Malta, the Netherlands, Poland, Slovakia, Sweden, the United Kingdom, Liechtenstein and Switzerland in particular an additional period completed in an EU-15 Member State of origin was added to the short period already achieved in the Member State of last activity. Only for unemployed migrants living in Croatia, Cyprus, Hungary, Romania and Finland in particular an additional period completed in an EU-13 Member State was added to their period already completed in their Member State of last activity. The United Kingdom is the main Member State of origin for unemployed migrants who had to aggregate periods in order to be entitled to an unemployment benefit in Bulgaria, Latvia, Lithuania, Malta or Poland. New EU-Member States such as Bulgaria and Romania never appear as one of the main Member States of origin of the unemployed migrants in the EU-15 who had to prove additional periods of insurance, employment or self-employment.

The fact that many cases of aggregation were applied by a Member State of the EU-13 as Member State of last activity and that in most of the cases also a Member State of the EU-15 was the Member State of origin could be an indication of return migration. At the same time, more than half of the cases in Liechtenstein (95% of total), Hungary (87% of total), Sweden (69% of total), the Netherlands (65% of total), Finland (59% of total), Croatia (56% of total), Luxembourg (54% of total) and Belgium (52% of total) refer to a neighbouring Member State of origin. In total, some 34% of all cases reported refer to a neighbouring Member State as the Member State of origin.

Aggregation of periods or salaries for unemployment benefits

\*\*\* No data available for CZ, DE, IE, EL, IT, AT, PT and IS.

**Source** Questionnaire on aggregation of periods in case of unemployment

## CONCLUSION

The scope of the questionnaire on the aggregation of periods for unemployment was limited to recent migrant workers who completed an insufficient period of insurance, employment or self-employment in their Member State of last activity in order to be entitled to an unemployment benefit. In that case additional periods completed by the person in a Member State other than the competent State and proven by a PD U1 are required. 23 Member States provided quantitative data. Missing data for a number of large Member States, in particular EU-15 Member States, may lead to a distorted view. As a result, some caution is required when drawing conclusions.

In total 24,821 cases reported for 2013 by 23 Member States concern unemployed migrant workers whose period of insurance, employment or self-employment completed in the Member State of last activity was insufficient to be entitled to an unemployment benefit. This is equal to an estimated share of 0.1% of the total unemployment figure in those Member States and to 2.1% of the annual flow of intra-EU migrants at working age to these Member States. 54% of the cases related to a period of insurance, employment or self-employment already completed in the Member State of last activity of three months and longer. 28% of the reported cases of aggregation concerned a period of less than 30 days. This distribution varies markedly across Member States, but also between the EU-13 and the EU-15. 62% of the cases reported by the EU-15 concerned a period of insurance, employment or self-employment of less than three months compared to only 16% of the cases reported by the EU-13.

Most aggregations of periods for unemployment concern France (34% of total), Bulgaria (16.6% of total) and Spain (10.0% of total). Also, 56% of the aggregations of periods for unemployment were applied by the EU-15. This percentage is even an underestimation given that some EU-15 Member States did not provide any data. In most of the cases the insufficient period of insurance, employment or self-employment was aggregated with an additional period completed in the United Kingdom (25% of total). For 73% of the cases an additional period fulfilled in an EU-15 Member State was added to the period already achieved in the Member State of last activity. The period of insurance, employment or self-employment already completed in the Member State of last activity is also much longer for unemployed migrant workers coming from the EU-13 (90% longer than three months) compared to those coming from the EU-15 (73% longer than three months).

## HOW TO OBTAIN EU PUBLICATIONS

### Free publications:

- one copy:  
via EU Bookshop (<http://bookshop.europa.eu>);
- more than one copy or posters/maps:  
from the European Union's representations ([http://ec.europa.eu/represent\\_en.htm](http://ec.europa.eu/represent_en.htm));  
from the delegations in non-EU countries ([http://eeas.europa.eu/delegations/index\\_en.htm](http://eeas.europa.eu/delegations/index_en.htm));  
by contacting the Europe Direct service ([http://europa.eu/europedirect/index\\_en.htm](http://europa.eu/europedirect/index_en.htm))  
or calling 00 800 6 7 8 9 10 11 (freephone number from anywhere in the EU) (\*).

(\* ) The information given is free, as are most calls (though some operators, phone boxes or hotels may charge you).

### Priced publications:

- via EU Bookshop (<http://bookshop.europa.eu>).

### Priced subscriptions:

- via one of the sales agents of the Publications Office of the European Union ([http://publications.europa.eu/others/agents/index\\_en.htm](http://publications.europa.eu/others/agents/index_en.htm)).

## PREFACE

In the framework of an impact assessment of a revision of Regulation (EC) Nos 883/2004 and 987/2009 by the end of 2015 the Commission requires a preparatory study on the economic impact of an amendment to the rules on the export of family benefits. The Commission proposed several alternative options, to be compared with the current situation, i.e. the 'status quo'.<sup>27</sup>

- **Status quo**
- **Option 1** – Adjustment of the exported family benefit to the living standards.
  - **Option 1a** - Adjustment of the exported family benefit to the living standards (upwards and downwards).
  - **Option 1b** - Adjustment of the exported family benefit to the living standards (ceiling).
- **Option 2** – No export (discarded).
- **Option 3** – A reverse order of competence.
- **Horizontal Option** - Different coordination rules for salary-related child-raising allowances.

Informing the debate with reliable and recent information is essential. Information could be collected in several ways to gain insight in the current situation. This information should also be useful in order to calculate the different options. Over the past few years, the collection of national administrative data moved ahead as several questionnaires were launched within the framework of the Administrative Commission. In 2015, among others, a questionnaire was launched on the export of family benefits. These data provide already a first overview of the current situation (see Pacolet and De Wispelaere, 2015). Nonetheless, data collected outside the framework of the Administrative Commission is also highly relevant. These data available at EU level or at national level are especially useful when they are combined or confronted with data collected within the framework of the Administrative Commission. This will in particular be the case if current rules need to be assessed and alternative scenarios have to be calculated.

Some data sources, interesting for different reasons, which could be extracted at EU level:

- provide information on national social security systems (MISSOC, OECD);
- provide information on intra-mobility (LFS, Eurostat migration statistics, national reports);
- compare total national expenditure with the specific cross-border expenditure (Organisation for Economic Cooperation and Development ("OECD"), European system of integrated social protection statistics ("ESSPROS")).

Intra-EU labour mobility, and as a result the export of family benefits, has different faces (*Table 1*): 'permanent' stay in another EU Member State as a result of migration; cross-border commuting and 'temporary' stay through the posting of workers. A first group are EU migrants of working age who moved to an EU Member State other than their EU Member State of birth or of their citizenship. In 2013, the share of citizens of working age (15 to 64 years) from an EU-28 Member State/EFTA country who resided in another EU-28 Member State was around 3.1% of the total population residing in the EU-28 Member States (Cannetta et al., 2014). In 2013,

<sup>27</sup> Several proposals for changes to the current rules (e.g. Holzmann and Koettl, 2014; Barslund and Busse, 2014; BMI and BMAS, 2014; Tænketanken Europa, 2014) or for a 'harmonisation' of the child benefit schemes (e.g. Levy et al., 2013) emerged in recent years.

some 7 million EU citizens worked and lived in an EU Member State other than their own (equal to 3.3% of total employment in the EU) (European Commission, 2014). In 2012, some 1.1 million citizens of working age moved to an EU-28 Member State or EFTA country other than the State of their nationality (Cannetta et al., 2014). However, also some 700 thousand EU-28/EFTA citizens returned to their Member State of citizenship. In addition, in 2013 some 1.3 million EU citizens were employed in an EU Member State other than their EU Member State of residence (i.e. 'cross-border workers'), representing 0.6% of total employment in the EU. Some 65% (about 814,000) cross-border workers were employed in a neighbouring Member State (i.e. 'frontier workers'). Finally, in 2013 some 1.34 million 'Portable Documents A1'<sup>28</sup> were issued to posted workers residing in an EU-28 Member State/EFTA country (Pacolet and De Wispelaere, 2014). The reference group to be studied in case of export of family benefits are the intra-EU migrants and cross-border workers. Both reference groups will be studied in more detail in this report.

### Box 1 – Glossary

- *Cross-border workers*: working in a Member State other than the Member State of residence which is also the Member State of residence of the child(ren).
- *Frontier workers*: cross-border workers employed in a neighbouring Member State. This definition differs from the definition defined in Article 1 (f) of Regulation (EC) No 883/2004: "any person pursuing an activity as an employed or self-employed person in a Member State and who resides in another Member State to which he/she returns as a rule daily or at least once a week."
- *Migrants*: living (and working) in a Member State other than the Member State of the child(ren).

**Table 1** Types of intra-EU labour mobility, 2012-2013

Type	Flow/Stock	Number	%	Year
Total stock EU/EFTA migrants at working age*	Stock		3.1% of total EU-28 population at working age	2013
Flow of EU/EFTA migrants at working age*	Flow	1.8 million	0.5% of total EU-28/EFTA population at working age	2012
<b>Of which 'return migration'</b> **	Flow	714,000	0.2% of total EU-28/EFTA population at working age	2012
EU migrants working and living in another MS	Stock	7 million	3.3% of total EU employment	2013
Cross-border workers in EU-28	Stock	1.3 million	0.6% of total EU employment	2013
<b>Of which 'frontier workers'</b>	Stock	814,000		2013
Posted workers in EU28/EFTA***	Stock	1.34 million	± 0.6% of total EU/EFTA employment	2013

\* By citizenship of the migrant.

\*\* We cannot know if someone has ever previously lived in the country of citizenship.

\*\*\* Number of forms issued.

**Source** Based on LFS; Eurostat data on migration, Cannetta et al., 2014; Pacolet and De Wispelaere, 2014

<sup>28</sup> Portable Document A1 is a formal statement on the applicable social security legislation and proves that the posted worker pays social security contributions in another Member State.

## INTRODUCTION

Chapter 8 of Regulation (EC) No 883/2004 on the coordination of social security systems covers the EU provisions on the coordination of family benefits<sup>29</sup> (Article 67 – 69). If family members live in a Member State other than the State where the insured person works and/or resides, family benefits could in some cases be exported to these family members. Since entitlement to family benefits might arise in more than one Member State (based on residence, employment or receipt of a pension) Article 68 has defined some priority rules in order to determine the 'primarily competent Member State'. In this respect, rights available on the basis of employment have first priority.<sup>30</sup> However, when there is employment in two different Member States, it is the Member State of residence of the children that will become primarily competent for the payment of the family benefits.<sup>31</sup> Also, a Member State might have to pay a supplement (corresponding to the difference between the two benefits) as the 'secondarily competent Member State' if the family benefit paid by the competent Member State is lower than the family benefit the entitled person would have received from the other Member State.<sup>32</sup>

These provisions, especially those containing the applicable priority rules in the event of overlapping entitlements, cover a broader scope than what is asked by the administrative questionnaire launched within the framework of the Administrative Commission<sup>33</sup> ("**administrative questionnaire**") on the export of family benefits to members of the family residing in another Member State. Firstly, no information will be available on the supplement paid by the Member State of residence as the secondarily competent Member State. Secondly, no information will be available on the number of households for which no supplement should be exported because the family benefit paid by the Member State of residence is higher than the family benefit the person entitled would have received from the exporting secondarily competent Member State.

This implies that parameters such as the number of intra-EU cross-border workers and migrants, the number of children involved, the Member State of residence of the children, the household composition of the insured persons living/working in a Member State other than the Member State of residence of the children, the labour status of the spouse and the level of the family benefits will influence the number of exports of family benefits (*Figure 1*). This means that more detailed figures on all the parameters are required in order to estimate the economic impact of the several options.

---

<sup>29</sup> 'Family benefit' means all benefits in kind or in cash intended to meet family expenses, excluding advances of maintenance payments and special childbirth and adoption allowances (Article 1 (z) of Regulation (EC) No 883/2004).

<sup>30</sup> Article 68 (1) (a) of Regulation (EC) No 883/2004.

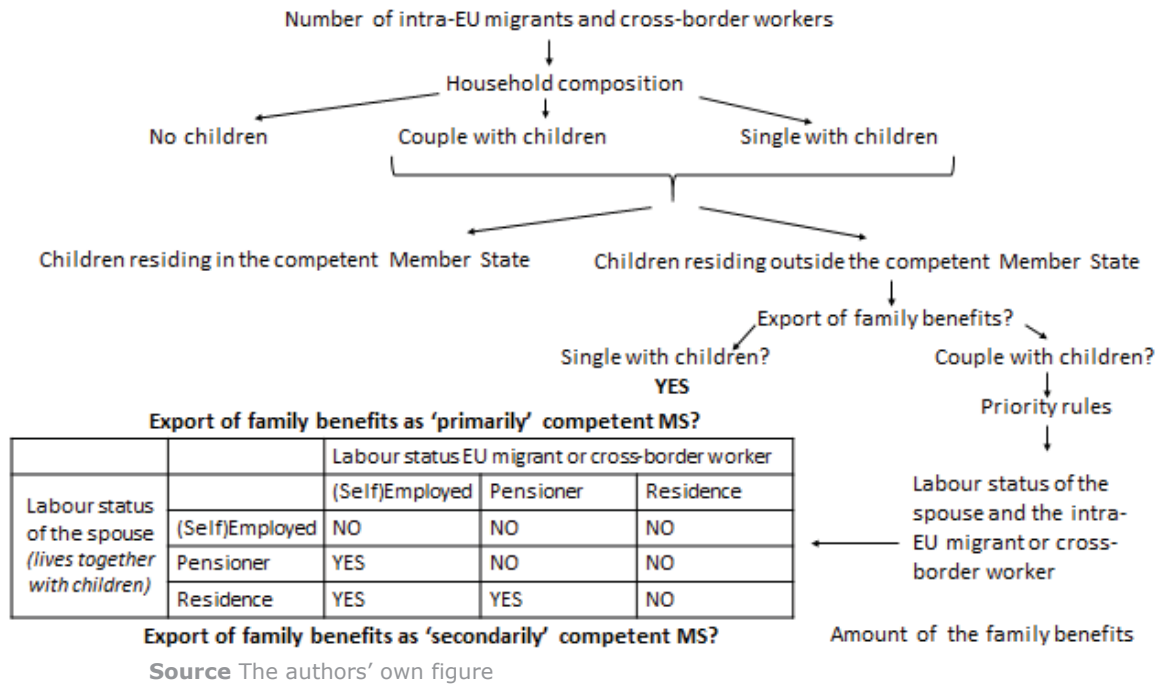

<sup>31</sup> Article 68 (1) (b) of Regulation (EC) No 883/2004.

<sup>32</sup> Article 68 (2) of Regulation (EC) No 883/2004.

<sup>33</sup> Article 71 and 72 of Regulation (EC) No 883/2004 define the composition and tasks of the Administrative Commission for the coordination of social security schemes.

**Figure 1 Determination of the reference group**

In order to discuss the economic impact of intra-EU mobility on family benefits, different aspects have to be taken into account:

- *the structure of the family benefits*: distribution between family benefits in cash or in kind; eligibility criteria; variation by age, number of children or income; benefit level etc;
- *the determination of the reference group*: intra-EU migrants and cross-border workers might export their family benefit to the family members residing in another Member State;
- *the household composition*: spouse and number of children;
- *the labour market status of the spouse*: employed, unemployed or inactive;
- *the Member State of residence of the family members*: the same (family reunification) or another (export) Member State than the Member State of employment of the intra-EU migrant. Cross-border workers will live in the same Member State as their children (no family reunification possible).

All Member States have defined specific family benefit schemes (in particular child benefit schemes). There are, however, considerable differences in design, structure, and generosity. These family benefit schemes should be embedded within a broader term of 'family policy' aiming to compensate the cost of children and to increase households' wellbeing. This family policy resulted in specific family-oriented benefits (e.g. family benefits (in kind and in cash), maternity leave<sup>34</sup> and equivalent paternity leave,<sup>35</sup> parental leave,<sup>36</sup> etc)<sup>37</sup> and tax policies (e.g. tax relief for children, tax deduction etc). They are the result of different objectives and motives, among others to assist parents with the additional costs of raising children, to increase fertility, to fight (child) poverty risks, to supplement household income, to respond to new family

<sup>34</sup> Article 3 of Regulation (EC) No 883/2004.

<sup>35</sup> Article 3 of Regulation (EC) No 883/2004.

<sup>36</sup> See Recital (19) of Regulation (EC) No 883/2004.

<sup>37</sup> Maternity and equivalent paternity benefits (Chapter 1) and family benefits (Chapter 8) are coordinated differently under Regulation (EC) No 883/2004.

structures and labour market structures, to reconcile work and family life, and to create horizontal (between small and large families) and/or vertical (between high and low-income families) redistribution (Gauthier, 1999; Barr, 1998; Bradshaw and Finch, 2010). Van Lancker (2014, p. 40) concludes that *“the particular design of the system of child benefits in the various countries often reflects such historical objectives and ideological motives: They may be income or non-income related, variable with the age or parity of the children, taxable or non-taxable, have a contributory or non-contributory base and operate through the tax system, via cash benefits, or a combination of the two.”* In Annex I of this report a list of family benefits per Member State is presented based on the MISSOC tables (2014). Besides the national child benefit schemes, many Member States have implemented more specific child-raising allowances, child care allowances, birth and adoption grants, advances of maintenance payments and special allowances/supplements for single parents and/or for children with disabilities. However, these tables not necessary match data provided by the Member States and therefore need to be treated with caution (advances of maintenance and special childbirth and adoption benefits expressly fall outside the scope of Regulation (EC) No 883/2004).<sup>38</sup>

## 1. CHARACTERISTICS

First, a more detailed analysis will be made of the characteristics of the national child benefit schemes (as part of the family benefit schemes). The differences in legislation will influence the number of entitled intra-EU migrants/cross-border workers and their children involved.

The child benefit could be either universal (all children are entitled) or selective (e.g. targeting only low-income households). However, universal systems could also be targeted (e.g. by taking into account the number of children, the child’s age, the vulnerability of families etc). *Table 2* shows the age limit for children. It varies most of the time between 15 and 18 years old, but is extended in many Member States up to a higher age if the child remains in further education. The child benefit varies in many Member States with the child’s age (applied in 13 Member States) and/or with the number of children (applied in 15 Member States). Some of the child benefit schemes also implement a means-test in the form of a ‘family’ income test. 11 Member States (CZ, DK, ES, HR, IT, CY, LT, MT, PT, SI and IS) apply more selective income-tested child benefit schemes. This means that only families which fulfil the income criteria will be entitled to the targeted child benefits. Because of this, the level of the benefit might differ according to the ‘family’ income (DK, IT, PT, SI and IS) and/or families exceeding the ‘family’ income threshold will not be entitled to a child benefit (CZ, ES, HR, IT, CY, LT, MT, PT, SI and IS). These differences in characteristics of the child benefit schemes, but also the distribution of means between benefits in cash or in kind and the tax system will have an impact on the national expenditure of child benefits and as a consequence on their export. The related expenditure will be discussed in more detail in *Tables 3 and 4* based on figures from ESSPROS.

## 2. EXPENDITURE

Family benefits can be either paid in cash (e.g. child benefit) or in kind (e.g. child care) (Table 3). Total family expenses vary from 4% of GDP (DK) and 3.7% of GDP (LU) to 0.9% (PL) and 1.0% (LV). The majority of public spending on family benefits (excluding the financial support provided through the tax system) are related to *cash* benefits (1.4% of GDP in the EU-28 compared to 0.8% of GDP related to benefits *in kind*). This is particularly so in Ireland and Luxembourg. On the contrary, policy in the Nordic countries (DK, SE, FI, IS and NO) and Spain is more focused on the development of family benefits in kind (Figure 2).<sup>39</sup> The unweighted EU average of the tax expenditure towards families amounts to 0.3% of GDP and varies from 0.7% of GDP in France to being practically non-existent in other Member States (e.g. LU, SE, DK, AT, FI, SI and EL). The distribution of means between family benefits in cash or in kind (and the tax system) will also have consequences for the eligibility criteria and the level of the cash benefits and consequently for their export (Figure 2).

<sup>39</sup> The OECD Family Database also reports figures on public spending on family benefits and contains not only figures on the spending in cash and in kind but also on the 'financial support for families provided through the tax system'.

**Figure 2 Public spending on family benefits in cash and in kind, as percentage of GDP, 2012**

Source ESSPROS [spr\_exp\_ffa]

Child benefit expenditure could, among others, be expressed in absolute amounts, in a percentage of GDP, as average expenditure per child (0 to 17 years) or per inhabitant. These figures could also be converted to purchasing power standards<sup>40</sup> (PPS) in order to eliminate the effect of price level differences across Member States. To calculate the impact of the different options, in particular figures on the average expenditure per child are useful given the fact that not all Member States have answered the administrative questionnaire.

In terms of GDP, Luxembourg (2.1% of GDP), Ireland (2.0% of GDP), Austria (1.8% of GDP), Germany (1.7% of GDP) and Belgium (1.6% of GDP) show the largest child benefit expenditure within the EU-28/EFTA area (*Table 4*).

The average amount per child and per inhabitant (also in purchasing power standards) varies markedly across the EU-15 Member States<sup>41</sup> and the EU-13 Member States. Member States could also be clustered into specific welfare state regimes by taking into account the characteristics (e.g. Bismarck-oriented or Beveridge-oriented) and the development (e.g. in terms of social protection expenditure at a high or low level) of the national welfare states.<sup>42</sup> These welfare state regimes also seem to be clustered geographically. Especially the EU-15 Bismarck-oriented countries (BE, FR, AT, DE, NL, LU and CH) show high public spending on child benefits. But also the eligibility criteria and the coverage of the family benefit schemes (as discussed above and described in more detail by the MISSOC tables) influence public spending.

---

<sup>40</sup> See section 4 for a detailed description of this term.

<sup>41</sup> 'EU-15' refers to the 'old' EU Member States: Belgium, Greece, Luxembourg, Denmark, Spain, the Netherlands, Germany, France, Portugal, Ireland, Italy, the United Kingdom, Austria, Finland and Sweden. 'EU-13' refers to the 'new' Member States: Croatia, Romania, Bulgaria, Poland, the Czech Republic, Latvia, Lithuania, Slovenia, Estonia, Slovakia, Hungary, Cyprus and Malta.

<sup>42</sup> See Pacolet and Coudron, 2006; EC, 2015.

### 3. REFERENCE GROUP

Intra-EU cross-border workers are an important group of persons that will be affected by changes to the applicable legislation on the export of family benefits. A second group, and for some Member States even more important (see also Pacolet and De Wispelaere, 2015), are intra-EU migrants who live in a Member State other than their child(ren). However, no recent figures are available on the number of intra-EU migrants who find themselves in such a situation.

In 2013, some 1.26 million persons were employed in an EU Member State other than their EU Member State of residence. Despite a remarkable increase of almost 20% compared to 2010, still only 6 in 1,000 workers commute across borders of EU Member States (*Table 5*). The extent of outgoing cross-border workers varies significantly between Member States, from 5.6% of the employed population in Slovakia and 3% in Estonia to only a marginal percentage of the employed population in Finland, Italy and the United Kingdom (1 in 1,000). But also the scale of incoming cross-border workers varies. Especially Luxembourg (43% of the employed population) and Austria (3.5% of the employed population) are confronted with a high number of incoming cross-border workers. In absolute figures, most of the outgoing cross-border workers reside in France (198,000), Germany (170,000) and Slovakia (131,000). Again in absolute figures, most of the incoming cross-border workers are employed in Germany (267,000), Luxembourg (178,000) and Austria (151,000). However, it is important to mention that also many EU cross-border workers are employed in Switzerland. In 2013, some 325,000 workers crossed the border to be employed in Switzerland, more than half of them (some 180,000) residing in France.

**Table 5 The number of outgoing and incoming cross-border workers (in ,000), EU-28**

Source Own calculations based on LFS

Some 65% of the cross-border workers are employed in a neighbouring Member State, which amounts to some 814,000 frontier workers (Table 6). This percentage varies markedly across Member States. Over 90% of the cross-border workers living in Belgium (97%) and France (96%) are employed in a neighbouring Member State. Also some 67% of the cross-border workers living in Slovakia, a Member State indicating a high number of outgoing cross-border workers in absolute and relative terms, are employed in one of the neighbouring countries. At the same time, also more than 90% of the cross-border workers working in Luxembourg (99%), the Czech Republic (99%), Slovenia (94%) and Austria (91%) reside in a neighbouring Member State. This more detailed analysis is useful, as it demonstrates that most of the cross-border workers are employed in a neighbouring Member State (and as a consequence most of the time also in a similar welfare state regime). When there is a great similarity in family benefits across neighbouring Member States and a net balance in outgoing and incoming cross-border workers, it does not matter who pays the family benefit.

Source Own calculations based on LFS

Figure 4 depicts the distribution of cross-border workers among the income deciles in their Member State of residence (decile 1: the lowest 10% of income earners and decile 10: the top 10% of income earners). On average 50% of EU cross-border workers fall within the two highest income deciles (or within the top 20% of income earners in their Member State of residence). This suggests that cross-border workers earn on average a (much) higher income compared to workers employed in their Member State of residence. There is, however, a possible selection bias (see e.g. EC, 2011; Nerb et al, 2009). "There is a marked difference between the occupations of cross-border commuters and others in employment in the country in which they live, which underlies the differences observed above in educational attainment levels" (EC, 2011, p. 101).

As a result, some of the cross-border workers might not be entitled to a family benefit when working in a Member State that has implemented a means-test. However, it is to be noted that the distribution of cross-border workers among the income deciles in the Member State of residence is not necessarily comparable to the distribution among the income deciles in the Member State of employment. This distribution of the cross-border workers among the income deciles of the Member State of residence is at the same time also an indication of the living standard of the cross-border worker, which is more likely to be higher compared to other citizens.

**Figure 4** Distribution of income of the outgoing cross-border workers, by income deciles of their Member State of residence, 2013

Source Own calculations based on LFS

The household composition of the cross-border worker and the labour work status of the spouse will have a significant influence on the number and the level of exported family benefits. This will be further elaborated in *Tables 7* and *8*. In general, half of the cross-border workers have no children. There are on average 0.9 children per cross-border worker in the EU area. Cross-border workers with children have on average 1.7 children. These average figures vary slightly between Member States, both for outgoing and incoming cross-border workers. This average number of children in the cross-border workers' families will consequently influence the expected financial impact of the export of family benefits.

**Table 7 The number of children of cross-border workers, 2013**

Source Own calculations based on LFS

By taking the different components into account (number of children – household composition – labour status of the spouse), the number of cross-border workers entitled to a child benefit for their children residing in another Member State could be estimated. At EU level, 22% of cross-border workers (276,000) live in a household with child(ren) whereby the spouse does not take up employment (*Table 8*). Also 2% of cross-border workers (22,000) is a single parent with child(ren). Both groups of cross-border workers is entitled to export their family benefit outside the Member State acting as 'primarily competent'. At the same time, 27% of cross-border workers (334,000) live in a household with child(ren) whereby the spouse is employed. In this case there will be no export of the child benefit from the Member State of employment of the cross-border worker as the 'primarily competent Member State'. However, this Member State might have to pay a supplement as the 'secondarily competent Member State'. Finally, as has been said, also 49% of cross-border workers have no children. The percentage of cross-border workers entitled to export a child benefit slightly differs across Member States. *Table 8* describes only those Member States with a high number of incoming cross-border workers (in absolute or/and in relative terms) (DE, LU and AT).<sup>43</sup> As a result, for these cross-border workers with children (some 50% of the reference group) almost 5 in 10 have a partner who is employed. For the other 50% of cross-border workers with children, the child benefit is exported outside the 'primarily competent Member State'.

<sup>43</sup> The impact assessment will take all Member States into consideration.

#### 4. THE LEVEL OF SOCIAL PROTECTION VERSUS THE STANDARD OF LIVING VERSUS THE COST OF LIVING

A possible amendment to the rules could correct the amount of the family benefit in proportion to the 'standard of living' in the Member State where the children reside (Option 1). Financial support by means of a family benefit aims to meet family expenses (see also Article 1 (z) of Regulation (EC) No 883/2004). However, the extent to which family benefits compensate family expenses might be different between the competent Member State and the Member State of residence of the children.<sup>44</sup> This section will focus on the definition of the concept 'living standard', the possible methodology to measure it, but also the similarities/differences with other concepts such as the level of social protection and the cost of living.

The concept 'living standard' has already been discussed frequently in literature (e.g. by Sen 1984; Dubnoff, 1985; Stávková, 2012). Sen (1984, p. 86) concludes that "living standard can be seen as freedom of particular types, related to *material capabilities*. ... It is in this sense that living standard can be seen as '*economic freedom*'." Several indicators could measure this. GDP per capita is, despite the imperfections of the indicator (see Stiglitz, Sen and Fittoussi, 2009), the most frequently used economic indicator to measure the standard of living. The correlation between this indicator and public spending on social protection (in this case related to family or child allowances) is shown by Figure 5. It will articulate the relative differences in generosity of social spending per capita. The Actual Individual Consumption (AIC) is an alternative economic indicator and is probably also better adapted to describe the material welfare of households. It includes all consumer goods and services purchased directly by households, as well as services provided by non-profit institutions and the government for individual consumption.

**Figure 5** The influence of GDP per capita on expenditure family or child allowance, 2013

\* Figures of LU are excluded in this figure. Correlation of 0.64.

Source Eurostat [prc\_ppp\_ind] [spr\_exp\_ffa]

<sup>44</sup> Barslund and Busse (2014, p. 20) concluded yet that "any indexation should apply in a non-discriminatory way, i.e. also when benefits are exported to countries with higher costs of living."

Both indicators, but also expenditure on social protection, could be converted by the Purchasing Power Parities (PPPs)<sup>45</sup> rates into a Purchasing Power Standard (PPS), eliminating the effect of price level differences across Member States, as price levels for consumer goods and services vary widely between Member States from 140% of the EU-28 average in Denmark to 48% of the EU-28 average in Bulgaria (figures for 2013) (*Figure 6*). EFTA countries Norway (157% of the EU-28 average) and Switzerland (155% of the EU-28 average) have, however, the highest price levels. These price level indices could be used to calculate a 'correction coefficient' in order to correct the price level differences between the competent Member State and the Member State of residence of the child(ren). But, this is rather a correction for the cost of living, which is in the most extreme situation three times higher or lower between Member States.

In 2013, the highest level of AIC per capita (136% of the EU-28 average) and GDP per capita<sup>46</sup> (257% of the EU-28 average) expressed in Purchasing Power Standards (PPS) was recorded in Luxembourg (*Figure 6*). This in contrast to Bulgaria, where the lowest level of AIC per capita in PPS (49% of the EU-28 average) and GDP per capita in PPS (45% of the EU-28 average) was recorded.

<sup>45</sup> See also EU Staff Regulations, Annex XI ([http://ec.europa.eu/civil\\_service/docs/toc100\\_en.pdf](http://ec.europa.eu/civil_service/docs/toc100_en.pdf)).

<sup>46</sup> With the exception that GDP per capita is not a good measure for a small country with a huge external workforce (cross-border commuters), as is the case for Luxembourg. In that case, GNP, which adds to the GDP net income received from abroad by the national population, is a better indicator.

**Figure 6** Indices of GDP and AIC per capita in PPS and price levels, 2013 (EU-28 = 100)

## 5. THE ESTIMATED ECONOMIC IMPACT OF THE CURRENT RULES AND THE ALTERNATIVE OPTIONS

### 5.1. Data collection

The scope of the administrative questionnaire was limited to the number of households and children who received a child benefit from a competent exporting Member State. For the calculation of the options, the complete reference group should be taken into account. However, some persons of the reference group do not appear on the basis of the administrative questionnaire. In particular persons who did not receive a supplement from the exporting Member State because the family benefit paid by the Member State of residence of the child(ren) is higher than the family benefit of the exporting Member State (see also *Figure 7*). This is a limitation of the data which should be taken into account. The definition of the complete reference group is in particular important for Option 3 (making the Member State of residence of the child primarily competent). Also, more information is required on the average amount of the family benefit on the basis of ESSPROS, as not all Member States have answered the administrative questionnaire. This kind of additional information will be needed for the calculation of Option 3.

**Figure 7 Limited scope of the questionnaire on export of family benefits**

**Source** The authors' own figure

19 Member States were able to provide more detailed data on the export of family benefits, of which 17 Member States provided data on the amount of exported family benefits. It follows that some caution is required when drawing conclusions especially given the fact that some Member States which can be considered highly relevant in this respect did not provide data on the export of family benefits. A total amount of some € 983 million related to the export of family benefits was brought into the picture by the reporting Member States (Table 9). As could be observed, some Member States provided information on the exportability of several types of family benefits. In order to avoid double-counting, the options will discuss only one family benefit scheme of each of the reporting Member States. Most of the time the child benefit scheme was selected. For a detailed reporting on the questionnaire on the export of family benefits we refer to Pacolet and De Wispelaere (2015).

The Member States have reported a total export of child benefits to some 324,000 households or 506,000 children, which amounts to a total expenditure of € 942 million. The cross-border tables provide a view on the 'main' exporting and receiving Member States. In particular, Luxembourg, Austria and Germany appear to be the 'main' exporting Member States in absolute terms. Luxembourg has even paid a total amount of € 477 million on family benefits exported abroad.

Source Questionnaire on the export of family benefits

## 5.2. Overview of the different options

### Status quo

Family benefits are paid at the level of the 'primarily' competent Member State. Also, a Member State might have to pay a supplement as the 'secondarily' competent Member State.

### Option 1 – Adjustment of the exported family benefit to the living standards

Under this option there is an adjustment of the amount of exported family benefits to the living standard in the Member State of residence of the child(ren). Under Sub-option 1a the adjustment of the amount could be upwards as well as downwards. This in contrast to Sub-option 2b, where the adjustment of the amount is limited to the amount paid by the competent Member State.

An adjustment of the family benefit paid by the exporting Member State (not only as primarily competent Member State but also as secondary competent Member State) by a correction coefficient should guarantee a correction for the differences in the cost of living between the exporting Member State and the Member State of residence of the child(ren).

Table 10 describes different possible cases and their impact on the cost of living (i.e. the benefit level) in the Member State of residence of the children. We observe that in two specific cases the payment of the family benefit under the current rules will result into a higher benefit level in the Member State of residence (*cases 1 and 3*).

**Table 10** The impact of the payment of a supplement on the living standard in the MS of residence

No of cases	Member State of employment/residence EU migrant/ cross-border worker (MS A)	Member State of residence of the children (MS B)	Result
	<b>Primarily competent</b>	<b>Secondarily competent</b>	
1 <b>FB MS A &gt; FB MS B</b>	No supplement paid by MS of residence		Above the 'benefit level' MS of residence
2 <b>FB MS A &lt; FB MS B</b>	Supplement paid by MS of residence		Equal to the 'benefit level' MS of residence
	<b>Secondarily competent</b>	<b>Primarily competent</b>	
3 <b>FB MS A &gt; FB MS B</b>	Supplement paid by the Member State of employment		Above the 'benefit level' MS of residence
4 <b>FB MS A &lt; FB MS B</b>	No supplement paid by the Member State of employment		Equal to the 'benefit level' MS of residence

Source The authors' own table based on the current EU provisions

### Option 2 – No export

This option will be disregarded due to legal reasons.

### **Option 3 – Reverse order of competence**

Under this option the order of priority in order to determine the 'primarily' competent Member State would be changed. The Member State of residence of the child should become the 'primarily' competent Member State. The Member State of employment of the migrant worker or cross-border worker would top up this amount as the 'secondarily' competent Member States if the level of family benefits is higher there. This implies a change in the allocation of the cost between the Member State of residence and the Member State of employment of the migrant/cross-border worker.

### **Horizontal Option - Different coordination rules for salary-related child-raising allowances**

This is a horizontal option, which may be applied alone or in conjunction with any of the options above. Under this option salary-related child raising allowances (or any salary-related components of a benefit which comprises of both salary-related and flat rate elements) would continue to be exportable as family benefits, but would be treated as individual and personal rights which may only be claimed by the parent who is subject to the applicable legislation in question (not by other members of their family). In addition, it is proposed that no anti-overlapping rules would apply to such benefits meaning that they would be payable in full to the parent concerned under the applicable national legislation irrespective of whether the Member State concerned has primary or secondary competence.

### **5.3. The estimated economic impact of the different options**

As could be observed, some Member States provided information on the exportability of several types of family benefits. In order to avoid double-counting, most of the time only the child benefit scheme was selected. But it is not always sure that the term covers the same type of benefit. As mentioned before, some Member States reported only the sum of more than one family benefit (e.g. CZ, LU, AT and MT). By selecting only one family benefit scheme per Member State, also a view on the Member State of residence of the children will be obtained.

#### **Status quo**

The status quo scenario results in a total reported expenditure on the export of child benefits of € 941.8 million (*Table 11*). In absolute terms, most child benefits are exported by LU, AT<sup>47</sup> and DE. In particular, Luxembourg spends a high amount on the export of child benefits. In total an amount of € 476.9 million, amounting to somewhat more than half of public spending reported by the different Member States, was paid by Luxembourg.

This cross-table also provides a more detailed breakdown of the expenditure per Member State of residence of the child(ren). This kind of detailed information will be needed in order to calculate the impact of Option 2 (adjustment of the amount to the 'living standard' (i.e. cost of living) in the Member State of residence of the child(ren)). Most child benefits were exported to France and Poland. The high share of

---

<sup>47</sup> Austria reported a total exported amount of € 147 million for 2013. However, an amount of € 206 million for 2013 was recently reported in a press article based on a parliamentary question. This amount includes two additional payments: retroactive payments for the last five years based on a national rule and double payments for differential supplements (2012 and 2013). Moreover, the breakdown per Member State of residence reported in this parliamentary question is very informative given that the Austrian delegation did not provide a breakdown per Member State of residence.

## Export of family benefits

France in total expenditure is mainly explained by the fact that most of the child benefits imported by France are exported by Luxembourg. However, the missing data for a number of competent exporting Member States may lead to a distorted view of reality if the export of child benefits is reported per Member State of residence of the child(ren).

### **Option 1 – Adjustment of the exported family benefit to the living standards**

Under this option there is an adjustment of the amount of the exported family benefits to the cost of living in the Member State of residence of the child(ren). An adjustment of the family benefit paid by the exporting Member State by a correction coefficient should guarantee a correction for the differences in the cost of living between the exporting Member State and the Member State of residence of the child(ren). By making use of the price level indices for consumer goods and services a correction coefficient between the exporting Member State and the Member State of residence of the child(ren) could be calculated. *“The price level indices provide a comparison of Member States' price levels relative to the European Union average: if the price level index is higher than 100, the Member State concerned is relatively expensive compared to the EU average, while if the price level index is lower than 100, then the Member State is relatively cheap compared to the EU average. They provide an indication of the order of magnitude of the price level in one Member State in relation to others.”*<sup>48</sup> This correction coefficient will afterwards be multiplied by the amounts reported in the status quo scenario.

#### **Box II – Interpretation of Table 12 – Two examples**

The price level of BG is 0.44 times the price level of BE. Therefore, the Belgian family benefit exported to BG will be multiplied by 0.44 in order to correct for the cost of living in BG.

The price level of BE is 2.3 times the price level of BG. Therefore, the Bulgarian family benefit exported to BE will be multiplied by 2.3 in order to correct for the cost of living in BE.

***Sub-option 1a: adjustment of exported family benefit to the living standards (upwards and downwards)***

Under Sub-option 1a the adjustment of the amount could be upwards as well as downwards. The application of this option results in a total expenditure of € 792.1 million or a decrease by 15.9% compared to the status quo scenario (*Table 13*). The budgetary impact of this option will mainly be determined by the distribution of the exported family benefits to the Member States of residence of the child(ren), the cost of living in these Member States and the differences with the exporting Member State. A higher cost of living in the Member State of residence of the child(ren) compared to the exporting Member State will result in a higher public spending under this option compared to the status quo scenario.

Luxembourg will experience a decrease of public spending related to the export of child benefits of 13% if this option is applied (*Table 13*). Germany will even spend 33% less under this option compared to the status quo scenario. The fact that Germany experiences a higher decrease of public spending compared to Luxembourg is mainly the result of the export towards a different kind of Member States of residence of the child(ren). Luxembourg exported most family benefits to France (which has a comparable level of cost of living) while Germany exported most family benefits to Poland (which has a much lower level of cost of living). Member States showing a low cost of living, among others Poland (+75%), Latvia (+41%), Estonia (+37%), Slovakia (+35%), Hungary (+21%), will experience a (much) higher public spending under this option compared to the status quo scenario.

**Table 13** Export of *child benefits*, estimated expenditure (in million €), 2013/2014 – *Sub-option 1a (adjustment upwards and downwards)*

\* No data available for BG, DK, FR, HR, IT, CY, LT, MT, AT, PT, RO, SI, SE, UK, LI and CH.

\*\* Calculations for DK, PL, LV and AT are based on the price level differences between the EU-28 and DK, PL/LV/AT as no (or an incomplete) breakdown per Member State of residence of the child(ren) is reported.

Source The authors' own calculations based on questionnaire on the export of family benefits and Eurostat

***Sub-option 1b: adjustment of exported family benefits to the living standards (with ceiling)***

Under Sub-option 1b, the adjustment of the amount is limited to the amount paid by the competent exporting Member State. This implies that if the correction coefficient calculated in *Table 12* is above 1 the expenditure will be equal to the amount reported under the status quo scenario (*Table 11*). If the correction coefficient is below 1, the expenditure will be equal to the amount reported under Sub-option 1a (*Table 13*). The application of this option results in a total expenditure of € 785.8 million or a decrease by 16.6% compared to the status quo scenario (*Table 14*). This is only a minor difference in total expenditure compared to Sub-option 1a. However, this is not necessarily the case for each of the individual Member States.

Luxembourg (-13%) does almost not experience a higher decrease of their public spending compared to Sub-option 1a (*Table 14*). This is because Luxembourg almost all the time shows a higher cost of living compared to the Member State of residence of the child(ren) (except for NO and CH). This option corrects especially the public spending for exporting Member States showing a low cost of living. Exporting Member States which experienced a higher expenditure under Sub-option 1a show under Sub-option 1b a (limited) lower expenditure compared to the status quo scenario (for instance, PL, LV, EE, SK and HU).

**Table 14** **Export of child benefits, estimated expenditure (in million €), 2013/2014 – Sub-option 1a (adjustment limited to the amount of the competent MS)**

\* No data available for BG, DK, FR, HR, IT, CY, LT, MT, AT, PT, RO, SI, SE, UK, LI and CH.

\*\* Calculations for DK, PL, LV and AT are based on the price level differences between the EU-28 and DK/PL/LV/AT as no breakdown per Member State of residence of the child(ren) is reported.

Source The authors' own calculations based on the questionnaire on the export of family benefits and Eurostat

### **Option 2 – No export**

This option will be disregarded due to legal reasons.

### **Option 3 – Reverse order of competence**

Under this Option 3 the exporting Member State would only top up the amount as the 'secondarily' competent Member State if the level of family benefits is higher than the level of family benefits in the Member State of residence of the child(ren). This implies that the Member State of residence of the child(ren) will become the 'primarily' competent Member State of the reference group of 506,123 children involved (*Table 15*). However, not all reporting Member States were able to provide a breakdown by Member State of residence (DK, PL, LV and AT). This implies that calculations will be based on a limited group of approximately 385,000 children. Also, as already mentioned the reference group is incomplete, as no view is available of the number of persons who received no supplement from the exporting Member State as the 'secondarily' competent Member State under the current rules (*Figure 7*).

**Table 15 Export of child benefits, the number of family members involved, 2013/2014**

\* No data available for BG, DK, FR, HR, IT, CY, LT, MT, AT, PT, RO, SI, SE, LI, NO and CH. The breakdown per Member State of residence by DK was not reported given that an incomplete breakdown by per Member State of residence of the child(ren) was reported.

Source Questionnaire on the export of family benefits

## Export of family benefits

In order to calculate the topping up of the exporting Member State more detailed figures on the level of the child benefit should be obtained. However, not all Member States answered the administrative questionnaire. The selection of the level of the child benefit is as a result based on the following criteria (*Table 16*): 1) the selection of the overall average annual amount per child (*column 1*), if not available: 2) the selection of the average annual exported amount as primarily competent Member State (*column 4*), if not available: 3) calculations based on ESSPROS (*column 5*).

Source Questionnaire on the export of family benefits and ESSPROS

Afterwards, the level of the child benefit of the exporting Member State was deducted from the level of the child benefit of the Member State of residence of the child(ren) (*Table 17*). A positive figure points at a higher level in the exporting Member State and should be considered as the annual paid supplement per child. If there is a negative result no supplement should be paid by the exporting Member State. The result of this is reported in *Table 18*. Especially Member States with a high level family benefit (among others LU, DE, DK, FR, AT, IE, BE, NL, FI, SE UK, LI, NO and CH) have to pay a supplement.

In order to estimate the budgetary impact of Option 3, the supplement paid by the exporting Member State (*Table 18*) is multiplied by the number of children involved (*Table 15*).

The application of this option results in a total exported amount of € 522.5 million or a decrease by 30.9% compared to the status quo scenario (excluding some Member States which did not provide a breakdown per Member State of residence of the children) (*Table 19*). This reflects to a high extent a shift of the expenditure from the exporting Member State towards the Member State of residence of the child(ren).

Some caution is, however, required if these calculations are compared to the status quo scenario. The level of the family benefit, selected in *Table 16*, is sometimes a proxy of the real figure. As a result, the expenditure for individual exporting Member States is sometimes higher under Option 3 compared to the status quo scenario (applicable to DE and ES). This is not possible in practice given that a family benefit will no longer be paid as the primarily competent Member State under this option (but only the supplement). Luxembourg, as a main exporting Member State under the current rules, experiences a decrease in expenditure of € 195 million or 41% compared to the status quo scenario.

However, there is also an underestimation of total spending if only the cost of the topping up is taken into account. The expenditure of the Member State of residence of the child(ren) as the primarily competent Member State should also be taken into account. It is at the same time an estimate of the total expenditure related to the coordination of family benefits and not only of the narrow scope of the export of family benefits. Under Option 3 this implies that mainly France (€ 179 million), Belgium (€ 100 million), Germany (€ 84 million) and Poland (€ 71 million) will experience a high cost of expenditure in absolute terms as the Member State of residence of the child(ren) (*Table 20* – see row totals). Counting together the expenditure under Option 3 as the exporting Member State and as the Member State of residence, a total estimated annual expenditure of € 1.2 billion is obtained (for a limited group of approximately 385,000 children) (*Table 21*). Despite the change of the current order of priority under Option 3, some of the exporting Member States will still have to pay a high share of the expenditure related to the coordination of family benefits. This is because the overall level of the family benefit is in some of the exporting Member States (in particular LU) (much) higher compared to the level of the main Member States of residence of the child(ren) (in particular FR and PL).

**Table 19** Export of *child benefits*, estimated expenditure (in million €) = supplement paid by the 'secondarily' competent exporting Member State, 2013/2014 – Option 3 (Member State of residence of the child primarily competent)

\* The amount related to the export of family benefits to be paid by DE under this option is higher compared to the amount (€ 106 million) under the status quo scenario. This is not possible in practice and is the result of an overestimation of the supplement to be paid by DE (average annual amount per child of € 2,389 applied for DE – see *Tables 16 and 17*) or an underestimation of the budgetary cost related to the export of family benefits under the status quo scenario reported by the German Delegation (only an average annual amount exported per child of € 993 – see *Table 16*). This also applies to ES but involves only a small amount in absolute terms (from € 10,729 to € 30,261).

**Source** The authors' own calculations based on the questionnaire on the export of family benefits

### Horizontal Option - Different coordination rules for salary-related child-raising allowances

Only a limited number of Member States have reported separate administrative data on their export of child-raising allowances. By Slovakia, a parental allowance was exported to 2,935 households amounting to a public spending of € 4.3 million (*Table 22*). Latvia reported the exportability of a parent's benefit to 100 households (or 0.8% of the total households entitled) amounting to a public spending of € 303,000 (or 0.4% of total export of family benefits). Romania reported the exportability of a child-raising benefit to 24 households. Finally, Hungary exported a child home care allowance to 118 households and a child-raising allowance to 2 households.

**Table 22 Export of child raising allowances, 2013**

	Name	Spending related to child-raising allowances (in Million €) (A)	Total spending on family benefits (in Million €) (B)	Share in total spending on family benefits (A/B)	Exported child-raising allowances (in €) (C)	Share in spending related to child-raising allowances (C/A)
DE	Parental benefit ( <i>Elterngeld</i> )	5,105	38,805	13.2%		
LV	Parental benefit ( <i>Vecaku pabalsts</i> )	71	169	41.9%	303,414	0.4%
HU	Child home care allowance ( <i>Gyermekgondozási segély</i> )				11,403	
	Child Raising Support ( <i>Gyermeknevelési támogatás</i> )				185	
RO	child raising benefit (indemnizatie pentru cresterea copilului)	346	1,001	34.5%	24 in 142,170 households (0.02%)	
SK	Parental allowance ( <i>Rodičovský príspevok</i> )				4,292,122	

**Source** Based on the questionnaire on the export of family benefits

On the basis of the number of cross-border workers and their household composition (*by using LFS data*) the impact of this horizontal option has been estimated.<sup>49</sup> Under the status quo scenario cross-border workers with child(ren) and their partner will be entitled to a salary-related child-raising allowance. It implies a reference group of some 785 thousand persons at EU-level (*by selecting only those cross-border workers with a child aged less than 15 (column A) and by adding their partner*<sup>50</sup> (*column B*)).<sup>51</sup> However, this reference group will be much smaller if only the Member States which have a child-raising allowance calculated by reference to salary or professional income are taken into consideration (17 Member States – see below). Moreover, it should be highlighted that only Bulgaria, Germany, Croatia and Finland permit that a right may be granted to a person despite not factually fulfilling the child-raising activity (i.e. derived rights).<sup>52</sup>

It will result in a considerable decrease of the number of persons entitled if the salary-related child raising allowance would be treated as an individual and personal right (*only claimed by the cross-border who is subject to the applicable legislation in question and not by other members of their family*) as the reference group would decline by 40% at EU-level compared to the status quo scenario.

<sup>49</sup> A second group of persons concerned are of course intra-EU migrants who live in a Member State other than their child(ren).

<sup>50</sup> As not all cross-border workers with children live together as a couple (e.g. single).

<sup>51</sup> However, in order to determine the competent Member State also the socio-economic position of the partner should be taken into consideration. Moreover, some households will be entitled to a child-raising allowance of the exporting Member State even if this Member State is not primarily competent. All these remarks are not taken into account and implies a possible overestimation of the reference group.

<sup>52</sup> Based on De Coninck, J. (2015), *Reply to an ad hoc request for comparative analysis – Salary-related child-raising benefits*, FreSsco.

Source LFS

In addition, it is proposed by this option that no anti-overlapping rules would apply to salary-related child raising allowances meaning that they would be payable in full to the parent concerned under the applicable national legislation irrespective of whether the Member State concerned has primary or secondary competence. According to our information, the countries which have a child-raising allowance calculated by reference to salary or professional income are: Austria, Bulgaria, Denmark, Greece, Portugal, Croatia, Estonia, Spain, Finland, Germany, Hungary, Italy, Latvia, Lithuania, Romania, Slovenia and Sweden. No data collected within the framework of the Administrative Commission is available for the assessment of this 'no anti-overlapping rule'. However, based on the data available from ESSPROS and MISSOC some figures on the impact could be provided, but taking several assumptions into consideration. By dividing parental leave spending (figures for 2012 – no distinction could be made among income-related parental leave benefits and flat-rate parental leave benefits) by an assumed reference group of children aged 0 to 3 years an average expenditure per child has been obtained. The same exercise was already reported in Table 4 with regard to the child benefit spending were we assumed a reference group aged 0 to 17 years. Under current rules a supplement will be paid by the secondarily competent Member State if the amount of the income-related child-raising allowance in this country is higher than the amount already paid by the primarily competent Member

State. However, under this new option the person concerned will be entitled to the full amount paid by the Member State of employment (= secondarily competent Member State). By confronting the average supplement paid per child (status quo) with the full amount to be paid under the new option the percentage change in expenditure per benefit being exported could be calculated for the secondarily competent Member State.<sup>53</sup> We first only selected the exporting Member states which have an income-related child raising allowance or a mixed allowance (*Table 24a*). Results are reported for the export of the child-raising allowance to all Member States of residence and to a more selective group of Member States of residence which have also an income-related or a mixed child-raising allowance. This option will lead to an average increase in expenditure per average exported benefit of 62% in all Member States that provide a child-raising benefit in case the average child-raising allowance from all Member States of residence is taken into account and even to an average increase of 81% if only the Member States of residence which have an income-related or a mixed child-raising benefit are selected.<sup>54</sup> The same exercise has been repeated for a broader group of Member States which have an income-related child raising benefit, a flat-rate child raising benefit or a mixed benefit (*Table 24b*).

Also, a case study has been conducted with reference to the German parental allowance (*Elterngeld*) to analyse the economic impact of this change for Germany as a secondary competent Member State exporting a parental allowance. The parental allowance will differ according to the net income of the recipient. The average net income (taking into consideration the average personal net income for a person living in a family of two working parents with two children (one at 100% and the other at

<sup>53</sup> For instance in case a child-raising allowance is exported from Luxembourg (annual average amount per child: € 2,786) to Germany (annual average amount per child: 1,830) a supplement will be paid by Luxembourg of €955 under the current rules and an amount of € 2,786 under the new option.

<sup>54</sup> The average increase per exporting Member State is based on the percentage change between the sum of supplements paid to an entitled person under the baseline scenario living in another EU-28/EFTA country or in one of the selected countries and the sum of the average amounts paid per entitled person under the new option (will always be the same amount).

67% of the average wage in the Member State of residence)) of the Member State of residence has been taken into account as well as the minimum and maximum ceiling of the benefit.<sup>55</sup> According to this analysis the increase in Germany's expenditure per benefit would range from 24% to Poland (increase from €383 to €476) to more than 250% in the case of Austria (increase from €405 to €1,428 paid to the family). Please notice, that only 14 Member States have a child-raising allowance calculated by reference to salary or professional income (see above).

**Table 25 Estimated impact of disapplying the anti-accumulation rules for income-related child-raising allowance, % change status quo compared to new option**

**Germany: Parental allowance (*Elterngeld*):** The parental allowance replaces the available monthly net income that the child-raising parent lost after the birth by a percentage rate which is dependent on the amount of the relevant income prior to confinement. For a net income between €1,000 and €1,200 prior to confinement, the percentage rate corresponds to 67%. The replacement rate decreases by 0.1% down to minimum of 65% for every €2 by which the net income exceeds €1,200. Therefore, the replacement rate for a net income of €1,240 or more is 65%. The replacement rate increases by 0.1% up to a maximum of 100% for every €2 by which the income is below €1,000. The parental allowance amounts to at least €300 and at most €1,800. In case of multiple births, the parental allowance is raised by €300 for every sibling from the multiple birth. Families with several children can receive a sibling's bonus to the amount of 10% of the parental allowance they are entitled to, which is at least €75 per month (MISSOC).

## Summary

### Partial view on the budgetary impact on the exporting Member States

A total amount of exported child benefits of € 941.8 million was reported by 17 exporting Member States under the current rules (*Table 26*). The budgetary impact

<sup>55</sup> The income earned in the exporting MS is a better indicator. However, no figures are available on the average income of cross-border workers (which is an important reference group). Also because this will be an individual right under the new option.

decreases under Sub-option 1a (-15.9%) and even further under Sub-option 1b (-16.6%) if there is an adjustment of the amount of exported family benefits to the cost of living in the Member State of residence of the child(ren). The budgetary impact of these sub-options will mainly be determined by the distribution of the exported family benefits to the Member States of residence of the child(ren), the cost of living in these Member States and the differences with the exporting Member State. Sub-option 2b even corrects the expenditure for exporting Member States which show a low cost of living compared to the Member States of residence of the child(ren). Belgium, the Czech Republic, Germany, Ireland, Spain, Luxembourg, the Netherlands, Austria, Finland, Iceland and Norway already experience a decrease of expenditure under Sub-option 1a. Under Sub-option 1b also for Estonia, Latvia, Hungary, Poland and Slovakia a budgetary decrease is observed compared to the status quo scenario. A change of the current priority rules so that a supplement should be paid only by the exporting Member State even results to a decrease by 30.9% of expenditure compared to the status quo scenario (excluding some Member States which did not provide a breakdown per Member State of residence of the children). It reflects to a high extent the shift of the expenditure from the exporting Member State towards the Member State of residence of the child(ren). However, this shift is only partially realised as the level of the family benefit in the main exporting Member States is most of the time (much) higher than this of the main Member States of residence of the child(ren).

**Source** The authors' calculations based on the questionnaire on the export of family benefits

**'Complete' view on the budgetary impact related to the coordination of family benefits**

The total expenditure related to the coordination of family benefits is broader than only the expenditure related to the export of family benefits. The expenditure of the Member State of residence of the child(ren) should also be taken into consideration.

The expenditure of the Member State of residence under Option 3 could be compared with the expenditure of the Member State of residence under the status quo scenario. Therefore, more detailed information on the number of family benefits exported as the primarily and as secondarily competent Member State is required. However, only eight Member States (LU, DE, HU, DK, CZ, EE, NL and IS) provided such detailed information.

Under the status quo scenario the Member State of residence might pay a supplement as the secondarily competent Member State (reference group of 182,825 children reported by eight Member States, including LU) and the family benefit as the primarily competent Member State (reference group of 102,994 children reported by eight Member States, including LU) (*Table 27*). Only when the amount of the child benefit of the Member of residence of the child(ren) is higher than this of the exporting Member State will a supplement be paid by the Member State of residence of the child(ren) (*Table 28*). The expenditure of the Member State of residence of the child(ren) under the status quo scenario is estimated at €175.6 million (including only eight reporting Member States).

**Source** The authors' own calculations based on the questionnaire on the export of family benefits

This expenditure under the status quo scenario could be compared to the expenditure of the Member State of residence of the child(ren) under Option 3. If under this option only the eight reporting Member States of the status quo scenario are taken into consideration a total expenditure of € 391.4 million is obtained (compared to a total expenditure for all Member State of residence under this option of € 497.4 million). This implies that the expenditure of the Member States of residence of the child(ren) will increase by 123% under Option 3 compared to the status quo scenario (selecting only eight reporting Member States) (*Table 29*). Especially France, Poland, Belgium and Germany will experience a much higher expenditure in absolute terms.

**Source** The authors' own calculations based on the questionnaire on the export of family benefits

By taking together both the expenditure as exporting Member State (*see Table 26*) and Member State of residence (*see Table 29*) the total expenditure related to the coordination of family benefits could be estimated. It is to be noted that the expenditure of the Member of residence is only based on the export of eight Member States in order to guarantee the comparability between the status quo scenario and Option 3. Although the total expenditure related to Option 3 without making this selection is reported as well (*see also Table 21*). Belgium, Denmark,<sup>23</sup> Estonia, Ireland, Latvia,<sup>56</sup> Luxembourg, the Netherlands, Austria,<sup>23</sup> Slovakia, Finland, Iceland and Norway<sup>23</sup> experience a lower budgetary cost compared to the status quo scenario.

<sup>56</sup> DK, LV, AT, PL and NO: No figures are available as exporting Member State under Option 3. This implies that the total cost under Option 3 is underestimated.

## Export of family benefits

This in contrast to the Czech Republic, Germany,<sup>57</sup> Spain<sup>58</sup> and Poland<sup>23</sup> (and probably also France taking into account the high number of exported family benefits to FR)<sup>59</sup> who will experience a higher budgetary cost.

\* No figures are available for DK, LV, PL, AT and NO as exporting Member State under Option 3. This implies that the total cost under Option 3 is underestimated! If we exclude those countries a total percentage change of **-15.4%** is obtained.

\*\* The amount related to the export of family benefits to be paid by DE under this option is higher compared to the amount (€ 106 million) under the status quo scenario. This is not possible in practice and is the result of an overestimation of the supplement to be paid by DE (average annual amount per child of € 2,389 applied for DE – see *Tables 16 and 17*) or an underestimation of the budgetary cost related to the export of family benefits under the status quo scenario reported by the German Delegation (only an average annual amount exported per child of € 993 – see *Table 16*). This also applies to ES but involves only a small amount in absolute terms (from € 10,729 to € 30,261).

<sup>57</sup> As already mentioned, the expenditure for DE as exporting Member State is higher under Option 3 compared to the status quo scenario. This is not possible in practice.

<sup>58</sup> ES: The cost to be paid as the Member State of residence is probably overestimated taking into account the selective income-tested child benefit scheme of ES.

<sup>59</sup> The total cost to be paid by FR under Option 3 was estimated at € 179 million (see *Table 30*). For instance, CLEISS has reported an amount related to the export of family benefits of € 9.5 million for 2013.

## Export of family benefits

\*\*\* The cost to be paid as Member State of residence is probably overestimated taking into account the selective income-tested child benefit scheme of Spain.

**Source** The authors' own calculations based on the questionnaire on the export of family benefits

The impact of the export of child benefits on total expenditure is quite limited for most of the Member States under the current rules. On average 1.6% of total public spending on child benefits of 16 reporting Member States could be related to the export of it. Luxembourg is an important 'outlier' with regard to the export of child benefits. Almost 50% of the amount of child benefits paid by Luxembourg was exported abroad. When total expenditure related to the coordination of family benefits is taken into account (amount paid as the exporting Member State but also as the Member State of residence of the child(ren)) the budgetary impact on total expenditure will be higher. A change to another option has on average no significant impact on the public spending on family benefits. Only Luxembourg will experience an important decrease in public spending if the Member State of residence of the child(ren) would become primarily competent. This in contrast to Poland (and probably also FR taking into account the high number of exported family benefits to FR), which will experience a much higher public spending if the Member State of residence of the child(ren) would become primarily competent.

\* No figures are available for DK, LV, PL, AT and NO as exporting Member State under Option 3. This implies that the total cost under Option 3 is underestimated!

\*\* DE and ES: this is probably an overestimation of the budgetary impact.

**Source** The authors' own calculations based on the questionnaire on the export of family benefits

### ***Impact of bilateral flows on the budgetary impact of the exporting Member State and the Member State of residence of the children: 2 specific cases***

The budgetary impact of the application of a reversed order of competence (Option 3) on the exporting Member State and on the Member State of residence of the child(ren) is visualised below for two main flows of exported family benefits, representing together almost a third of total reported expenditure on the export of family benefits.

#### *1) From Luxembourg to France*

Luxembourg has exported 62,164 family benefits to children living in France representing an amount of € 250.7 million. 37,619 children living in France received a family benefit from Luxembourg as the primarily competent Member State representing a total amount of € 184.3 million and another group of 24,524 children living in France received a family benefit from Luxembourg as the secondarily competent Member State representing a total amount of € 66.5 million. The latter already received an estimated amount of € 39.3 million from France as the primarily competent Member State. No supplement should be paid by France as the Member State of residence given that the level of the family benefit in Luxembourg (average annual amount of € 4,109 per child) is higher compared to France (average annual amount of € 1,603 per child). Under Option 3 France as the Member State of residence of the children will be competent to pay a family benefit to the total group of 62,164 children. By taking into consideration an average annual amount of € 1,603 per child, France will pay an estimated total amount of € 99.6 million. Afterwards a supplement of € 190.5 million will be paid by Luxembourg in order to ensure that the child receives the same amount under this option as under the current rules. This implies that Luxembourg has to pay a lower but still significant amount under Option 3 despite the fact that it only has to pay a supplement. This is the result of a much higher family benefit paid by Luxembourg compared to France.

**Figure 8 Estimated budgetary impact of the export of family benefits from Luxembourg to France**

\* The amount paid by LU under Option 3 is higher compared to the amount reported in Table 19 since total spending on the export of family benefits of both options should be equal to each other.

Source The authors' own calculations based on the questionnaire on the export of family benefits

## 2) From Germany to Poland

Germany has exported 47,273 family benefits to children living in Poland representing an amount of € 70.4 million. 33,564 children living in Poland received a family benefit from Germany as the primarily competent Member State, representing an estimated total amount of € 57.1 million, and another group of 13,709 children living in Poland received a family benefit from Germany as the secondarily competent Member State representing a total estimated amount of € 13.3 million. The latter already received an estimated amount of € 10 million from Poland as the primarily competent Member State. No supplement should be paid by Poland as the Member State of residence given that the level of the family benefit in Germany (average annual amount of € 2,389 per child) is higher compared to Poland (average annual amount of € 733 per child). Under Option 3 Poland as the Member State of residence of the children will be competent to pay a family benefit to the total group of 47,273 children. By taking into consideration an average annual amount of € 733 per child, Poland will pay an estimated total amount of € 34.7 million. Afterwards a supplement of € 45.8 million will be paid by Germany in order to ensure that the child receives the same amount under this option as under the current rules. This implies that Germany has to pay a lower but still significant amount under Option 3 despite the fact that it only has to pay a supplement. This is the result of a much higher family benefit paid by Germany compared to Poland.

**Figure 9** Estimated budgetary impact of the export of family benefits from Germany to Poland

\* The amount paid by DE under Option 3 is lower compared to the amount reported in Table 19 since total spending on the export of family benefits of both options should be equal to each other.

**Source** The authors' own calculations based on the questionnaire on the export of family benefits

## CONCLUSIONS

Chapter 8 of Regulation (EC) No 883/2004 on the coordination of social security systems covers the EU provisions on the coordination of family benefits. If family members live in a Member State other than where the insured person works and/or resides, family benefits could in some cases be exported to these family members. Since entitlement to family benefits might arise in more than one Member State (based on residence, employment or receipt of a pension) some priority rules are defined in order to determine the 'primarily competent Member State'. In this respect, rights available on the basis of employment have first priority. However, when there is employment in two different Member States, it is the Member State of residence of the children that will become primarily competent for the payment of the family benefits. Also, a Member State might have to pay a supplement (corresponding to the difference between the two benefits) as the 'secondarily competent Member State' if the family benefit paid by the competent Member State is lower than the family benefit the entitled person would have received from the other Member State.

In the framework of an impact assessment of a revision of Regulation (EC) Nos 883/2004 and 987/2009 by the end of 2015, the Commission requires a preparatory study on the economic impact of an amendment to the rules of the export of family benefits. The Commission proposed several alternative options, to be compared with the current situation, i.e. the 'status quo'.

- **Status quo;**
- **Option 1** – Adjustment of the exported family benefit to the living standards.
  - **Option 1a** - Adjustment of the exported family benefit to the living standards (upwards and downwards).
  - **Option 1b** - Adjustment of the exported family benefit to the living standards (ceiling).
- **Option 2** – No export (discarded).
- **Option 3** – A reverse order of competence.
- **Horizontal Option** - Different coordination rules for salary-related child-raising allowances.

Three different types of public spending on family benefits could be defined, in particular benefits in cash, benefits in kind and tax expenditure towards families. However, the analysis of the economic impact of the options has in particular focused on the characteristics of the child benefit schemes. These benefits vary in many Member States with the child's age and/or with the number of children, and even eleven Member States have implemented a means-test. Public spending on child benefits varies markedly across the 'old' and 'new' Member States, but also across welfare state regimes. Especially the EU-15 Bismarck-oriented countries show a high level of public spending on child benefits. These differences in characteristics of the child benefits schemes, but also the distribution of means between benefits in cash or in kind and the tax system will have an impact on the national expenditure of child benefits and as a consequence on their export.

A questionnaire on the export of family benefits was launched within the Administrative Commission in order to obtain a view on the budgetary impact of the current rules, but also to use the reported figures for the calculation of the alternative options. 19 Member States were able to provide more detailed data on the export of family benefits of which 17 Member States provided data on the amount of exported family benefits. It follows that the same caution is required when drawing general conclusions on the economic impact of the different options.

A total amount of exported child benefits of € 941.8 million was reported by 17 exporting Member States under the current rules. The impact of the export of child benefits on total expenditure is quite limited for most of the Member States under the current rules. On average 1.6% of total public spending on child benefits of 16 reporting Member States could be related to their export. Luxembourg is an important 'outlier' with regard to the export of child benefits. Almost 50% of the amount of child benefits paid by Luxembourg was exported abroad.

The budgetary impact decreases under Sub-option 1a (-15.9%) and even further under Sub-option 1b (-16.6%) if there is an adjustment of the amount of exported family benefits to the cost of living in the Member State of residence of the child(ren). The budgetary impact of these sub-options will mainly be determined by the breakdown of the family benefits per Member State of residence of the child(ren), the cost of living in these Member States and the differences with the exporting Member State. Sub-option 1b even corrects the expenditure for exporting Member States which show a low cost of living compared to the Member States of residence of the child(ren).

A change of the current priority rules so that only a supplement should be paid by the exporting Member State even results in a decrease by 30.9% of expenditure by the exporting Member States compared to the status quo scenario (excluding the cost to be paid as the Member State of residence). It reflects to a high extent a shift of the expenditure from the exporting Member State towards the Member State of residence of the child(ren). In that case, France, Poland, Belgium and Germany will experience a much higher expenditure as the Member State of residence of the child(ren) compared to the status quo scenario. However, this shift is only partially realised as the level of the family benefit in the main exporting Member States is most of the time (much) higher than the level of the main Member States of residence of the child(ren).

By taking together both the expenditure as exporting Member State and Member State of residence, the total expenditure related to the coordination of family benefits could be estimated. Luxembourg will experience an important decrease in public spending if the Member State of residence of the child(ren) were to become primarily competent. This in contrast to Poland (and probably also FR taking into account the high number of exported family benefits to FR), which will experience a much higher public spending if the Member State of residence of the child(ren) were to become primarily competent.

**ANNEX 1 LIST OF FAMILY BENEFITS PER MEMBER STATE**

Table A1.1 List of family benefits per Member State

	Child benefit	Child-raising allowances	Child care allowances	Birth and adoption grants	Allowance for single parents	Special allowances for children with disabilities	Advance on maintenance payments	Other allowances
Austria	Universal scheme for all residents financed by employers' contributions and taxes providing Child benefit (Familienbeihilfe)	Child-raising allowance (Kinderbetreuungsgeld) The Income-related Child-raising allowance (einkommensabhängiges Kinderbetreuungsgeld)	No special allowance.	No special allowance.	Flat-rate Child-raising allowance (Kinderbetreuungsgeld): YES Tax credit for single parents (Alleinerzieherabsetzbetrag): YES	Child benefit (Familienbeihilfe) YES	YES	Accommodation and housing allowances according to the Minimum Resources Acts of the Länder.  Child tax credit (Kinderabsetzbetrag)  Supplement to the flat-rate Child-raising allowance (Beihilfe zum pauschalen Kinderbetreuungsgeld): Families with low income are granted a supplement When a child is put under the care of a private person through or at the expense of a public authority.  Supplement called back-to-school grant.  Annual amounts for children with a supplement for single parent families and a social supplement and who are disabled
Belgium	Compulsory social insurance scheme financed by a federal grant and covering any person considered as active with lump-sum benefits or working as self-employed. ## PREFACE

In the framework of an impact assessment of a revision of Regulation (EC) Nos 883/2004 and 987/2009 by the end of 2015 the Commission requires a preparatory study on the economic impact of an amendment of the aggregation rules for unemployment. The Commission proposed several alternative options, to be compared with a first option representing the current situation, i.e. the 'status quo'.<sup>60</sup>

- **Option 1** – Status quo: “maintaining the wording of Article 61”.
- **Option 2** – The formalisation of the “one-day rule”.
- **Option 3** – The introduction of a minimum period for aggregating periods of insurance, employment or self-employment;
  - **Sub-option 3a: one month** of insurance, employment or self-employment needs to be completed before aggregation can be applied.
    - **Sub-option 3a1:** *Previous Member State is responsible for paying the unemployment benefits for those workers who, in the Member State of last activity, have not completed one month of insurance, employment or self-employment.*
  - **Sub-option 3b: three months** of insurance, employment or self-employment need to be completed before aggregation can be applied.
    - **Sub-option 3b1:** *Previous Member State is responsible for paying the unemployment benefits for those workers who, in the Member State of last activity, have not completed three months of insurance, employment or self-employment.*
- **Option 4** – A change of the calculation method of the unemployment benefit.
  - **Sub-option 4a:** the salary earned in the previous Member State is also taken into account for the calculation of the unemployment benefit by the competent Member State, if less than **one month** of insurance, employment or self-employment is completed.
  - **Sub-option 4b:** the salary earned in the previous Member State is also taken into account for the calculation of the unemployment benefit by the competent Member State, if less than **three months** of insurance, employment or self-employment is completed.

Informing the debate with reliable and recent information is essential. Information could be collected in several ways to gain insight in the current situation. This information should also be useful in order to calculate the different options. Over the past few years, the collection of national administrative data moved ahead as several questionnaires were launched within the framework of the Administrative Commission for the Coordination of Social Security Systems. In 2015, among others, a questionnaire was launched on the aggregation of unemployment benefits. These data provide already a first overview of the current situation (see Pacolet and De Wispelaere, 2015). Nonetheless, data collected outside the framework of the Administrative Commission is also highly relevant. These data available at EU level or at national level are especially useful when they are combined or confronted with administrative data of the questionnaire.

Some data sources, interesting for different reasons, which can be extracted at EU level:

- provide information on national social security systems (MISSOC, OECD);
- provide information on intra-mobility (LFS, Eurostat migration statistics, national reports);

<sup>60</sup> In recent years, several proposals of changes to the current rules (see, for instance, Barslund and Busse, 2014; BMI and BMAS, 2014; Tænketanken Europa, 2014) or for a 'harmonization' of the social security schemes (see, for instance, Dullien, 2014) emerged.

- compare total national expenditure with the specific cross-border expenditure (OECD, ESSPROS, Ageing Report 2012 or 2015).

Intra-EU labour mobility has different faces (*Table 1*): 'permanent' stay in another EU Member State as a result of migration; cross-border commuting and 'temporary' stay through the posting of workers. A first group are EU migrants of working age who moved to an EU Member State other than their EU Member State of birth or of their citizenship. In 2013, the 'stock' of citizens of working age (15 to 64 years) from an EU-28 Member State/EFTA country who resided in another EU-28 Member State was around 3.1% of the total population residing in the EU-28 Member States (Cannetta et al., 2014). In 2013, some 7 million EU citizens worked and lived in an EU Member State other than their own (equal to 3.3% of total employment in the EU) (European Commission, 2014a). However, in order to assess the current aggregation rules a more detailed view on the yearly flow of intra-EU migrants is needed. In 2012, some 1.8 million EU/EFTA citizens of working age migrated to another EU-28 Member State or EFTA country, of which some 700,000 EU-28/EFTA citizens returned to their Member State of citizenship. In addition, in 2013 some 1.3 million EU citizens were employed in an EU Member State other than their EU Member State of residence (i.e. 'cross-border workers'), representing 0.6% of total employment in the EU.<sup>61</sup> Some 65% (about 814 thousand) cross-border workers were employed in a neighbouring Member State (i.e. 'frontier workers')<sup>62</sup>. Finally, in 2013 some 1.34 million 'Portable Documents A1'<sup>63</sup> were issued to posted workers residing in an EU-28 Member State/EFTA country (Pacolet and De Wispelaere, 2014). The reference group to be studied within the context of this report are the new intra-EU migrants of working age.

**Table 1** Types of intra-EU labour mobility, 2012-2013

Type	Flow/Stock	Number	%	Year
Total stock EU/EFTA migrants of working age*	Stock		3.1% of total EU-28 population of working age	2013

<b>Of which 'return migration'</b> **	Flow	714,000	0.2% of total EU-28/EFTA population of working age	2012
EU migrants working and living in another MS	Stock	7 million	3.3% of total EU employment	2013
Cross-border workers in EU-28	Stock	1.3 million	0.6% of total EU employment	2013
<b>Of which 'frontier workers'</b>	Stock	814,000		2013
Posted workers in EU28/EFTA***	Flow	1.34 million	± 0.6% of total EU/EFTA employment	2013

\* By citizenship of the migrant.

\*\* We cannot know if someone has ever previously lived in the country of citizenship.

\*\*\* Number of forms issued.

**Source** Eurostat data on migration, Cannetta et al., 2014; Pacolet and De Wispelaere, 2014.

<sup>61</sup> Based on Labour Force Survey (LFS) data, an estimation of the number of cross-border workers can be made (based on the question 'What is the name and address of the local unit of the enterprise where you work?' and variables 'COUNTRYW' (country of place of work) and 'COUNTRY' (country of residence) in the database). However, some interpretation problems appear. While legally a distinction should be made between posted workers and cross-border workers, this distinction is not made by this question in the LFS. For that reason we think that the LFS question covers both cross-border workers (within the rules of free movement of workers) and posted workers (within the rules of free movement of services). Ideally, the LFS should make this distinction to avoid possible interpretation problems. In the further analysis we considered all workers who work in a country other than the country of residence as cross-border workers.

<sup>62</sup> This definition of a frontier worker differs from the definition used in Regulation (EC) No 883/2004.

<sup>63</sup> Portable Document A1 is a formal statement on the applicable social security legislation and proves that the posted worker pays social security contributions in another Member State.

## INTRODUCTION

The unemployment chapter of Regulation (EC) No 883/2004<sup>64</sup> provides for specific coordination rules for the aggregation of periods of insurance, employment or self-employment in case of unemployment. Aggregation will be applied to those unemployed recent migrant workers who have completed their most recent periods of insurance, employment or self-employment in the Member State where the benefit is claimed. In some cases the period of insurance, employment or self-employment is insufficient to be entitled to an unemployment benefit. In that case additional periods of insurance, employment or self-employment completed by the person in a Member State other than the competent State are required (by the use of a Portable Document U1 or a Structured Electronic Document U002).<sup>65</sup> Portable Document (PD) U1 or the corresponding Structured Electronic Document (SED) U002 certify periods of insurance, employment or self-employment completed by a worker in another Member State, which are to be taken into account for the award of unemployment benefits. PD U1 is issued to the worker, on his or her request, by the institution of the Member State where the person completed the periods of insurance, employment or self-employment. SED U002 is issued at the request of the competent institution. It should be noted that a migrant worker becomes subject to the legislation of a Member State as soon as he or she starts to work there. Hence, the aggregation rules become fully applicable as from that moment.

### Box 1 – Scope of the aggregation rules

The scope of the aggregation rules covered by PD U1 or SED U002 includes unemployed recent migrant workers, unemployed frontier workers and cross-border workers, other than frontier workers. However, the latter two groups fall outside the scope of this study.

- *Frontier workers* (i.e. people who work in a Member State other than the Member State of residence, and return home daily or at least once a week) who become wholly unemployed must apply for unemployment benefits in their Member State of residence.

- *Cross-border workers, other than frontier workers* (i.e. people who work in a Member State other than the Member State of residence, and do NOT return home daily or at least once a week), may apply for unemployment benefits and register with the employment service in either the Member State of last activity or the Member State of residence.

There is also a reimbursement mechanism between the Member State of last activity and the Member State of residence where unemployment benefits are claimed. The Member State of last activity only reimburses the State of residence the first three months of the unemployment benefits paid by the latter. This is extended to five months if the person has been insured in the Member State of last activity for at least 12 months in the preceding 24 months.

The group of unemployed frontier workers and other cross-border workers involved and the budgetary consequences on public unemployment spending may even be larger compared to the number of unemployed recent migrant workers and the corresponding expenditure.

By quantifying the number of new intra-EU movers who became unemployed after only a short period of employment and the budgetary consequences, an impact

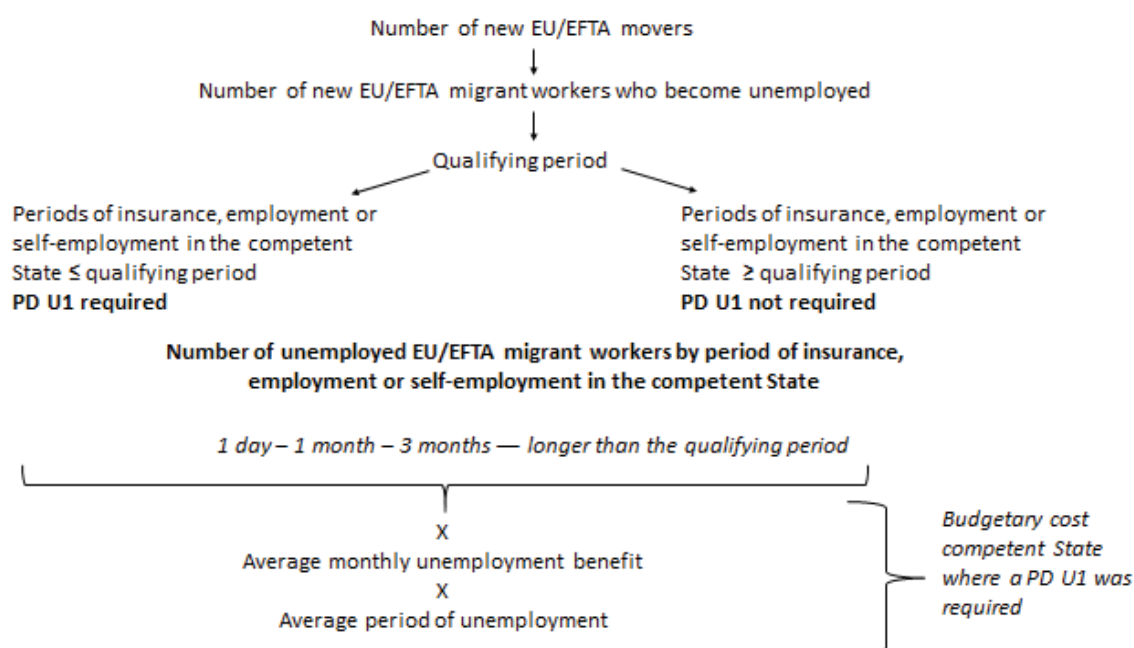

<sup>64</sup> Chapter 6 of Regulation (EC) No 883/2004, Article 61-65.

<sup>65</sup> Article 61 of Regulation (EC) No 883/2004.

assessment of the current rules but also of the several options can be made (Figure 1). Thus, more information on the number of new EU/EFTA movers; the number of new EU/EFTA movers who became unemployed; the period of insurance, employment or self-employment fulfilled in the Member State of last activity; the qualifying period; the average level of the unemployment benefit and the average duration of unemployment will be required.

**Figure 1 Determination of the reference group and the budgetary impact**

Source The authors' own figure

## 1. CHARACTERISTICS

The analysis of MISSOC (2014) creates the opportunity to obtain an overview of the different dimensions of the national unemployment schemes and in particular of the qualified period, the waiting period, the level of the unemployment benefit, the duration of the unemployment benefit etc. A comparable exercise was recently provided by Esser et al (2013), commissioned by DG EMPL, based on data from the Social Policy Indicator Database (SPIN).<sup>66</sup>

The entitlement to unemployment benefits is based upon the completion of periods of insurance, employment or self-employment. The qualifying period varies across Member States, from at least four months in France to 24 months in Slovakia (Figure 2). Nevertheless, many Member States apply a qualifying period of some 12 months (BE, CZ, DK, DE, EE, ES, IT, HU, MT, AT, PL, PT, RO, LI and CH). However, it should be noted that there are large differences in the time in which this period must be completed. It will make the accomplishment of the acquired period more severe or less severe. Those national provisions will influence the number of PDs U1 required and the period of insurance, employment or self-employment to be completed by a worker in a Member State other than the competent State in order to be entitled to an unemployment benefit. This report will provide more information on the links between those elements.

<sup>66</sup> See also EC, 2014b. The report of the European Migration Network maps national rules on social security by using the MISSOC tables.

**Figure 2 Unemployment benefits – Qualifying period, 2014**

Source MISSOC, 2014

In almost all Member States (excluding IE, MT, PL and UK) earnings received before unemployment will be taken into account as reference basis for the calculation of the unemployment benefit (Table 2). However, the applied calculation method varies, from taking into account the last salary earned (BE, NL and LI) to the average earnings of several months (from three months in HR, CZ, DK and LU to 36 months in LT).

These national rules do not apply to earnings acquired in another Member State. Article 62 of Regulation (EC) No 883/2004 has defined the calculation method of the unemployment benefit in case of aggregation of periods. The calculation method should only take into account the salary or professional income received by the person concerned in respect of the last activity as an employed or self-employed person. This implies that the unemployment benefit calculated on the basis of the current EU provisions might differ from the unemployment benefit if national rules would be applied (most of the Member States calculate the unemployment benefit on the basis of an average amount of earnings received during several months).<sup>67</sup>

This calculation method of the unemployment benefit has also been changed compared to 'old' Regulation (EEC) 1408/71. The second part of Article 68 of Regulation (EEC) No 1408/71 stated that "if the person concerned had been in his last employment in that territory for less than four weeks, the benefits shall be calculated on the basis of the normal wage or salary corresponding, in the place where the unemployment person is residing or staying, to an equivalent or similar employment to his/her last employment in the territory of another Member State".

<sup>67</sup> Barslund and Busse (2014, p. 21) concluded that any revision (in this case the inclusion of actual earnings during the relevant period) should also apply to workers moving from higher to lower salary countries.

**Table 2 Unemployment benefits – Earnings taken as reference, 2014**

Source MISSOC, 2014

Another dimension which will influence the budgetary cost is the duration of the unemployment benefits (*Table 3*).<sup>68</sup> The applied method in order to determine the maximum entitlement period varies across Member States. In many Member States the period of insurance/employment/contribution also determines the duration of the payment while in other Member States a fixed duration of entitlement has been determined. Only Belgium has an unlimited benefit duration.

**Table 3 Unemployment benefits – Determination of the duration of the benefits, 2014**

No limit	Fixed number	Unemployment rate	Insurance period	Employment (contribution) period	Insurance duration and age	Contribution duration and age	Age
BE	CY; DK; FI; IS; LV; MT; LU; NO; SK; SE; UK	PL	BG; EE; FR; HU; IE; LT	HR; EL; RO; ES; CH; NL	AT; DE; LI; SI	PT	CZ; IT

Source MISSOC, 2014

*Table 4* provides information on the minimum and maximum duration of the unemployment benefit. The entitlement to an unemployment insurance benefit will be limited to a number of weeks or months (except for BE) and varies markedly across but also within Member States.

<sup>68</sup> Based on LFS data we calculated in previous research the average duration of unemployment (average duration of 15 months). However, this average duration is measured at a certain moment which implies a possible underestimation of the duration of the unemployment (e.g. the person may still remain unemployed).

**Figure 3 Minimum and maximum duration of the unemployment benefit, 2014**

\* Belgium: unlimited

\* Note that for Slovenia the minimum duration has changed due to a new category being introduced so that coverage of least entitled actually increased.

Source EC, 2015 (chart 76) based on MISSOC 2014

## 2. EXPENDITURE

In 2012, the average EU public spending on unemployment benefits amounted to 1.0% of GDP and varied from 0.1% of GDP in Romania to 2.3% of GDP in Ireland (Table 4). Total expenditure could be divided by the total number of unemployed persons who became unemployed during the reference year.<sup>69</sup> The average annual spending per unemployment varies markedly across the EU Member States from a high amount per unemployed person in the Netherlands, Luxembourg and Norway to a very low one in Romania, Lithuania and Poland (see also Figure 4). Differences in terms of expenditure across the EU-15 Member States and the EU-13 Member States could be observed as well. These amounts will be important for the calculation of the financial impact of the several options.

The eligibility criteria and the coverage of the national unemployment schemes (discussed above and described more in detail by the MISSOC tables) will influence to a high extent the public unemployment spending.<sup>70</sup> Moreover, the access to guaranteed minimum resources (i.e. social assistance)<sup>71</sup> and the transition to it when there is no longer an entitlement to an unemployment benefit could result in a shift from contribution-financed public unemployment spending towards tax-financed public spending on social assistance.

<sup>69</sup> Note that only data is available on the number of unemployed persons at a certain time or on the average number of unemployed persons over a certain time and not on the total number of unemployed persons who were or became unemployed during the year. This implies also an overestimation of the public spending per unemployed person reported in Table 5 (based on the annual average of 2012).

<sup>70</sup> See also Darvas and Wolff (2014).

<sup>71</sup> These benefits are not part of the branches covered by Regulation (EC) No 883/2004.

### 3. REFERENCE GROUP

The Annual report on labour mobility (Cannetta, Fries-Tersch and Mabilia, 2014), commissioned by DG EMPL, provides information on the stock and flows of EU citizens residing and/or working in another EU Member State/EFTA country. In 2013, the share of citizens of working age (15 to 64 years) from an EU-28 Member State/EFTA country who resided in another EU-28 Member State was around 3.1% of the total population of working age residing in the EU-28 Member States. However, in order to assess the impact of the aggregation rules a more detailed view on the inflow of EU migrants is required. The labour status during the first year of residence of this group of recent movers and their previous labour status in the Member State of origin will determine if periods of insurance, employment or self-employment completed in a Member State other than the competent Member State are taken into account by the unemployment scheme of the competent Member State.

Based on the 'Migration and migrant population statistics' published by Eurostat more detailed information could be obtained on the annual flow of immigrants (*Table 5*). In 2012, some 1.8 million EU-28/EFTA citizens of working age (between 15 and 64) migrated to another EU Member State/EFTA country. Some 700 thousand or 40% of the EU-28/EFTA movers have, however, the same nationality as their new Member State of residence (so-called 'return migration')<sup>72</sup>. This is especially observed for Romania, Estonia, Lithuania and Latvia (higher than 90% of the 'new' immigrants). These figures on return migration are also discussed in European Commission, 2014a.<sup>73</sup> The flow of intra-EU movers of working age represents some 0.5% of the total EU population (this percentage is equal to 0.3% of the EU population when movers with the same citizenship as their new Member State are excluded) (*Table 5*). This percentage varies across Member States, from 3.8% of the population in Luxembourg and 1.8% in Switzerland, to only 0.1% in Portugal and Estonia. This annual flow of intra-EU movers is the reference group which should be studied. Some of them will become unemployed after a 'short' period of employment and might need to prove insured periods of another Member State in order to be entitled to an unemployment benefit.

---

<sup>72</sup> However, based on these data we cannot know if someone has ever previously lived in the country of citizenship, although he or she has the same nationality.

<sup>73</sup> However, in this report of the EC (2014a) also third-country nationals are taken into account to calculate the share of 'return migration' in total immigration.

\*\* We cannot know if someone has ever previously lived in the country of citizenship.

Source Own calculation based on Eurostat data on migration by age group and citizenship [migr\_imm1ctz]

More information on the labour status (employed, unemployed or inactive) of this group of recent movers is therefore needed. This information was extracted from the Labour Force Survey (LFS). Three different categories are defined: new EU-28/EFTA movers (= < 1 year of residence),<sup>74</sup> recent EU-28/EFTA movers (= < 10 years of residence) and people who are born in the country. Note that also EU-28/EFTA movers who have the same nationality of their new Member State of residence (but not born in this country) have been taken into consideration. In general, some 11% of the new EU-28/EFTA movers are unemployed (*Figure 5*). This percentage is comparable to the unemployment rate of recent EU-28/EFTA movers but is higher compared to the unemployment rate of the nationals (7%). The unemployment rate of those three categories varies also markedly across Member States.

<sup>74</sup> However, for this first year the number of new migrants will be underestimated for most of the Member States. Based on the LFS, somewhat more than 500 thousand EU-28/EFTA citizens at working age reside less than one year in a new EU-28 Member State/EFTA country. Compared to 1.8 million EU-28/EFTA citizens based on the Eurostat Migration Statistics.

Figure 5 EU-28/EFTA movers and nationals, by labour market status, 2013

\* Selection of Member States above the reliability levels

Source Own calculations based on LFS

By taking into account the yearly flow of EU-28/EFTA movers (based on the 'Migration and migrant population statistics' published by Eurostat presented in *Table 5*) and the unemployment rate (based on LFS data – presented in *Figure 5*) of this group, a first estimate of the number of unemployed new EU-28/EFTA movers could be provided. This group might need to prove periods of insurance, employment or self-employment completed in a Member State other than the competent State (dependent on the qualifying period of the competent Member State and the 'short' period of employment). Confronting the 1.8 million EU-28/EFTA citizens of working age (between 15 and 64) who migrated in 2012 to another EU Member State/EFTA country with a total EU unemployment rate of 11%, some 200,000 unemployed recent movers might need a PD U1 or an SED U002 in order to acquire a right to unemployment benefits.<sup>75</sup>

## **4. THE ESTIMATED ECONOMIC IMPACT OF THE CURRENT RULES AND THE ALTERNATIVE OPTIONS**

### **4.1. Data collection**

Based on the data from the questionnaire on the aggregation of periods for unemployment the budgetary impact of the current rules and the different alternative options can be calculated. However, those data do not cover all EU-28/EFTA countries. A total of 23 Member States provided quantitative data, of which three Member States were not able to provide a breakdown by Member State of origin and two other Member States were not able to provide a breakdown by length of insurance, employment or self-employment in the Member State of last activity. The missing data for a number of large Member States, in particular EU-15 Member States, may lead to a distorted view. As a result, some caution is required when drawing conclusions. For a detailed reporting on the questionnaire on the aggregation of periods for unemployment we refer to Pacolet and De Wispelaere (2015).

These administrative data provided by the questionnaire do not cover all components of the economic impact (e.g. expenditure on social assistance) or are insufficient to calculate the options (e.g. more data is required on average earnings, the calculation method of the unemployment benefit, the qualifying period, the average level of the unemployment benefit, the duration of the unemployment benefit etc). Therefore, these administrative data will be complemented with other data available at EU-level and in particular data of MISSOC and Eurostat.

In total 24,821 cases reported by 23 Member States for 2013 concern unemployed migrant workers whose period of insurance, employment or self-employment completed in the Member State of last activity was insufficient to be entitled to an unemployment benefit (*Table 6*). This is equal to an estimated share of 0.1% of total unemployment in those Member States and to 2.1% of the annual flow of intra-EU migrants of working age to these Member States. Most aggregations of periods for unemployment were reported by France (8,338 cases or 33.6% of total), Bulgaria (4,118 cases or 16.6% of total) and Spain (2,471 cases or 10.0% of total).

---

<sup>75</sup> However, based on the LFS only 53,000 new EU-28/EFTA movers have become unemployed (selection of the respondents who migrated one year ago and became unemployed – COUNTRY1Y (not the same country (EU-28) and MAINSTAT (unemployed)). But as mentioned before, these data of the LFS underestimate the number of new migrants for most of the Member States (see previous footnote).

## 4.2. Overview of the different options

### Option 1 – Status quo

This option will be disregarded since the wording of Article 61 of Regulation (EC) No 883/2004 does not provide sufficient clarity on the time period required before aggregation.

### Option 2 – The formalisation of the “one-day rule”

Aggregation is possible if any period of insurance, employment or self-employment has been fulfilled in the Member State of last activity. The unemployment benefit is calculated on the basis of the salary earned in the Member State of last activity.

### Option 3 – A threshold for a minimum period for aggregation

A threshold is applied for the aggregation of periods of insurance, employment or self-employment fulfilled in the Member State of last activity. A threshold of one month (sub-option 3a) or three months (sub-option 3b) could be implemented.

The application of a threshold will have some important consequences on the situation of the recent migrant worker who became unemployed and has fulfilled a period of insurance, employment or self-employment below the threshold (of one or three months). In that case, there are three possibilities: a) the person tries to find a new job as quickly as possible; b) the person returns to the Member State of origin; or c) the person asks for social assistance (or a special non-contributory benefit) (if he or she is entitled to it). As a result, this option also has to take into account public spending on social assistance. However, to what extent unemployed recent migrant workers who are not entitled to an unemployment benefit will ask for social assistance is of course unclear.

If the unemployed recent migrant worker did not fulfil a minimum period of insurance, employment or self-employment required for an unemployment benefit, this person might ask for social assistance (if he or she is entitled to it).<sup>76</sup> Therefore, the economic impact calculated for one year could also take into account the public spending on social assistance. The person involved might be entitled to an unemployment assistance scheme (*Table 7*) or to a more general assistance scheme (*Table 8*). Denmark, Estonia, Ireland, Spain, France, Austria, Portugal, Finland and the United Kingdom have defined a specific unemployment scheme. Besides, almost all Member States have defined a guaranteed minimum scheme. The monthly financial support varies from € 1,348 in Luxembourg to € 32 in Romania.

---

<sup>76</sup> The host Member State is not obliged to provide social assistance during the first three months of residence. Also, to acquire the right to reside (after three months) movers have to show that they have sufficient resources.

Source MISSOC, 2014

Under this options unemployed persons who have not completed a period of one or three months of insurance, employment or self-employment risk falling between two stools given that they probably will not be entitled to social assistance. An alternative within option 3 is that the previous Member State is responsible for paying the unemployment benefits for those workers who, in the Member State of last activity, have not completed one month (*option 3a*) or three months (*option 3b*) of insurance, employment or self-employment.

#### Option 4 – A change of the calculation method

Article 62 of Regulation (EC) No 883/2004 defines the calculation method of the unemployment benefit in case of aggregation of periods. The current calculation method only takes into account the salary or professional income received by the person concerned in respect of the last activity as an employed or self-employed person.

This calculation method is changed under option 4. If a period of insurance, employment or self-employment of less than one month (sub-option 4a) or three months (sub-option 4b) has been fulfilled in the Member State of last activity, the calculation of the unemployment benefit will also be based on the salaries earned in the Member State of origin.

This option implies that more detailed information is required on the unemployed recent migrant worker's Member State of origin, on the salary earned, but also on the

calculation method of the competent Member States (e.g. the ceiling of the earnings taken into account, minimum and maximum unemployment benefit).

For most of the cases reported by the Member States, the period of insurance, employment or self-employment of the Member State of last activity was aggregated by an additional period completed in the United Kingdom (22% of total) and Austria (18% of total) (Pacolet and De Wispelaere, 2015). The United Kingdom is the main Member State of origin for unemployed migrants who had to aggregate periods in order to be entitled to an unemployment benefit in Bulgaria, Latvia, Lithuania, Malta or Poland. New EU Member States such as Bulgaria and Romania never appear as one of the main Member States of origin of the unemployed migrants in the EU-15 who had to prove additional periods of insurance, employment or self-employment. For 76% of the cases an additional period fulfilled in an EU-15 Member State was added to the period already achieved in the Member State of last activity. This might be an indication of return migration for the EU-13 Member States. However, the missing data for a number of Member States may lead to a distorted view of reality if the numbers of cases are presented by the Member State of origin. Therefore, again some caution is required when drawing conclusions.

No information on the salary earned in the competent Member State as well as in the Member State of origin was collected via the administrative questionnaire.<sup>77</sup> Therefore, wage data published by Eurostat should be used. In 2013, the annual gross earnings (of a single person without children and earning 67% of the average wage) for the EU-28 amounted to € 21,361 (Figure 6). These annual gross earnings vary from a high amount in Switzerland (€ 47,741) and Norway (44,763) to a low amount in Bulgaria (€ 3,332) and Romania (€ 3,915).

**Figure 6 Annual gross earnings, single person without children, 67% of average wage, 2013**

Source Eurostat [earn\_nt\_net]

Despite the fact that the calculation of the unemployment benefit will be based on the salaries earned in the Member State of origin, this does not necessarily imply that changing this will result to the same extent in a change of the level of the unemployment benefit. Some Member States apply a maximum ceiling of earnings to

<sup>77</sup> The PD U1 form contains a section where more 'income details' (gross income) could be reported.

be taken into account (BE, BG, DE, ES, HR, FR, IT, CY, NL, AT, SE, LI, NO and CH) (*Table 9*). Also, a number of Member States apply a minimum and/or a maximum benefit level which flattens a strong increase or decrease in average earnings (BE, BG, CZ (max.), DK (max.), ES, HR, IT (max.), LT, LU (max.), HU (max.), AT, SI, SE and LI (max.)).

Finally, Ireland, Malta, Poland and the United Kingdom do not take previous earnings as a reference for the calculation of the unemployment benefit (*see also Table 2*), which implies that this option does not influence the unemployment benefit in these Member States.

**Table 9 Unemployment benefit, impact of the earnings on the level of the UB, 2014**

MS	Ceiling earnings taken as reference	Rate of the benefits	Lowest	Highest

### 4.3. Estimated economic impact of the different options

#### Options 1 and 2 – The current rules

As mentioned before, in total 24,821 cases were reported by 23 Member States for 2013. 6,741 cases or 28% of total cases relate to a period of insurance, employment or self-employment of less than 30 days in the Member State of last activity (*Table 10*). 3,341 cases or 14% of total cases apply to a period between one and three months, and finally 14,014 cases or 58% to a period of three months or longer. So, for most of the cases of aggregation, already a period of insurance, employment or self-employment of more than three months was completed by the unemployed migrant worker in the Member State of last activity. This distribution varies markedly across Member States, but also between the EU-13 and the EU-15. 8,580 cases or 62% of the cases reported by the EU-15 concerned a period of insurance, employment or self-employment of less than three months compared to only 1,295 cases or 16% of the cases reported by the EU-13. This breakdown by period of insurance, employment or self-employment will have an influence on the budgetary impact of the different options. For example, the different options will have (almost) no impact on Cyprus (100% of the cases), Hungary (97% of the cases) and Bulgaria (96% of the cases) as they have aggregated all or most of their cases on the basis of a period of insurance, employment or self-employment of more than three months.

Under the current rules all cases should be taken into consideration. These could be multiplied by the annual average expenditure per unemployed person in order to estimate the public unemployment spending (*amounts reported in Table 5 – column 3*). This yearly expenditure assumes to some extent that the unemployed person did not find a job during the first year of unemployment. While the entitlement to an unemployment insurance benefit in most of the Member States (except for BE) will be limited to a number of weeks or months. Therefore, a more 'realistic' calculation of the yearly expenditure is calculated by taking into account the annual average duration of the payment of the unemployment benefit.<sup>78</sup> The average duration of the payment of the unemployment benefit amounts to 7.5 months, but differs strongly across Member States (*Table 10 – column 6*). The average duration is multiplied by the average amount reported in *Table 5 – column 3* and results in a corrected figure reported in *Table 10 – column 7*.

The budgetary impact for Lithuania and Norway could be estimated for the baseline scenario, but not for the other options given that these Member States could not provide a breakdown by period of insurance, employment or self-employment. Also for Liechtenstein the budgetary impact is missing, since no information on the annual average expenditure per unemployed person is available.

A total estimate of annual public unemployment spending of € 100 million is obtained for the 22 reporting Member States. In absolute terms, in particular France (€ 53 million) and Belgium (€ 20.5 million) are the main spending Member States. Their expenditure is influenced by the higher number of cases and average expenditure per unemployed person compared to the other Member States (*Table 10*).

The budgetary impact of the aggregation of periods for unemployment on total unemployment spending is, however, very limited (*Table 10*). In general, 0.11% of

<sup>78</sup> Calculations are based on the duration of the unemployment (which can be calculated using LFS data). If the duration of the unemployment < 1 month, we assume a payment of the unemployment benefit (UB) of 0.5 months; between 1-2 months of unemployment = 1.5 months UB paid; between 3-5 months of unemployment = 4 months UB paid; between 6 and 11 months of unemployment = 8.5 months UB paid; 12 months or longer of unemployment = 12 months UB paid. Based on LFS data we obtained an average duration of unemployment of 15 months. However, this average duration is measured at a certain moment, which implies a possible underestimation of the duration of the unemployment (e.g. the person may still remain unemployed). However, the expenditure is calculated for only one year. This explains the cut-off at 12 months. This will result in an annual average duration of payment of the unemployment of 7.5 months.

total unemployment spending by the reporting Member States could be related to the aggregation of periods for unemployment. This percentage is similar for EU-13 Member States (0.12%) and EU-15 Member States (0.10%). Denmark, Spain, Croatia, Cyprus, Latvia, Lithuania, Poland, the Netherlands, Romania, Finland, Sweden and the United Kingdom spent less than 0.1% of their unemployment expenditure on unemployed recent migrant workers who completed an insufficient period of insurance, employment or self-employment to be entitled to an unemployment benefit.

### **Option 3 – A threshold for a minimum period for aggregation**

A threshold is applied for the aggregation of periods of insurance, employment or self-employment fulfilled in the Member State of last activity. A threshold of one month (sub-option 3a) or three months (sub-option 3b) could be implemented.

#### *Sub-option 3a – A threshold of one month*

If a threshold of one month is applied, 6,741 cases or 28% of the total reported cases will no longer have an impact on public unemployment spending (*Table 11*). The remaining 17,355 cases are again multiplied by the annual average expenditure per unemployed person in order to estimate the public unemployment spending.

The application of this sub-option results in a total estimate of annual public unemployment spending of € 60.6 million for 20 reporting Member States. This implies a decrease of expenditure by 37% compared to the baseline scenario (excl. LT and NO).

This option will in particular have an influence on competent Member States confronted with a high percentage of aggregated cases during the first month. For example, the length of insurance, employment or self-employment of most of the cases completed in Denmark and the United Kingdom is less than one month. In contrast, Croatia and Cyprus did not report any cases below a period of one month (see also *Table 10*). The expenditure for Denmark will decrease by 63% compared to the baseline scenario. This option has no or almost no budgetary impact on Croatia (0%), Cyprus (0%), Bulgaria (-0.5%) and Switzerland (-0.3%). The expenditure of France and Belgium, two Member States which show a high expenditure in absolute terms under the baseline scenario, will decrease by 47% and 34% respectively compared to the baseline scenario (*Table 11*).

Under this option, 0.07% of total unemployment spending by the reporting Member States will be related to the aggregation of periods for unemployment (*Table 11*). However, as mentioned above, also spending on social assistance could be added to the budgetary cost.

**Table 11 Estimate of the annual budgetary impact under sub-option 3a**

*Sub-option 3a1 – A threshold of one month AND the previous Member State is responsible for paying the unemployment benefits for those workers who, in the Member State of last activity, have not completed one month of insurance, employment or self-employment*

Under this sub-option the previous Member State (i.e. Member State of origin) will be responsible for paying the unemployment benefits for those workers who, in the Member State of last activity, have not completed one month of insurance, employment or self-employment. The Member State of last activity will still be responsible for paying the unemployment benefits for those workers who have completed more than one month of insurance, employment or self-employment.

The missing data for a number of reporting Member States may lead to a distorted view of reality if the number of cases are reported by the previous Member State. As has been pointed out, most of the aggregated cases apply to a period of insurance, employment or self-employment of more than three months. It implies that the previous Member State only for a limited number of cases will be responsible for paying the unemployment benefit if a threshold of one month is applied. Moreover, only 1,534 of the 13,113 aggregated cases which could be allocated to a previous Member state of residence have to be taken into account (see also Pacolet and De Wispelaere, 2015). Most of the cases with a period of insurance, employment or self-employment of less than one month were aggregated with an additional period completed in an EU-15 Member State and mainly completed in the United Kingdom (263 cases), the Netherlands (179 cases) and France (165 cases) (*Table 12*).

The calculation of the budgetary cost for the previous Member State could be based on the average duration of unemployment (*see also Table 10*), the entitlement to an unemployment benefit up to 3 or 6 months or for the maximum duration of the entitlement (*see also Figure 3*). Please notice that the average duration of unemployment not necessarily corresponds to the duration of the entitlement to an unemployment benefit (e.g. the period of unemployment could be longer than the entitlement to an unemployment benefit). The total annual budgetary cost for the Member States of origin varies from € 3.4 Million (entitlement up to 3 months) to € 13.7 Million (maximum duration of the entitlement) for the 1,534 reported cases depending on the calculation method used (*Table 12*). The Netherlands and France will probably be confronted with the highest budgetary cost in absolute figures. However, this cost is marginal if we confront the budgetary cost of paying an unemployment benefit for those unemployed persons who, in their Member State of last activity, have not completed one months of insurance, employment or self-employment with total unemployment spending (for instance equal to 0.005% of total public spending if the average duration of unemployment is taken into account).

The additional cost to be paid as previous Member State should be added to the budgetary cost Member States will experience as Member State of last activity (*Table 13*). However, the additional cost as previous Member state will hardly influence the total cost. Only the Netherlands shows a higher cost as Member State of origin than as Member State of last activity. The real budgetary impact is, however, underestimated given that under the baseline scenario 6,741 aggregated cases of a period of insurance, employment or self-employment of less than 1 month have been taken into consideration compared to only 1,534 cases under sub-option 3a1 (*Table 12*) and even only 986 cases when selecting only the 20 reporting Member States (*Table 13*). Nevertheless, these figures show already that this option will lead to a higher budgetary impact for some Member States compared to the current rules (for instance the United Kingdom). If we extrapolate the 986 cases to the total group of 6,741 cases an estimated amount of € 32.2 Million (assuming an average expenditure

per unemployed person) or € 14,912,546 (assuming the entitlement for 3 months) will be paid by the Member States of origin (*Table 13*). It implies that the loss of an unemployment benefit in the Member State of last activity is compensated considerably by the Member State of origin (compared to an expenditure of € 36.2 Million under current rules for those 6,741 cases – see *also Table 10*).

Aggregation of periods or salaries for unemployment benefits

### *Sub-option 3b – A threshold of three months*

In case a threshold of three months is applied, the remaining 14,049 cases are multiplied by the annual average expenditure per unemployed person in order to estimate the public unemployment spending.

Under this sub-option, the total estimated annual public unemployment spending for 20 reporting Member States amounts to € 45.8 million or to a decrease of expenditure by 53% compared to the baseline scenario (*Table 14*).

This sub-option 3b almost does not result in any further decrease of expenditure compared to sub-option 3a in Denmark (0 p.p.),<sup>79</sup> Cyprus (0.0 p.p.), Hungary (-0.5 p.p.), Switzerland (-2.5 p.p.), the United Kingdom (-3.3 p.p.), Bulgaria (-3.6 p.p.) and Croatia (-6.3 p.p.) (*Table 14*). Especially Finland (-37.0 p.p.), Sweden (-26.7 p.p.) and Poland (-25.0 p.p.) will experience a higher decrease of expenditure compared to sub-option 3a. This option will consequently lead to a further decrease of public unemployment spending to 0.05% of total unemployment spending by the reporting Member States (*Table 14*).

---

<sup>79</sup> p.p. = percentage points.

*Sub-option 3b1 – A threshold of three months AND the previous Member State is responsible for paying the unemployment benefits for those workers who, in the Member State of last activity, have not completed three months of insurance, employment or self-employment*

Under this sub-option the previous Member State (i.e. Member State of origin) will be responsible for paying the unemployment benefits for those workers who, in the Member State of last activity, have not completed three months of insurance, employment or self-employment. The Member State of last activity will still be responsible for paying the unemployment benefits for those workers who have completed more than three month of insurance, employment or self-employment.

As mentioned before, the missing data for a number of reporting Member States may lead to a distorted view of reality if the number of cases are reported by the previous Member State. Also, most of the aggregated cases apply to a period of insurance, employment or self-employment of more than three months. It implies that the previous Member State only for a limited number of cases will be responsible for paying the unemployment benefit if a threshold of three months is applied. Moreover, only 3,027 of the 13,113 aggregated cases which could be allocated to a previous Member state of residence have to be taken into account (see also Pacolet and De Wispelaere, 2015). Most of the cases with a period of insurance, employment of self-employment of less than three months were aggregated with an additional period completed in an EU-15 Member State and mainly completed in the United Kingdom (577 cases), the Netherlands (371 cases) and Spain (328 cases) (*Table 15*).

The calculation of the budgetary cost for the previous Member State could be based on the average duration of unemployment (*see also Table 10*), the entitlement to an unemployment benefit up to 3 or 6 months or for the maximum duration of the entitlement (*see also Figure 3*). Please notice that the average duration of unemployment not necessarily corresponds to the duration of the entitlement to an unemployment benefit (e.g. the period of unemployment could be longer than the entitlement to an unemployment benefit). The total annual budgetary cost for the Member States of origin varies from € 14.2 Million (entitlement up to 3 months) to € 26.2 Million (maximum duration of the entitlement) for the 3,027 reported cases depending on the calculation method used (*Table 15*). Again, The Netherlands and France will probably be confronted with the highest budgetary cost in absolute figures. This cost is still marginal if we confront the budgetary cost of paying an unemployment benefit for those unemployed persons who, in their Member State of last activity, have not completed three months of insurance, employment or self-employment with total unemployment spending (for instance equal to 0.01% of total public spending if the average duration of unemployment is taken into account).

**Table 15 Annual cost for the previous Member State responsible for paying the unemployment benefits for those workers who, in the Member State of last activity, have not completed three months of insurance, employment or self-employment, average duration of unemployment, three months entitled to an unemployment benefit and maximum duration entitled to an unemployment benefit**

\* This is an incomplete picture due to missing data for CZ, DE, IE, EL, IT, AT, PT, SI and IS as reporting Member State and given that some Member states did not provide a breakdown by the Member State of origin (FR, ES and EE).

Source Own calculations based on the administrative questionnaire and ESSPROS

The additional cost to be paid as previous Member State should be added to the budgetary cost Member States will experience as Member State of last activity (*Table 16*). Especially the United Kingdom and the Netherlands show in absolute figures a higher cost as Member State of origin than as Member State of last activity. The real budgetary impact is, however, underestimated given that under the baseline scenario 10,082 aggregated cases of a period of insurance, employment or self-employment of less than three month have been taken into consideration compared to only 3,027 under sub-option 3b1 (*Table 15*) and even only 1,911 cases when selecting only the 20 reporting Member States (*Table 16*). Nevertheless, these figures show already that this option will lead to a higher budgetary impact for some Member States compared to the current rules (for instance the United Kingdom). If we extrapolate the 1,911 cases to the total group of 10,082 cases an estimated amount of € 47.4 Million (assuming an average expenditure per unemployed person) or € 21,955,523 (assuming the entitlement for 3 months) will be paid by the Member States of origin (*Table 16*). It implies that the loss of an unemployment benefit in the Member State of last activity is compensated considerably by the Member State of origin (compared to an expenditure of € 51.0 Million under current rules for those 10,082 cases – see also *Table 10*).

Source Own calculations based on the administrative questionnaire

#### Option 4 – A change of the calculation method: salary earned in the Member State of origin is also taken into account

For this option the calculation of the unemployment benefit will also be based on the salaries earned in the Member State of origin. The average wage earned during the qualifying period laid down in national legislation will be calculated. As mentioned

above (see also *Figure 2*), many Member States apply a qualifying period of some 12 months.

**Box 2 – An example**

An unemployed migrant worker worked for one month (option 4a) in the Member State of last activity and received a salary of € 2,000. The qualifying period in the Member State of last activity is 12 months. Therefore, a period of insurance, employment or self-employment of 11 months completed by the unemployed migrant worker in the Member State of origin has to be taken into account for the award of an unemployment benefit by the Member State of last activity. During this period of 11 months the unemployed migrant worker received a monthly salary of € 1,000. The unemployment benefit of the Member State of last activity is calculated as a certain percentage of the average salary of the previous 12 months (i.e. the qualifying period). The average salary will amount to € 1,083 ( $= (\text{€ } 2,000 \times 1 + \text{€ } 1,000 \times 11) / 12$ ). In accordance with the current rules, the calculation of the unemployment benefit would be based on the salary received in the Member State of last activity only, i.e. € 2,000.

If the unemployed migrant worker worked for three months (option 4b) in the Member State of last activity, the average salary would amount to € 1,250 ( $= (\text{€ } 2,000 \times 3 + \text{€ } 1,000 \times 9) / 12$ ).

*Tables 17* (threshold of one month) and *18* (threshold of three months) provide bilateral information on the impact of the average wage when also salaries earned in the Member State of origin are taken into account compared to the current situation. Figures are expressed as x times the average salary under the current rules. For example, consider the changes between Belgium and Bulgaria. The average wage in option 4a (*Table 17*) for an unemployed migrant worker who is employed only one month in Belgium as Member State of last activity (qualifying period = 12 months) and requiring an aggregation of a period of 11 months from Bulgaria as Member State of origin is equal to 0.2 times the average wage under the current rules. This in contrast to an unemployed worker employed in Bulgaria as Member State of last activity (qualifying period = 9 months) and requiring an aggregation of a period of eight months from Belgium as Member State of origin, where the average wage in option 4a will be equal to 8.4 times the average wage under the current rules. These cross-tables could be used to estimate the decrease or increase of the amount of the unemployment benefit. However, this should be corrected by the ceiling of earnings taken into account and the minimum and maximum unemployment benefits. For example, Bulgaria applies a maximum amount of the monthly contributory income of € 1,227. This implies that the salary earned in the Member of origin by unemployed migrant workers coming from high-wage Member States will be flattened to this ceiling. Also, unemployed migrant workers entitled to an unemployment benefit from Belgium will receive at least a daily amount of € 36.6 despite the fact that their average wage is decreased many times by taking into account also the salary earned in low-wage Member States of origin.

**Table 17** Average earnings also taking into account the salaries earned in the Member State of origin compared to the current situation, threshold of one month

*Option 4a – A threshold of one month*

In order to calculate option 4a the following definition is applied:

**= (Cases of less than 30 days \* average spending per unemployed person \* correction coefficient) + (cases more than 30 days \* average spending per unemployed person).**

The correction coefficient is defined in *Table 17* (assuming a period of employment of one month in the Member State of last activity and 11 months in the Member State of origin). The unemployment expenditure related to the cases of a period of more than one month is already reported in *Table 11* under sub-option 3a.

For six of the reporting Member States the budgetary impact could not be estimated: Lithuania and Norway could not provide a breakdown by period of insurance, employment or self-employment; France, Spain and Estonia could not provide a breakdown by Member State of origin and for Liechtenstein the average spending per unemployed person is not known.

The estimated budgetary impact does not take into account the ceiling of earnings taken as a reference defined by some Member States, or the lowest and highest levels of the unemployment benefits. Therefore, these estimates should be considered as a maximum impact, given that the real impact will be flattened for some Member States. As already mentioned, also some Member States do not take previous earnings as a reference for the calculation of the unemployment benefit and as a result this option will not affect these Member States (Ireland, Malta, Poland and the United Kingdom).

Under this sub-option 0.10% of total yearly unemployment spending by the reporting Member States will be related to the aggregation of periods for unemployment (*Table 19*).

If the calculation of the unemployment benefit will also be based on the salaries earned in the Member State of last activity for those unemployed recent migrant workers who fulfilled a period of insurance, employment or self-employment of less than one month in their Member State of last activity, in particular 'low-wage' competent Member States (compared to the Member States of origin) will be confronted with an additional budgetary cost (e.g. BG (+2.7%), LV (+94.7%), HU (+1.5%), SK (+43.7%) and SE (+3.2%)) (*Tables 15 and 16*). This of course in contrast to 'high-wage' competent Member States (e.g. BE (-6.8%), DK (-24.7%); NL (-1.4%), FI (-4.3%) and CH (-0.2%)).

#### Option 4b – A threshold of three months

In order to calculate option 4b the following definition is applied:

**= (Cases of less than 30 days \* average spending per unemployed person \* correction coefficient) + (cases more than one month but less than three months \* average spending per unemployed person \* correction coefficient) + (cases more than three months \* average spending per unemployed person).**

The correction coefficient for the cases of less than 30 days is defined in *Table 17* (assuming a period of employment of one month in the Member State of last activity and 11 months in the Member State of origin) and for the cases of more than one month but less than three months in *Table 84* (assuming a period of employment of three months in the Member State of last activity and nine months in the Member State of origin). The unemployment expenditure related to the cases of a period of more than three months is already reported in *Table 15* under sub-option 3b.

For six reporting Member States the budgetary impact could not be estimated: Lithuania and Norway could not provide a breakdown by period of insurance, employment or self-employment; France, Spain and Estonia could not provide a breakdown by Member State of origin and for Liechtenstein the average spending per unemployed person is not known.

The estimated budgetary impact does not take into account the ceiling of earnings taken as a reference defined by some Member States, or the lowest and highest levels of the unemployment benefits. Therefore, these estimates should be considered as a maximum impact, given that the real impact will be flattened for some Member States. As already mentioned, also some Member States do not take previous earnings as a reference for the calculation of the unemployment benefit and as a result this option will not affect these Member States (IE, MT, PL and UK).

Under this sub-option, 0.10% of total unemployment spending by the reporting Member States will be related to the aggregation of periods for unemployment

(Table 21). Also, a similar view on the budgetary impact of 'low-wage' and 'high-wage' Member States as described under sub-option 4a is obtained.

**Table 21 Estimate of the budgetary annual impact under sub-option 4b**

### Summary

All Member States will experience the lowest budgetary impact on their public unemployment spending if option 3b – application of a threshold of three months – is applied (*Tables 23 and 24*). The budgetary impact differs for each of the Member States and depends on the percentage of aggregated cases applicable to a period of insurance, employment or self-employment below three months compared to the total number of aggregated cases. For instance, Cyprus and Hungary will experience almost no decrease of public unemployment spending under option 3b. These estimates only include the budgetary impact on public unemployment spending. However, also public spending on social assistance applicable to recent unemployed migrant workers who fall below the threshold could be taken into account. This will also limit the financial 'gain' when applying a threshold of one or three months. The impact of option 4 – the calculation of the unemployment benefit will also be based on the salaries in the Member State of origin if a period of insurance, employment or self-employment of less than one month (sub-option 4a) or three months (sub-option 4b) has been fulfilled in the Member State of last activity – depends strongly on the breakdown by Member State of origin. If average earnings in the Member State of origin are higher than the average earnings in the Member State of last activity, competent Member States will experience a higher budgetary cost compared to the baseline scenario. However, the real impact will be flattened for some competent Member States given that they have defined a ceiling of earnings taken as a reference and/or a minimum and/or a maximum level of the unemployment benefit.

## CONCLUSIONS

The unemployment chapter of Regulation (EC) No 883/2004 provides for specific coordination rules for the aggregation of periods of insurance, employment or self-employment in the case of unemployment. Aggregation will be applied to those unemployed recent migrant workers who have completed their most recent periods of insurance, employment or self-employment in the Member State where the benefit is claimed. In some cases the period of insurance, employment or self-employment is insufficient to be entitled to an unemployment benefit. In that case additional periods of insurance, employment or self-employment completed by the person in a Member State other than the competent State are required.

In the framework of an impact assessment of a revision of Regulation (EC) Nos 883/2004 and 987/2009 by the end of 2015 the Commission requires a preparatory study on the economic impact of an amendment of the aggregation rules for unemployment. The Commission proposed several alternative options, to be compared with a first option representing the current situation, i.e. the 'status quo'.

- **Option 1** – Status quo: “maintaining the wording of Article 61”;
- **Option 2** – The formalisation of the “one-day rule”;
- **Option 3** – The introduction of a minimum period for aggregating periods of insurance, employment or self-employment;
  - **Sub-option 3a: one month** of insurance, employment or self-employment needs to be completed before aggregation can be applied.
    - **Sub-option 3a1:** *Previous Member State is responsible for paying the unemployment benefits for those workers who, in the Member State of last activity, have not completed one month of insurance, employment or self-employment.*
  - **Sub-option 3b: three months** of insurance, employment or self-employment needs to be completed before aggregation can be applied.
    - **Sub-option 3b1:** *Previous Member State is responsible for paying the unemployment benefits for those workers who, in the Member State of last activity, have not completed three months of insurance, employment or self-employment.*
- **Option 4** – A change of the calculation method of the unemployment benefit.
  - **Sub-option 4a:** the salary earned in the previous Member State is also taken into account for the calculation of the unemployment benefit by the competent Member State, if less than **one month** of insurance, employment or self-employment is completed.
  - **Sub-option 4b:** the salary earned in the previous Member State is also taken into account for the calculation of the unemployment benefit by the competent Member State, if less than **three months** of insurance, employment or self-employment is completed.

Different components (the number of new EU-28/EFTA movers; the number of unemployed new EU-28/EFTA movers; the period of insurance, employment or self-employment completed in the last Member State of activity; the qualifying period; the amount of the unemployment benefit and the duration of unemployment) will determine the budgetary cost of new EU-28/EFTA movers who became unemployed after a short period of insurance, employment or self-employment.

In 2012, some 1.8 million EU-28/EFTA citizens of working age moved to another EU Member State/EFTA country and some one in ten of these new EU-28/EFTA movers were unemployed. This group might need to prove periods of insurance, employment or self-employment completed in a Member State other than the competent Member

State in order to be entitled to an unemployment benefit. To which extent aggregation is required (expressed by the number of PDs U1 or SEDs U002) will also depend on the qualifying period required under the legislation of the competent Member State. Most Member States apply a qualifying period of some 12 months. However, it should be noted that there are also large differences in the time in which this period must be completed. It will make the accomplishment of the acquired period more severe or less severe.

In almost all Member States the earnings preceding unemployment are taken into account as a reference basis for the calculation of the unemployment benefit. Nonetheless, the applied calculation methods vary from taking into account the last salary earned to the average earnings of several months. In case of aggregation the calculation method (as defined in Article 62 of Regulation (EC) No 883/2004) provides that only the salary or professional income received by the person concerned in respect of the last activity in the competent Member State is taken into account. However, option 4 is revising this by also taking into account the salary earned in the previous Member State of origin if a period of insurance, employment or self-employment of less than one month (sub-option 4a) or three months (sub-option 4b) has been fulfilled in the Member State of last activity .

The budgetary impact of the aggregation of periods for unemployment on total unemployment spending is very limited. Approximately 0.11% of total unemployment spending by the reporting Member States could be related to the aggregation of periods for unemployment.

All Member States will experience the lowest budgetary impact on their public unemployment spending if option 3b – application of a threshold of three months – is applied. The budgetary impact differs for each of the Member States and depends on the percentage of aggregated cases applicable to a period of insurance, employment or self-employment below three months compared to the total number of aggregated cases. These estimates only include the budgetary impact on public unemployment spending. However, also public spending on social assistance applicable to unemployed recent migrant workers who fall below the threshold could be taken into account. This will also limit the financial 'gain' when applying a threshold of one or three months.

In case the previous Member State is responsible for paying the unemployment benefits for those workers who, in the Member State of last activity, have not completed one or three months of insurance, employment or self-employment this additional cost should be added to the budgetary cost Member States will experience as Member State of last activity. However, most of the aggregated cases apply to a period of insurance, employment or self-employment of more than three months and implies that the previous Member State only for a limited number of cases will be responsible for paying the unemployment benefit. Nevertheless, figures show already that this will lead to a higher budgetary impact for some Member States compared to the current rules.

The impact of option 4 – the calculation of the unemployment benefit will also be based on the salaries in the Member State of origin if a period of insurance, employment or self-employment of less than one month (sub-option 4a) or three months (sub-option 4b) has been fulfilled in the Member State of last activity – depends strongly on the breakdown by Member State of origin. If average earnings in the Member State of origin are higher than the average earnings in the Member State of last activity, competent Member States will experience a higher budgetary cost compared to the baseline scenario. However, the real impact will be flattened for some

competent Member States given that they have defined a ceiling of earnings taken as a reference and/or a minimum and/or a maximum level of the unemployment benefit.

## HOW TO OBTAIN EU PUBLICATIONS

### Free publications:

- one copy:  
via EU Bookshop (<http://bookshop.europa.eu>);
- more than one copy or posters/maps:  
from the European Union's representations ([http://ec.europa.eu/represent\\_en.htm](http://ec.europa.eu/represent_en.htm));  
from the delegations in non-EU countries ([http://eeas.europa.eu/delegations/index\\_en.htm](http://eeas.europa.eu/delegations/index_en.htm));  
by contacting the Europe Direct service ([http://europa.eu/europedirect/index\\_en.htm](http://europa.eu/europedirect/index_en.htm))  
or calling 00 800 6 7 8 9 10 11 (freephone number from anywhere in the EU) (\*).

(\* ) The information given is free, as are most calls (though some operators, phone boxes or hotels may charge you).

### Priced publications:

- via EU Bookshop (<http://bookshop.europa.eu>).

### Priced subscriptions:

- via one of the sales agents of the Publications Office of the European Union ([http://publications.europa.eu/others/agents/index\\_en.htm](http://publications.europa.eu/others/agents/index_en.htm)).

**ANNEX XV: ADMINISTRATIVE COSTS 2014 PACKAGE**

For the assessment of the administrative and implementation costs, a **limited number of Member States** has been selected as a sample.

For **long-term care benefits**, these countries are:

- Austria, Belgium, Germany, Luxembourg, Poland and the United Kingdom.

For **unemployment benefits**, these countries are:

- Austria, Belgium, Luxembourg, Poland, Romania and the United Kingdom.

The selection criteria applied are:

- 1) The high number of cross-border workers in these countries and experience with managing cross-border cases;
- 2) The efficiency level and the degree of automation in place;
- 3) The geographic balance;
- 4) The willingness of the national administrations to collaborate.

#### LONG-TERM CARE BENEFITS

For long-term care, it appears that the situation is very complex, as it encompasses different cares that are not understood in the same way in the whole EU and that imply a fragmented landscape of responsible and implementing actors in some Member States (e.g. over 70 different bodies are involved in Germany, while each of the 17 regions of Spain also has a different system; in many Member States, local entities are a dominant actor, etc.). The different national specificities result in a large variety of situations which may have a significant impact on the administrative burden when dealing with cross-border cases for long-term care.

There are a number of examples demonstrating the complexity of the processing of cross-border cases for long-term care which can result in administrative cost and burden for Member States' authorities:

- According to the interviewees, there is legal uncertainty about which benefits should be coordinated under the Sickness Chapter. Some countries still do not consider the care (social assistance) they provide as being included in the Sickness Chapter;
- In our survey to the national administrations, around 50% of national administrations that are opposed to changes to the current coordination rules state that the current rules need only to be better applied in practice and to be better explained. National administrations who are in favour of a change of the current rules say that the identified problems (legal uncertainty, complex regulation and uneven applications of the rules by Member States) will persist if no change occurs;
- Not in all Member States (particularly not in Member States that generally are in favour of keeping the status quo such as Germany, Austria and the Netherlands) administrative burden was perceived as a major concern by national administrations. One Danish interviewee gave the following argument to put the administrative burden into perspective:

---

<sup>80</sup> Source: Deloitte, Consulting Study for the impact assessment for revision of Regulations (EC) Nos 883/2004 and 987/2009, 6 December 2013.

*“Before 2009, Germany did not ask reimbursement to Denmark for costs that it incurred by provision of LTC services to citizens that fell under the Danish system, based on a special agreement between both Member States. However, recently, Germany asked to reintroduce a reimbursement system again between both countries. The fact that Germany asked to reinstall a reimbursement system again shows that other aspects seem more important for Germany than administrative burden from reimbursement claims, for example the financial impact of LTC services provided by Germany.”*

- A German health insurance considered the reimbursement of LTC benefits to be slow and problematic from an administrative point of view:

*“There are EUR 500 000 – 600.000 interest costs per year that my organisation has to bear because of non- or late payment. The reimbursement mechanism is not functioning well and needs a substantial revision of the rules. There is an outstanding amount of EUR 12-13 million in 2013. Late payments can be the result of checks/scrutiny of services rendered by the country of residence; however, the checks do not justify a waiting period of up to 18 months in some cases. The time needed for checks should be reduced substantially. The reimbursement mechanism could be made more efficient by using lump sum compensation mechanism. However, the views about its effectiveness are divided amongst the insuring companies.”*

- An Austrian representative of a health insurance fund confirms the long processing time of reimbursement:

*“Particularly the reimbursement of LTC benefits in kind by the competent MS poses difficulties. Often, the information about the amount/costs of benefits in kind rendered by the Member State of residence reaches the competent Member State (which reimburses these costs) very late. Regularly, it takes 1-1.5 years to reimburse such claims. The rules stipulating information procedures should be more detailed (e.g. duty for monthly information provision of the value of the benefits in kind rendered by the MS of residence). The time-bound provision of information by all Member States is of key importance as to ensure an effective application of the reimbursement mechanism”.*

In general, regardless if they believed that administrative burden from the current rules is a major problem or not, only a small minority of national administrations have a good view on the actual administrative burden or are able to support their arguments with quantitative data or a detailed description of the burden. The lack of concrete (quantitative) evidence adds to the difficulty for making a sound judgment about this issue.

In terms of substantiation of the administrative costs related to the current rules and considering the limitations of the application of the SCM methodology in this exercise, we present in the table below the estimated costs related to processing of the PD S1 document.

Despite the data limitations resulting from the problems discussed in this chapter, the assessment of the administrative cost (baseline scenario) for the PD S1 document provides a robust basis for assessing the theoretical impact (positive or negative) of the different policy options on the administrative cost.

The methodology for assessing the administrative cost is based on the following formula:

$$\text{Time (T) x Wage (W) x Number (N)}$$

The hourly rate is EUR 18 per hour. We provide an estimate for the total number of cases for processing PD S1 documents for the EU-27.

### **Estimated current administrative cost (Baseline Scenario)**

The PD S1 form allows a person to register for healthcare in the country of residence. This form is delivered per person (not per family). The number of PD S1 forms issued provides insight into the number of people who (may) receive LTC benefits in another Member State. In the framework of this study, we have collected data on the number of PD S1 documents ‘issued’ by category of citizen and have estimated expenditure on LTC benefits. In addition, we have collected data on the number of PD S1 documents issued for Poland and Belgium by means of a workshop with experts in the respective countries. In this section, we use the data available to calculate the

estimated administrative cost for processing a number of documents related to long-term care in a cross-border case.

In order to assess the administrative costs for the EU-27 stemming from the processing of the PD S1 documents, we have carried out the following steps according to the Standard Cost Model (SCM):

### 1. Calculation of the unit cost per case:

The unit cost per case (processing/handling of a PD S1 form by the administrative staff – clerk) provides insight into the total cost for processing one PD S1 document. It is based on the following formula:

$$\text{Time (T) x Wage (W)}$$

During the workshops in the Member States, we have collected data on the average standard time spent for processing/handling a PD S1 document. Robust data are available only for Poland. The estimated time for processing one PD S1 document in Poland is estimated at 60 minutes.

The hourly rate for processing the administrative tasks is EUR 18; this results in a rate per minute of EUR 0.3 (EUR 18/60 minutes). The average unit cost for the EU-27 per case of handling a PD S1 document is EUR 18<sup>81</sup>. It is calculated on the following basis: Time (60 minutes) x Wage (EUR 0.3).

Caution should be paid when interpreting this estimated unit cost as the result is based on an example of one country only (Poland) which seems to have a rather efficient way of processing PD documents (see also the discussion on the processing of PD U1 documents above). It can be expected that the time for processing a PD S1 document in the other Member States may differ (substantially). Due to data limitation, however, we have calculated the administrative cost on the basis of the Polish example.

### 2. Number of cases:

In our research, we have estimated data for the number of PD S1 documents ‘issued’ for the EU-27 countries on the basis of our own calculations based on data from LFS (for a detailed discussion on the estimated number of PD S1 issued by category of citizen, see section 4.2.5 in this report). The total estimated number of PD S1 documents ‘issued’ in the EU-27 is estimated at around 1 980 000.

### 3. Calculation of the administrative cost (per Member State and for the EU-27)

We have calculated the administrative cost for processing PD S1 documents on the basis of this formula:

$$\text{Time (T) x Wage (W) x Number (N)}$$

The table below presents the total estimated administrative cost for processing PD S1 documents. The **estimated total cost for the EU-27 is EUR 35 632 000**. Within the EU-27, the estimated total cost for processing PD S1 documents was highest (> EUR 3 000) in a number of the old Member States (in descending order): Germany, the UK, Luxembourg, the Netherlands, Austria and Italy. It was lowest (< EUR 100) in a number of the new Members States (in descending order): Cyprus, Bulgaria, Slovenia, Estonia, Malta, Lithuania and Latvia.

---

<sup>81</sup> Standard time (60 minutes) x EUR 0.30 (average wage – clerk level) = EUR 18

**Table 1: Estimated administrative cost - PD S1 'issued', EU-27, EUR, 2013, in 000**

Country	Competent country	
	Total number of PD S1 issued	Total cost (EUR)

Source: Own calculations HIVA based on data from LFS and workshop in Poland

We have also calculated the administrative cost for processing a number of other documents related to long-term care benefits for Poland by applying the following formula: Time (T) x Wage (W) x Number (N). Data were collected for the following documents:

Member State of residence:

- Service of E125 forms.

Competent Member State:

- Request for the issue of S1 document/ E100 series form (service of E107/E001 forms);
- Registration of the S1 document;
- Registration of the E100 -series form (part B);
- Service of SED S001 documents;
- Issuing E125 forms.

There are no data available for the EU-27 for these documents; a calculation of administrative cost for these documents is therefore not possible at this stage. We present the data only for Poland, where robust data are available. The table below presents the total estimated administrative cost for processing the documents for Poland presented according to 'Member State of residence' and 'Former working Member State':

*Source:* Own calculations based on collected administrative data and 2012 Ageing Report and data provided during the workshops on administrative burden (Poland, Belgium and Romania).

The number of cases is multiplied by **standard stylized estimated** cost per case. Standard because we use for each country the same cost, stylized because round figures are used and estimated because we have only partial and anecdotic information for two countries, Belgium and Poland. Those parameters can however easily be changed in this kind of calculations when more solid information becomes available. Stylized is also the fact that we do not reproduce all administrative steps for this kind of benefits: the intake of the patient, the decision process to allocate a benefit, the administrative burden to pay a patient, to claim in needed the reimbursement, to verify the entitlements, to reimburse, or claim reimbursement of some of the administrative burden etc. Here we make the hypothesis that in the country of residence the administrative burden for the intake for a benefit in kind is € 60, as it is also € 60 for the benefit in cash. This intake is here to take place in the country of residence, although situations are thinkable that people were already entitled to this benefit before they moved (as a pensioner for instance) from the previous country of residence to a new one. In the case of a benefit in kind also in the competent state an additional cost needs to be made for the handling of this process. On top of that for the payment in kind, based on the level of the country of residence and organised in the country of residence, a reimbursement process is needed, here supposed at € 20 euro per case, triggering at the same time a similar cost in the competent country. Multiplying those standard costs with the number of cases results to an average administrative cost for the in kind cases of € 4.8 million, and € 3.6 million for the in cash cases. The % of this administrative cost to the total budgetary cost is some 0.8% for the in kind benefits, and 1.0% for the in cash benefits. The grand total is some 0.9 % of which the major part of the administrative burden is at the expense of the country of residence while the budgetary cost is completely to be paid or reimbursed by the competent country.

### Estimated current administrative costs and burden

#### *Data limitations*

In order to allow the stakeholders to identify the time spent on the information obligations related to the Regulations, we have defined prior to our visits in the Member States a standard legal process stemming from the Regulations, in cooperation with the Commission.

During our first visits, we noticed several issues concerning this process:

- National administrations have developed their own administrative processes for processing/handling documents related to cross-border cases for unemployment benefits and long-term care. These differ substantially between the Member States. As a result, the experts in the respective countries faced difficulties in plugging the suggested administrative processes into their national way of working (processing documents);
- The legal process encompassed several sub-administrative processes and documents and therefore Information Obligations (IOs). The complexity of the different processes proved to be an obstacle in making precise estimations of the (estimated) time spent for each of the processes. The experts were often not able to provide robust data on the time spent per each of the steps defined by the legal process.

Moreover, as the Regulations impose “principles” of coordination more than specific information obligations in the sense of the SCM, and as the principles were already applied partly or integrally by the administrations or applied still differently, it proved to be impossible for the stakeholders to differentiate the specific administrative burden<sup>82</sup> created by the Regulations from the *business-as-usual* (the administrative tasks they would perform anyway in the absence of the Regulations).

Another consequence of the nature of the Regulations is that each national process is different, meaning that it results in different requirements, documents, times and complexity. It makes impossible to standardize one process that fits all national specificities.

There are examples demonstrating the complexity of the processing of cross-border cases for unemployment benefits which can result in administrative cost and burden for Member States’ authorities:

- The occasionally ‘blurry’ distinction between frontier workers and other cross-border workers, the distinction between wholly and partially unemployed frontier workers, the highly interpretable character of the criteria to determine the residence of a worker, the provisions on the aggregation of periods of insurance, employment and self-employment, and the reimbursement mechanism were mentioned as factors rendering the current coordination rules as complex;
- While these regulatory distinctions intend to reflect the complexities of real situations and account for the actual differences between different types of cross-border workers and different types of national systems, the result is a striking variety of possible cases in which the interpretation of the rules carried out by each institution plays a significant role;
- There are notable differences in the interpretation and application of the rules on the aggregation of periods and the extension of the period of export of unemployment benefits;
- The classic distinction between frontier workers and other cross-border workers has become more problematic. Inter alia, the improvement and reduction in the cost of different means of transportation has allowed workers to cover ever larger differences to commute daily or weekly for work. The elements fixed in Article 11 of Regulation (EC) No 987/2009 are broad

---

<sup>82</sup> The administrative burden is burden created by a legal requirement while the administrative cost is the full cost of an administrative process, including the business as usual.

enough to prevent mobile workers to know with certainty their country of residence and hence the legal regime applicable to them in case of unemployment;

- The reimbursement mechanism was often criticized, including claims considering that it should be made more transparent (Belgium) and that clear guidelines should be provided to each country (Luxembourg).

While the interviewees in certain countries defended that the current rules are sufficiently clear (e.g. the German Employment Services), the prevalent view was that the current coordination rules do not facilitate transparency and could be simplified. The burdensome character of the current rules was also criticized in countries which did not call for a revision of the coordination rules.

The diversity of opinions and practices in the application of certain aspects of the coordination rules is a testimony to the complexity of the rules and the lack of transparency they generate (since, given a similar situation in different regions, the similar outcome is not guaranteed). This complexity and incoherent understanding and application of the rules create a substantial (administrative) burden for the (national) administrations. This ‘burden’ is inherent to the management of cases where different understanding and national administrative processes apply; it goes beyond the definition of the administrative burden of the SCM where it is related to legal information obligations.

Around 40% of the participating public administrations reported that the EU rules create significant administrative costs and burden for national administrations. They consider the different types of forms/documents used per country, the varying requirements/understanding in terms of the information needed to fill out the documents, their mandatory or optional character and advance the procedures, and the different delays in the completion and transmission of documents as some of the most salient and recurrent problems. The reimbursement mechanism was repeatedly mentioned as a source of burden mainly due to the slow and ineffective communication between Member States.

*“There are high administrative costs in what concerns to the reimbursement of the unemployment benefits that were paid. Moreover, we would highlight the delay on the treatment of the processes and the requests for payment that are denied. Because the EU rules create significant administrative costs and burdens for national administrations, EU law is not uniformly “understood” and applied by Member States and vice versa. ... Paper SEDs are not always suitable for the exchange of information and not all MS use the same documents/forms. Reimbursement procedures create high administrative burden and important costs for both the MS of last activity and the MS of residence and the cost/benefit ratio is not effective, mainly for the MS of residence. The communications between institutions is slow and needs to be more effective.”*

Several public officials expect the administrative burden to decrease in the next couple of years as a result of learning effects after the successful implementation and alignment of the rules. While the adoption of the Regulations took place ten years ago, it has taken time to fine-tune the implementation of the new rules and procedures. The lack of sound implementation of the new rules and procedures is particularly visible in a number of Member States. According to the online survey, 64% of the administrations stated that the communication (with other Member States) works well in general. However, there are problems with specific Member States. These reported problems are expected to be the main source of administrative costs.

Technological evolution could resolve some of the problems related to cooperation and communication. However, divergent interpretations of the rules and the information requirements for the completion of portable documents will continue to pose difficulties in the proper application of the Regulations.

In light of the limitations associated with the quantification of information obligations stemming from the application of the Regulations, we have adapted our approach for quantifying the IOs resulting from the Regulations and for assessing the (potential) impact of the policy options on the overall administrative process. In our analysis, we focused on a selected number of documents for which the stakeholders were able to provide robust information on a) the time spent to process/handle a document and b) the (approximate) number of cases.

We have collected useful information on the processing of documents related to cross-border cases for unemployment benefits on a) the estimated time and b) the number of cases in the following countries: Belgium, Poland, Luxembourg and Romania by means of a workshop. Other countries have provided a wealth of qualitative information which is useful for understanding the underlying problems related to the processing of the different documents and for assessing the (potential) impacts of the different options.

Despite the data limitations resulting from the problems discussed in this chapter, the assessment of the administrative cost (baseline scenario) for a number of key documents provides a robust basis for assessing the theoretical impact (positive or negative) of the different policy options on the administrative cost.

### *Aggregation of periods of employment/insurance/self-employment*<sup>83</sup>

The number of PD U1/E301 documents received/issued provides insight into the extent to which periods of insurance and (self-) employment in another Member State were taken into account when granting unemployment benefits. For the purpose of the assessment of the administrative costs, we do not make any distinction between PD U1 documents and E301 documents (Member States are using either of the documents, depending on their national administrative processes). Both documents are treated interchangeably for the purpose of this exercise.

In the framework of this study, we have collected data on the number of PD U1 documents ‘issued’ and ‘received’. The following countries provided data on the total number of PD U1 documents ‘issued’: Belgium, Estonia, Luxembourg and Romania. With regards to the number of PD U1 forms ‘received’, we have collected data for Belgium, Estonia, France, Poland, Romania, Slovak Republic, Sweden and the UK. In addition, we have collected data on the aggregation of periods of employment/insurance/self-employment by means of a workshop in the following countries: Belgium, Poland and Romania (data provided for E301 only).

In order to assess the administrative costs for the EU-27 stemming from the processing of the PD U1 documents, we have carried out the following steps according to the Standard Cost Model (SCM)<sup>84</sup>:

#### **Calculation of the unit cost per case:**

The unit cost per case (processing/handling of a PD U1 form by the administrative staff – clerk level) provides insight into the total cost for processing one single PD U1 document (in a given Member State). It is based on the following formula:

$$\textit{Time (T) x Wage (W)}$$

During the workshops and interviews in the Member States, we have collected data on the average standard time spent for processing/handling a PD U1 document for the following countries: Poland (5 minutes), Belgium (60 minutes) and Romania (363 minutes)<sup>85</sup>. As the data show, there are stark differences between the lowest time for processing data/information (Poland - 5 minutes) and countries where the processing time is relatively higher (Romania - 363 minutes). Belgium (60 minutes) ranges in the middle.

In Poland, for example, the process for handling PD U1 documents is automatized - Poland uses the portable documents efficiently (the administrative staff faces less administrative burden). According to the interviewees (national administration), the handling of the documents is reported to be less burdensome.

In Romania, on the other hand, the administration of E301 documents (note: not PD U1 in this case) is reported to be more burdensome. According to the interviewees, the administration of simple cases, with limited or no clarifications requested from the beneficiary or employer, may take minimum 1 hour of work in total for the person in charge<sup>86</sup>. The administration of complex cases, with a lot of missing, inadequate or incorrect information in the dossier, may request up to 8 hours of effort from the person in charge. In such cases, the

---

<sup>83</sup> See also **Error! Reference source not found.**

<sup>84</sup> Based on the following formula: Number of cases (N) x Wage (hourly tariff) (W) x Time (minutes) (T).

<sup>85</sup> We have also received a rough, undetailed estimation of the issuance of E 301/PD U1 document for the Netherlands (source: public employment service UWV). The average administrative burden to issue this document is estimated at 30 minutes (comparable to Belgium’s estimates). 90% of the cases is processed within 8 weeks.

<sup>86</sup> There are no legislation/manual/ instructions/guidelines explaining step by step what the Romanian authorities need to do specifically for each procedure for unemployment under the Regulation; in fact, no other Romanian authority has prepared any specific national legislation/manual/instructions/guidelines related to the implementation of the Regulation, with the exception of the Pensions Authority. The Regulation 883/2004 is implemented in Romania via the Intermediary Body (National Labour Office) and Competent Institutions (County Labour Offices – 42 in total). The Intermediary Body mainly acts as a facilitator of contacts between Romanian institutions and foreign ones, as well as trainer and day-to-day support to county offices meeting difficulties in implementation of the Regulation. In the Intermediary Body there are two persons working on the Regulation (one person is 100% dedicated to the activities related to the Regulation, the other one dedicates approximately 70% of his/her time to the Regulation).

respective civil servant assumes an active role in the completion of a correct dossier and starts giving phone calls, researching different taxes and employment data bases etc.

Based on the interviewees' responses for Poland, Belgium and Romania, it can be assumed that these three countries give good indications for calculating the average unit cost for processing/handling a PD U1 document: Poland (low administrative burden – 5 minutes), Belgium (average administrative burden – 60 minutes) and Romania (high administrative burden – 363 minutes).

For consistency and comparability with other SCM assessments of EU regulation, the tariff variable used in this study is based on hourly labour costs (plus overheads) per category of employment that has previously been used in recent SCM studies for DG EMPL<sup>87</sup> and our recent Impact Assessment studies we have conducted for the Commission. We have applied an average tariff/hour of EUR18. It results in a rate per minute of EUR 0.3 (EUR 18/60 minutes).

The **average unit cost for the EU-27 is EUR 42.8**. It is calculated on the following basis: Time ((5 minutes (Poland) + 60 minutes (Belgium) + 363 minutes (Romania)) / 3) x Wage 0.3 = **EUR 42.8**

## 1. Number of cases:

We have collected data for the number of PD U1 documents 'received' for the following countries: Belgium, Estonia, France, Poland, Slovak Republic and the UK. We have estimated the number of PD U1 documents for the other EU-27 countries on the basis of our own calculations based on collected administrative data and the 2012 Ageing Report (see section 4.1.2.1 for more detailed information on the number of PD U1/E301 forms 'received' and 'issued'). We were able to calculate the estimated administrative cost for the EU-27 on the basis of this data. The total estimated number of PD U1 documents 'received' in the EU-27 in 2010 is around **340 000**.

## 2. Calculation of the administrative cost (per Member State and for the EU-27)

We have calculated the administrative cost for processing PD U1 documents on the basis of this formula:

$$\text{Time (T) x Wage (W) x Number (N)}$$

The table below presents the total estimated administrative cost for processing PD U1 documents. The **estimated total cost for the EU-27 in 2010 was EUR 14 604 326**. Within the EU-27, the estimated total cost for processing PD U1 documents was highest (> EUR 1 million) in a number of the old Member States (in descending order): Spain, France, Germany and Italy. It was lowest (< EUR 100 000) in descending order in Sweden, Estonia, Slovenia, Cyprus, Luxembourg and Malta.

---

<sup>87</sup> For instance: *Review of the Working Time Directive 2003/88/EC: measuring administrative costs and burdens of various possible options*. Economisti Associati srl, 21/12/2011. This study presents a tariff per MS and per level (managerial and clerical staff) that we have averaged. The result is in line with the tariff we use in other SCM that we have conducted for other European Commission DGs.

Source: Estimate based on collected administrative data and 2012 Ageing Report and data provided during the workshops on administrative burden (Belgium, Poland and Romania).

We have also calculated the average administrative cost for processing/handling a number of other documents, based on the data available. We were only able to produce the administrative cost for processing PD U1 documents ('received') for the EU-27 as we had data available for the EU-27 on the basis of our own calculations (there are no calculations for the other documents presented below).

We have calculated the administrative cost for 'issuing' a PD U1 document ('issued') for Poland and Belgium (based on the data we have collected during the workshops in the different countries). The total estimated cost for 'issuing' a PD U1 document in Poland is estimated at EUR 19 800. The amount is EUR 103 698 in Belgium. The table below presents the estimated cost for 'issuing' a PD U1 document for Poland and Belgium.

**Table 7: Estimated administrative Cost – PD U1 ('issued'), Poland and Belgium, EUR, 2013**

	Poland	Belgium
Unit cost per case (EUR)	6.6	9
Number of cases	3000	11522
Total cost (EUR)	19800	103698

Source: Deloitte, Workshop, Poland and Belgium

We have also estimated the cost for the following documents for Poland<sup>88</sup>:

- SED U004 'Salary Info' (answer on SED U003);
- SED U006 'Family Info' (answer on SED U005).

<sup>88</sup> Poland has provided the most comprehensive data set on the administrative burden resulting from the information obligations stemming from the Regulation during the workshop.

The table below presents the estimated cost for processing the above-mentioned documents in Poland. The total estimated cost for processing a SED U004 document ‘Salary Info’ in Poland is EUR 402. The cost for processing SED U006 documents ‘Family Info’ is estimated at EUR 825.

**Table 8: Estimated administrative Cost –SED U004 ‘Salary Info’, SED U006 ‘Family Info’, Poland EUR, 2013**

### *Export of unemployment benefits<sup>89</sup>*

The PD U2 form is the authorisation which an unemployed person needs to export his/her unemployment benefit if (s)he wishes to move to another EU country to look for work. The competent national institution is responsible for granting this authorisation. There is a wide variety of practices in the EU-27 with regard to granting (and prolonging) authorisation to export unemployment benefit.

We have collected data on the number of PD U2 documents ‘issued’ for ten EU Member States: Austria, Belgium, Denmark, Estonia, Luxembourg, the Netherlands, Poland, Slovak Republic, Sweden and the UK. Taking together both components (survey data and own estimates) we estimate that 23.7 thousand unemployed persons have exported their unemployment benefits in 2010 (see section 4.1.3.3 for a detailed discussion on the calculation of the number of PD U2 ‘received’ and on the methodology for calculating missing data).

We have calculated the administrative cost for processing/handling a PD U2 document for the EU-27 using the following methodology:

#### **1. Calculation of the unit cost per case:**

The average unit cost per case is based on the data we have received from Poland (the only country for which we have received robust data on the time spent for processing a PD U2 document<sup>90</sup>). The average unit cost per case that we found concerns the export of an unemployment benefit to 3 months<sup>91</sup>. Following the formula Time (T) x Wage (W), we have estimated an average unit cost per case (PD U2 ‘issued’) at **EUR 4.5<sup>92</sup>**.

The estimated unit cost should be treated with caution, however, as it is based on one case only (Poland). As discussed in the section on the ‘aggregation of periods’, Poland seems to have an efficient (automatized) system for processing/handling PD documents (the processing of the documents is reported to be less burdensome). Therefore, it is to be expected, that the Polish example presents a rather positive picture on the overall time spent to process these documents. Other countries, such as Romania (which reported a much higher time spent for processing the PD U1 document) may report longer periods for processing/handling these types of documents. Due to data limitations, we have calculated the average unit cost on the basis of the Polish example.

<sup>89</sup> See also **Error! Reference source not found.**

<sup>90</sup> A rough, undetailed estimation was collected for the Netherlands (source: public employment service UWV).UWV estimated the average time needed to issue a PD U2 document at 1.5 hour. 90% of the cases are estimated to be processed within 5 weeks.

<sup>91</sup> We were not able to collect data on the average unit cost of a case where an unemployed persons export his unemployment for 6 months. Therefore, we needed to rely on a qualitative assessment to know how the administrative burden shifts if the export period is prolonged from 3 to 6 months.

<sup>92</sup> Average time to process a PD U2 document in Poland is approximately 15 minutes. The average wage (clerk) is estimated at EUR 0.3 per minute (EUR 18 per hour): 15 x EUR 0.3 = EUR 4.5.

## 2. Number of cases:

We have collected data on the number of PD U2 documents ‘issued’ by means of a questionnaire for the following countries: Austria, Belgium, Denmark, Estonia, Luxembourg, the Netherlands, Poland, Slovak Republic, Sweden and United Kingdom. In 2010, the total EU-27 number of PD U2 documents ‘issued’ is estimated at around 23 700.

## 3. Calculation of the administrative cost (per Member State and for the EU-27)

We have calculated the administrative cost for processing PD U2 documents (‘issued’) on the basis of this formula:

$$\text{Time (T) x Wage (W) x Number (N)}$$

The calculation includes the time spent on national administrative procedures supporting the processing of the SEDS and the time needed for processing the SED.

The table below presents the total estimated administrative cost for processing PD U2 documents. The **estimated total cost for the EU-27 in 2010 was EUR 106 695**. Within the EU-27, the estimated total cost for processing a PD U2 documents was highest (> EUR 10 000) in a number of the old Member States (in descending order): Spain, Germany and France. It was lowest (< EUR 500) in descending order in Slovenia, Slovak Republic, Estonia, Cyprus Malta and Romania.

**Table 9: Estimated administrative Cost –PD U2 (‘issued’), EU-27, EUR, 2010**

Country	Unemployed persons (20-64) - 2010 (in .000)	PD U2 certificates issued

*Source:* Estimate based on collected administrative data and 2012 Ageing Report and data provided during the workshops on administrative burden (Poland).

We have also estimated the cost for the following documents for Poland<sup>93</sup>:

Competent employment service:

- SED U011 'Effect to Entitlement - Export' (answer to SED U010);
- SED U012 'Request for monthly follow-up'.

Employment service of the MS where jobseeker has gone:

- Process PD U2;
- SED U007 'Request Document on Export';
- SED U009 'Notification Registration - Export';
- SED U010 'Circumstances Affecting Entitlement - Export' (linked with U3 form);
- Issue of PD U3 (linked with SED U010);
- SED U013 'Monthly Follow-up' (answer on SED U013);
- SED U028 'Request Entitlement to Export'.

The tables below present the total estimated administrative cost for processing the respective documents presented according to a) competent Member State and b) employment service of the Member State where the jobseeker has gone. The estimated unit cost per case is based on the data provided by Poland (T: time and W: wage (EUR 0.3)). Note that the unit cost per case differs from the one calculated for processing the PD U2 document in the documents presented below. We have not calculated the EU-27 average cost for all documents due to data limitations. Be aware that these costs occur separately, others are combined. There is no overview of the total number of flows. In the future this should be made possible by EESSI.

**Table 10: Estimated Administrative Cost – Competent employment service, SED U001, SED U012, Poland, EUR, 2013**

SED U011 'Effect to Entitlement - Export' (answer to SED U010)	
Unit cost per case (EUR)	1.5
Number of cases	11
Total cost (EUR)	16.5
SED U012 'Request for monthly follow-up'	
Unit cost per case (EUR)	2.4
Number of cases	120
Total cost (EUR)	288

## *Reimbursement claims*<sup>94</sup>

Claims for reimbursement can be made by the country of residence to the country of last activity for fully unemployed frontier workers but also for other cross-border workers who have decided to register with the competent institution in their country of residence. The country of last activity reimburses the unemployed benefits provided in the country of residence during the first three months or five months (when the unemployed person during the preceding 24 months, completed at least 12 months of (self)employment in the country of last activity). Reimbursement procedures are defined under art. 65(6) and (7) of Regulation (EC) No. 883/2004 and art. 70 of Regulation (EC) No. 987/2009.

### **1. Calculation of the unit cost per case:**

The average unit cost per case is based on the data we have received from Poland (the only country for which we have robust data on the reimbursement claims. Following the formula  $\text{Time (T)} \times \text{Wage (W)}$ , we have estimated an average unit cost per case for each of the individual documents.

### **2. Number of cases:**

We have collected data on the number of cases for Poland for a number of documents. There are no estimated data available for calculating the estimated total number of cases of reimbursement claims in the EU. For a detailed discussion on the number of claims received (as debtor) and the number of claims issued (as creditor) (see section 4.1.5)..

### **3. Calculation of the administrative cost (Poland)**

We have calculated the administrative cost for processing a number of documents related to reimbursement claims for Poland by applying the following formula:  $\text{Time (T)} \times \text{Wage (W)} \times \text{Number (N)}$ .

Data were collected for the following documents:

Member State of residence:

- SED U020 'Reimbursement Request';
- SED U025 'Reimbursement Receipt/Closing notification'.

Competent Member State:

- SED U021 'Reimbursement Full Acceptance' (possible answer to SED U020);
- SED U022 'Reimbursement Non Acceptance' (possible answer to SED U020);
- SED U023 'Reimbursement Partial Acceptance' (possible answer to SED U020);
- SED U024 'Reimbursement Payment Notification'.

The table below presents the total estimated administrative cost for processing the following documents for Poland presented according to 'Member State of residence' and 'Former working Member State':

Only **stylized estimates** can be made on the administrative burden. Only anecdotic information on the average cost of this administrative burden was available. Based on this information we suppose first of all that in the country where the unemployment benefit is paid, an average handling time of the cases of two hours, or € 40, is required. On top of that, when there is payment in the country of residence there is an administrative burden of some € 42.8 for the handling of a PD U1 in the country of residence and some € 20 (our hypothesis) in the country of last activity. On top of that there is in those cases in the country of residence and in the country of last activity a handling time for introducing a reimbursement claim and the settling of it. We suppose the same stylised estimate of € 20 in both countries. Multiplying this standard cost (in reality this cost can differ between the countries because of differences in organisation, productivity and wages) with the total number of cases provides us the total administrative cost in the country of residence and the country of last activity, for the payment of a benefit, including the control of the unemployed person, and the cost of reimbursement.

In Table 49 those amounts are calculated, and compared with the total budgetary cost of the unemployment benefits. Remember that the total amount of benefits is estimated on a yearly basis, while reimbursement on 3 months. In the baseline scenario the total administrative burden is € 8.3 million of which € 5.2 million in the countries of residence. This is 64% of the total administrative cost and this is a very similar % of the 71% of the budgetary cost. The share of the total administrative burden in the total budgetary burden is some 1.3%. It could be compared with the average administrative cost in the unemployment insurance.

Table 14: *Estimated number of unemployed cross-border workers and country responsible for payment and reimbursement*

## Executive Summary

Regulation (EC) No 883/2004 of the European Parliament and of the Council of 29 April 2004 on the coordination of social security systems specifies in Article 67 that a person is entitled to family benefits, also where his/her family members reside in another Member State. Currently, the entitlement is determined by the legislation of that person's Member State – henceforth called the Member State of primary competence. Family benefits are intended to contribute to families' expenses, which both depend on the number and the age of the children and on the costs of living. However, in a case of export of family benefits, the family benefit amount depends on the costs of living in the Member State of primary competence rather than that of the Member State of residence of the child – henceforth called the Member State of secondary competence<sup>1</sup>. For such cases the amount of family benefits paid can be higher or lower than could be argued by the local circumstances where the family resides.

Revisions to the current rules are therefore being considered to address inequalities that may result from differences in the costs of living in the Member States of primary competence in relation to those of the Member States of secondary competence. Such amendments aim to ensure that family benefits contribute equally to family expenses for all families in a given Member State, and to ensure an even distribution of the financial burden between Member States. However, such revisions to the rules may also have implications for the administrative costs and burden for the national administrations handling exports of family benefits as well as for the EU-citizens themselves and their families.

On this background, the present study looks into the following three possible revisions to Regulation (EC) No 883/2004:

- Option 1a: Adjustment of the amount of exported family benefits to the living standard in the Member State of secondary competence (residence of the child) – i.e. adjustment upwards or downwards compared to current situation.
- Option 1b: Adjustment of the amount of exported family benefits to the living standard in the Member State of secondary competence – limited to the amount provided by the Member State of primary competence.
- Option 3<sup>2</sup>: Change in the current order of priority: (1) Member State of residence of the child [secondary competence], (2) Member State of work [primary competence], and (3) Member State of pension [primary competence]. This means that the Member State of residence of the child has primary responsibility to pay the full amount of family benefits to which the entitlement exists under its national rules. The Member State of work (or pension) will top up this amount if the level of family benefits would be higher there. The family will thus receive the same amount of family benefits as before, but the allocation of the costs between the Member State of work (or pension) and the Member State of residence will differ from the current situation.

There is, however, no official information available on the costs of the different administrative tasks carried out by the national administrations in the Member States

---

<sup>1</sup> Not that the Member State of residence of the child is not always the state of secondary competence. For example, where both parents are economically active it will be the Member State of primary competence (Art 68(1)(b)(i)).

<sup>2</sup> Option 2 of no export of family benefits was initially considered for assessment, but was discarded because of concerns as regards its compatibility with Article 45(2) of the TFEU.

when handling a case of export of family benefits. Therefore, the study has obtained this information from its primary sources via interviews with national administrations. It was not feasible within the scope of Task 1 to gather such information for all 28 EU Member States. Hence, the results are based on analyses for six case study Member States: Germany, Denmark, Netherlands, Poland, Romania, and the UK.

### **Change in administrative costs and burden for national administrations of primary competence**

A first observation, when assessing the administrative costs and burden for the national administrations in the Member States acting as primary competence, is that most of these national administrations – at least in the six case study Member States – handle a significant number of cases annually. Germany experiences most cases with 62,587 (in 2013), followed by the UK (20,271) and the Netherlands (20,271). However, in comparison with the sizes of the national labour market, the amount of cases do compare in between the case study Member States – ranging from 0.56 cases per 1000 employed in Poland to 2.42 cases per 1000 employed in the Netherlands. Hence, from the outset it could be assumed that there within many national administrations is good experience with handling export of family benefit cases and there might be focus on the costs of doing so. In any case, the current total administrative costs are considered to be notable in an overall context.

Currently, the national administrations in the case study Member States use as shown in Table 0-1 on average around 2 man-hours per case, much of which is used for determining in which Member State the applicant and his/her family reside and in this context check whether the applicant is employed, unemployed, a posted worker or a civil servant. Relatively many resources are also spent on calculating the benefits that the given applicant is entitled to according to the given national legislation. This involves contacting the Member State of residence of the applicant's family to investigate the applicant's entitlement to family benefits in this Member State – i.e. to check for overlapping benefits, and it involves setting the payment of family benefits in motion. The UK and Denmark spend most resources per case, while the other case study Member States are at a lower but similar level.

*Table 0-1 National administrations handling exports of family benefits as primary competence, man-hours per average case*

<b>Administrative tasks</b>	<b>DE</b>	<b>DK</b>	<b>NL</b>	<b>PL</b>	<b>RO</b>	<b>UK</b>	<b>Av.<sup>(2)</sup></b>

<b>TOTAL</b>	<b>1.36</b>	<b>3.70</b>	<b>1.92</b>	<b>1.21</b>	<b>1.46</b>	<b>5.25</b>	<b>1.93</b>

Sources: Interviews.

Notes: <sup>(1)</sup> Annual control concerns exiting case and has so not been included in the total for new cases. <sup>(2)</sup> The UK estimates are considered too uncertain to be included in the average.

This study assesses as shown in Table 0-2 that the administrative tasks of the national administrations of primary competence are expected to increase by around one man-hour per case or by around 50% - no matter whether it is decided to implement Option 1a, Option 1b or Option 3. In other words the additional administrative efforts increase by similar amounts whether an requirement to take into account living standards in other Member States is introduced (Options 1a and 1b), or whether there is a change in the order of responsibility (Option 3). The major increase in absolute terms of man-hours is that for the calculation of benefits (around 40 minutes extra per average case). For example, where the calculations in many cases currently are being processed automatically, it will be necessary to make specific calculations in each case. In relative terms, the largest increase (around 140% = additional 6 minutes extra per average case) in the administrative burden is that for the reimbursement activity, as the more complex family benefit calculation rules are expected to lead to more cases where provisional family benefits are paid out in the Member State of secondary competence, and so have to be reimbursed by the Member State of primary competence.

*Table 0-2 Change in the man-hours per administrative task for exports of family benefit cases handled by national administrations as primary competence (simple average of case study Member States<sup>(2)</sup>)*

Note: <sup>(1)</sup> Annual control concerns exiting case and has so not been included in total for new cases. <sup>(2)</sup> No estimates for the UK, and so excluded from the average calculation.

In monetary terms, the assessment is as shown in Table 0-3 that the revisions will lead to notable increases in total administrative costs ranging from 5,600 EUR in Poland (Option 3) to 1,156,900 EUR in Germany (Options 1a and 1b). The low figures for Poland is combination of a relative low number of cases and low labour costs, while the opposite is the case for Germany.

### **Change in administrative costs and burden for national administrations of secondary competence**

The observation that most national administrations of primary competence handle a significant number of export of family benefit cases annually few cases of unemployment period aggregations implies that this also will be the case for most national administrations of secondary – as the total number of cases is the same from both perspectives for the EU as a whole. Poland experiences with 62,047 (in 2013) by far the largest number of cases, followed by Germany with 20,918 cases. In relation to the size of the national labour market, Poland handles with almost 4 cases per 1000 employed most, while at the other end the UK handles 0.11 cases per 1000 employed.

Currently, the national administrations in the case study Member States use as shown in Table 0-4 on average just above 1.5 man-hours per case, much of which is used for determining in which Member State the applicant and his/her family reside and in this context check whether the applicant is employed, unemployed, a posted worker or a civil servant. As for the national administrations of primary competence, many resources are also spent on calculating the benefits that the given applicant is entitled to according to the given national legislation. Actually, many of the national administrations do not see many differences in tasks and efforts per case being of secondary or of primary competence.

*Table 0-4 National administrations handling exports of family benefits as secondary competence, man-hours per average case*

Notes: <sup>(1)</sup> Annual control concerns exiting case and has so not been included in total for new cases. <sup>(2)</sup> The UK estimates are considered too uncertain to be included in the average.

This study assesses as shown in Table 0-5 that the administrative tasks of the national administrations of secondary primary competence on average will increase by almost one man-hour per case or by just above 50% - if it is decided to implement Option 1 or Option 1b, and slightly less if Option 3 is implemented. In absolute terms the largest increase is by far that for the calculation of benefits as more complex calculation rules will have to be implemented. Furthermore, there will be additional communication with the relevant Member States of primary competence to deal with. In relative terms, the largest increase in the administrative burden is - similar to when being of primary competence - that for the reimbursement activity.

In monetary terms, the assessment is as shown in Table 0-6 that the revisions will lead to increases in total administrative costs in most Member States – although ranging from a slight fall of 39,800 EUR in Poland (Option 1b) to 386,700 EUR in Germany (Options 1a and 1b). The fall in administrative costs for Poland in Option 1b derives from the assessment of the Polish interviewees that they can reduce their contribution to calculating benefit rates in more cases.

*Table 0-6 Change in unit costs per case and total costs handling export of family benefit cases by national administrations as secondary competence – main calculation*

### **Change in administrative costs and burden for mobile EU-citizens and their families**

The proposed revisions to the EU provisions may well have implications for the mobile EU-citizens and their families. However, it is suggested that in particular Option 1a and 1b may have minor implications, while Option 3 may increase the administrative burden from increased requirements to verifications of the residence of the children. In general, the longer processing times of the cases may be considered as adverse effect. This is, for example, the assessment of the German and Danish interviewees.

Similarly, the assessment in the Netherlands, Poland and Romania is that the changes will not lead to extra tasks for the applicants. However, it is stressed that the process of handling the applications most likely will take more time why the applicant consequently must wait longer to get the application approved.

## Introduction

### 1.1. Background and purpose

Regulation (EC) No 883/2004 of the European Parliament and of the Council of 29 April 2004 on the coordination of social security systems specifies in Article 67 that a person is entitled to family benefits, also where his/her family members reside in another Member State. Currently, the entitlement is determined by the legislation of that person's Member State – henceforth called the Member State of primary competence.

Family benefits are intended to contribute to families' expenses, which both depend on the number and the age of the children and on the costs of living. However, in a case of export of family benefits, the family benefit amount depends on the costs of living in the Member State of primary competence rather than that of the Member State of residence of the child – henceforth called the Member State of secondary competence<sup>3</sup>. For such cases the amount of family benefits paid can be higher or lower than could be argued by the local circumstances where the family resides.

Revisions to the current rules are therefore being considered to address inequalities that may result from differences in the costs of living in the Member States of primary competence in relation to those of the Member States of secondary competence. Such amendments aim to ensure that family benefits contribute equally to family expenses for all families in a given Member State, and to ensure an even distribution of the financial burden between Member States.

On this background, this present study looks into the following three possible revisions to Regulation (EC) No 883/2004:

- Option 1a: Adjustment of the amount of exported family benefits to the living standard in the Member State of secondary competence (residence of the child) – i.e. adjustment upwards or downwards compared to current situation.
- Option 1b: Adjustment of the amount of exported family benefits to the living standard in the Member State of secondary competence – limited to the amount provided by the Member State of primary competence.
- Option 3<sup>4</sup>: Change in the current order of priority: (1) Member State of residence of the child [secondary competence], (2) Member State of work [primary competence], and (3) Member State of pension [primary competence]. This means that the Member State of residence of the child has primary responsibility to pay the full amount of family benefits to which the entitlement exists under its national rules. The Member State of work (or pension) will top up this amount if the level of family benefits would be higher there. The family will thus receive the same amount of family benefits as before, but the allocation of the costs between the Member State of work (or pension) and the Member State of residence will differ from the current situation.

Such revisions may affect the behaviour of the mobile EU-citizens and their families, the amounts of exported family benefits being paid, and the administration needed to handle the export of family benefit cases. The analysis within Task 1 focuses on the latter issue

---

<sup>3</sup> Not that the Member State of residence of the child is not always the state of secondary competence. For example, where both parents are economically active it will be the Member State of primary competence (Art 68(1)(b)(i)).

<sup>4</sup> Option 2 of no export of family benefits was initially considered for assessment, but was discarded because of concerns as regards its compatibility with Article 45(2) of the TFEU.

– i.e. the changes in administrative costs and burden from the revisions to the national administrations handling exports of family benefits. In this context, Task 1 distinguishes between the administrative costs incurring in the Member States of primary competence and those incurring in the Member States of secondary competence. Furthermore, we look into the possible changes in the administrative burden for the mobile EU-citizens themselves and their families.

However, as described further below there is no official information available on the costs of the different administrative tasks carried out by the national administrations in the Member States when handling a case of export of family benefits. Therefore, we have obtained this information from its primary sources via interviews with national administrations. It was not feasible within the scope of Task 1 to gather such information for all 28 EU Member States. Hence, the results are based on analyses for six case study Member States: Germany, Denmark, Netherlands, Poland, Romania, and the UK.

## **1.2. Methodology**

As just introduced above, Task 1 focuses on assessing the administrative costs and burden for the national administrations handling cases of export of family benefit. For this, we have made use of the definition of administrative costs and burden provided by the EC (2009) Impact Assessment Guidelines. While doing this, we have adopted a broad definition of administrative information obligations – i.e. we have considered the costs of administrative tasks such as the determination of Member State of competence, the calculation of benefits, and the reimbursement and recovery of benefits in between Member States. We have then assessed how these administrative costs may change from the revisions to Regulation (EC) No 883/2004 to comprise an additional administrative burden – positive or negative – for the national administrations as well as for the mobile EU-citizens and their families. This approach is also in line with the Better Regulation Guidelines (EC, 2015) emphasises objective of delivering maximum benefits to citizens, businesses and workers while avoiding all unnecessary regulatory burdens, and so avoiding unnecessary additional administrative burdens.

The calculations of the administrative costs for the national administrations are as illustrated in Figure 1-1 in principle simple. Firstly, the number of cases in the left-hand side of the figure are the annual cases of exports of family benefits currently registered in the six case study Members States. Actually, a given case may be dealt with in two of the six selected Member States if, for example, a given applicant for exports of family benefits (i.e. in a Member State of primary competence) has his/her family residing in another of the six Member States (i.e. in a Member State of secondary competence). In our main calculation, we assume that the number of cases does not change as a result of revisions to the EU provisions. However, we do to illustrate the sensitivity of this assumption also show a scenario where we assume a change in the number of cases based on the results of Task 3 of this study.

Secondly, we calculate the unit costs for the national administration – i.e. the current administrative costs per case as well as the changed administrative costs per case as a result of revisions to the EU provisions. The administrative costs per case will clearly differ between cases, i.e. there will be easy cases only involving standard administrative tasks while other more complex cases will involve additional tasks. Hence, we are in practice looking for average costs. These unit costs in EUR are composed of assessments of the man-hours needed per case and the costs per man-hour in EUR (see Table 1-1 in the next section).

*Figure 1-1 Calculation of administrative costs for national administrations*

As indicated in Figure 1-1, the estimations of the current number of cases have been provided by the HIVA KU Leuven Research Institute for Work and Society (HIVA) via a data gathering exercise (see Pacolet and De Wispelaere, 2015).

The bulk of the work within Task 1 has been the estimation of the man-hours needed to carry out the administrative tasks of handling a case of export of family benefits. As already mentioned, such information is not available from official sources, and so we have gathered the information through interviews with national administrations in the six case study Member States. For this purpose, we identified the national administrations to interview (see Annexes C to H for the interviewees), and we developed an interview guide that was shared with our Member States experts/interviewers in the six case study Member States in their respective national languages (see Annex B for the English version of the interview guide). The interview guide was developed via a desk study approach by reviewing existing literature and guidance papers on the legislation (see Annex A) and it was tested in Denmark before being applied in the five other case study Member States.

From the Member State-specific analyses in Annexes C to H, it becomes clear that most of the man-hour estimates are based on a few interviews only. This is partly because there is often only a few national administrations that handle export of family benefit cases in each of the Member States, and partly because of limited interview resources. Hence, the premise for this analysis is the uncertainty associated with few assessments that, furthermore, mostly are based on the subjective assessments of the interviewees rather than on actual registrations of time spent on different administrative tasks. It has therefore not been feasible within the present study period to further validate the administrative cost estimates, but these may well be commented upon by national administrations in the non-case study Member States once this report is released. In this context, it should be underlined that although there are some differences in the assessments both within and in between the Member States, the overall the assessed levels of administrative costs and the additional burdens from the possible revisions to the EU provisions do compare. Finally, the assessed additional burdens can be argued to be low, in particular in absolute terms for a Member State as a whole. Hence, they may well be lower than the socioeconomic benefits caused by the revisions.

### **1.3. Case study Member States**

As already mentioned, the calculations of the administrative costs and burden are based on information for six case study Member States only. Although, it is not the aim of Task 1 to produce a total EU-28 figure for the administrative costs and burden via an upscaling of the calculations from the case studies, we have aimed to select Member States that represent the variety within the EU.

Firstly, we have selected Member States that are geographically spread across the EU. Secondly, the selection comprises Member States that mainly attract mobile EU-citizens (Germany, Denmark, Netherlands, UK), and Member States that mainly see citizens leave (Poland, Romania). Thirdly, child benefits rules and amounts differ in between Member States<sup>5</sup>. Whereas there are Member States that provide fixed benefit amounts (Germany, Netherlands), others provide means-tested amounts that are fixed to thresholds (Poland, Romania). Some rules specify that children residing in the Member State can receive child benefits (Denmark, Romania, UK), while others link the child benefit to the place of taxation of the parent (Germany, Netherlands). Furthermore, the amounts of child benefits paid in the Member States vary widely.

Finally, as shown in Table 1-1, the unit labour costs of the national administrations differ much in between the case study Member States. We assume here that the average wage levels of the relevant employees in the national administrations are similar to that of employees in general in the public administration with upper secondary or post-secondary non-tertiary education. Although the differences in labour costs is a reflection of general differences in labour costs in between the Member States, it could be expected that this may lead to differences in the use of man-power to carry out the administrative tasks. It could, for example, be expected that higher labour costs could lead to fewer labour-intensive processes – and vice versa. However, as shown below such difference have not been detected in between higher and lower labour cost Member States.

*Table 1-1 Labour costs, 2013, EUR per hour - employees in public administration etc. with upper secondary or post-secondary non-tertiary education*

<b>Member State</b>	<b>Wage costs, 2010, EUR per hour<sup>(1)</sup></b>	<b>Wage costs, 2013, EUR per hour<sup>(2)</sup></b>	<b>Labour costs, 2013, EUR per hour<sup>(3)</sup></b>

## **Current administrative costs and burden**

### **1.4. National administrations**

The export of family benefit cases are handled by similar types of national administrations in the case study Member States. In Denmark, all cases – both when being of primary competence and of secondary competence – are carried out by one institution: Udbetaling Danmark. In Germany it is Die Bundesagentur für Arbeit, in the Netherlands: Sociale Verzekeringsbank, and in the UK: Her Majesty's Revenue and

<sup>5</sup> See Annexes C to H for more details on rules in the different case study Member States. Note in this context that Regulation overrules such national provisions if these are in conflict with this.

Customs. In Poland and Romania, the handling of cases takes place at both national and regional level. In Poland, it is the Ministry of Labour and Social Policy and the Regional Social Policy Centres (Krakow and Opole), respectively. In Romania, it is the National Agency for Payments and Social Inspection and county agencies, respectively.

The below box describes two possible examples of exports of family benefits currently handled by the national administrations. Parent A receives in both examples family benefits from the Member State [primary competence] where he works according to its rules.

**Example 1 of exports of family benefits:**

Parent A works in Member State A [primary competence] which has a higher cost of living than Member State B [secondary competence] while his non-working wife Parent B resides with their children in Member State B.

Under the current rules, Parent A is entitled to family benefits in Member State A at the same amount as if his family was residing in Member State A.

**Example 2 of exports of family benefits:**

Parent A works in Member State B [primary competence] while his non-working wife Parent B resides with their children in Member State A [secondary competence].

Under the current rules, Parent A is entitled to family benefits in Member State B at the same amount as if his family was residing in Member State B.

### **National administrations with primary competence**

Table 2-1 shows that the number of cases handled by national administrations with primary competence varied between the case study Member States in 2013<sup>6</sup>. This is not surprising given the difference in the sizes of the Member States, and that we both have selected some that mainly attract mobile EU-citizens and some that mainly see citizens leave. However when looking at the number of cases relative to the sizes of the labour markets, the differences are less noticeable. While the Netherlands in 2013 experienced 2.42 cases per 1000 employed in the Netherlands as a whole, it was at the other end 0.56 cases per employed in Poland and 0.68 cases per employed in the UK

---

<sup>6</sup> 2013 has been chosen as it is year for the information on the number of cases gathered by Pacolet and De Wispelaere (2015).

*Table 2-1 Number of exports of family benefits handled by national administrations in 2013 as primary competence*

<b>Member State</b>	<b>Number of cases, 2013</b>	<b>Cases per 1000 employed</b>

UK: United Kingdom	20271	0.68

Sources: Pacolet and De Wispelaere (2015). Eurostat database (lfsi\_emp\_a).

Note: <sup>(1)</sup> Estimate provided by the Danish national expert.

Table 2-2 shows for the six case study Member States, the man-hours per average case for the national administrations handling exports of family benefits as primary competence. The administrative tasks are divided into standard administrative tasks and additional administrative tasks.

The former tasks, which are carried out for almost all cases, comprise the determination of the national administration with primary competence – i.e. for each application for exports of family benefits, and for each of the applications, the national administration will determine in which Member State the applicant and his/her family reside and in this context check whether the applicant is employed, unemployed, a posted worker or a civil servant.

The national administration with primary competence will then calculate the benefits that the given applicant is entitled to according to the given national legislation. This involves contacting the Member State of residence of the applicant's family to investigate the applicant's entitlement to family benefits in this Member State – i.e. to check for overlapping benefits, and it involves setting the payment of family benefits in motion.

Furthermore, for each of the existing cases there will be an annual control to check whether the information/status of the applicant and his/her family has changed.

The latter tasks, which are carried out more infrequently for the more complex cases, comprise, for example, disagreements regarding the determination of the national administration having the primary competence. Such disagreement will lead to additional exchanges of information, to provision of provisional benefits, and ultimately from bringing the case before the Administrative Commission. Table 2-2 shows that this task for an average case in a Member States takes between zero and one hour. However, from the Member State-specific analyses in Annexes C to H, it e.g. shows that for Germany the 0.1 hours (around 7 minutes) per average case covers over that this task only is carried out in 5% of the cases, while each of these cases requires around two man-hours. Similarly, the 0.13 hours in Denmark cover over that such task is only carried out in 5% of the case – where the actual time spent on such rare cases typically amount to 2.5 hours.

In contrast, the 0.5 hours on average spent in Denmark on handling the issue of overlapping benefits, hereunder on deciding on a possible sharing of benefit payments, is very frequent and so almost resembles the efforts for each actual case. For Romania, the 0.08 man-hours cover over that such task is only carried out for 5% of the cases – each typically requiring 1.5 man-hours.

Overall, Table 2-2 shows that currently the resources spent on a case being the national administration of primary competence averages around two man-hours. UK<sup>7</sup> and Denmark are outliers at the high end, which appears to be caused by relative much emphasis on the benefit calculations, hereunder on overlapping benefits and reimbursements if provisional benefits have been paid by another Member State. Poland, Germany and Romania are at the lower end with relatively few resources spent on additional administrative tasks.

*Table 2-2 National administrations handling exports of family benefits as primary competence, man-hours per average case*

<b>Administrative tasks</b>	<b>DE</b>	<b>DK</b>	<b>NL</b>	<b>PL</b>	<b>RO</b>	<b>UK</b>	<b>Av.<sup>(2)</sup></b>

<b>TOTAL</b>	<b>1.36</b>	<b>3.70</b>	<b>1.92</b>	<b>1.21</b>	<b>1.46</b>	<b>5.25</b>	<b>1.93</b>

Sources: Interviews.

Notes: <sup>(1)</sup> Annual control concerns exiting case and has so not been included in the total for new cases. <sup>(2)</sup> The UK estimates are considered too uncertain to be included in the average.

When accounting for the differences in labour costs shown in Table 1-1, Table 2-3 shows that the average unit administrative costs in EUR differ more than the average man-hours shown in Table 2-2. The reason is that the high labour costs Member States, Denmark and the Netherlands, also spend relatively most man-hours. This could be argued to be a surprising result, i.e. it could be expected that higher labour costs could lead to less labour-intensive processes.

The lower labour costs and man-hours spent in Poland and Romania imply that an average case costs around 4 to 6 EUR, while it in Denmark reaches above 100 EUR and in the Netherlands above 40 EUR. However, looking at total costs, Germany and the UK have with their many cases the highest current costs.

<sup>7</sup> Note that the UK estimates are considered particularly uncertain due to difficulties of the UK interviewee to provide estimates.

Note: <sup>(1)</sup> The UK estimates are considered too uncertain to be included in the average.

### **National administrations with secondary competence**

Table 2-4 then shows the number of cases handled by national administrations as secondary competence in the case study Member States in 2013 provided by Pacolet and De Wispelaere (2015). Poland experiences the largest number of cases, followed by Germany. Compared with the size of the labour market – i.e. with the number of employed in the Member States as a whole – Poland has in relative terms the highest number of cases with around four cases per 1000 employed. Member States that mainly attract mobile EU-citizens such as the UK and Denmark handle relatively few cases.

*Table 2-4 Number of exports of family benefits handled by national administrations in 2013 as secondary competence*

<b>Member State</b>	<b>Number of cases, 2013</b>	<b>Cases per 1000 employed</b>
DE: Germany	20918	0.53
DK: Denmark	732	0.27
NL: Netherlands	7569	0.90

UK: United Kingdom	3391	0.11

Sources: Pacolet and De Wispelaere (2015). Eurostat database (lfsi\_emp\_a).

Table 2-5 shows for the six case study Member States, the man-hours per average case for the national administrations handling exports of family benefits as secondary competence. The administrative tasks are divided into standard administrative tasks and additional administrative tasks.

It must firstly be underlined that many of the national administrations do not see many differences in tasks and efforts per case being of secondary or of primary competence. Hence, for Germany, Denmark, the Netherlands and Poland, the figures are very similar to this in Table 2-2. Romania and the UK, however, spend much less time on the determination of primary competence, when it shows that its national administration is of secondary competence.

For example, in Romania the average resources spend on a case is 0.12 man-hours when being the national administration of secondary competence while it is 1 man-hour when being of primary competence. This is both due to fewer resources spend when the task is

actually carried out being of secondary competence (0.6 man-hours) and the assessment that the task only is carried out for 20% of the cases.

*Table 2-5 National administrations handling exports of family benefits as secondary competence, man-hours per average case*

<b>Administrative tasks</b>	<b>DE</b>	<b>DK</b>	<b>NL</b>	<b>PL</b>	<b>RO</b>	<b>UK</b>	<b>Av.<sup>(2)</sup></b>

Sources: Interviews.

Notes: <sup>(1)</sup> Annual control concerns exiting case and has so not been included in total for new cases. <sup>(2)</sup> The UK estimates are considered too uncertain to be included in the average.

Table 2-6 therefore also shows a similar picture to that of Table 2-3 with the highest average unit administrative costs in EUR found in Denmark, followed by the UK, the Netherlands and Germany. However, looking at the total costs, Germany and Poland have as a result of handling many cases the highest costs.

*Table 2-6 Administrative costs for national administrations handling exports of family benefits as secondary competence, unit costs and total costs 2013, EUR*

	<b>DE</b>	<b>DK</b>	<b>NL</b>	<b>PL</b>	<b>RO</b>	<b>UK</b>	<b>Av.<sup>(1)</sup></b>
Unit costs, EUR	26.2	113.6	32.7	5.8	0.9	50.5	<b>35.8</b>
Total costs, 1000 EUR	547.8	83.1	247.2	362.9	4.3	171.3

Note: <sup>(1)</sup> The UK estimates are considered too uncertain to be included in the average.

### **1.5. Mobile EU-citizens and their families**

The interviews carried out in the six case study Member States have not revealed many concerns about the time spent at present by the mobile EU-citizens and their families when applying for exports of family benefits. However, as discussed in Section 3.2 the possible revisions to the EU provisions may well have implications.

## Change in administrative costs and burden from revised EU provisions

### 1.6. National administrations

The administrative tasks of handling a case of export of family benefits may change in both size and characteristics if the EU provisions are revised. In this study we look, as introduced in Section 1.1, into the following three possible revisions, that each are exemplified in the below boxes.

Option 1a: Adjustment of the amount of exported family benefits to the living standard in the Member State of secondary competence (residence of the child) – i.e. adjustment upwards or downwards compared to current situation.

#### Example 1 of new situation:

Parent A works in Member State A [primary competence] while his non-working wife Parent B resides with their children in Member State B [secondary competence].

Under the revised rules, Parent A will receive family benefits from Member State A reduced to the living standard in Member State B.

#### Example 2 of new situation:

Parent A works in Member State B [primary competence] while his non-working wife Parent B resides with their children in Member State A [secondary competence].

Under the revised rules, Parent A will receive family benefits from Member State B increased to the living standard in Member State A.

Option 1b: Adjustment of the amount of exported family benefits to the living standard in the Member State of secondary competence – limited to the amount provided by the Member State of primary competence.

#### Example 1 of new situation:

Parent A works in Member State A [primary competence] while his non-working wife Parent B resides with their children in Member State B [secondary competence].

Under the revised rules, Parent A will receive family benefits from Member State A reduced to the living standard in Member State B.

#### Example 2 of new situation:

Parent A works in Member State B [primary competence] while his non-working wife Parent B resides with their children in Member State A [secondary competence].

Under the revised rules, Parent A will receive family benefits from Member State B to the maximum of the rate in Member State B, irrespective of the fact that the living standard in Member State A is higher.

Option 3: Change in the current order of priority: (1) Member State of residence of the child [secondary competence], (2) Member State of work [primary competence], and (3) Member State of pension [primary competence].

Example 1 of new situation:

Parent A works in Member State A [primary competence] (which has a higher cost of living than Member State B) while his non-working wife Parent B resides with their children in Member State B [secondary competence] (which has a lower cost of living than Member State A).

Under the revised rules, Parent A will receive family benefits from Member State B at the normal national rate to which the entitlement exists under its national rules. If the family is also entitled to benefits from Member State A, the family would receive a differential supplement from Member State A to the level paid under its national legislation. The family overall receives the same amount, but Parent A receives less from Member State A than his co-workers whose children reside with them in Member State A.

Example 2 of new situation:

Parent A works in Member State B [primary competence] (which has a lower cost of living than Member State A) while his non-working wife Parent B resides with their children in Member State A [secondary competence] (which has a higher cost of living than Member State B).

Under the revised rules, Parent A will receive family benefits from Member State B at the normal national rate to which the entitlement exists under its national rules. As the amount of family benefits paid in Member State B is lower than the amount paid by Member State A, Member State B will pay nothing. The family overall receives the same amount, but Parent A receives less from Member State B than his co-workers whose children reside with them in Member State B.

### **National administrations with primary competence**

As described in Section 1.2, we assume in the main calculations that the number of cases does not change as a result of revisions to the EU provisions. Hence, in the main calculations the changes in administrative costs and burden are solely a result of changes to the unit administrative costs. Table 3-1 shows a simple average – while we refer to the annexes regarding insight into the more specific Member State calculations.

A first important observation is that on average across the case study Member States, the interviewed national administrations expect that their administrative tasks as primary competence will increase by around one man-hour per case or by around 50% - no matter whether it is decided to implement Option 1a, Option 1b or Option 3. In other words, the additional administrative efforts increase by similar amounts whether an requirement to take into account living standards in other Member States is introduced (Options 1a and 1b), or whether there is a change in the order of responsibility (Option 3).

The major increase in absolute terms of man-hours is that for the calculation of benefits. For example, where the calculations in many cases currently are being processed automatically, it will be necessary to make specific calculations in each case. For Germany it may even not be technically feasible at the moment as it is not possible to pay out reduced or higher benefits. Furthermore, calculation efforts may increase as

there is a need for additional contacts with national administrations in other Member States.

In relative terms, the largest increase in the administrative burden is that for the reimbursement activity, as the more complex family benefit calculation rules are expected to lead to more cases where provisional family benefits are paid out in the Member State of secondary competence, and so have to be reimbursed by the Member State of primary competence. Similarly, the more complex calculation rules are expected to lead to more cases where applicants unjustified have received family benefits, that then need to be recovered.

*Table 3-1 Change in the man-hours per administrative task for exports of family benefit cases handled by national administrations as primary competence (simple average of case study Member States<sup>(2)</sup>)*

Administrative tasks	Option 1a		Option 1b		Option 3	
	man-hours	from base	man-hours	from base	man-hours	from base

Note: <sup>(1)</sup> Annual control concerns exiting case and has so not been included in total for new cases. <sup>(2)</sup> No estimates for the UK could be provided by the UK national administration, and so excluded from the average calculation.

Table 3-2 then shows the change in the unit costs per case, in EUR and total costs in EUR for each of the case study Member States. It shows that the estimated total cost increases range from 5,600 EUR in Poland (Option 3) to 1,156,900 EUR in Germany (Options 1a and 1b). The low figures for Poland is combination of a relative low number of cases and low labour costs, while the opposite is the case for Germany.

*Table 3-2 Change in unit costs per case and total costs handling export of family benefit cases by national administrations as primary competence – main calculation*

Member State	Option 1a		Option 1b		Option 3	
	Unit costs EUR	Total costs 1000 EUR	Unit costs EUR	Total costs 1000 EUR	Unit costs EUR	Total costs 1000 EUR

RO: Romania	0.8	8.7	0.8	8.7	2.7	30.4
UK: United Kingdom <sup>(1)</sup>	n/a	n/a	n/a	n/a	n/a	n/a

Sources: Interviews and Eurostat.

Note: <sup>(1)</sup> No estimates for the UK could be provided by the UK national administration.

The number of cases are, however, likely to change as a result of revisions to the EU provisions. There might be changes due to changing eligibility criteria for qualifying for export of family benefits and due to changing benefit incomes that affect the behaviour of the mobile EU-citizens. Task 3 of the present study has estimated such behavioural changes. We have on the basis of the behavioural change estimates for families composed of one-earner married couples with two children at 100% of average earnings derived assumptions about the likely change in the number of cases handled by national administrations as primary competence (cf. Table 3-3).

implying that fewer mobile EU-citizens stay in these Member States and claim family benefits. In contrast, it will become relatively more attractive to stay in Member States with lower living standards such as Poland and Romania, and claim family benefits from other Member States (where the children reside).

A similar picture is found for Option 1b for the Member States with high living standards as family incomes fall for mobile EU-citizens claiming family benefits. However, those claiming benefits in Member States with low living standards will not experience any change in family incomes.

Finally, FGB et.al. (2015) assume that Option 3 only will lead to a redistribution of competence from the Member State of primary competence to the Member State of secondary competence. Hence, there will be no impact on family incomes and so on mobility.

Hence,

*Table 3-3 Change in number of exports of family<sup>(1)</sup> benefit cases handled by national administrations as primary competence*

Member State	Option 1a	Option 1b	Option 3
DE: Germany	-3.1%	-3.2%	0%
DK: Denmark <sup>(2)</sup>	-3.5%	-3.6%	0%
NL: Netherlands	-4.0%	-4.0%	0%
PL: Poland	3.2%	0.0%	0%
RO: Romania	8.3%	0.0%	0%
UK: United Kingdom <sup>(2)</sup>	-3.5%	-3.6%	0%

Sources: FGB et.al. (2015): Annex 2 - Table 2.1.

Notes: <sup>(1)</sup> Estimation for "one-earner married couples with two children at 100% of average earnings". <sup>(2)</sup> As no estimates are provided for Denmark and the UK, we have assumed/used simple average of the changes for Germany and the Netherlands.

Adjusting the main results for such possible changes in the number of cases we get as shown in Table 3-4 slightly different results. While unit cost changes are similar to those presented in Table 3-2, Options 1a and 1b lead to lower total costs increases in Member States such as Denmark and the Netherlands as the number of cases to handle decreases.

*Table 3-4 Change in unit costs per case and total costs handling export of family benefit cases by national administrations as primary competence – assuming changes in the number of cases*

Member State	Option 1a		Option 1b		Option 3	
	Unit costs EUR	Total costs 1000 EUR	Unit costs EUR	Total costs 1000 EUR	Unit costs EUR	Total costs 1000 EUR
DE: Germany	18.5	1068.1	18.5	1063.0	10.3	642.7
DK: Denmark	58.3	272.7	58.3	272.0	58.3	303.3
NL: Netherlands	25.0	450.9	25.0	450.9	25.0	505.5
PL: Poland	2.2	21.3	1.9	16.7	0.6	5.6
RO: Romania	0.8	12.9	0.8	8.7	2.7	30.4
UK: United Kingdom <sup>(1)</sup>	n/a	n/a	n/a	n/a	n/a	n/a

Sources: FGB et.al. (2015): Annex 2 - Table 2.1, Eurostat and interviews.

Note: <sup>(1)</sup> No estimates for the UK could be provided by the UK national administration.

**National administrations with secondary competence**

Table 3-5 shows that the expectations to changes in man-hours are fairly similar to those in Table 3-1 regarding primary competence. This is as already mentioned partly a consequence of that many of the national administrations do not see many differences in tasks and efforts per case being of secondary or of primary competence. Hence, the observations are also fairly similar to those for Table 3-1.

Hence, in absolute terms the largest increase is by far that for the calculation of benefits as more complex calculation rules will have to be implemented. Furthermore, there will be additional communication with the relevant Member States of primary competence to deal with.

In relative terms, the largest increase in the administrative burden is – similar to when being of primary competence – that for the reimbursement activity. There will be additional needs to request reimbursements from Member States of primary competence of provisionally paid family benefits. Furthermore, the more complex calculation rules in Options 1a and 1b are expected to lead to more cases where applicants unjustified have received family benefits, and so a need to contribute to this task. In contrast, it is assessed that the redistribution of competences in Option 3 may lead to a slightly lower need for recovery activities.

*Table 3-5 Change in the man-hours per administrative task for exports of family benefit cases handled by national administrations as secondary competence (simple average of case study Member States<sup>(2)</sup>)*

Administrative tasks	Option 1a		Option 1b		Option 3	
	man-hours	from base	man-hours	from base	man-hours	from base
<i>Standard admin. tasks</i>

<b>TOTAL</b>	<b>0.98</b>	<b>60.2%</b>	<b>0.89</b>	<b>54.6%</b>	<b>0.76</b>	<b>46.7%</b>

Sources: Interviews.

Note: <sup>(1)</sup> Annual control concerns exiting case and has so not been included in total for new cases. <sup>(2)</sup> No estimates for the UK could be provided by the UK national administration, and so excluded from the average calculation.

Table 3-6 then shows the change in the unit costs per case, in EUR and total costs in EUR for each of the case study Member States. It shows that costs are actually expected to fall slightly in Poland in the case of Option 1b, while the highest unit cost increases are expected for Denmark, the Netherlands and Germany.

The fall in administrative costs for Poland in Option 1b derives from the assessment of the Polish interviewees that they can reduce their contribution to calculating benefit rates in more cases.

*Table 3-6 Change in unit costs per case and total costs handling export of family benefit cases by national administrations as secondary competence – main calculation*

Member State	Option 1a		Option 1b		Option 3	
	Unit costs EUR	Total costs 1000 EUR	Unit costs EUR	Total costs 1000 EUR	Unit costs EUR	Total costs 1000 EUR
DE: Germany	18.5	386.7	18.5	386.7	10.3	214.8
DK: Denmark	58.3	42.7	58.3	42.7	51.1	37.4
NL: Netherlands	25.0	189.2	25.0	189.2	25.0	189.2
PL: Poland	1.7	103.6	-0.6	-39.8	0.6	39.8
RO: Romania	1.4	6.4	1.4	6.4	0.8	3.5
UK: United Kingdom <sup>(1)</sup>	n/a	n/a	n/a	n/a	n/a	n/a

Sources: Interviews and Eurostat.

Note: <sup>(1)</sup> No estimates for the UK could be provided by the UK national administration.

The likely change in the number of cases as a result of revisions to the EU provisions will also be experienced by the national administrations with secondary competence. Table 3-7 shows our estimates/assumptions for these likely changes. Since the relative attractiveness of the Member States with high living standards decreases there will be relatively more mobile EU-citizens leaving for other Member States and so leave their families behind in the Member State of secondary competence. This effect goes the other way for Member States with lower living standards.

*Table 3-7 Change in number of exports of family<sup>(1)</sup> benefit cases handled by national administrations as secondary competence*

Member State	Option 1a	Option 1b	Option 3
DE: Germany	0.7%	-1.0%	0%
DK: Denmark <sup>(2)</sup>	2.0%	-0.5%	0%
NL: Netherlands	3.3%	0.0%	0%
PL: Poland	-3.2%	-3.2%	0%
RO: Romania	-3.7%	-3.7%	0%
UK: United Kingdom <sup>(2)</sup>	2.0%	-0.5%	0%

Sources: FGB et.al. (2015): Annex 2 - Table 2.1.

Notes: <sup>(1)</sup> Estimation for "one-earner married couples with two children at 100% of average earnings". <sup>(2)</sup> As no estimates are provided for Denmark and the UK, we have assumed/used simple average of the changes for Germany and the Netherlands.

Adjusting the main results for such possible changes in the number of cases we get as shown in Table 3-8 slightly different results than those in Table 3-6. The fewer cases in

Poland and Romania implies that the total cost figures are lower than those in Table 3-6, and in turn the total cost figures are higher for the remaining four case study Member States.

*Table 3-8 Change in unit costs per case and total costs handling export of family benefit cases by national administrations as secondary competence – assuming changes in the number of cases*

Note: <sup>(1)</sup> No estimates for the UK could be provided by the UK national administration.

### **1.7. Mobile EU-citizens and their families**

The interviews carried out in the six case study Member States indicate that the proposed revisions to the EU provisions may well have implications for the mobile EU-citizens and their families. However, many interviewees suggest that in particular Option 1a and 1b may have minor implications, while Option 3 may increase the administrative burden from increased requirements to verifications of the residence of the children. In general, the longer processing times of the cases may be considered as an adverse effect. This is, for example, the assessment of the German and Danish interviewees.

Similarly, the assessment in the Netherlands, Poland and Romania is that the changes will not lead to extra tasks for the applicants. However, it is stressed that the process of handling the applications most likely will take more time why the applicant consequently must wait longer to get the application approved.

## Conclusions

Revising the current rules for export of family benefits specified in Regulation (EC) No 883/2004 will have impact on the administrative costs and burden of the national administration in the Member States handling cases where mobile EU-citizens apply for family benefits – both in the Member States where the application is submitted (Member State of primary competence) and in those where the children reside. Furthermore, the applying EU-citizens and their families will experience changes in the own administrative burden from the revisions. The overall conclusion from this study is that the impacts are expected to be notable in a number of Member States – a conclusion that is based on assessments made in six case study Member States: Germany, Denmark, the Netherlands, Poland, Romania, and the UK.

### **Change in administrative costs and burden for national administrations of primary competence**

A first observation, when assessing the administrative costs and burden for the national administrations in the Member States acting as primary competence, is that most of these national administrations – at least in the six case study Member States – handle a significant number of cases annually. Germany experiences most cases with 62,587 (in 2013), followed by the UK (20,271) and the Netherlands (20,271). However, in comparison with the sizes of the national labour market, the amount of cases do compare in between the case study Member States – ranging from 0.56 cases per 1000 employed in Poland to 2.42 cases per 1000 employed in the Netherlands. Hence, from the outset it could be assumed that there within many national administrations is good experience with handling export of family benefit cases and there might be focus on the costs of doing so. In any case, the current total administrative costs are considered to be notable in an overall context.

Currently, the national administrations in the case study Member States use on average around 2 man-hours per case, much of which is used for determining in which Member State the applicant and his/her family reside and in this context check whether the applicant is employed, unemployed, a posted worker or a civil servant. Relatively many resources are also spent on calculating the benefits that the given applicant is entitled to according to the given national legislation. This involves contacting the Member State of residence of the applicant's family to investigate the applicant's entitlement to family benefits in this Member State – i.e. to check for overlapping benefits, and it involves setting the payment of family benefits in motion. The UK and Denmark spend most resources per case, while the other case study Member States are at a lower but similar level.

This study assesses that the administrative tasks of the national administrations of primary competence will increase by around one man-hour per case or by around 50% - no matter whether it is decided to implement Option 1a, Option 1b or Option 3. In other words the additional administrative efforts increase by similar amounts whether an requirement to take into account living standards in other Member States is introduced (Options 1a and 1b), or whether there is a change in the order of responsibility (Option 3). The major increase in absolute terms of man-hours is that for the calculation of benefits (around 40 minutes extra per average case). For example, where the calculations in many cases currently are being processed automatically, it will be necessary to make specific calculations in each case. In relative terms, the largest increase (around 140% = additional 6 minutes extra per average case) in the administrative burden is that for the reimbursement activity, as the more complex family

benefit calculation rules are expected to lead to more cases where provisional family benefits are paid out in the Member State of secondary competence, and so have to be reimbursed by the Member State of primary competence.

In monetary terms, the assessment is that the revisions will lead to notable increases in total administrative costs ranging from 5,600 EUR in Poland (Option 3) to 1,156,900 EUR in Germany (Options 1a and 1b). The low figures for Poland is combination of a relative low number of cases and low labour costs, while the opposite is the case for Germany.

### **Change in administrative costs and burden for national administrations of secondary competence**

The observation that most national administrations of primary competence handle a significant number of export of family benefit cases annually few cases of unemployment period aggregations implies that this also will be the case for most national administrations of secondary – as the total number of cases is the same from both perspectives for the EU as a whole. Poland experiences with 62,047 (in 2013) by far the largest number of cases, followed by Germany with 20,918 cases. In relation to the size of the national labour market, Poland handles with almost 4 cases per 1000 employed most, while at the other end the UK handles 0.11 cases per 1000 employed.

Currently, the national administrations in the case study Member States use on average just above 1.5 man-hours per case, much of which is used for determining in which Member State the applicant and his/her family reside and in this context check whether the applicant is employed, unemployed, a posted worker or a civil servant. As for the national administrations of primary competence, many resources are also spent on calculating the benefits that the given applicant is entitled to according to the given national legislation. Actually, many of the national administrations do not see many differences in tasks and efforts per case being of secondary or of primary competence

This study assesses that the administrative tasks of the national administrations of secondary primary competence on average will increase by almost one man-hour per case or by just above 50% - if it is decided to implement Option 1 or Option 1b, and slightly less if Option 3 is implemented. In absolute terms the largest increase is by far that for the calculation of benefits as more complex calculation rules will have to be implemented. Furthermore, there will be additional communication with the relevant Member States of primary competence to deal with. In relative terms, the largest increase in the administrative burden is – similar to when being of primary competence – that for the reimbursement activity.

In monetary terms, the assessment is that the revisions will lead to increases in total administrative costs in most Member States – although ranging from a slight fall of 39,800 EUR in Poland (Option 1b) to 386,700 EUR in Germany (Options 1a and 1b). The fall in administrative costs for Poland in Option 1b derives from the assessment of the Polish interviewees that they can reduce their contribution to calculating benefit rates in more cases.

### **Change in administrative costs and burden for mobile EU-citizens and their families**

The proposed revisions to the EU provisions may well have implications for the mobile EU-citizens and their families. However, it is suggested that in particular Option 1a and 1b may have minor implications, while Option 3 may increase the administrative burden from increased requirements to verifications of the residence of the children. In general,

the longer processing times of the cases may be considered as an adverse effect. This is, for example, the assessment of the German and Danish interviewees.

Similarly, the assessment in the Netherlands, Poland and Romania is that the changes will not lead to extra tasks for the applicants. However, it is stressed that the process of handling the applications most likely will take more time, why the applicant consequently must wait longer to get the application approved.

## **Annex B – Interview guide**

The attached interview guide is the actual version used for the interviews in the UK, and is so in English. The interview guide was provided to the Member States experts in their national languages.

Note that we in the interview guide make use of the option titles: Revisions (A), (B), and (C), rather than Options 1a, 1b, and 3 – as in the report. The reason for this was to avoid discussing what happened to Option 2.

EUROPEAN COMMISSION, DG EMPLOYMENT, SOCIAL AFFAIRS AND INCLUSION

Study to analyse and assess the impacts of policy options for a possible EU initiative in the area of coordination of social security schemes, in particular with regard to the revision of the current EU provisions on entitlement to unemployment benefits and export of family benefits

### **Interview guide:**

#### **National administrations handling exports of family benefits**

The European Commission, Directorate-General for Employment, Social Affairs and Inclusion has given Fondazione Brodolini, COWI and IER the task to assess changes to administrative/compliance costs within national administrations and for the families affected that would occur from the possible revision of the current EU provisions on export of family benefits specified in Regulation (EC) 883/2004: the 'Basic Regulation' and in Regulation (EC) 987/2009: the 'Implementing Regulation'.

More precisely, we aim to assess the changes in administrative/compliance tasks, and consequently costs, from having to calculate the amount of exported family benefits based on the living standard in the Member State of residence of the children rather than based on the competent Member State's benefit rates.

Furthermore, we aim to assess whether the families receiving the benefits will face changing administrative/compliance tasks.

We would therefore much appreciate your help by providing us with the list of tasks and estimates of your current administrative/compliance time needs for handling the current EU provisions, and in assessing how these time needs may change from revisions to the provisions. We would like to do this via an interview with you – either in person or by phone.

Hence, we would like to arrange the time and place for an interview; and for you to get more insight into the questions we would like to ask you – we hereby provide you with our interview guide.

You may well find that you are not able to answer all the questions. We will therefore focus on the questions you can answer – but you may also be able to help us pointing to the other services in your national administrations that can help us answering the remaining questions.

April 2015

## 1. You and your national administration

Name \_\_\_\_\_ and \_\_\_\_\_ title \_\_\_\_\_ of \_\_\_\_\_ interviewee:

National \_\_\_\_\_ administration:

Function/responsibility \_\_\_\_\_ of \_\_\_\_\_ interviewee:

## 2. Current administrative tasks and consequently costs of handling exports of family benefits

In this section, we ask you to verify and estimate the costs of a number of administrative tasks that are currently carried out when handling a case of exports of family benefits. Imagine a case as described by the following examples:

### Example 1 of exports of family benefits:

Carlos works in Member State A (which has a higher cost of living than Member State B) while his non-working wife Joanna resides with their children in Member State B (which has a lower cost of living than Member State A).

Under the current rules, Carlos is entitled to family benefits in Member State A at the same amount as if his family was residing in Member State A.

### Example 2 of exports of family benefits:

Carlos works in Member State B while his non-working wife Joanna resides with their children in Member State A.

Under the current rules, Carlos is entitled to family benefits in Member State B at the same amount as if his family was residing in Member State B.

We do the assessment in two parts. Firstly, we ask you to assess a situation when you are the national administration with primary competence – i.e. where you deal with the applicant for family benefits.

Secondly, when you are the national administration with secondary competence – i.e. where you deal with the follow-on administrative tasks from an application submitted in another Member State.

If you only carry out one of the two types of administrative tasks – please leave out the other part.

### 2.1. Administrative tasks/costs – when national administration with primary competence

Consider the situation, where you are the national administration with primary competence.

Firstly, please provide your assessment of the number of cases handled by your institution.

➤ How many cases of exports of family benefits does your institution currently handle per year as the national administration with primary competence – including new cases and already active cases?

- a) New cases?
- b) Existing active cases?

➤ How do you collect data?

- a) From other member states?
- b) From the applicant?

When answering these questions please explain whether you collect information via IT-systems, via records of personal registration etc.

Secondly, please provide, with an outset in the below table, your assessment of the current administrative costs of handling a typical case of exports of family benefits, *being the national administration with primary competence*. (You may relate the tasks to the SEDs to be filled out). Hence:

- Please assess the frequency of each of the detailed administrative tasks – i.e. how often are the tasks carried out for a given case? And in this context – is it appropriate to distinguish between "standard tasks" and "additional tasks"?
- Please estimate the average man-hours/minutes required per administrative task. We acknowledge that you may not keep accounts of your time spent on a case/task. Hence, we ask you to provide your best guess. Furthermore, we acknowledge that you may find it difficult to provide a specific man-hour estimate per task. Hence, you may instead provide ranges of estimates (less than 15 minutes, 15 to 30 minutes, 30 minutes to 1 hour, between 1 and 3 hours, between 3 hours and 1 working day, more than 1 working day), or you may also choose to provide a total cost estimate per case – and rank the tasks according to their resource demands, where 1 is the most resource demanding tasks and so forth.

Administrative task	Description of administrative task - hereunder frequency of tasks within a case	Average man-hours/ minutes	Comments
<i>Standard administrative tasks</i>			
Determination of national administration with primary competence	<p><i>Please revise (if necessary):</i></p> <p>You receive an application for exports of family benefits, you determine in which Member State the applicant and his/her family reside, and determine whether the applicant is employed, unemployed, posted worker, or civil servant.</p> <p><i>Please specify/revise frequency when you are the national administration with primary competence:</i></p> <p>Frequency: <u>100</u>%.</p>		<i>Comments:</i>

Calculation of benefit	<p><i>Please revise (if necessary):</i></p> <p>For each of the cases where you are determined as the national administration with primary competence: You will calculate the benefits that the applicant is entitled to according to your national legislation. Furthermore, you will contact the Member State of residence of the applicant's family to investigate the applicant's entitlement to family benefits in this Member State – i.e. to check for overlapping benefits (see further below). Finally, you will set the payment of family benefits in motion.</p> <p><i>Please specify/revise frequency when you are the national administration with primary competence:</i></p> <p>Frequency, when you are the national administration with primary competence: <u>100%</u></p>		<i>Comments:</i>
Annual control	<p><i>Please revise (if necessary):</i></p> <p>For each of the existing cases of exports of family benefits: You will once a year check whether the information/status on the applicant and his/her family has changed based on the (renewed) application of the family.</p> <p><i>Please specify/revise frequency when you are the national administration with primary competence:</i></p> <p>Frequency, when you are the national administration with primary competence (i.e. once a year per existing case): <u>100%</u></p>		<i>Comments:</i>
<b><i>Additional administrative tasks</i></b>			
Disagreement regarding determination of national administration with primary competence	<p><i>Please revise (if necessary):</i></p> <p>If there is disagreement on whether you or your corresponding national administration in the other Member State is the competent one: Additional tasks/costs arise from exchange of information, from determination of which Member State to provide provisional benefits, and ultimately from bringing the case before the Administrative Commission.</p> <p><i>Please specify frequency out of total number of cases when you are the national administration with primary competence:</i></p> <p>Frequency: ___%</p>		<i>Comments:</i>

Administrative task	Description of administrative task - hereunder frequency of tasks within a case	Average man-hours/ minutes	Comments
Overlapping benefits	<p><i>Please revise (if necessary):</i></p> <p>If the applicant is entitled to family benefits from more than one Member State: Additional costs arise from determining which Member State legislation to apply, and hence taking provisional decision on competence, and from deciding on possible sharing of benefit payments.</p> <p><i>Please specify frequency out of total number of cases when you are the national administration with primary competence:</i></p> <p>Frequency: ___%</p>		<i>Comments:</i>
Reimbursement	<p><i>Please revise (if necessary):</i></p> <p>If (provisional) family benefits should have been paid by another Member State: Additional costs arise from reimbursement activities.</p> <p><i>Please specify frequency out of total number of cases when you are the national administration with primary competence:</i></p> <p>Frequency: ___%</p>		<i>Comments:</i>
Recovery	<p><i>Please revise (if necessary):</i></p> <p>If an applicant unjustified has received family benefits: Additional costs arise from determining whether there is a basis for recovery, from calculation of benefits to recover, and from contacting Member States with secondary competence to seek recovery.</p> <p><i>Please specify frequency out of total number of cases when you are the national administration with primary competence:</i></p> <p>Frequency: ___%</p>		<i>Comments:</i>
<b>Missing administrative tasks</b>			
<i>Please add missing task</i>			<i>Comments:</i>
<i>Please add missing task</i>			<i>Comments:</i>
<b>Please estimate your total use of man-hours per case</b>			

**2.2. Administrative costs – when national administration with secondary competence**

Now, consider the situation, where you are *the national administration with secondary competence* – i.e. you receive a request for information from the national administration with primary competence in another Member State.

Firstly, please provide your assessment of the number of cases handled by your national administration.

- How many cases of exports of family benefits do institution currently handle per year as the national administration with secondary competence?
  - a) New cases?
  - b) Existing active cases?

Secondly, please provide, with an outset in the below table, your assessment of the current administrative costs of handling one case of exports of family benefits, being the national administration with secondary competence. (You may relate the tasks to the SEDs to be filled out). Hence:

- Please assess the frequency of each of the detailed administrative tasks – i.e. how often are the tasks carried out in a typical case of application for family benefits? 100 % means that the task is always carried out, while 50 % means it is carried out in half of the cases.  
And in this context – is it appropriate to distinguish between "standard tasks" and "additional tasks"?
- Please estimate the average man-hours/minutes required per administrative task. We acknowledge that you may not keep accounts of your time spent on a case/task. Hence, we ask you to provide your best guess. Furthermore, we acknowledge that you may find it difficult to provide a specific man-hour estimate per task. Hence, you may instead provide ranges of estimates (less than 15 minutes, 15 to 30 minutes, 30 minutes to 1 hour, between 1 and 3 hours, between 3 hours and 1 working day, more than 1 working day), or you may also choose to provide a total cost estimate per case – and rank the tasks according to their resource demands, where 1 is the most resource demanding tasks and so forth.

### 3. Change in administrative costs of handling exports of family benefits from revisions to EU provisions

In this section, we then ask you to assess the likely increase or decrease in administrative task/costs within your national administration from possible revisions to the EU provisions.

We acknowledge that this may be even more difficult than estimating the current use of man-hours in the previous section – in particular if the revisions lead to new administrative tasks.

Please focus on the administrative tasks where resources in terms of average man-hours/minutes will change due to the revisions – i.e. if there is no change, please do just enter 0% in the below tables.

Please do this assessment for each of the possible revisions one by one. We firstly ask you to assess the revisions assuming you are the national administration with primary competence, and secondly we ask you to assess the revisions assuming you are the national administration with secondary competence. However, if you only carry out one of the two types of administrative tasks – please leave out the other.

Revision	(a):
Adjustment of amount of exported family benefits to the living standard in the Member State of residence of the	

child – i.e. adjustment upwards or downwards compared to current situation.

Example 1 of new situation:

Carlos works in Member State A while his non-working wife Joanna resides with their children in Member State B.

Under the revised rules, Carlos will receive family benefits from Member State A reduced to the living standard in Member State B.

Example 2 of new situation:

Carlos works in Member State B while his non-working wife Joanna resides with their children in Member State A.

Under the revised rules, Carlos will receive family benefits from Member State B increased to the living standard in Member State A.

➤ Please fill in the table in section 4.1 below.

**Revision (b):**

Adjustment of amount of exported family benefits to the living standard in the Member State of residence of the child – limited to the amount provided by the competent Member State.

Example 1 of new situation:

Carlos works in Member State A while his non-working wife Joanna resides with their children in Member State B.

Under the revised rules, Carlos will receive family benefits from Member State A reduced to the living standard in Member State B.

Example 2 of new situation:

Carlos works in Member State B while his non-working wife Joanna resides with their children in Member State A.

Under the revised rules, Carlos will receive family benefits from Member State B to the maximum of the rate in Member State B, irrespective of the fact that the living Standard in Member State A is higher.

➤ Please fill in the table in section 4.1 below.

**Revision (c):**

A further possible option would be that the current order of priority is changed as follows: 1) country of residence of the child; 2) the country of work; and 3) country of pension. This would mean that the country of residence of the child has primary responsibility to pay the full amount of family benefits to which the entitlement exists under its national rules. The country of work would top up this amount if the level of family benefits would be higher there. The family will receive the same amount of family benefits as before, but the allocation of the costs between the country of work and the country of residence will differ from the current rules. This also applies, where there is no entitlement to family benefits in the primary competent Member State, but there is entitlement in a secondary competent Member State, as in such a case, the latter State will pay 100% of benefits under its national legislation by way of a "top up".

Example 1 of new situation:

Carlos works in Member State A (which has a higher cost of living than Member State B) while his non-working wife Joanna resides with their children in Member State B (which has a lower cost of living than Member State A).

Under the revised rules, Carlos will receive family benefits from Member State B at the normal national rate to which the entitlement exists under its national rules. If the family is also entitled to benefits from Member State A, the family would receive a differential supplement from Member State A to the level paid under its national legislation. The family overall receives the same amount, but Carlos receives less from Member State A than his co-workers whose children reside with them in Member State

A.

Example 2 of new situation:

Carlos works in Member State B (which has a lower cost of living than Member State A) while his non-working wife Joanna resides with their children in Member State A (which has a higher cost of living than Member State B).

Under the revised rules, Carlos will receive family benefits from Member State B at the normal national rate to which the entitlement exists under its national rules. As the amount of family benefits paid in Member State B is lower than the amount paid by Member State A, Member State B will pay nothing. The family overall receives the same amount, but Carlos receives less from Member State B than his co-workers whose children reside with them in Member State B.

➤ Please fill in the table in section 4.1 below.

**3.1. Change in administrative tasks – when national administration with primary competence**

Consider the situation, where you are the competent national administration – i.e. the national administration sending request for information to (an)other Member State(s).

Please focus on the current administrative tasks where resources in terms of average man-hours/minutes will change due to the revision. Please clearly indicate whether the change is positive or negative: a "+" indicate an increase in the man-hours needed to perform the task and a "-" indicate a reduction in man-hours needed to perform the task. If the estimated change is zero or insignificant please also indicate this in the table. Also please add new administrative tasks required by the revision if relevant.

Please provide a brief narrative explanation for each of the assessed changes and new administrative tasks.

#### 4. Administrative implications for families from revisions to EU provisions on exports of family benefits

The suggested revisions to the EU provisions on exports of family benefits, and hence changes to the administrative tasks of the national administrations, may also have administrative implications for the families – e.g. time spent when applying for exports of family benefits, when being controlled etc.

- Please add relevant tasks for the families in the table below.
- For each of the revisions we ask you to assess the implications for the families associated hereby.

We acknowledge that it is difficult to assess such implications, but please help us doing this by providing your qualitative (or semi-quantitative) assessments. You may just provide a narrative assessment of the implications or you may try to link the implications to the administrative tasks of the national administrations listed in the below table.

**Thanks for your help!**

## Annex C – Case study for Germany

### Introduction

In this section, we give a short description of the German provisions for family benefits, which kind of benefits they include, who is eligible, and how the provisions are interpreted by the national administrative institution handling family benefits: Die Bundesagentur für Arbeit.

EC Regulation 883/2004, Article 1 (z) defines the term family benefits as *"all benefits in kind or in cash intended to meet family expenses, excluding advances of maintenance payments and special childbirth and adoption allowances mentioned in Annex I"*.

In Germany this includes:

- Kindergeld (child benefit)
- Elterngeld (parental allowance)
- Betreuungsgeld (child care allowance)

This study considers exportable family benefits (cash benefits) only, and so only Kindergeld.

Kindergeld can be obtained by taxable persons residing in Germany, or persons subject to income taxation in Germany. There are no restrictions with respect to own children, adopted children or dependent children.

To receive Kindergeld, the applicant's children must be under the age of 18. However, there is a possibility for prolongation to 21 years of age for registered jobseekers, and to 25 for students and working students (less than 20 hours a week). Furthermore, the children must reside in Germany or in another EU Member State, the EEA, or in Switzerland.

The German scheme is universal, and so not means-tested. In 2015, the rates were EUR 184 per month for the first and second child, EUR 190 per month for the third child, and EUR 215 per month for the fourth and subsequent children.

### Current administrative costs and burden

To determine the current administrative costs and burden in handling exports of family benefits in Germany, a number of face-to-face interviews were carried out with experts from the Nürnberg national administration for family benefits. They estimate that there in Germany as a whole are around 85,000 new cases per year and around 170,000 existing cases handled as primary competence. This is slightly more than the estimates by Pacolet and De Wispelaere (2015) shown in Table C-1.

Averaging of the experiences of the interviewees of resources spend on administrative tasks as national administration with primary competence leads to an estimate of 1.36 man-hours per case and 1.28 man-hours per case when they act as national administration with secondary competence, c.f. Table C-1 and Table C-2. The tables show also the administrative tasks are fairly similar being of primary and of secondary competence, both with respect to type and to the amount of resources spent. Furthermore, some tasks are always carried out for a given case, while others are much rarer.

Based on the number of man-hours spent and an average labour cost at EUR 20.5 per hour this adds up to a total average of EUR 28.0 per case as national administration with primary competence and EUR 26.2 per case as national administration with secondary

competence. Table C-1 and Table C-2 shows that for Germany as a whole – i.e. for all cases during a year – the current administrative costs amount to around mEUR 1.8 and mEUR 0.5, respectively.

Table C-1 Current administrative costs and burden – Germany as Member State of primary competence

Administrative task	Average man-hours per case	Frequency	Number of cases <sup>(1)</sup>	Administrative costs, Total, EUR 1,000 <sup>(2)</sup>
<b>A typical case; first time handling of a case - all regular tasks included (not annual control)</b>	<b>1.36 hours</b>	<b>100%</b>	<b>62587</b>	<b>1751.4</b>
Determination of national administration with primary competence <sup>8</sup>	0.5 hours	100%		
Calculation of benefit	0.5 hours	100%		
Annual control <sup>9</sup>	0.67 hours	100%		
Disagreement regarding determination of primary competence <sup>10</sup>	2 hours	5%		
Overlapping benefits	0 hours	0%		
Reimbursement	1 hour	10%		
Recovery	1 hour	>5%		
Translation and coordination	0.25 hours	30-40%		

Notes: <sup>(1)</sup> Source: Pacolet and De Wispelaere (2015). <sup>(2)</sup> Using unit labour cost estimates based on Eurostat data.

<sup>8</sup> The determination of competence and the calculation of benefit is considered as one working task – taking one hour altogether.

<sup>9</sup> The annual control is done via questionnaires sent out to benefit recipients.

<sup>10</sup> Happens rarely and the most important problem is missing answers from other administrations.

Table C-2 Current administrative costs and burden – Germany as Member State of secondary competence

Administrative task	Average man-hours per case	Frequency	Number of cases <sup>(1)</sup>	Administrative costs, Total, EUR 1,000 <sup>(2)</sup>
<b>A typical case; first time handling of a case - all regular tasks included (not annual control)</b>	<b>1.28 hours</b>	<b>100%</b>	<b>20918</b>	<b>547.8</b>
Determination of national administration with primary competence <sup>11</sup>	0.5 hours	100%		
Calculation of benefit	0.5 hours	100%		
Annual control	1 hour	100%		
Disagreement regarding determination of primary competence	2 hours	5%		
Overlapping benefits	0 hours	0%		
Reimbursement	1 hour	10%		
Recovery	1 hour	>5%		

Notes: <sup>(1)</sup> Source: Pacolet and De Wispelaere (2015). <sup>(2)</sup> Using unit labour cost estimates based on Eurostat data.

### Change in administrative costs and burden from revised EU provisions

The overall assessment from the German interviewees is that the changes will lead to few additional man-hours used per case – both being national administration of primary competence and being national administration of secondary competence. Actually, it is assumed that the changes will be similar for the two competences.

Table C-3 shows the expected change in man-hours used per case for Options 1a and 1b – as these are expected to be similar, while Table C-4 concerns Option 3. Options 1a and 1b are extremely complicated to administer as it implies that the national administrations need knowledge on all the different systems, rules and regulations of the different Member States. Technical assistance through a common database. This concerns both the determination of the national administration as well as the calculation of benefits. Furthermore, it is difficult to align different systems like flat-rate systems, income-based systems, the duration of benefit payments etc.

For all three revisions, it has to be added that there are several significant transitional costs that have to be taken into account (training in the new regulations, changes in the IT-systems, re-examination and re-calculation of all existing cases).

<sup>11</sup> The determination of competence and the calculation of benefit is considered as one working task – taking one hour altogether.

Table C-3 Change in administrative costs and burden from Option 1a and Option 1b – Germany as Member State of primary and secondary competence

Administrative task	Change in average man-hours per case	Frequency	Number of cases <sup>(1)</sup>	Change in administrative costs, Total, EUR 1,000 <sup>(2)</sup>
<b>A typical case; first time handling of a case - all regular tasks included (not annual control)</b>	<b>0.9 hours</b>	<b>100%</b>	Primary: <b>62587</b> Secondary: <b>27794</b>	Primary: <b>1156.9</b> Secondary: <b>386.7</b>
Determination of national administration with primary competence <sup>12</sup>	0.4 hours	100%		
Calculation of benefit <sup>13</sup>	0.25 hours	100%		
Annual control	0 hours	100%		
Disagreement regarding determination of national administration with primary competence	0 hours	100%		
Overlapping benefits	0 hours	100%		
Reimbursement <sup>14</sup>	0.25 hours	100%		
Recovery	0 hours	100%		

Notes: <sup>(1)</sup> Source: Pacolet and De Wispelaere (2015). <sup>(2)</sup> Using unit labour cost estimates based on Eurostat data.

<sup>12</sup> The interviewees have indicated a change of "up to double effort"

<sup>13</sup> The interviewees have emphasised that it is not technically feasible at the moment as it is not possible to pay out reduced or higher benefits. They have assessed a change of "++" which we have interpreted as a 50% increase.

<sup>14</sup> The unit costs will increase if information provision by the other Member States is not corking and benefits are paid out without proper calculation. The interviewees have assessed a change of "+" which we have interpreted as a 25% increase.

Table C-4 Change in administrative costs and burden from Option 3 – Germany as Member State of primary and secondary competence

A typical case; first time handling of a case - all regular tasks included (not annual control)	Change in average man-hours per case	Frequency	Number of cases <sup>(1)</sup>	Change in administrative costs, Total, EUR 1,000 <sup>(2)</sup>
<b>Total</b>	<b>0.5 hours</b>	<b>100%</b>	Primary: <b>62587</b> Secondary: <b>27794</b>	Primary: <b>642.7</b> Secondary: <b>214.8</b>

### **Administrative implications for families from revisions to EU provisions on exports of family benefits**

It is the assessment of the national administrations that Options 1a and 1b only will have few administrative implications for the families subject to export of family benefits. However, Option 3 will increase their administrative burden as there will be verifications of the residence of the child. In turn, there may be a reduction in the administrative burden as proof of income will not be necessary anymore.

### **Conclusions**

<sup>15</sup> The interviewees have emphasised that it is not technically feasible at the moment as it is not possible to pay our reduced or higher benefits. They have assessed a change of "++" which we have interpreted as a 50% increase.

<sup>16</sup> The control costs will increase as the residence of the child will have to be changes. In general, the control of the residence of the child is considered to be difficult to implement. However, as it is no longer necessary to control the existence of an employment contract, administrative costs might also decrease. All in all, the interviewees have assessed a change of "+" which we have interpreted as a 25% increase.

<sup>17</sup> The unit costs will increase if information provision by the other Member States is not corking and benefits are paid out without proper calculation. The interviewees have assessed a change of "+" which we have interpreted as a 25% increase.

The annual number of cases handled in Germany per year is estimated at 62587 when Germany is the Member State of primary competence, while the number of cases is somewhat lower, 20918, when Germany is the Member State of secondary competence.

Currently, the administrative resources spent on each case amount to 1.36 hours for an average case when Germany is the Member State primary competence, and to 1.28 hours when of secondary competence.

The overall assessment is that the changes will lead to few additional man-hours used per case – both being national administration of primary competence and being national administration of secondary competence. Actually, it is assumed that the changes will be similar for the two competences.

It is the assessment of the national administrations that Options 1a and 1b only will have few administrative implications for the families subject to export of family benefits. However, Option 3 will increase their administrative burden as there will be verifications of the residence of the child. In turn, there may be a reduction in the administrative burden as proof of income will not be necessary anymore.

## Annex D – Case study for Denmark

### Introduction

In this section, we give a short description of the Danish legislation on family benefits, which kind of benefits it includes, who is eligible, and how the legislation is interpreted by the national administrative institution handling family benefits, Udbetaling Danmark (Payment Denmark).

EC Regulation 883/2004, Article 1 (z) defines the term family benefits as *"all benefits in kind or in cash intended to meet family expenses, excluding advances of maintenance payments and special childbirth and adoption allowances mentioned in Annex I"*.

In Denmark, this includes<sup>18</sup>:

- children and youth benefits (børne- og ungeydelsen)
- child supplements and adoption supplements (børnetilskud og adaptionstilskud)
- subsidies for private childcare and subsidies for home caring of own children in accordance with the Day Care Act chapter 15 and 16 (tilskud til privat pasning og tilskud til pasning af egne børn efter dagtilbudslovens kapitel 15 og 16)

However, since this study only assesses family benefits that can be exported (cash benefits) only the children and youth benefits are relevant.

The law on child benefits (børnetilskudsloven) regulates the children and youth benefits. Danish children and youth benefits are universal and not means-tested. However, since 2014 it has been income-regulated meaning that workers with a yearly income above DKK 723,100 (EUR 96,894) receive a reduced amount of benefits.

Family benefits are obtainable for residents with Danish nationality or refugee status and foreigners with one to three years of residence in Denmark, depending on the type of benefits applied for<sup>19</sup>.

According to Danish law two years of residence or employment within a reference period of 10 years is required to obtain the right to family benefits<sup>20</sup>. Are these requirements not met the payments are reduced. Hence, the Danish law establishes that six months of residence or employment in Denmark entitles the applicant to 25% of the full amount of benefit. One year of residence or employment entitles the applicant to 50% of the full amount of benefits. 18 months entitles to 75% and two years of residence or employment entitles to 100% of the benefits<sup>21</sup>. All within a reference period of 10 years.

For 2015, the rates of benefits are DKK 4,443 (EUR 595) per quarter for each child of 0-2 years, DKK 3,519 (EUR 472) per quarter for each child 3-6 years, DKK 2,769 (EUR 371) per quarter for each child 7-14, and DKK 923 (EUR 124) per quarter for each child of 15-17 years<sup>22</sup>. The benefits are tax-free and rates are adjusted annually.

In Denmark, Udbetaling Danmark (Payment Denmark) is the national administrative institution handling family benefits. Here, the Department of Family Benefits (afdeling for familieydelse) is responsible for all processes and payments related to family benefits. Therefore, in determining the Danish national administrative burdens related to handling exports of family benefits only one interview was conducted.

<sup>18</sup> 'Vejledning om EF-regler om social sikring – Familieydelse' (The official Danish manual on the interpretation of the EC regulation 883/2004 in a Danish context).

<sup>19</sup> Børnetilskudsloven § 5.

<sup>20</sup> Børnetilskudsloven § 5a, stk. 1.

<sup>21</sup> Børnetilskudsloven § 5a, stk. 2.

<sup>22</sup> Rates publicly available at the citizens information service borger.dk: <https://www.borger.dk/Sider/Boerne-ungeydelse.aspx>

Udbetaling Danmark acknowledged that the Danish legislation at first glance might seem to be inconsistent with EC Regulation 883/2004. However, they stressed that in practice the rules are in line with EU regulation since Udbetaling Danmark calculate an EU-workers' right to benefits based on an aggregation principle, where the period of time, in which the EU-worker was entitled to benefits from the Member State(s) where he/she previously resided, is included. If the Member State(s), in which an EU-worker formerly resided, has assessed there is a right to benefits, this right also applies in Denmark. In many EU Member States, the right to family benefits derives from work or insurance, where in Denmark it is based on residence.

### **Current administrative costs and burden**

To determine the current administrative costs and burden in handling family benefits in Denmark an interview with Udbetaling Danmark, Department of Family Benefits, was conducted. Udbetaling Danmark has been doing measurements of time used on internal handling of different types of cases and was therefore able to give rather accurate time estimates on the different tasks. Udbetaling Danmark has only existed for two years. Prior to this family benefits were managed by the Danish municipalities.

Udbetaling Danmark estimates that they handle approximately 6,500 new cases a year (about 450 cases per month). It is estimated that in 20% – or 1,300 – of these cases Udbetaling Danmark is the national administration of secondary competence. Udbetaling Danmark currently has 10,000 ongoing cases where quarterly payments are made. Udbetaling Danmark states that the number of cases has been stable – though with a slight increase – in the two years Udbetaling Danmark has existed. The amount of new cases typically follows the different types of seasonal work (e.g. horticulture work) and bigger projects (e.g. construction projects such as the new city metro line in Copenhagen). A slight increase in the number of cases in the coming years is expected due to the economic situation in Denmark, which remains better than many other European countries. However, there is a tendency towards more EU-workers moving their families to Denmark after having worked here for a period of time, in which case the family benefits cease being exported.

It is the impression at Udbetaling Danmark that Denmark, due to its high amount of benefits, in most cases is the primary competent state (at times jointly with another Member State).

The average man-hours used handling cases on export of family benefits by Udbetaling Danmark as national administration with primary competence is estimated at 3.70 man-hours per case. As national administration with secondary competence the number is 3.88 man-hours per case. With an average labour cost at EUR 29.3 per hour this adds up to a total average of EUR 108.5 per case as national administration with primary competence and EUR 113.6 per case as national administration with secondary competence. Hence, for Denmark as a whole the annual current administrative costs amount to EUR 564,000 and EUR 83,100, respectively.

Table D-1 Current administrative costs and burden – Denmark as Member State of primary competence

Administrative task	Average man-hours per case	Frequency	Number of cases <sup>(1)</sup>	Administrative costs, Total, EUR 1,000 <sup>(2)</sup>
<b>A typical case; first time handling of a case - all regular tasks included (not annual control)</b>	<b>3.70 hours</b>	<b>100%</b>	<b>5200</b>	<b>564.0</b>
Determination of national administration with primary competence <sup>23</sup>	1 hour	100%		
Calculation of benefit <sup>24</sup>	1.83 hours	100%		
Annual control	0.75 hours	80%		
Disagreement regarding determination of primary competence	2.50 hours	0-5%		
Overlapping benefits <sup>25</sup>	0.50 hours	90-100%		
Reimbursement <sup>26</sup>	12 hours	2%		
Recovery <sup>27</sup>	0.50 min.	0.25-0.5%		

Notes: <sup>(1)</sup> Source: Estimate provided by the Danish national expert. <sup>(2)</sup> Using unit labour cost estimates based on Eurostat data.

<sup>23</sup> The EU worker does not submit an actual application; he/she just provide the requested information to Udbetaling Danmark (or another MS) who then initiates the process. Exchange of information with other relevant Member State already takes place on receipt of application/information on EU worker. Other relevant Member State provides (amongst other things) information on the family status.

<sup>24</sup> Information and answers obtained before any calculation of benefits are made. Point should therefore be noted under 'determination of national administration with primary competence', where it is also included in the estimation of man-hours.

<sup>25</sup> There is usually overlap in entitlement why it should not be listed as a separate task, but should be located under 'determination of national administration with primary competence'. In Denmark, the right to benefits is conditioned by Danish residency, but in many other MS the right to benefits often derives from work or insurance. This creates an overlap in entitlement to benefits. Often an overlap in benefits occurs when the applicant moves between DK and another MS, as DK typically pre-pay, while other countries post pay.

<sup>26</sup> Very few cases after the new regulation. Today it is no longer possible to pay benefits to an applicant who is eligible in another MS, and then seek reimbursement from the other MS. Instead, the requirement today is to bypass the other MS and approach the applicant directly (which transfers most of the cases to the 'recovery' category). Reimbursement is only relevant in cases where there are three member states involved. For example, when the mother works in Denmark, and applies for family benefits here, the father works in Sweden, and applies for benefits there, while the family (children) lives in Norway. In this case both Denmark and Sweden are the competent administration why either Denmark or Sweden pays benefits to the family and afterwards seek reimbursement from the other MS.

<sup>27</sup> Genuine recovery is done via the Danish tax authorities.

Table D-2 Current administrative costs and burden – Denmark as Member State of secondary competence

Administrative task	Average man-hours per case	Frequency	Number of cases <sup>(1)</sup>	Administrative costs, Total, EUR 1,000 <sup>(2)</sup>
<b>A typical case; first time handling of a case - all regular tasks included (not annual control)</b>	<b>3.88 hours</b>	<b>100%</b>	<b>732</b>	<b>83.1</b>
Determination of national administration with primary competence <sup>28</sup>	1 hour	100%		
Calculation of benefit <sup>29</sup>	1.83 hours	100%		
Annual control <sup>30</sup>	0.25 hours	20%		
Annual recalculation of benefits as secondary MS <sup>31</sup>	0.17 hours	100%		
Disagreement regarding determination of primary competence	2.5 hours	0-5%		
Overlapping benefits <sup>32</sup>	0.5 hours	90-100%		
Reimbursement <sup>33</sup>	12 hours	2%		
Recovery <sup>34</sup>	2 hours	0.25-0.5%		

Notes: <sup>(1)</sup> Source: Pacolet and De Wispelaere (2015). <sup>(2)</sup> Using unit labour cost estimates based on Eurostat data.

<sup>28</sup> The EU worker does not submit an actual application; he/she just provide the requested information to Udbetaling Danmark (or another MS) who then initiates the process. Exchange of information with other relevant Member State already takes place on receipt of application/information on EU worker. Other relevant Member State provides (amongst other things) information on the family status.

<sup>29</sup> Information and answers obtained before any calculation of benefits are made. Point should therefore be noted under 'determination of national administration with primary competence', where it is also included in the estimation of man hours.

<sup>30</sup> When secondary state, less control is needed.

<sup>31</sup> The annual recalculation of benefits as secondary institution is relevant to Member States that have high family benefits. Udbetaling Danmark estimate that this goes for about one third of the MS. Eastern and southern Europe generally have very low benefits. Only Sweden (when the children are older), Netherlands and (some parts of) Germany have higher benefits than Denmark.

<sup>32</sup> There is usually overlap in entitlement why it should not be listed as a separate task, but should be located under 'determination of national administration with primary competence'. In Denmark, the right to benefits is conditioned by Danish residency, but in many other MS it is often conditioned by work. This creates an overlap in entitlement to benefits. There is often also an overlap when the applicant moves between DK and another MS, as DK typically pre-pay, while other countries post pay.

<sup>33</sup> Very few cases after the new regulation. Today it is no longer possible to pay benefits to an applicant who is eligible in another MS, and then seek reimbursement from the other MS. Instead, the requirement today is to bypass the other MS and approach the applicant directly (which transfers most of the cases to the 'recovery' category). Reimbursement is only relevant in cases where there are three member states involved. For example, when the mother works in Denmark, and applies for family benefits here, the father works in Sweden, and applies for benefits there, while the family (children) lives in Norway. In this case both Denmark and Sweden are the competent administration why either Denmark or Sweden pays benefits to the family and afterwards seek reimbursement from the other MS.

<sup>34</sup> In Denmark payments are made four times a year (30 min. x 4 times a year = 2 hours per case). There are currently 38 cases in which DK has been asked by other MS to hold back payments of benefits. Genuine recovery is done via the Danish tax authorities.

### Change in administrative costs and burden from revised EU provisions

Table D-3 and Table D-4 reveal that the Udbetaling Danmark envisages that the analysed revisions to the EU provisions will have fairly similar impacts on the administrative costs – whether being the Member State of primary competence or of secondary competence. Furthermore, Option 1a and Option 1b are expected to have similar impacts, while the impacts of Option 3 are slightly lower. The main impact is expected to be on the resources spend on the calculation of benefits, while the rare reimbursement cases are expected to be even more complex.

Table D-3 Change in administrative costs and burden from Option 1a and Option 1b – Denmark as Member State of primary and secondary competence

A typical case; first time handling of a case - all regular tasks included (not annual control)	Change in average man-hours per case	Frequency	Number of cases <sup>(1)</sup>	Change in administrative costs, Total, EUR 1,000 <sup>(2)</sup>
<b>Total</b>	<b>1.99 hours</b>	<b>100%</b>	Primary: <b>5200</b> Secondary: <b>732</b>	Primary: <b>303.3</b> Secondary: <b>42.7</b>
Determination of national administration with primary competence <sup>35</sup>	0.25 hours	100%		
Calculation of benefit <sup>36</sup>	1.5 hours	100%		
Annual control <sup>37</sup>	0.5 hours	100%		
Disagreement regarding determination of national administration with primary competence	0 hours	0-5%		
Overlapping benefits	0 hours	90-100%		
Reimbursement	12 hours	2%		
Recovery	0 hours	0.25-0.5%		

Notes: <sup>(1)</sup> Source: Estimate provided by the Danish national expert, and Pacolet and De Wispelaere (2015). <sup>(2)</sup> Using unit labour cost estimates based on Eurostat data.

<sup>35</sup> To some extent it will be the same as the current situation. However, it will probably be necessary to gather information more often, on whether the EU workers entitlement to benefit in the other MS has changed.

<sup>36</sup> Instead of calculations being processed automatically there will be necessary to make specific calculations in each case.

<sup>37</sup> Due to a need for additional control and further exchange of information.

Table D-4 Change in administrative costs and burden from Option 3 – Denmark as Member State of primary and secondary competence

A typical case; first time handling of a case - all regular tasks included (not annual control)	Change in average man-hours per case	Frequency	Number of cases <sup>(1)</sup>	Change in administrative costs, Total, EUR 1,000 <sup>(2)</sup>
<b>Total</b>	Primary: <b>1.99</b> Secondary: <b>1.79</b>	<b>100%</b> <b>100%</b>	Primary: <b>5200</b> Secondary: <b>732</b>	Primary: <b>303.3</b> Secondary: <b>37.4</b>
Determination of national administration with primary competence	0.25 hours	100%		
Calculation of benefit	1.5 hours	100%		
Annual control	0.25 hours	Primary: 20% Secondary: 80% (Opposite before revision)		
Disagreement regarding determination of national administration with primary competence	0 hours	0-5%		
Overlapping benefits	0 hours	90-100%		
Reimbursement	12 hours	2%		
Recovery	0 hours	0.25-0.5%		

Notes: <sup>(1)</sup> Source: Estimate provided by the Danish national expert, and Pacolet and De Wispelaere (2015). <sup>(2)</sup> Using unit labour cost estimates based on Eurostat data.

### **Administrative implications for families from revisions to EU provisions on exports of family benefits**

The proposal, which entails that benefits are adjusted to the standard of living in the Member State of residence, will most likely provide longer case processing times for the EU-workers and their families, due to the increase in information that needs to be obtained/exchanged.

Many of the changes involve, that the EU-workers need to be in contact with an additional authority (both the primary and the secondary) since they will have the right to benefits from more than one Member State.

In cases where EU workers need to provide proof of residence to obtain benefits the revisions might make it more difficult for them. In Denmark, this would not be an issue, since the National Register (Folkeregisteret) can provide proof of this information, but many Member States do not have such a register.

Option 1a: Unchanged time used for the EU worker. EU workers must do the same as today, but will probably experience a prolonged processing time, since they in all cases must wait for information from the other Member State.

Option 1b: The same as Option 1a. Unchanged time used, but extended processing time for certain cases.

Option 3: Maybe less time consuming and experience of an easier procedure for the EU worker, since they must apply in the country where the family resides which can be assumed to have a system the EU worker will find easier to navigate in.

### **Conclusions**

The annual number of cases handled in Denmark per year is estimated at 5200 when Denmark is the Member State of primary competence, while the number of cases is somewhat lower, 732, when Denmark is the Member State of secondary competence.

Currently, the administrative resources spent on each case amount to 3.70 hours for an average case when Denmark is the Member State primary competence, and to 3.88 hours when of secondary competence.

The overall assessment is that the changes will lead to around 2 additional man-hours used per case when being national administration of primary competence and around 1.8 additional hours being national administration of secondary competence.

## Annex E – Case study for Netherlands

### Introduction

In this section, we give a short description of Dutch the legislation on family benefits, which kind of benefits it includes, who is eligible, and how the legislation is interpreted by the national administrative institution handling family benefits, Sociale Verzekeringsbank (SVB).

EC Regulation 883/2004, Article 1 (z) defines the term family benefits as *"all benefits in kind or in cash intended to meet family expenses, excluding advances of maintenance payments and special childbirth and adoption allowances mentioned in Annex I"*.

In The Netherlands, this includes:

- Algemene Kinderbijslagwet (AKW) (*General Child Benefit*)
- Wet op het kindgebonden budget (WKB) (*Act on supplementary child benefit*)

This study only assess exportable family benefits (cash benefits), which applies to both AKW and WKB. Both kinds of benefits are granted to EU workers with children residing in another EU Member State (EEA country or Switzerland).

To receive family benefits in the Netherlands the applicant's children must be under the age of 18. In addition, the applicant must – regardless of nationality – reside, work and consequently pay taxes on wages in the Netherlands to be eligible to family benefits. While the Algemene Kinderbijslagwet (AKW) is universal scheme and not mean-tested, the Wet op het kindgebonden budget (WKB) is means-tested.

In 2015 the AKW rates for children up to 5 years are EUR 63.88, for children in the age of 6-11 years: EUR 77.57, and for children in the age of 12-17 years: EUR 91.26. The benefits are paid per quarter.

For the WKB there is a ceiling depending on income. The benefit amount decreases as income rise: For income above the threshold of EUR 26,147 the allowance is reduced by 7.6% of the difference between the family income and the EUR 26,147. The income limit for a single person is EUR 102,499 and EUR 123,638 for partners. The monthly amount per children is for one child: EUR 39,529; for two children: EUR 46,581, for three children: EUR 48,989, for four children: EUR 50,384; (...) and for eight children: EUR 55,963.

### Current administrative costs and burden

To determine the current administrative costs and burdens in handling family benefits in The Netherlands an interview with Sociale Verzekeringsbank (SVB), Directie Strategische en Externe Betrekkingen (Social Security Office, Department of Strategic and External Relations), was conducted.

SVB estimates that they handle approximately 4,800 *new* cases each year<sup>38</sup> and about 15,600 existing cases<sup>39</sup>. The numbers from the HIVA study (Pacolet and De Wispelaere, 2015) for 2013 are 20,225 existing cases as national institution of primary competence and 7,596 cases as national institution of secondary competence. The calculations of administrative costs in handling family benefits are based on the data received from the HIVA study.

<sup>38</sup> Based on the number of new cases in the period from October to December 2013.

<sup>39</sup> Based on numbers available for the last quarter of 2014.

The present study estimates the number of man-hours spend as national administration with primary competence is 1.92 man-hours and 1.47 man-hours as national administration with secondary competence.

Based on the number of man-hours spend from this study and an average labour cost at EUR 22.2 per hour this adds up to a total average of EUR 42.7 per case as national administration with primary competence and EUR 32.7 per case as national administration with secondary competence. Hence, for the Netherlands as a whole the annual current administrative costs amount to EUR 862,700 and EUR 247,200, respectively

Below is a detailed review of the administrative cost (EUR) arising from each of the administrative tasks involved in handling the export of family benefits today and in regards to Options 1a, 1b and 3.

Table E-1 Current administrative costs and burden – the Netherlands as Member State of primary competence

Administrative task	Average man-hours per case	Frequency	Number of cases <sup>(1)</sup>	Administrative costs, Total, EUR 1,000 <sup>(2)</sup>
<b>A typical case; first time handling of a case - all regular tasks included (not annual control)</b>	<b>1.92 hours</b>	<b>100%</b>	<b>20225</b>	<b>862.7</b>
Determination of national administration with primary competence. <sup>40</sup>	0.5 hours	150%		
Calculation of benefit	0.75 hours	100%		
Annual control <sup>41</sup>	0.38 hours	50%		
Disagreement regarding determination of primary competence <sup>42</sup>	0.50 hours	100%		
Overlapping benefits <sup>43</sup>	0 hours	100%		
Reimbursement <sup>44</sup>	1 hour	0-5%		
Recovery <sup>45</sup>	1 hour	0-5%		

Notes: <sup>(1)</sup> Source: Pacolet and De Wispelaere (2015). <sup>(2)</sup> Using unit labour cost estimates based on Eurostat data.

<sup>40</sup> This task is done both during an intake and during mutation. Often there are one or more mutations during a year, why the task in average is done 1,5 times per year.

<sup>41</sup> Annual control is only done in about 50 pct. of the cases and often depend on which the country.

<sup>42</sup> Very few cases with disagreements on competence. Almost never happens.

<sup>43</sup> These task falls under the 'calculation of benefits'.

<sup>44</sup> Frequency per case is very hard to estimate. For both reimbursement and recovery, the tasks that the SVB has to do are the same. The SVB first tries to recover the money from the applicant, and only when that fails, do they contact the relevant institution in another Member State. Both for reimbursement and recovery the SVB uses the term 'Verrekening', which means 'solving miscalculation'.

<sup>45</sup> Frequency per case is very hard to estimate. For both reimbursement and recovery, the tasks that the SVB has to do are the same. The SVB first tries to recover the money from the applicant, and only when that fails, do they contact the relevant institution in another Member State. Both for reimbursement and recovery the SVB uses the term 'Verrekening', which means 'solving miscalculation'.

Table E-2 Current administrative costs and burden – the Netherlands as Member State of secondary competence

Administrative task	Average man-hours per case	Frequency	Number of cases <sup>(1)</sup>	Administrative costs, Total, EUR 1,000 <sup>(2)</sup>
<b>A typical case; first time handling of a case - all regular tasks included (not annual control)</b>	<b>1.47 hours</b>	<b>100%</b>	<b>7569</b>	<b>247.2</b>
Determination of national administration with primary competence <sup>46</sup>	0.38 hours	150%		
Calculation of benefit <sup>47</sup>	0.75 hours	100%		
Annual control	0.38 hours	100%		
Disagreement regarding determination of primary competence <sup>48</sup>	1 hour	0-5%		
Overlapping benefits <sup>49</sup>	0 hours	100%		
Reimbursement <sup>50</sup>	1 hour	0-5%		
Recovery <sup>51</sup>	1 hour	0-5%

### Change in administrative costs and burden from revised EU provisions

The overall assessment from the SVB is, that the changes will lead to few additional man-hours used per case. However, the SVB stresses that the introduction of such changes most likely will be followed by a transition phase (6-12 months) involving a significant amount of policy changes, update of processes and instructions, change of IT-systems and new agreements with relevant partners (e.g. tax department).

Below is shown the expected change in man-hours used per case which for all three revisions is estimated to a total average of 1.13 hours per case both as primary and secondary national administration. With an average labour cost at EUR 22.2 per hour this adds up to a total average of additional EUR 25 per case.

<sup>46</sup> This task is done both during an intake and during mutation. Often there are one or more mutations during a year, why the task in average is done 1.5 times per year.

<sup>47</sup> Due to the need for additional contact to national administrations in other Member States and contact to the national tax department, this task is in average performed four times a year for active cases.

<sup>48</sup> Very few cases with disagreements on competence. Almost never happens.

<sup>49</sup> These task falls under the 'calculation of benefits'.

<sup>50</sup> Frequency per case is very hard to estimate. For both reimbursement and recovery, the tasks that the SVB has to do are the same. The SVB first tries to recover the money from the applicant, and only when that fails, do they contact the relevant institution in another Member State. Both for reimbursement and recovery the SVB uses the term 'Verrekening', which means 'solving miscalculation'.

<sup>51</sup> Frequency per case is very hard to estimate. For both reimbursement and recovery, the tasks that the SVB has to do are the same. The SVB first tries to recover the money from the applicant, and only when that fails, do they contact the relevant institution in another Member State. Both for reimbursement and recovery the SVB uses the term 'Verrekening', which means 'solving miscalculation'.

Table E-3 Change in administrative costs and burden from Options 1a, 1b and 3 – the Netherlands as Member State of primary and secondary competence

<sup>52</sup> Rules do not actually change.

<sup>53</sup> Option 1a: Additional 50% since living standards has to be taken into account. Option 1b: Additional 50% since living standards has to be taken into account and gathering of additional information from other Member States needs to be done.

<sup>54</sup> Rules do not actually change.

<sup>55</sup> Rules do not actually change.

<sup>56</sup> Rules do not actually change.

<sup>57</sup> Rules do not actually change.

<sup>58</sup> Rules do not actually change.

**Administrative implications for families from revisions to EU provisions on exports of family benefits**

It is the SVB assessment that the changes will not lead to extra tasks for the applicants. However, they stress that the process of handling the applications most likely will take more time why the applicant consequently must wait longer to get the application approved.

**Conclusions**

The annual number of cases handled in the Netherlands per year is estimated at 20225 when the Netherlands is the Member State of primary competence, while the number of cases is somewhat lower, 7569, when being the Member State of secondary competence.

Currently, the administrative resources spent on each case amount to 1.92 hours for an average case when the Netherlands is the Member State primary competence, and to 1.47 hours when of secondary competence.

The overall assessment is that the changes due to any of the three revisions will lead to just above around 1 additional man-hour used per case – whether being national administration of primary competence or of secondary competence.

## Annex F – Case study for Poland

### Introduction

In this section, we give a short description of the Polish legislation on family benefits, which kind of benefits it includes, who is eligible, and how the legislation is interpreted by the administrative institutions handling family benefits. The institutions responsible for handling family benefits in Poland are at the national level the Ministry of Labour and Social Policy and at regional level the Regional Social Policy Centres, more precisely the Regional Social Policy Centre Krakow and the Regional Social Policy Centre Opole.

To be eligible to family benefits in Poland the beneficiaries must be either:

- Polish citizen
- Foreigner who falls within the scope of the law on coordination of social security schemes or bilateral agreement on social security
- Foreigners residing with their family within the territory of Poland who holds refugee status or has residence permit. Applicants who holds an EU, EEA or Swiss citizenship are not obliged to have their children living in Poland to be eligible to family benefits.

Polish family benefits are contributory and means-tested. It is given to children under the age of 18 years or at the end of the child's education at school. The family income per capita must not exceed PLN 539 (EUR 130) (in 2014) per month (PLN 623 (EUR 150) in the case of families with a disabled child). The monthly amounts per child depend on the age: under 5 years: PLN 77 (EUR 18), 5 - 18 years: PLN 106 (EUR 25), 18 - 24 years: PLN 115 (EUR 28).

### Current administrative costs and burden

To determine the current administrative costs and burden in handling family benefits in Poland interviews with the relevant Polish administrative institutions have been conducted. This includes: at the national level the Ministry of Labour and Social Policy, Department of Coordination of Social Security Systems, and at regional level the Regional Social Policy Centres, more precisely the Regional Social Policy Centre Krakow and the Regional Social Policy Centre Opole.

The Ministry of Labour and Social Policy estimates, that they in average handled 78,000 cases of family benefits in 2014 and a total of around 6,000 active cases<sup>59</sup>. The ministry underlined that they did not have any data on man-hours used on handling cases of family benefits. Their given estimates of man-hours used are based on intuition.

Below is a detailed review of the administrative costs arising from each of the administrative tasks involved in handling the export of family benefits today and in regards to Options 1a, 1b and 3.

Table F-1 shows that an average case for the national administration as primary competence uses just above one man-hour with most time most often spent on the calculation of benefit and on determining which Member State actually has the primary competence. In addition, the Polish interviewees mention the copying of the application and its transfer to a foreign institution as a standard task.

---

<sup>59</sup> Cases that were initiated in 2013 and which had not been completed by 2014.

Table F-1 Current administrative costs and burden – Poland as Member State of primary competence

Administrative task	Average man-hours per case	Frequency	Number of cases <sup>(1)</sup>	Administrative costs, Total, EUR 1,000 <sup>(2)</sup>
<b>A typical case; first time handling of a case - all regular tasks included (not annual control)</b>	<b>1.21 hours</b>	<b>100%</b>	<b>8698</b>	<b>53.9</b>
Determination of national administration with primary competence	0.44 hours	100%		
Calculation of benefit <sup>60</sup>	0.47 hours	100%		
Annual control <sup>61</sup>	0.06 hours	0-1%		
Disagreement regarding determination of primary competence <sup>62</sup>	0.75 hours	0.04-1%		
Overlapping benefits <sup>63</sup>	0 hours	100%		
Reimbursement	0 hours	10%		
Recovery	0.33 hours	10%		
Additional task <sup>64</sup>	0.21 hours	100%		

Notes: <sup>(1)</sup> Source: Pacolet and De Wispelaere (2015). <sup>(2)</sup> Using unit labour cost estimates based on Eurostat data.

Table F-2 shows that a similar amount of resources are spent on an average case being the national administration of secondary competence. The largest task is here the determination of which Member State that actually has the primary competence.

<sup>60</sup> In Poland the amount of family benefit is - to a large extent - fixed.

<sup>61</sup> The Ministry of Labour and Social Policy notes, that in Poland a new application has to be submitted every year, why annual control - in principle - is not relevant. However, in some cases they still have an annual inspection. It takes around 10 min. to submitting a new application.

<sup>62</sup> Time used on this task usually derives from challenges on gathering information from other Member States.

<sup>63</sup> Benefits in Poland are most often lower than in other Member States. Also, this is handled within the task of determination of national administration with primary competence.

<sup>64</sup> Copying the application and attachments to transfer to a foreign institution (Art. 68, 3 883/2004).

Table F-2 Current administrative costs and burden – Poland as Member State of secondary competence

Administrative task	Average man-hours per case	Frequency	Number of cases <sup>(1)</sup>	Administrative costs, Total, EUR 1,000 <sup>(2)</sup>
<b>A typical case; first time handling of a case - all regular tasks included (not annual control)</b>	<b>1.14 hours</b>	<b>100%</b>	<b>62047</b>	<b>362.9</b>
Determination of national administration with primary competence	0.69 hours	100%		
Calculation of benefit	0.17 hours	100%		
Annual control	0 hours	0%		
Disagreement regarding determination of primary competence	0.50 hours	0-0.04%		
Overlapping benefits	0.17 hours	100%		
Reimbursement	0 hours	10%		
Recovery	0.11 hours	10%		

Notes: <sup>(1)</sup> Source: Pacolet and De Wispelaere (2015). <sup>(2)</sup> Using unit labour cost estimates based on Eurostat data.

### Change in administrative costs and burden from revised EU provisions

The interviewees were also asked to assess the consequences of three different revisions to the current EU provisions. The consequences are estimated in terms of additional man-hours to carry out the administrative tasks.

Table F-3 shows that Option 1a is expected to lead to additional resource requirements of just under half an hour – a little less being of secondary competence than of primary competence. These amounts are composed of minor additional efforts to calculate benefits, to deal with overlapping benefits

Table F-3 Change in administrative costs and burden from Option 1a – Poland as Member State of primary and secondary competence

Administrative task	Change in average man-hours per case	Frequency	Number of cases <sup>(1)</sup>	Change in administrative costs, Total, EUR 1,000 <sup>(2)</sup>
<b>A typical case; first time handling of a case - all regular tasks included (not annual control)</b>	Primary: <b>0.43 hours</b> Secondary: <b>0.33 hours</b>	Primary: <b>100%</b> Secondary: <b>100%</b>	Primary: <b>8698</b> Secondary: <b>62047</b>	Primary: <b>19.0</b> Secondary: <b>103.6</b>
Determination of national administration with primary competence	Primary: 0 hours Secondary: 0 hours	100%		
Calculation of benefit	Primary: 0.15 hours Secondary: 0.10 hours	100%		
Annual control	Primary: 0 hours Secondary: - 0.05 hours	Primary: 0-1% Secondary: 0%		
Disagreement regarding determination of national administration with primary competence	Primary: 0 hours Secondary: - 0.05 hours	Primary: 0.04-1% Secondary: 0-0.04%		
Overlapping benefits	Primary: 0.08 hours Secondary: 0.08 hours	100%		
Reimbursement	Primary: 0.08 hours Secondary: 0.08 hours	10%		
Recovery	Primary: 0.13 hours Secondary: 0.13 hours	10%		

Notes: <sup>(1)</sup> Source: Pacolet and De Wispelaere (2015). <sup>(2)</sup> Using unit labour cost estimates based on Eurostat data.

The picture is as shown in Table F-4 similar of Option 1b when Poland is the Member State of primary competence, while resource requirements are expected to fall slightly when being of secondary competence. This is mainly due to a fall in the task of calculating benefits.

Table F-4 Change in administrative costs and burden from Option 1b – Poland as Member State of primary and secondary competence

Administrative task	Change in average man-hours per case	Frequency	Number of cases <sup>(1)</sup>	Change in administrative costs, Total, EUR 1,000 <sup>(2)</sup>
<b>A typical case; first time handling of a case - all regular tasks included (not annual control)</b>	Primary: <b>0.38 hours</b> Secondary: <b>-0.13 hours</b>	Primary: <b>100%</b> Secondary: <b>100%</b>	Primary: <b>8698</b> Secondary: <b>62047</b>	Primary: <b>16.7</b> Secondary: <b>-39.8</b>
Determination of national administration with primary competence	Primary: 0 hours Secondary: 0 hours	100%		
Calculation of benefit	Primary: 0.15 hours Secondary: -0.15 hours	100%		
Annual control	Primary: 0 hours Secondary: -0.50 hours	Primary: 0-1% Secondary: 0%		
Disagreement regarding determination of national administration with primary competence	Primary: 0 hours Secondary: -0.05 hours	Primary: 0.04-1% Secondary: 0-0.04%		
Overlapping benefits	Primary: 0 hours Secondary: 0 hours	100%		
Reimbursement	Primary: 0.08 hours Secondary: 0.08 hours	10%		
Recovery	Primary: 0.08 hours Secondary: 0.13 hours	10%		

Notes: <sup>(1)</sup> Source: Pacolet and De Wispelaere (2015). <sup>(2)</sup> Using unit labour cost estimates based on Eurostat data.

Finally, Table F-5 shows that only few changes to the administrative tasks are expected from Option 3.

Table F-5 Change in administrative costs and burden from Option 3 – Poland as Member State of primary and secondary competence

Administrative task	Change in average man-hours per case	Frequency	Number of cases <sup>(1)</sup>	Change in administrative costs, Total, EUR 1,000 <sup>(2)</sup>
<b>A typical case; first time handling of a case - all regular tasks included (not annual control)</b>	Primary: <b>0.13 hours</b> Secondary: <b>0.13 hours</b>	Primary: <b>100%</b> Secondary: <b>100%</b>	Primary: <b>8698</b> Secondary: <b>62047</b>	Primary: <b>5.6</b> Secondary: <b>39.8</b>

Notes: <sup>(1)</sup> Source: Pacolet and De Wispelaere (2015). <sup>(2)</sup> Using unit labour cost estimates based on Eurostat data.

**Administrative implications for families from revisions to EU provisions on exports of family benefits**

The Regional Social Policy Centre in Opole assesses that the revisions will not lead to any direct changes to the application procedure; neither in the time used nor in the administrative tasks to be performed. However, the Department for Coordination of Social Security Systems and the Ministry of Labour and Social Policy notes that their assessment of the implications to the applicants due to the revisions are high.

**Conclusions**

The annual number of cases handled in Poland per year is estimated at 8698 when Poland is the Member State of primary competence, while the number of cases is somewhat higher, 62047, when being the Member State of secondary competence.

Currently, the administrative resources spent on each case amount to 1.21 hours for an average case when Poland is the Member State primary competence, and to 1.14 hours when of secondary competence.

The overall assessment is that the changes due to any of the three revisions will lead to less than half an hour additional resource per case – whether being national administration of primary competence or of secondary competence.

## Annex G – Case study for Romania

### Introduction

In this section, we give a short description of Romanian legislation on family benefits, which kind of benefits it includes, who is eligible, and how the legislation is interpreted by the national administrative institution handling family benefits, National Agency for Payments and Social Inspection.

The National Agency for Payments and Social Inspection is a public institution with legal personality, subordinated to the Ministry of Labour, Family and Social Protection. The agency operates through county agencies for payments and social inspection, who are organized and operating as decentralised public services with legal personality. While the National Agency for Payments and Social Inspection is the liaison body for family benefits in Romania, the county agencies are the competent institutions.

EC Regulation 883/2004, Article 1 (z) defines the term family benefits as *"all benefits in kind or in cash intended to meet family expenses, excluding advances of maintenance payments and special childbirth and adoption allowances mentioned in Annex 1"*.

In Romania, this includes:

- child benefits
- child-raising benefits

However, since this study assesses family benefits that can be exported (cash benefits) only the child benefits are relevant.

Children up to 18 years of age (or secondary or post-secondary graduation age), who live together with their parents, and have their domicile or residence in Romania, are entitled to state allowances for children (*alocație de stat pentru copii*). The amount of child benefits is fixed (not income related), but varies according to age: 200 lei (EUR 45) for children under the age of two and to 42 lei (about EUR 9) for those older than two.

Claims for family benefits have to be submitted at the town halls. Claims that involve the use of EU forms are submitted to the county agencies for payments and social inspection who take the decision on entitlement.

Eligibility to family benefits requires documentation in the form of: original and copy of birth certificate of the child, original and copy of the ID of the legal representative, documents showing legal status of the child towards legal representative. In cases where claims for child benefits are made by EU citizens working in Romania, the applicant must provide documentation to clarify whether Romania has primary competence. This includes relevant information regarding working status and residence of the other parent and child(ren).

The National Agency for Payments and Social Inspection is using an IT tool for issuing the decisions and calculation of benefits in the case of national applications. This is not applicable for issuing the EU forms.

### **Current administrative costs and burden**

To determine the current administrative costs and burdens in handling family benefits in Romania an interview with the National Agency for Payments and Social Inspection was conducted.

The National Agency for Payments and Social Inspection estimates that they handle approximately 3,000 existing active cases as primary competent state and 49,536<sup>65</sup> existing cases as secondary competent state.

The average man-hours used handling cases on export of family benefits by National Agency for Payments and Social Inspection as national administration with primary competence is 1.46 man-hours. As national administration with secondary competence the number is 0.37 man-hours. With an average labour cost at EUR 2.5 per hour this adds up to a total average of EUR 3.7 per case as national administration with primary competence and EUR 0.9 per case as national administration with secondary competence.

Below is a detailed review of the administrative costs arising from each of the administrative tasks involved in handling the export of family benefits today and in regards to Options 1a, 1b, and 3.

---

<sup>65</sup> Note it is not the number of *new cases* in 2014 but *existing active cases* in 2014. The number of new cases for 2014 is not available.

Table G-1 Current administrative costs and burden – Romania as Member State of primary competence

Administrative task	Average man-hours per case	Frequency	Number of cases <sup>(1)</sup>	Administrative costs, Total, EUR 1,000 <sup>(2)</sup>
<b>A typical case; first time handling of a case - all regular tasks included (not annual control)</b>	<b>1.46 hours</b>	<b>100%</b>	<b>11427</b>	<b>42.3</b>

Overlapping benefits	1.5 hours	0.1%		
Reimbursement	-	0%		
Recovery	2 hours	0.1%		

Notes: <sup>(1)</sup> Source: Pacolet and De Wispelaere (2015). <sup>(2)</sup> Using unit labour cost estimates based on Eurostat data.

### Change in administrative costs and burden from revised EU provisions

The National Agency for Payments and Social Inspection expressed doubts regarding the proposed changes to the provisions of family benefits granted according to the living standard in the Member State of residence of the child. The concerns were related to whether the revisions would lead to a breach with the principles of coordination of social security systems.

In addition, the National Agency for Payments and Social Inspection stressed, that since the procedure of implementing the new rules are not clear, they found it rather difficult to make an estimation of the change in administrative costs.

If the procedures are implemented through the same mechanism of EU forms and payments of benefits are made directly to the families, the administrative costs will remain almost the same. However, if the procedure shall involve reimbursements between the institutions, the administrative tasks will increase and the costs equally which most likely will affect the EU workers/applicants. The National Agency for Payments and Social Inspections also assessed, that in case the order of priority changed so that the country of residence of the children becomes the Member State with primary competence, it will lead to an increase in disagreements between the Member State on competence, since residence as a criteria is harder to implement than work.

Table G-3 Change in administrative costs and burden from Option 1a and Option 1b – Romania as Member State of primary and secondary competence

Administrative task	Change in average man-hours per case	Frequency	Number of cases <sup>(1)</sup>	Change in administrative costs, Total, EUR 1,000 <sup>(2)</sup>
<b>A typical case; first time handling of a case - all regular tasks included (not annual control)</b>	Primary: <b>0.30 hours</b> Secondary: <b>0.55 hours</b>	<b>100%</b> <b>100%</b>	Primary: <b>11427</b> Secondary: <b>4616</b>	Primary: <b>8.7</b> Secondary: <b>6.4</b>

### **Administrative implications for families from revisions to EU provisions on exports of family benefits**

Though they find it hard to estimate, the National Agency for Payments and Social Inspection believe that the revisions will lead to an increase in time spent by the families on providing information.

### **Conclusions**

The annual number of cases handled in Romania per year is estimated at 11427 when Romania is the Member State of primary competence, while the number of cases is somewhat lower, 4616, when being the Member State of secondary competence.

Currently, the administrative resources spent on each case amount to 1.46 hours for an average case when Romania is the Member State primary competence, and to 0.37 hours when of secondary competence.

The overall assessment is that the changes to the administrative tasks will be quite significant. This is particularly the case for Option 3.

## Annex H – Case study for UK

### Introduction

In this section, we give a short description of the UK legislation on family benefits, which kind of benefits it includes, who is eligible, and how the legislation is interpreted by the national administrative institution handling family benefits, Her Majesty's Revenue and Customs.

EC Regulation 883/2004, Article 1 (z) defines the term family benefits as *"all benefits in kind or in cash intended to meet family expenses, excluding advances of maintenance payments and special childbirth and adoption allowances mentioned in Annex I"*.

In the UK, this includes child benefits, which is a tax financed (non-contributory, not means-tested) system available for persons responsible for raising a child or children. The claimant must be present, ordinarily resident and have a right to reside in the UK. Claimant's immigration status not subject to any limitation or condition Child and claimant to be present in UK and living together.

The benefits apply normally to children of up to 16 years or if continuing in non-advanced education or approved training up to 20th birthday. Generally, the child must be present in the UK.

In 2015, the benefit rates are GBP 88.83 (EUR 111) per month for the eldest qualifying child of a couple (monthly amount). For each other child GBP 58.72 (EUR 73).

### Current administrative costs and burden

To determine the current administrative costs and burden in handling family benefits in the UK an interview with Her Majesty's Revenue and Customs was conducted. In general, the interviewee found it difficult to assess administrative costs and burden as no actual measurements are made. Hence, the assessments of current costs provided are rough estimates only, while no assessments of the changes to these as a result of revisions to the EU provisions have been provided.

With this caveat in mind, Table H-1 shows that Pacolet and De Wispelaere (2015) estimates that the UK as primary competence handles just above 20,000 cases a year. The administrative resources spent on average on these cases are estimated to amount to almost six man-hours per case. This is higher than for the other case study Member States. Much time seems, for example, to be spent on determining who the national administration with primary competence is, and on settling disagreements in this regard.

With the significant number of cases, the total administrative costs amount to almost mEUR 2 per year.

Table H-1 Current administrative costs and burden – UK as Member State of primary competence

Administrative task	Average man-hours per case	Frequency	Number of cases <sup>(1)</sup>	Administrative costs, Total, EUR 1,000 <sup>(2)</sup>
<b>A typical case; first time handling of a case - all regular tasks included (not annual control)</b>	<b>5.75 hours</b>	<b>100%</b>	<b>20271</b>	<b>1955.1</b>
Determination of national administration with primary competence	2 hours	100%		
Calculation of benefit	2 hours	100%		
Annual control	0.75 hours	100%		
Disagreement regarding determination of primary competence	2 hours	15%		
Overlapping benefits	2 hours	25%		
Reimbursement	0.75 hours	40%		
Recovery	0.75 hours	20%		

Notes: <sup>(1)</sup> Source: Pacolet and De Wispelaere (2015). <sup>(2)</sup> Using unit labour cost estimates based on Eurostat data.

Table H-2 then shows that Pacolet and De Wispelaere (2015) estimates that the UK as primary competence handles around 3,300 cases a year. The administrative resources spent on average on these cases are estimated to amount to 2.75 man-hours per case. This is similar to for the other case study Member States. The total administrative costs amount to almost EUR 200,000 per year.

Table H-2 Current administrative costs and burden – UK as Member State of secondary competence

Administrative task	Average man-hours per case	Frequency	Number of cases <sup>(1)</sup>	Administrative costs, Total, EUR 1,000 <sup>(2)</sup>
<b>A typical case; first time handling of a case - all regular tasks included (not annual control)</b>	<b>2.75 hours</b>	<b>100%</b>	<b>3391</b>	<b>171.3</b>
Determination of national administration with primary competence	0.75 hours	100%		
Calculation of benefit	0.75 hours	100%		
Annual control	0.75 hours	100%		
Disagreement regarding determination of primary competence	2 hours	15%		
Overlapping benefits	2 hours	25%		
Reimbursement	0.75 hours	40%		
Recovery	0.75 hours	20%		

Notes: <sup>(1)</sup> Source: Pacolet and De Wispelaere (2015). <sup>(2)</sup> Using unit labour cost estimates based on Eurostat data.

### Change in administrative costs and burden from revised EU provisions

As mentioned above, it was not feasible for the UK interviewee to provide estimates of the change in the administrative costs from revisions to the EU provisions.

### Administrative implications for families from revisions to EU provisions on exports of family benefits

Similarly, the UK interviewee could not assess the administrative implications for the families.

### Conclusions

The annual number of cases handled in the UK per year is estimated at 20,271 when the UK is the Member State of primary competence, while the number of cases is somewhat lower, 3,391, when the UK is the Member State of secondary competence.

Currently, the administrative resources spent on each case amount to 5.75 hours for an average case when of primary competence, and to 2.75 hours when of secondary competence.

It has not been feasible to obtain estimates of the change in the administrative costs from revisions to the EU provisions.

## HOW TO OBTAIN EU PUBLICATIONS

### Free publications:

- one copy:  
via EU Bookshop (<http://bookshop.europa.eu>);
- more than one copy or posters/maps:  
from the European Union's representations ([http://ec.europa.eu/represent\\_en.htm](http://ec.europa.eu/represent_en.htm));  
from the delegations in non-EU countries  
([http://eeas.europa.eu/delegations/index\\_en.htm](http://eeas.europa.eu/delegations/index_en.htm));  
by contacting the Europe Direct service ([http://europa.eu/europedirect/index\\_en.htm](http://europa.eu/europedirect/index_en.htm))  
or calling 00 800 6 7 8 9 10 11 (freephone number from anywhere in the EU) (\*).

## **Executive Summary**

The right to unemployment benefits in all Member States depends on having fulfilled a qualifying period. Regulation (EC) No 883/2004 of the European Parliament and of the Council of 29 April 2004 on the coordination of social security systems specifies in Article 61 the principle of aggregation, which means that if a person does not have a sufficiently long unemployment benefit insurance record in the last Member State of activity/insurance – henceforth called the Member State of last employment, periods

fulfilled in another Member State – henceforth called the Member State of previous employment. Most Member States apply the principle of aggregation after one day of insurance. This may lead to cases where unemployment benefits are being claimed after a very short period of being member of the insurance system in the Member State of last employment. It has therefore been questioned whether the current rules sufficiently ensure that a worker has an effective link to the given labour market and the related insurance system before claiming unemployment benefits there, either in terms of the length of the insurance periods fulfilled or in terms of the calculation basis for the unemployment benefits. Furthermore, claiming benefits after a short period of insurance or (self-)employment may have negative financial consequences for the Member States which has to pay the benefits.

Revisions to the current rules are therefore being considered to ensure uniform application of the principle of aggregation across Member States. This is done to ensure that the financial burden for paying unemployment benefits does not arise in situations, where mobile EU-workers have not yet made a significant contribution to the insurance system in the Member State of last employment, and in general to avoid undesirable uses of the unemployment benefit insurance systems in the EU. However, such revisions to the rules may also have implications for the administrative costs and burden for the national administrations handling aggregation of unemployment benefit cases as well as for the EU-workers themselves and their families.

On this background, the present study looks into the following four possible revisions to Regulation (EC) No 883/2004:

- Option 2a: A threshold of **one month** of insurance or (self-)employment needs to be completed in the Member State of last employment before aggregation of periods of insurance, employment or self-employment fulfilled in a Member State of previous employment can be applied<sup>80</sup>.
- Option 2b: A threshold of **three months** of insurance or (self-)employment needs to be completed in the Member State of last employment before aggregation of periods of insurance, employment or self-employment fulfilled in a Member State of previous employment can be applied<sup>81</sup>.
- Option 3a: The salary earned in the Member State of previous employment is also taken into account for the calculation of the unemployment benefit by the Member State of last employment, if less than **one month** of insurance or (self-)employment is completed in the Member State of last employment. The calculation is made within a national reference period.
- Option 3b: The salary earned in the Member State of previous employment is also taken into account for the calculation of the unemployment benefit by the Member State of last employment, if less than **three months** of insurance or (self-)employment is completed in the Member State of last employment. The calculation is made within a national reference period.

There is, however, no official information available on the costs of the different administrative tasks carried out by the national administrations in the Member States when handling a case of aggregation of unemployment benefits. Therefore, the study has obtained this information from its primary sources via interviews with national administrations. It was not feasible within the scope of Task 2 to gather such information for all 28 EU Member States. Hence, the results are based on analyses for six case study Member States: Germany, Denmark, Netherlands, Poland, Romania, and the UK.

<sup>80</sup> We also qualitative assess the possible additional administrative burden, if the option is modified/extended to make the Member State of previous employment responsible for paying unemployment benefits for those workers who have not completed the required period of insurance or (self-)employment in the Member State of last employment.

<sup>81</sup> idem.

### Change in administrative costs and burden for national administrations acting as authority of last employment

A first observation, when assessing the administrative costs and burden for the national administrations in the Member States acting as authority of last employment, is that most of these national administrations – at least in the six case study Member States – only handle few cases annually. Only Poland experiences a notable number of cases with 1,517 (in 2013) while the Romanian national administration only had to handle 12 cases. Hence, from the outset it could be assumed that there within many national administrations only is little experience with handling aggregation cases and not that much focus on the costs of doing so. In any case, the current total administrative costs are limited in an overall context.

Currently, the national administrations in the case study Member States use as shown in Table 0-1 on average less than 1.5 man-hours per case, most of which is used for the collection of information from Member States of previous employment about the applicants' employment and insurance histories, followed by resources spent on the calculation of the unemployment benefit payments. The man-hour use is fairly similar in between the case study Member States, and there is no tendency to that high labour cost Member States such as Denmark and the Netherlands carry out the administrative tasks using less manpower than low labour cost Member States such as Poland and Romania.

*Table 0-1 National administrations handling aggregations of unemployment benefits as authority of last employment, man-hours per average case*

Sources: Interviews.

This study assesses as shown in Table 0-2 that the administrative tasks will be almost unchanged if it is decided to implement Option 2a or Option 2b – i.e. to introduce a threshold for the period of insurance or employment to be completed in the Member State of last employment before the aggregation principle applies. If Options 2a and 2b are modified/extended to make the Member State of previous employment responsible for paying unemployment benefits for those workers who have not completed the required period of insurance or (self-)employment in the Member State of last employment, there will be an additional need for the latter national administration to inform the former about this situation. Although the interviewees have not assessed the administrative burden of doing this, we would expect this to a minor additional task as the national administration of last employment in any case is in contact with the national

administration of previous employment regarding the exchange of information about the given applicant.

For Options 3a and 3b – i.e. taking into account the salary earned in the Member State of previous employment in the unemployment benefit calculation – it is assessed that each case on average will take around 20 minutes longer to handle, i.e. 28-29% increase. This increase is caused by the need to collect information as the salary earned in the Member State of previous employment and to use this in the calculation of the unemployment benefit payment.

*Table 0-2 Change in the man-hours per administrative task for aggregation of unemployment benefit cases handled by national administrations as authority of last employment (simple average of case study Member States)*

Sources: Interviews.

In monetary terms, the assessment is as shown in Table 0-3 that the revisions will lead to minor changes in total administrative costs. Only in Poland a change in the unit costs per case and in total costs in EUR is expected as a result of Options 2a and 2b.

*Table 0-3 Change in unit costs per case and total costs handling aggregation of unemployment benefit cases by national administrations as authority of last employment – main calculation*

#### **Change in administrative costs and burden for national administrations acting as authority of previous employment**

The observation that most national administrations of last employment only handle few cases of unemployment period aggregations implies that this also will be the case for most national administrations of previous employment – as the total number of cases is the same from both perspectives for the EU as a whole. This said, the number of cases handled by the six case study Member States of previous employment is somewhat higher than that when being of Member State of last employment. The UK experiences with 3,333 (in 2013) the largest number of cases, followed by Germany with 1,164 cases. However, in relation to the size of the national labour market, Denmark handles with 686 cases most.

Currently, the national administrations in the case study Member States use as shown in Table 0-4 on average less than one man-hour per case, with almost all time spent on the standard administrative task of providing information – i.e. to respond to a request from a Member State of last employment regarding an applicant's insurance and employment history. There is, however, some variation in the average time spent in between the case study Member States. In particular, the unemployment funds in Romania spend much time responding to a request for information about an applicant's previous insurance and employment history. At the other end, the UK does not see that of being the authority of previous employment involving much work.

*Table 0-4 National administrations handling aggregations of unemployment benefits as authority of previous employment, man-hours per average case*

Sources: Interviews.

Similar to for the national administrations of last employment, Option 2a and Option 2b will as shown in Table 0-5 not make almost no changes to the administrative tasks of the national administrations when acting as authority of previous employment. However, if Options 2a and 2b are modified/extended to make the Member State of previous employment responsible for paying unemployment benefits for those workers who have not completed the required period of insurance or (self-)employment in the Member State of last employment, the national administration of previous employment will have two new administrative tasks. Firstly, there will be a minor task of receiving and registering the information about the situation. Secondly, the national administration will calculate the benefits that the applicant is entitled to according to its national legislation. Our best estimate of the additional administrative burden of this is the time estimates provided by the national administrations of last employment for their similar tasks. Hence, based on their we assess that the national administration of previous employment will spent around 20 minutes extra for each case where it becomes responsible for paying the unemployment benefits.

This assessment of limited impacts goes, however, also for Options 3a and 3b when having the role as authority of previous employment.

*Table 0-5 Change in the man-hours per administrative task for aggregation of unemployment benefit cases handled by national administrations as authority of previous employment (simple average of case study Member States)*

Sources: Interviews.

Hence as shown in Table 0-6, also in monetary terms the assessment is that the revisions will lead to minor changes in total administrative costs.

*Table 0-6 Change in unit costs per case and total costs handling aggregation of unemployment benefit cases by national administrations as authority of previous employment – main calculation*

### **Change in administrative costs and burden for mobile EU-workers and their families**

The proposed revisions to the EU provisions may well have implications for the mobile EU-workers and their families. Although it may not be considered as administrative implications, it is suggested that Option 2a and Option 2b may have a negative impact on the exercise of free movement, because a more complex legislation may discourage workers who were planning to move to another Member State.

Regarding Option 3a and Option 3b, compared with the current situation, applicants need to wait a longer time before they receive their benefits. This may further cause income problems for those without private savings. Furthermore, there is an increased requirement to provide documentation in the form of contracts, payslips etc.

## Introduction

### 1.8. Background and purpose

The right to unemployment benefits in all Member States depends on having fulfilled a qualifying period. Regulation (EC) No 883/2004 of the European Parliament and of the Council of 29 April 2004 on the coordination of social security systems specifies in Article 61 the principle of aggregation, which means that if a person does not have a sufficiently long unemployment benefit insurance record in the last Member State of activity/insurance – henceforth called the Member State of last employment, periods fulfilled in another Member State – henceforth called the Member State of previous employment.

Most Member States apply the principle of aggregation after one day of insurance. This may lead to cases where unemployment benefits are being claimed after a very short period of being member of the insurance system in the Member State of last employment. It has therefore been questioned whether the current rules sufficiently ensure that a worker has an effective link to the given labour market and the related insurance system before claiming unemployment benefits there, either in terms of the length of the insurance periods fulfilled or in terms of the calculation basis for the unemployment benefits. Furthermore, claiming benefits after a short period of insurance or (self-)employment may have negative financial consequences for the Member States which has to pay the benefits.

Revisions to the current rules are therefore being considered to ensure uniform application of the principle of aggregation across Member States. This is done to ensure that the financial burden for paying unemployment benefits does not arise in situations, where mobile EU-workers have not yet made a significant contribution to the insurance system in the Member State of last employment, and in general to avoid undesirable uses of the unemployment benefit insurance systems in the EU.

On this background, we look in the present study into the following four possible revisions to Regulation (EC) No 883/2004:

- Option 2a: A threshold of **one month** of insurance or (self-)employment needs to be completed in the Member State of last employment before aggregation of periods of insurance, employment or self-employment fulfilled in a Member State of previous employment can be applied<sup>82</sup>.
- Option 2b: A threshold of **three months** of insurance or (self-)employment needs to be completed in the Member State of last employment before aggregation of periods of insurance, employment or self-employment fulfilled in a Member State of previous employment can be applied<sup>83</sup>.
- Option 3a: The salary earned in the Member State of previous employment is also taken into account for the calculation of the unemployment benefit by the Member State of last employment, if less than **one month** of insurance or (self-)employment is completed in the Member State of last employment. The calculation is made within a national reference period.
- Option 3b: The salary earned in the Member State of previous employment is also taken into account for the calculation of the unemployment benefit by the Member State of last employment, if less than **three months** of insurance or (self-)employment is completed in the Member State of last employment. The calculation is made within a national reference period.

<sup>82</sup> We also qualitative assess the possible additional administrative burden, if the option is modified/extended to make the Member State of previous employment responsible for paying unemployment benefits for those workers who have not completed the required period of insurance or (self-)employment in the Member State of last employment.

<sup>83</sup> idem.

Such revisions may affect the behaviour of the mobile EU-workers and their families, the amounts of unemployment benefits being paid, and the administration needed to handle the aggregation of unemployment benefit cases. The analysis within Task 2 focuses on the latter issue – i.e. the changes to the administrative costs and burden for the national administrations handling aggregation of unemployment benefit cases from the revisions. In this context, Task 2 distinguishes between the administrative costs incurring in the Member States of last employment and those incurring in the Member States of previous employment. Furthermore, we look into the possible changes in the administrative burdens for the mobile EU-workers themselves and their families.

There is, however, as described further below no official information available on the costs of the different administrative tasks carried out by the national administrations in the Member States when handling a case of aggregation of unemployment benefits. Therefore, we have obtained this information from its primary sources via interviews with national administrations. It was not feasible within the scope of Task 2 to gather such information for all 28 EU Member States. Hence, the results are based on analyses for six case study Member States: Germany, Denmark, Netherlands, Poland, Romania, and the UK.

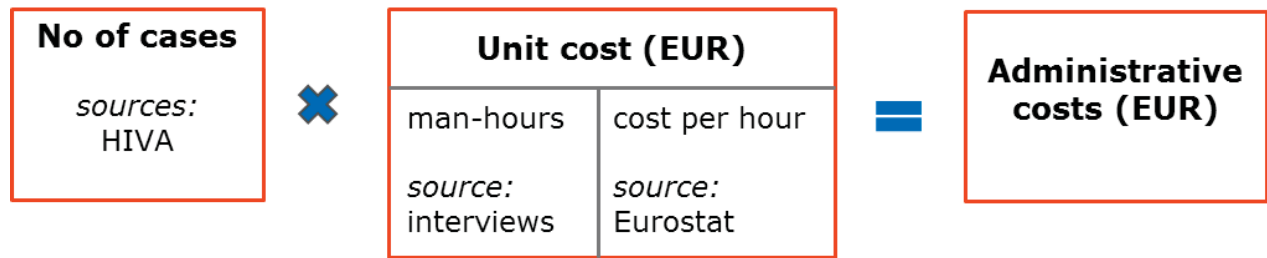

### **1.9. Methodology**

As just introduced above, Task 2 focuses on assessing the administrative costs and burden for the national administrations handling aggregation of unemployment benefit cases. For this, we have made use of the definition of administrative costs and burden provided by the EC (2009) Impact Assessment Guidelines. While doing this, we have adopted a broad definition of administrative information obligations – i.e. we have considered the costs of administrative tasks such as the collection and provision of information, the calculation of benefits, and the reimbursement and recovery of benefits in between Member States. We have then assessed how these administrative costs may change from the revisions to Regulation (EC) No 883/2004 to comprise an additional administrative burden – positive or negative – for the national administrations as well as for the mobile EU-workers and their families. This approach is also in line with the Better Regulation Guidelines (EC, 2015) emphasises objective of delivering maximum benefits to citizens, businesses and workers while avoiding all unnecessary regulatory burdens, and so avoiding unnecessary additional administrative burdens.

The calculations of the administrative costs for the national administrations are as illustrated in Figure 1-1 in principle simple. Firstly, the number of cases in the left-hand side of the figure are the annual cases of aggregation of unemployment benefits currently registered in the six case study Members States. Actually, a given case may be dealt with in two of the six selected Member States if, for example, a given applicant for aggregation (i.e. in a Member State of last employment) comes from another of the six Member States (i.e. in a Member State of previous employment). In our main calculation, we assume that the number of cases does not change due to revising the EU provisions. However, we do to illustrate the sensitivity of this assumption also show a scenario where we assume a change in the number of cases based on the results of Task 4 of this study.

Secondly, we calculate the unit costs for the national administration – i.e. the current administrative costs per case as well as the changed administrative costs per case as a result of revising the EU provisions. The administrative costs per case will clearly differ between cases, i.e. there will be easy cases only involving standard administrative tasks while other more complex cases will involve additional tasks. Hence, we are in practice looking for average costs. These unit costs in EUR are composed of assessments of the man-hours needed per case and the costs per man-hour in EUR (see Table 1-1 in the next section).

Figure 1-1 Calculation of administrative costs for national administrations

As indicated in Figure 1-1, the estimations of the current number of cases have been provided by the HIVA KU Leuven Research Institute for Work and Society (HIVA) via a data gathering exercise (see Pacolet and De Wispelaere, 2015).

The bulk of the work within Task 2 has been the estimation of the man-hours needed to carry out the administrative tasks of handling a case of aggregation of unemployment benefits. As already mentioned, such information is not available from official sources, and so we have gathered the information through interviews with national administrations in the six case study Member States. For this purpose we identified the national administrations to interview (see Annexes C to H for the interviewees), and we developed an interview guide that was shared with our Member States experts/interviewers in the six case study Member States in their respective national languages (see Annex B for the English version of the interview guide). The interview guide was developed via a desk study approach by reviewing existing literature and guidance papers on the legislation (see Annex A) and it was tested in Denmark before being applied in the five other case study Member States.

From the Member State-specific analyses in Annexes C to H, it becomes clear that most of the man-hour estimates are based on a few interviews only. This is partly because there is often only a few national administrations that handle export of family benefit cases in each of the Member States, and partly because of limited interview resources. Hence, the premise for this analysis is the uncertainty associated with few assessments that, furthermore, mostly are based on the subjective assessments of the interviewees rather than on actual registrations of time spent on different administrative tasks. It has therefore not been feasible within the present study period to further validate the administrative cost estimates, but these may well be commented upon by national administrations in the non-case study Member States once this report is released. In this context, it should be underlined that although there are some differences in the assessments both within and in between the Member States, the overall the assessed levels of administrative costs and the additional burdens from the possible revisions to the EU provisions do compare. Finally, the assessed additional burdens can be argued to be low, in particular in absolute terms for a Member State as a whole. Hence, they may well be lower than the socioeconomic benefits caused by the revisions.

### **1.10. Case study Member States**

As already mentioned, the calculations of the administrative costs and burden are based on information for six case study Member States only. Although, it is not the aim of Task 2 to produce a total EU-28 figure for the administrative costs and burden via an upscaling of the calculations from the case studies, we have aimed to select Member States that represent the variety within the EU.

Firstly, we have selected Member States that are geographically spread across the EU. Secondly, the selection comprises Member States that mainly attract mobile EU-workers (Germany, Denmark, Netherlands, UK) and Member States that mainly see workers leave (Poland, Romania). Thirdly, although all Member States apply the general principle of providing an income support to workers that have become (involuntarily) unemployed and all apply qualifying periods, there are some differences. While the Netherlands

applies a qualifying period of less than one year, it is one year or above in Germany, Denmark, Poland and Romania. Furthermore, the income replacement rates are a percentage of past earnings averaged over more than three months in Germany, while Denmark and Netherlands only look at earnings during the last three months. Poland, Romania and the UK apply a flat or fixed rate<sup>84</sup>. Finally, the case study Member States may well differ with respect to the capacity of administration, to the development of IT, and to the standard of living.

Regarding the latter, as shown in Table 1-1, the unit labour costs of the national administrations differ much in between the case study Member States. We assume here that the average wage levels of the relevant employees in the national administrations are similar to that of employees in general in the public administration with upper secondary or post-secondary non-tertiary education. Although the differences in labour costs is a reflection of general differences in labour costs in between the Member States, it could be expected that this may lead to differences in the use of man-power to carry out the administrative tasks. It could, for example, be expected that higher labour costs could lead to fewer labour-intensive processes – and vice versa. However, as shown below such difference have not been detected in between higher and lower labour cost Member States.

*Table 1-1 Labour costs, 2013, EUR per hour - employees in public administration etc. with upper secondary or post-secondary non-tertiary education*

<b>Member State</b>	<b>Wage costs, 2010, EUR per hour<sup>(1)</sup></b>	<b>Wage costs, 2013, EUR per hour<sup>(2)</sup></b>	<b>Labour costs, 2013, EUR per hour<sup>(3)</sup></b>

<sup>84</sup> See Annexes C to H for more details on rules in the different case study Member States. Note in this context that Regulation overrules such national provisions if these are in conflict with this.

## Current administrative costs and burden

### 1.11. National administrations

The aggregation of unemployment benefit cases are handled by different types of national administrations in the case study Member States. In Germany and Denmark, it is the task of the private unemployment insurance institutions – both when acting as the authority of last employment and of previous employment. In the Netherlands, it is the Institute for Employee Benefit Schemes. In Poland, it is both at national and regional level Departments of Social Security Systems. In Romania, it is the National Agency for Employment, while it in the UK is the Department for Work and Pensions.

The below box describes an example of an aggregation of unemployment benefits currently handled by the national administrations.

#### Example of aggregation of unemployment benefits:

EU-worker A moves from Member State A [previous employment] to Member State B [last employment] and works there for two weeks<sup>85</sup> before becoming unemployed. Currently, he can claim unemployment benefits in Member State of last employment B based on his period of insurance in Member State of previous employment A.

#### **National administrations handling aggregation of unemployment benefits as authority of last employment**

Table 2-1 shows that the number of cases handled by national administrations acting as authority of last employment varied between the case study Member States in 2013<sup>86</sup>. This is not surprising given the difference in the sizes of the Member States, and given the fact that we both have selected Member States that mainly attract mobile EU-citizens and mainly see citizens leave. Actually, only Poland experiences a notable number of cases. The differences are also notable when looking at the number of cases relative to the sizes of the labour markets – i.e. total employment in the respective Member States.

---

<sup>85</sup> Note that some Member States currently have stricter requirements, e.g. Denmark requires 8 weeks of work within 12 weeks to qualify.

<sup>86</sup> 2013 has been chosen as reference year, since the information on cases gathered by Pacolet and De Wispelaere (2015) is from 2013.

*Table 2-1 Number of aggregations of unemployment benefits handled by national administrations in 2013 as authority of last employment*

<b>Member State</b>	<b>Number of cases, 2013</b>	<b>Cases per 1000 employed</b>
DE: Germany <sup>(1)</sup>	791	0.02
DK: Denmark	54	0.02
NL: Netherlands	160	0.02

UK: United Kingdom	30	0.00

Sources: Pacolet and De Wispelaere (2015). Eurostat database (lfsi\_emp\_a).

Notes: <sup>(1)</sup> Estimate made by consultant on the basis of data for Denmark and the Netherlands.

Table 2-2 shows for the six case study Member States, the man-hours per average case for the national administrations handling aggregation of unemployment benefits as authority of last employment. The administrative tasks are divided into standard administrative tasks and additional administrative tasks.

The former tasks, which are carried out for almost all cases, comprise information collection. Hence, for each application for aggregation of unemployment benefits, the national administration will collect the information necessary to decide on the payment of unemployment benefits to the applicant. This involves, for example, obtaining information from previous Member State(s) of insurance about insurance and employment histories. Table 2-2 shows that this task for an average case in a Member States takes between 0.20 man-hours in Germany and 1.42 man-hours in Denmark (see Annexes C to H for Member State-specific analyses).

The national administration of last employment will then calculate the benefits that the given applicant is entitled to according to the given national legislation, and it will set the payment of unemployment benefits in motion. Here the average time spent per case ranges from 0.20 man-hours in Germany to 1 man-hours in Romania.

The latter tasks, which are carried out more infrequently for the more complex cases, comprise, for example, the determination of residence when this is not obvious. This task leads to additional costs as a result of collecting additional information about family ties, housing situation, characteristics of the applicant's professional activities. In Poland, this is an important task, while it is of only little importance in the other case study Member States.

Furthermore, if circumstances of the applicant change this will require a determination of the type of change and it may lead to a change of competence and to a recalculation of benefits. Finally, there may be costs from reimbursement activities if provisional unemployment benefits awarded to an EU-worker should have been paid by another Member State, and from recovery activities if an applicant unjustified has received unemployment benefits.

Overall, Table 2-2 shows that currently the resources spent on a case by the national administration as authority of last employment averages less than 1.5 man-hours. Germany is a slight outlier at the low end, which appears to be caused by relative less emphasis on information collection. Denmark, Poland, and Romania are at the higher end, due to different tasks, however.

*Table 2-2 National administrations handling aggregations of unemployment benefits as authority of last employment, man-hours per average case*

<b>Administrative tasks</b>	<b>DE</b>	<b>DK</b>	<b>NL</b>	<b>PL</b>	<b>RO</b>	<b>UK</b>	<b>Av.</b>

Sources: Interviews.

When accounting for the differences in labour costs shown in Table 1-1, Table 2-3 shows that the average unit administrative costs in EUR differ more than the average man-hours shown in Table 2-2. The reason is that the high labour cost Member State, Denmark, also spend relatively most man-hours. This could be argued to be a surprising result, i.e. it could be expected that higher labour costs could lead to less labour-intensive processes.

The lower labour costs and man-hours spent in Poland and Romania imply that an average case costs around 5 to 10 EUR, while it in Denmark reaches above 50 EUR and in the Netherlands around 25 EUR. However, looking at total costs, Germany has with its many cases the highest total costs.

*Table 2-3 Administrative costs for national administrations handling aggregations of unemployment benefits as authority of last employment, unit costs and total costs 2013, EUR*

	<b>DE</b>	<b>DK</b>	<b>NL</b>	<b>PL</b>	<b>RO</b>	<b>UK</b>	<b>Av.</b>
Unit costs, EUR	10.3	53.0	24.3	9.4	4.7	20.7	20.4
Total costs, 1000 EUR	8.1	2.9	3.9	14.3	0.1	0.6	

Sources: Table 1-1, Table 2-1, and Table 2-2.

### **National administrations handling aggregation of unemployment benefits as authority of previous employment**

Table 2-4 then shows the number of cases handled by national administrations as authority of previous employment in the case study Member States in 2013 provided by Pacolet and De Wispelaere (2015). There is large variation in the number of cases. The UK experiences the largest number of cases, followed by Germany. This variation is also notable when looked at it in relation to the size of the national labour markets. Using this measure, Denmark handles relatively the highest number of cases, followed by the Netherlands, the UK and Romania.

*Table 2-4 Number of aggregations of unemployment benefits handled by national administrations in 2013 as authority of previous employment*

<b>Member State</b>	<b>Number of cases, 2013</b>	<b>Cases per 1000 employed</b>
DE: Germany	1164	0.03
DK: Denmark	686	0.26
NL: Netherlands	918	0.11
PL: Poland	147	0.01
RO: Romania	887	0.10
UK: United Kingdom	3333	0.11

Sources: Pacolet and De Wispelaere (2015). Eurostat database.

Table 2-5 shows for the six case study Member States, the unit administrative costs for the national administrations handling aggregations of unemployment benefits as authority of previous employment. The unit costs are here measured as man-hours per average case. Most cases involve time spent on the standard administrative task of providing information – i.e. to respond to a request from a Member State of last employment regarding an applicant's insurance and employment history.

More complex cases involve additional tasks that each may take significant time, but that will be infrequent. For the case study Member States this seems only to be significant for Poland, where time is spent on the determination of residence of the applicant and on dealing with changes in circumstances.

Overall, Table 2-5 shows that there is some variation in the average time spent in between the case study Member States. In particular, the unemployment funds in Romania spend much time responding to a request for information about an applicant's previous insurance and employment history. At the other end, the UK does not see that of being the authority of previous employment involving much work.

*Table 2-5 National administrations handling aggregations of unemployment benefits as authority of previous employment, man-hours per average case*

### **1.12. Mobile EU-workers and their families**

The interviews carried out in the six case study Member States have not revealed many concerns about the time spent at present by the mobile EU-workers and their families when applying for aggregation of unemployment benefits. However, as discussed in Section 3.2 the possible revisions to the EU provisions may well have implications.

## Change in administrative costs and burden from revised EU provisions

### 1.13. National administrations

The administrative task of handling a case of aggregation of unemployment benefits may change in both size and characteristics if the EU provisions are revised. In this study we look as introduced in Section 1.1 into the following four possible revisions, that each are exemplified in the boxes below.

Option 2a: A threshold of **one month** of insurance or (self-)employment needs to be completed in the Member State of last employment before aggregation of periods of insurance, employment or self-employment fulfilled in a Member State of secondary competence can be applied.

#### Example of new situation:

EU-worker A becomes entitled to unemployment benefits in Member State A [of last employment] based on his insurance periods in Member State B [of previous employment] only after completion of at least **one month** of unemployment insurance in Member State A.

Option 2b: A threshold of **three months** of insurance or (self-)employment needs to be completed in the Member State of last employment before aggregation of periods of insurance, employment or self-employment fulfilled in a Member State of previous employment can be applied.

#### Example of new situation:

EU-worker A becomes entitled to unemployment benefits in Member State A [of last employment] based on his insurance periods in Member State B [of previous employment] only after completion of at least **three months** of unemployment insurance in Member State A.

Option 3a: The salary earned in the Member State of previous employment is also taken into account for the calculation of the unemployment benefit by the Member State of last employment, if less than **one month** of insurance or (self-) employment is completed in the Member State of last employment. The calculation is made within a national reference period.

#### Example of new situation

EU-worker A becomes entitled to unemployment benefits in Member State A [of last employment] after only one day of insurance in Member State A; but, as he has been employed for less than **one month** in Member State A, the institution in Member State A also takes his salaries earned in Member State B [of previous employment] into account for the calculation of the amount.

Option 3b: The salary earned in the Member State of previous employment is also taken into account for the calculation of the unemployment benefit by the Member State of last employment, if less than **three months** of insurance or (self-) employment is completed in the Member State of last employment. The calculation is made within a national reference period.

#### Example of new situation

EU-worker A becomes entitled to unemployment benefits in Member State A [of last employment] after only one day of insurance in Member State A; but, as he has been employed for less than **three months** in Member State A, the institution in Member State A also takes his salaries earned in Member State B [of previous employment] into account for the calculation of

the amount.

### **National administrations handling aggregation of unemployment benefits as authority of last employment**

As described in Section 1.2, we assume in the main calculations that the number of cases does not change as a result of revisions to the EU provisions. Hence, in the main calculations the changes in administrative costs and burden are solely a result of changes to the unit administrative costs. Table 3-1 shows a simple average – while we refer to the annexes regarding insight into the more specific Member State calculations.

A first important observation is that on average across the case study Member States, the interviewed national administrations expect that their administrative tasks as authority of last employment are expected to be almost unchanged if it is decided to implement Option 2a or Option 2b. The small decreases observed in Table 3-1 solely stem from the assessment of the Polish interviewees – i.e. that the options may lead to easier handlings of the determination of residence and regarding reimbursement activities.

If Options 2a and 2b are modified/extended to make the Member State of previous employment responsible for paying unemployment benefits for those workers who have not completed the required period of insurance or (self-)employment in the Member State of last employment, there will be an additional need for the latter national administration to inform the former about this situation. Although the interviewees have not assessed the administrative burden of doing this, we would expect this to a minor additional task as the national administration of last employment in any case is in contact with the national administration of previous employment regarding the exchange of information about the given applicant. For Options 3a and 3b, it is expected that the man-hours per case will increase by 28-29% which, however, only is around 20 minutes per case. This is mainly caused by increases in the need to collect information as the salary earned in the Member State of previous employment also must be taken into account in the calculation of the unemployment benefit payments.

As just mentioned above, only the Polish interviewees expect as a change in the unit costs per case and in total costs in EUR as a result of Options 2a and 2b, c.f. Table 3-2. The costs implications of Options 3a and 3b are, however, also assessed to be negligible.

*Table 3-2 Change in unit costs per case and total costs handling aggregation of unemployment benefit cases by national administrations as authority of last employment – main calculation*

Sources: Interviews and Eurostat.

The number of cases are, however, likely to change as a result of revisions to the EU provisions. There might be changes due to changing eligibility criteria for qualifying for aggregation of unemployment benefits and so due to changing unemployment benefit incomes that affect the behaviour of the mobile EU-workers. Task 4 of the present study has estimated such behavioural changes. We have on the basis of the behavioural change estimates for workers with families composed of one-earner married couples with two children at 100 % of average earnings derived assumptions about the likely change in the number of cases handled by national administrations as authority of last employment (cf. Table 3-3).

Hence, the estimation/assumption is that Option 2a and Option 2b, which introduce thresholds – one month and three months, respectively, of insurance or (self-)employment periods, have larger impacts on mobile EU-workers behaviour, than Option 3a and Option 3b, which specify that salaries earned in the Member States of previous employment also may be taken into account for the calculation of unemployment benefits.

*Table 3-3 Change in number of aggregation of unemployment benefit cases handled by national administrations as authority of last employment*

Sources: FGB et.al. (2015): Annex 2 - Table 2.3 and Table 2.4.

Adjusting the main results for such possible changes in the number of cases we get as shown in Table 3-4 slightly different results. While unit cost changes are the same as

those presented in Table 3-2, the options lead to lower total costs compared with Table 3-4 for Member States such as Denmark and Germany as the number of cases to handle decreases.

*Table 3-4 Change in unit costs per case and total costs handling aggregation of unemployment benefit cases by national administrations as authority of last employment – assuming changes in the number of cases*

### **National administrations handling aggregation of unemployment benefits as authority of previous employment**

Table 3-5 shows that the changes in man-hours spent by authorities of previous employments as a result of the revisions are expected to be minor. This also implies that the changes measured in EUR in Table 3-6 are very limited.

However, if Options 2a and 2b are modified/extended to make the Member State of previous employment responsible for paying unemployment benefits for those workers who have not completed the required period of insurance or (self-)employment in the Member State of last employment, the national administration of previous employment will have two new administrative tasks. Firstly, there will be a minor task of receiving and registering the information about the situation. Secondly, the national administration will calculate the benefits that the applicant is entitled to according to its national legislation. Our best estimate of the additional administrative burden of this is the time estimates provided by the national administrations of last employment for their similar tasks. Hence, based on the estimates in Table 2-2 we assess that the national administration of previous employment will spend around 20 minutes extra for each case where it becomes responsible for paying the unemployment benefits.

*Table 3-5 Change in the man-hours per administrative task for aggregation of unemployment benefit cases handled by national administrations as authority of previous employment (simple average of case study Member States)*

The likely change in the number of cases as a result of revisions to the EU provisions will also be experienced by the national administrations of previous employment. Table 3-7 shows our estimates/assumptions for these likely changes – which are limited apart from for Romania.

*Table 3-7 Change in number of aggregation of unemployment benefit cases handled by national administrations as authority of previous employment*

### **1.14. Mobile EU-workers and their families**

The interviews carried out in the six case study Member States indicate that the proposed revisions to the EU provisions may well have implications for the mobile EU-workers and their families. Although it may not be considered as administrative implications, some interviewees envisage that Option 2a and Option 2b may have a negative impact on the exercise of free movement, because a more complex legislation may discourage workers who were planning to move to another Member State.

Regarding Option 3a and Option 3b, compared with the current situation, applicants need to wait a longer time before they receive their benefits. This may further cause income problems for those without private savings. Furthermore, there is an increased requirement to provide documentation in the form of contracts, payslips etc.

## Conclusions

Revising the current rules for aggregation of unemployment periods specified in Regulation (EC) No 883/2004 will have impact on the administrative costs and burden of the national administration in the Member States handling cases where mobile EU-workers apply for unemployment benefits – both in the Member States of last employment of the applicant and in those of previous employment of the applicant. Furthermore, the applying EU-workers and their families will experience changes in the own administrative burden from the revisions. The overall conclusion from this study is, however, that the impacts are expected to be limited – a conclusion that is based on assessments made in six case study Member States: Germany, Denmark, the Netherlands, Poland, Romania, and the UK.

### **Change in administrative costs and burden for national administrations acting as authority of last employment**

A first observation, when assessing the administrative costs and burden for the national administrations in the Member States acting as authority of last employment, is that most of these national administrations – at least in the six case study Member States – only handle few cases annually. Only Poland experiences a notable number of cases with 1,517 (in 2013) while the Romanian national administration only had to handle 12 cases. Hence, from the outset it could be assumed that there within many national administrations only is little experience with handling aggregation cases and not that much focus on the costs of doing so. In any case, the current total administrative costs are limited in an overall context.

Currently, the national administrations in the case study Member States use on average less than 1.5 man-hours per case, most of which is used for the collection of information from Member States of previous employment about the applicants' employment and insurance histories, followed by resources spent on the calculation of the unemployment benefit payments. The man-hour use is fairly similar in between the case study Member States, and there is no tendency to that high labour cost Member States such as Denmark and the Netherlands carry out the administrative tasks using less manpower than low labour cost Member States such as Poland and Romania.

This study assesses that the administrative tasks will be almost unchanged if it is decided to implement Option 2a or Option 2b – i.e. to introduce a threshold for the period of insurance or employment to be completed in the Member State of last employment before the aggregation principle applies. If Options 2a and 2b are modified/extended to make the Member State of previous employment responsible for paying unemployment benefits for those workers who have not completed the required period of insurance or (self-)employment in the Member State of last employment, there will be an additional need for the latter national administration to inform the former about this situation. Although the interviewees have not assessed the administrative burden of doing this, we would expect this to a minor additional task as the national administration of last employment in any case is in contact with the national administration of previous employment regarding the exchange of information about the given applicant.

For Options 3a and 3b – i.e. taking into account the salary earned in the Member State of previous employment in the unemployment benefit calculation – it is assessed that each case on average will take around 20 minutes longer to handle, i.e. 28-29% increase. This increase is caused by the need to collect information as the salary earned in the Member State of previous employment and to use this in the calculation of the unemployment benefit payment.

### **Change in administrative costs and burden for national administrations acting as authority of previous employment**

The observation that most national administrations of last employment only handle few cases of unemployment period aggregations implies that this also will be the case for most national administrations of previous employment – as the total number of cases is the same from both perspectives for the EU as a whole. This said, the number of cases handled by the six case study Member States of previous employment is somewhat higher than that when being of Member State of last employment. The UK experiences with 3,333 (in 2013) the largest number of cases, followed by Germany with 1,164 cases. However, in relation to the size of the national labour market, Denmark handles with 686 cases most.

Currently, the national administrations in the case study Member States use on average less than one man-hour per case, with almost all time spent on the standard administrative task of providing information – i.e. to respond to a request from a Member State of last employment regarding an applicant's insurance and employment history. There is, however, some variation in the average time spent in between the case study Member States. In particular, the unemployment funds in Romania spend much time responding to a request for information about an applicant's previous insurance and employment history. At the other end, the UK does not see that of being the authority of previous employment involving much work.

Similar to for the national administrations of last employment, Option 2a and Option 2b will not make almost no changes to the administrative tasks of the national administrations when acting as authority of previous employment. However, if Options 2a and 2b are modified/extended to make the Member State of previous employment responsible for paying unemployment benefits for those workers who have not completed the required period of insurance or (self-)employment in the Member State of last employment, the national administration of previous employment will have two new administrative tasks. Firstly, there will be a minor task of receiving and registering the information about the situation. Secondly, the national administration will calculate the benefits that the applicant is entitled to according to its national legislation. Our best estimate of the additional administrative burden of this is the time estimates provided by the national administrations of last employment for their similar tasks. Hence, based on their we assess that the national administration of previous employment will spent around 20 minutes extra for each case where it becomes responsible for paying the unemployment benefits.

This assessment of limited impacts goes, however, also for Options 3a and 3b when having the role as authority of previous employment.

### **Change in administrative costs and burden for mobile EU-workers and their families**

The proposed revisions to the EU provisions may well have implications for the mobile EU-workers and their families. Although it may not be considered as administrative implications, it is suggested that Option 2a and Option 2b may have a negative impact on the exercise of free movement, because a more complex legislation may discourage workers who were planning to move to another Member State.

Regarding Option 3a and Option 3b, compared with the current situation, applicants need to wait a longer time before they receive their benefits. This may further cause income problems for those without private savings. Furthermore, there is an increased requirement to provide documentation in the form of contracts, payslips etc.

## **Annex B – Interview guide**

The attached interview guide is the actual version used for the interviews in the UK, and is so in English. The interview guide was provided to the Member States experts in their national languages.

Note that we in the interview guide make use of the option titles: Revisions (A), (B), (C), and (D), rather than Options 2a, 2b, 3a, and 3b – as in the report. The reason for this was to avoid discussing what happened to Option 1.

EUROPEAN COMMISSION, DG EMPLOYMENT, SOCIAL AFFAIRS AND INCLUSION

Study to analyse and assess the impacts of policy options for a possible EU initiative in the area of coordination of social security schemes, in particular with regard to the revision of the current EU provisions on entitlement to unemployment benefits and export of family benefits

**Interview guide:**

**National administrations handling unemployment benefits**

European Commission, Directorate General for Employment, Social Affairs and Inclusion has given Fondazione Brodolini, COWI and IER the task to assess changes to administrative/compliance costs within national administrations and for the individuals affected that might occur from possible revision of the current EU provisions on unemployment benefits specified in Regulation (EC) 883/2004: the 'Basic Regulation' and in Regulation (EC) 987/2009: the 'Implementing Regulation'.

***In this interview, we focus on the case handling of applications for unemployment benefits where the aggregation principle apply. I.e. applications from citizens having moved from one Member State to another to work who have become unemployed before the qualifying period in the competent Member State has been completed. In this interview guide we refer to these citizens as mobile EU workers.***

More precisely, we aim to assess changes in the administrative/compliance tasks and consequently costs of introducing a threshold of one to three months of insurance in the competent Member State before the aggregation rule applies. Furthermore, we want to assess changes in the administrative costs of introducing a rule that states that wages earned in a previous Member State should also be taken into account when the calculating unemployment benefits if less than one or three months of insurance or (self-) employment is completed in the competent State. Finally, we aim to assess whether the unemployed receiving the benefits will face changing administrative/compliance tasks.

We would therefore much appreciate your help by providing us with the list of tasks and estimates of your current administrative/compliance time needs for handling the current EU provisions, and in assessing how these time needs may change from revisions to the provisions. We would like to do this via an interview with you – either in person or by phone.

Hence, we would like to arrange the time and place for an interview; and for you to get more insight into the questions we would like to ask you – we hereby provide you with our interview guide.

You may well find that you are not able to answer all the questions. We will therefore focus on the questions you can answer – but you may also be able to help us pointing to the other services in your national administration that can help us answering the remaining questions.

April 2015

## 5. You and your national administration

Name and title of interviewee:

---

National administration:

---

Function/responsibility of interviewee:

---

## 6. Current administrative tasks and consequently costs of handling unemployment benefits

In this section, we ask you to verify and estimate the costs of a number of administrative tasks that are currently carried out when handling a case of unemployment benefits. Imagine a case as described by the following example:

### Example 1 of unemployment benefits

Carlos moves from Member State A to Member State B and works there for two weeks before becoming unemployed. Currently, he can claim unemployment benefits in Member State B based on his period of insurance in Member State A.

We do the assessment in two parts. Firstly, we ask you to assess a situation when you are the competent national administration – i.e. where you deal with the applicant for unemployment benefits. Secondly, we ask you to assess a situation where you are the national administration of a previous Member State of employment – i.e. where you deal with the follow-on administrative tasks from an application submitted in another Member State.

If you only carry out one of the two types of administrative tasks – please leave out the other part.

### 6.1. Administrative tasks/costs – when competent national administration

Consider the situation, where you are *the competent national administration*.

Firstly, please provide your assessment of the number of cases handled by your institution.

- How many cases of application for unemployment benefits from Mobile EU workers do your institution currently handle per year *as the competent national administration*:

- c) New cases?
- d) Existing active cases?

➤ How do you collect data?

- c) From other member states?
- d) From the applicant?

When answering these questions please explain whether you collect information via IT-systems, via records of personal registration etc.

Secondly, please provide, with an outset in the below table, your assessment of the current administrative costs in terms of average man-hours of handling one case of application for unemployment benefits from a mobile EU worker, *being the competent national administration*. (You may relate the tasks to the SEDs to be filled out). Hence:

- Please assess the frequency of each of the detailed administrative tasks – i.e. how often are the tasks carried out in a case of application for unemployment benefits from a mobile EU worker? 100 % means that the task is always carried out, while 50 % means it is carried out in half of the cases.  
And in this context – is it appropriate to distinguish between "standard tasks" and "additional tasks"?
- Please estimate the average man-hours/minutes required per administrative task. We acknowledge that you may not keep accounts of your time spent on a case/task. Hence, we ask you to provide your best guess. Furthermore, we acknowledge that you may find it difficult to provide a specific man-hour estimate per task. Hence, you may instead provide ranges of estimates (less than 15 minutes, 15 to 30 minutes, 30 minutes to 1 hour, between 1 and 3 hours, between 3 hours and 1 working day, more than 1 working day), or you may also choose to provide a total cost estimate per case – and rank the tasks according to their resource demands, where 1 is the most resource demanding tasks and so forth.

Administrative task	Description of administrative task - hereunder frequency of tasks within a case	Average man-hours/ minutes	Comments
<i>Standard administrative tasks</i>			
Collecting information	<p><i>Please revise (if necessary):</i></p> <p>Determine whether the information provided by the applicant is sufficient to decide on the payment of unemployment benefits. ## 6.2. Administrative costs – when national administration in a Member State of previous insurance of a mobile EU worker

Now, consider the situation, where you are the national administration in a Member State of previous insurance of a mobile EU worker – i.e. you receive a request for information from another Member State.

Firstly, please provide your assessment of the number of cases handled by your national administration.

- How many cases of application for unemployment benefits from mobile EU workers do your institution currently handle per year as the national administration in a Member State of previous insurance of a mobile EU worker?
  - c) New cases?
  - d) Existing active cases?

Secondly, please provide, with an outset in the below table, your assessment of the current administrative costs of handling one application for unemployment benefits from a mobile EU worker, being the national administration in a Member State of previous employment of a mobile EU worker. (You may relate the tasks to the SEDs to be filled out). Hence:

- Please assess the frequency of each of the detailed administrative tasks – i.e. how often are the tasks carried out for a given case?  
And in this context – is it appropriate to distinguish between "standard tasks" and "additional tasks"?

- Please estimate the average man-hours/minutes required per administrative task. We acknowledge that you may not keep accounts of your time spent on a case/task. Hence, we ask you to provide your best guess. Furthermore, we acknowledge that you may find it difficult to provide a specific man-hour estimate per task. Hence, you may instead provide ranges of estimates (less than 15 minutes, 15 to 30 minutes, 30 minutes to 1 hour, between 1 and 3 hours, between 3 hours and 1 working day, more than 1 working day), or you may also choose to provide a total cost estimate per case – and rank the tasks according to their resource demands, where 1 is the most resource demanding tasks and so forth.

Administrative task	Description of administrative task - hereunder frequency of tasks within a case	Average man-hours/minutes	Comments
<i>Standard administrative tasks</i>

## 7. Change in administrative costs of handling unemployment benefits from revisions to EU provisions

In this section, we then ask you to assess the likely increase or decrease in administrative tasks/costs within your national administration from possible revisions to the EU provisions.

We acknowledge that this may be even more difficult than estimating the current use of man-hours in the previous section – in particular if the revisions lead to new administrative tasks.

Please focus on the administrative tasks where resources in terms of average man-hours/minutes will change due to the revisions – i.e. if there is no change, please do just enter 0% in the below tables.

Please do this assessment for each of the possible revisions one by one. We firstly ask you to assess the revisions assuming you are the competent national administration, and secondly we ask you to assess the revisions assuming you are the national administration in a Member State of previous employment of a mobile EU worker. However, if you only carry out one of the two types of administrative tasks – please leave out the other.

The four revisions to assess are presented in the following boxes:

### Revision (a):

A threshold of one month of insurance or (self-) employment needs to be completed before aggregation of

periods of insurance, employment or self-employment fulfilled in another Member State can be applied.

**Example A of new situation:**

Carlos becomes entitled to unemployment benefits in Member State A based on his insurance periods in Member State B only after completion of at least one month of unemployment insurance in Member State A.

➤ Please fill in the table in section 4.1 below.

**Revision (b):**

A threshold of three months of insurance or (self-) employment needs to be completed before aggregation of periods of insurance, employment or self-employment fulfilled in another Member State can be applied.

**Example B of new situation:**

Carlos becomes entitled to unemployment benefits in Member State A based on his insurance periods in Member State B only after completion of at least three months of unemployment insurance in Member State A.

➤ Please fill in the table in section 4.1 below.

**Revision (c):**

The salary earned in the previous Member State is also taken into account for the calculation of the unemployment benefit by the competent Member State, if less than one month of insurance or (self-) employment is completed. The calculation is made within a national reference period.

**Example C of new situation:**

Carlos becomes entitled to unemployment benefits in Member State A after only one day of insurance in Member State A, but, as he has been employed for less than one month in Member State A, the institution in Member State A also takes his salaries earned in Member State B into account for the calculation of the amount.

➤ Please fill in the table in section 4.1 below.

**Revision (d):**

The salary earned in the previous Member State is also taken into account for the calculation of the unemployment benefit by the competent Member State, if less than three months of insurance or (self-) employment is completed. The calculation is made within a national reference period.

**Example of new situation:**

Carlos becomes entitled to unemployment benefits in Member State A after only one day of insurance in Member State A, but, as he has been employed for less than three months in Member State A, the institution in Member State A also takes his salaries earned in Member State B into account for the calculation of the amount.

➤ Please fill in the table in section 4.1 below.

### 7.1. Change in administrative tasks – when competent national administration

Consider the situation, where you are the competent national administration – i.e. the national administration sending request for information to (an)other Member State(s).

Please focus on the current administrative tasks where resources in terms of average man-hours/minutes will change due to the revision. Please clearly indicate whether the change is positive or negative: a "+" indicate an increase in the man-hours needed to perform the task and a "-" indicate a reduction in man-hours needed to perform the task. If the estimated change is zero or insignificant please also indicate this in the table. Also please add new administrative tasks required by the revision if relevant.

Please provide a brief narrative explanation for each of the assessed changes and new administrative tasks.

## 7.2. Change in administrative costs – the national administration in a Member State of previous insurance of a mobile EU worker

Now, consider the situation, where you are *the national administration in a Member State of previous insurance of a mobile EU worker* – i.e. you receive a request for information from the competent national administration in another Member State.

- Please repeat the assessment of the change in the administrative costs associated with the case handling for each of the revisions (a), (b), (c) and (d).

Please focus on the current administrative tasks where resources in terms of average man-hours/minutes will change due to the revision. Please clearly indicate whether the change is positive or negative: a "+" indicate an increase in the man-hours needed to perform the task and a "-" indicate a reduction in man-hours needed to perform the task. If the estimated change is zero or insignificant please also indicate this in the table. Also please add new administrative tasks required by the revision if relevant.

Please provide a brief narrative explanation for each of the assessed changes and new administrative tasks.

### 8. Administrative implications for mobile EU workers from revisions to EU provisions on unemployment benefits

The suggested revisions to the EU provisions on unemployment benefit, and hence changes to the administrative tasks of the national administrations, may have administrative implications for the mobile EU workers – e.g. time spent when applying for unemployment benefits.

- Please add relevant tasks for the Mobile EU worker in the table below.
- For each of the revisions we ask you to assess the implications for the Mobile EU worker associated hereby.

We acknowledge that it is difficult to assess such implications, but please help us doing this by providing your qualitative (or semi-quantitative) assessments. You may just provide a narrative assessment of the implications or you may try to link the implications to the administrative tasks of the national administrations listed in the below table.

**Thanks for your help!**

## Annex C – Case study for Germany

### Introduction

In this section, we give a short description of the German provisions for unemployment benefits, who is eligible, and how the legislation is interpreted by the national administrative institutions handling unemployment benefits: Arbeitnehmerleistungen/Sozialversicherung (the unemployment insurance funds).

Within this study, we focus on the case-handling of applications for unemployment benefits where the aggregation principle apply – i.e. applications from citizens who do not have sufficiently long insurance records in the last Member State of activity/insurance (the Member State of last employment) to qualify for unemployment benefits. Thus periods fulfilled in another Member State (of previous employment) can be aggregated in line with the "principle of aggregation" laid down in Article 61 of Regulation (EC) No 883/2004.

In addition, to qualify for unemployment benefits in Germany the applicant must not be engaged in an employment relationship, but make an effort to put an end to this situation. He/she must be available for placement efforts undertaken by the employment agency, must not be entitled to a standard pension, and in general must make use of all possibilities of occupational integration. Furthermore, the applicant must have been compulsorily insured for at least 12 months during the last two years.

Benefits are based on the recent net earnings, on the category mentioned on the wage-tax card and on the presence or not of children. Beneficiaries with children get 67% of recent net earnings, while it is 60% for those without children.

### Current administrative costs and burden

To determine the current administrative costs and burden in handling aggregations of unemployment benefits in Germany, five experts from the Arbeitnehmerleistungen/Sozialversicherung were interviewed. They emphasised, as also suggested by Pacolet and De Wispelaere (2015), that data on new or existing cases of aggregations of unemployment benefits are not available – at least seen from the perspective of being the Member State of last employment. One reason is that the Bundesagentur für Arbeit (the German Federal Employment Agency) in its IT-systems consider the applications for unemployment benefits from EU-workers as standard files, i.e. not marked as special cases. Another reason is that the administrative procedures within the Bundesagentur für Arbeit do not differ between EU-workers and cross-border workers applying for unemployment benefits, and so any registration of cases is a mix of the two.

We have therefore for the purpose of calculating the administrative costs and burden for Germany as a whole (as authority of last employment) made use of a rough estimate of the number of cases based on the assumption that the number of cases are similar to those in Denmark and the Netherlands – adjusted for the sizes of the labour markets. This leads as shown in Table C-1 to an estimate of 791 cases in 2013.

Table C-1 shows that in total, an average case handling of an application for unemployment benefits from a mobile EU-worker amount to approximately 0.5 hours in the current situation when Germany is the Member State of last employment – with most time spent on collecting information about the applicant's unemployment insurance history from other Member States and on calculating the benefit payments. Some time is also spent on providing personal explanation to the applicant.

Table C-1 Current administrative costs and burden – Germany as Member State of last employment

Administrative task	Average man-hours per case	Frequency	Number of cases <sup>(1)</sup>	Administrative costs, Total, EUR 1,000 <sup>(2)</sup>
<b>A typical case; first time handling of a case - all regular tasks included</b>	<b>0.5 hours</b>	<b>100%</b>	<b>791</b>	<b>8.1</b>
Collecting information <sup>87</sup>	0.2 hours	100%		
Calculation of benefit <sup>88</sup>	0.2 hours	100%		
Determination of residence <sup>89</sup>	0 hours	0%		
Change in circumstances <sup>90</sup>	0 hours	0%		
Reimbursement <sup>91</sup>	0 hours	0%		
Recovery <sup>92</sup>	0 hours	0%		
Explanation of application process to EU-worker	0.1 hours	100%		

Notes: <sup>(1)</sup> Estimate on the basis of data for Denmark and the Netherlands. <sup>(2)</sup> Using unit labour cost estimates based on Eurostat data.

When Germany is the Member State of previous insurance (authority of previous employment), the national administrations are assessed as shown in Table C-2 currently to use around half an hour per case to provide information about the applicant to the Member State of last employment.

<sup>87</sup> 20 min. when PDU 1 is handed in and (more or less) filled in completely; 30 min. when an information request must be sent to the former insurance institution (filling in SED).

<sup>88</sup> Part of this administrative task has already taken place as part of "collection of information". In any case, it is not more time consuming than the calculation for 'normal' German applicants. Furthermore, former periods of employment are under the current legislation not relevant for the calculation of benefits.

<sup>89</sup> As the applicant in question has had a working contract in Germany and is eligible for German unemployment benefits, the determination of residence is not necessary.

<sup>90</sup> Not considered as a relevant administrative task, as Germany no longer is the Member State of last employment.

<sup>91</sup> Not considered as a relevant administrative task under the current legislation.

<sup>92</sup> Not considered as a relevant administrative task under the current legislation.

Table C-2 Current administrative costs and burden – Germany as Member State of previous employment

Administrative task	Average man-hours per case	Frequency	Number of cases <sup>(1)</sup>	Administrative costs, Total, EUR 1,000 <sup>(2)</sup>
<b>A typical case; first time handling of a case - all regular tasks included</b>	<b>0.5 hours</b>	<b>100%</b>	<b>1164</b>	<b>12.0</b>
Providing information <sup>93</sup>	0.5 hours	100%		
Determination of residence <sup>94</sup>	0 hours	0%		
Change in circumstances <sup>95</sup>	0 hours	0%		
Reimbursement <sup>96</sup>	0 hours	0%		
Recovery <sup>97</sup>	0 hours	0%		

Notes: <sup>(1)</sup> Source: Pacolet and De Wispelaere (2015). <sup>(2)</sup> Using unit labour cost estimates based on Eurostat data.

### Change in administrative costs and burden from revised EU provisions – Germany as Member State of last employment

The interviewees were also asked to assess the consequences of four different revisions to the current EU provisions. The consequences are estimated in terms of additional man-hours to carry out the administrative tasks. As shown Table C-3 and Table C-4, the interviewees envisage that the changes will be similar for Option 2a and Option 2b, and for Option 3a and Option 3b, respectively.

Table C-3 shows that no change in man-hours spent per case is assessed for Option 2a and Option 2b. However, some interviewees envisage that reimbursement and recovery procedures may get more difficult and so require more time; but it is difficult to assess the amount of time needed and the frequency of cases. Furthermore, it may well be so that these two revisions may create a lot of problems as no coherent administrative practices exist for solving possible conflicts between public employment services in different Member State regarding responsibilities for paying unemployment benefits, for providing job counselling or other instruments etc.

Table C-3 Change in administrative costs and burden from Option 2a and Option 2b – Germany as Member State of last employment

Administrative task	Change in average	Frequency	Number of cases <sup>(1)</sup>	Change in administrative
---------------------	-------------------	-----------	--------------------------------	--------------------------

<sup>93</sup> When the applicant requests information: fill in PDU 1; when the public employment service of another Member State requests information: fill in SED; in some cases: contacting former employers and determining pension insurance number.

<sup>94</sup> Not applicable.

<sup>95</sup> Not applicable.

<sup>96</sup> Not applicable.

<sup>97</sup> Not applicable.

	man-hours per case			costs, Total, EUR 1,000 <sup>(2)</sup>
<b>Total</b>	<b>0 hours</b>	<b>100%</b>	<b>791</b>	<b>0</b>
Collecting information	0 hours	100%		
Calculation of benefit	0 hours	0%		
Determination of residence	0 hours	0%		
Change in circumstances	0 hours	0%		
Reimbursement	0 hours	0%		
Recovery	0 hours	0%		
Explanation of application process to EU-worker	0 hours	100%		

Notes: <sup>(1)</sup> Estimate on the basis of data for Denmark and the Netherlands. <sup>(2)</sup> Using unit labour cost estimates based on Eurostat data.

Option 3a and Option 3b will require additional resources for the collection of income data – i.e. the use of two SED forms, one for employment periods and one for incomes. Although applicants are already expected to indicate their former income in the PDU 1 document, very often this information is not provided and the former insurance institution must be contacted. Furthermore, there will be an additional administrative burden from the requirement to calculate mixed benefits, i.e. taking salaries of former employment periods into consideration, c.f. Table C-4.

Table C-4 Change in administrative costs and burden from Option 3a and Option 3b – Germany as Member State of last employment

Administrative task	Change in average man-hours per case	Frequency	Number of cases <sup>(1)</sup>	Change in administrative costs, Total, EUR 1,000 <sup>(2)</sup>
<b>Total</b>	<b>0.55 hours</b>	<b>100%</b>	<b>791</b>	<b>8.9</b>
Collecting information	0.15 hours	100%		
Calculation of benefit	0.4 hours	100%		
Determination of residence	0 hours	0%		
Change in circumstances	0 hours	0%		
Reimbursement	0 hours	0%		
Recovery	0 hours	0%		
Explanation of application process to EU-worker	0 hours	100%		

Notes: <sup>(1)</sup> Estimate on the basis of data for Denmark and the Netherlands. <sup>(2)</sup> Using unit labour cost estimates based on Eurostat data.

### Change in administrative costs and burden from revised EU provisions – Germany as Member State of previous employment

Similar to the situation as Member State of last employment, the changes are envisaged to be similar for Option 2a and Option 2b, and for Option 3a and Option 3b, respectively, when it comes to Germany as Member State of previous employment.

Furthermore, similar to Table C-3, Table C-5 shows that no change is assessed for Option 2a and Option 2b. However, some interviewees envisage also here that reimbursement and recovery procedures may get more difficult and so require more time; but it is difficult to assess the amount of time needed and the frequency of cases.

Table C-5 Change in administrative costs and burden from Option 2a and Option 2b – Germany as Member State of previous employment

Administrative task	Change in average man-hours per case	Frequency	Number of cases <sup>(1)</sup>	Change in administrative costs, Total, EUR 1,000 <sup>(2)</sup>
<b>Total</b>	<b>0 hours</b>	<b>100%</b>	<b>1164</b>	<b>0</b>
Providing information	0 hours	100%		
Determination of residence	0 hours	0%		
Change in circumstances	0 hours	0%		
Reimbursement	0 hours	0%		
Recovery	0 hours	0%		

Notes: <sup>(1)</sup> Source: Pacolet and De Wispelaere (2015). <sup>(2)</sup> Using unit labour cost estimates based on Eurostat data.

Table C-6 shows that Option 3a and Option 3b are expected to require a minor extra effort to provide information regarding former incomes – i.e. around 3 minutes extra for the PDU 1 or around 10 minutes extra for the SED form. Furthermore, additional consultation resources must be allocated to explain the calculation methods to the applicants.

Table C-6 Change in administrative costs and burden from Option 3a and Option 3b – Germany as Member State of previous employment

Administrative task	Change in average man-hours per case	Frequency	Number of cases <sup>(1)</sup>	Change in administrative costs, Total, EUR 1,000 <sup>(2)</sup>
<b>Total</b>	<b>0.2 hours</b>	<b>100%</b>	<b>1164</b>	<b>4.8</b>
Providing information	0.1 hours	100%		
Determination of residence	0 hours	0%		
Change in circumstances	0 hours	0%		
Reimbursement	0 hours	0%		
Recovery	0 hours	0%		
Explanation of application process to EU-worker	0.1 hours	100%		

Notes: <sup>(1)</sup> Source: Pacolet and De Wispelaere (2015). <sup>(2)</sup> Using unit labour cost estimates based on Eurostat data.

### Administrative implications for applicants from revisions to EU provisions on unemployment benefits

The interviewees envisage that Option 2a and Option 2b may have a negative impact on the exercise of free movement, because a more complex legislation may discourage workers who were planning to move to another Member State. Furthermore, workers will be deprived of social security protection to which they would have been entitled if they had spent their working life in only one Member State. This is in particular true for the access to measures of active labour market policies.

Regarding Option 3a and Option 3b, compared with the current legislation, applicants need to wait a longer time before they receive their benefits. In case the applicant has no private savings, the increased time to calculate benefits might create problems. Furthermore, applicants are expected to provide additional data compared with the current legislation) because former salaries are unclear etc. Finally, communication with the applicant will be more complicated, as the legislation is getting more complex.

### Conclusions

The annual number of cases handled in Germany per year is estimated at 791 when Germany is the Member State of last employment, while the number of cases is somewhat higher, 1164, when Germany is the Member State of previous employment – i.e. of previous insurance.

Currently, the administrative resources spent on each case amount to 0.5 hours for an average case – whether Germany is the Member State of last employment or of previous employment.

While Options 2a and 2b are not expected to require additional administrative resources per case, Options 3a and 3b will increase these requirements. Being the Member State of last employment, the national administrations are expected to spend 0.55 hours more per case – i.e. more than double compared with the current situation – in particular on the calculation of benefits. Being the Member State of previous employment, additional 0.2 hours per case are expected – partly for providing information, and partly for explaining the application process to the EU-worker.

Option 2a and Option 2b are envisaged to have a negative impact on the exercise of free movement, because a more complex legislation may discourage workers who were planning to move to another Member State. Regarding Option 3a and Option 3b, compared with the current legislation, applicants need to wait a longer time before they receive their benefits. In case the applicant has no private savings, the increased time to calculate benefits might create problems. Furthermore, applicants are expected to provide additional data compared with the current legislation) because former salaries are unclear etc. Finally, communication with the applicant will be more complicated, as the legislation is getting more complex.

## Annex D – Case study for Denmark

### Introduction

In this section, we provide a short description of Danish legislation on unemployment benefits, who is eligible, and how the legislation is interpreted by the national administrative institutions handling unemployment benefits: A-kasserne (the unemployment insurance funds).

To qualify for unemployment benefits in Denmark – the applicant must fulfil the following conditions:

- reside in Denmark
- be unemployed
- not be actively engaged with a formal education
- be a registered as active jobseeker and so be available to the Jobcenter (Danish employment centre)
- be able to work
- be available to the job market
- be between 18 and 65 years old
- be actively job seeking and cooperate with the Jobcenter in building an individual action plan
- have fulfilled eight weeks of work in Denmark (equivalent to 296 hours) within 12 weeks preceding the unemployment spell

The calculation of unemployment benefits is usually based on the average income over the last 12 weeks. In 2015, the amount obtained corresponds to 90% of the earlier income up to a limit of DKK 827 (EUR 111) a day. One can only receive unemployment benefits in up to two years within a three-year period.

There are 26 unemployment insurance funds (A-kasser) in Denmark. The unemployment insurance funds are private and their activities are funded by worker memberships. However, they keep responsibility of public authorities by also administering the publicly-funded share of the unemployment benefits. In other words, they constitute the national administrative institutions handling unemployment benefits.

It is the perception among the interviewed A-kasser that Danish legislation is fully in line with the EC regulation 883/2004. The interpretation of the regulation may, however, differ from other Member States' interpretations in that a period of eight weeks of employment in Denmark within 12 weeks has to be fulfilled in order to qualify for aggregation of unemployment period – i.e. a mobile worker will not be eligible after just one day of work in Denmark.

### Current administrative costs and burden

To determine the current administrative costs and burden in handling unemployment benefits in Denmark, we have interviewed four unemployment insurance funds listed in Table D-1 below.

Table D-1 Interviewed unemployment insurance funds, Denmark

Unemployment insurance fund	Description <sup>98</sup>
3F	Members within Transport, Building & Construction, Manufacturing industries, Agriculture, Forestry,

<sup>98</sup> Memberships are per January 1<sup>st</sup> 2015.

	Horticulture/Market Gardens, Cleaning, Hotel & Restaurants, Delivery and distribution of newspapers and magazines. About 250,000 members.
HK	Unemployment fund for Trade and office workers. About 200,000 members.
ASE	Unemployment insurance fund for all types of workers. About 140,000 members.
Krifa	Unemployment insurance fund for all types of workers. About 140,000 members.

None of the four interviewed unemployment insurance funds has exact time measurements of the administrative costs in terms of man-hours used per case handled. Hence, the estimations are based on best guesses from their experience with the case handlings. However, since unemployment insurance funds are privately-owned in Denmark, both HK A-kasse and 3F A-kasse have expressed that they are focused on limiting time used on case handling, and so they have a good feeling of the time spent.

The interviewed unemployment insurance funds handle between 20 and 150 cases of applications from workers per year (i.e. comparable with the figures in Table D-2), where the aggregation principle is applicable. They generally believe that this number will increase over time. Reasons include expectations of higher degree of travelling abroad to work – especially among young workers<sup>99</sup>. In the shorter run, the Danish economy shows signs of improvement causing employment to increase – and a faster improvement than other EEA countries. This will probably attract more workers seeking employment in Denmark<sup>100</sup>.

In total, an average case handling of an application for unemployment benefits from a mobile EU-worker amount to approximately 1.8 hours in the current situation when Denmark is the Member State of last employment, c.f. Table D-2.

Table D-2 Current administrative costs and burden – Denmark as Member State of last employment

Administrative task	Average man-hours per case	Frequency	Number of cases <sup>(1)</sup>	Administrative costs, Total, EUR 1,000 <sup>(2)</sup>
<b>A typical case; first time handling of a case - all regular tasks included</b>	<b>1.8 hours</b>	<b>100%</b>	<b>54</b>	<b>2.9</b>
Collecting information <sup>101</sup>	1.4 hours	100%		
Calculation of benefit <sup>102</sup>	0.2 hours	100%		
Determination of residence <sup>103</sup>	<0.1 hours	8%		

<sup>99</sup> Interview with HK A-kasse.

<sup>100</sup> Interview with Krifa.

<sup>101</sup> Determination of whether the information provided by the applicant is sufficient to decide on the payment of unemployment benefits. Obtain information from other previous Member State(s) of insurance about insurance and employment history in this/these country(-ies).

<sup>102</sup> For each of those cases where the interviewed unemployment insurance fund is the competent national administration: Time spend on calculation of the benefit, which the applicant is entitled to under the national legislation. The interviewed unemployment insurance fund set the payment of unemployment benefits in motion.

<sup>103</sup> If the State of residence is not readily overt determination of residence needed to determine whether the applicant is eligible for unemployment benefits under the national legislation: Additional costs arise as a

Change in circumstances <sup>104</sup>	<0.1 hours	4%		
Reimbursement <sup>105</sup>	0	0%		
Recovery <sup>106</sup>	<0.1 hours	1%		

Notes: <sup>(1)</sup> Source: Pacolet and De Wispelaere (2015). <sup>(2)</sup> Using unit labour cost estimates based on Eurostat data.

There is a large variation in the time spend on the individual cases – mostly depending on the applicant’s previous place of insurance. For instance, if the unemployment insurance fund in the Member State of previous employment has not had much experience with exchanging information with the previous place of insurance, it might take longer to attain the information needed.

The calculation of unemployment benefits is usually straightforward. The interviewed unemployment insurance funds have all set up a calculation tool which calculates the amount to be paid out. However, in most cases the calculation is not event necessary, as the Danish rate for unemployment insurance will be paid out. The calculation is thus merely a check to see, if the applicant is entitled to more benefits than the standard rate would dictate.

When Denmark is the Member State of previous employment, the average man-hours used for case handling is 0.7 hours, c.f. Table D-3. Only time spend on providing information has proven to be a task actually carried out in the interviewed unemployment insurance funds. They acknowledge that the other tasks in principle exist. However, none of them has recent experience with handling any of them and note that these tasks are the exception rather than the rule, when handling applications for unemployment benefits from mobile EU-workers. Therefore no time estimate has been provided for these tasks.

---

result of collecting additional information about e.g. family ties, housing situation, characteristics of the candidate's professional activities.

<sup>104</sup> If circumstances change and it leads to a change of who is the competent Member State, a re-calculation of benefits or reevaluation of competent state is performed: Determine what type of change it is - whether it will lead to a re-calculation of benefits or change in competence.

<sup>105</sup> If (provisional) unemployment benefits awarded to a Mobile EU worker should have been paid by another Member State: Additional costs arise from reimbursement activities.

<sup>106</sup> If an applicant unjustified has received unemployment benefits (i.e. it has been determined, that the interviewed unemployment fund are not the competent state after all): additional costs arise from determining whether there is a basis for recovery, from calculation of benefits to recover, and from contacting the competent Member States to seek recovery.

Table D-3 Current administrative costs and burden – Denmark as Member State of previous employment

Administrative task	Average man-hours per case	Frequency	Number of cases <sup>(1)</sup>	Administrative costs, Total, EUR 1,000 <sup>(2)</sup>

Recovery <sup>111</sup>	0 hours	0%		

Notes: <sup>(1)</sup> Source: Pacolet and De Wispelaere (2015). <sup>(2)</sup> Using unit labour cost estimates based on Eurostat data.

### Change in administrative costs and burden from revised EU provisions – Denmark as Member State of last employment

The interviewees were also asked to assess the consequences of four different revisions to the current EU provisions. The consequences are estimated in terms of additional man-hours to carry out the administrative tasks. No new tasks have been identified based on the revisions during any of the four interviews.

The interviewed unemployment insurance funds believe that Option 2a compared with the current practice could be considered to lessen the requirements to employment in Denmark. While this may push for more applications for unemployment benefits from mobile EU-workers, in turn the more complex legislation may discourage workers who were planning to move to another Member State. Similarly, FGB et.al (2015) – as also shown in Table 3-3 – assessed that stricter requirements will lead to less applications in Member States that mainly attract mobile EU-workers. In any case, the administrative burden in terms of additional man-hours required for case handlings is unchanged. Thus, as can be seen from Table D-4, Option 2a is expected to have no impact on the man-hours for case handling in the Danish context. Similarly, all of the interviewed unemployment insurance funds interpret Option 2b as being more or less the same as the current rules in Denmark.<sup>112</sup> The administrative burden in terms of additional man-hours required to case handlings is therefore unchanged.

<sup>107</sup> The interviewed unemployment fund receive a request for information about an applicant's previous insurance and employment history in your State from another Member State concerning an application for unemployment benefits and you contribute with the required information.

<sup>108</sup> If the State of residence is not readily overt determination of residence needed to determine whether the applicant is eligible for unemployment benefits under the national legislation: Additional costs arise as a result of providing additional information about candidate's professional activities.

<sup>109</sup> If circumstances change and it leads to a change of who is the competent Member State and the interviewed unemployment fund are determined the competent institution: Additional costs arise a calculation of benefits is performed.

<sup>110</sup> If (provisional) unemployment benefits awarded to a mobile EU worker should have been paid by the interviewed unemployment fund, but another Member State has done this: Additional costs arise from reimbursement activities.

<sup>111</sup> If an applicant, who belongs to the interviewed unemployment fund has unjustified received unemployment benefits in another Member State: Additional costs arise recovery activities.

<sup>112</sup> ASE interprets Option 2b as a slight lessening of the current rules, while Krifa interprets the revision as a slight tightening of the rules.

**Table D-4 Change in administrative costs and burden from Options 2a and 2b – Denmark as Member State of last employment**

Administrative task	Change in average man-hours per case	Frequency	Number of cases <sup>(1)</sup>	Change in administrative costs, Total, EUR 1,000 <sup>(2)</sup>
<b>Total</b>	<b>0 hours</b>	<b>100%</b>	<b>54</b>	<b>0</b>
Collecting information	0 hours	100%		
Calculation of benefit	0 hours	100%		
Determination of residence	0 hours	8%		
Change in circumstances	0 hours	4%		
Reimbursement	0 hours	0%		
Recovery	0 hours	1%		

Notes: <sup>(1)</sup> Source: Pacolet and De Wispelaere (2015). <sup>(2)</sup> Using unit labour cost estimates based on Eurostat data.

Option 3a is interpreted as leading to a much lower unemployment benefits for many of the mobile EU-worker applicants. However, the interviewees disagree on the expected effect on the number of applications for unemployment benefits from EU workers. Some argue that the living costs in Denmark are so high, that it will become harder to get by on the reduced benefit, and thus reduce the number of mobile EU-workers to travel to Denmark. Others argue that many of the applicants travel to Denmark because of spouses or other circumstances and not because of the job possibilities in itself. Those applicants will continue to travel to Denmark no matter how the benefits are calculated.

The administrative costs in terms of additional use of man-hours per case have an average estimate of total 0.5 hours subdivided into 0.4 hours for additional information gathering and 0.1 hours on calculation of benefits, c.f. Table D-5. The additional information gathering concerns the collection of salary statements. The extra time spent on information gathering varies between the interviewees, though. Some argue that no extra information is necessary. It depends on what information the unemployment insurance fund already obtain.

The calculation of benefits will become a bit more extensive, when having to include previous salary history. It increases the need to understand specific salary statements and calls for the development of standardised portable documents e.g. with clear definitions of wages to be applied for the aggregation calculations.

Option 3b is interpreted much in the same way as Option 3a, but with a slightly higher consequence on the development in the number of applications in the future. Additional time consumption on case handling are the same – i.e. a total of additional 0.5 hours per case.

**Table D-5 Change in administrative costs and burden from Option 3a and Option 3b – Denmark as Member State of last employment**

Administrative task	Change in average man-hours per case	Frequency	Number of cases <sup>(1)</sup>	Change in administrative costs, Total, EUR 1,000 <sup>(2)</sup>
---------------------	--------------------------------------	-----------	--------------------------------	---

<b>Total</b>	<b>0.5 hours</b>	<b>100%</b>	<b>54</b>	<b>0.8</b>
Collecting information	0.4 hours	100%		
Calculation of benefit	0.1 hours	100%		
Determination of residence	0 hours	8%		
Change in circumstances	0 hours	4%		
Reimbursement	0 hours	0%		
Recovery	0 hours	1%		

Notes: <sup>(1)</sup> Source: Pacolet and De Wispelaere (2015). <sup>(2)</sup> Using unit labour cost estimates based on Eurostat data.

### **Change in administrative costs and burden from revised EU provisions – Denmark as Member State of previous employment<sup>113</sup>**

In addition to assessing the consequences of the four revisions while being the Member State of last employment, the interviewees were also asked to assess the consequences when being the Member State previous employment – i.e. of previous insurance. Again, no new tasks have been identified for any of the revisions.

Since time spend on providing information have proven to be the only administrative task actually carried out in the unemployment insurance funds in this respect, it is the only one that has been assessed during this part of the interviews.

In general, it is the conviction, that the administrative costs in terms of additional man-hours are infinitesimal. Most interviewees give an estimate of no additional time consumption. 3F A-kasse foresee a bit more servicing of other Member States based on the revision.

Table D-6 Change in administrative costs and burden from changing information task – Denmark as Member State of previous employment

<b>Revision</b>	<b>Change in average man-hours per case</b>	<b>Frequency</b>	<b>Number of cases<sup>(1)</sup></b>	<b>Change in administrative costs, Total, EUR 1,000<sup>(2)</sup></b>
Option 2a	<0.1 hours	100%	686	0.8
Option 2b	<0.1 hours	100%	686	0.8
Option 3a	<0.1 hours	100%	686	0.8
Option 3b	<0.1 hours	100%	686	0.8

Notes: <sup>(1)</sup> Source: Pacolet and De Wispelaere (2015). <sup>(2)</sup> Using unit labour cost estimates based on Eurostat data.

### **Administrative implications for applicants from revisions to EU provisions on unemployment benefits**

Revising the unemployment provisions according to the proposed revisions will have different effect, depending on the unemployment insurance funds standard case

<sup>113</sup> The estimation of the administrative costs and burden from revised EU provisions when Denmark is the Member State of previous insurance is based on three interviews, since HK A-kasse was not able to give an estimation on this.

handling. Overall, the more complex legislation may discourage workers who were planning to move to another Member State.

However, both HK A-kasse and Krifa already ask the applicants for documentation for employment history and salary slips, which means they do not expect any of the revisions to increase the administrative implications for the applicants. Krifa explains, that the demands they pose on mobile EU-workers today are relatively extensive, which means it is hard to imagine that the proposed revisions should make it more difficult for the applicants.

3F A-kasse and ASE do not necessarily require documentation for salary and employment history in their current case handlings of applications for unemployment benefits from mobile EU-workers. Thus, they expect the administrative implications for the applicant will increase in the case of Options 3a and 3b, where these documents will become necessary. ASE further expects, that they will demand authorised translation of the documentation, which will pose both an administrative implication on the applicant in terms of time and in terms of monetary costs. This burden may be reduced by the introduction of standardised documents.

### **Conclusions**

The annual number of cases handled in Denmark per year is 54 when Denmark is the Member State of last employment, while the number of cases is somewhat higher, 686, when Denmark is the Member State of previous employment – i.e. of previous insurance.

Currently, the administrative resources spent on each case amount to 1.8 hours for an average case – whether Denmark is the Member State of last employment, and 0.7 hours when of previous employment. Most resources are spent on collecting and providing information.

In the Danish case, only two of the four revisions are expected to have impact on administrative costs in terms of use of man-hours when being the Member state of last employment: Options 3a and 3b. The impacts are very limited though, and thus, the increase in administrative costs in terms of labour costs are relatively small. A small impact is expected from the revisions being the Member State of previous insurance. However, the impacts are infinitesimal.

Overall, the more complex legislation may discourage workers who were planning to move to another Member State. However, applicants are already expected to provide documentation for employment history and salary slips, which means they do not expect any of the revisions to increase the administrative implications for the applicants. The demands they pose on mobile EU-workers today are relatively extensive, which means it is hard to imagine that the proposed revisions should make it more difficult for the applicants.

## Annex E – Case study for Netherlands

### Introduction

In this section, we provide a short description of Dutch legislation on unemployment benefits, who is eligible, and how the legislation is interpreted by the national administrative institutions handling unemployment benefits: the Institute for Employee Benefit Schemes (UWV).

To qualify for unemployment benefits (WW-uitkering) in the Netherlands – the applicant must fulfil the following conditions:

- be involuntarily unemployed
- have had a loss of at least five or half the working hours per week
- timely register with the Institute for Employee Benefit Schemes (UWV)
- be able to work
- be available to the job market
- be below the legal retirement age
- seek employment
- reside in the Netherlands
- apply for benefits on the first day of unemployment

To be eligible for WW benefit the applicant needs to satisfy the "26 out of 36 weeks" ruling, which states that he/she must have been employed for at least 26 out of the 36 weeks before the first day of unemployment. An applicant who only meets the required number of weeks will receive WW benefit up to a maximum of three months. If the applicant has received wages for at least 52 days for four (out of the five) last calendar years from the year of unemployment, the benefit will be payable for as many months as the number of years the person he/she was employed.

The calculation of unemployment benefits is based on the last available daily wage with a maximum of EUR 198.28. The amount is equal to 75% of the last daily wage during the first two months, 70% thereafter. An applicant who only meets the weeks' condition receives benefits for a maximum duration of three months, whereas a person who satisfies the years' condition receives benefits for as many months as the number of months in employment, with a maximum of 38 months.

If unemployment benefits are less than the social minimum, a supplementary benefit can be claimed under the Supplementary Benefit Act (Toeslagenwet, TW).

### Current administrative costs and burden

To determine the current administrative costs and burden in handling unemployment benefits in the Netherlands, we have interviewed the Institute for Employee Benefit Schemes (UWV).

The Institute for Employee Benefit Schemes (UWV) estimates that they had 40 new cases in 2014 as national administration with last employment and a total of only 10 existing active cases. From the HIVA study (Pacolet and De Wispelaere, 2015) the number of cases for 2013 as national administration with last employment is 160. As for the number of cases as national administration with previous employment the UWV estimates that they handled a total number of 23,808 cases in 2014, but are unable to say for how many of these cases the aggregation principle (*in Dutch: samenstellingsregeling*) applied. However, the HIVA study shows that the aggregation principle was used in 918 cases where the UWV was the national administration with previous employment. Hence, there seems to be some uncertainty connected with the counting of cases.

In total, an average case handling of an application for unemployment benefits from a mobile EU-worker will amount to approximately 1.1 hours in the current situation when the Netherlands is the Member State of last employment, most often spent on the collection of information about the applicant's employment and insurance history and on the calculation of benefits, c.f. Table E-1. Based on the average number of man-hours spend and an average labour cost at EUR 22.2 per hour this adds up to a total average of EUR 24.3 per case as national administration with last employment, and to EUR 3,900 for all cases.

**Table E-1** Current administrative costs and burden – the Netherlands as Member State of last employment

<b>Administrative task</b>	<b>Average man-hours per case</b>	<b>Frequency</b>	<b>Number of cases<sup>(1)</sup></b>	<b>Administrative costs, Total, EUR 1,000<sup>(2)</sup></b>
A typical case; first time handling of a case - all regular tasks included	1.1 hours	100%	160	3.9
Collecting information <sup>114</sup>	0.5 hours	100%		
Calculation of benefit <sup>115</sup>	0.5 hours	100%		
Determination of residence <sup>116</sup>	0.5 hours	5-10%		
Change in circumstances <sup>117</sup>	0.53 hours	>5%		
Reimbursement <sup>118</sup>	0 hours	0%		
Recovery <sup>119</sup>	0.38 hours	>5%		

Notes: <sup>(1)</sup> Source: Pacolet and De Wispelaere (2015). <sup>(2)</sup> Using unit labour cost estimates based on Eurostat data.

When the Netherlands is the Member State of previous insurance (previous employment), the average man-hours used for case handling is 0.67 hours, c.f. Table E-2, all of which is spent on providing information about the applicant's employment and insurance history to the relevant Member State of last employment.

<sup>114</sup> Determination of whether the information provided by the applicant is sufficient to decide on the payment of unemployment benefits. Obtain information from other previous Member State(s) of insurance about insurance and employment history in this/these country(-ies).

<sup>115</sup> For each of those cases where the interviewed administration is the competent national administration: Time spend on calculation of the benefit, which the applicant is entitled to under the national legislation. The interviewed unemployment insurance fund set the payment of unemployment benefits in motion.

<sup>116</sup> If the State of residence is not readily overt determination of residence needed to determine whether the applicant is eligible for unemployment benefits under the national legislation: Additional costs arise as a result of collecting additional information about e.g. family ties, housing situation, characteristics of the candidate's professional activities.

<sup>117</sup> If circumstances change and it leads to a change of who is the competent Member State, a re-calculation of benefits or reevaluation of competent state is performed: Determine what type of change it is - whether it will lead to a re-calculation of benefits or change in competence.

<sup>118</sup> If (provisional) unemployment benefits awarded to a Mobile EU worker should have been paid by another Member State: Additional costs arise from reimbursement activities.

<sup>119</sup> If an applicant unjustified has received unemployment benefits (i.e. it has been determined, that the interviewed unemployment fund are not the competent state after all): additional costs arise from determining whether there is a basis for recovery, from calculation of benefits to recover, and from contacting the competent Member States to seek recovery.

Table E-2 Current administrative costs and burden – the Netherlands as Member State of previous employment

Administrative task	Average man-hours per case	Frequency	Number of cases <sup>(1)</sup>	Administrative costs, Total, EUR 1,000 <sup>(2)</sup>
<b>A typical case; first time handling of a case - all regular tasks included</b>	<b>0.67 hours</b>	<b>100%</b>	<b>918</b>	<b>13.7</b>
Providing information <sup>120</sup>	0.67 hour	100%		
Determination of residence <sup>121</sup>	0 hours	0%		
Change in circumstances <sup>122</sup>	0 hours	0%		
Reimbursement <sup>123</sup>	0 hours	0%		
Recovery <sup>124</sup>	0 hours	0%		

Notes: <sup>(1)</sup> Source: Pacolet and De Wispelaere (2015). <sup>(2)</sup> Using unit labour cost estimates based on Eurostat data.

### Change in administrative costs and burden from revised EU provisions – The Netherlands as Member State of last employment

The interviewees were also asked to assess the consequences of four different revisions to the current EU provisions. The consequences are estimated in terms of additional man-hours to carry out the administrative tasks. No new tasks have been identified based on the revisions during the interviews.

As shown in Table E-3 no change in man-hours used are expected for Option 2a and Option 2b – i.e. the introduction of a threshold is not expected to make much difference to the single case handling.

<sup>120</sup> The interviewed administration receive a request for information about an applicant's previous insurance and employment history in your State from another Member State concerning an application for unemployment benefits and you contribute with the required information.

<sup>121</sup> If the State of residence is not readily overt determination of residence needed to determine whether the applicant is eligible for unemployment benefits under the national legislation: Additional costs arise as a result of providing additional information about candidate's professional activities.

<sup>122</sup> If circumstances change and it leads to a change of who is the competent Member State and the interviewed unemployment fund are determined the competent institution: Additional costs arise a calculation of benefits is performed.

<sup>123</sup> If (provisional) unemployment benefits awarded to a mobile EU worker should have been paid by the interviewed unemployment fund, but another Member State has done this: Additional costs arise from reimbursement activities.

<sup>124</sup> If an applicant has unjustified received unemployment benefits in another Member State: Additional costs arise recovery activities.

**Table E-3** Change in administrative costs and burden from Option 2a and Option 2b – the Netherlands as Member State of last employment

Administrative task	Change in average man-hours per case	Frequency	Number of cases <sup>(1)</sup>	Change in administrative costs, Total, EUR 1,000 <sup>(2)</sup>
<b>Total</b>	<b>0 hours</b>	<b>100%</b>	<b>160</b>	<b>0</b>
Collecting information <sup>125</sup>	0 hours	0%		
Calculation of benefit	0 hours	0%		
Determination of residence	0 hours	0%		
Change in circumstances	0 hours	0%		
Reimbursement	0 hours	0%		
Recovery	0 hours	0%		

Notes: <sup>(1)</sup> Source: Pacolet and De Wispelaere (2015). <sup>(2)</sup> Using unit labour cost estimates based on Eurostat data.

However, the UWV assesses that Option 3a will require them to collect additional information when processing the applications and estimates this will lead to an increase in man-hours spend per case at 0.38 hours per case (Table E-4). The UWV interprets the effects of Option 3b to be much the same as Option 3a. However, based on current numbers the UWV assesses that Option 3b will lead to a rise in the number of cases, since the applicant in almost all cases has worked in the Netherlands for more than one month. This said, the additional time used on processing the cases is estimated by the UWV to be the same as for Option 3a.

<sup>125</sup> In the current situation much of the information needed for Option 2a and Option 2b is already being gathered in the current situation. The period of time the applicant has worked in the Netherlands does not influence the administrative process.

Table E-4 Change in administrative costs and burden from Option 3a and Option 3b – the Netherlands as Member State of last employment

Administrative task	Change in average man-hours per case	Frequency	Number of cases <sup>(1)</sup>	Change in administrative costs, Total, EUR 1,000 <sup>(2)</sup>
<b>Total</b>	<b>0.38 hours</b>	<b>100%</b>	<b>160</b>	<b>1.4</b>
Collecting information	0.38 hours	100%		
Calculation of benefit	0 hours	100%		
Determination of residence	0 hours	0%		
Change in circumstances	0 hours	0%		
Reimbursement	0 hours	0%		
Recovery	0 hours	0%		

Notes: <sup>(1)</sup> Source: Pacolet and De Wispelaere (2015). <sup>(2)</sup> Using unit labour cost estimates based on Eurostat data.

#### Change in administrative costs and burden from revised EU provisions – the Netherlands as Member State of previous employment

In addition to assessing the consequences of the four revisions while being the Member State of last employment, the interviewees were also asked to assess the consequences when being the Member State of previous employment – i.e. of previous insurance.

As it is shown below in Table E-5 the UWV assess that the revisions will not lead to changes in the time used handling the cases. In addition, no new tasks have been identified for any of the revisions.

Table E-5 Change in administrative costs and burden from changing information task – the Netherlands as Member State of previous employment

Revision	Change in average man-hours per case	Frequency	Number of cases <sup>(1)</sup>	Change in administrative costs, Total, EUR 1,000 <sup>(2)</sup>
Option 2a	0 hours	100%	918	0
Option 2b	0 hours	100%	918	0
Option 3a	0 hours	100%	918	0
Option 3b	0 hours	100%	918	0

Notes: <sup>(1)</sup> Source: Pacolet and De Wispelaere (2015). <sup>(2)</sup> Using unit labour cost estimates based on Eurostat data.

#### Administrative implications for applicants from revisions to EU provisions on unemployment benefits

The UWV assesses that revising the unemployment provisions according to the proposed revisions will lead to a slight increase in the time used on the application for the mobile EU-worker. The reason for this mainly arise from the additional information and documents the applicant must provide – e.g. in the form of contracts, payslips etc.

## Conclusions

The annual number of cases handled in the Netherlands per year is 160 when the Netherlands is the Member State of last employment, while the number of cases is significantly higher, 918, when the Netherlands is the Member State of previous employment – i.e. of previous insurance.

Currently, the administrative resources spent on each case amount to 1.1 hours for an average case – when the Netherlands is the Member State of last employment, and 0.67 hours when of previous employment. Most resources are spent on collecting and providing information, and on the calculation of benefits.

As the interviewee only handle a small number of cases as competent state every year, the burden from revision being the competent state is relatively small. In addition, even though the Netherlands is the Member State of previous employment in a higher number of cases, the estimate of additional costs per case is limited, which means the burden is not that significant when being the state of previous employment. Hence, all in all none of the policy revisions seems to have a larger impact on administrative costs of case handling unemployment benefits in the Netherlands.

Finally, it is assessed that that revising the unemployment provisions according to the proposed revisions will lead to a slight increase in the time used on the application for the mobile EU-worker. The reason for this mainly arise from the additional information and documents the applicant must provide – e.g. in the form of contracts, payslips etc.

## Annex F – Case study for Poland

### Introduction

In this section, a short description is given of the Polish legislation on unemployment benefits, who is eligible, and how the national administrative institutions handling unemployment benefits interpret the legislation.

To qualify for unemployment benefits (*Zasilek dla bezrobotnych*) in Poland – the applicant must fulfil the following conditions:

- be involuntary unemployed
- be without work or payment
- be registered with the employment agency
- be capable for work
- be available for full-time work
- be at least 18 years of age and less than 60 years (woman) or 65 years (man)
- not be entitled to old-age or invalidity pension
- hold a Polish, EU or EEA or Swiss citizenship
- not be recipient of rehabilitation, sickness, maternity or child raising allowance

In addition, there is a qualifying period, where the applicant must have been in paid employment of at least 365 calendar days within a period of 18 months preceding the day of registration.

The amount of unemployment benefits are not based on earnings, but on the length of economic activity. It is calculated as a percentage of the Basic Unemployment Allowance, depending upon the length of employment: one to five years of work entitles the applicant to 80% of the Basic Unemployment Allowance; five to 20 years entitles the applicant to 100% of the full amount; 20 years and more entitle the applicant to a 120% of the full amount.

The Basic Unemployment Allowance constitutes an amount of PLN 831.10 (EUR 200) per month for a period of three months and PLN 652.60 (EUR 157) thereafter. The duration of the benefits is a period of six months in areas with an unemployment rate less than 150% national average. In areas with an unemployment rate of at least 150% or more of the national average the duration of benefits are 12 months. This period of benefits on 12 months also applies if the claimant has a qualifying period of 20 years and is more than 50 years old, or if the claimant's spouse is unemployed, not entitled to an allowance and they have at least one dependent child under the age of 15 years.

### Current administrative costs and burden

To determine the current administrative costs and burden in handling unemployment benefits in Poland, we have interviewed four Polish national and regional administrations listed in Table F-1 below.

Table F-1 Interviewed national and regional administrative institutions handling unemployment benefits, Poland

<b>Institution</b>
Regional Labour Office Warsaw, team for promoting of employment and EURES
Lower Silesian Regional Labour Office, Department of Social Security Systems
Ministry of Labour and Social Policy, Department for Coordination of Social Security Systems

Ministry of Labour and Social Policy, Department of Labour Market

None of the four interviewed administrations handling unemployment benefits has exact time measurements of the administrative costs in terms of man-hours used per case handling. Hence, the estimations are based on best guesses from their experience with the case handlings.

In total, an average case handling of an application for unemployment benefits from a mobile EU-worker will amount to approximately 1.8 hours in the current situation when Poland is the Member State of last employment, c.f. Table F-2. The largest task is the determination of residence followed by the collection of information about the applicant's employment and insurance history from the relevant Member State of previous employment.

Table F-2 Current administrative costs and burden – Poland as Member State of last employment

Administrative task	Average man-hours per case <sup>(1)</sup>	Frequency <sup>(1)</sup>	Number of cases <sup>(2)</sup>	Administrative costs, Total, EUR 1,000 <sup>(3)</sup>
<b>A typical case; first time handling of a case - all regular tasks included</b>	<b>1.83 hours</b>	<b>100%</b>	<b>1517</b>	<b>14.3</b>
Collecting information <sup>126</sup>	0.56 hours	-		
Calculation of benefit <sup>127</sup>	0.32 hours	-		
Determination of residence <sup>128</sup>	0.63 hours	-		
Change in circumstances <sup>129</sup>	0.07 hours	-		
Reimbursement <sup>130</sup>	0.01 hours	-		
Recovery <sup>131</sup>	0 hours	-		

Notes: <sup>(1)</sup> The frequencies in the Polish calculations have been taken into account when calculating the average man-hours per case. <sup>(2)</sup> Source: Pacolet and De Wispelaere (2015). <sup>(3)</sup> Using unit labour cost estimates based on Eurostat data.

Table F-3 shows that Poland as Member State of previous employment annually handles around 147 cases. The average time of handling a case is 1.27 hours – with most time spent of the provision of information about the applicant to the relevant Member State of last employment, followed by efforts regarding determination of residence of the applicant.

<sup>126</sup> Determination of whether the information provided by the applicant is sufficient to decide on the payment of unemployment benefits. Obtain information from other previous Member State(s) of insurance about insurance and employment history in this/these country(-ies).

<sup>127</sup> For each of those cases where the interviewed administration is the competent national administration: Time spend on calculation of the benefit, which the applicant is entitled to under the national legislation. The interviewed administration set the payment of unemployment benefits in motion.

<sup>128</sup> If the State of residence is not readily overt determination of residence needed to determine whether the applicant is eligible for unemployment benefits under the national legislation: Additional costs arise as a result of collecting additional information about e.g. family ties, housing situation, characteristics of the candidate's professional activities.

<sup>129</sup> If circumstances change and it leads to a change of who is the competent Member State, a re-calculation of benefits or reevaluation of competent state is performed: Determine what type of change it is - whether it will lead to a re-calculation of benefits or change in competence.

<sup>130</sup> If (provisional) unemployment benefits awarded to a Mobile EU worker should have been paid by another Member State: Additional costs arise from reimbursement activities.

<sup>131</sup> If an applicant unjustified has received unemployment benefits (i.e. it has been determined, that the interviewed unemployment fund are not the competent state after all): additional costs arise from determining whether there is a basis for recovery, from calculation of benefits to recover, and from contacting the competent Member States to seek recovery.

Table F-3 Current administrative costs and burden – Poland as Member State of previous employment

Administrative task	Average man-hours per case <sup>(1)</sup>	Frequency <sup>(1)</sup>	Number of cases <sup>(2)</sup>	Administrative costs, Total, EUR 1,000 <sup>(3)</sup>
<b>A typical case; first time handling of a case - all regular tasks included</b>	<b>1.27 hours</b>	<b>100%</b>	<b>147</b>	<b>1.0</b>
Providing information <sup>132</sup>	0.67 hours	-		
Determination of residence <sup>133</sup>	0.46 hours	-		
Change in circumstances <sup>134</sup>	0.15 hours	-		
Reimbursement <sup>135</sup>	0 hours	-		
Recovery <sup>136</sup>	0 hours	-		

Notes: <sup>(1)</sup> The frequencies in the Polish calculations have been taken into account when calculating the average man-hours per case. <sup>(2)</sup> Source: Pacolet and De Wispelaere (2015). <sup>(3)</sup> Using unit labour cost estimates based on Eurostat data.

### **Change in administrative costs and burden from revised EU provisions – Poland as Member State of last employment**

The interviewees were also asked to assess the consequences of four different revisions to the current EU provisions. The consequences are estimated in terms of additional man-hours to carry out the administrative tasks.

The respondents gave quite different answers to the expected changes in administrative cost and burdens due to the revisions.

In one interview with the Department for Coordination of Social Security Systems at the Ministry of Labour and Social Policy it was assessed that both Options 2a and 2b will lead to an increase of 50% in collecting information due to the need of collecting further information on the applicants previous period of employment. As for Options 3a and 3b, they estimate that there will be no changes. However, in another interview with the same department at the Ministry of Labour and Social Policy it was estimated that neither of the revisions will lead to any changes. As for Options 2a and 2b the explanation to this is, that the time it takes to analyse the documents will stay the same before and after the revisions. For Options 3a and 3b the remark is that Polish benefits are not dependent on the wages but on status. This assessment is shared by the Regional Labour Office Warsaw who notes that the revisions will not lead to any changes in the handling of documents related to the application.

<sup>132</sup> The interviewed administration receive a request for information about an applicant's previous insurance and employment history in your State from another Member State concerning an application for unemployment benefits and you contribute with the required information.

<sup>133</sup> If the State of residence is not readily overt determination of residence needed to determine whether the applicant is eligible for unemployment benefits under the national legislation: Additional costs arise as a result of providing additional information about candidate's professional activities.

<sup>134</sup> If circumstances change and it leads to a change of who is the competent Member State and the interviewed unemployment fund are determined the competent institution: Additional costs arise a calculation of benefits is performed.

<sup>135</sup> If (provisional) unemployment benefits awarded to a mobile EU worker should have been paid by the interviewed unemployment fund, but another Member State has done this: Additional costs arise from reimbursement activities.

<sup>136</sup> If an applicant, who belongs to the interviewed administration has unjustified received unemployment benefits in another Member State: Additional costs arise recovery activities.

The Labour Market Department – also at the Ministry of Labour and Social Policy – the assessment is that all revisions will lead to an increase in time spend on collecting information. This is again contrary to what the Lower Silesian Regional Labour Office estimates; here it is expected that the all revisions will lead to decrease on 50-70% in man-hours used due to less administrative work<sup>137</sup>. These differences in estimations of changes due to revisions recurs at several tasks.

The following tables give an overview of the aggregated/average estimates by the Polish interviewees of the changes when Poland is Member State of last employment. These aggregated estimates show that the overall view is that all revisions will lead to a slight decrease in administrative costs and burdens when handling unemployment benefits.

**Table F-4** Change in administrative costs and burden from Option 2a – Poland as Member State of last employment

Administrative task	Change in average man-hours per case <sup>(1)</sup>	Frequency <sup>(1)</sup>	Number of cases <sup>(2)</sup>	Change in administrative costs, Total, EUR 1,000 <sup>(3)</sup>

#### **Change in administrative costs and burden from revised EU provisions – Poland as Member State of previous employment**

In addition to assessing the consequences of the four revisions while being the Member State of last employment, the interviewees were also asked to assess the consequences when being the Member State previous employment competence – i.e. of previous insurance.

As shown in Table F-8, the aggregated assessment of Options 2a and 2b is that they will also lead to a slight decrease in man-hours used on handling unemployment benefits.

Opposite the estimates given on changes in administrative cost and burdens as a result of the revisions when Poland is the Member State of last employment, the aggregated assessment is, that Options 3a and 3b will lead to an almost insignificant increase in man-hours used when Poland is Member State of previous employment – c.f. Table F-9. This minor increase covers, however, over slight a slight increase in resources needed for providing information, while savings are expected regarding the determination of residence and the reimbursement task.

**Table F-8** Change in administrative costs and burden from Options 2a and 2b – Poland as Member State of previous employment

Administrative task	Change in average man-hours per case <sup>(1)</sup>	Frequency <sup>(1)</sup>	Number of cases <sup>(2)</sup>	Change in administrative costs, Total, EUR 1,000 <sup>(3)</sup>

Reimbursement	-0.33 hours	-		
Recovery	0.17 hours	-		

Notes: <sup>(1)</sup> The frequencies in the Polish calculations have been taken into account when calculating the average man-hours per case. <sup>(2)</sup> Source: Pacolet and De Wispelaere (2015). <sup>(3)</sup> Using unit labour cost estimates based on Eurostat data.

### **Administrative implications for applicants from revisions to EU provisions on unemployment benefits**

The interviewed administrative institutions were very reluctant to estimate the implications to the applicants due to the revisions. However, the Labour Market Department at the Ministry of Labour and Social Policy assesses that Option 3b will not have significant implications to the applicant, though it might lead to slight increase in workload, since the need for documentation and information will increase.

## **Conclusions**

The annual number of cases handled in Poland per year is 1517 when Poland is the Member State of last employment, while the number of cases is significantly lower, 147, when the Netherlands is the Member State of previous employment – i.e. of previous insurance.

Currently, the administrative resources spent on each case amount to 1.83 hours for an average case – when Poland is the Member State of last employment, and 1.27 hours when of previous employment. Most resources are spent on collecting and providing information, and on the calculation of benefits and the determination of residence.

The aggregated estimates show that the overall view is that all revisions will lead to a slight decrease in administrative costs and burdens when handling unemployment benefits as authority of last employment. This result is also found for Options 2a and 2b when being the authority of previous employment, which a slight very small increase in administrative costs are expected for Options 2a and 2b.

## Annex G – Case study for Romania

### Introduction

In this section, we provide a short description of Romanian legislation on unemployment benefits, who is eligible, and how the national administrative institutions handling unemployment benefits interpret the legislation.

To obtain unemployment benefits in Romania a person has to address to the local/county agency for employment to register for unemployment benefit with the following documents:

- identity document
- diplomas and certificates of qualifications
- documents from the former employers on ending employment: dismissal decision, the labour contract
- medical certificate proving that the person it is able to work or if the person has any medical restrictions
- documents issued by the financial relevant authorities, showing that the person has no income or in case of self-employed persons, or has income less than the unemployment benefit

Within this study, we focus on the case-handling of applications for unemployment benefits where the aggregation principle apply – i.e. applications from citizens who do not have sufficiently long insurance records in the last Member State of activity/insurance to qualify for unemployment benefits. Thus periods fulfilled in another Member State can be aggregated in line with the "principle of aggregation" laid down in Article 61 of Regulation (EC) No 883/2004. The unemployment benefit level is determined by the reference social indicator, the level of earnings, and the length of contribution period.

The unemployment indemnity is calculated and paid monthly as a percentage of the reference social indicator (500 RON, 111 EUR) and is 75% for a contribution period of one year and over (375 RON, 83.3 EUR). For a contribution period of three years and over, another percentage of the average gross income earned during the last 12 months contribution period is added to the base amount:

- 3% of the average gross income earned during the last 12 months for a contribution period between three and five years;
- 5% of the average gross income earned during the last 12 months between five and ten years;
- 7% of the average gross income earned during the last 12 months between ten and twenty years;
- 10% of the average gross income earned during the last 12 months for twenty years and over.

In short, the procedure for obtaining unemployment benefit in Romania can be described as follows:

When a claim for unemployment benefits is submitted to the national administration, the local agency for employment or working point will prepare a file containing all documents submitted for granting unemployment benefits.

The employment officer from the local employment agency or work point checks the documents submitted and decides if the conditions are met to obtain the unemployment benefit.

The registered unemployed who involuntarily became unemployed is required to have completed a contribution period of 12 months during the 24 months preceding

registration in order to be entitled to an unemployment indemnity (*indemnizatie de somaj*) from the unemployment insurance system's scheme.

The duration of the unemployment indemnity varies with the length of contribution period: 6 months for a contribution period between one and five years, 9 months between five and ten years, and 12 months for ten years and over. The employment officer shall issue the decision on the establishment or denial of unemployment benefits. In case the claimant is entitled to unemployment benefits, it is necessary to review the length of contribution period to determine the amount and duration of the benefit, in order to issue the decision.

The Romanian National Employment Agency is using an IT tool for issuing the decisions and calculation of benefits in the case of national applications.

### Current administrative costs and burden

To determine the current administrative costs and burden in handling unemployment benefits in Romania, we have interviewed three bodies within the National Agency for Employment listed in Table G-1 below.

Table G-1 Interviewed unemployment insurance funds, Romania

Unemployment insurance fund	Description <sup>138</sup>
National Agency for Employment	An autonomous public institution, under the coordination of Ministry of Labour, Family, Social Protection and Elderly. NAE administers and operates the unemployment insurance system through 42 county employment agencies, 70 local agencies and 141 working points.
County Employment Agency, Ilfov	Hence, the county employment agencies are in practice handling unemployment aggregation case and are so the competent institutions.
Local employment agency, Brasov	However, to obtain unemployment benefits in Romania a person can approach to the local employment agency.

The interviewed national administration of Romania represented by the three bodies above handled a total of 12 cases in 2013 and 4 cases in 2014 at national level, where the aggregation principle was applicable. Pacolet and De Wispelaere (2015) report a total of 12 cases per year.

In total, an average case handling of an application for unemployment benefits from a mobile EU-worker amounts to approximately 1.9 hours in the current situation when Romania is the Member State of last employment, c.f. Table G-2. Most time is spent on the calculation of benefits and on the collection of information about the applicant from the relevant Member State of previous employment. The remaining tasks are only infrequently carried out.

<sup>138</sup> Memberships are per January 1<sup>st</sup> 2015.

Table G-2 Current administrative costs and burden – Romania as Member State of last employment

Administrative task	Average man-hours per case	Frequency	Number of cases <sup>(1)</sup>	Administrative costs, Total, EUR 1,000 <sup>(2)</sup>
<b>A typical case; first time handling of a case - all regular tasks included</b>	<b>1.9 hours</b>	<b>100%</b>	<b>12</b>	<b>0.1</b>
Collecting information <sup>139</sup>	0.9 hours	100%		
Calculation of benefit <sup>140</sup>	1 hour	100%		
Determination of residence <sup>141</sup>	0	0%		
Change in circumstances <sup>142</sup>	1 hour	0.1%		
Reimbursement <sup>143</sup>	0.5 hours	0.01%		
Recovery <sup>144</sup>	2 hours	0.1%		

Notes: <sup>(1)</sup> Source: Pacolet and De Wispelaere (2015). <sup>(2)</sup> Using unit labour cost estimates based on Eurostat data.

When the qualifying period is only fulfilled by application of the aggregation principle of periods of employment/work/insurance in the Member State of previous employment the employment officer shall decide upon the settlement or denial of unemployment benefits.

If the person does not already have the demanded EU forms, the officer must inform the applicant about the need of the EU form in order to obtain the unemployment benefit. The applicant is advised to obtain the EU form by him-/herself. The reason is that usually in this way the EU form is received earlier than using the official/institutional way.

When the EU form has been received from the applicant the officer prepare the EU form, submit it to the director of the employment agency to be signed and send the form by e-mail or regular mail to the liaison body of the competent country. When the information needed is available, and the person is entitled to unemployment benefit, the benefit can be calculated

<sup>139</sup> Determination of whether the information provided by the applicant is sufficient to decide on the payment of unemployment benefits. Obtain information from other previous Member State(s) of insurance about insurance and employment history in this/these country(-ies).

<sup>140</sup> For each of those cases where the interviewed unemployment insurance fund is the competent national administration: Time spend on calculation of the benefit, which the applicant is entitled to under the national legislation. The interviewed unemployment insurance fund set the payment of unemployment benefits in motion.

<sup>141</sup> If the State of residence is not readily overt determination of residence needed to determine whether the applicant is eligible for unemployment benefits under the national legislation: Additional costs arise as a result of collecting additional information about e.g. family ties, housing situation, characteristics of the candidate's professional activities.

<sup>142</sup> If circumstances change and it leads to a change of who is the competent Member State, a re-calculation of benefits or reevaluation of competent state is performed: Determine what type of change it is - whether it will lead to a re-calculation of benefits or change in competence.

<sup>143</sup> If (provisional) unemployment benefits awarded to a Mobile EU worker should have been paid by another Member State: Additional costs arise from reimbursement activities.

<sup>144</sup> If an applicant unjustified has received unemployment benefits (i.e. it has been determined, that the interviewed unemployment fund are not the competent state after all): additional costs arise from determining whether there is a basis for recovery, from calculation of benefits to recover, and from contacting the competent Member States to seek recovery.

The Romanian National Employment Agency uses an IT tool for the issue of the E-forms. The application was not yet updated for the U-forms. This is the reason of preference of using E-forms. If an EU country requires only U-forms, these are prepared using only Word documents, taking more time than preparing an E-form. If the EU-form is returned within 30 days and contains information that the qualifying period is completed, the payment of unemployment benefits is to be set in motion, and the officer proceed to the calculation of the unemployment benefits and to issue the decision. If the EU form is not returned within 30 days or is returned and contains information that the qualifying period is not completed, the officer shall prepare a decision of denial of unemployment benefits.

After signing the decision on the settlement or denial of unemployment benefits by the Executive Director or the person empowered to do so, a copy of the decision shall be given to the claimant, a copy is kept on file unemployed and the third copy, together with the form "Information regarding payment of the benefit" is forward to the payment compartment. The decision on the right to unemployment benefit is handed to the applicant on the first visit to the agency.

To make a correct calculation of the unemployment benefit the officer needs to know the entire history of work, insurance and self-employment periods and the amount of the gross income earned in last 12 months of work. This information should be provided by the claimant within the documents submitted with the claim.

Romania handles significantly more cases as the Member State of previous employment. According to the interviewees, the national administration handled a total of 6,567 cases. Pacolet and De Wispelaere (2015) counts less at 887 cases per year. c.f. Table G-3. In total, an average case handling of an application for unemployment benefits from a mobile EU-worker amounts to approximately 2.5 hours in the current situation when Romania is the Member State of previous employment – with almost all time spent on providing information to the relevant Member States of the applicant's employment and insurance history.

Table G-3 Current administrative costs and burden – Romania as Member State of previous employment

Administrative task	Average man-hours per case	Frequency	Number of cases <sup>(1)</sup>	Administrative costs, Total, EUR 1,000 <sup>(2)</sup>
<b>A typical case; first time handling of a case - all regular tasks included</b>	<b>2.5 hours</b>	<b>100%</b>	<b>887</b>	<b>5.6</b>
Providing information <sup>145</sup>	2.5 hours	100%		
Determination of residence <sup>146</sup>	Almost 0 hours	0.1%		
Change in circumstances <sup>147</sup>	0.25 hours	1%		
Reimbursement <sup>148</sup>	2 hours	0.1%		
Recovery <sup>149</sup>	2 hours	0.01%		

Notes: <sup>(1)</sup> Source: Pacolet and De Wispelaere (2015). <sup>(2)</sup> Using unit labour cost estimates based on Eurostat data.

It is easier and the process is shorter if the applicant him-/herself claim the EU-form regarding the last period of insurance or the income and composition of the family directly to the Romanian institution, instead of an EU-form received from other EU institution, because in this case the officer could ask for information directly to that person.

#### **Change in administrative costs and burden from revised EU provisions – Romania as Member State of last employment**

The interviewees were also asked to assess the consequences of four different revisions to the current EU provisions. The consequences are estimated in terms of the additional man-hours to carry out the administrative tasks. No new tasks have been identified based on the revisions during any of the interviews.

The Romanian interviewees do not anticipate additional administrative costs based on neither Option 2a nor Option 2b, cf. Table G-4.

Table G-4 Change in administrative costs and burden from Option 2a and Option 2b – Romania as Member State of last employment

Administrative task	Change in average	Frequency	Number of	Change in administrative
---------------------	-------------------	-----------	-----------	--------------------------

<sup>145</sup> The interviewed unemployment fund receive a request for information about an applicant's previous insurance and employment history in your State from another Member State concerning an application for unemployment benefits and you contribute with the required information.

<sup>146</sup> If the State of residence is not readily overt determination of residence needed to determine whether the applicant is eligible for unemployment benefits under the national legislation: Additional costs arise as a result of providing additional information about candidate's professional activities.

<sup>147</sup> If circumstances change and it leads to a change of who is the competent Member State and the interviewed unemployment fund are determined the competent institution: Additional costs arise a calculation of benefits is performed.

<sup>148</sup> If (provisional) unemployment benefits awarded to a mobile EU worker should have been paid by the interviewed unemployment fund, but another Member State has done this: Additional costs arise from reimbursement activities.

<sup>149</sup> If an applicant, who belongs to the interviewed unemployment fund has unjustified received unemployment benefits in another Member State: Additional costs arise recovery activities.

	man-hours per case		cases <sup>(1)</sup>	costs, Total, EUR 1,000 <sup>(2)</sup>
<b>Total</b>	<b>0 hours</b>	<b>100%</b>	<b>12</b>	<b>0</b>
Collecting information	0 hours	100%		
Calculation of benefit	0 hours	100%		
Determination of residence	0 hours	0%		
Change in circumstances	0 hours	0.1%		
Reimbursement	0 hours	0.01%		
Recovery	0 hours	0.1%		

Notes: <sup>(1)</sup> Source: Pacolet and De Wispelaere (2015). <sup>(2)</sup> Using unit labour cost estimates based on Eurostat data.

For Options 3a and 3b, the interviewees expect that collecting information regarding the salary earned in the previous Member State will be probably necessary, and thus will require additional administrative costs in terms of man-hours for case handling. The additional cost is estimated to amount to a total of 1 hour, c.f. Table G-5.

Table G-5 Change in administrative costs and burden from Option 3a and Option 3b – Romania as Member State of last employment

Administrative task	Change in average man-hours per case	Frequency	Number of cases <sup>(1)</sup>	Change in administrative costs, Total, EUR 1,000 <sup>(2)</sup>
<b>Total</b>	<b>1 hour</b>	<b>100%</b>	<b>12</b>	<b>&lt;0.5</b>
Collecting information	1 hour	100%		
Calculation of benefit	0 hours	0.1%		
Determination of residence	0 hours	1%		
Change in circumstances	0 hours	0.1%		
Reimbursement	0 hours	0.01%		
Recovery	0 hours	<b>100%</b>		

Notes: <sup>(1)</sup> Source: Pacolet and De Wispelaere (2015). <sup>(2)</sup> Using unit labour cost estimates based on Eurostat data.

### **Change in administrative costs and burden from revised EU provisions – Romania as Member State of previous employment**

In addition to assessing the consequences of the four revisions while being the Member State of last employment, the interviewees were also asked to assess the consequences when being the Member State of previous employment – i.e. of previous insurance. Table G-6 shows that none of the revisions is expected to lead to any changes to the administrative costs and burden.

Table G-6 Change in administrative costs and burden from changing information task – Romania as Member State of previous employment

Revision	Change in average man-hours per case	Frequency	Number of cases <sup>(1)</sup>	Change in administrative costs, Total, EUR 1,000 <sup>(2)</sup>
Option 2a	0 hours	100%	887	0
Option 2b	0 hours	100%	887	0
Option 3a	0 hours	100%	887	0
Option 3b	0 hours	100%	887	0

Notes: <sup>(1)</sup> Source: Pacolet and De Wispelaere (2015). <sup>(2)</sup> Using unit labour cost estimates based on Eurostat data.

### **Administrative implications for applicants from revisions to EU provisions on unemployment benefits**

The national administration on unemployment benefits in Romania expects that only Options 3a and 3b will lead to additional administrative burden for the mobile EU worker and increased time to process the information. This burden is due to the demand for information regarding history of salary earned in the previous Member State, which will probably be necessary under these revisions.

### **Conclusions**

The annual number of cases handled in Romania per year is 12 when Romania is the Member State of last employment, while the number of cases is significantly higher, 887, when Romania is the Member State of previous employment – i.e. of previous insurance.

Currently, the administrative resources spent on each case amount to 1.9 hours for an average case – when Romania is the Member State of last employment, and 2.5 hours when of previous employment. Most resources are spent on collecting and providing information, and on the calculation of benefits.

As the interviewee only handle a few cases as competent state every year, the burden from revision being the competent state is infinitesimal. In addition, even though Romania is the Member State of previous employment in a higher number of cases, the estimate of additional costs per case is close to zero, which means the burden is also infinitesimal when being the state of previous employment. Hence, all in all none of the policy revisions seems to have a significant impact on administrative costs of case handling unemployment benefits in Romania.

## Annex H – Case study for UK

In this section, we provide a short description of United Kingdom's legislation on unemployment benefits, who is eligible, and how the national administrative institutions handling unemployment benefits interpret the legislation.

The national institution responsible for handling contribution-based Jobseekers' Allowance (JSA) in the United Kingdom is the Department for Work and Pensions. Unemployment benefits are a flat-rate benefit, which means that benefits are not based on earnings, but vary according to age: aged 25 or over receive GBP 72.40 (EUR 90) per week and aged 18-24 receive GBP 57.35 (EUR 72) per week. There is no increase for dependants and the duration of the benefits are limited to 182 days in any job-seeking period. If the applicant has not paid enough National Insurance contributions he/she may be eligible for income-based JSA.

To qualify for unemployment benefits in the UK the applicant must fulfil the following main conditions:

- be involuntarily unemployed
- not be engaged in work for 16 or more hours a week
- be capable of work
- be available for work
- be under pensionable age
- has entered into a Jobseekers' agreement
- be actively seeking employment
- be in the UK
- not being a full-time student
- not being engaged in a trade dispute (on strike or being locked-out)

In addition, there is a qualifying period, which entails that:

- contributions has been paid in one of the two tax years on which the claim is based amounting to at least 26 times the minimum weekly contribution for that year
- contributions has been paid or credited in both the appropriate tax years - amounting to a total of at least 50 times the minimum weekly contribution for that year

### Current administrative costs and burden

To determine the current administrative costs and burden in handling unemployment benefits in the UK, we have interviewed several caseworkers and team leaders within different departments in the Department for Work and Pensions (DWP).

Table H-1 shows that according to Pacolet and De Wispelaere (2015) the UK national administration handles only around 30 cases per year being the authority of last employment. In total, an average case handling of an application for unemployment benefits from a mobile EU-worker amounts to approximately 1.1 hours in the current situation – most on collecting information about the applicant's insurance and employment history from the relevant Member State of previous employment, the rest on the calculation of benefits.

Table H-1 Current administrative costs and burden – UK as Member State of last employment

Administrative task	Average man-hours per case	Frequency	Number of cases <sup>(1)</sup>	Administrative costs, Total, EUR 1,000 <sup>(2)</sup>
<b>A typical case; first time handling of a case - all regular tasks included</b>	<b>1.1 hours</b>	<b>100%</b>	<b>30</b>	<b>0.6</b>
Collecting information <sup>150</sup>	0.75 hours	100%		
Calculation of benefit <sup>151</sup>	0.38 hours	100%		
Determination of residence <sup>152</sup>	0 hours	50%		
Change in circumstances <sup>153</sup>	0 hours	0%		
Reimbursement <sup>154</sup>	0 hours	0%		
Recovery <sup>155</sup>	0 hours	0%		

Notes: <sup>(1)</sup> Source: Pacolet and De Wispelaere (2015). <sup>(2)</sup> Using unit labour cost estimates based on Eurostat data.

Table H-2 shows that the UK national administrations hardly spend any resources when being the authority of previous employment. Only in rare cases, time is spent on the determination of residence.

<sup>150</sup> Determination of whether the information provided by the applicant is sufficient to decide on the payment of unemployment benefits. Obtain information from other previous Member State(s) of insurance about insurance and employment history in this/these country(-ies).

<sup>151</sup> For each of those cases where the interviewed unemployment insurance fund is the competent national administration: Time spend on calculation of the benefit, which the applicant is entitled to under the national legislation. The interviewed unemployment insurance fund set the payment of unemployment benefits in motion. The DWP notes that they do not calculate benefits, since they use a flat rate.

<sup>152</sup> If the State of residence is not readily overt determination of residence needed to determine whether the applicant is eligible for unemployment benefits under the national legislation: Additional costs arise as a result of collecting additional information about e.g. family ties, housing situation, characteristics of the candidate's professional activities. The DWP notes, that the only cost they have derives from the issue of a questionnaire to the customer/applicant. They can determine competence, but do not always enhance the insurance record.

<sup>153</sup> If circumstances change and it leads to a change of who is the competent Member State, a re-calculation of benefits or revaluation of competent state is performed: Determine what type of change it is - whether it will lead to a re-calculation of benefits or change in competence. The DWP notes, that if the insured applicant leaves the UK the claim ends after 5 days if they fail to attend the Jobcentre (PES) and the DWP do not calculate benefits.

<sup>154</sup> If (provisional) unemployment benefits awarded to a Mobile EU worker should have been paid by another Member State: Additional costs arise from reimbursement activities. The DWP notes, that any overpayment would be classed as an 'official error' in UK terms and written off. Their PES can invite repayment from the customer. Only relevant in Article 65 cases.

<sup>155</sup> If an applicant unjustified has received unemployment benefits (i.e. it has been determined, that the interviewed unemployment fund are not the competent state after all): additional costs arise from determining whether there is a basis for recovery, from calculation of benefits to recover, and from contacting the competent Member States to seek recovery. The DWP notes, that they do not seek recovery.

Table H-2 Current administrative costs and burden – UK as Member State of previous employment

Administrative task	Average man-hours per case	Frequency	Number of cases <sup>(1)</sup>	Administrative costs, Total, EUR 1,000 <sup>(2)</sup>
<b>A typical case; first time handling of a case - all regular tasks included</b>	<b>0.01 hours</b>	<b>100%</b>	<b>3333</b>	<b>0.5</b>
Providing information <sup>156</sup>	0 hours	100%		
Determination of residence <sup>157</sup>	0.25 hours	3%		
Change in circumstances <sup>158</sup>	0 hours	0%		
Reimbursement <sup>159</sup>	0 hours	0%		
Recovery <sup>160</sup>	0 hours	0%		

Notes: <sup>(1)</sup> Source: Pacolet and De Wispelaere (2015). <sup>(2)</sup> Using unit labour cost estimates based on Eurostat data.

### **Change in administrative costs and burden from revised EU provisions – UK as Member State of last employment**

The interviewees were also asked to assess the consequences of four different revisions to the current EU provisions. The consequences are estimated in terms of additional man-hours to carry out the administrative tasks. DWP did not envisage any changes to the man-hours spent on each case due to the revisions, and they did not expect new additional tasks. Hence, unlike most of the other case study Member States, they did not envisage an additional information collection burden from Options 3a and 3b.

<sup>156</sup> The interviewed unemployment fund receive a request for information about an applicant's previous insurance and employment history in your State from another Member State concerning an application for unemployment benefits and you contribute with the required information.

<sup>157</sup> If the State of residence is not readily overt determination of residence needed to determine whether the applicant is eligible for unemployment benefits under the national legislation: Additional costs arise as a result of providing additional information about candidate's professional activities.

<sup>158</sup> If circumstances change and it leads to a change of who is the competent Member State and the interviewed unemployment fund are determined the competent institution: Additional costs arise a calculation of benefits is performed.

<sup>159</sup> If (provisional) unemployment benefits awarded to a mobile EU worker should have been paid by the interviewed unemployment fund, but another Member State has done this: Additional costs arise from reimbursement activities.

<sup>160</sup> If an applicant, who belongs to the interviewed unemployment fund has unjustified received unemployment benefits in another Member State: Additional costs arise recovery activities.

**Table H-3 Change in administrative costs and burden – UK as Member State of last employment**

Revision	Change in average man-hours per case	Frequency	Number of cases <sup>(1)</sup>	Change in administrative costs, Total, EUR 1,000 <sup>(2)</sup>
Option 2a	0 hours	100%	30	0
Option 2b	0 hours	100%	30	0
Option 3a	0 hours	100%	30	0
Option 3b	0 hours	100%	30	0

Notes: <sup>(1)</sup> Source: Pacolet and De Wispelaere (2015). <sup>(2)</sup> Using unit labour cost estimates based on Eurostat data.

### **Change in administrative costs and burden from revised EU provisions – UK as Member State of previous employment**

In addition to assessing the consequences of the four revisions while being the Member State of last employment, the interviewees were also asked to assess the consequences when being the Member State previous employment – i.e. of previous insurance. Again, the DWP assessed that the revisions would not lead to any changes in man-hours used per case and no new tasks was identified for any of the revisions.

**Table H-4 Change in administrative costs and burden – UK as Member State of previous employment**

Revision	Change in average man-hours per case	Frequency	Number of cases <sup>(1)</sup>	Change in administrative costs, Total, EUR 1,000 <sup>(2)</sup>
Option 2a	0 hours	100%	3333	0
Option 2b	0 hours	100%	3333	0
Option 3a	0 hours	100%	3333	0
Option 3b	0 hours	100%	3333	0

Notes: <sup>(1)</sup> Source: Pacolet and De Wispelaere (2015). <sup>(2)</sup> Using unit labour cost estimates based on Eurostat data.

### **Administrative implications for applicants from revisions to EU provisions on unemployment benefits**

The DWP has not noted any administrative implications for the applicants as a result of the revisions to the EU provisions on unemployment benefits.

### **Conclusions**

The annual number of cases handled in the UK per year is 30 when UK is the Member State of last employment, while the number of cases is significantly higher, 3333, when the UK is the Member State of previous employment – i.e. of previous insurance.

Currently, the administrative resources spent on each case amount to 1.1 hours for an average case – when UK is the Member State of last employment, while the UK national administrations hardly spend any resources when being the authority of previous employment. Only in rare cases, time is spent on the determination of residence.

As the interviewee only handle a few cases as competent state every year - and the changes in man-hours per case as a consequence of the revisions are assessed to be zero – the burden from the revisions are infinitesimal. In addition, even though the UK is the Member State of previous employment in a higher number of cases, the estimate of additional costs per case is also zero, which means the burden is also infinitesimal when being the state of previous employment. Hence, all in all, none of the policy revisions seems to have a significant impact on administrative costs of case handling unemployment benefits in the UK.

## HOW TO OBTAIN EU PUBLICATIONS

### Free publications:

- one copy:  
via EU Bookshop (<http://bookshop.europa.eu>);
- more than one copy or posters/maps:  
from the European Union's representations ([http://ec.europa.eu/represent\\_en.htm](http://ec.europa.eu/represent_en.htm));  
from the delegations in non-EU countries  
([http://eeas.europa.eu/delegations/index\\_en.htm](http://eeas.europa.eu/delegations/index_en.htm));  
by contacting the Europe Direct service ([http://europa.eu/europedirect/index\\_en.htm](http://europa.eu/europedirect/index_en.htm))  
or calling 00 800 6 7 8 9 10 11 (freephone number from anywhere in the EU) (\*).

## Executive Summary

The background for this report are the current considerations with respect to changing the EU provisions relating to a person's entitlement to family benefits, also where his/her family member reside in another Member State (Regulation (EC) No 883/2004). Currently, the entitlement is determined by the legislation of that person's Member State – henceforth called the Member State of primary competence. Whereas the Member State of residence of the child(ren) is henceforth called the Member State of secondary competence. The amendments that are being considered aim to ensure that family benefits contribute equally to family expenses for all families in a given Member State, and to ensure an even distribution of the financial burden between Member States. The three revisions being considered are:

- Option 1– Adjustment of the amount of exported family benefits to the living standard in the Member State of residence of the child(ren):
  - Option 1a: Adjustment upwards and downwards of the amount of exported family benefits according to the living standard in the Member State of residence of child(ren);
  - Option 1b: Adjustment of the amount of exported family benefits to the living standard in the Member State of residence of the child(ren), but limited to the amount provided by the competent Member State.
- Option 3<sup>161</sup>: Making the Member State of residence of the child(ren) primarily competent. In this option, the current order of priority for the export of family benefit is changed as follows: 1) country of residence of the child(ren); 2) country of work and 3) country of pension. This would mean that the country of residence of the child(ren) has primary responsibility to pay the full amount of family benefits to which entitlement exists under its national rules. The country of work would top up this amount if the level of family benefits were higher there. The family will receive the same amount of family benefits as before, but the allocation of the costs between the country of work and the country of residence will differ from the current rules. This also applies, where there is no entitlement to family benefits in the Member State of residence of the child(ren), but there is entitlement in a secondary competent Member State, as in such a case, the latter State will pay 100% of benefits under its national legislation by way of a "top up".

On this background, the present study aims to estimate the envisaged secondary effects derived by the proposed modification of the current EU regulation to the export of family benefits. The analysis focuses on the effects that the possible revision of the current regulation on the export of family benefits may generate in terms of intra-EU mobility and in the dimension of the population interested to the export of family benefits, providing also consideration in relation to variation in family reunification. The study also offers an estimate of the variation in the expenditure for the export of family benefits that would result from the implementation of the proposed policy options and from the related mobility changes.

The simulation tool developed for the this study aims at translating the implications of the proposed policy options into expected income changes. Assuming a given

---

<sup>161</sup> After a revision of the policy options originally proposed, policy option 2 has been substituted by policy option 3.

connection between income differentials and the propensity to move among EU countries, a variation in mobility flows and in the number of potential cases of export of family benefits is estimated. Finally, taking into account the variation in the number of cases, the different level of benefits and the redistribution of competences between sending and receiving countries envisioned by the policy options, it is proposed an estimate of the variation in expenditure for the export of family benefits for the selected countries.

The main representative unit of population identified for the analysis is one-earner couples with two children at 100% of the average wage. As alternative target populations, we take one-earner families with up to two children and one-earner families with more than two children. The reason to focus on one-earner families with different numbers of children derives from the fact that in this case the economic differential potentially generated by the proposed policy options could be higher with respect to the case of two-earned families, increasing the incentive to mobility or family reunification .

The countries proposed for the analysis as case studies are Germany, Belgium, Poland, Romania, Netherlands, Spain and Ireland<sup>162</sup>. The proposed countries are chosen as geographically spread across the EU. They include countries which are mainly attracting EU mobile citizens from other member states ( DE; IE) as well as countries that experience strong migration outflows (PL; RO) but also countries within the middle ground (BE; NL; ES). The selection of the 7 MS is derived also by the specific characteristics that regulate the provision and the access to family benefits.

Section 3 provides a description of the virtual status quo year which represents a pre-policy option scenario, against which the possible secondary effects are estimated and evaluated. This section provides figures of mobility flows, computed as the averages of the most recent values of annual mobility flows among the 7 selected countries. This section provides also the number of export of family benefits among the selected MS as well as the average values of these benefits, defined according to the administrative data collected by the HIVA study<sup>163</sup>.

Section 4 reports the variation of mobility patterns between the selected MS according to the policy options proposed, assessed in relation to the status quo scenario. Results generally show mild reductions in mobility changes (see fig. 4.1) attributable to the potential implementation of the policy options. Limited differences can be noted for the two policy options tested for mobility changes (1a and 1b). Excluding Poland and Romania, the other MSs analysed show a slight decrease in migration flows. The variations range between -0.2% and -4%. Because the benefits paid in Poland and Romania in the status quo scenario are lower than those paid in the other selected MS, the implementation of policy option 1a produces an incentive to move to these countries and an increase in mobility from the other 6 MS of respectively 3.2% and 8.3%. When the upward adjustment is limited to the amount provided by the competent Member State (policy option 1b), the negative impact of mobility flows is

---

<sup>162</sup> When analysing countries of focus for secondary effects of exportability of family benefits, we noticed that for 4 of the countries originally selected no data on the Export of child benefits – number of persons entitled –, were provided by the parallel study (see Pacolet, 2015, Table 6). We then opted for the replacement of, France, Italy and the UK respectively with, Belgium, Spain and Ireland, for which data were available.

<sup>163</sup> PACOLET, J. and DE WISPELAERE, F., Export of family benefits, Network Statistics FMSSFE, European Commission, June 2015

slightly increased in most countries, while the change in mobility is null for Poland and Romania.

For what concerns expenditure changes generated by policy options and mobility changes, presented in section 5, as much as the percentage variations on expenditure levels may reach high values, variations shown in absolute terms and as ratios of GDP confirm the little relevance for national budgets of the expenditure for the exportation of family benefits

In relation to family reunification it is possible to presume that some families may react to the implementation of policy options 1a and 1b by reuniting in the country of residence of the working parent. Dependant family members residing in the poorer countries will indeed have an incentive to reunite with their mobile working relative, so to avoid the reduction in the family benefit (which under policy option 1a and 1b would be computed at the level of the country of residence of the children). If all families residing in poorer countries were to react according to the economic incentive produced by policy options 1a and 1b, they would nullify the effects of the policies. On the contrary, dependant family members residing in richer countries would have a disincentive to reunite with their mobile working relative under policy option 1a, since by doing so they would lose the entitlement to higher benefits (while they would experience no difference under policy option 1b). In relation to the other policy option (3) considered, since there is no variation in the level of family benefits perceived, no economic incentive to reunite families would be produced.

## 1. Introduction

The right to export family benefits and the provision to manage cases of overlapping entitlement to family benefits are regulated under the current EU provisions on export of family benefits specified in Regulation (EC) 883/2004: the 'Basic Regulation' and in Regulation (EC) 987/2009: the 'Implementing Regulation'. Article 67 of Regulation (EC) No 883/2004 states that "A person shall be entitled to family benefits in accordance with the legislation of the competent Member State, including for his family members residing in another Member State". Article 68(1)(a) of Regulation (EC) No 883/2004 specifies the order of priority for competence to pay family benefits as 1) the country of work (Member State of primary competence); 2) the country of pension and 3) the country of residence of the child (Member State of secondary competence). Article 68(2) also provides that any other Member State with secondary competence must pay a differential supplement or "top up" if its own benefits are higher than the ones provided by the Member State of primary competence. In the report, the current regulation of export of family benefits defines the status quo scenario.

The study aims to estimate the envisaged secondary effects derived by a possible modification of the current EU regulation to the export of family benefits. The general objective of the proposed revision of the EU regulation (see below, policy option 1a, 1b and 3) is to modernise the EU social security coordination rules and adapt them to changes in mobility patterns and in national social security systems, demographic developments and case law of the Court of Justice. The initiative aims to ensure that the rules be fit for the purpose and constitute the basis for effective and efficient coordination and cooperation between Member States, ensuring both protection of citizen's rights and even distribution of the financial burden between Member States.

When exporting *family benefits* from a given competent Member State, the amount of the benefits is unrelated to the standard of living in the Member State where the family members reside..

On this background, in the present study we look into the following possible revisions to Regulation (EC) 883/2004 and Regulation (EC) 987/2009:

- Option 1: Adjustment of the amount of exported family benefits to the living standard in the Member State of residence of the child(ren)
  - Option 1a: Adjustment upwards and downwards of the amount of exported family benefits according to the living standard in the Member State of residence of child(ren);
  - Option 1b: Adjustment of the amount of exported family benefits to the living standard in the Member State of residence of the child(ren), but limited to the amount provided by the competent Member State.

- Option 3<sup>164</sup>: Making the Member State of residence of the child(ren) primarily competent.

In this option, the current order of priority for the export of family benefit is changed as follows: 1) country of residence of the child(ren); 2) country of work and 3) country of pension. This would mean that the country of residence of the child(ren) has primary responsibility to pay the full amount of family benefits to which entitlement exists under its national rules. The country of

---

<sup>164</sup> After a revision of the policy options originally proposed, policy option 2 has been substituted by policy option 3.

work would top up this amount if the level of family benefits were higher there. The family will receive the same amount of family benefits as before, but the allocation of the costs between the country of work and the country of residence will differ from the current rules. This also applies, where there is no entitlement to family benefits in the Member State of residence of the child(ren), but there is entitlement in a secondary competent Member State, as in such a case, the latter State will pay 100% of benefits under its national legislation by way of a "top up".

- Option 4: Different coordination rules for salary-related child-raising allowances.

This is a horizontal option, which may be applied in conjunction with any of the options above. Under this proposal, salary-related child raising allowances (or any salary-related components of a benefit which comprises of both salary-related and flat rate elements) would continue to be exportable as family benefits, but would be treated as individual and personal rights which may only be claimed by the parent who is subject to the applicable legislation in question (not by other members of their family).

In addition, it is proposed that no anti-overlapping rules would apply to such benefits meaning that they would be payable in full to the parent concerned under the applicable national legislation irrespective of whether the Member State concerned has primary or secondary competence and amounts awarded by the primary competent Member State may not be "off-set" by the secondary Member State when calculating the differential supplement.

Further, in cases where, under national legislation, parents are permitted to share a salary-related child raising allowances (e.g. Sweden) the parent who is subject to applicable legislation is entitled to the allowance for the maximum duration permitted under national legislation. However, where a family receives a salary-related child raising allowance in more than one Member State, national authorities will be entitled to "off-set" periods of entitlement in another Member State from the overall duration of the benefit (although not the amount).

Such revisions may affect the behaviour of EU mobile citizens and of their families, the amounts of family benefits paid out and the administrative work needed to handle the cases of export of family benefits. In this report, the analysis focuses on the effects that the possible revision of the current regulation on the export of family benefits may generate in terms of intra-EU mobility and in the dimension of the population interested to the export of family benefits (henceforth: target population). The study also offers an estimate of the variation in the expenditure for the export of family benefits that would result from the implementation of the proposed policy options.

The opportunity to make an assessment on the potential implementation of policy option 4 was brought up very late during the impact assessment process. Because of the intrinsic difference with the other policy options<sup>165</sup> and the lack of the necessary time to research the national legislations on the matter, it was impossible to deliver quantitative nor qualitative results on mobility and expenditure changes for the given policy option.

---

<sup>165</sup> Both in terms of object ('salary-related child-raising allowances' instead of general 'family benefits') and area of impact (time away from work instead of income differential).

The present study assumes different sources of data, among which a parallel study on the export of family benefits , which provides detailed data for a proper estimation of the possible secondary effects related to the amendments to the current regulations, e.g. average values of child benefits and number of persons entitled. The administrative data collected by this study, however, does not provide figures on the export of family benefits for all the 28 MS. Additionally, this study is based on a limited number of Member States chosen in relation to their different characteristics in terms of social security schemes and migration flows. Hence, the analysis proposed in this report focuses on seven case-study Member States: Germany, Belgium, the Netherlands, Poland, Romania, Spain and Ireland.

## **2. Methodology**

### **2.1. General approach**

The aim of the report is to provide support to considerations on the overall long-term effects of the proposed changes to the current rules on the export of family benefits in terms of mobility, migration patterns, related variation of costs generated and in relation to the possible variation in terms of family reunification. We calculate the effect of the policy options on the income differentials among MSs, then assess the impacts of said policy changes in terms of incentives to move, providing a tool for comparing the options

- against the status quo scenario;
- against each other.

We must emphasise the important role of family benefits in supporting national and intra-EU mobile families. Moreover, their cross-border nature highlights the relevance of these benefits in the current debate, placing family benefits at the core of a possible EU initiative in the area of coordination of social security schemes.

The output will consist of a definition of different final scenarios for each policy option and for each selected Member State (MS), with the impacts of the potential policy changes being estimated in terms of intra-EU mobility and expenditure variations. The analysis of the possible secondary effects provides for each policy option the following estimates:

- estimation on the change of inflows and outflows of EU citizens;
- estimation on the variation of expenditure for the export of family benefits.

It is important to draw a distinction between direct secondary effects that are potential outputs of a viable model in the present context and indirect consequences of all changes that can propagate throughout the economic and social system of a country and the EU.

In order to identify secondary effects, we will restrict the analysis to the impact on the social security system of a country attributable to changes in the family benefits exported to family members of EU mobile citizens. Therefore, our results provide a estimation of mobility and cost variations imputable to policy options for what concerns exported family benefits, without considering potential effects on other areas, e.g. on the levels of contributions and/or taxes paid or on the variation in other cost elements, e.g. health and care expenditure<sup>166</sup>, which are beyond the scope of the study.

A quantitative assessment of the exact variation in the number of mobile citizens as well as an exact definition of cost changes are beyond the scope of this study. Rather, we suggest reading the estimation of the secondary effects as indicative of the direction and the general magnitude of the variation generated by the implementation of the different policy options.

### **2.2. Data and data limitation**

In order to provide information on how changes in the regulation for the export of family benefits can influence the decision to move, different sources of data are

---

<sup>166</sup> Due to the available data for the specific categories of population analysed, secondary effects on other area or on other expenditure issues cannot be estimated.

needed. The main surveys that provide micro data on individual and family condition, employment situation, social benefits and services received are the European Union Statistics on Income and Living Conditions (EU-SILC) and, to a lesser degree, the EU Labour Force Survey (EU-LFS). In order to supplement and validate the analysis of EU-LFS and EU-SILC surveys, additional datasets of the Eurostat database on migration statistics are used with the aim of defining the bilateral migration flow between the 7 selected countries. Eurostat data allow identifying the average inflow and outflow of EU mobile citizens for each pair of countries. These data represent the starting point on which to assess the variation of mobility patterns generated by each policy option. In order to get figures on the target population (EU mobile citizens residing in a MS with dependent family members residing in a different MS), we make use of the data gathered by the parallel study carried out by the HIVA Research Institute for Work and Society of KU Leuven<sup>167</sup>.

### **2.3. Literature review**

While there are many aspects that drive migration and mobility decisions, we will focus in the following on a broad overview on the literature of economic drivers. Other factors such as institutions, language barriers, religion or distance will at most be discussed briefly. As the main change in the policy simulated is an economic one, while other factors remain constant, our focus reflects the focus of the simulation exercise. Further changes to other factors are also likely to take place in the future, but are not taken into account in the simulation exercise as we solemnly want to identify the effect of the specific policy changes.

In *The Theory of Wages*, Hicks<sup>168</sup> argues that the main causes of migration are differences in wages. To this day, all economic studies of migration decisions employ Hicks' considerations as the general conjecture on which more sophisticated arguments are built about the influence of various other factors. These economic factors are used for internal, i.e. within country, mobility just as much as for cross-country mobility. Migration is in this context seen as an investment into human capital, yielding potentially higher income in the receiving country than in the sending country (Sjaastad, 1962).

Borjas<sup>169</sup> has formulated this into an inter-temporal choice to the general evaluation of income differences. The migration decision is based on income differences between home (sending) and foreign (receiving) country, individual preferences for specific countries (which can be specified by a separate factor, or attributed in relation to the cost of moving) and the cost of moving:

$$d = (income\_foreign - income\_home) - z\_i - c$$

as specified in Hatton and Williamson<sup>170</sup>. Where  $d$  is the decision to migrate. When  $d > 0$ , an individual is assumed to migrate, or in other words, as long as the income difference outweighs the cost of moving ( $c$ ) and the individual's compensating differential ( $z_i$ ), he/she will move.

<sup>170</sup> Hatton, T. J., & Williamson, J. G. (2002). What fundamentals drive world migration? (No. w9159). National Bureau of Economic Research

The new economics of labour migration emphasizes the importance of families or households in the decision to migrate. Rather than taking an isolated, individual decision, it is argued that the unit of interest might in many cases be the household<sup>171</sup>. We are considering this by taking earnings relative to household rather than individuals in our simulation tool.

Employing wage or income differentials as an explanation of mobility behaviour seems to be at odds with low mobility in the European Union, which largely diminished legal and institutional obstacles to the free movement of workers. Wages in the past have had only a weak influence on migration flows, e.g., Braunerhjelm et al.<sup>172</sup> find that mobility levels were not increasing despite a widening gap in income differentials and unemployment levels. In contrast to this, Bentivogli and Pagano<sup>173</sup> (1999) note that the US labour market shows much stronger reaction to income differentials than the EU. More recent evidence, however, shows that mobility takes on stronger roles in solving imbalances. Probably through the abolishment of inhibitions to mobility within the European Union, market forces such as wage differences allow to solve shocks to labour markets by regional mobility. For example, Arpaia et al.<sup>174</sup> (2014) show in their study that regional labour market mobility can adjust for about 25% within a year of the shock that affects a specific region, thus the regional mobility – which explicitly includes mobility across national borders – plays an important role in resolving labour market imbalances. Beyer and Smets<sup>175</sup> (2015) corroborate those findings by showing that regional labour market mobility can adjust for about 25% within a year of the shock that affects a specific region.<sup>176</sup>

The overall economic effect of migration can be subsumed into three separate elements. The economic effects of migration include the ability of mobile workers and migrants to blend in or 'assimilate' into the labour market, the economic impact on the labour market ('displacement of native workers') and the impact on the social security system of the country, both as contributors and recipients of benefits (Kerr & Kerr, 2011). The current study deals mainly with the third effect.

Measurement of the success of mobile workers is difficult, as most datasets cannot overcome the problem of selectivity of results through re-migration. E.g. Edin et al.<sup>177</sup> (2000) found that 30-40% of the immigrants to Sweden had left the country within five years. These re-migrants were usually less assimilated than the group of migrants staying longer. Similar patterns can also be found in other countries (e.g. Germany as

reported in Constant and Massey, 2003; and Bellemare, 2007<sup>178</sup>). The literature shows clear differences in the success of migrants (as measured by e.g. earnings assimilation, unemployment, or culture integration) in mobility from within the EU and migration from outside of the EU (mostly developing countries). Overall, those migrants that remain in the country exhibit earnings assimilation to the natives (Aslund and Rooth<sup>179</sup>, 2007). A recent report by ILO-MPI indicates the difficulties of migrant workers (from outside of the EU) to keep up their income position.<sup>180</sup>

The country of origin seems to be the most important explanatory variable for the gaps observed between the employment rates of immigrants and those of the locals. For Sweden, Nekby (2002) reports 30-32% lower employment rates in 1990-2000, while Ekberg (1991) reports -17% for a single year (1989). For Finland, Sarvimäki<sup>181</sup> (2011) reports 9 – 18% lower employment levels for migrants from OECD countries. For the Netherlands, Roodenburg et al.<sup>182</sup> (2003) find 4% lower employment rates for migrants from Western countries, versus 18% lower employment rates for migrants from non-Western countries. Overall Kerr and Kerr<sup>183</sup> (2011) conclude that “[...] the mechanisms of wage and employment assimilation are poorly understood. Immigrants may face various obstacles to employment, including issues with the recognition of educational degrees, lack of language skills, poor professional connections or networks, and regulations that prevent them from working legally.”

A crucial determinant of the economic impact of immigration on the host country is the net amount of welfare services and other social benefits that immigrants consume or contribute. The net amount has to be calculated based on the contribution minus the benefits paid. The importance of the welfare receipts is discussed in the literature both from the angle of ‘net costs’ of migrants and in terms of the attractiveness of a country through its welfare system. Borjas<sup>184</sup> (1999) and others have discussed possible “welfare magnet effects” where migrants are drawn to countries with high social benefits. Kerr & Kerr (2011, p. 17) conclude that this is likely to be more important in the EU countries as immigrants in most European countries rely more on social security and unemployment benefits relative to natives in the US or Canada. Using the EU Household Panel study, De Giorgi & Pellizzari<sup>185</sup> (2009) find a significant, albeit small, effect of the generosity of welfare on (individual) migration decisions. This effect, however, is still large enough to influence the distribution of migration flows. It is, however, also the case that mobile EU workers tend to have on average lower uptake of benefits than nationals.<sup>186</sup>

The studies that address the concept net costs of migration into a country, i.e. the contribution of migrant minus their uptake in social benefits and public expenditure find mixed evidence. Boerie<sup>187</sup> (2010) using EU-SILC for the core EU15 countries concludes that there is no evidence that legal migrants, notably skilled migrants, are net recipients of transfers from the state. However, there is evidence of 'residual dependency' on non-contributory transfers and self-selection of unskilled migrants in the countries with the most generous welfare states. Hansen and Lofstrom<sup>188</sup> (2003) investigated the causes of greater welfare reliance by immigrants to Sweden. They concluded that recent immigrants used relatively more social security than they did in 1980s. This is due to a change in the composition and volume of the migration flows, while observable traits do not explain the gap in welfare take-up, implying that there are unobserved differences or selectivity. Büchel & Frick<sup>189</sup> (2005) emphasized the heterogeneity of the European situation in migration decisions. However, examining migration flows and controlling for immigrant characteristics did not dramatically change this EU heterogeneity. The higher benefit usage thus results more from policy and institutional differences across countries than the characteristics of migrants themselves. They conclude that limitations and restrictions to participate or access relevant parts of the labour market can be a limiting factor in the economic performance of migrants. Overall, this conclusion from 2005 should become less important to within EU mobility, as limiting factors diminished.<sup>190</sup>

Overall, we can conclude that, while economic factors by themselves seem to bear little explanatory value to the variation of size of mobility across countries in the EU, taking into account non-economic factors yields the expected outcomes: correcting for cultural differences such as the language and cultural distance between countries, as in Belot and Ederveen<sup>191</sup> and Sprenger<sup>192</sup>, economic factors do play an important role in explaining migration flows. Over time, economic differences across regions seem to have increased in their explanatory power towards migration flows.

#### **2.4. Simulation approach**

The simulations presented aim at translating the implications of the proposed policy options into expected income changes. Assuming a connection between income differentials and the propensity to move among EU countries, a variation in mobility flows and in the number of potential cases of export of family benefits is estimated. Finally, taking into account the variation in the number of cases, the different level of benefits and the redistribution of competences between sending and receiving countries envisioned by the policy options, we give an estimate of the variation in expenditure for the export of family benefits for the selected countries.

The status quo scenario is built on a virtual 'baseline year', with a defined level of mobility flows and a defined level of expenditure. Changes attributable to the policy options are computed on an annual basis.

<sup>192</sup> Sprenger, E. (2013). The Determinants of International Migration in the European Union: An Empirical Analysis IOS Working Paper, No. 325.

In analogy with the parallel study<sup>193</sup>, as a main representative unit of population we take one-earner couples with two children at 100% of the average wage. Average wage levels are derived from Eurostat (earn\_nt\_net), while the average amounts for family benefits are taken from the parallel study (Pacolet et al., June 2015, table 3). For this assumption of the target population, we estimate both mobility and expenditure changes.

As alternative target populations, we take one-earner families with up to two children and one-earner families with more than two children, taking information on average wage and average amount of family benefits from own elaborations on EU-SILC. In these cases, we only estimate mobility changes.

We decided to focus on one-earner families with different numbers of children since in this case the economic differential potentially generated by the proposed policy options would be higher, compared to the case of two-earner families, increasing the incentive to move.

#### **2.4.1. The estimation of mobility changes**

The simulation tool takes an average level of flows between two countries to build the status quo scenario. We use the most recent available flow figures from Eurostat, computing averages from the last three available years<sup>194</sup>. The derived annual flows of migration are assumed to be characterizing our countries in our virtual 'status quo years' (before policy options are implemented). These migration flows are caused by all factors that influence the mobility decisions of EU citizens, which we do not attempt to model. Based on these existing flows and on the income level of our target households, the impact of the various policy options on the overall income of the household is evaluated.

The income level is set to the sum of the net average household earnings (source is either Eurostat, earn\_nt\_net, or own elaborations on EU-SILC, see above) and the average child benefit (source is either Pacolet et al., June 2015, table 3, or own elaborations on EU-SILC, see above).

$$(1) \text{ Income} = \text{avg\_earnings} + \text{avg\_FB}$$

Income differences between two countries are then defined as:

$$(2) \text{ Income\_difference} = \text{Income\_receiving} - \text{Income\_sending}$$

It is assumed that the income differences observed in the status quo scenario – along with all other factors that the policy options do not have an impact on – generate the mobility observed in the status quo period both in terms of general mobility flows and in terms of the number of family benefits exported.

The influence of family benefits on mobility is evaluated by calculating the change attributable to the various policy options on the amounts of family benefits paid in relation to the family income in the country of origin.

$$(3) \text{ pct\_income\_change} = \frac{\text{chg\_family\_benefits(policy option)}}{\text{Income\_sending}}$$

---

<sup>193</sup> PACOLET, J. and DE WISPELAERE, F. (2015).

<sup>194</sup> The choice to choose a reference period of 3 years in the estimation of the average flows between MS derives from the necessity to consider the most recent values but still avoid 'year effects'.

Once the income change is calculated, we convert that change into a potential mobility effect. In lack of useful indications from the economic literature on migration, we opted for theoretical assumptions on the elasticity of migration flows to income changes, relating elasticity to income differentials for each combination of countries (42 in total). As a measure for earnings, we consider the net earnings (PPS-adjusted) of a one-earner married couple with two children, at 100% of average wage (Eurostat). For each country, we compute the 2011-13 average value.

*Table 2.4.1. Income differentials in the selected countries.*

	BE	DE	ES	IE	NL	PL	RO
BE		-8%	36%	5%	-4%	133%	295%
DE	9%		49%	15%	4%	154%	331%
ES	-27%	-33%		-23%	-30%	71%	189%
IE	-5%	-13%	29%		-9%	121%	274%
NL	5%	-4%	43%	10%		144%	313%
PL	-57%	-61%	-41%	-55%	-59%		69%
RO	-75%	-77%	-65%	-73%	-76%	-41%	

Source: Eurostat (earn\_nt\_net, web-based database). Own elaborations.

Values for the countries in rows are at the numerator, values for the countries in column at the denominator.

In the absence of relevant literature on the matter, basing on economic logic we assume the function that relates income differentials to elasticity to have the shape of a reverse U: the highest elasticity corresponds to close-to-null values in the income differential.

*Figure 2.4.1. Assumed relation between income differential and elasticity in mobile patterns to income change*

The assumption is that, in case of large gaps in mean earnings between countries (either positive or negative, i.e. Polish average salaries compared to German average salaries or vice-versa), the motives to move will not be substantially impacted by marginal changes of income caused by the implementation of the policy options. For a same absolute level of income differential, a lower level of elasticity is attributed when said differentials are negative compared to when they are positive: if a citizen is moving from Denmark to Romania, his/her choice is probably scarcely related to welfare motives.

*Table 2.4.2. Elasticity assumptions for the selected countries*

	BE	DE	ES	IE	NL	PL	RO
BE		0.8	0.6	0.8	0.8	0.4	0.4
DE	0.8		0.6	0.8	0.8	0.4	0.4
ES	0.2	0.2		0.2	0.2	0.6	0.4
IE	0.8	0.8	0.6		0.8	0.4	0.4
NL	0.8	0.8	0.6	0.8		0.4	0.4
PL	0.1	0.1	0.2	0.1	0.1		0.6
RO	0.1	0.1	0.1	0.1	0.1	0.2	

Source: our calculation based on Eurostat (earn\_nt\_net, web-based database)

Row: Country of destination. Column: Country of origin.

Once elasticity is computed, the percentage of income change can be translated into a mobility percentage change:

$$pct\_mobility\_change = elasticity * pct\_income\_change \quad (3)$$

The percentage of mobility change can then be translated into a change in mobility flows (in the number of people entitled to family benefits) by relating the calculated percentage change to the absolute number of mobile citizens (people entitled to family benefits) in the status quo case.

Policy option 3 leaves intact the overall amount of the family benefit paid, it only transfers the main competence from receiving to sending countries. As option 3 does not produce variations in income differentials, its impact is not studied at this point, but it is included in the estimation of expenditure changes for the national security systems (see below).

#### **2.4.2. The estimation of expenditure changes**

Focusing on the population that seems to better represent the target of the policy options, one-earner couples with two children (100% of average wage)<sup>195</sup>, for each of the 7 selected countries we have estimated the changes in terms of expenditure dedicated to the export of family benefits to the other seven countries.

We compute the present level of expenditure by multiplying the number of cases of export of family benefits (Pacolet et al., 2015, table 6) by the average amount of family benefits (Pacolet et al., 2015, table 3).

We then observe the percentage variation of expenditure – total and related to each bilateral relation. When computing the post-policy-option expenditure, we take into account the previously estimated variation in the number of cases of family benefits, the different level of benefits envisioned by policy options 1a and 1b and the redistribution of competences envisioned by policy option 3.

---

<sup>195</sup> According to Eurostat data, in EU, between 2001 and 2013, the average value of the fertility rate (the average number of children that would be born to a woman over her lifetime) is close to 1.6.

## 2.5. Case study Member States

The countries proposed for the analysis as case studies are Germany, Belgium, Poland, Romania, Netherlands, Spain and Ireland<sup>196</sup>. The proposed countries are chosen as geographically spread across the EU. They include countries which are mainly attracting EU mobile citizens from other member states ( DE; IE) as well as countries that experience strong migration outflows (PL; RO) but also countries within the middle ground (BE; NL; ES). The selection of the 7 MS is derived also by the specific characteristics that regulate the provision and the access to family benefits. Countries' regulatory framework for family benefits can be summarised as follows:

*Table 2.5.1. Overview of principal characteristics of child benefits in the selected countries*

<b>Family Benefits</b>	
<i>Child Benefits: Dependence on parents income</i>	
Fixed Amount	DE, NL, BE, , IE
Means-tested	RO, PL, ES
<i>Level of Child Benefits</i>	
High	DE, , IE
Intermediate	NL, BE, (ES)
Low	RO, PL
<i>Child Benefits: Residence requirement</i>	
Residence required	BE, ES, , IE, RO
Parents' taxable / working	DE, NL, PL, BE
<i>Other family (cash) benefits</i>	
Child-raising income supplement	BE, DE, RO,
Means-tested supplements	NL

Source: MISSOC (web based dataset)

As table 2.5.1 shows, family benefits vary in the amount and in the rules for the determination of the amount. There are countries that provide a fixed amount (DE; NL, BE, , IE); others provide means-tested benefits that are fixed to thresholds (RO, PL) or inversely related to the total income (ES) of the recipient's parent. Some of the selected countries foresee child benefits for children residing in the country (BE, ES,

<sup>196</sup> When analysing countries of focus for secondary effects of exportability of family benefits, we noticed that for 4 of the countries originally selected no data on the Export of child benefits – number of persons entitled –, were provided by the parallel study (see Pacolet, 2015, Table 6). We then opted for the replacement of, France, Italy and the UK respectively with, Belgium, Spain and Ireland, for which data were available.

IE, RO)<sup>197</sup> while others link the child benefit to the place of taxation of the parent (DE, NL, PL) without the requirement that the child live in the same country. Finally, the amount of child benefits varies greatly. The additional (cash) family benefits cover a wide range of cases reflecting the diversity and complexity of the harmonisation process on the matter of EU mobile citizens. Appendix 1 provides an overview of the principal characteristics of the child benefits for the selected countries.

The purpose of the simulation is to estimate the secondary effects of the potential implementation of the policy options on the bilateral relations between the 7 selected MS. Results for each pair of countries are essentially driven by the country-specific figures on migration flows, average levels of family benefits and income differentials with the other countries. The observed results can therefore be imputed to pair of MS countries that present similar characteristics in said aspects.

Annex 4 presents a methodology for an indicative extension of the simulation results to the other EU-28 MS.

---

<sup>197</sup> For the purpose of the study, and following the data collected by Pacolet (see note 1) we assume the present EU regulations (Regulation (EC) 883/2004: the 'Basic Regulation' and Regulation (EC) 987/2009: the 'Implementing Regulation') as in force. Therefore, child benefits are considered payable also to children not residing in the country of work of the employed parent.

### 3. Status quo Scenario

#### 3.1 Status quo mobility flows

The table below reports the figures of mobility flows in our virtual status quo year, computed as the averages of the most recent values of annual mobility flows among the 7 selected countries<sup>198</sup>. The estimation of the variation in mobility patterns generated by the policy options is derived from the bilateral flows presented in table 3.1.1.

*Table 3.1.1. Mobility flows between selected countries. Status quo scenario.*

		<b>Country of origin</b>						
		<b>BE</b>	<b>DE</b>	<b>ES</b>	<b>IE</b>	<b>NL</b>	<b>PL</b>	<b>RO</b>
<b>MS of residence</b>	BE		4,223	6,725	449	10,431	8,464	7,624
	DE	4,247		15,707	1,918	14,185	149,513	38,314
	ES	3,283	9,720		1,691	3,539	2,841	33,581

	RO	77	644	212	26	139	141	

Source: Eurostat (web-based database). Averages are estimated on 2011-13 data when available, or on latest available data. We are considering countries of last residence as 'senders' (Eurostat: migr\_imm5prv). For lack of data, for Romania countries of nationality are assumed as 'senders' (Eurostat: migr\_imm1ctz)<sup>199</sup>.

Poland and Romania are the two prevalent sending countries among the seven selected. In Ireland, the Netherlands and especially Germany, citizens coming from Poland represent the prevalent share in the migration flows, while Romania is the main country of origin among mobile citizens residing in Spain. Another interesting result concerns the migration flow between neighbouring countries (Belgium-Netherlands, Germany-Netherlands). Germany is also a common receiving country for citizens coming from Spain. The migration flows towards Ireland are moderate, as well as the migration from Ireland to the other selected countries. According to the data, the principal migration flows regards Romania and Poland as sending countries and Belgium, Germany and Spain as receiving countries. The highest migration flow concerns Poland and Germany: 149,513 citizens coming from Poland move to Germany in the virtual 'status quo year'.

#### 3.2 Status quo target population

According to the current EU provisions on export of family benefits specified in Regulation (EC) 883/2004: the 'Basic Regulation' and in Regulation (EC) 987/2009: the 'Implementing Regulation', the exportability of family benefits is regulated as follows:

<sup>198</sup> In order to contextualize the relations between the eight selected MS in the intra-EU mobility, according to Eurostat (migr\_imm5pr), the bilateral migration flows considered account for around 20% of the overall intra-EU migration flow. Data are usually computed as 2011-13 averages. We are considering countries of last residence as 'senders'. For lack of data, for Romania countries of nationality are assumed as 'senders'.

<sup>199</sup> Taking country of nationality as country of origin seems problematic for the case of Romania: in 2013, as many as 124,273 EU-mobile citizens were reported to enter Romania (Eurostat, no differentiation available in terms of sending country), but in the same year only 1,024 non-Romanian EU citizens were reported to enter Romania.

**Example 1**

Joanna works in Member State A (which has a higher cost of living than Member State B) while her non-working husband Colin resides with their children in Member State B (which has a lower cost of living than Member State A).

Under the current rules, Joanna is entitled to family benefits in Member State A at the same amount as if her family was residing in Member State A.

**Example 2:**

Colin works in Member State B (which has a lower cost of living than Member State A) while his non-working wife Joanna resides with their children in Member State A (which has a higher cost of living than Member State B).

Under the current rules, Colin is entitled to family benefits in Member State B at the same amount as if his family was residing in Member State B.

As the examples suggest, the target population of the study are one-earner families in which the person entitled to the exportability of child benefits works and resides in a MS different from the one the dependent family members reside in. The HIVA study<sup>200</sup> allows to identify, for each selected country, the total number of persons entitled to the export of child benefits. The data provided in table 3.2.1 offer an overview of the population interested by the policy options and of the related expenditure in our virtual 'status quo year'. The table reports the aggregate data of the bilateral relations between the seven selected countries, in terms of number of persons entitled, average values of child benefits, and related estimated expenditure<sup>201</sup>.

*Table 3.2.1. Status quo scenario. Number of entitled persons, average amount of child benefit, and related expenditure.*

<b>Total</b>	69,344	3,067	299,581,391

Source: HIVA study (Pacolet et al., 2015). Own elaborations.

According to the HIVA study, in 2013, in the 7 selected countries 69,344 persons were entitled to export child benefits. In absolute terms, Germany is the country with the highest number of persons entitled, followed by the Netherlands. According to the HIVA study, in Spain only 30 EU mobile citizens were entitled to export child benefits.

<sup>200</sup> PACOLET, J. and DE WISPELAERE, F., Export of family benefits, Network Statistics FMSSFE, European Commission, June 2015, 34 p

<sup>201</sup> The analysis of the secondary effects of policy options are based on the bilateral relations between the selected MS. For this reason, the simulation tool uses the number of entitled persons derived by each combination between the selected MSs provided by the HIVA study (Pacolet, 2015).

The annual average values of child benefits vary significantly among the selected countries. Belgium, the Netherlands and Germany present the highest values, ranging between 4,200 euro and 5,800 euro. Romania presents the lowest values of child benefits (177 euro). In 2013, the overall expenditure on the export of child benefits among the selected countries was about 299 millions of euro. Germany and the Netherlands account for over 80% of that expenditure. In Romania and especially in Spain, the reported expenditure is very limited. Unfortunately, according to HIVA study administrative data on the number of persons entitled to the export of child benefits in Poland are not available. It is therefore impossible to estimate the annual expenditure for this country in the status quo scenario. We still decided to keep Poland among the selected countries even if the data on the export of family benefits are not available: as subsection 3.1 shows, the migration flows from Poland towards the other selected countries are the highest among those analysed.

#### 4. Secondary effects: estimation of mobility changes

This section reports the variation of mobility patterns between the selected MS according to the policy options proposed, assessed in relation to the status quo scenario. The mobility patterns are estimated for three categories of population. This section presents the results of the analysis for one-earner married couples with two children at 100% of average earnings. Results for the other categories of population presented above - one-earner married couples with up to two children and one-earner married couples with three or more children- are reported in annex 2. The figures are presented in aggregate terms for each MS, while the detailed results of the bilateral relations between the 7 selected MS are again presented in annex 2<sup>202</sup>.

As previously stated, in the estimation of mobility changes we assume all factors to stay constant but the income differential impacted by the policy options analysed.

As stated in sub-section 4.2.1, the estimation of changes in mobility only concerns policy option 1. Policy option 3 merely envisions a redistribution of competence (from receiving to sending country), with no change in the benefits paid to recipients. Since in our simulation tool mobility changes are only caused by the economic differentials generated by a modification to the current regulations, policy option 3 implies no mobility change.

Figure 4.1. Variation in mobility flows. Policy options 1a and 1b (one-earner married couples with two children at 100% of average earnings)

Source: our calculations based on data from Pacolet et al. (2015) and Eurostat (migr\_imm5prv, earn\_nt\_net; web-based database)

Figure 4.1 shows the estimated intra-EU mobility flows as impacted by the implementation of policy options 1a and 1b. According to policy option 1a, the amount of the exported family benefits has to be adjusted (upward and downward) to the living standard in the Member State of residence of the child(ren). In the case of policy option 1b, said adjustment cannot exceed the amount of the family benefits provided in the member state of primary competence.

In aggregate terms, with the exception of Poland and Romania, policy option 1 generates a slight reduction in (net) migration flows. The Netherlands present the

<sup>202</sup> For the three categories of population considered, annex 2 provides to the reader the possibility to extrapolate the bilateral results for each MS considered.

highest reductions in percentage terms. Policy option 1 (a and b) produces a decrease of 4.0% of the estimated migration inflow defined in the status quo scenario. In Germany, a slight difference between policy option 1a and policy option 1b is registered. In the latter case, this country experiences a reduction of the overall migration inflow from the other six countries equal to 3.2%, while in the case of policy option 1a the reduction is of 3.1%. In Belgium, the two policy options analysed produce a more marked difference. Although the impact on mobility flows of the policy option is generally limited, the effect of policy option 1b is two times higher than policy option 1a (2.2% to 1.1%). Spain and Ireland show similar results. In Poland and Romania, while policy option 1b does not generate any change in mobility, policy option 1a causes an increase in mobility towards these countries (3.2% and 8.4% for Poland and Romania respectively). This happens because the absence of a threshold for the upward adjustment on the amount of family benefits incentivizes EU mobile citizens to move to Poland and Romania. Because all factors but family benefits stay constant, the increase in family benefits generates a net incentive to move.

When the upward adjustment is limited to the amount provided by the competent Member State (policy option 1b), no change in the income differentials observed in the status quo scenario is produced, nor is the incentive to move generated, which results in no change in mobility.

As regards the bilateral relations, the main results concern the migration flows of EU mobile citizens coming from Poland and Romania. In the policy option considered, this population accounts for the majority of the reduction of migration flows for the other MS analysed. For Germany, Belgium and Ireland, the reduction of EU mobile citizens coming from Spain represents a significant share of the overall decrease in the migration flows to these countries. In the Netherlands, in addition to EU mobile citizens coming from Poland and Spain, an important reduction in migration flows is imputable to neighbouring countries. Respectively 17.0% and 15.3% of the decrease in the Dutch aggregate migration flow is attributable to citizens coming from Germany and Belgium (see annex 2 for the detailed bilateral relations).

Figure 4.2 shows the variation in potential target population according to the policy options analysed<sup>203</sup>. The figure presents, for each MS, the changes in percentage terms of the population that applies for the export of family benefits compared to the figures in the status quo scenario (see tab. 3.1.1). The figures report variations in target population attributable to changes in the economic differential in the case of policy option 1, and to the redistribution of competences in the case of policy option 3<sup>204</sup>. Policy option 3 is in a way 'splitting' the competence between country of work and country of residence of the children. In the following results, variations in the target population attributed to policy option 3 are only relative to the share of population to which countries are primary competent. When estimating expenditure variations, integrations are also taken into account.

In general, the variations in target population generated by policy option 1 are very moderate, between 3.9% and -3.7%, and with the exception of Belgium and Romania (policy option 1a), in all countries the result is a reduction in the export of family

---

<sup>203</sup> As previously stated, in this case target population refers to one-earner families in which the person entitled to the exportability of child benefits works and resides in a MS different from the one the dependent family members reside in.

<sup>204</sup> In policy option 3, the country of residence of the child(ren) has primary responsibility to pay the full amount of family benefits to which entitlement exists under its national rules. The country of work of the parent will top up this amount if the level of family benefits is be higher there.

benefits. In absolute terms, the higher variations in target population are experienced by Germany and the Netherlands. In policy option 1b, the latter shows a reduction of the target population equal to 700 EU mobile citizens, while the reduction in Germany is of 962. Among the other countries considered, with the exclusion of Spain, in which policy option 1 affects only a very limited number of EU mobile citizens, and Romania, in which policy option 1a results in a increase of target population equal to 231 EU mobile citizens, in the other countries, policy option 1 results in a decrease of target population between 58 and 94 EU mobile citizens<sup>205</sup>.

Figure 4.2. Variation in potential target population. Policy options 1a, 1b, 3 (one-earner married couples with two children at 100% of average earnings).

Source: our calculations based on data from Pacolet et al. (2015) and Eurostat (earn\_nt\_net; web-based database). No variation can be estimated for Poland, for which no administrative data on the export of family benefits are available in the status scenario. It has to be stressed that, according to the administrative data collected by the HIVA study (Pacolet et al., 2015) in Spain the number of cases of exportation of family benefits is extremely low: only 37 overall, in 2013.

Policy option 3 results in a decrease in the number of EU mobile citizens entitled to the export of family benefits for the majority of countries considered. Only Spain records a - very important - increase in the target population. This, however, is attributable to the fact that, according to the administrative data collected by the HIVA study, only 30 EU mobile citizens coming from the other 6 selected countries that reside in Spain export family benefits in 2013 (and in our status quo scenario), while the number of family benefits claimed in the other 6 selected countries by EU mobile citizens coming from Spain is as high as 6,705. The inversion of competences therefore produces an considerable change in the target population.

In countries characterised by immigration rather than emigration, like Germany and Ireland, policy option 3 results in a reduction of the target population higher than 87%. In the Netherlands, characterised by significant migration flows towards Germany and Belgium, policy option 3 results in a more mild reduction in target population (63.9%) compared to the aforementioned countries. Similarly, in Belgium the reduction of target population is limited by the significant share of EU mobile citizens with Belgium as country of previous residence that apply for the export of

<sup>205</sup> It has to be stressed that, according to the administrative data collected by the HIVA study (Pacolet, 2015), in Spain the number of cases of exportation of family benefits is extremely low: only 37 in 2013. Additionally administrative data on the export of family benefits are not available for Poland, and no estimation are provided for this country.

family benefits in the Netherlands. Surprisingly, even Romania experiences a decrease in target population. This reduction is due to the high number of family benefits claimed in Romania by EU mobile citizens that previously resided in Spain, which alone outnumbers the family benefits asked by EU mobile citizens coming from Romania in the other 6 selected countries (see annex 2 for the detailed result of the bilateral relations).

## 5. Secondary effects: estimation of expenditure changes

This section reports the estimated changes of expenditure of family benefits devoted to the target population compared to the figures observed in the status quo scenario, for each MS analysed and according to the various policy options. The results discussed in this section are referred to the representative category of the potential target population: one-earner couples at 100% of average earning with up to two children. The results are presented in aggregate terms for each MS, while the detailed results of the bilateral relations between the 8 MS considered are presented in annex 3.

As reported in section 2.4.2, in defining the expenditures changes we take into account the variation in the target population (due to both mobility changes and variations in the relevant regulations), the different level of benefits envisioned by policy options 1a and 1b and the redistribution of competences envisioned by policy option 3.

With the exception of Romania<sup>206</sup> policy option 1 provokes a relevant reduction in percentage terms of the expenditure for child benefits paid to the target population (figure 5.1). In Germany, Ireland and the Netherlands, only a small difference is registered between the effects of policy options 1a and 1b. In Belgium, the differences between sub-options are most pronounced. Policy option 1a implicates a reduction of expenditure for the export of family benefits of 8.8%, while the estimated saving of policy option 1b is equal to 30.8%. In Germany, Spain, the Netherlands and Ireland the cost changes generated by policy option 1 are higher than half the previous expenditure. Even though Spain presents percentage variations in line with the other selected countries, since the number of family benefits exported is very limited, the savings generated by policy option 1a and 1b are extremely low in monetary terms (around € 36,000 for policy option 1a and just above € 42,000 for policy option 1b). Romania is the only country that registers an increase of expenditure for the export of child benefits when policy option 1a is applied. The difference between the average amount of child benefits paid in Romania and those of the other selected MS causes a high increase (in percentage terms) in the expenditure for the export of child benefits. As Figure 5.1 shows, the expenditure variation for Romania is of 1058.8%. Similarly to the results observed for mobility changes, when the upward adjustment is limited to the amount provided by the competent Member State (policy option 1b), no change in expenditure is observed.

In policy option 3 the country of residence of the child has primary responsibility to pay the full amount of the family benefit to which entitlement exists under its national rules. The country of work will top up this amount if the level of family benefits is higher there. In Belgium and especially in Spain, this policy option results in an increase of the expenditure devoted to the export of child benefits.

---

<sup>206</sup> As previously stated, since data on the number of cases of export of family benefits are not available for Poland in the HIVA study, we cannot estimate the changes in expenditures for family benefits for this country.

Figure 5.1. Variation of expenditure for the export of family benefits. Policy options 1a, 1b and 3 (one-earner married couples with two children at 100% of average earnings).

Source: Our calculation based on data from Pacolet et al. (2015), Eurostat (migr\_imm5prv, earn\_nt\_net; web-based database). No variation can be estimated for Poland, for which no administrative data on the export of family benefits are available in the status scenario. It has to be stressed that, according to the administrative data collected by the HIVA study (Pacolet et al., 2015) in Spain the number of cases of exportation of family benefits is extremely low: only 37 overall, in 2013.

As figure 4.2 shows, in Spain, policy option 3 generates an extreme increase in the target population. In the status quo scenario, only a very limited number family benefits are recorded to be exported from Spain (only 30 to the other 6 selected countries), but EU mobile citizens who have Spain as country of previous residence represent an important share of the target population in the other 6 selected MS, especially in Germany, Romania and the Netherlands. Under policy option 3, the number of family benefits Spain has to pay for therefore increase dramatically, generating an extremely high increase in expenditure (+22329.1%). However, it has to be considered that this expenditure variation could represent an overestimation. In Spain the access to family benefits is mean-tested, and only families with income per year below €11,519.16. (or €17,337.05 in the case of families with 3 dependent children) are eligible. The simulation tool used in this study is based on aggregate data at national level and does not allow taking into account the families' income distribution. Eurostat data suggest that in 2013 less than 18% of the families residing in Spain had an income below €13,524 (second quartile top cut-off point). Hence, we can assess that, even if policy option 3 in Spain could generate a significant increase in the expenditure for the export of family benefits, the variation proposed is likely overestimated<sup>207</sup>.

In Belgium, the increase of expenditure for the export of child benefits (15.1%) derives primarily from the export of family benefits to the Netherlands. In the Netherlands the average amount of family benefits are higher than in Belgium. Hence the difference between the average amount of child benefits generates an increase of expenditure for Belgium estimated to be around a fifth of the expenditure defined in the status quo scenario. In Germany, an important share of the overall variation of expenditures, is due to the payment that the country's finances would sustain to top

<sup>207</sup> Similar considerations can be applied in the case of Romania and Poland where, similarly to Spain, the access of family benefits is means-tested.

up the gap between the amount of child benefits in Poland and in Germany, when Poland is the country of residence of the family members. In Ireland, the combination of the bilateral relations among the selected MS generates a reduction of expenditure for the export of child benefits of 37.6%. According to the data collected by Pacolet et al. (2015), there are plenty of mobile citizens entitled to the export of family benefits in Romania that have their family members in Spain. The redistribution of competences envisioned by policy option 3 actually reduces the number of benefits to be paid by Romania: the expenditure decreases by 29.0%.

Table 5.1 shows the bilateral distribution of the expenditure that each MS considered sustains in the export of family benefit in relation to the other six selected MS.

P.o. 1b	-	-	-	-	-	-						

Source: Our calculation based on data from Pacolet et al. (2015), Eurostat (migr\_imm5prv, earn\_nt\_net; web-based database). No variation can be estimated for Poland, for which no data on the export of family benefits are available in the status quo scenario. It has to be stressed that the number of cases of exportation of family benefits recorded by the HIVA study (Pacolet et al., 2015) for Spain is extremely low: only 37 overall, in 2013.

In Germany and Ireland the majority of the expenditure for the export of family benefits is devoted to EU mobile citizens coming from Poland. In Ireland the policy option 1 does not impact on the share of expenditure received by this population, which accounts for around 95% of the aggregate expenditure. In Germany policy option 1 (a and b) results in a decrease in the analysed chapter of expenditure. Additionally, in Germany, policy option 1 involves an increase of the share of expenditure of export of family benefits directed to EU mobile citizens how have the Netherlands as country of origin. This population – EU mobile citizens coming from the Netherlands – represents an relevant chapter of expenditures also for Belgium. In policy option 1, the Belgian expenditure for the export of family benefits devoted to this population ranges between 75% and 80%. In the Netherlands, policy option 1 halves the cost of export of family benefits sustained for EU mobile citizens coming from Poland. As a result, the aggregate expenditure for the export of family benefits among the countries considered is more or less evenly shared between EU mobile citizens coming from Belgium, Germany and Poland. Similarly in Spain, policy option 1 significantly reduces the share of expenditure for export of family benefits sustained for EU mobile citizens coming from Romania. This variation is compensated by an increase of the share of expenditure related to citizens coming from Germany and Poland. In Romania, while policy option 1b does not produce any variation in the distribution of the expenditure, policy option 1a generates only a small changes in the chapters of expenditure devoted to EU mobile citizens coming from Spain and Germany.

In order to provide a benchmark for the evaluation of expenditure variations, figure 5.2 reports the expenditure for the export of family benefits paid to EU mobile citizens coming from the other 6 selected countries as a ratio of the GDP, in the status quo scenario and in each policy option.

Figure 5.2. Expenditure variation in % GDP (2013), Status quo and policy option scenarios

Source: Our calculation based on data from Pacolet et al. (2015), Eurostat (migr\_imm5prv, earn\_nt\_net, nama\_10\_gdp; web-based database).

The figure indicates that in all scenarios the expenditure for the export of family benefits devoted to the target population is very limited: in no case does the value go over 0.015% of the GDP. In Romania, policy option 1a produces a significant increase

in the expenditure for the export of family benefits in absolute terms, but the share of GDP involved is still of little relevance, rising from 0.0007% in the status quo scenario to 0.0083%. As already observed, in Belgium, Germany and Ireland the expenditure variations between the status quo scenario and the policy options are moderate. In the Netherlands, policy option 1 reduces the expenditure by half while policy option 3 generates only a limited saving. In Poland, according to the available data, it is only possible to estimate the expenditure for the export of family benefits related to policy option 3<sup>208</sup>. In this case, the expenditure that this country sustains in order to provide family benefits to EU mobile citizens coming from this MS and residing in one of the other six MS considered is equal to 0.0152% of the GDP.

## 5.2 Possible effects of family reunifications

The approach followed by the study at hand does not allow to specifically account for the event of family reunifications, i.e. the dependant family members reuniting with the mobile citizen that is entitled to the family benefit. Some considerations are however possible and seem appropriate in analysing the matter at hand.

As a general note, if dependent family members were to reunite with the working partner/parent working in another MS, they would nullify the effects of all of the policy options. We shall then analyse how the economic incentives generated by the policy options may influence the decision to reunite of European families.

Under policy options 1a and 1b, dependent family members residing in the poorer countries (in terms of the level of family benefits computed) will have an incentive to reunite with their mobile working relative, so to avoid the reduction in the family benefit (which under policy options 1a and 1b would be computed at the level of the country of residence of the children). Let us take the example of a European citizen that resides and works in Belgium, while her partner and their children are in Romania. Following the implementation of policy option 1a or 1b, the household would see the family benefit reduced from the level of Belgium to the one of Romania. The dependent family members would have an incentive to move to Belgium in order to get higher benefits. If this incentive trumps the costs of moving (this is probably the case when the decision to migrate is a long-term one), the family members residing in the poorer country will move to the richer and offset the effect of the policy option. If all families residing in poorer countries were to react according to the economic incentive produced by policy options 1a and 1b, they would nullify the effects of the policies, i.e. in our example, Belgium would have to pay family benefits at the Belgian level.

On the contrary, dependent family members residing in richer countries would have a disincentive to reunite with their mobile working relative under policy option 1a, since by doing so they would lose the entitlement to higher benefits.

Let us take the example of a European citizen that resides and works in Poland, while her partner and their children are in Germany. Following the implementation of policy option 1a, the household would see the family benefit increased from the level of

---

<sup>208</sup> Still, no estimation can be made on the expenditure – derivable from the potential implementation of policy option 3 – relative to the integration of family benefits paid to EU mobile citizens residing in Poland. These costs would most likely have little relevance, since the average level of family benefits paid in Poland is the second lowest amongst the 7 selected countries. The only accountable costs here are those Poland would sustain, as MS of primary competence, to pay family benefits to mobile citizens whose children reside in Poland.

Poland to the one of Germany. The dependent family members would have a disincentive to move to Poland, because that would mean getting a lower benefit.

If this disincentive is trumped by some incentive to reunite (this is probably the case when the decision to migrate is a long-term one), the family members residing in the poorer country will move to the richer and offset the effect of the policy option.

Instead, if all families residing in richer countries were to react according to the economic incentive produced by policy options 1a, the effects of the policies would stay intact.

If policy option 1b is implemented, because of the limits imposed on the level of benefits computed, no variation in the household income is envisioned, i.e. in our example, the household would see the family benefit stay at the Polish level and the incentives to reunite would not be altered.

In addition, as noticed above, no variation in the level of family benefits is imputable to policy option 4 (only changes in competence priorities are envisioned). Therefore, the economic incentives to reunite would not be altered, neither in poor-to-rich nor in rich-to-poor relations.

*Table 5.3. The estimated effects of family reunifications*

<b>Policy option</b>	<b>Country relation</b>	<b>New incentive produced</b>	<b>Effect if reunification is determined by the new incentives produced</b>	<b>Effect if reunification happens nonetheless</b>
2A	Poor-to-rich	Incentive to move	P.O. effects nullified	P.O. effects nullified

## 6. Conclusions

The aim of the study is to assess the secondary effects of the proposed modification to the current EU provisions on the export of family benefits, as specified in Regulation (EC) 883/2004: the 'Basic Regulation' and in Regulation (EC) 987/2009: the 'Implementing Regulation'. Such secondary effects include changes in the overall mobility of citizens, in the number of individuals entitled to the exportation of family benefits and in the level of expenditure attributable to the item.

To this end, we have selected 7 MS as part of the case study, with consideration to the level of representativeness of the group as regards the whole EU. For each MS, we have defined size and characteristics of the population potentially interested by the policy changes, as well as the relative expenditure for the export of child benefits. Against this 'status quo scenario', we have estimated the impact of the various policy changes.

A simulation tool has been defined in order to estimate the potential mobility changes attributable to the economic differentials generated by the three policy options. The second step of the analysis has concerned the estimation of the changes of public expenditure devoted to the child benefits paid to the target population.

In order to proceed with the estimate, key assumptions had to be made on the elasticity of potentially mobile EU citizens to changes in income differentials among countries, which are expected to impact the incentives to move across countries (see par. 2.4).

Results generally show mild reductions in mobility changes (see fig. 4.1) attributable to the potential implementation of the policy options. Limited differences can be noted for the two policy options tested for mobility changes (1a and 1b). Excluding Poland and Romania, the other MSs analysed show a slight decrease in migration flows. The variations range between -0.2% and -4%.

Because the benefits paid in Poland and Romania in the status quo scenario are lower than those paid in the other selected MS, the implementation of policy option 1a produces an incentive to move to these countries and an increase in mobility from the other 6 MS of respectively 3.2% and 8.3%.

When the upward adjustment is limited to the amount provided by the competent Member State (policy option 1b), the negative impact of mobility flows is slightly increased in most countries, while the change in mobility is null for Poland and Romania.

In relation to expenditure changes<sup>209</sup> generated by policy options and mobility changes, as much as the percentage variations on expenditure levels may reach high values, variations shown in absolute terms and as ratios of GDP confirm the little relevance for national budgets of the expenditure for the exportation of family benefits (see fig. 5.2).

---

<sup>209</sup> No variation can be estimated for Poland, for which no data on the export of family benefits are available in the status quos scenario (no data in Pacolet et al, 2015). Results observed for Spain should be considered most carefully, since according to administrative data collected by the HIVA study (Pacolet et al., 2015) the number of cases of exportation of family benefits are extremely low for this MS: only 37 overall, in 2013.

The approach followed by the study at hand does not allow to specifically account for the event of family reunifications, i.e. the dependant family members reuniting with the mobile citizen that is entitled to the family benefit.

However, we can presume that some families may react to the implementation of policy options 1a and 1b by reuniting in the country of residence of the working parent. Dependant family members residing in the poorer countries will indeed have an incentive to reunite with their mobile working relative, so to avoid the reduction in the family benefit (which under policy option 1a and 1b would be computed at the level of the country of residence of the children). If all families residing in poorer countries were to react according to the economic incentive produced by policy options 1a and 1b, they would nullify the effects of the policies.

On the contrary, dependant family members residing in richer countries would have a disincentive to reunite with their mobile working relative under policy option 1a, since by doing so they would lose the entitlement to higher benefits (while they would experience no difference under policy option 1b).

As already noticed, no variation in the level of family benefits perceived is imputable to policy option 3. Therefore, no economic incentive to reunite families would be produced.

## Annex 1 – List of Family benefits within the scope of the study (source MISSOC).

The MISSOC Comparative Tables Database contains detailed information on social protection in 32 countries. However MISSOC gives a description of the purely national legislation and often does not take into account the application of Regulation 883/2004, while in many MS the Regulation directly applies and has priority over national law. The scope of this table is to provide a indicative overview of the characteristics of the family benefits under the national legislation in the 7 selected MS.

	Name or act	Conditions	Age limit and child residence	Benefit amount
<b>Belgium</b>	<i>General Act of 19 December 1939 on Child Benefits (Loi générale du 19 décembre 1939 relative aux allocations familiales (LGAF)/ Algemene kinderbijslagw et (AKBW)) (as amended by the act of 4 April 2014)</i>	* The beneficiary must have a parental, alliance, adoption or unofficial guardianship link with the child. * No variation with income.	*Normal: 18 years. *Vocational training: 25 years. *Further education: 25 years. * The child must be brought up in Belgium and follow his studies there and not abroad.	1st child: € 90.28 2nd child: € 167.05 3rd child and subsequent children: € 249.41 Variation with age. Monthly age supplements Children in 1st order, receiving the normal rate (i.e. not entitled to the supplement for single parent families or to a social supplement and who are not disabled): aged 6 - 12: € 15.73 aged 12 - 18: € 23.95 aged 18 or more: € 27.6
<b>Germany</b>	<i>Kindergeld</i>	*Taxable persons residing in Germany or persons subject to income taxation there without restrictions for their own children, adopted children or dependent children *Universal scheme, not means-tested.	*18 years. Prolongation to 21 for registered jobseekers, and to 25 for student and working student (less than 20 hours a week) *The child must reside in Germany or in another EU or EEA Member State or in Switzerland	1st and 2nd child: € 184 3rd child: € 190 4th and subsequent: € 215
<b>Spain</b>	<i>Prestaciones por hijo a cargo</i>	* Parents or persons in charge of the	* 18 years. * The child must be resident in	* Child Benefit (12 payments per year): Children under 18

Task 3:  
Secondary effects following a change of regulations on the exportation of family benefits

		child, legally resident in Spain	Spain	years of age:€24.25; * No benefit if the family income per year exceeds €11,519.16. This ceiling increases up to €17,337.05 for families with 3 dependent children. This amount increases by €2,808.12 for each dependent child after and including the fourth child.
<b>Poland</b>	N/A	*The beneficiaries must be either: Polish citizens, foreigners who fall within the scope of the law on co-ordination of social security schemes or bilateral agreement on social security, foreigners staying in the territory of Poland who hold refugee status or residence permit if they reside in the territory of Poland together with family members. *contributory and means-tested	*The condition of residence of the child must be fulfilled only in relation to foreigners who: have neither EU nor EEA nor Swiss citizenship, hold refugee status or residence permit. *Less than 18 years,* the end of the child's education at school	Family income per capita must not exceed PLN 539 (€130) (in 2014) per month (PLN 623 (€150) in the case of families with a disabled child). The monthly amounts per child depend on the age: under 5 years: PLN 77 (€18), 5 - 18 years: PLN 106 (€25), 18 - 24 years: PLN 115 (€28)
<b>Romania</b>	<i>Alocatie de stat pentru copii</i>	* Social assistance scheme, universal, financed by the State Budget * means-tested. * Child cohabiting with his/her parent(s)	*18 years (or secondary or post-secondary graduation age) *Domicile or residence in Romania	*The monthly amount varies with the age of children and the Reference Social Indicator(RSI) *Ceiling: The total amount of social assistance benefits accrued by a single person or a family may not exceed a certain coefficient set annually by Government Decision

Task 3:  
Secondary effects following a change of regulations on the exportation of family benefits

				and which is related to the RSI
<b>The Netherlands</b>	<p>*Algemene Kinderbijslagwet (AKW);</p> <p>Wet op het *kindgebonden budget (WKB)</p> <ul style="list-style-type: none"> <li>• Tegemoetkoming ouders van thuiswonende gehandicapte kinderen (TOG)</li> <li>• Wet Kinderopvang en kwaliteitseisen peuterspeelzalen</li> </ul>	<p>*all (insured) residents whatever their nationality who work in the Netherlands and consequently pay tax on wages, and also maintain the child.</p> <p>*Universal scheme, not means-tested (AKW), means-tested (WKB)</p>	<p>* Child up to 18 years of age</p> <p>*Both AKW and WKB are also paid for children who live in an EU or EEA country or Switzerland</p>	<p>*AKW: up to 5 years: €63.88 / 6-11 years: €77.57 / 12-17 years: €91.26. The benefits are paid per quarter.</p> <p>*WKB ceiling: above the threshold of €26,147 the allowance is reduced by 7.6% of the difference between the family income and €26,147. Income limit: €102,499 for a single person or €123,638 for partners. The benefit amount decreases as income rises. Monthly amount per children: 1 child: €39,529; 2 children: €46,581; 3 children: €48,989; 4 children: €50,384; (...) 8 children: €55,963.</p>
<b>Ireland</b>	Social Welfare Consolidation Act 2005 (act)	<p>* Child Benefit is a monthly payment, paid to the child's mother or step-mother; however it may be paid to the father or step-father if the child is living with and being supported by them.</p> <p>* No variation with income.</p>	<p>*No variation with age</p> <p>* Normal: up to 16th birthday</p> <p>*Further education: up to 18th birthday</p> <p>* Child must be normally living with and being supported by recipient.</p>	<p>*€130 per child.</p> <p>*In cases of triplets, quadruplets and other multiple births the allowance for each child is doubled. In the case of twins the allowance is one and a half times the first child payment</p>

## Annex 4 – Extension of results to EU-28 countries

The purpose of the simulation is to estimate the secondary effects of the potential implementation of the policy options on the bilateral relations between the 7 selected MS. Results for each pair of countries are essentially driven by the country-specific figures on migration flows, average levels of family benefits and income differentials with the other countries.

For each of the 7 selected countries, table 4.1 offers elements for an indicative extension of the results observed. Underneath the selected countries, in the first column, the income differential is computed by dividing the expected income values of the row countries (inclusive of the average level of family benefits) by the expected income values of the column countries. In analogy with par. 2.4.1, expected incomes are computed according to the formula:

$$Income = avg\_earnings + avg\_FB$$

The second column reports the quota of EU-mobile citizens coming from the row countries on the total of EU-mobile citizens in the column country. In analogy with par. 3.1, we report flow values.

When row countries that are not part of the case study show similar values in both variables to those row countries that are part of the 7 countries selected for the analysis, we can predict a similar response to the implementation of the policy options and a similar impact on the countries in column. Italy, for instance, has values similar to Spain, when related to Belgium or Germany. The income differential is indicative of the response to the policy options, the quota of mobile citizens on the total is indicative of the impact that the population moving from the given row country will have on the column country. For example, EU-mobile citizens coming from Lithuania and Latvia, when reacting to the policy options implemented, can be predicted to act similarly to mobile citizens coming from Poland (similar income differentials). Because the formers constitute a much smaller quota of the total EU-mobile citizens that move to Belgium in the baseline scenario (0.3% and 0.4% from Latvia and Lithuania respectively, against 10.3% from Poland), the impact on Belgium will be less relevant.

The extension of results proposed is to be intended as indicative. An estimation in line with the methodology proposed would have to account for the number of individuals entitled to family benefits (as well as the country of residence of their children) and separately (not only as part of the 'expected income') account for the level of family benefits in the different countries.

## Executive Summary

The background for this report are the current considerations with respect to changing the EU provisions relating the coordination of social security systems specifies in Article 61 of Regulation (EC) No 883/2004. Article 61 defines the principle of aggregation, which means that - if a person does not have a sufficiently long unemployment benefit insurance record in the Member State of "last" employment, then activity/insurance periods fulfilled in the Member State of "previous" employment would qualify and give the right to aggregate unemployment benefits between Member States.

Most Member States apply the principle of aggregation after one day of insurance<sup>211</sup>. This may lead to cases where unemployment benefits are being claimed after a very short period of being member of the insurance system in the Member State of "last" employment. It has therefore been questioned whether the current rules sufficiently ensure that a worker has an effective link to the given labour market and the related insurance system before claiming unemployment benefits there. Amendments to the current rules are therefore being considered to ensure a uniform application of the principle of aggregation across Member States. The aim is to avoid that payment of unemployment benefits across Member States give rise to situations where mobile EU-workers have not yet made a significant contribution to the insurance system in the Member State of "last" employment and avoid negative financial consequences for the Member States, which have to pay the benefits. The considered revisions are:

- Policy option 2a: A threshold of **one month** of insurance or (self-)employment needs to be completed in the Member State of last employment before aggregation of periods of insurance, employment or self-employment fulfilled in a Member State of previous employment can be applied. The MS of previous employment is responsible for paying the UB for workers who do not meet the threshold.
- Policy option 2b: A threshold of **three months** of insurance or (self-)employment needs to be completed in the Member State of last employment before aggregation of periods of insurance, employment or self-employment fulfilled in a Member State of previous employment can be applied. The MS of previous employment is responsible for paying the UB for workers who do not meet the threshold.

Because the specification that mobile workers would have the possibility to claim benefits if they moved back to the country of previous employment was included late during the assessment process, the quantitative results presented in this report do not consider it. If individuals do not meet the threshold, they are expected to not be entitled to any benefit.

Qualitative assessments that take into account the mentioned specification are provided.

- Policy option 3a: The salary earned in the Member State of previous employment is also taken into account for the calculation of the unemployment benefit by the Member State of last employment, if less than **one month** of insurance or (self-)employment is completed in the Member State of last employment.

---

<sup>211</sup> When building the status quo scenario, we are assuming that all countries have implemented the one day rule.

- Policy option 3b: The salary earned in the Member State of previous employment is also taken into account for the calculation of the unemployment benefit by the Member State of last employment, if less than **three months** of insurance or (self-)employment is completed in the Member State of last employment.

On this background, the present study aims to estimate the envisaged secondary effects derived by the proposed modification of the current EU regulation on the aggregation of periods or salaries for unemployment benefits. The analysis focuses on the effects that the proposed possible revision may generate in terms of labour mobility, migration patterns and related variation of costs generated.

The simulation tool developed for this study aims at translating the implications of the policy options into expected income changes. Assuming a connection between income differentials and the propensity to move among EU countries, variations in overall migration flows and in the dimension of the target population – comprised within said migration flows – are estimated. Finally, taking into account both the variation in the number of cases and the different computation rules for the benefits, we give an estimate of the change in expenditure for the aggregation of periods or salaries for unemployment benefits for the selected countries.

As best representative of the target population, we chose single individuals without children at 100% of the average wage. This choice is first of all derived from the consideration that unemployment benefits are provided to individuals; also, the target population is composed of individuals who have only been working in their country of residence for a short time. We assume that this type of short-term mobility (possibly linked to short-term contracts) is more suitable to single individuals rather than families.

The countries proposed for the analysis as case studies are Denmark, Germany, France, Poland, Romania, the Netherlands, Italy and the UK. The proposed countries are chosen as geographically spread across the EU as well as differentiated in the welfare systems. They include countries that are mainly attracting EU mobile workers (DK; DE; NL; UK) from other member states as well as those that see many workers leave (PL; RO) but also countries within the middle ground (FR; IT).

Section 3 provides a description of the virtual status quo year which represents a pre-policy option scenario, against which the possible secondary effects are estimated and evaluated. This section provides figures of mobility flows, computed as the averages of the most recent values of annual mobility flows among the 8 selected countries. The section provides also the average values of the unemployment benefits as well as the estimated aggregate expenditure devoted to aggregation of periods or salaries for unemployment benefits computed in relation to the target population identified in the virtual status quo year. The number of potential cases of aggregation of periods or salaries for unemployment benefits (target population) is computed by multiplying the status quo mobility flow registered from a given sending country to a given receiving country with the ratio of unemployed non-national EU28+EFTA individuals on the total number of non-national EU28+EFTA individuals in the given receiving country.

Section 4 reports the variation of mobility patterns between the selected MS according to the policy options proposed, assessed in relation to the status quo scenario. Results generally show mild reductions in overall migration flows attributable to the potential implementation of the policy options. Decreases are stronger when policy option 2 is

implemented, especially 2b, since a rather relevant quota of the target population is excluded by the entitlement to unemployment benefits, which reduces the incentive to move. The disincentives to move would be reduced if potential movers were to consider the possibility to obtain welfare coverage if they moved back to the country of previous employment.

When option 3 is implemented, much smaller changes are observed. Policy option 2 also results in an important reduction of EU mobile citizens eligible for the aggregation of periods or salaries for the purpose of receiving unemployment benefits. For policy option 3, variations in the target population are limited to those produced by the changes in overall migration flows, since this option does not reduce the population eligible to unemployment benefits.

For what concerns expenditure changes generated by policy options and mobility changes - presented in section 5 -, because policy option 2 excludes quite a large share of individuals from the entitlement to unemployment benefits, all countries experience a high decrease in the relevant chapter of expenditure (more so in the case of policy option 2b). Lower savings are observed when policy option 3 is implemented. Because the computation of benefits has to take into account salaries earned in the country of previous residence, Poland and Romania see their expenditure grow by a wide margin when option 3 is realised. In both policy option 2 and 3, most of the expenditure variation is imputable to changes in entitlement and computation rules, while the behavioral change in mobility flows accounts for only a limited share of the cost variations. As much as the percentages may reach high values, variations shown in absolute terms and as ratios of GDP confirm the little relevance for national budgets of the expenditure on unemployment benefits that require aggregation of periods or salaries.

Comparing the obtained results with the administrative data provided by a parallel study conducted by the HIVA Research Institute for Work and Society (Pacolet, 2015), it appears that for most of the countries our estimate of the potential target population in the 'status-quo' scenario represents an upper bound. EU mobile citizens seem to have lower take up of unemployment benefits than natives. The dimensions of the phenomenon analysed and of the expenditure figures are therefore even smaller than what has appeared in the present study.

## 5. Introduction

The right to unemployment benefits in all Member States depends on having fulfilled a qualifying period. Regulation (EC) No 883/2004 (April 29<sup>th</sup> 2004) on the coordination of social security systems specifies the principle of aggregation (Article 61): if a person does not have a sufficiently long unemployment benefit insurance record in the last Member State of activity/insurance (hereinafter 'the Member State of last employment'), periods fulfilled in another Member State (hereinafter 'the Member State of previous employment') can be added together.

Most Member States apply the principle of aggregation after one day of insurance<sup>212</sup>. This may lead to cases where unemployment benefits are claimed after a very short period of contribution to the insurance system of the Member State of last employment. It has therefore been questioned whether the current rules sufficiently ensure that a worker has an effective link to the given labour market and the related insurance system before claiming unemployment benefits there, either in terms of the length of the insurance periods fulfilled or in terms of the calculation basis for the unemployment benefits. Furthermore, claiming benefits after a short period of insurance or (self-)employment may have negative financial consequences for the Member States which have to pay the benefits.

Amendments to the current rules are therefore being considered to ensure uniform application of the principle of aggregation across Member States. This in order to ensure that the payment of unemployment benefits does not burden countries where mobile EU-workers have not yet made a significant contribution to the insurance system and more in general to avoid undesirable uses of the unemployment benefit insurance systems in the EU.

On this background, we look in the present study into the following possible revisions to Regulation (EC) No 883/2004:

- Policy option 2a: A threshold of **one month** of insurance or (self-)employment needs to be completed in the Member State of last employment before aggregation of periods of insurance, employment or self-employment fulfilled in a Member State of previous employment can be applied. The MS of previous employment is responsible for paying the UB for workers who do not meet the threshold.
- Policy option 2b: A threshold of **three months** of insurance or (self-)employment needs to be completed in the Member State of last employment before aggregation of periods of insurance, employment or self-employment fulfilled in a Member State of previous employment can be applied. The MS of previous employment is responsible for paying the UB for workers who do not meet the threshold.

Because the specification that mobile workers would have the possibility to claim benefits if they moved back to the country of previous employment was included late during the assessment process, the quantitative results presented in this report do not consider it. If individuals do not meet the threshold, they are expected to not be entitled to any benefit.

---

<sup>212</sup> When building the status quo scenario, we are assuming that all countries have implemented the one day rule.

Qualitative assessments that take into account the mentioned specification are provided in par. 4.1 and 5.1.

- Policy option 3a: The salary earned in the Member State of previous employment is also taken into account for the calculation of the unemployment benefit by the Member State of last employment, if less than **one month** of insurance or (self-)employment is completed in the Member State of last employment.
- Policy option 3b: The salary earned in the Member State of previous employment is also taken into account for the calculation of the unemployment benefit by the Member State of last employment, if less than **three months** of insurance or (self-)employment is completed in the Member State of last employment.

Such revisions may affect the behaviour of the mobile EU-workers and their families, the amounts of unemployment benefits paid and entitlement to them, and the administrative costs and procedures needed to handle the cases of aggregation of unemployment benefit. In this context, the report focuses on the secondary effects that the revision of the current regulation of aggregation of periods or salaries for unemployment benefits generates in terms of intra-EU mobility for the population potentially interested by the regulation change. The study aims also to estimate the changes that would occur in the expenditure for unemployment benefits.

As described further below, intra-EU mobility is quite difficult to measure. Therefore, the study assumes different sources of data, among which a study on the aggregation of period for unemployment<sup>213</sup>, which provides detailed data for a proper estimation of the possible secondary effects related to the amendments to the current regulations. The administrative data collected by this study, however, does not provide figures on the aggregation of unemployment benefits for all the 28 Member States. Additionally, This study is based on a limited number of Member States chosen in relation to their different characteristics in terms of social security schemes and migration flows. Hence, the analysis proposed in this report focus on eight case study Member States: Germany, Denmark, France, the Netherlands, Italy, Poland, Romania, and the UK.

## 6. Methodology

### 6.1. General approach

The aim of the report is to provide support to considerations on the overall long-term effects of the proposed changes to the current rules on the aggregation of periods or salaries for unemployment benefits, in terms of labour mobility, migration patterns and related variation of costs generated. Evaluating the policy options in terms of pull factors for individual and household mobility it is possible to estimate the potential impact of the policy changes at the national level, providing a tool for comparing the options

- against the status quo scenario;
- against each other.

The output will consist of a definition of different final scenarios for each policy option and for each selected Member State (MS), with the impacts of the potential policy changes being estimated in terms of intra-EU mobility and cost variation. The analysis of the possible secondary effects provides for each policy option the following estimates:

- estimation on the change of inflows and outflows of EU citizens (and consequently of the potential target population<sup>214</sup>);
- estimation on the variation of expenditure for unemployment benefits that require aggregation of periods or salaries paid to EU mobile workers.

It is important to draw a distinction between **direct secondary effects** that are potential outputs of a viable model in the present context and **indirect consequences** of all changes that can propagate throughout the economic and social system of a country and the EU.

In the framework of the study we focus on the impact of any changes on the mobility decisions of workers in the EU and on cost changes for unemployment expenditures (specifically in our 8 countries). In order to identify secondary effects, we will have to restrict the analysis to the impact on the specific branch of the social security system attributable to changes in the unemployment benefits paid to EU mobile workers that resort to the aggregation of periods or salaries. This will inevitably yield an incomplete picture, as we will disregard potential effects on other areas, e.g. on the levels of contributions and/or taxes paid or on the variation in other cost elements, e.g. health and care expenditure<sup>215</sup>, which are beyond the scope of the study.

We must also stress that the implied changes in the level of expenditure are indicative, since they are based on the assumptions made for the definition of a representative category of population, from which we extract the population interested to the aggregation of periods or salaries in order to claim unemployment benefits (see par. 3.1).

A quantitative assessment of the exact variation in the number of mobile workers and families as well as an exact definition of the cost changes are beyond the scope of this study. Rather, we suggest reading the estimation of the secondary effects as

---

<sup>214</sup> By 'target population', we hereby refer to individuals who need to aggregate periods or salaries in order to claim unemployment benefits.

<sup>215</sup> Due to the available data for the specific categories of population analysed, secondary effects on other area or on other expenditure issues cannot be estimated.

indicative of the direction and the general magnitude of the variation generated by the implementation of the different policy options.

## **6.2. Data and data limitation**

In order to provide information on how changes in the regulation of aggregation of periods or salaries for unemployment benefits can influence the decision to move, different sources of data are needed. The main surveys that provide micro data on individual and family condition, employment situation, social benefits and services received are the European Union Statistics on Income and Living Conditions (EU-SILC) and, to a lesser degree, the European Union Labour Force Survey (EU-LFS). In order to supplement and validate the analysis of EU-LFS and EU-SILC surveys, additional datasets of the Eurostat database on migration statistics are used with the aim of defining the bilateral migration flow between the 8 selected countries. Eurostat data allow identifying the average inflow and outflow of EU mobile citizens for each pair of countries. These data represent the starting point on which to assess the variation of mobility patterns generated by each policy option. Considering that intra-EU mobility in general is considered difficult to measure<sup>216</sup>, and that the current analysis focuses on a target population even more difficult to measure (unemployed EU mobile citizens which have worked for a limited period after entering the receiving country), we also make use of the data gathered by the parallel study carried out by the HIVA Research Institute for Work and Society of KU Leuven<sup>217</sup>.

## **6.3. Literature review**

While there are many aspects that drive migration and mobility decisions, we will focus in the following on a broad overview on the literature of economic drivers. Other factors such as institutions, language barriers, religion or distance will at most be discussed briefly. As the main change in the policy simulated is an economic one, while other factors remain constant, our focus reflects the focus of the simulation exercise. Further changes to other factors are also likely to take place in the future, but are not taken into account in the simulation exercise as we solemnly want to identify the effect of the specific policy changes.

In *The Theory of Wages*, Hicks<sup>218</sup> argues that the main causes of migration are differences in wages. To this day, all economic studies of migration decisions employ Hicks' considerations as the general conjecture on which more sophisticated arguments are built about the influence of various other factors. These economic factors are used for internal, i.e. within country, mobility just as much as for cross-country mobility. Migration is in this context seen as an investment into human capital, yielding potentially higher income in the receiving country than in the sending country (Sjaastad, 1962).

Borjas<sup>219</sup> has formulated this into an inter-temporal choice to the general evaluation of income differences. The migration decision is based on income differences between

home (sending) and foreign (receiving) country, individual preferences for specific countries (which can be specified by a separate factor, or attributed in relation to the cost of moving) and the cost of moving:

$$d = (\text{income\_foreign} - \text{income\_home}) - z_i - c$$

as specified in Hatton and Williamson<sup>220</sup>. Where  $d$  is the decision to migrate. When  $d > 0$ , an individual is assumed to migrate, or in other words, as long as the income difference outweighs the cost of moving ( $c$ ) and the individual's compensating differential ( $z_i$ ), he/she will move.

The role of unemployment in determining the income is introduced in Harris and Todaro<sup>221</sup> for the rural-to-urban mobility. Harris and Todaro provide the basis for the assumption that migration decisions are likely to be based on expected income, by that meaning a combination of the expected salary and the income that one may receive as unemployed. Both are weighted by the respective probabilities.

The new economics of labour migration emphasizes the importance of families or households in the decision to migrate. Rather than taking an isolated, individual decision, it is argued that the unit of interest might in many cases be the household<sup>222</sup>. We take this into account in the evaluation of family benefits which is usually paid to the household, whereas the evaluation of the impact of unemployment benefits will be more individualistic.

Employing wage or income differentials as an explanation of mobility behaviour seems to be at odds with low mobility in the European Union, which largely diminished legal and institutional obstacles to the free movement of workers. Wages in the past have had only a weak influence on migration flows, e.g., Braunerhjelm et al.<sup>223</sup> find that mobility levels were not increasing despite a widening gap in income differentials and unemployment levels. In contrast to this, Bentivogli and Pagano<sup>224</sup> (1999) note that the US labour market shows much stronger reaction to income differentials than the EU. More recent evidence, however, shows that mobility takes on stronger roles in solving imbalances. Probably through the abolishment of inhibitions to mobility within the European Union, market forces such as wage differences allow to solve shocks to labour markets by regional mobility. For example, Arpaia et al.<sup>225</sup> (2014) show in their study that regional labour market mobility can adjust for about 25% within a year of the shock that affects a specific region, thus the regional mobility – which explicitly includes mobility across national borders – plays an important role in resolving labour

<sup>225</sup> Apaia, A.; Kiss, A.; Palvolgyi, B.; Turrini, A. (2014): Labour mobility and labour market adjustment in the EU, *Economic Papers* 539, European Commission.

market imbalances. Beyer and Smets<sup>226</sup> (2015) corroborate those findings by showing that regional labour market mobility can adjust for about 25% within a year of the shock that affects a specific region. The VAR framework used in both studies was developed in Blanchard and Katz<sup>227</sup> (1992).

The overall economic effect of migration can be subsumed into three separate elements. The economic effects of migration include the ability of mobile workers and migrants to blend in or 'assimilate' into the labour market, the economic impact on the labour market and the impact on the social security system of the country, both as contributors and recipients of benefits (Kerr & Kerr, 2011). The current study deals mainly with the third effect.

Measurement of the success of mobile workers is difficult, as most datasets cannot overcome the problem of selectivity of results through re-migration. E.g. Edin et al<sup>228</sup> (2000) found that 30-40% of the immigrants to Sweden had left the country within five years. These re-migrants were usually less assimilated than the group of migrants staying longer. Similar patterns can also be found in other countries (e.g. Germany as reported in Constant and Massey, 2003; and Bellemare, 2007<sup>229</sup>). The literature shows clear differences in the success of migrants (as measured by e.g. earnings assimilation, unemployment, or culture integration) in mobility from within the EU and migration from outside of the EU (mostly developing countries). Overall, those migrants that remain in the country exhibit earnings assimilation to the natives (Aslund and Rooth<sup>230</sup>, 2007).

The country of origin seems to be the most important explanatory variable for the gaps observed between the employment rates of immigrants and those of the locals. For Sweden, Nekby (2002) reports 30-32% lower employment rates in 1990-2000, while Ekberg (1991) reports -17% for a single year (1989). For Finland, Sarvimäki<sup>231</sup> (2011) reports 9 - 18% lower employment levels for migrants from OECD countries. For the Netherlands, Roodenburg et al.<sup>232</sup> (2003) find 4% lower employment rates for migrants from Western countries, versus 18% lower employment rates for migrants from non-Western countries. Overall Kerr and Kerr<sup>233</sup> (2011) conclude that "[...] the mechanisms of wage and employment assimilation are poorly understood. Immigrants may face various obstacles to employment, including issues with the recognition of educational degrees, lack of language skills, poor professional connections or networks, and regulations that prevent them from working legally."

<sup>233</sup> Kerr, S. P., & Kerr, W. R. (2011). Economic impacts of immigration: A survey (No. w16736). National Bureau of Economic Research.

A crucial determinant of the economic impact of immigration on the host country is the net amount of welfare services and other social benefits that immigrants consume or contribute. The net amount has to be calculated based on the contribution minus the benefits paid. The importance of the welfare receipts is discussed in the literature both from the angle of 'net costs' of migrants and in terms of the attractiveness of a country through its welfare system. Borjas<sup>234</sup> (1999) and others have discussed possible "welfare magnet effects" where migrants are drawn to countries with high social benefits. Kerr & Kerr (2011, p. 17) conclude that this is likely to be more important in the EU countries as immigrants in most European countries rely more on social security and unemployment benefits relative to natives in the US or Canada. The importance of the welfare generosity is taken on in Giulietti et al.<sup>235</sup>. In estimating the (macro-economic) relation between (national) welfare spending and migration flow, they find, however, no evidence that workers' mobility within the EU responds to unemployment benefit incentives. Using the EU Household Panel study, De Giorgi & Pellizzari<sup>236</sup> (2009) find a significant, albeit small, effect of the generosity of welfare on (individual) migration decisions. This effect, however, is still large enough to influence the distribution of migration flows. It is, however, also the case that mobile EU workers tend to have on average lower uptake of benefits than nationals<sup>237</sup>.

The studies that address the concept net costs of migration into a country, i.e. the contribution of migrant minus their uptake in social benefits and public expenditure find mixed evidence. Büchel and Frick<sup>238</sup> (2003) conclude that immigrants in Germany are on average net payers to the social security system. Boeri<sup>239</sup> (2010) using EU-SILC for the core EU15 countries concludes that there is no evidence that legal migrants, notably skilled migrants, are net recipients of transfers from the state. However, there is evidence of 'residual dependency' on non-contributory transfers and self-selection of unskilled migrants in the countries with the most generous welfare states. Hansen and Lofstrom<sup>240</sup> (2003) investigated the causes of greater welfare reliance by immigrants to Sweden. They concluded that recent immigrants used relatively more social security than they did in 1980s. This is due to a change in the composition and volume of the migration flows, while observable traits do not explain the gap in welfare take-up, implying that there are unobserved differences or selectivity. Büchel & Frick<sup>241</sup> (2005) emphasized the heterogeneity of the European situation in migration decisions. However, examining migration flows and controlling for immigrant characteristics did not dramatically change this EU heterogeneity. The higher benefit usage thus results more from policy and institutional differences across countries than the characteristics of migrants themselves. They conclude that limitations and restrictions to participate or access relevant parts of the labour market

can be a limiting factor in the economic condition of migrants. Overall, this conclusion from 2005 should become less important at EU level, as limiting factors diminished.<sup>242</sup>

Overall, we can conclude that, while economic factors by themselves seem to bear little explanatory value to the variation of size of mobility across countries in the EU. Taking into account non-economic factors yields the expected outcomes: correcting for cultural differences such as the language and cultural distance between countries, as in Belot and Ederveen<sup>243</sup> and Sprenger<sup>244</sup>, economic factors do play an important role in explaining migration flows. Over time, economic differences across regions seem to have increased in their explanatory power towards migration flows.

#### **6.4. Simulation approach**

The simulations presented aim at translating the implications of the policy options into expected income changes. Assuming a connection between income differentials and the propensity to move among EU countries, variations in overall migration flows and in the dimension of the target population – comprised within said migration flows – are estimated. Finally, taking into account both the variation in the number of cases and the different computation rules for the benefits, we give an estimate of the change in expenditure for the aggregation of periods or salaries for unemployment benefits for the selected countries.

The status quo scenario is built on a virtual 'baseline year', with a defined level of mobility flows and a defined level of expenditure. Changes attributable to the policy options are computed on an annual basis.

As best representative of the target population, we chose single individuals without children at 100% of the average wage. This choice is first of all derived from the consideration that unemployment benefits are provided to individuals; also, the target population is composed of individuals who have only been working in their country of residence for a short time. We assume that this type of short-term mobility (possibly linked to short-term contracts) is more suitable to single individuals rather than families. As Par. 2.4.1 shows, in our model the decision to move is made by individuals on the basis of their expected wage both in the (potentially) sending and in the (potentially) receiving country.

Average net earnings are derived from Eurostat (earn\_nt\_net), while in order to compute the average unemployment benefits we made use of the replacement rates suggested by van Vliet<sup>245</sup>. With this target population assumed, we estimate both mobility and expenditure changes.

As an alternative target population, we take net earnings of one-earner couples with two children at 100% of the average wage. For this case, we only estimate mobility changes.

Information on the number of aggregations of periods or salaries for unemployment benefits by length of insurance (1 day, 30 days, 3 months), is obtained from the parallel study (Pacolet, 2015, Table 10)<sup>246</sup>.

#### 6.4.1. The estimation of mobility changes

The simulation tool takes an average level of flows between two countries to build the status quo scenario. We use the most recent available flow figures from Eurostat, computing averages from the last three available years (see par. 2.6). The derived annual flows of migration are assumed to be characterizing our countries in our virtual 'baseline year' (before policy options are implemented). These migration flows are caused by all factors that influence the mobility decisions of EU workers, which we do not attempt to model. Based on these existing flows and on the status quo income level of our target households, the impact of the various policy options on the overall income of the household is evaluated.

The status quo income level is set to the average income in a country. In order to compute that status quo income, we combine the mean earnings derived from Eurostat with the probability of employment, then we add the probability of unemployment times the income that can be generate while unemployed (UB). The nominal value obtained is divided by price level indices that adjust the figures to purchasing power (base of the index is EU28<sup>247</sup>): this allows individuals to account for costs of living in their choice to move.

$$(4) \text{ Income} = (\text{Prob}(1-\text{Unemployed}) * \text{avg\_earnings} + \text{Prob}(\text{Unemployed}) * \text{UB}) / \text{PPP\_index}$$

Income differences between two countries are then defined as:

$$(5) \text{ Income\_difference} = \text{Income\_receiving} - \text{Income\_sending}$$

It is assumed that the income differences observed in the status quo scenario – along with all other factors that the policy options do not have an impact on – generate the mobility observed in the status quo scenario both in terms of general mobility flows and in terms of the number of potential cases of aggregation of periods or salaries for unemployment benefits.

A probabilistic evaluation of income as a probability-weighted combination of wage income and unemployment benefits is within the tradition of economics (e.g. search theory implements this approach). Just as in the decision for specific occupations<sup>248</sup>, it is rational to assume that mobile workers evaluate the overall income level while taking the decision on cross-border mobility.

Some care needs to be taken in determining appropriate amounts of unemployment benefits, we are using the following specification to translate the policy options into our framework.

The unemployment benefits are calculated as:

<sup>246</sup> Since figures for Germany and Italy are not collected by Pacolet et al. (2015), they have been computed as an average of the figures collected for the other seven countries.

<sup>247</sup> Source: Eurostat (prc\_ppp\_ind).

<sup>248</sup> D. Fouarge, B. Kriechel, T. Dohmen (2014), Occupational sorting of school graduates: The role of economic preferences, in Journal of Economic Behavior & Organization 106, 335-351.

$$(6) UB = (\text{income relevant for eligibility} * \text{replacement rate (RR)} * \text{eligibility}) / \text{PPP\_index}$$

We use the replacement rates as they are reported in van Vliet et al. (2012) for the various countries. The income relevant for eligibility is usually the income earned in the country of residence. For eligibility, we employ data collected by Pacolet (2015, table 10) on the number of aggregations of periods or salaries for unemployment benefits by length of insurance (1 day, 30 days, 3 months). Pacolet's data do not differentiate by country of previous employment; therefore, we apply the same percentages for all of the bilateral relations studied. In addition, Pacolet's data are collected on a single year (2013), but figures may change significantly in other periods.

Policy option 3a and 3b require a combination of the income in the present country of residence and of the income earned in the previous country or residence. In line with the letter of the policy options 3a and 3b, we have opted for an equal weighting of the two average income levels:

$$(7) UB = ((\text{avg\_earnings}(\text{country of residence}) + \text{avg\_earnings}(\text{country of origin})) / 2 * \text{RR}(\text{country of residence})) / \text{PPP\_index}$$

The influence of unemployment benefits is then evaluated by calculating the change attributable to the various policy options on the unemployment benefits in relation to the original income in the country of previous residence.

$$(8) \text{pct\_income\_change} = \text{chg\_U\_benefits}(\text{policy option}) / \text{Income\_sending}$$

Once the income change is calculated, we convert that change into a potential mobility effect. In lack of useful indications from the economic literature on migration, we opted for theoretical assumptions on the elasticity of migration flows to income changes, relating elasticity to income differentials for each combination of countries (56 in total). As a measure for earnings, we consider the net earnings (PPS-adjusted) of single individuals without children at 100% of the average wage. For each country, we calculate the 2011-13 average value.

Table 2.4.1. Income differentials in the selected countries

	DE	DK	FR	IT	NL	PL	RO	UK

Values for the countries in rows are at the numerator, values for the countries in column at the denominator.

In the absence of relevant literature on the matter, basing on economic logic we assume the function that relates income differentials to elasticity to have the shape of

Task 4:

Secondary effects following a change of regulations on the aggregation of periods or salaries for unemployment benefits

---

a reverse U: the highest elasticity corresponds to close-to-null values in the income differential.

Task 4:

Secondary effects following a change of regulations on the aggregation of periods or salaries for unemployment benefits

Fig. 2.4.1. Assumed relation between income differential and elasticity in mobile patterns to income change

The assumption is that, in case of large gaps in mean earnings between countries (either positive or negative, i.e. Polish average salaries compared to German average salaries or vice-versa), the motives to move will not be substantially impacted by marginal changes of income caused by the implementation of the policy options. For a same absolute level of income differential, a lower level of elasticity is attributed when said differentials are negative compared to when they are positive: if a mobile worker is moving from Denmark to Romania, his/her choice is probably not much related to welfare motives.

Tab. 2.4.2. Elasticity assumptions for the selected countries

Source: our calculation based on Eurostat (earn\_nt\_net, web-based database)

Row: Country of destination. Column: Country of origin.

Once elasticity is computed, the percentage of income change can be translated into a percentage change in mobility:

$$(9) \text{ pct\_mobility\_change} = \text{elasticity} * \text{pct\_income\_change}$$

The percentage of mobility change can then be translated into a change in mobility flows by relating the calculated percentage change to the absolute number of mobile workers in the status quo case.

When measuring the impact of policy options 2a and 2b on the population potentially interested to the aggregation of periods or salaries for unemployment benefits (our 'target population'), we account for the change in mobility patterns and we subtract

the share of mobile workers excluded by the entitlement of the benefits because of the one-month/three-month threshold<sup>249</sup>.

#### 6.4.2. The estimation of expenditure changes

Focusing on the population that seems to better represent the target of the policy options - single individuals at 100% of the average wage - for each of the 8 selected countries we have estimated the changes in terms of expenditure dedicated to unemployment benefits that are a result of aggregation of periods or salaries by workers moving from one of the other seven countries.

We compute the present level of expenditure by multiplying the number of present potential cases of aggregation of periods or salaries for unemployment benefits by the average amount of unemployment benefits.

We then observe the percentage variation of expenditure – total and related to each bilateral relation. In evaluating the impact due to the implementation of the policy options, we are first considering the behavioral change in mobility flows. Then, employing the percentages made available by Pacolet (see note 1, Table 2), for policy option 2 we are computing no benefit to individuals having contributed less than 1 month (2a) and less than 3 months (2b) in the country of residence. For policy options 3a and 3b, we consider those same individuals and assign them with a benefit that takes into account the income perceived in the country of previous residence (see formula 4).

#### 6.5. Case study Member States

The unemployment cases to be considered for the scope of the study are defined by Regulation 883/2004. Only contributory unemployment benefits will be analysed. The export of unemployment benefits is beyond the scope of the present study, and the issue of aggregation alone is to be analysed<sup>250</sup>.

The countries proposed for the analysis as case studies are Denmark, Germany, France, Poland, Romania, the Netherlands, Italy and the UK. The proposed countries are chosen as geographically spread across the EU as well as differentiated in the welfare systems. They include countries that are mainly attracting EU mobile workers (DK; DE; NL; UK) from other member states as well as those that see many workers leave (PL; RO) but also countries within the middle ground (FR; IT).

Countries' regulatory framework for unemployment benefits can be summarised as follows:

*Table 2.5.1. Overview of principal characteristics of unemployment benefits in the selected countries*

<b>Unemployment Benefits</b>	
<b>UB: Eligibility - qualifying period</b>	
below 1 year	FR, (IT), NL

<sup>249</sup> Source: Pacolet (2015).

<sup>250</sup> Annex 1 and 2 present a list of unemployment and family benefits in the countries proposed for the case studies, made on the bases of the MISSOC.

Task 4:  
Secondary effects following a change of regulations on the aggregation of periods or salaries for  
unemployment benefits

---

1 year or more	DK, DE, IT, PL, RO,
<b><i>UB: Replacement rates</i></b>	
% of past earnings (average over more than 3 months)	FR, DE, IT
% of last earnings (up to 3 months)	DK, NL
flat or fixed rate	PL, RO, UK

Source: MISSOC (web-based database)

The purpose and requirements for unemployment benefits are similar. The general principle of providing an income stream for those claimants that become (involuntarily) unemployed is generally found in all countries. All systems require a qualifying period, which we have dichotomised as i) below 1 year (FR, NL (IT)) or ii) above one year (DK, DE, IT, PL, RO). In many cases, specific requirements are in place about the (minimum) number of hours worked or about the level of wages earned during the qualifying period.

In terms of replacement rates for unemployment benefits, similar breakdowns can also be made of variations across countries. Here we offer a distinction among countries that base the amount of the benefits mainly on current income: some compute the average over (up to) the last 3 months of work (DK, NL), some over longer periods (FR, DE, IT). There are also countries that provide a flat or fixed amount (PL, RO, UK). Often this is linked to some minimum income level.

The purpose of the simulation is to estimate the secondary effects of the potential implementation of the policy options on the bilateral relations between the 8 selected MS. Results for each pair of countries are essentially driven by the country-specific figures on migration flows, average levels of unemployment benefits and income differentials with the other countries. The observed results can therefore be imputed to pairs of MS countries that present similar characteristics in said aspects.

Annex 4 presents a methodology for an indicative extension of the simulation results to the other EU-28 MS.

## 7. Status quo scenario

### 3.1 Status quo mobility flows

The table below reports the figures of mobility flows in our virtual baseline year, computed as the averages of the most recent values of annual mobility flows among the 8 selected countries<sup>251</sup>. The estimation of the variation in mobility patterns generated by the policy options are defined from the bilateral flows presented in table 3.2.1.

Table 3.1.1. Mobility flows between selected countries. Status quo scenario.

		<b>MS of previous employment</b>							
		<b>DE</b>	<b>DK</b>	<b>FR</b>	<b>IT</b>	<b>NL</b>	<b>PL</b>	<b>RO</b>	<b>UK</b>
<b>MS of last employment</b>	DE		2,742	19,498	21,117	14,185	149,513	38,314	13,863
	DK	3,066		1,136	1,080	721	3,396	3,137	2,886
	FR(b)	6,413	599		4,654	2,145	2,077	1,831	9,538
	IT	6,605	205	3,922		746	4,691	76,521	3,732

	PL	3,321	46	358	373	228		15	1,991
	RO(a)	644	44	508	850	139	141		284
	UK	17,241	1,077	21,889	13,230	7,616	32,413	10,422	

Source: Eurostat (web-based database). Averages are estimated on 2011-13 data when available, or on latest available data. We are considering countries of last residence as 'senders' (Eurostat: migr\_imm5prv). For lack of data, for Romania countries of nationality are assumed as 'senders' (Eurostat: migr\_imm1ctz). Same is done for France, though data is not obtained from Eurostat, since it is not available, but from the United Nations Population Division (International Migration Flows to and from Selected Countries: The 2010 Revision (web-based database)<sup>252</sup>.

Poland and Romania are the two prevalent sending countries among the eight selected. According to the data, the highest migration flow concerns Poland and Germany. It is estimated that 149,513 citizens move from Poland to Germany in our virtual 'status quo year'. Additionally, Poland represent the main sending country for the Netherlands, Denmark and the UK. Citizens coming from Romania represent the larger share of EU mobile citizens moving to Italy (80%). Moreover, there are also a significant number of mobile citizens who migrate from Romania to Germany (38,314) and to the UK (10,422). The table also highlights that Italy, France, the UK and the Netherlands are common countries of origin of mobile citizens moving to Germany. On the other hand, Germany represents the country of origin for a relevant number of mobile citizens moving to the UK, the Netherlands, Italy and France. An important migration flow regards the relation between UK, as a receiving country, and Italy, France and the Netherlands as countries of origin. The migration flows towards Romania and Poland in general are limited. Besides the migration flow from Germany to Poland and from the UK to Poland, in these countries the migration flows of EU citizens are lower than 1000 individuals. Compared to the other countries, in Denmark (limiting the attention to the selected MS) the migration of EU mobile workers is quite limited. The four main countries of origin of the mobile EU population in Denmark are Germany, the UK, Poland and Romania.

<sup>251</sup> In order to contextualize the relations between the eight selected MS in the intra-EU mobility, according to Eurostat (migr\_imm5prv), the bilateral migration flows considered account for 32.7% of the overall intra-EU migration flow.

<sup>252</sup> Taking country of nationality as country of origin seems particularly problematic for the case of Romania: in 2013, as many as 124,273 EU-mobile citizens were reported to enter Romania (Eurostat, no differentiation available in terms of sending country), but in the same year only 1,024 non-Romanian EU citizens were reported to enter Romania.

### 3.2 Status quo target population

According to the policy options proposed for the revision of the current EU provisions on unemployment benefits – specified in Regulation (EC) 883/2004: the 'Basic Regulation' and in Regulation (EC) 987/2009: the 'Implementing Regulation' – the target population of the current study are EU citizens having moved from one Member State to another to work who have become unemployed before having met the qualifying period for the entitlement of unemployment benefits in the receiving country.

The number of potential cases of aggregation of periods or salaries for unemployment benefits (that compose our 'target population') is computed by multiplying the status quo mobility flow (see tab. 3.1.1) registered from a given sending country to a given receiving country with the ratio of unemployed non-national EU28+EFTA individuals on the total number of non-national EU28+EFTA individuals in the given receiving country<sup>253</sup>.

Table 3.2.1. Status quo scenario. Target population, average amount of unemployment benefits, and estimated related expenditure. Eight selected countries

Country of last employment	Target population (a)	Annual average UB (b) <sup>254</sup>	Expenditure (c)
DE	12185	€ 16,669.45	€ 203,117,272.62
DK	1005	€ 19,258.48	€ 19,354,769.68
FR	1218	€ 18,729.70	€ 22,812,770.56
IT	7649	€ 11,833.71	€ 90,516,009.86
NL	1563	€ 22,865.09	€ 35,738,132.30
PL	172	€ 1,898.37	€ 326,520.16
RO	50	€ 1,802.55	€ 90,127.68
UK	4240	€ 4,242.05	€ 17,986,297.02
Total	28082	€ 12,162.42	€ 341,545,207.10

Source: a) Our calculations based on data from Eurostat (migr\_imm5prv; web-based database) and EU-LFS. b) Our calculations based on data on 2014 net earnings for singles at 100% of AW from Eurostat (earn\_nt\_net; web-based database) and replacement rates calculated by van Vliet & Caminada (2012). c) Our calculations based on a) and b).

The data provided in table 3.2.1 provide an overview of the size and related expenditure for the estimated target population of unemployed EU mobile citizens residing in one of the selected MS and coming from the other selected countries (bilateral migration flows between the selected MS)<sup>255</sup>. For each MS, the table reports

<sup>253</sup> Source: LFS, own elaborations. We would indeed need unemployment rates specific to individuals that have the country of last residence and work (not the country of nationality) as 'sender' State. Because we do not dispose of such data, the mentioned approximation was necessary. We also opted for unemployment rates relative to all the EU28+EFTA mobile citizens because we found the estimation to be more robust than if made on specific nationalities (lack of an adequately large sample in LFS).

<sup>254</sup> The average values of unemployment benefits is calculated according to the average replacement rate provided by van Vliet & Caminada (2012). The table reports the average values for the category of population used for the definition of the main result: single person at 100% of average earnings.

<sup>255</sup> We estimated the population according to the average values of the recent migration flows (2011-2013) between the 8 selected countries provided by Eurostat (migr\_imm5prv; web-based database), and

the aggregate data in terms of the number of potential unemployed EU citizens, average values of unemployment benefits and related estimated expenditure. According to the status quo scenario, considering all the 8 selected countries, the amount of unemployed EU mobile citizens (regardless of the length of unemployment insurance period) is equal to 28,082. According to our estimation, Germany, Italy and the UK are the countries with the highest share of unemployed, and account for 85% of the total potential population identified. France, Denmark and the Netherlands present a similar number of potential unemployed mobile citizens (around 1000 persons), while in Poland and Romania the share of unemployed mobile citizens coming from the other seven selected countries is limited. The average amount of unemployment benefits varies markedly across the selected countries. The Netherlands, France, Germany and Denmark are marked by a comparatively higher annual amount of unemployed benefits. In relation to the other countries, Italy and UK are characterized by a mean value of average amount of unemployment benefits, while in Poland and Romania the average unemployment benefits are estimated to be just under 2000 euro. The total expenditure of unemployment benefits for EU mobile citizens among the selected countries is estimated at about 328 millions of euro. Germany presents the highest estimated expenditure for unemployment benefits for EU mobile citizens (more than 200 millions of euro). In Italy, the high number of unemployed mobile citizens involves an expenditure for these benefits of around 90 millions of euro. In Germany, the UK, the Netherlands and France the estimated expenditure ranges from 17 millions of euro in the UK, to 35 millions of euro in the Netherlands. Due to the limited number of unemployed mobile citizens as well as the moderate average amount of unemployed benefits, the estimated expenditure in Romania and Poland is comparatively lower respect the other selected countries, respectively 326,520 euro in Poland and 90,127 euro in Romania.

When taking in consideration figures from Pacolet (2015, p.18) it appears that for most of the countries our estimate of the potential target population in the 'status-quo' scenario represents an upper bound. For the Netherlands, the UK, Romania and Denmark, the administrative data collected by the HIVA study (Pacolet, 2015) reports respectively 160, 30, 12 and 54 total cases of aggregation in 2013, whereas we estimate 1005, 4240, 50 and 1005 cases of aggregation only for individuals coming from the other 7 selected countries. Assuming that the survey data shown by Pacolet is reliable, the very low access to aggregation can be explained as a consequence of potentially restrictive national legislations and lack of action from the potentially interested citizens.

Said discrepancies between our assumptions on the target population and Pacolet's findings should also be kept in mind when assessing the observed potential impacts of the proposed policy options, as the dimension of the phenomenon may be even smaller than what is apparent in the present study.

---

according to the share of unemployed EU mobile citizens on the total EU mobile citizens population in each MS.

## 8. Secondary effects: estimation of mobility changes

This section reports the variation of mobility patterns between the selected MS according to the policy options proposed, assessed in relation to the status quo scenario. The mobility patterns are estimated for two categories of population. This section presents the results of the analysis of the variation in mobility patterns for the representative category of the potential target population, single person at 100% of average earning. The results for the second category of population identified - one-earner married couple with two children at 100% of average earnings - are reported in annex 2. The results are presented in aggregate terms for each MS, while the detailed results of the bilateral relations between the 8 selected MS are presented in annex 2. As previously stated, in the estimation of mobility changes we assume all factors to stay constant but the income differential impacted by the policy options analysed.

Figure 4.1 shows the estimated variations in the overall mobility flows attributable to the policy options analysed. Policy option 2 establishes that the population of unemployed EU mobile citizens who has become unemployed before the defined thresholds are met (respectively, one month of contribution in the country of competence for policy option 2a, three months for policy option 2b) is not entitled to the aggregation of periods or salaries for the purpose of receiving unemployment benefits. In relation to such policy options, Denmark and Italy present a high reduction of the migration flows in percentage terms.

In Denmark the introduction of a threshold of either one month or three months generates a decrease of migration flow equal to 6,1%<sup>256</sup>. In Italy, policy option 2a produces a decrease of the migration flow equal to 4.4%, while policy option 2b generates a reduction of the potential migration inflow of 5.3%.

As visible in table 2.1 of annex 2, for both Denmark and Italy a rather large change in the income difference is foreseen for groups of potentially mobile citizens coming from Poland and Romania. Together, they constitute a large component of the overall migration flow from the other 7 selected countries observed in the status quo scenario (42% for Denmark, 84% for Italy). For Denmark, one also needs to take into account that according to Pacolet's data (Pacolet, 2015, table 10) as much as 62% of the individuals who needed an aggregation of periods had only been contributing in the new country of work for less than 1 month (same quota for less than 3 months). Policy options 2a and 2b are therefore sure to have a strong impact, since potential movers will have to consider that if they fall unemployed within a year from moving<sup>257</sup>, there is a strong chance (62%) that they do when they have no entitlement to unemployment benefits. That makes their expected income fall and creates an economic disincentive to move.

In Germany, the reduction generated by policy option 2 on the inflow population coming from the other seven countries analysed ranges from 2.5% to 3.3%. In France, the policy option 2 results in a decrease of the migration flow equal to 2.5% in the case of option 2a, and to 3.4% in the case of option 2b. In the Netherlands the

<sup>256</sup> The two policy options produce the same result, since, according to the HIVA study (Pacolet et al., 2015), in Denmark there are no EU mobile citizens coming from the other seven selected countries that have required an aggregation of unemployment insurance periods after having contributed for more than one month but less than three months. The same share of target population is therefore applied to both policy option 2a and 2b.

<sup>257</sup> We are taking annual flows in consideration.

reduction of mobility patterns of EU mobile citizens is between 0.8% and 1.5%. In UK the impact of policy option 2 on migration flow is moderate. The introduction of policy option 2a or 2b results in a decrease of migration flow equal to 0.6%. In the cases of Romania and Poland no variation of the potential target population is estimated.

Figure 4.1. Variation in overall migration flows. Policy options 2a, 2b, 3a, 3b (single person at 100% of the average wage).

Source: Our calculation based on data from Pacolet (2015), Eurostat (migr\_imm5prv, earn\_nt\_net; web-based database), van Vliet and Caminada (2012) and EU-SILC.

According to policy option 3, for the unemployed EU mobile citizens who become unemployed before the defined thresholds are met (respectively, one month of contribution for policy options 3a, three months for policy options 3b), the salary earned in the Member State of previous employment is also taken into account for the calculation of the unemployment benefit by the Member State of last employment. In relation to policy option 2, the variation of mobility patterns generated by policy option 3 (a and b) are more moderate (Figure 4.1). As in the case of policy option 2, Denmark and Italy are the countries in which the reduction of migration flows is more evident. In Germany the policy option analysed diminishes the inflow of mobile citizens by 0.8%, in the case of policy option 3a, and 1.1%, in the case of policy option 3b. In France, the Netherlands and the UK the modification of the current regulation on aggregation of periods or salary for unemployment benefits generates a limited variation in the migration flow. In the case of policy option 3 the variation of migration flows of the potential target population is between 0.1% and 0.5%<sup>258</sup>. Similar to policy option 2, for Romania and Poland no variation in the migration flows are estimated.

As regards the bilateral relations, the main results concern the migration flows of the EU mobile citizens coming from Poland and Romania. In both policy options considered, this population accounts for the majority of the reduction of migration

<sup>258</sup> In the case of France, the limited share of EU mobile citizens coming from Romania and Poland can explain said low results. In the Netherlands, a significant share of the migration flow is composed by EU mobile citizens coming from neighbouring countries (DE, DK and FR), in relation to which the variation in income differentials generated by policy option 3 is moderate. The low level of unemployment benefits in the UK (see tab. 3.2.1) does not allow the policy options to produce relevant changes in weighted income (that accounts for both earnings and unemployment benefits, see equation (1) at par. 2.4.1). No relevant change is therefore observed in the income differentials with any country.

#### Task 4:

### Secondary effects following a change of regulations on the aggregation of periods or salaries for unemployment benefits

flows for the other MS analysed. The only exception is France in which the main variations of migration flows are attributable to EU mobile citizens coming from the UK, Germany and Italy<sup>259</sup>.

Figure 4.1 suggests that the impact on migration flows of the four policy options is modest, especially in the case of policy option 3. Policy option 2 generates stronger secondary effects on the mobility patterns of EU mobile citizens, inasmuch it produces a higher economic differential compared to policy option 3. The threshold for the entitlement of aggregation of periods or salaries for the purpose of receiving unemployment benefits (one and three months) generates a high variation of the expected income derived from unemployment benefits, influencing the decision of EU mobile citizens to move.

Figure 4.2 shows the variation in potential target population according to the policy options analysed. The figure presents the changes in percentage terms of the share of population in the status quo mobility flow that requires the aggregation of periods or salaries in order to be entitled to unemployment benefits in the country of residence. We take in consideration the impacts produced by both the variation in mobility flows and the changes in entitlement rules. As the figure suggests, policy option 3 (sub-options a and b) has a very limited impact on the target population. Except for small differences caused by approximation to units, results are identical to the ones observed for overall migration flows (see fig. 4.1), since policy options 3a and 3b do not restrict the entitlement to unemployment benefits. The estimated reduction varies between -1.9% or -1.7%, in Denmark and in Italy, to values close to 0 for the other MS. In absolute terms the higher variation in potential target population is in Italy, in which policy option 3b generates a reduction equal to 173 EU mobile citizens. Excluding Germany that presents values similar to the Italian ones, in the other MS the reduction of the target population is comprised between 0 and 19 EU citizens (annex 2).

Figure 4.2. Variation in potential target population. Policy options 2a, 2b, 3a, 3b (single person at 100% of the average wage).

<sup>259</sup> The detailed figures of bilateral mobility changes are reported in Annex 2.

Source: Our calculation based on data from Pacolet (2015), Eurostat (migr\_imm5prv, earn\_nt\_net; web-based database), van Vliet, Caminada (2012) and EU-SILC.

The scenario significantly differs in the case of policy option 2. The introduction of thresholds (one month and three months) for the entitlement of aggregation of periods or salaries for receiving unemployment benefits results in a high variation in potential target population, compared to the status quo scenario. In percentage terms, Denmark shows the highest variation in target population among the selected countries. Policy option 2a and policy option 2b generate a reduction of target population equal to 86.5%, which corresponds to 6499 EU mobile citizens. In the UK, the variation on the target population generated by policy option 2 is around 60%. In this MS the implementation of policy option 2a and 2b leads to a reduction of the target population of respectively 2414 (59.6%) and 2554 (60.2%) EU mobile citizens. In Italy, France and Germany policy option 2 results in a similar reduction of the target population, which ranges from 40% to 64%. In absolute terms, Germany and Italy present the highest variation in target population, which in the case of policy option 2b corresponds to respectively 6499 and 4178 EU mobile citizens (annex 2). In the Netherlands, Romania and Poland the variations in target population generated by policy option 2 are significant, but comparatively limited in relation to the other MS analysed. In the Netherlands, after the introduction of policy option 2b the target population entitled to aggregation of periods or salaries for receiving unemployment benefits is equal to 1031, which means a reduction of 34.0% of the target population defined in the status quo scenario. In Romania and Poland, the variations in target population in absolute terms are moderate. In Poland, the reduction of 36.0% (policy option 2b) corresponds to 62 EU mobile citizens, while in Romania variation generated by policy option 2b corresponds to 16 EU mobile citizens.

As in the case of variation in overall migration flows, the main results related to the bilateral relation among the selected MS concerns the variation in target population generated by EU mobile citizens coming from Poland and Romania. In both policy option 2 and 3, this population accounts for the majority of the reduction in target population for the other MS (annex 2). The only exception is France in which around 75% of the total variation in target population is explained by citizens coming from UK, Germany and Italy (respectively 34.7%, 23.4% and 17.0%). Additionally, in the UK a significant reduction in target population is generated by EU mobile citizens coming from France, Italy and Germany (respectively 21.0%, 16.6% and 12.3%). In the Netherlands, around a quarter of the total reduction in the target population generated by policy option 2 derives from EU mobile citizens coming from Germany.

Figure 4.2 indicates that the two policy options analysed generate two completely different scenarios. The limited variation in the target population related to policy option 3 (a and b) is generated only by the changes in the overall mobility flow attributable to economic differentials. Conversely, in policy option 2 (a and b), the introduction of thresholds for the entitlement of the aggregation of periods or salaries for the purpose of receiving unemployment benefits significantly reduces the target population in all the MS considered.

### **8.1. Refinement of policy options 2a and 2b**

The disincentives to move produced by policy options 2a and 2b as considered above would be reduced if potential movers were to consider the possibility to obtain welfare coverage if they moved back to the country of previous employment.

#### Task 4:

### Secondary effects following a change of regulations on the aggregation of periods or salaries for unemployment benefits

---

The effect of said reduction in the disincentives would essentially be linked to the level of benefits obtainable in the country of previous employment and to the costs of moving (due to both geographical distance and individual perspective when moving, short or long-term). For example, individuals that plan to move from the Netherlands to Belgium for a short term contract will look at the possibility of losing their job in less than 1 month/3 months as 'easily solvable' by moving back to the closeby Netherlands, where they can get a rather high benefit and compensate for the relatively low costs of moving. The results observed in the above paragraph for policy options 2a and 2b would therefore change significantly.

Viceversa, EU citizens that plan to move (for example) from Romania to the UK are more likely to be long-term movers that will not consider the possibility to move back to Romania as an actual option. In this type of cases, results for policy option 2a and 2b in their 'refined' versions would align to those seen in the above paragraph.

## 9. Secondary effects: estimation of expenditure changes

This section reports the estimated changes of expenditure on unemployment benefits devoted to workers who need to aggregate periods or salaries in order to be entitled to such benefits. The variation is computed on the aforementioned status quo scenario (see par. 3), for each MS analysed and according to the various policy options. The results discussed in this section are referred to the representative category of the potential target population: single persons at 100% of average earning. The results are presented in aggregate terms for each MS, while the detailed results of the bilateral relations between the 8 selected MS are presented in annex 3.

As reported in section 2.4.2, in evaluating the impact on expenditure due to the implementation of the policy options, we are considering both the behavioral change in mobility flows and the change in entitlement and computation rules. For each analysed MS, Figure 5.1 shows the results in aggregate terms.

In the 8 MS, policy option 2 provokes a reduction of the expenditure for unemployment benefits for the potential target population. This reduction is obviously more marked when the threshold for the aggregation of periods or salaries for unemployment benefits is set to three months (policy option 2b). In Denmark, Italy, the UK, France and Germany, the cost changes generated by the policy option 2b exceed 50%. In Denmark, the expenditure on unemployment benefits for the potential target population decreases by 86.5%. In France, policy option 2 involves a reduction of expenditure equal to 48.6%, in the case of policy option 2a, and of 64%, in the case of policy option 2b. In percentages terms, in Italy and Germany the effects of policy options 2 are similar, respectively -40.4% and -41.6% for policy option 2a, -53.3% and -54.6% for policy option 2b. In the UK, policy option 2 involves a decrease of -56.9% (option 2a) and -60.2% (option 2b). In the Netherlands, Poland and Romania the cost changes attributable to policy option 2 are similar, ranging from -16.9% to -20.0%, for policy option 2a, and from -32.0% to -36.0% in the case of policy option 2b.

In the case of policy option 2, the analysis of the disaggregated results for each bilateral relation between the 8 MS (annex 3) suggests that a significant reduction of the expenditure for unemployment benefits that require aggregations of periods or salaries in Germany (57.7%), the Netherlands (29.3%), the UK (37.4%) and Denmark (22.1%) is to be imputed to those EU mobile citizens coming from Poland<sup>260</sup>. In Italy, about 80% of the decrease in expenditure is due to the variation attributable to mobile workers coming from Romania. The reduction of unemployment benefits expenditure generated by target population coming from the UK is estimated to be 34.7% in France, 30.6% in Poland and 16.6% in Denmark. EU mobile citizens coming from Germany account for 53.2% of the estimated decrease for the expenditure for unemployment benefits in Poland, and for 20.5%, 26.6%, 23.3% and 19.8% respectively in the Netherlands, France and Denmark. In the UK around 20% of the savings generated by policy option 2b is to be imputed to EU mobile citizens coming from France.

<sup>260</sup> Since there is a slight difference between policy option 2a and policy option 2b in terms of bilateral relations between the 8 MS considered, in this section we focus only on the results of policy option 2b. The complete set of results is reported in annex 3.

Figure 5.1. Variation of expenditure for unemployment benefits that require aggregations of periods or salaries. Policy options 2a, 2b, 3a, 3b (single person at 100% of the average wage).

Source. Our calculation based on data from Pacolet (2015), Eurostat (migr\_imm5prv, earn\_nt\_net; web-based database), van Vliet and Caminada (2012), and EU-LFS.

In policy option 3, the calculation of unemployment benefits for the potential target population takes into account the salary earned in the Member State of previous employment when the one-month/three-month threshold is not met (see equation (4) in par 2.4.1). That produces a limited reduction in the expenditure in six of the analysed MS (DE, UK, IT, FR, NL and FR). For Poland and Romania, the entry into force of policy option 3 would result in an increase of public expenditure: the computation of the unemployment benefits would have to take into account the salaries earned in the countries of previous residence, where the average salary is generally higher than in these two countries.

In the UK, Germany and Italy the cost changes related to policy option 3 are between -11.3% and -17.4%, while in Denmark the estimated expenditure reduction is -19.0%<sup>261</sup>. In the Netherlands the effects of policy option 3 are a reduction in expenditures between 3.6% and 7.2%. In France the policy option examined produces a very limited change (-0.6% for 3a, -1% for 3b). The most relevant results of policy option 3 concern Poland and Romania. Both would face an increase in the expenditure dedicated to unemployment benefits paid to mobile workers that require aggregation of periods or salaries. In Poland, such policy option generates an increase of public expenditure of 15.9%, in the case of policy option 3a, and of 51.3%, in the case of policy option 3b. In Romania the estimated effects on cost changes are even higher. Policy option 3a involves an additional expenditure for unemployment benefits estimated to 49.4% of the expenditure calculated in the status quo scenario, while the increase generated by policy option 3b reaches 81.4%.

<sup>261</sup> Policy option 3a: IT -13.2% (€ 11,949,089); DE -11.0% (€ 22,425,518 ); UK -12.8% (€ 2,310,933); DK 19.0% (€ 3,682,527). Policy option 3b: IT -17.4% (€ 15,772,988); DE -14.6% (€ 29,741,402); UK -13.6% (€ 2,444,233); DK -19.0% (€ 3,682,527).

Task 4:

Secondary effects following a change of regulations on the aggregation of periods or salaries for unemployment benefits

The bilateral relations between the selected MS in terms of cost changes reflect those generated by policy option 2, previously analysed. Table 3.1.2 in annex 3 reports the detailed results.

In order to provide a benchmark for the evaluation of expenditure variations, figure 5.2 reports the expenditure for unemployment benefits paid to mobile workers (coming from the other 7 selected countries) that require the aggregation of periods or salaries as a ratio of GDP, in the status quo scenario and in each policy option. The figure indicates that in all scenarios the unemployment benefits expenditures devoted to the target population is very limited: in no case does the value go over 0.008% of GDP. In Denmark and Germany, the expenditure generated by policy option 3 is around 0.006% of GDP, while in Italy and the Netherlands these values range from 0.0046% to 0.0052% of GDP. In France, the UK, and especially Poland and Romania, the public expenditure in policy option 3 is even more moderate. In France and the UK, the values are around or just below 0.001% of GDP, and in Romania and Poland these expenditures account only for one millionth of GDP.

Fig. 5.2. Expenditure variation in % GDP (2014), Status quo and policy option scenarios

Source: Our calculation based on data from Pacolet (2015), Eurostat (migr\_imm5prv, earn\_nt\_net, nama\_10\_gdp; web-based database), van Vliet and Caminada (2012), and EU-LFS.

As already mentioned, policy option 2 generates higher savings compared to policy option 3, resulting in an even lower expenditure for unemployment benefits paid to mobile workers (coming from the other 7 selected countries) that require the aggregation of periods or salaries. This is clear in the case of Denmark, where the estimated aggregate expenditure for policy option 2 is around 0.001% of GDP. For the other considered countries, the difference between policy options 2 and 3 is not as

noticeable. For a group of countries (Germany, Italy and the Netherlands) the aggregate expenditure is comprised between 0.0045% and 0.0025% of GDP, while for the UK, France, Poland and Romania the values are below or significantly below 0.001% of GDP.

Table 5.1 disaggregates the expenditure estimated for each policy option, presenting the expenditure variation due the behavioral change in mobility flows and due to the change in entitlement and computation rules.

*Tab. 5.1. Cost variation attributable to mobility change and to changes in entitlement and computation rules. Policy options 2a, 2b, 3a, 3b (single person at 100% of the average wage).*

Source: Our calculation based on data from Pacolet (2015), Eurostat (migr\_imm5prv, earn\_nt\_net; web-based database), van Vliet and Caminada (2012), and EU-LFS.

The changes in migration flows account only for a moderate share of the expenditure variations for all policy options. Excluding Italy and Denmark, for the other six MS considered, the behavioural change in mobility flows explains less than 3.5% of the expenditure variations. The highest expenditure variations related to changes in migration flows are registered for policy option 2b. In this case, around 6% of expenditure variation of Italy and Denmark is attributable to mobility changes. In general, most of the expenditure variation is due to a reduction of the population entitled to receive unemployment benefits (policy option 2), or to different computation rules for the benefits (policy option 3).

### **9.1. Refinement of policy options 2a and 2b**

For what concerns policy options 2a and 2b, variations of expenditure for unemployment benefits that require aggregations of periods or salaries would not differ from the ones observed if potential movers were to consider the possibility to obtain welfare coverage if they moved back to the country of previous employment.

EU-mobile citizens that decide to come back to the country of previous employment to receive the unemployment benefits that are no longer paid in the country where they have lost their job would burden the general welfare expenditure of the MS.

## 10. Conclusions

The aim of the study is to assess the secondary effects of the proposed modification to the current EU provisions on the entitlement to unemployment benefits paid to mobile workers that require the aggregation of periods or salaries, as specified in Regulation (EC) 883/2004: the 'Basic Regulation' and in Regulation (EC) 987/2009: the 'Implementing Regulation'. Such secondary effects include changes in the overall mobility of workers, in the number of individuals entitled to the benefits and in the level of expenditure.

To this end, we have selected 8 MS as part of the case study, with consideration to the level of representativeness of the group as regards the whole EU. For each MS, we have defined size and characteristics of the population potentially interested by the policy changes, as well as the relative expenditure for unemployment benefits. Against this status quo scenario, we have estimated the impact of the various policy changes.

A simulation tool has been defined in order to estimate the potential mobility changes attributable to the economic differentials generated by the four policy options. The second step of the analysis has concerned the estimation of the changes of public expenditure devoted to the unemployment benefits paid to the target population.

In order to proceed with the estimate, key assumptions had to be made on the elasticity of potentially mobile EU citizens to changes in income differentials among countries (see par. 2.4).

Results generally show mild reductions in overall migration flows attributable to the potential implementation of the policy options. Decreases are stronger when policy option 2 is implemented, especially 2b, since a rather relevant quota of the target population is excluded by the entitlement to unemployment benefits, which reduces the incentive to move. The disincentives to move would be reduced if potential movers were to consider the possibility to obtain welfare coverage if they moved back to the country of previous employment. When option 3 is implemented, much smaller changes are observed. Policy option 2 also results in an important reduction of EU mobile citizens eligible for the aggregation of periods or salaries for the purpose of receiving unemployment benefits. For policy option 3, variations in the target population are limited to those produced by the changes in overall migration flows, since this option does not reduce the population eligible to unemployment benefits.

As regards expenditure changes, because policy option 2 excludes quite a large share of individuals from the entitlement to unemployment benefits, all countries experience a high decrease in the relevant chapter of expenditure (more so in the case of policy option 2b). That would not change if potential movers were to consider the possibility to obtain welfare coverage if they moved back to the country of previous employment though of course EU-mobile citizens that decide to come back to the country of previous employment to receive the unemployment benefits that are no longer paid in the country where they have lost their job would burden the general welfare expenditure of that MS.

Lower savings are observed when policy option 3 is implemented. Because the computation of benefits has to take into account salaries earned in the country of previous residence, Poland and Romania see their expenditure grow by a wide margin when option 3 is realised. In both policy option 2 and 3, most of the expenditure

variation is imputable to changes in entitlement and computation rules, while the behavioral change in mobility flows accounts for only a limited share of the cost variations. As much as the percentages may reach high values, variations shown in absolute terms and as ratios of GDP confirm the little relevance for national budgets of the expenditure on unemployment benefits that require aggregation of periods or salaries.

As noted in par. 3.2, when taking in consideration figures from Pacolet (2015, p.18) it appears that for most of the countries our estimate of the potential target population in the 'status-quo' scenario represents an upper bound. EU mobile citizens seem to have lower take up of unemployment benefits than natives. The dimensions of the phenomenon analysed and of the expenditure figures are therefore even smaller than what has appeared in the present study.

**Annex 1 – List of unemployment benefits within the scope of the study**

<b>DENMARK</b>	
<b>ACT or Name</b>	Consolidated Act No 348 of 8 April 2014 on unemployment insurance (om arbejdsløshedsforsikring mv)
<b>Main condition</b>	* Residing in Denmark.* No working activity;* No formal educational activity;* Registered as job seeker and at the disposal of the employment office; * Capable of working; * Available for the labour market; * Age between 18-65 years; * Actively seeking employment and co-operating with the employment office to build up an individual action plan;
<b>Qualifying period</b>	Basic allowance: A minimum period of 1,924 hours (corresponding to full-time employment during one year) during the 3 preceding years is required. Only employment carried out while being insured is taken into account.
<b>Waiting period</b>	Employees: No waiting period if involuntarily unemployed. 3 weeks waiting period if voluntarily unemployed. Self-employed: 3 weeks.
<b>Determining factors</b>	Previous earnings; period of employment.
<b>Amount</b>	Employees: Calculation usually based on average earnings of preceding 12 weeks or three months. No ceiling for the reference earnings. Self-employed: Calculation on the basis of his/her daily income (1/260 of the yearly income) if the self-employed person has carried out substantial self-employed activities for at least one year in a 3-year-period.Amount. 90% of previous earnings, but not more than DKK 815 (€109) per day. The benefit is paid per month. This maximum is adjusted once a year according to the adjustment rate (satsreguleringsprocenten).Duration: 2 years within a 3-year period. Labour market benefit (midlertidig arbejdsmarkedsydelse): Paid after entitlement to unemployment benefit has expired: 80% or 60% of the maximum unemployment benefit, according as to whether or not the beneficiary has dependent children. Duration: Up to 15 months after expiry of entitlement to unemployment benefit
<b>supplement</b>	No family or other supplement

<b>FRANCE</b>	
<b>ACT or Name</b>	assurance chômage
<b>Main condition</b>	*Residence in France; * not to have left previous employment voluntarily without good cause; *to be effectively and permanently looking for work; *to be registered as jobseeker and to conform to a personalised back-to-work action plan; * to be physically able to work;

Task 4:

Secondary effects following a change of regulations on the aggregation of periods or salaries for unemployment benefits

	*not to have reached the statutory retirement age (between 60 and 62). However, the indemnity is maintained (within the limit of its maximum duration) until the person reaches the age for entitlement to full pension (between 65 and 67 years), regardless of the length of insurance.
<b>Qualifying period</b>	At least 4 months (122 days) insurance during the last 28 months (36 months for those aged 50 and over) preceding the unemployment.
<b>Waiting period</b>	The waiting period comprises paid holidays plus a general period of 7 days plus a waiting period equal to the amount of the redundancy payment divided by 90 within a limit of 180 days (75 days in the case of redundancy).
<b>Determining factors</b>	Earnings on which contributions have been paid.
<b>Amount</b>	Earnings of the last 12 months within the limit of four times the social security ceiling (€12,516 per month). 40.4% of reference daily wages (RDW) + €11.72 per day or 57.4% of the RDW within the limit of 75% of the RDW. The best result is taken into account. Minimum: €28.58 per day. The duration of payment of the benefit corresponds to the length of insurance taken into account for acquiring entitlement to benefits (between 4 months and 2 years or 3 years if the beneficiary is aged 50 and over).
<b>Supplement</b>	No Family or other supplement

<b>GERMANY</b>	
<b>ACT or Name</b>	Arbeitslosenversicherung
<b>Main condition</b>	not engaged in an employment relationship (without work); * makes an effort to put an end to this situation (efforts of his or her own); * is available for the placement efforts undertaken by the employment agency (availability); not entitled to a standard pension; * the unemployed person is obliged to make use of all possibilities of occupational integration
<b>Qualifying period</b>	The unemployed person must have been compulsorily insured for at least 12 months during the last 2 years.
<b>Waiting period</b>	In principle no waiting period. If the unemployed person has terminated his/her employment contract without good reason or has caused the termination of the contract through his/her own misconduct, a waiting period (a so-called blocking period, Sperrzeit) of up to 12 weeks may become effective.
<b>Determining factors</b>	Benefits are based on the salary, on the category mentioned on the wage-tax card and on the presence or not of children.

Task 4:

Secondary effects following a change of regulations on the aggregation of periods or salaries for unemployment benefits

<b>Amount</b>	Beneficiaries with children: 67% of net earnings. Beneficiaries without children: 60% of net earnings. The duration of benefits (DB) depends on the duration of compulsory insurance coverage (DI) and on the age of the beneficiary. Minimum length 12 DI, age not considered, equals to 6 months of DB; Maximum length 48 DI, age 58 years, 24 months of DB
<b>supplement</b>	No family or other supplement

<b>ITALY</b>	
<b>ACT or Name</b>	<i>Assegno Sociale per l'Impiego ASPI, (Indennità di disoccupazione)</i>
<b>Main condition</b>	To be involuntarily unemployed, *not engaged in work for more than 5 consecutive days; to be capable of work; *to be available for the employment office; *not benefiting from any other pension treatment; * no income higher than the personal annual taxable limit; *claim to be presented within 2 months (98 days in case of dismissal without notice).
<b>Qualifying period</b>	ASPI: Having matured at least two years of work insurance contributions one of which accrued during the two years prior to the onset of unemployment. Mini ASPI: Having matured at least 13 weeks (3 months) of contributions during the 12 months prior to dismissal.
<b>Waiting period</b>	Waiting period of 8 days.
<b>Determining factors</b>	Previous salary with a ceiling; age; duration of unemployment.
<b>Amount</b>	The benefit is calculated as a percentage of the average monthly gross income earned by the worker in the last two years prior to dismissal, with a monthly ceiling of €1,192.98 for the year 2014. ASPI and mini ASPI. Amounts equal to 75% of the monthly reference earnings. The maximum payable amount is €1,165.58 per month. The amount of the benefit is reduced to 60% of the monthly reference earnings after six months and to 45% after twelve months. Duration. ASPI. Duration will be gradually increased according to age: Unemployed persons under 50 are granted the benefit for 10 months in 2015; Unemployed persons between the age of 50 and 54 are granted the benefit for a period of 12 months through 2015 (from January 2016 onwards Unemployed persons under 55 will be granted the benefit for 12 months); Unemployed persons aged 55 and over are granted the benefit for 16 months in 2015 (18 months from January 2016 onwards). Mini ASPI: Granted for a number of weeks corresponding to half the number of weekly contributions paid during the last year prior to dismissal.
<b>supplement</b>	Eligible unemployed persons can receive an additional allowance for

## Task 4:

Secondary effects following a change of regulations on the aggregation of periods or salaries for unemployment benefits

	family dependent family members ( <i>assegni familiari</i> ) upon request.
--	--

<b>POLAND</b>	
<b>ACT or Name</b>	Zasiłek dla bezrobotnych
<b>Main condition</b>	*Involuntarily unemployed; *without work or payment; *registered with the employment agency; *to be capable of work; *to be available for full-time work; *aged at least 18 years of age and less than 60 years (woman) or 65 years (man); *no entitlement to old-age or invalidity pension; *Polish or EU or EEA or Swiss citizenship; *not in receipt of rehabilitation, sickness, maternity or child-raising allowance.
<b>Qualifying period</b>	At least 365 calendar days of paid employment during the 18 months preceding the day of registration.
<b>Waiting period</b>	7 calendar days.
<b>Determining factors</b>	Length of economic activity.
<b>Amount</b>	Benefits not based on earnings. The monthly amount is paid as a percentage of the Basic Unemployment Allowance, depending upon the length of economic activity: 1 to 5 years of work: 80%; 5 to 20 years: 100%; 20 years and more: 120%. Basic Unemployment Allowance: PLN 831.10 (€200) per month for a period of three months, PLN 652.60 (€157) thereafter. Duration: 6 months in areas with an unemployment rate less than 150% national average; 12 months in areas with an unemployment rate of at least 150% or more of the national average, or if the claimant has a qualifying period of 20 years and is over 50 years old, or if the claimant's spouse is unemployed, not entitled to an allowance, and they have at least one dependent child under the age of 15 years.
<b>supplement</b>	No family or other supplement

<b>ROMANIA</b>	
<b>ACT or Name</b>	indemnizatie de somaj
<b>Main condition</b>	*To be involuntarily unemployed; *not working; *to be registered as unemployed with the National Agency for Employment; *to be able to work; *to be available for work; *to be aged between 16 and the date of meeting the conditions for the Old-Age Pension ( <i>pensie pentru limita de varsta</i> ); * to be actively searching for work; * to have domicile or residence in Romania; * to apply for benefit within 12 months.
<b>Qualifying</b>	Minimum contribution period: 12 months during the 24 months

Task 4:

Secondary effects following a change of regulations on the aggregation of periods or salaries for unemployment benefits

<b>period</b>	preceding the application date. No qualifying period for graduates.
<b>Waiting period</b>	No waiting period.
<b>Determining factors</b>	level of earnings, length of contribution period.
<b>Amount</b>	Reference earnings: the monthly gross income. No ceiling. The amount is related to the length of contribution period and to the Reference Social Indicator (RSI) (indicator social de referinta).The duration of Unemployment Indemnity varies with the contribution period. Minimum length, between 1-5 years, entitlement to 6 months; maximum length, 10 and over years, entitlement for 12 months.
<b>supplement</b>	No family supplement or any other supplement

<b>The NETHERLANDS</b>	
<b>ACT or Name</b>	WW-uitkering
<b>Main condition</b>	*To be involuntarily unemployed; *loss of at least 5 or half of the working hours per week; *timely registration with the Institute for Employee Benefit Schemes (UWV);*to be capable for work; *to be available for work;*below the legal retirement age; *seeking employment; *residence in the Netherlands; *application for benefit on the first day of unemployment.
<b>Qualifying period</b>	A person who has received wages in at least 26 weeks out of the 36 weeks before the first day of unemployment (weeks' condition).A person who has received wages for at least 208 hours in four of the five calendar years preceding the year in which s/he became unemployed (years condition).
<b>Waiting period</b>	No waiting period.
<b>Determining factors</b>	Reference earnings.
<b>Amount</b>	The reference earning is the last daily wage with a maximum of €198.28. The amount is equal to 75% of the last daily wage during the first two months, 70% thereafter. Duration. A person who only meets the weeks condition receives benefits for a maximum duration of 3 months. A person who satisfies the years condition receives benefits for as many months as the number of months in employment, with a maximum of 38 months.
<b>supplement</b>	If unemployment benefits are less than the social minimum, a supplementary benefit can be claimed under the Supplementary Benefit Act (Toeslagenwet, TW)

## Task 4:

Secondary effects following a change of regulations on the aggregation of periods or salaries for unemployment benefits

<b>UK</b>	
<b>ACT or Name</b>	Contribution-based Jobseekers' Allowance (JSA)
<b>Main condition</b>	*to be involuntarily unemployed;* not engaged in work for 16 or more hours a week; *to be capable of work; *to be available for work; * under pensionable age; *has entered into a Jobseekers' agreement; *actively seeking employment; *is in Great Britain; *is not a full-time student; *is not engaged in a trade dispute.
<b>Qualifying period</b>	Requirements. Contributions paid in one of the 2 tax years on which the claim is based amounting to at least 26 times the minimum weekly contribution for that year, and contributions paid or credited in both the appropriate tax years amounting to a total of at least 50 times the minimum weekly contribution for that year.
<b>Waiting period</b>	3 days
<b>Determining factors</b>	Flat-rate benefit, varying according to age.
<b>Amount</b>	Benefits not based on earnings, but varying with age: aged 25 or over: GBP 72.40 (€90) per week; aged 18-24: GBP 57.35 (€72) per week. Additionally no increase for dependants. Duration: limited to 182 days in any jobseeking period.
<b>supplement</b>	If a higher rate of benefit is needed and the conditions of entitlement are met, Income-based Jobseekers' Allowance can be payable instead. Income-based Jobseekers' Allowance: Support for children formerly included in Income-based Jobseekers' Allowance claims was transferred to Child Tax Credit in 2006/07.

## Annex 4 – Extension of results to EU-28 countries

The purpose of the simulation is to estimate the secondary effects of the potential implementation of the policy options on the bilateral relations between the 8 selected MS. Results for each pair of countries are essentially driven by the country-specific figures on migration flows, average levels of unemployment benefits and income differentials with the other countries.

For each of the 8 selected countries, table 4.1 offers elements for an indicative extension of the results observed.

Underneath the selected countries, in the first column, the income differential is computed by dividing the expected income values of the row countries by the expected income values of the column countries. In analogy with par. 2.4.1, expected incomes are computed according to the formula:

$$Income = (Prob(1-Unemployed) * avg\_earnings + Prob(Unemployed) * UB) / PPP\_index$$

The second column reports the quota of EU-mobile citizens coming from the row countries on the total of EU-mobile citizens in the column country. In analogy with par. 3.1, we report flow values.

When row countries that are not part of the case study show similar values in both variables to those row countries that are part of the 8 countries selected for the analysis, we can predict a similar response to the implementation of the policy options and a similar impact on the countries in column. Belgium, for instance, has similar values to Denmark, when related to Germany. Bulgaria has similar values to Romania, when related to the Netherlands. The income differential is indicative of the response to the policy options, the quota of mobile citizens on the total is indicative of the impact that the population moving from the given row country will have on the column country.

The extension of results proposed is to be intended as indicative. An estimation in line with the methodology proposed would have to account for an estimate on the length of insurance (1 day, 30 days, 3 months) of EU-mobile citizens that require aggregation and separately (not only as part of the 'expected income') account for the level of unemployment benefits in the different countries.

Table 4.1. Income differential and distribution of EU-mobile citizens. Selected countries and EU-28 MS

## HOW TO OBTAIN EU PUBLICATIONS

### Free publications:

- one copy:  
via EU Bookshop (<http://bookshop.europa.eu>);
- more than one copy or posters/maps:  
from the European Union's representations ([http://ec.europa.eu/represent\\_en.htm](http://ec.europa.eu/represent_en.htm));  
from the delegations in non-EU countries  
([http://eeas.europa.eu/delegations/index\\_en.htm](http://eeas.europa.eu/delegations/index_en.htm));  
by contacting the Europe Direct service ([http://europa.eu/eurodirect/index\\_en.htm](http://europa.eu/eurodirect/index_en.htm))  
or calling 00 800 6 7 8 9 10 11 (freephone number from anywhere in the EU) (\*).

(\*). The information given is free, as are most calls (though some operators, phone boxes or hotels may charge you).

### Priced publications:

- via EU Bookshop (<http://bookshop.europa.eu>).

### Priced subscriptions:

- via one of the sales agents of the Publications Office of the European Union  
([http://publications.europa.eu/others/agents/index\\_en.htm](http://publications.europa.eu/others/agents/index_en.htm)).

**Annex XX: TECHNICAL PROVISIONS TO BE INCLUDED WITHIN THE REVISION  
WHICH ARE NOT SUBJECT TO IMPACT ASSESSMENT**

## **TECHNICAL PROVISIONS TO BE INCLUDED WITHIN THE REVISION WHICH ARE NOT SUBJECT TO IMPACT ASSESSMENT**

### ***Introduction***

The revision package will also include a number of proposals for technical amendments to the coordination rules. The amendments will clarify the rules, but will not substantially revise them and are not subject to a formal Impact Assessment. For reasons of transparency, this section provides an overview of the proposed changes.

### ***Technical amendments to the text and annexes***

These amendments concern a number of periodic updates of the Regulations to reflect developments in national legislation that have an effect on the application of the coordination rules. The aim is to ensure legal certainty for institutions and citizens by making technical amendments to the wording of provisions or by amending certain country specific annexes. This is necessary, for instance, where a benefit ceases to exist in a Member State and has to be deleted from a specific annex to one of the Regulations, or where the wording of an Article needs to be corrected or clarified to avoid misinterpretation.

### ***Technical amendments to the text in field of posting***

As a result of recommendations arising from the targeted review on Posting, in the area of social security, it has been recommended<sup>263</sup> to clarify the relationship between posting within the meaning of the EU social security rules and the Posting of Workers Directive<sup>264</sup> and to introduce further a number of technical amendments concerning posting with a view to clarify and expedite the administrative procedure, but without conferring new entitlements or requirements. These may be summarised as follows:

- Clarification of the relationship between the Regulations and Directive 96/71/EC of the European Parliament and of the Council of 16 December 1996 concerning the posting of workers **in the framework of the provision of services**.<sup>265</sup>
- an obligation for Member States to certify the accuracy and completeness of Portable Document A1 (attestation that a detached worker remains subject to the social security system of the home state)
- an obligation for social security institutions to cooperate with labour inspectorates both within their respective Member States and in cross-border situations

---

<sup>263</sup> Taking into account challenges which have arisen in some Member States and which had been outlined in the European Report 2013 of the trESS network, the FreSsco network was mandated to prepare a report on “Procedures related to the granting of portable documents A1”. This report was based on a survey among the delegates of the Administrative Commission and presented in May 2014. Further to this survey, an Ad-Hoc Group on posting issues was established by decision of the Administrative Commission dealing with a number of questions to improve procedures in the field of posting.

<sup>264</sup> Directive 96/71/EC of the European Parliament and of the Council of 16 December 1996 concerning the posting of workers in the framework of the provision of services

<sup>265</sup> OJ L 018 , 21.01.1997 p. 1

- express deadlines for responding to requests for information concerning suspected fraud and error and an accelerated procedure for withdrawal of the PD A1 in the case of serious fraud or error.
- Possibility for the Commission after consultation with the Administrative Commission, to further specify a uniform approach to the issuance, verification and withdrawal of the Portable Document A1. regarding the posting provisions by legally binding ‘implementing acts’ in accordance with Article 291 TFEU.

### ***Governance change***

Some Member States have called for changes to speed up the procedure for adapting the Annexes to the social security Regulations, as the time lapse between the changes in the national legislation and the updating of the Regulations is seen as taking too long.<sup>266</sup> It is already the case that some Annexes to these Regulations can be amended by a Commission Regulation. In order to make it simpler and faster in the future to adapt *all* the annexes, it could be proposed that all annexes to the Regulations are amended by a Commission Regulation.

### ***Legal basis for data exchange to detect fraud and error***

Finally, the package will contain an improved legal basis for data exchange to detect fraud and error to give the Member States a powerful tool to periodically transmit personal data of persons to whom the social security coordination Regulations apply. The amendment expands the current legal basis to provide that such data transmission can take place even in a case where there is no doubt about the accuracy of the information for the purposes of routine verification of information in order to detect instances of fraud or error and to ensure that the Regulation continues to be correctly applied.

---

<sup>266</sup> Some of the changes are pending since 2011, as since that time, no proposal for a Regulation has been adopted. At the June 2015 Meeting of the Administrative Commission, an important number of MS asked if it were possible to decouple the technical amendments from the more fundamental changes, in order to have the technical amendments adopted quicker. It is considered to split the proposal into a proposal with technical amendments (no impact assessment) and a proposal with changes that have been subject to an impact assessment.

Strasbourg, 13.12.2016

## ANNEX XXI MAPPING OF NATIONAL SYSTEMS OF LONG-TERM CARE BENEFITS, FAMILY BENEFITS, UNEMPLOYMENT BENEFITS AND SPECIAL NON-CONTRIBUTORY CASH BENEFITS<sup>1</sup>

### 1. Long-term care benefits

#### AUSTRIA

##### Applicable statutory basis

Cash benefits:

Federal Long-term Care Benefit Act (*Bundespflegegeldgesetz*, BPGG), Official Journal (BGBl.) No. 110/1993, and 9 similarly phrased Long-term Care Benefit Acts of the Länder.

Benefits in kind:

Numerous applicable statutory bases, e.g. the Agreement between the Federal Government and the Länder on joint measures for persons in need of care. Social Assistance Acts and Disability Acts of the Länder.

##### Benefits in kind

###### 1. Home care

Mobile and outpatient care, such as:

- visiting service,
- Social homecare (home-helpers),
- 24-hour-care,
- meals on wheels,
- family support,
- personal assistance,
- medical home care,

###### 2. Semi-residential care

- semi-stationary care in care facilities, e.g. in day centres or residential care facilities
- day centres for people with disabilities

###### 3. Residential care

- residential care facilities, e.g. nursing homes
- comprehensive care in residential communities
- short-term care
- residential care facilities for people with disabilities

###### 4. Other benefits

A consulting and information service for persons in need of care and their relatives, such as:

- long-term care phone service
- legal counsel for disabled persons

---

<sup>1</sup> trESS Analytical Study 2012, *Legal impact assessment for the revision of Regulation 883/2004 with regard to the coordination of long-term care benefits*, to be consulted at: [http://www.tress-network.org/tress2012/EUROPEAN%20RESOURCES/EUROPEANREPORT/trESS\\_Analytical%20Study%202012.pdf](http://www.tress-network.org/tress2012/EUROPEAN%20RESOURCES/EUROPEANREPORT/trESS_Analytical%20Study%202012.pdf).

- case- and care Management
- support groups / self-help groups

### Cash benefits

\* **Pflegegeld:** under the *Bundespflegegeldgesetz* (BPGG) or one of the *Landespflegegeldgesetze* of the nine provinces. The latter have been repealed as of the beginning of 2012 and all entitlements are determined now under the federal law.

Pflegegeld is a tax-financed benefit granted irrespective of the cause of need, the recipient's income, assets or age. There are seven different levels of Pflegegeld depending on the intensity of the need of care and assistance.

Pflegegeld (per Month):

Level 1 € 154.20

Level 2 € 284.30

Level 3 € 442.90

Level 4 € 664.30

Level 5 € 902.30

Level 6 € 1 260.00

Level 7 € 1 655.80

In case of semi-residential long-term care (e.g. in a day centre), long-term care benefits are due.

In case of providing residential care in a care facility, a maximum of 80% of the long-term care benefit is transferred to the institution bearing the cost of residential care. The monthly spending money amounting to € 44.30 is left to the person in need of care.

The long-term care benefit (Pflegegeld) is paid directly to the person in need of care and can be spent by him or her for the financing of the long-term care at his or her sole discretion. In case of improper use of the long-term care benefit, it can be replaced by benefits in kind.

\* **Zuwendungen aus dem Unterstützungsfonds** (§§ 21a, 21b BPGG; directives released by the Federal Minister of Labour, Social Affairs and Consumers' Protection): Means-tested allowances can be granted by supporting funds (but without legal entitlement)

a) to persons giving care to close relatives who are entitled to Pflegegeld of at least level 3 (even level 1 will be sufficient if the recipient of the Pflegegeld is suffering dementia or is underage) as long as they have to take leave. The allowance shall enable them to make use of **substitutional professional care during that rest period** and amounts from € 1 200 up to € 2 200 (subject to the level of Pflegegeld) per year.

b) to the person in need of care him or herself or their relatives as long as they make use of **24-hours-assistance by professional caregivers**: The allowance amounts to € 550 per month if the professional caregivers are self-employed and to € 1 100 per month for employed caregivers.

\* **erhöhte Familienbeihilfen für erheblich behinderte Kinder<sup>18</sup>**

<sup>18</sup> It is argued in the Austrian note that higher family benefits for considerably disabled children could fall under the definition of LTC benefits. However, they are coordinated as family benefits, which might be more beneficial for the entitled persons.

### Combination of benefits

Cash benefits from the State and Länder as well as benefits in kind via public and private providers.

A combination of benefits is possible. If recipients of Pflegegeld make use of professional services at home or in a nursing home they (and sometimes even close relatives, at least their spouses) have to pay means-tested cost shares taking into account up to 80 per cent of the Pflegegeld.

These cost shares have to be considered as one of the main reasons that – as recent studies show – only one third of recipients of Pflegegeld make use of professional services.

### **Benefits for the Carer**

- Zuwendungen aus dem Unterstützungsfonds (see above, Cash benefits)
- Pension insurance for caring family members: an option of a preferential voluntary insurance and preferential continuation of affiliation to the pension insurance from category 3. The federal government pays contributions for voluntary self-insurance or optional continued insurance in the field of pension insurance entirely and for an unlimited period of category 3 and above.

## **BELGIUM**

### **Applicable statutory basis**

No specific legislation at federal level. However, certain benefits are provided for in the legislation on sickness and invalidity insurance and on guaranteeing sufficient resources namely the:

- Health Care and Sickness Benefit Compulsory Insurance Act (Loi relative à l'assurance obligatoire soins de santé et indemnités / Wet betreffende de verplichte verzekering voor geneeskundige verzorging en uitkeringen), coordinated on 14 July 1994; and the
- Act of 27 February 1987 on disabled persons' allowances (Loi relative aux allocations aux personnes handicapées / Wet betreffende de tegemoetkomingen aan gehandicapten), respectively.

At the level of the federated entities (Flemish Community): the Decree of the Flemish Parliament of 30 March 1999 on the organisation of care insurance (Decreet houdende de organisatie van de zorgverzekering), last amended in March 2011 to take account of the modernised EU social security Coordination Regulations; and Orders of the Flemish government of 28 September 2001.

### **Benefits in kind**

#### **1. Home care**

*Sickness and invalidity insurance:*

Nursing care at home for heavily dependent patients. The insurance covers part of the fixed costs of this care according to the state of physical dependence of the patient:

- dependency category A:

€15.94 with preferential scheme,  
€12.13 without preferential scheme;

- dependency category B:

€30.93 with preferential scheme,  
€28.05 without preferential scheme;

- dependency category C:

€42.40 with preferential scheme,  
€38.37 without preferential scheme

#### **2. Semi-residential care**

*Sickness and invalidity insurance:*

No benefits in kind in case of semi-residential care.

#### **3. Residential care**

*Sickness and invalidity insurance:*

Rest and nursing homes, psychiatric nursing homes and rest homes for the elderly: a single lump sum determined by the institution.

#### 4. Other benefits

*Sickness and invalidity insurance:*

No other benefits.

#### Cash benefits

*Sickness and invalidity insurance:*

A single person or a cohabiting person without dependants who draws invalidity benefit (indemnité d'invalidité / invaliditeitsuitkering) receives a higher compensation rate (65% instead of 55% or 40%) if he or she is recognised as being in need of constant care.

Disabled persons who have dependants and who fulfil the conditions to be recognised as being in need of the assistance of a third party are entitled to a flat-rate allowance of € 12.99 per day.

*Care insurance (Zorgverzekering/Assurance soins):*

Insurance coverage for community-based care and home care: a fixed monthly amount of € 130. The same amount is granted if the person resides in an institution other than a service flat.

The benefit is paid to the user.

*Integration allowance (allocation d'intégration / integratietegemoetkoming) and allowance for assistance to the elderly (allocation pour l'aide aux personnes âgées / tegemoetkoming voor hulp aan bejaarden):*

Integration allowance:

Category I: € 1 082.50

Category II: € 3 688.76

Category III: € 5 894.18

Category IV: € 8 587.07

Category V: € 9 741.49

Allowance for assistance to the elderly:

Category I: € 925.06

Category II: € 3 531.18

Category III: € 4 293.35

Category IV: € 5 055.29

Category V: € 6 209.71

*Sickness and invalidity insurance, care insurance (Zorgverzekering/Assurance soins), integration allowance (allocation d'intégration/integratietegemoetkoming) and allowance for assistance to the elderly (allocation pour l'aide aux personnes âgées/tegemoetkoming voor hulp aan bejaarden):*

Discretionary use.

Benefits are paid on a flat-rate basis. The actual provision of care to the beneficiary need not be proven.

The **supplementary allowance for children with disabilities** under the age of 21. The amount of this allowance, which is a supplement to the child benefit, varies according to the degree of disability, taking into account the physical and mental consequences of the disability, the

consequences for the participation of the child in daily life (mobility, learning capacity, personal hygiene) and the consequences for the family.

Some benefits of the Flemish and Walloon agencies for disabled persons (VAPH/AWIPH, respectively), notably the *personal assistance budgets*. These are (earmarked) budgets (i.e. no discretionary use) awarded to disabled persons in order to, among other things, ensure their independent living, in particular by allowing them to personal assistants (employed or not, respectively) for help in activities of daily living.

In the case of *accidents at work and occupational diseases*, a *supplementary allowance* can be awarded of a maximum of 12 times the average monthly guaranteed income, according to the degree of need, index-linked from the beginning of the period of compensation and terminated as of the 91st day of hospitalisation.

### **Mixed benefits**

*Sickness and invalidity insurance:*

The possibility of mixed benefits in case of heavily dependent patients. See “Benefits in kind”, “1. Home care” and “Cash benefits”, “1. Amount”.

*Care insurance (Zorgverzekering/Assurance soins), integration allowance (allocation d'intégration/integratietegemoetkoming) and allowance for assistance to the elderly (allocation pour l'aide aux personnes âgées/tegemoetkoming voor hulp aan bejaarden):*

No mixed benefits.

No free choice between benefits in kind and cash benefits.

### **Benefits for the carer**

No specific benefits for the carer.

## **BULGARIA**

### **Applicable statutory basis**

Long-term care in Bulgaria is not a separate social risk. The possible benefits in such cases are of various natures – social insurance, public assistance, etc. They are regulated in many **statutory acts**. The most important of these acts are:

- the Social Insurance Code,
- the Social Assistance Act,
- and the Regulation for the Implementation of the Social Assistance Act,
- the Integration of Persons with Disabilities Act,
- and the Regulation for the Implementation of the Integration of Persons with Disabilities,
- the Family Allowances for Children Act,
- the Wars Veterans Act,
- and the Regulation for the Implementation of the Wars Veterans Act,
- the Ordinance on the Medical Expertise of the Working Capacity,
- the Tariff of the Fees for Social Services Financed by the State Budget.

### **Benefits in kind**

Depending on the content of these benefits they may be divided as follows:

#### **1. Home care.**

People receive the necessary care in their home. The forms of such benefits are:

- The delivery of food, cooking and help with eating,
- Shopping and the delivery of necessary household goods,
- Maintaining personal and home hygiene,
- Support in taking medicines, accompanying during doctor visits, etc,
- Support in the supply of technical facilities in case of invalidity or severe disease,
- Administrative and everyday necessities services (payment of electricity, phone and other utilities, filling in administrative forms, etc),
- Assistance in communication and social contacts.

#### **2. Semi-residential care**

In these cases people live in their homes, but receive some care in specialised establishments. The main forms of such care are:

- *Day care centre* – provides a complete package of services to the persons during the day, including the provision of meals as well as the provision of the daily health, educational and rehabilitation services plus the organisation of free time and personal contacts.
- *Centre for social rehabilitation and integration* – performs rehabilitation, legal consultations, educational and professional training and guidance elaboration and performance of individual programmes for social inclusion.

#### **3. Residential care**

People receive the necessary care out of their homes, in specialised establishments. The types of these establishments are:

- *Centre for family-type accommodation.* A complete package of social services delivered in an environment similar to the family environment for a limited number of persons are provided in such centre.
- *Home for medical and social care.* A complete package of services for children up to 3 years of age is provided here.
- *Home for children with physical disabilities* – provides a complete package of services for children between 3 and 18 years of age.
- *Home for children with mental backwardness* – a complete package of services for children between 3 and 18 years of age is the characteristic of this home.
- *Home for adults with mental backwardness* – the same as the previous, but for people over 18 years of age.
- *Home for adults with mental disorders.* A complete package of services for people over 18 years of age depending on their situation.
- *Home for adults with physical disabilities* – the same as the previous.
- *Home for adults with sensor disorders* – the same as the previous.
- *Home for adults with dementia* -- the same as the previous.
- *Home for elderly people.* People having reached the statutory retirement age, including those with disabilities receive a complete package of social services for people in such homes.

#### **4. Other benefits**

Here, we may point out the targeted assistance the purchase and repair of technical supportive devices, facilities and medical appliances for compensation of the disability. The assistance is provided in the form of reimbursement of actual expenditures made by persons with disabilities for the purchase and repair of the devices, facilities and appliances.

##### **Cash benefits**

These are provided by various sources. Such benefits are:

- ***Family benefits for children with permanent disabilities.*** These are paid by the state budget and are:
  - The monthly benefit for raising a child with permanent disabilities. It is paid until the child reaches the age of 2 years regardless of family income.
  - The monthly benefit for a child with a permanent disability until the completion of secondary education.
  - The monthly supplement for children up to 18 years of age with a permanent disability.

- ***Benefits for social integration of persons with permanent disabilities.*** The state budget pays these benefits. These are:
  - o *Monthly allowances.**Targeted allowances depending on the particular needs of the person.*

- ***Supplement to the pension of pensioners with reduced working capacity over 90% who need permanent assistance of a carer.*** This is paid by the state social insurance.

The Bulgarian note it is argued that this benefit (top-up for a personal assistant to persons with a 90% disability in need of assistance in their day to day life) is essentially the only LTC cash benefit. Some benefits have been removed from the list (Invalidity pensions, Cash allowance when the insured person does not meet the requirements for invalidity pension and Sanatorium and resort treatment compensation).

**Combination of benefits**

No mixed benefits.

Free choice between cash and/or benefits in kind not possible.

**Benefits for the carer**

Persons (parents, spouses, individuals) employed under the National Programme “Assistants for People with Disabilities” and the National Programme “Social Services in Family Environment” receive a monthly remuneration the amount of which is equal to the statutory monthly minimum wage.

Adult Centres Act of 1997 (Κέντρο Ενηλίκων Νόμος του 1997, Ν. 38(I)/1997). Last amendment: Act 64(I)/2011

### Benefits in kind

#### 1. Home care

This includes services such as personal hygiene, house cleaning, washing of clothes, cooking, payment of bills, shopping, etc. It is provided to people entitled to a public assistance benefit or people who cannot meet their special needs with their income. This support provided to vulnerable groups of people aims to enable the latter to live at home. Social Welfare Services employ carers who visit people in need of care at their own premises and who provide services according to their needs. Carers can also be employed by Community Councils or may be self-employed. The salary of the last two categories is paid by the Public Assistance Fund.

#### 2. Semi-residential care

The day care service offers the elderly and the disabled persons the opportunity to live at home as long as possible. People who cannot care for themselves can spend their daytime at

their local day centres where they are offered cooked meals and laundry facilities. Day care centres are operated by the Community Welfare Councils and are financed by the Scheme of State Funding.

### **3. Residential care**

Residential care is strictly provided for people when their individual needs cannot be met on a 24-hour basis by their family or other supportive services. The Social Welfare Services place people in need of Residential Care in governmental, community or privately owned Residential Homes.

It should be noted that “*Houses in the community*” are houses providing accommodation for up to five disabled persons. They function on the basis of The Homes for the Elderly and Disabled Persons Law of 1991. Foundations may run such “Houses in the community”.

“Shelters for the elder and people with disabilities” provide residential care. They are subject to the Homes for the Elderly and Disabled Persons Act of 1991.

### **4. Other benefits**

The Social Welfare Services subsidises the Pancyprian Volunteerism Coordinative Council which may, among others, offer training courses for non-governmental home carers.

Telecare services have been suspended as of September 2010.

- The National Action Plan for the Elderly 2005-2015, elaborated by the Ministry of Health, provides a programme on the development of *geriatric services*. The latter aim at the timely diagnosis and treatment of diseases which lead to the dependency of the elderly, the extension of their capacity to take care of themselves and the improvement of the quality of their life. We are not aware of the state of progress of this action plan.
- Specialised programmes in the framework of the *Community Nursing Mental Health policy* concerning the elderly with mental problems, the persons suffering from Alzheimer or other disorders, etc. Mental Health Community Centers notably direct their services towards individuals, including the elderly, with chronic mental health problems that require continuous support and mobilisation in their families and professional environment.
- The *Scheme on Social Assistance on Improving Housing Conditions* (Σχέδιο Παροχής Κοινωνικής Αρωγής για τη Βελτίωση των Συνθηκών Στέγασης), which provides a lump sum principally to the recipients of public assistance in view of improving their housing conditions.
- The *Scheme on the Support of Families for Caring for the Elder and/or Disabled Members* (Σχέδιο για την Ενίσχυση Οικογενειών για τη Φροντίδα Ηλικιωμένων ή/και Αναπήρων Μελών τους), which aims to enhance the families in view of keeping their elderly and/or disabled members at home via the adjustment of their housing conditions.
- The Scheme on the Funding of Local Authorities, in view of providing technical or financial assistance by the Social Welfare Services, under the form of a State subsidy, for the *development of actions in local societies*.
- *Care Programmes for Drugs*: programmes including prevention, timely intervention, treatment and social inclusion of persons that are addicted to drugs.
- *Care Programmes at Prisons* for condemned persons who are mentally ill and require long-term treatment and care. We are not aware of the state of progress of said programme.

### **Cash benefits**

According to data provided by the national administration, cash benefits relating to home care amount to € 6 per hour or a maximum of € 240 per month; cash benefits relating to day care vary from € 85 to € 137 per month, depending on the services offered to the recipient concerned, and cash benefits relating to residential care vary from € 623 to € 744 per month.

With regard to home helpers, in the case of a person in need of 24-hour home care who is entitled to public assistance, it was reported by Social Welfare Services that from 1.7.2011, their salary amounts to € 326, plus social insurance contributions amounting to € 83.

- *Care benefit*: intended for paraplegics and quadriplegics who are in need of personal care due to wheelchair use and limited body functioning.
- *Financial Assistance for Technical Equipment Benefit*: addressed to disabled persons aiming to improve their quality of life by using technical means that contribute to their autonomy at the workplace and at home.
- *Financial Assistance for Wheelchairs Benefit for People with Severe Mobility Impairment*. The scheme aims at ensuring a financial aid in view of covering certain additional needs of persons with severe motor disabilities. The persons concerned cannot walk and permanently sit in the wheelchair.
- There is an *allowance concerning the blind* (ειδική χορηγία για τυφλούς) which is granted on an annual basis by the Service of Grants and Benefits of the Ministry of Finance under the conditions provided in Article 6 of the Law on Special Grants of 1996 (Ο περί Παροχής Ειδικών Χορηγιών Νόμος του 1996). The allowance should enable the beneficiaries to deal with the specificities concerning their disability (e.g. purchase of special devices, adaptation of their domicile in view of improving their conditions of living, etc).
- A *child benefit* is granted under the conditions provided in the Act on Child Benefits of 2002 (Ο περί Παροχής Επιδόματος Τέκνου Νόμος του 2002). Its personal scope of beneficiaries includes children aged under 18, unmarried dependants aged 18-25 doing their military service or aged 18-23 engaged in education, dependants aged 23-25 engaged in education for the same duration as their military service and children, regardless of their age, who are permanently deprived of their capacity for self-preservation.

### **Combination of benefits**

Recipients of public assistance who are in need of short or long-term care may be provided services in kind and/or cash benefits for care.

Care services include day care, residential care and home care. Cash benefits include the monthly fees paid for residential/day care, the Home Helper's salary and social insurance contributions, and pocket money for persons who live in public residential homes and Community Homes.

The claimant cooperates with a welfare officer to develop his or her personal care plan (e.g. type of care, frequency) based on individual needs for care services in kind and/or cash benefits.

The claimant has the choice to decide on the type of care (in cash and/or in kind) needed.

### **Benefits for the carer**

*Social Welfare Services (Υπηρεσίες Κοινωνικής Ευημερίας):*

The State may pay (fully or partly) a private home carer who may be a family member. It is possible to compensate a family member who provides long-term care (if a family member is required to stop working for that purpose, or if he or she is of low socio-economic standing),

or a friend or a non-governmental organisation, offering home care services for the provision of long-term care to persons entitled to public assistance who are in need of care. Moreover, the state may pay the salary and the social security contributions of a Home Helper in the case of a person in need of 24-hour home care who is entitled to public assistance. In the case of informal caregivers a contract is signed between the Social Welfare Services, the person in need and the caregiver (if the amount allocated for care exceeds a certain amount).

## CZECH REPUBLIC

### Applicable statutory basis

- Act No. 108/2006 on social services (*Zákon o sociálních službách*).
- Act No. 20/1966 on Care for Public Health (*Zákon o péči o zdraví lidu*).
- Act No. 48/1997 on Public Health Insurance (*Zákon o veřejném zdravotním pojištění*).
- Act No. 160/1992 on Non-State Health Care Facilities (*Zákon o nestátních zdravotnických zařízeních*).

### Benefits in kind

The benefits in kind are regulated especially by Act 108/2006 on social services. Among the social services, the home services, home social care services and personal assistance are regulated. There are also special health care facilities provided to people in need of LTC, regulated by Act 20/1966 and financed by the health insurance system. This service is, however, financed for a definite time only. When the situation of the patient does not improve, there are classical social services offered.

#### 1. Home care

##### *Health care facilities:*

Special outpatient facilities: home health care, home health care agencies (note that home care workers ensure only medical care), palliative care, and hospices.

##### *Social services:*

Home services (in clients' home ensuring social assistance and support apart from specialised medical treatment):

- home social care services (domiciliary care provides assistance in the care of one's own person, organising meals and assistance in running a household to people with a limited ability in the area of personal and home care),
- personal assistance (intended for people whose capabilities are limited because of disabilities, age or illness for example in the areas of personal care, use of public places, household care, contact with family and broader society. The service is provided in the environment where the individual lives, works, etc. The personal assistance services include reading, interpreting and guiding services),
- emergency care,
- early intervention services (oriented towards entire families with a young child whose development is at risk because of a disability or illness. The service includes the use of educational, social and health care measures. The objective is to return or maintain the parents' competence to raise the child and create suitable conditions for the child's development. The services are provided in the household and specialised day care institutions, usually free of charge)
- social counselling (part of every kind of social service).

#### 2. Semi-residential care

In case the person only needs day care, especially when the health situation of the person allows it, there are day care centres available according to the Social Services Act.

Day and week care centres are intended for people whose capabilities are limited, particularly in the areas of personal care and household care and who cannot live at home on a daily basis without someone else's assistance. Providing temporary housing may be part of the service.

In the same vein, there are also some specific outpatient services, like day service centres, respite care services etc., again regulated by the Social Services Act.

Respite care is the assistance for families that take all year-long care of a disabled person or a senior. The provider supplies services to the individual at times when the family members are at work, on holiday, do common errands outside the home, etc. The care is provided in the household or in specialized residential institutions (day care or short-term stays of up to three months).

### **3. Residential care**

#### *Health care facilities:*

Aftercare health care facilities: establishment for the long-term ill, expert and rehabilitation treatment institutes, mental hospitals.

#### *Social services:*

Residential services are mainly provided under the social services act, which envisages establishing residential services facilities: weekly short-stay social welfare institutions, homes for the elderly and persons with disabilities and special purpose homes (for the mentally ill, for drug addicts, persons with Alzheimer's dementia, etc.).

Stays in homes for the elderly and homes for the people with learning disabilities are intended for people whose capabilities are limited, particularly in the areas of personal care and household care and who cannot live at home in this situation. Providing housing in accommodation that is specifically designated for such a purpose and substitute homes for the users are a part of the service. The service is not restricted by time.

Protected and supported housing is intended for people whose capabilities are limited, particularly in the areas of personal care and household care and who want to live independently in the standard environment. Providing housing in an apartment that represents a home for the user, is managed by the provider and is part of a standard housing complex, is a part of the service.

Other social services and special purpose homes are intended for persons in specific situation, e.g. homelessness, drug addiction, poverty etc.

The residential care services are mainly run by the public local authorities – often established by the cities or municipalities – there are, however, also some NGOs, especially the church NGOs, which also establish residential care services for people in need of LTC.

### **4. Other benefits**

No other benefits are directly applicable.

Some additional social assistance benefits might be mentioned, if also rehabilitation and occupational and empowerment activities would be considered as LTC. The social assistance benefits are regulated by Act No. 100/1988 Coll. on social security and by order of the Ministry of Labour and Social Affairs No. 182/1991 Coll. on implementing the act on social security. Under this legislation, a *benefit for compensation assistance tools* – like a wheelchair, stocks etc. – can be claimed, as well as an *allowance to buy a car for a handicapped person or to rebuild a house or a flat in order to make it barrier-less*. However, these benefits do not fall under the coordination and, from the coordination's point of view, are not considered as LTC benefits.<sup>21</sup>

<sup>21</sup> This argument is underpinned by the Czech note stating that the reference to the additional social assistance benefits is no longer up-to-date, however, as these benefits do not come within the material scope of coordination rules, it is not necessary to amend the list.

## **Cash benefits**

In case of LTC, the most important cash benefit seems to be the *care allowance*, as regulated in the Social Services Act. Care allowance is a benefit paid to individuals dependent on care to arrange for necessary care or services. The rate of the care allowance varies according to the age of the beneficiaries (aged under or over 18) and the degree of dependency (based on an assessment of self-care capabilities - ADL, IADL). There are four levels of amount of the care allowance according to the seriousness of health problem, disability and incapability of self-sufficiency etc. Users pay for care and have a choice to use care allowance for either professional or informal care.

## **Combination of benefits**

Benefits in kind and cash benefits can be combined.

The person in need of care may not choose between benefits in kind and cash benefits, but has a choice to use a cash benefit (care allowance) for either professional or informal care.

## **Benefits for the carer**

Carers are not entitled to specific benefits. They receive the care allowance from dependent persons. The State pays health and social insurance contributions for those registered as informal carers. Periods of caring are taken into account for the purposes of old-age pension calculation.

However, Respite care as assistance for families is provided (see point 2. Semi-residential care, above).

## DENMARK

### Applicable statutory basis

- Consolidated Act No 81 of 04/02/2011 on Social Service Benefits (*om social service*).
- Consolidated Act No. 103 of 11/02/2011 on Social Housing (*om almene boliger*).
- Consolidated Act No. 663 of 14/06/2011 on Housing Subsidies (*om individual boligstøtte*)
- Consolidated Act No. 666 of 17/06/2010 on Housing for elderly and handicapped persons (*om boliger for ældre og personer med handicap*)
- Consolidated Act No. 743 of 27/06/2011 on Help with the purchase of equipment and consumables after the Consolidated Act on social services benefits (*om hjælp til anskaffelse af hjælpemidler og forbrugsgoder efter serviceloven*)

### Benefits in kind

#### 1. Home care (consolidated Act on Social Service Benefits, Section 83)

Personal hygiene, domestic help and assistance to a person to maintain his or her capacities (rehabilitation).

In some cases, the accompanying person under 67 years (for persons who are severely disabled the accompanying service includes 15 hours monthly).

#### 2. Semi-residential care (consolidated Act on Social Service Benefits, Section 108)

The municipal council shall provide accommodation in facilities suitable for long-term accommodation for persons in need of extensive assistance for general day-to-day functions or care, attendance or treatment, where such needs cannot be addressed in any other way.

The municipal council can offer people who have need for it, a temporary stay in a care centre or nursing home.

After specific individual evaluation, relief can be granted to a family or a person taking care at home of a person with a reduced mental or physical functional capacity. This relief can take the form of care in a day centre or of an overnight stay in a nursing home.

#### 3. Residential care (Consolidated Act on Social Housing)

There are many different types of housing (mainly for elderly, but also for disabled persons):

- Family home
- Close-care accommodation
- Private nursing home
- Private nursing home/private dwelling

The local authority decides whether a citizen requires assistance which cannot be given in the form of home care. If a citizen is offered residential accommodation, she or he can choose between different alternatives within the municipality or even in other municipalities.

#### **4. Other benefits**

- the adaptation of the dwelling and provision of special equipment, consolidated Act on Social Service Benefits, Section 100.
- The replacement and relief of a person who is providing his or her partner or a close relative care at home, the consolidated Act on Social Service Benefits, Section 84.
- Subsidies for the purchase of cars. Consolidated Act on Social Service Benefits, Section 114:
  - Subsidies for the purchase of cars shall be available for persons with permanently impaired physical or mental function substantially reducing their freedom of movement or substantially reducing their possibilities of finding or maintaining employment or completing an education without the use of a car.
  - Technical aids. Consolidated Act on Social Service Benefits, Section 112 (1): The municipal council shall grant support for technical aids for persons with permanent impairment of physical or mental function, where the aid
    - (i) will remedy the permanent effects of the functional impairment significantly;
    - (ii) will facilitate daily life in the home significantly; or
    - (iii) is necessary to enable the person to carry out an occupation.

The municipal council may direct that a specific aid shall be supplied by particular contractors. In connection with the conclusion of supply contracts by the municipal council, representatives of the users shall be involved in the drafting of performance specifications. In some cases there are free choices, e.g. hearing aid.

- Housing subsidies: Consolidated Act on Housing Subsidies section 2a: Owners or members of private housing cooperatives who are severely physically disabled and whose dwelling is suitable for such purpose, shall upon application be eligible for housing benefits under this Act. The same shall apply for persons who are severely physically disabled, and who share a household with a tenant, an owner or a member of a private housing cooperative, and who live in a dwelling suitable for severely physically disabled persons.
- Food service (Madservice-ordning) The Consolidated Act No. 81 of 04/02/2011 on Social Service Benefits, Chapter 16, Section 83: The municipality must offer citizens in need food service. The citizen can receive the food service after a specific individual evaluation. The food service requires payment from the citizen.

#### **Cash benefits**

In Danish note it is argued that for coordination purposes benefits mentioned under “cash benefits” seem to be better placed under “benefits in kind” in accordance with the definition given in Art. 1 (va) of the Regulation 883/2004.

*Subsidies in cash:* • The Consolidated Act on Social Services, Section 95 (1): If the municipal council is unable to provide the necessary assistance for a person in need of assistance under sections 83-84, the municipal council may instead pay a subsidy towards any assistance engaged by such person.

- The Consolidated Act on Social Services, Section 96 (1): The municipal council shall offer citizen-controlled personal assistance. Citizen-controlled personal assistance shall be offered in the form of subsidies to cover the cost of employing care assistants and supervision and attendance of citizens with considerably and permanently impaired physical or mental function who require special support.

*Necessary extra costs in relation to disability:*

The Consolidated Act on Social Service Benefits, Section 100 (1): The municipal council shall pay any necessary extra costs relating to the personal day-to-day maintenance of persons between the age of 18 and the state pension age, cf section 1 a of the Act on Social Pensions, with permanent impairment of physical or mental function, and of persons with permanent impairment of physical or mental function who have deferred their claim for old-age pension pursuant to Section 15 a of the Act on Social Pensions. It shall be a condition that the extra costs are a result of the impaired function and are not recoverable under any other legislation or under other provisions of this Act.

**Combination of benefits**

No mixed benefits.

**Benefits for the carer**

The Consolidated Act on Social Service Benefits, Section 84: A person with a gainful activity who wishes to take care of a closely related person suffering from a significant disability can be employed by the municipality where the disabled person lives.

## **ESTONIA**

### **Applicable statutory basis**

The Social Welfare Act (*Sotsiaalhoolekande seadus*) of 1995.

### **Benefits in kind**

#### **1. Home care**

Home care is provided by local government, helping them to manage in their usual environment, excluding the care that requires physical contact.

Long-term supportive services are continuously provided for people living independently to enable them to use general public services.

Home services are, for example, cleaning and caring for the house, the procurement of food, pharmaceuticals, other necessities and firewood or other fuel, and information and assistance in administrative matters.

#### **2. Semi-residential care**

Provided by local government, to support a person or his or her family to maintain capacity in institutions where the person spends the day. Day care is provided by day centres where social services, developmental and hobby activities are offered during the day. An elderly or disabled person can visit the day centre as often as he or she wishes (has need for).

Day care centres can offer services for people with dementia – family members/caregivers bring a person diagnosed with dementia to the day care centre and professionals take care of him or her.

The purpose of day centres is to maintain the welfare and activity of their clients; and to support them in staying at home for as long as possible.

#### **3. Residential care**

Nursing homes, homes for the elderly and disabled.

#### **4. Other benefits**

Technical appliances (including prostheses) financed by the State and community based mental health services for people with special mental needs, partially provided by the State and partially by the local government.

Activities aimed at improving the mobility of persons (various transportation subsidies/services) could also be considered. The reason is that the freedom of mobility plays the most important role in ensuring people's independence and awareness of social activity.

It seems important to add that the organisation of LTC is predominantly done by local authorities. Local governments provide a flexible approach to a wider opportunity for LTC services with existing local needs and resources.

### **Cash benefits**

No cash benefits. Estonia only has benefits in kind. It is believed that at the moment it is not the most appropriate time to create the cash benefit system. It is argued that long-term care, in particular, first needs a variety of services and assistance, and less direct forms of financial assistance.

### **Combination of benefits**

No cash benefits.

### **Benefits for the carer**

The Caregiver's Benefit (*hooldajatoetus*): provided by the local governments to caregivers who support persons with an assessed degree of disability in everyday activities (paying bills, organising transportation to a doctor or to a bank when needed) and who also provide care service at home (personal assistance in eating, clothing, washing; home assistance in cleaning, cooking, buying products). In some local governments this benefit is paid to the disabled person.

The conditions are regulated by the local governments and may therefore differ. The main condition is that the caregiver or the family member who provides the care has been appointed by the local government. The amount is different (€ 25.56 – 31.96), plus national insurance contributions. The benefit is applicable for the informal caregiver. **85 / 156**

## FINLAND

### Applicable statutory basis

- The Disability Benefits Act (*Laki vammaisetuksista*) of 11 May 2007.
- The Services and Assistance for the Disabled Act (*Laki vammaisuuden perusteella järjestettävistä palveluista ja tukitoimista*) of 3 April 1987.
- The Act on interpretation services for disabled persons (*Laki vammaisten henkilöiden tulkkauspalveluista*) of 19 February 2010.
- The Social Welfare Act (*Sosiaalihuoltolaki*) of 17 September 1982.
- The Act on Support for Informal Care (*Omaishoidon tuki*) of 2 December 2005.
- The Act on Special Care for Handicapped Persons (*Laki kehitysvammaisten henkilöiden erityishuollosta*) of 23 June 1977
- The Primary Health Care Act (*Kansanterveyslaki*) of 28 January 1972.

The Finnish legislation concerning disability benefits has been changed as of the 1st of January 2008. Disability benefits are gathered under one Act Concerning Disability Benefits (*Laki vammaisetuksista*) (570/2007).

The child care allowance has been abolished and replaced by a benefit called the **Disability allowance for persons under 16 years of age**.

The Finnish Disability allowance which was mentioned in annex IIa of Regulation 1408/71 is also abolished from Finnish legislation and replaced by a benefit called The **Disability allowance for persons aged 16 years or over**.

The **Pensioners' care allowance** has been transferred from the Act concerning National Pension to the Act Concerning Disability Benefits (*Laki vammaisetuksista*) (570/2007). There is also a fourth benefit covered by the same act, namely the **Dietary Grant for persons with celiac disease**.

It might be argued that only benefits provided under the Disability Benefits Act should be considered as LTC benefits for the purpose of the social security coordination. The other benefits (housing allowance for pensioners) and services mentioned might not be considered as LTC benefits, but as social services which seem to be outside the scope of the Regulations. All services mentioned are provided by the municipalities with a wide discretion on the need to provide these services in the municipality in question. The person in need of care does not have a right to a specific service, but it is the municipality that evaluates which type of services can and should be provided in the situation in question.

### Benefits in kind

#### 1. Home care

Home services and services for the disabled (transport services, a personal assistant, house alteration).

Support for informal care (care allowance, statutory leave for the caregiver, support and counselling).

#### 2. Semi-residential care

Service housing for older people and people with disabilities who need outside support and assistance, which cannot be arranged in an ordinary dwelling. **86 / 156**

### 3. Residential care

Statutory institutional care services include the institutional services provided in homes for elderly, in the inpatient wards of municipal health centres and in specialised care units for people with mental disabilities. Long-term institutional care is given in various types of nursing homes and homes for disabled war veterans. NGOs and private firms also provide institutional care in old people's homes and private hospitals.

### 4. Other benefits

Technical equipment, when needed.

#### Cash benefits

Pensioners' care allowance (*Eläkkeensaajien hoitotuki*): € 57.55 per month.

Increased rate: € 143.27 per month.

Special rate: € 302.96 per month.

Pensioners' housing allowance (*Eläkkeensaajien asumistuki*)

Disability allowance for persons under 16 years of age and disability allowance for persons aged 16 years or over (*Alle 16-vuotiaan ja 16 vuotta täyttäneen vammaistuki*):

Both benefits have three rates depending on the degree of strain: € 85.93, € 200.51 or € 388.80 per month.

*The Disability Allowance for persons under 16 years of age* is payable at three rates.

- Basic rate (€ 85.93 per month)

The disability allowance at the basic rate is payable for a child who on account of an illness, injury or handicap needs treatment and rehabilitation at least weekly, placing the family under additional strain for at least 6 months.

- Middle rate (€ 200.51 per month)

The disability allowance is paid at the middle rate if the treatment and rehabilitation of the child imposes a considerable daily strain for at least 6 months.

- Highest rate (€ 388.80 per month)

The disability allowance is paid at the highest rate if the treatment and rehabilitation of a child imposes an extreme, around-the-clock strain on the family for at least 6 months.

Disease-specific evaluation

The amount of disability allowance payable does not solely depend on the diagnosis but also on the strain that the illness or injury imposes on the family and the level of commitment it requires. Certain diseases are relatively uniform in terms of the amount of care and assistance they demand, the strain they impose and the level of commitment they require. These diseases and the special needs associated with them are defined in the administrative guidelines applied by Kela.

The effect of other benefits and income

Eligibility for the disability allowance does not depend on the income or assets of the child or family, nor is the award of the allowance prevented by other benefits or compensations. However, if the child is in receipt of a foreign benefit comparable to the disability allowance, this foreign benefit may be deducted from the Finnish allowance. Similarly, if the child is in

receipt of a care allowance or a supplementary handicap benefit from a workers' compensation or motor vehicle insurance plan, it is deducted from the disability allowance.

***The disability allowance for persons over 16 years of age*** is payable at three rates depending on the need of assistance, guidance and supervision as well as special expenses.

- Basic rate (€ 85.93 per month)

You can receive a disability allowance at the basic rate if you have an illness or injury that causes you significant hardship and continuous expenses. The expenses must be at least equal to the amount of the basic disability allowance per month.

- Middle rate (€ 200.51 per month)

You can be paid a disability allowance at an increased rate if the hardship is considerable and you need outside assistance or supervision at least weekly or you have expenses that are at least equal to the amount of the increased disability allowance per month.

- Highest rate (€ 388.80 per month)

The disability allowance at the highest rate can be awarded to persons with severe disabilities who need substantial outside assistance on a daily basis or who incur substantial expenses from their disability. The expenses have to be at least equal to the amount of the highest disability allowance per month. Persons who are blind, unable to move or prelingually deaf are always entitled to the highest rate of disability allowance.

The ***Care Allowance for Pensioners*** is payable at three rates depending on the need of assistance, guidance and supervision as well as on special expenses.

- Basic rate (€ 57.55 per month)

You may be eligible for the basic rate if your illness or injury results in at least a weekly need of assistance in personal activities of daily living or guidance or supervision with them. If your illness or injury causes special expenditure that is at least equal to the amount of the basic rate, you may be eligible for the allowance. Persons who are blind or unable to move are always eligible for the basic rate at least.

- Middle rate (€ 143.27 per month)

You may be eligible for the middle rate if your illness or injury results in a daily need of several personal activities (such as eating, getting dressed, washing) or if you need regular guidance and supervision. If your illness or injury causes special expenditure that is at least equal to the amount of the middle rate, you may be eligible for the allowance.

- Highest rate (€ 302.96 per month)

You may be eligible for the highest rate if your illness or injury results in an around the clock assistance and guidance by another person. If your illness or injury causes special expenditure that is equal to the amount of the highest rate, you may be eligible for the allowance.

- The Care Allowance for Pensioners is a tax-free benefit.

### ***Special expenses***

For disability benefits purposes, 'special expenses' refers to necessary additional costs incurred on account of an illness or injury in respect of work, study or activities of daily living. Usually, only regular expenses lasting at least 6 months (and not one-time costs) are covered.

Are for example recognised as special expenses:

- the costs of medical care and medication
- additional transportation costs
- the costs of home health care and home help.

Are for example not recognised: normal expenditures for food or clothing, hobbies, purchases of equipment or car ownership costs.

The amount of the *Dietary Grant* is € 21.00 per month.

The use of the Pensioners' Care Allowance (*Eläkkeensaajien hoitotuki*), the Pensioners' Housing Allowance (*Eläkkeensaajien asumistuki*), and the Disability Allowance for persons under 16 years of age and the disability allowance for persons aged 16 years or over (*Alle 16-vuotiaan ja 16 vuotta täyttäneen vammaistuki*) is at the discretion of the beneficiary.

### **Combination of benefits**

Depending on the degree of disability and the need of care.

Both cash benefits and benefits in kind are provided through different schemes.

No free choice between cash benefits and benefits in kind. Municipalities can provide a service voucher (benefit in kind).

### **Benefits for the carer**

Caregiver's allowance: depends on the municipality, the minimum is € 336.41 per month. Those caregivers who have made an agreement with the municipality have the right to 3 free days per month.

## FRANCE

### Applicable statutory basis

The supplement for assistance of a third party (*majoration pour aide d'une tierce personne*): Articles L. 341-4, L. 355-1 and L. 434-2 of the Social Security Code (*Code de la sécurité sociale*).

The special education supplement for a disabled child (*complément d'allocation d'éducation de l'enfant handicapé*):

Article L. 541-1 of the Social Security Code (*Code de la sécurité sociale*).

The disability compensation allowance (*prestation de compensation du handicap - PCH*):

Article L. 245-1 of the Social Action and Family Code (*Code de l'action sociale et de la famille*).

The allowance for loss of autonomy (*allocation personnalisée d'autonomie - APA*):

Article L. 232-1 of the Social Action and Family Code (*Code de l'action sociale et de la famille*)

### Benefits in kind

#### 1. Home care

The disability compensation allowance (*prestation de compensation du handicap - PCH*) and the allowance for loss of autonomy (*allocation personnalisée d'autonomie - APA*):

Assessment of the assistance required for staying at home. The amount of the benefit depends on the assistance plan used, less the participation of the beneficiary, calculated according to his or her means.

France chose to treat dependency and disability differently by creating two distinct types of benefit: the allowance for loss of autonomy (*allocation personnalisée d'autonomie*, APA) for older people and disability compensation allowance (*prestation de compensation du handicap*, PCH). These benefits are granted to older or disabled people living at home (APA and PCH) or in institutions (APA).

The APA and the PCH are compulsory benefits governed and granted outside the French legal framework for social insurance and without the involvement of a social-security body: they are managed by local authorities or departments (or *conseils généraux*) under social-assistance legislation. Social-assistance benefits and benefits granted under social-insurance schemes (social security, supplementary schemes) together make up the social-protection system in France.

The APA was created by Act No 2001-647 of 20 July 2001 on provision for the loss of independence of older people and the personal independence allowance. This law laid down the right to APA of any older person unable to cope with the consequences of a lack or loss of independence due to his or her physical or mental state. Any person aged over 60 may apply for APA; the amount to be granted depends primarily on the degree of dependence, with remaining costs to be met by the person concerned at a level commensurate with his or her resources. The four most severe levels of dependence (1 to 4) always confer a potential right to assistance. The maximum amounts granted under the assistance plans directly financing benefits range from € 552.03 for people registered as GIR 423 to € 1 288.09 for GIR 1 (the most severe level). These assistance plans are paid for by the local authority where the older person's income is less than € 725.23 per month.

23 GIR = *Groupe iso-ressources* [iso-resource group] **90 / 156**

This benefit in kind directly finances a very wide range of services: expenditure linked to remuneration for a home help, temporary reception costs (with or without accommodation) in institutions, payments for services rendered by foster carers and the costs of transport, technical aids, adaptations to dwellings and any other expenditure enhancing the beneficiary's independence.

To cope with the rapid rise in the costs of this benefit and the corresponding costs for the departments, various reforms have been introduced with a view to financing the APA. One important provision of the Act of 30 June 2004 on solidarity for the independence of older and disabled people was to create the Solidarity Day, which takes the form of an extra, unpaid working day for employees and an "independence solidarity" contribution of 0.3% for employers, based largely on wages and salaries. The funds collected are managed by the National Solidarity Fund for Independence [*Caisse nationale de solidarité pour l'autonomie – CNSA*], a State-administered public enterprise.

The Act of 11 February 2005 on equal rights and opportunities, participation and citizenship for persons with disabilities provided for *disability compensation allowance [prestation de compensation du handicap or PCH]*. This benefit takes the form of personalised financial assistance to cover needs linked to the loss of independence of people having become disabled before age 60, provided that it is applied for by age 75 at the latest. These needs are recorded in a personalised plan drawn up by a multidisciplinary team from the *Maison départementale des personnes handicapées (MDPH)* (the department's disabled people's centre) on the basis of a life plan expressed by the person concerned.

This benefit in kind covers the costs linked to a need for human or technical assistance, adaptations to the disabled person's dwelling or vehicle, any additional transport costs or specific or exceptional expenditure, such as the costs of acquiring or maintaining products associated with the disability or assistance animals.

Although the departments manage both the APA and the PCH, these benefits are not financed entirely from the local authorities' own tax resources. The national solidarity fund contributes in the form of assistance paid to the departments by the CNSA. This assistance is supplied by the independence solidarity contribution (CSA), supplemented for the APA by part of the general welfare contribution (*contribution sociale généralisée - CSG*). The CSA and CSG are taxes under French law, not social-security contributions. The CNSA contributes 29% of APA funding and 58% of PCH funding.

Public expenditure on financing dependence is not limited to the APA and the PCH; other institutions also contribute:

- the State in the form of the tax expenditure linked to income tax exemptions or reductions linked to dependence;
- health insurance for expenditure on care by social and medico-social establishments and services, hospital and non-hospital care, the costs of social services and regional health insurance funds and exemptions from social contributions linked to dependence financing;
- the National Solidarity Fund for Independence (CNSA) also helps to finance establishments, the promotion of innovative schemes, the improvement of professional skills, publicity, prevention and studies and to co-finance investment operations;
- the National Old-Age Insurance Fund [*Caisse nationale d'assurance vieillesse – CNAV*], the Central Agricultural Mutual Insurance Fund [*Caisse centrale de mutualité sociale agricole – CCMSA*] and the self-employed persons' social scheme [*Régime social des indépendants – RSI*] cover the costs of support at home and in communal establishments;
- the National Family Allowances Fund [*Caisse nationale d'allocations familiales – CNAF*] finances social housing allowances and personalised housing assistance.

In 2011 the Government organised a major national debate on the dependence of older people that gave rise to several working groups, analytical reports and proposals. The results of this work should feed into the discussions on a reform of dependence financing in 2012. This has been postponed until after the presidential elections.

## **2. Semi-residential care**

The disability compensation allowance (*prestation de compensation du handicap - PCH*) and the allowance for loss of autonomy (*allocation personnalisée d'autonomie - APA*):

The possibility to receive the benefit in case of day care in a specialised centre. The number of hours granted depends on the evaluation of the need of assistance. See point 1. Home care, above.

## **3. Residential care**

Accommodation in a social or medico-social institution, hospitalisation in a health institution. The Institution for accommodating elderly dependent persons (*Établissement pour hébergement pour personnes âgées dépendantes, EHPAD*).

In case of accommodation in a specialised institution, the amount of the benefit corresponds to the amount of the expenses corresponding to the degree of loss of autonomy according to the institution's tariffs, minus the participation of the beneficiary him or herself.

## **4. Other benefits**

Technical aids granted for the purchase or renting of specific equipment, adaptation of frequently used equipment, housing support (adaptation), transport-related support, specific or exceptional help, assistance animals.

Some other benefits might be mentioned as well:

- the *aide ménagère* (household aid) is a social assistance benefit granted by local authorities or by local social security institutions. They cover costs such as house cleaning, meal preparation or delivery, 24-hour medical assistance, etc. Usually, it is a means-tested benefit. It can be either a cash benefit or a benefit in kind (the amount based on actual expenses);
- the *majoration pour tierce personne* is provided to pensioners who, before age 65, need the assistance of a third person to accomplish their daily life activities;
- the *SSIAD* are service providers who provide special care for dependent persons who stay at their home.

## **Cash benefits**

The supplement for assistance of a third party (*majoration pour aide d'une tierce personne*): 40% increase of the pension, with a monthly amount of at least € 1 038.36.

The special education supplement for a disabled child (*complément d'allocation d'éducation de l'enfant handicapé - Aeeh*):

6 categories of supplements ranging from € 93.41 to € 1 038.36 per month.

A specific increase for dependent children of a single parent, who is benefiting from the allowance and from a supplement for a disabled child of at least the 2nd category (between € 50.60 and € 416.44).

Discretionary use.

The adult disability allowance (*allocation aux adultes handicapés - AAH*) could be mentioned as well. It is a cash benefit which provides a minimum income for disabled persons. It is completed by the *majoration pour la vie autonome* (supplement for independent life).

### **Combination of benefits**

No mixed benefits.

Choice between the special education supplement for a disabled child (*complément d'allocation d'éducation de l'enfant handicapé*) and the disability compensation allowance (*prestation de compensation du handicap*). The choice is made on the basis of the proposals in the personalised compensation plan.

### **Benefits for the carer**

The employed carer is entitled to benefits on the same basis as other employees.

The beneficiary of the allowance can make use of home services offered by specialised organisations (services organised by the municipality, by State authorised associations or by undertakings). She or he can also opt to remunerate these organisations by using a universal service employment cheque (*chèque emploi service universel, CESU*). The beneficiary can choose to be employer him or herself, either directly or by proxy.

In addition, persons who take care of a dependent person can get tax advantages. There is also a waiving of tax contributions on the salary of a person employed by a dependent.

### **Addendum: Social security coordination aspects**

According to the Note of the French delegation, the listing essentially puts four major benefit or assistance categories:

- the "dependency" benefits: the allowance for loss of autonomy (APA) and disability compensation allowance (PCH);
- the social-security benefits coordinated in chapters of the Regulation other than sickness, such as the supplement for permanent assistance from another person which constitutes an old-age benefit, or the supplement paid with disability benefit;
- the special non-contributory benefits mentioned in Annex X of the Regulation, such as the disabled adults' allowance (*allocation aux adultes handicapés, AAH*);
- assistance arising from social assistance or from social action by organisations.

The local assistance able to be granted by local authorities or social-security bodies is a non-compulsory fringe benefit whose grant criteria, amount, purpose and conditions of use vary according to the territories, authorities or bodies paying it, which are not obliged to grant it. This would be very hard to coordinate under Regulation 883/2004, which according to the Note of the French delegation means that it should not be covered by the Regulation.

Apparently, only the APA and the PCH constitute long-term care benefits within the scope of the proposed definition in the trESS 2011 report, and should remain on this list. These benefits, and the APA in particular, have for several years been treated as social-security benefits in the Union law, particularly in the light of the findings in the *Molenaar* (1998) and *Jauch* (2001) cases; under French national law these benefits are classed as social-assistance benefits. They are granted subject to on-the-spot assessment of the specific situation and needs of each applicant; the content and extent of the assistance are individualised on the basis of this assessment. Lastly, these benefits are non-contributory and are financed by taxes. The AAH was recognised in the Union law as a special non-contributory benefit and is mentioned as such in Annex X to the Regulation. According to the view of the Note of the French delegation, this classification need not be reviewed, since it is a social minimum unrelated to the sickness risk, optional in use and intended to combat monetary poverty.

The other social-security benefits should continue to be coordinated according to the current rules in the Regulation. The types of assistance arising from local social action (municipality, department) or from social-security funds or other organisations, provided that they are

optional, are not suitable for coordination by Regulation, and it is suggested in the Note of the French delegation that they be removed from this list.

## GERMANY

### Applicable statutory basis

Statutory long-term care insurance (*Gesetzliche Pflegeversicherung*):

Social long-term care insurance for persons insured under statutory sickness insurance and private compulsory long-term care insurance for persons insured under private sickness insurance: Social Code (*Sozialgesetzbuch*), Book XI (SGB XI), lastly amended by Article 3 of the Act to regulate the need of care assistance in hospitals (*Gesetz zur Regelung des Assistenzpflegebedarfs im Krankenhaus*) of 30 July 2009 (BGBl. I, S. 2495).

Social assistance (*Sozialhilfe*):

Social Code (*Sozialgesetzbuch*), Book XII, - social assistance -, of 27 December 2003.

As of: the Act on Family Benefits (*Familienleistungsgesetz*) of 22 December 2008 (BGBl. I S. 2955).

According to the Note of the German delegation, long-term care benefits are not only provided by the statutory and the private long-term care insurance and the social assistance scheme, but also e.g. by the work-accident insurance, if the need for long-term care ensues from an industrial accident or an occupational disease. The need for such long-term care is basically taken into account by a care allowance („Pflegegeld“). This benefit currently ranges from € 310 to € 1 2140 (West) and from € 272 to € 1 086 (East) depending on the amount of care needed. At the request of the insured person, nursing care at home („Hauspflege“) or in an appropriate residence („Heimpflege“) may also be provided.

Benefits in case of need for long-term care or supplements are also provided according to the Federal Law on War pensions (“Bundesversorgungsgesetz”), where the contingency occurred in the course of the exercise of a military or similar service or due to an accident suffered during such a service.

The amounts below have been adjusted (increased) as of the beginning of 2012.

### Benefits in kind

#### 1. Home care

Monthly benefits in kind (provision of basic care, general care and domestic help by outpatient care centres or individual carers) which amount:

- Category I: up to € 440;
- Category II: up to € 1 040;
- Category III: up to € 1 510;
- In cases of particular hardship: up to € 1 918.

Several persons in need of care, especially in new forms of housing, can combine entitlements to benefits in kind (the so-called “pooling”) and the increased efficiency, especially of care benefits, are to be used in favour of the “pooling” participants.

#### 2. Semi-residential care

Monthly benefits in kind for care in day and night centres in addition to home care which amount:

- Category I: up to € 440;
- Category II: up to € 1 040;
- Category III: up to € 1 510.

Apart from the entitlement to day/night care, a 50% entitlement to the respective outpatient care benefit in kind or care allowance remains.

### **3. Residential care**

A lump-sum payment of the costs for care, medical care treatment and social care expenses as a monthly benefit in kind in the following categories:

- Category I: € 1 023
- Category II: € 1 279
- Category III: € 1 510
- In cases of particular hardship: € 1 825.

In addition, the care insurance pays care providers for additional care of persons with significant general need for long-term care. For every 25 persons an additional carer could be engaged.

### **4. Other benefits**

- Benefits for home care are complemented by aids and appliances to facilitate the provision of care, unless, as a result of illness or disability, they have to be provided by another fund, and by technical aids and appliances for household activities, used for the alleviation of home care or mitigation of ailment of the person in need of long-term care or to support an individual way of life of such a person. Expenses for aids and appliances meant for usage are reimbursed up to € 31. Technical aid is preferably provided on loan. In certain circumstances participation of 10% is due, but not more than € 25.
- Courses of instruction in the provision of care for caring family members and other voluntary carers.
- Respite care (*Pflegevertretung*) provides carers a break from normal caring duties and thus alleviates the burden of caregiving: payment up to an amount of € 1 510 for a maximum of 28 days in the calendar year for the substitution of a carer, if he or she is on holiday or ill. The carer must, however, have provided care for at least twelve months prior to the date of his or her absence. If the stand-in is a professional carer or works for a home care service, the long-term care insurance fund will cover the cost up to a maximum amount mentioned above. This amount can likewise be claimed if the stand-in is a neighbour or distant relative (i. e. not a first or second degree relative or in-law).
- Short-term care (*Kurzzeitpflege*): In case of absence of a carer or following the inpatient care, the costs of residential care during a short period up to a maximum of 28 days per year are covered for an amount of € 1 510. Short-term care for children in need of care up to 18 years is also possible in the support institutions for disabled people or in other appropriate institutions.
- Additional care benefits for persons with an extensive general need of care (e.g. people with dementia, mentally disabled and people with mental illnesses) up to € 100 per month (basic amount) or up to € 200 per month (increased amount). The care must comprise at least 14 hours per week within the home area of the person in need of care and may not be rendered on a commercial basis (the care allowance passed to the caregiver is not considered to constitute such “commerce”).
- The reimbursement of expenses for measures to improve the living environment up to € 2 557 per measure with regard to appropriate participation.

## **Cash benefits**

### *Statutory long-term care insurance:*

If a person in need of care provides for the care him herself, he or she can get care allowance in order to assure necessary basic care and household assistance in an adequate way. For this benefit the monthly amount is:

- Category I: € 225;
- Category II: € 430;
- Category III: € 685.

Care allowance can be claimed instead of home care services.

### *Social assistance:*

The same benefit amounts as under the long-term care insurance.

## **Combination of benefits**

### *Statutory long-term care insurance:*

Cash benefits and benefits in kind may be combined: if the person in need of care only claims the benefits in kind partly, he or she is entitled to receive proportionate care allowance next to it. The care allowance is reduced by the percentage corresponding to the claimed benefits in kind. The person in need of care is bound by the decision relating to ratio between cash benefits and benefits in kind for a period of six months.

There is free choice between benefits in kind and cash benefits.

In order to exercise their right to self-determination the person in need of long-term care in principle has the free choice between home care and residential care, as well as the choice between several licensed facilities and services. Together with the notice of approval, the care funds provide a list with a comparison of services and prices of the facilities in the catchment area, the nearest care station (*Pflegestützpunkt*) and suggestions for individual care consultation. Since January 2009, the insured person has the right to additional care consultation vis-à-vis their care funds or private insurance organisation. Normally, the care advisers are staff members of the care funds, they analyse the need of care on the basis of an MDK report, set up a plan for the provision of the needed social benefits and rehabilitation in the individual case, of healthy, preventive, curative or other medical care and care based social assistance and they work towards approval and conduction of the corresponding measures. If so-called care stations (*Pflegestützpunkte*) are set up, the care advisers have to be placed there.

## **Benefits for the carer**

### *Statutory long-term care insurance:*

Payment of pension insurance contributions for caring family members and other informal carers by the long-term care insurance. A protection without contribution is also provided for these persons by the accident insurance. Contributions to the statutory pension insurance are also paid during the carer's holidays.

Employees in companies with at least 15 employees have an entitlement to unpaid leave for up to 6 months in order to take care of a relative (so-called care time, *Pflegezeit*). As a general rule, their family health insurance continues during this time and the pension insurance continues via the long-term care insurance fund. The entitlement from the unemployment insurance remains because of the contributions of the long-term care insurance fund. The

contributions for health insurance and long-term care insurance are borne by the long-term care insurance fund up to the minimum contribution amount if necessary.

If a person suddenly becomes dependent on long-term care, employees can stay away from work at short notice for up to 10 days in order to ensure care in need during this time or organise suitable care (so-called short-term work incapability, *kurzzeitige Arbeitsverhinderung*).

*Social assistance:*

The payment of the contributions for the carer for adequate old-age provision, unless this is provided otherwise.

## GREECE

### **Applicable statutory basis**

No special scheme.

According to the Note of the Greek delegation, the policy on long-term care benefits is undergoing restructuring and has not yet been finalised. The conditions demanding restructuring are firstly the necessity to re-examine all benefits of this type, in order to avoid one person being able to accumulate benefits, and secondly the rationalisation of the terms and conditions for granting benefits with the ultimate aim of economising resources and distributing them to people who are really in need.

To help achieve this aim, significant administrative alterations have already taken place in the structure of the Services through the transfer of the Social Welfare Section from the Ministry of Health and Welfare to the Ministry of Labour and Social Security under Article 9(5) of Law 4052/2012, and the gradual integration of all the branches of sickness benefits in kind into the EOPYY (National Health Services Organisation).

However, under Article 138 of the recent Law 4052/2012, a Home Care Programme for Pensioners was established with the aim of ensuring independent living conditions for elderly and disabled pensioners at home. This programme will cover pensioners belonging to primary insurance funds that come under the Ministry of Labour and Social Security, although those receiving a pension from OGA (Agricultural Insurance Organisation) as uninsured elderly people, pensioners from NAT (Mariners' Retirement Fund), public sector pensioners and those qualifying for welfare benefits may also be included in the scheme. The programme will be implemented after the publication of the provisions by the same law of Ministerial decisions, and from 1 September 2012 a special levy to fund the benefits will be established for those who are insured by bodies that come under the Ministry of Labour and Social Security, those who will retire after 1 January 2015 and fulfil the criteria for benefiting from the programme.

Hence, the benefits mentioned below are currently being reassessed in Greece.

### **Benefits in kind**

#### **1. Home care**

The Programme "Aid at Domicile" (*ΒΟΗΘΕΙΑ ΣΤΟ ΣΙΠΙΤΙ*) is part of the primary social care services, providing nursing care, social care services and domestic assistance to elder people who live alone continuously or at certain times of the day and cannot sufficiently take care of themselves, and also to disabled people who face situations of isolation, exclusion or family crisis. Its aim is to support and care for the elderly in their home, to enhance the quality of their life, to inform society and to attract volunteers. It is implemented under the responsibility of the Local Authorities in municipalities throughout the country, primarily in remote mountainous and island areas.

#### **2. Semi-residential care**

During the day, in urban and suburban areas, the Day Care Centres of the Elderly (*ΚΕΝΤΡΑ ΗΜΕΡΗΣΙΑΣ ΦΡΟΝΤΙΔΑΣ ΗΛΙΚΙΩΜΕΝΩΝ – Κ.Η.Φ.Η.*) accommodate elderly people who cannot care for themselves (due to physical difficulties, dementia, etc), and whose family members are not able to take care of them due to their work or serious social or economic problems or health problems.

The Day Care Centres of the Elderly are established and operated by municipal enterprises, joint municipal enterprises, municipal business associations of local authorities and, also, by private non-profitable entities. They cooperate with local organisations providing social services such as health units and the Welfare Directorates of the Prefectures of the country providing social services.

### **3. Residential care**

Hospitalisation in a public hospital, a contracted clinic or a social welfare centre for the chronically ill.

Elderly Care Units (*ΜΟΝΑΔΕΣ ΦΡΟΝΤΙΔΑΣ ΗΛΙΚΙΩΜΕΝΩΝ*), which can be established and operated by charitable associations, the Orthodox Church or the local authorities and, in this case, are non-profitable, or they can be established by individuals (and, thus, are profitable). The Ministry of Health and Social Solidarity, in the framework of its social policy, has contracted with private Elderly Care Units for the provision of some beds, in order to care for indigent elderly who cannot be served by State institutions due to lack of or insufficient beds. The cost of these beds is covered by the national budget.

### **4. Other benefits**

The Open Protection Centres of the Elderly (*ΚΕΝΤΡΑ ΑΝΟΙΚΤΗΣ ΠΡΟΣΤΑΣΙΑΣ ΗΛΙΚΙΩΜΕΝΩΝ - Κ.Α.Π.Η.*) are open programmes that involve the elderly over 60 years without socio-economic criteria, in order to integrate and socialise all members of the community. They provide all forms of organised recreation, medical care, physiotherapy treatment, occupational therapy, social work, hospital care and all kinds of material and psychological support services to the elderly.

### **Cash benefits**

The benefit for non-residential care (*ΕΞΩΔΙΑΡΥΜΑΤΙΚΟ ΕΠΙΔΟΜΑ*):

A benefit of € 660.80. Conditional upon the insured person having completed:

- the days of work that are required for acquiring sickness benefits in kind, during the year of the application (70 days from 1/1/2010, 80 days from 1/1/2011, 90 days from 1/1/2012 and 100 days as of 1/1/2013 and beyond) and at least 350 days of insurance during the last 4 years before the invalidity, or
- 1 000 days of insurance in total.

The total invalidity benefit (*ΕΠΙΔΟΜΑ ΑΠΟΛΥΤΟΥ ΑΝΑΠΗΡΙΑΣ*):

Paid to pensioners because of invalidity, as long as they are in a state that requires continuous care from another person (total invalidity), to pensioners because of death and exceptionally, to pensioners because of old age who, after their retirement, became blind. The amount corresponds to 50% of the invalidity pension paid.

Housing allowance (*ΣΤΕΓΑΣΤΙΚΗ ΣΥΝΔΡΟΜΗ*):

A benefit in the form of a rental fee, paid to uninsured and financially weak elderly over 65 years who live alone or in a couple and do not own a house. The programme was implemented by the Directorate of Social Welfare of the Prefectures of the country. Amount: € 362. It is suggested by the Note of the Greek delegation (without any explanation though) that the housing allowance is removed from the list of LTC benefits.

No discretionary use, but the cash benefits may be used to pay both professional providers and informal caregivers. Free choice of provider.

**Combination of benefits**

No mixed benefits.

No free choice between cash benefits and benefits in kind.

**Benefits for the carer**

Provisions for retirement at a lower age and/or with fewer years of insurance for parents of children with a level of invalidity of at least 67% and for spouses of persons with a level of invalidity of at least 80%.

## HUNGARY

### Applicable statutory basis

In case of long-term care services providing personal social care (social services):

The Act III of 1993 on Social Administration and Social Assistance (*törvény a szociális igazgatásról és szociális ellátásokról*) supplemented by Government and Ministerial decrees.

There is no separate insurance system for long term care in Hungary. Those requiring long term assistance can rely on the services provided by the health and social care system.

According to the Note of the Hungarian delegation, municipalities are responsible for long term care benefits in kind (different social services have to be provided, according the number of inhabitants living there). Until 2012, county municipalities were responsible for operating residential care for elderly, people living with mental problems, or addictions, people with disabilities or homeless people, but from 2012 these institutions with many other cultural, educational ones became governmentally operated institutions. The purpose of this reorganisation is to streamline the organisation, develop and make services more efficient and economical. Besides, many other, non-governmental or church organizations also provide long term care for people in need.

The key elements of the ongoing governmental intentions:

- streamlining the organizations,
- develop services to be more efficient and economical,
- build appropriate environment for the residential services users (e.g. smaller institutions),
- ensure all conditions for people in need living either at home or in institution without burdens and barriers.

There have not been major changes relating to the long-term care benefits in kind and no changes are foreseen at present.

### Benefits in kind

#### 1. Home care

Home care is provided to persons who are unable to care for themselves in their home and who have no one to care for them.

*According to statistics, about 46 000 persons were cared for at home in 2007. (This means that, of the 60+ population, the number of care recipients per ten thousand was 209.6).*

#### 2. Semi-residential care

Day care facilities are provided for:

- Elderly persons;
- People with disabilities;
- Psychiatric patients;
- Persons with addictions;
- Homeless persons.

Day care allows persons who live in their own homes (as well as homeless people) but who need social and mental support due to their health condition or old age, persons who are partly or wholly unable to cater for themselves, persons with disabilities or autistic persons in need of supervision, psychiatric patients and persons with addictions *to find daytime shelter, to*

*maintain social relations and to satisfy their basic hygienic needs*, and, if required, organises the *daytime meals* for the care recipients.

Day care facilities are usually open from 8am to 4pm or from 9am to 5pm, but it depends on the need of the users.

Day care is provided primarily in (separate) day care facilities but can be provided at care homes too.

### **3. Residential care**

Residential care is provided in four types of institutions:

- a) care facilities providing nursing and care;
- b) institutes of rehabilitation;
- c) residential care homes;
- d) institutes providing temporary placement.

#### ***a) Care facilities providing nursing and care:***

They provide comprehensive care for persons who are unable to care for themselves, or for those who are able to do so only with continuous help (meals provision, housing, care, health care).

Types:

- elderly homes,
- care homes for psychiatric patients ,
- care homes for persons with addictions,
- care homes for persons with disabilities,
- care homes for homeless persons.

#### ***b) Institutes of rehabilitation:***

Rehabilitation institutions serve to develop or restore the ability of residents to lead independent lives.

Types:

- rehabilitation institutes for psychiatric patients
- rehabilitation institutes for persons with addictions,
- rehabilitation institutes for persons with disabilities,
- rehabilitation institutes for homeless persons.

#### ***c) Residential care homes***

The residential care homes are small care homes with 8-12 residents. They are more modern, more homely and more personalised.

Residential care homes provide care in compliance with the health condition and the degree of independence, to disabled persons, psychiatric patients and victims of addiction.

#### ***d) Institutions providing temporary placement:***

They provide care for a maximum of one year (which can be prolonged), with the exception of the temporary shelter and night shelter of homeless people.

Main types of these institutions:

- care homes for the elderly,
- care homes for persons with disabilities,
- temporary homes for psychiatric patients,
- temporary homes for persons with addictions,

- night shelters,
- temporary accommodation for homeless persons.

#### **4. Other benefits**

Signalling home care (or alarm system based home care) is a kind of service to persons living in their own homes and needing such assistance due to their health and social conditions, in order to overcome crisis situations that arise.

#### **Cash benefits**

Nursing fee (*ápolási díj*) as a flat rate, non-contributory benefit is payable to persons who provide long-term care to family members who are disabled or under 18 years of age and permanently ill. The amount of benefit is 100% of the basic amount (*alapösszeg*) defined by the Act on the Central Budget (HUF 29,500 or € 107), or 130% (HUF 38,350 or € 139) in case of an increased need of nursing. The third form of the nursing fee is provided by the local government; the amount is determined by the local governments and may be no less than 80% of the basic amount (HUF 23,600 or € 86). However the first and second form of nursing fee is not means-tested; the benefit is regulated among social assistances in the Act on Social Benefits and Social Administration. It is administered by the local governments, which means there are about 3200 authorities who are potentially competent.

A nursing fee (*ápolási díj*) is paid to the carer (the carer has to be a family member) and not to the person in need of care. This means that from the side of the care recipient one can neither speak of a free choice, nor of discretionary use.

#### **Combination of benefits**

Not applicable.

#### **Benefits for the carer**

A nursing fee (*ápolási díj*) is paid to the carer (not to the person in need of care) – the carer has to be a family member.

In the case of persons with severe disabilities, the assistance amounts to 100% of the basis amount defined by the Act on the Central Budget, while in the case of persons with severe disabilities in need of intensive care this is 130%.

In 2011, the basis amount is HUF 29 500 per month. See above Cash benefits.

The amount of the cash benefit (nursing fee) does not cover the full costs of the carer; rather it tries to compensate her or him for the lost income.

According to the Labour Act (Act XXII of 1992 on the Labour Code), those who are taking care of their relatives can take unpaid leave for a maximum of 2 years.

## ICELAND

### Applicable statutory basis

Constitution of the Republic of Iceland, (*Stjórnarskrá Lýðveldisins Íslands*) No. 33/1944:

#### Article 76:

*The law shall guarantee for everyone the necessary assistance in case of sickness, invalidity, infirmity by reason of old age, unemployment and similar circumstances.*

*The law shall guarantee for everyone suitable general education and tuition.*

*For children, the law shall guarantee the protection and care which is necessary for their well-being. 1)L. 97/1995, 14. gr.*

Act on the Mandatory Guarantee of Pension Rights and the Operation of Pension Funds. (*Lög um skyldutryggingu lífeyrisréttinda og starfsemi lífeyrissjóða*) No 129/1997 of December 1997.

Act on the Affairs of the Elderly (*Lög um málefni aldraðra*) No 125/1999, of December 1999.

Act on the Affairs of People with Disabilities (*Lög um málefni fatlaðra*) No 59/1992 of June 1992.

Act on Social Security (*Lög um almannatryggingar*) No 100/2007 of May 2007.

Public Health Services Act (*Lög um heilbrigðisþjónustu*) No. 40/2007 of March 2007.

Health Insurance Act (*Lög um sjúkratryggingar*) No. 112/2008 of September 2008.

Municipalities' Social Services Act, (*Lög um félagsþjónustu sveitarfélaga*) No. 40/1991 of March 1991.

Act on payments to parents of chronically ill or severely disabled children (*Lög um greiðslur til foreldra langveikra eða alvarlega fatlaðra barna*) No. 22/2006 of April 2006.

Act on service-center for persons with sight problems. (*Lög um þjónustu- og þekkingarmiðstöð fyrir blinda, sjónskerta og daufblinda einstaklinga*), No 160/2008 of December 2008.

Act on Social Service (*Lög um félagslega aðstoð*) No. 99/2007 of May 2007. The Act provides assistance both in cash and kind such as home care, cleaning, basic financial assistance etc.

### Benefits in kind

#### 1. Home care

The Act on the Affairs of the Elderly (*Lög um málefni aldraðra*) No 125/1999 emphasize on assisting the elderly to stay at their own home as long as they wish so to do. To acquire that objective, home care is increasing, often together with some day-care or leisure activities. It is possible to receive nursing and some assistance at home, (meals, cleaning, personal assistance, physiotherapy, nursing etc.) provided by health care authorities, The Social Insurance Administration and municipalities as well as private contractors.

#### 2. Semi-residential care

Day-care centres are provided for persons living at their own house but are not capable of staying home alone the whole day. The duration is max. 8-10 hours per day, 5 days per week. Medical and personal assistance and counselling as well as leisure activities available.

Temporary care in a nursing home can be provided.

### **3. Residential care**

Nursing homes and homes for the elderly and persons with disabilities.

- a) Public nursing homes for the elderly.
- b) Private nursing homes for the elderly.
- c) Public residential care for persons with disabilities.
- d) Public residential care for the elderly.
- e) Service-flats and housing for persons with disability.

### **4. Other benefits**

Telecommunications service, technical aids, assistance for home-improvement, transport service, etc. can be provided under certain circumstances, mostly from municipalities.

#### **Cash benefits**

1. The elderly and persons with disability may be paid a supplement for purchasing a car they require because of a mobility handicap. A supplement may also be granted to the provider of a motor-impaired child receiving home-care payments.
2. Reimbursement of exceptional high medical costs.

#### **Benefits for the carer**

1. Home-care allowances are financial assistance to parents having children who are grappling with a handicap or serious illness. This is social assistance that is provided when care is demanding, and the cost because of healthcare service, treatment and training has become considerable and severe for parents.
2. A caregiver benefits card provides parents with discounts on medical services for children.
3. Spouse's benefits (*makabætur*) to spouse or close relative who wishes to take care of a closely related person suffering from a significant disability or illness.

## IRELAND

### Applicable statutory basis

The Health Act of 1970:

Home Care

The Health (Nursing Homes) Act 1990: Nursing Home Subvention Scheme.

According to the Note of the Irish delegation, since the commencement of the Nursing Homes Support Scheme Act, 2009, no further applications under The Health (Nursing Homes) Act 1990 (Nursing Home Subvention) will be considered.

The Nursing Homes Support Scheme Act 2009: Nursing Homes Support Scheme

It should also be noted that, with regard to the Nursing Homes Support Scheme, the Health Service Executive pays the balance of the cost of care directly to the nursing home where the person is residing.

The Social Welfare Consolidation Act 2005:

- Constant Attendance Allowance
- Carers' Benefit
- Carers' Allowance
- Respite Care Grant
- Domiciliary Care Allowance

It might also be mentioned that the rates of weekly *pensions* are higher in Ireland than the rates of weekly benefits for those below pension age, because people on reaching pension age will have lost and will continue to lose a certain amount of personal autonomy for the reasons listed in the definition.

Similarly, *allowances* for travel, telephone, electricity, gas and fuel are paid to qualified pensioners over pension age, but to those below pension age only on grounds of long-term disability.

One of the key objectives of this range of benefits is to enable such people to have personal autonomy as long as possible and to considerably limit the extent to which they require assistance from others. Accordingly, if these cash benefits were not provided, many of these recipients could require assistance from family or other persons.

According to the Note of the Irish delegation, investment in the supply of more and better care for older people in the community and in residential settings will be a priority. Additional funding will be provided each year for the care of older people. This funding will go to more residential places, more home care packages and the delivery of more home help and other professional community care services.

The Nursing Homes Support Scheme system of financing nursing home care will be reviewed with a view to developing a secure and equitable system of financing for community and long-term care which supports older people to stay in their own homes.

Finally, it should be noted that LTC may be statutory based (e.g. the Nursing Homes Support Scheme) or not (e.g. HSE Home Support Services). Any future developments would be dependent on evolving service priorities and overall resource availability. **106 / 156**

## **Benefits in kind**

### **1. Home care**

Home Care Packages are an additional support on top of the existing mainstream community services, and are designed to enhance rather than replace existing home support services. The packages were first introduced in 2005, with the primary objective of supporting older people to continue to live in their own communities.

Carers' Allowance:

Free Travel, Telephone Allowance, Electricity or Gas Allowance and Television Licence. These benefits seem to be provided without reference to the care needs of the beneficiary and might as well be excluded from the scope of long-term care allowances (although listed in the MISSOC tables under the chapter on long-term care).

According to the Note of the Irish delegation, there have been changes to these schemes which take effect from April 2012. These provide that new applicants for Carers' Allowance, who are not living with the person to whom they are providing care, are no longer entitled to the Household Benefits package (Telephone Allowance, Electricity / Gas Allowance and Television Licence) in their own right.

### **2. Semi-residential care**

Day care centres providing services such as a midday meal, a bath, physiotherapy, occupational therapy, chiropody, laundry and hairdressing services. A number of hours is not specified, but depends on individual circumstances.

### **3. Residential care**

Public nursing home care is provided subject to charges. For all new entrants to public nursing homes after 27 October 2009, the charge is equal to the cost of care but financial support towards this cost can be provided via the Nursing Homes Support Scheme.

### **4. Other benefits**

Grants for home adaption are available from the Department of the Environment.

## **Cash benefits**

The Nursing Homes Support Scheme:

The financial assessment determines the applicant's co-payment towards their care. The HSE will pay the balance of the cost of care. The price charged by the private nursing home is agreed in advance with the National Treatment Purchase Fund. The price charged by public nursing homes (i.e. the full cost of care) is also published.

The Carers' Benefit:

In respect of a single care recipient: € 205.00 per week.

In respect of several care recipients: € 307.50 per week.

The Carers' Allowance:

Maximum amounts:

In respect of a single care recipient: € 204 per week (€ 239 if aged 66 or over).

In respect of several care recipients: € 306 per week (€ 358.50 if aged 66 or over). **107 / 156**

The Constant Attendance Allowance: € 205.00 per week.

This is payable in respect of persons who receive a disablement benefit resulting from an occupational injury or disease and who require constant care. This payment is made directly to the care recipients, although it is not payable during periods when they are in hospital or other residential institutions.

The Domiciliary Care Allowance:

Maximum rate per month: € 309.50 per child with a disability.

The Respite Care Grant: € 1 700 (annual rate for each person being cared for).

The Carers' Benefit, Carers' Allowance, Constant Attendance Allowance, and Respite Care Grant are paid directly to the carer as a Social Welfare income support payments to meet his/her own needs and the amounts are not different according to dependency levels. Domiciliary Care Allowance is a monthly payment for a severely disabled child who is under age 16 and needs full-time care and attention far beyond what is normally required by a child of the same age. It is paid to the person with whom the child is living and who is providing for the care of the child.

The Nursing Home Subvention: This can only be paid directly to the nursing home where the person is residing. Since it is paid directly by the HSE to the residential home, and the benefit is the care provided, this subvention might as well be categorised as a benefit in kind.

The Carers' Benefit, Carers' Allowance, Domiciliary Care Allowance, Constant Attendance Allowance and Respite Care Grant are paid to the informal caregiver who has discretion as to how the cash benefit is spent.

It might be worth mentioning that the Carers' Benefit, Carers' Allowance, Respite Grant and Domiciliary Care Allowance are paid to the carers as income to meet their own needs. Normally, the care recipients are also getting benefits, e.g. pensions, in their own right. The care they receive from those getting the care benefits or allowances would, therefore, for them appear to be benefits in kind. If such 'carers' were not available, they would probably need to be cared for in a residential home and would thus be regarded as receiving benefits in kind.

### **Combination of benefits**

Home Care:

In most cases the person receives the service. However, in a very small number of cases, the person receives a weekly payment from the Health Service Executive and purchases the service privately. This practice is being phased out.

Nursing Home Subvention: The person's weekly entitlement is paid directly to the nursing home where he or she is residing.

### **Benefits for the carer**

Carers' Benefit / Carers' Allowance / Constant Attendance Allowance / Domiciliary Care Allowance / Respite Care Grant: as outlined above.

In addition to Carers' Allowance and Benefit, carers may also qualify for other social insurance payments such as Illness Benefits or State Pension Contributory. Where a person qualifies for another social insurance payment the Carers' Allowance etc. will be paid at a half rate.

According to the Note of the Irish delegation, for the reasons outlined above the Domiciliary Care Allowance could not be considered as a benefit for the carer and should not be referenced here.

## ITALY

### Applicable statutory basis

According to the Note of the Italian delegation, the bulk of social services to be provided to the elderly and/or disabled is split into four service sectors:

- Home assistance (ADI/SAD): As it is provided by regions, this service is not yet homogeneously spread, geographically-wise.
- Family carer attendance: is now playing a growing, almost structural role which is not simply limited to the domestic functions, but integrates and sometimes replaces, the public service – both social and health services .
- The hospital or elderly-home stay accounts for nearly 3% of the granted services with high peaks in the North.
- Money transfers, attendance allowances and care allowances: account for a large part of the public expenditure, with 10 billion euro spent only towards financing the constant attendance allowances.

Act No. 118 of 30 March 1971 on civilian invalidity benefits (*Legge 30 Marzo 1971, n. 118 - Conversione in Legge del D.L. 30 gennaio 1971, n. 5 e nuove norme in favore dei mutilati ed invalidi civili*).

According to the Note of the Italian delegation, these are special non-contributory benefits, included in Title III, Chapter 9 of the Regulation 883/2004.

Act No. 18 of 11 February 1980 on mobility allowances (*Legge 11 Febbraio 1980, n. 18 - Indennità di accompagnamento agli invalidi civili totalmente inabili*).

According to the Note of the Italian delegation, it is a special non-contributory benefit, included in Title III, Chapter 9 of the Regulation 883/2004.

Act No. 104 of 5 February 1992, Article 33 (Framework act on disability) (*Legge 5 Febbraio 1992, n. 104 - Legge-quadro per l'assistenza, l'integrazione sociale e i diritti delle persone handicappate*).

According to the Note of the Italian delegation, the law only provides for rules related to labour law (paid leave)

Legislative Decree No. 112 of 31 March 1998 on the transfer of legislative tasks and administrative competences from the State to the Regions and local entities (*Decreto Legislativo 31 Marzo 1998, n. 112 - Conferimento di funzioni e compiti amministrativi dello Stato alle regioni ed agli enti locali, in attuazione del capo I della Legge 15 Marzo 1997, n. 59*).

According to the Note of the Italian delegation, the law is related to territorial organization of the State.

Act No. 183 of 4 November 2010, Article 24 (Changes rules about permissions and assistance for disable persons). (*Legge n. 183 del 4 Novembre 2010, art. 24 – Modifiche alla disciplina in materia di permessi per l'assistenza a portatori di handicap in situazione di gravità*).

According to the Note of the Italian delegation, the law only provides for rules related to labour law (paid leave)

### Benefits in kind

It is explained in the Note of the Italian delegation that according to the Italian legislation, there is not a specific notion of long term care benefits (LTC), i.e. is not established any specific category of benefits in kind for LTC differing from the other benefits in kind. The

Health System covers all the health needs required by the insured people, irrespective of the forecasted or the effective length of time of the treatment concerned. Therefore notwithstanding the LTC are not namely quoted in the Italian legislation as such, they should be regarded as health benefits in kind *tout-court*.

### **1. Home care**

Home care services are provided for at local level. They generally include home help, meal delivery, medical treatment and nursing care.

Home healthcare is provided directly by the Health System only in some Regions and inside them in very few territories. It concerns only the medical treatments and the nursing service.

### **2. Semi-residential care**

The possibility of staying in a day care centre.

In the Health System there are centres of this kind but their availability in giving assistance cannot cover the overall demand. They provide only the medical treatments and moreover the nursing service. All this means that such LTC are granted both by the Health System and in many cases by the private providers who have not any agreement with the Health System. In the latter cases the relevant costs shall be covered by the insured persons.

### **3. Residential care**

Residential care is provided for in the most serious cases. The length of the stay varies according to the seriousness of the situation of dependency.

In the Health System there are centres of this kind but their availability in giving assistance cannot cover the overall demand. They provide only the medical treatments and moreover the nursing service. All this means that such LTC are given both by the Health System and in many cases by private providers who have not any agreement with the Health System. In the latter cases the relevant costs shall be covered by the insured persons.

### **4. Other benefits**

Technical aids are provided for in the most serious cases.

Provision for benefits contributing to the purchase of prostheses or other necessary medical equipment; the purchase or adaptation of private means of transport; the purchase of tools making it possible to carry out a self-employed activity.

The granting of the electronic appliances or prostheses is up to a previous ascertainment of the relevant need by the competent institution and the relevant procedure for providing the aforementioned benefits depends on the ground of the need.

### **Cash benefits**

*Invalidity and incapacity insurance:*

The invalidity allowance (*assegno ordinario d'invalidità, AOI*) and Incapacity pension (*pensione di inabilità*).

In the coordination of social security systems, these are invalidity benefits, included in Title III, Chapter 4 of the Regulation 883/2004.

*Guaranteeing sufficient resources:*

The attendance allowance (*Indennità di accompagnamento*) for disabled people: € 480.47 (€ 472.45 for recipients of the incapacity pension; € 783.60 for totally blind people). **110 / 156**

Disabled people, deaf-mutes and totally blind persons in hospitals and partially blind persons: € 256.67 (€ 277.57 for non-hospitalised totally blind persons).

The Special allowance for partially blind persons (*Indennità speciale per ciechi parziali*): € 185.25.

The communication allowance for deaf-mutes (*Indennità di comunicazione per sordomuti*): € 239.95.

All these benefits are for the coordination purposes considered to be special non-contributory cash benefits, included in Title III, Chapter 9 of the Regulation 883/2004.

Discretionary use.

### **Combination of benefits**

The possibility to combine cash benefits and benefits in kind.

No free choice between benefits in kind and cash benefits.

### **Benefits for the carer**

No specific benefits for the carer. However, periods of leave to take care of a disabled family member are taken into account as periods of insurance for the purposes of a pension insurance.

### **Addendum: Additional social security coordination aspects**

According to the Note of the Italian delegation, it is not possible to say if the list of LTC benefits is correct neither if it is complete, because:

- at the moment such benefits are coordinated in different chapters of the Regulation (e.g. sickness, invalidity, AWOD, special non-contributory benefits). So it is necessary to specify exactly the AC's purpose: to create a new kind of coordination or a list of benefits, or modify the Regulation according to the judgments of the Court etc.
- as far as the local benefits are concerned, monitoring such heterogeneous benefits granted by 8.092 municipalities, 115 provinces and 20 Regions is quite impossible.

## LATVIA

### **Applicable statutory basis**

The Act on Social Services and Social Assistance (*Sociālo pakalpojumu un sociālās palīdzības likums*) of 31 October 2002.

The Regulations of the Cabinet of Ministers No. 1046 "Health care organisation and financing procedure" of 19 December 2006.

### **Benefits in kind**

#### **1. Home care**

Care by a trained or other person (informal caregiver) to perform housework and to deliver meals. If (social) home care is provided by family members, the local authority supports them by training, consulting and if necessary also by providing benefits in cash.

The provider of health care at home (main tasks):

- plans the health care of the patient;
- prescribes diagnostic and therapeutic manipulations;
- assists the doctor during the diagnostic and therapeutic manipulations;
- carries out the palliative care;
- trains the patient and his or her family members in the care provision.

#### **2. Semi-residential care**

Is provided for various groups – care and possible involvement in physical and mental activities is provided to elderly, disabled with physical disorders, people with mental disorders, persons after serious and continuous diseases.

The number of hours that the recipient may attend the institution and any specialised services are set by the municipalities according to agreements with care institutions.

Day care centres are run by municipalities or NGOs. Day care centres for people with mental disabilities are partly financed by the State.

#### **3. Residential care**

Fulltime care is provided by long-term social care institutions for:

- orphans and children deprived of parental care,
- people of retirement age and the disabled with physical disorders or blind people,
- children with serious mental disorders, and
- adults with serious mental disorders.

Long-term care institutions are run by State and municipalities.

#### **4. Other benefits**

The state provides technical aids (*tehniskie palīgīdzekļi*) for persons to help prevent or reduce the functional incapacity caused by long-term or irreversible functional disorders of the body or anatomic defects:

- disabled of categories I, II or III,
- disabled children under the age of 18 years,
- children for whom the technical aids are necessary to reduce or eliminate functional inability,

- adult persons for whom the technical aids are necessary to reduce or eliminate functional inability,
- persons with anatomic defects who need a prosthesis or orthopaedic footwear
- persons with anticipated disability according to an individual rehabilitation plan.

Health care at home taking into account a person's health and health care needs can be provided.

Patients with the following diagnoses are entitled to health care at home:

- Immobile patients with cancer diagnosis (C00-C97; D37- D48);
- Patients with mental disorders (F00-F03; F06.0-F06.3; G10- G32; A81);
- Patients with bedsores (L89);
- Patients with cerebral stroke and other paralytical syndromes (G80-G83);
- Patients who need respiratory therapy (Z99.1);
- Patients with mobility disorders and the following diagnoses: B20-B24; E10-E11; G35; I60-I69; T91.3; Z48; Z93; Z94; Z98.

The referral from a general practitioner or specialist (if health care at home is needed after release from the hospital) is needed. The referral must contain: the health care services required, the statement of reasons for health care at home, the duration of health care at home. Another benefit - care of disabled child benefit - could be also considered as long-term care benefit according to the trESS 2011 definition. Persons who permanently reside in the territory of Latvia have the right to State social allowances - also care of disabled child benefit. According to the national legislation and Regulation 883/2004 it falls under family benefits.

### **Cash benefits**

Local authority may provide benefits in cash for a person in need if he or she is not receiving home care services. Cash benefits are also available for family members who provide care.

The municipality can grant additional benefits.

The amount and conditions for the provision of cash benefits depend on the municipality and the internal regulations they approve.

No discretionary use.

### **Combination of benefits**

No mixed benefits.

No free choice between cash benefits and benefits in kind.

### **Benefits for the carer**

Depends on the municipality's decision.

The conditions for the provision of benefits for the carer depend on the municipality and the internal regulations they approve.

**Addendum: Social security coordination aspects**

According to Annex X of the Regulation 883/2004 for Latvia special non-contributory cash benefits are State Social Security Benefit (Law on State Social Benefits of 1 January 2003); Allowance for the compensation of transportation expenses for disabled persons with restricted mobility (Law on State Social Benefits of 1 January 2003).

According to the Note of the Latvian delegation, another benefit should be added - An allowance for a disabled person for whom care is necessary (Law on State Social Benefits of 1 January 2003) which is in force since 2008. After having re-examined this request Latvia has decided to withdraw this request again.

Care of disabled child benefit is considered as family benefit according to national legislation and the Regulation 883/2004 and the latter sets up priorities to determine the competent MS.

## LIECHTENSTEIN

### Applicable statutory basis

- The Act on Sickness Insurance of 24 November 1971 (*Gesetz über die Krankenversicherung, KVG*).
- The Act on compulsory Accident Insurance of 28 November 1989 (*Gesetz über die obligatorische Unfallversicherung, UVersG*).
- The Act on Invalidity Insurance of 23 December 1959 (*Gesetz über die Invalidenversicherung, IVG*).
- the Act on the granting of allowances for blind persons of 17 December 1970 (*Gesetz über die Gewährung von Blindenbeihilfen*).
- The Act on Old-age and Survivors' Insurance of 14 December 1952 (*Gesetz über die Alters- und Hinterlassenenversicherung, AHVG*).
- the Act on Supplementary Benefits to the Old-age, Survivors' and Invalidity Insurance of 10 December 1960 (*Gesetz über Ergänzungsleistungen zur Alters-, Hinterlassenen- und Invalidenversicherung, ELG*).
- The Act on Assistance for Victims of Crime of 22 June 2007 (*Gesetz über die Hilfe an Opfer von Straftaten, OHG*).
- The Act on Social Assistance of 15 November 1984 (*Sozialhilfegesetz, SHG*).

### Benefits in kind

#### 1. Home care

##### KVG:

Examinations, treatment and care at the home of the patient by doctors and chiropractors<sup>24</sup> as well as, on the basis of a medical prescription, by nurses or homecare organisations (= SPITEX);

<sup>24</sup> Assuming that the notion of „ambulant“ is the same as in Switzerland.

<sup>25</sup> Assuming that the notion of „ambulant“ is the same as in Switzerland.

<sup>26</sup> UVersG not for long-term care.

##### UVersG:

- treatment at the home of the patient by doctors and chiropractors<sup>25</sup>;

- care at the home of the patient, prescribed by a doctor and provided by nurses or homecare organisations (= SPITEX);

*ELG* (special medical measures): treatment at home by a doctor or, on prescription, by paramedical staff.

## **2. Semi-residential care**

In no field envisaged according to MISSOC. (See, however, Gesundheitsgesetz, Article 37, and below under “Supplementary benefits [according to ELG]”.)

## **3. Residential care<sup>26</sup>**

*KVG*: examinations, treatment and care in a hospital or in a medico-social establishment as well as the stay in the general ward of the hospital.

*ELG* (special medical measures): treatment, board and accommodation in the general ward of a hospital.

## **4. Other benefits**

### *Auxiliary equipment*

Simple and adequate model. Appear on a list.

- *KVG*: therapeutic equipment prescribed by a doctor;
- *UVersG*: therapeutic equipment; auxiliary equipment to compensate for physical damage or loss of a function;
- *AHVG* and *IVG*: auxiliary equipment necessary for the insured person in order to move about, establish contacts with her or his entourage or develop personal autonomy;
- *ELG*: therapeutic and auxiliary equipment.

### **Cash benefits**

#### *Helplessness allowance*

Depends on the degree of helplessness. Monthly amounts.

- *ELG*:

An amount depending on the degree (slight – moderate – severe) of helplessness; for persons over 65 in principle only in case of moderate and severe degree of helplessness; a supplement for minors living in an institution.

- *UVersG*:

An amount depending on the degree (slight – moderate – severe) of helplessness.

#### *Allowances for the blind (Gesetz über die Gewährung von Blindenbeihilfen):*

As a compensation for the additional expenses due to the visual impairment.

An amount depending on the degree of visual impairment.

#### *Supplementary benefits (according to ELG)*

Also designed to cover (up to a certain amount) particularly the costs of a stay in a medico-social establishment or in a hospital (particularly daily fee), of health care, of home care (in part including costs for loss compensation in favour of caring family members) and semi-residential care as well as of therapeutic and auxiliary equipment.

#### *Support and care allowance (according to ELG)*

For covering costs borne by the assisted person for compensating his or her home carer. The latter can also be a family member receiving a salary from the person in need of assistance or care. Six levels.

*Compensation for expenses for home care in case of special medical measures being carried out at the home of the patient*<sup>27</sup>(according to ELG)

27 For this situation see above under benefits in kind – home care – ELG.

- Home care by medical nursing staff: compensation for adequate expenses for nursing staff.
- Home care by other persons: flat rate compensation; 4 levels (need of intensive care of 8 hours a day at least – need of intensive care of 6 hours a day at least – need of intensive care of 4 hours a day at least – need of intensive care of 2 hours a day at least or need of continuous surveillance).

A priori bearing of part of the long term care costs by the State (not in the form of cash benefits to the persons in need of long term care themselves; *KVG*).

Contributions according to the *OHG*: contributions for long-term help of third persons and compensation by the State (both insofar as not covered particularly by social security or the author of damage).

*Social assistance* (insofar as not covered particularly by social security).

### **Combination of benefits**

The benefits are provided by several branches of social security: benefits in kind and cash benefits, which are often granted to a person for the same period of time. In general, the person does not have freedom of choice as to whether he or she prefers a benefit in kind or a cash benefit.

### **Benefits for the carer**

A person caring for family members or (only for non-profit care) for other persons who are helpless to a moderate degree in terms of the ELG at least and who live with him or her in the same (or a neighbouring) household may claim a bonus for caretaking. The yearly bonus corresponds to 48 times the amount of the minimum monthly old-age 1st pillar pension. The bonus is part of the determining income for the calculation of the carer's 1st pillar pension.

See also above under “Supplementary benefits (according to ELG)” and “Support and care allowance (according to ELG)”.

Contributions according to the *OHG* (see above)<sup>28</sup> .

28 Assuming that the Liechtenstein law is interpreted in the same way as the Swiss law.

### **Addendum: Social security coordination aspects**

At the beginning of 2010 Liechtenstein introduced an ‘attendance and care allowance’ for care at home. According to the Note of the Liechtenstein delegation, this is a sickness benefit in kind within the meaning of Regulation No 883/2004 (rather than a cash benefit). The attendance and care allowance must be used to pay for care services provided by third parties. Evidence of this must be produced, otherwise there is no entitlement. There is no regionalisation.

## LITHUANIA

### Applicable statutory basis

- Temporary Act on Social Benefits' Re-calculation and Payment (*Socialinių išmokų perskaičiavimo ir mokėjimo laikinasis įstatymas*) of 9 December 2009 (No. XI-537).
- Act on State Social Assistance Benefits (*Valstybinių Šalpos išmokų įstatymas*) of 29 November 1994 (No. I-675).
- Act on Social Services (*Socialinių paslaugų įstatymas*) of 19 January 2006 (No. X-493).
- Act on Health Insurance (*Sveikatos draudimo įstatymas*) of 21 May 1996 (No I-1343).
- Act on the Health care System (*Sveikatos sistemos įstatymas*) of 19 July 1994 (No I-552).
- Act on Health Care Institutions (*Sveikatos priežiūros įstaigų įstatymas*) of 6 June 1996 (No. I-1367).

In Lithuania there is a central system of LCT which is supplemented on a municipal level:

1) Lithuanian Government adopts long-term national programs, strategies, requirements and standards.

2) Municipalities are directly responsible for organisation and planning of provision of social services; for determination of individual needs for social services; for supervision of social services. They prepare and implement municipal programs of disabled social integration, also organise the primary health care (financed by Compulsory Health Insurance Fund. Municipalities are also responsible for granting target compensations for nursing or attendance (financed by State budget).

LTC is organised in day centres, home care centres, residential social care institutions and nursing or general hospitals.

There is no single legal act regulating LTC. LTC for the persons in need is provided by through several branches: social services, target compensations for nursing or attendance and long term healthcare.

### Benefits in kind

Benefits in kind are the most important part of LTC benefits.

#### 1. Home care

One of the main principles of providing social services at home is to help to a adult with a disability to create conditions for him to live at home, in his family and organising the assistance co-ordinated with education, employment, personal health care and special assistance measures, helping to develop or compensate for his abilities to care for his personal (family) life and to participate in the labour market.

People in need of home help are regularly visited by social workers or social workers assistants.

Social attendance or social care at home includes performance of housework and care by home helpers.

Social care services includes services which are provided by a team of specialists (social workers, social workers assistants, health care assistants and others depends on the need) at a person's home.

Elderly and disabled people can receive day care services at home from 2 hours till 8 hours per day up to 7 times per week, short - term care up to 8 hours per day till one month at person's home.

Services financed from municipal budget and if person is with severe disability could be financed from special targeted subsidies of the State budget to municipal budgets and persons (families) payments.

Cash allowance. In some cases, when where is expedient to organise social services at home in monetary form, services may be changed into a cash allowance. This cash allowance is paid for person (family) to pay for a help of assistance. Cash allowance financed from the municipal budgets.

Primary health care institutions are responsible for the organisation and provision of *nursing services at home*.

Palliative care and nursing services can be provided at home by a team of specialists: a doctor, nurse and social workers. Social care services includes services which are provided by various specialists at a person's home.

Nursing at home financed from the Compulsory Health Insurance Fund.

## **2. Semi-residential care**

Elderly and disabled people can receive day care, social care services in day care centres from 3 hours per day up to 5 days per week in institution.

Short - term social care for elderly and disabled people providing not less than 12 hours per day till 6 months per year or 5 days per week or termless in institution.

Long term care in residential social care institutions depending on the kind of recipients of the services, for elder persons no less than 6 months per year or termless.

Semi-residential care is financed from the municipal budgets or special targeted subsidies of the State budget to municipal budgets and persons (families) payments.

## **3. Residential care**

Residential care is financed from the State, municipal budgets or special targeted subsidies of the State budget to municipal budgets, and persons (families) payments.

Residential care is provided for children deprived of parental care, children and adults with disabilities and elderly people by foster families, social care houses (old-age homes, housing for disabled, specialised social care homes, etc.).

Nursing and maintenance treatment is provided in nursing or general hospitals.

Palliative care is provided in the general, cancer and nursing hospitals.

## **4. Other benefits**

Other benefits in kind include the provision of special equipment. Disabled people receive special aid for purchasing a car, they are provided with wheelchairs, their flats are arranged according to their disability.

However, these benefits might be provided to a larger scope of beneficiaries and not only to long-term care recipients.

Respite care is the assistance for families that take care all year – long of disabled person or senior not less than 12 hours per day till 6 months per year or 5 days per week or termless in institution. For persons with severe disabilities could be providing social care (in day centres, at home, in institutions) and financed from special targeted subsidies of the State budget to municipal budgets.

## **Cash benefits**

*The Special Compensation for Care Expenses (Slaugos išlaidų tikslinė kompensacija):* Paid for disabled children with a severe degree of disability, to disabled persons with a reduction in capacity for work of 75% - 100% or to the persons of retirement age if the need of permanent care is determined. The amount is 250% of the social insurance basic pension (currently LTL 900 (€ 261)). Temporarily, for the period 2010-2011, benefits are paid at 85% of the above-mentioned amounts.

*The Special Compensation for Attendance Expenses (Priežiūros (pagalbos) išlaidų tikslinė kompensacija):* Paid to disabled children with a severe and moderate degree of disability whether or not the need of permanent care is determined and to disabled persons with a reduction in capacity for work of at least 60% and to persons of retirement age if the need of permanent attendance is determined. The amount is 50% or 100% of the social insurance basic pension depending on the category of the recipient (respectively LTL 180 (€ 52) or LTL 360 (€ 104)). Temporarily, for the period 2010-2012, benefits are paid at 85% of the above-mentioned amounts.

The person has the free choice to use cash benefit at his or her own discretion.

## **Combination of benefits**

Mixed benefits.

No choice between cash benefits or benefits in kind.

However, if a person who receives residential care is at the same time entitled to special compensations mentioned above, the compensations are paid, and the amounts are included in the income of this person. A person may not pay more than 80 per cent of his or her full income for residential care. The rest is covered by local governments. So it may happen that up to 80 per cent of the special compensations (being a part of person's income) are deducted as a payment for residential care. Payment could be more than 80 per cent of income, if a person has a property above a certain limit (i.e. if person's property exceeds the ration established by the legislation, 1 % is calculated in respect of property value exceeding the ration), but in any case no less than 20 per cent of income leaves for person to ensure daily life expenses. The similar rule is also applied in the case of home care (in this case not more than 20 per cent of the income is deducted).

## **Benefits for the carer**

No benefits for the carer, but the periods of care influence his or her entitlement and amount of social pension, means-tested social benefit, etc.

## LUXEMBOURG

### **Applicable statutory basis**

The Act of 19 June 1998 introducing the dependency insurance, in force since 1 January 1999 amended several times, but not fundamentally, in order to better ensure the correct use of the benefits provided and to adapt provisions to practical problems which appeared while applying the legislation. No major reform planned at short term.

Insurance system financed by contributions paid by insured persons and determined on professional income and all other income, plus financial participation of the State budget.

All persons covered by Luxembourg health insurance are automatically covered by dependency insurance.

Benefits in kind are care services provided by professional carers. Up to a certain limit professional care may be provided by an informal carer (family member, friend, hired person) and in this case benefits in kind are replaced by a cash benefit which has to be paid to this informal carer.

### **Benefits in kind**

#### **1. Home care**

- Assistance and care necessary for the basic everyday activities;
- assistance for the general upkeep of the house and laundry;
- assistance in the form of support activities. These might include a presence in the home of a person who cannot stay alone, specialised individual supervision, accompaniment for an outing or shopping, or group support activities, notably visiting a semi-stationary centre;
- assistance in the form of professional advice aimed at maintaining the autonomy potential of the person and teaching those in the dependent person's social circle the adequate actions for providing assistance and care.

Technical and adaptation assistance:

- reimbursement of the cost of purchasing or renting technical assisting devices: wheelchair, adapted bed, walking stick, seats;
- measures for adapting the accommodation in order to improve its accessibility;
- financial aid for the purchase of products necessary for the assistance and care.

#### **2. Semi-residential care (in approved centres)**

Visiting a semi-stationary centre constitutes a group support activity (see "Benefits in kind", "1. Home care"). The assistance and care which the dependent person requires during his stay in a semi-stationary centre are granted in accordance with the person's care plan.

#### **3. Residential care**

- Assistance and care necessary for the basic everyday activities;
- Assistance in the form of support activities. These might include specialised individual supervision or group support activities;
- Reimbursement of the cost of purchasing or renting technical assisting devices that are not included in the standard equipment of an institution.

Products necessary for the assistance and care are provided free of charge to the dependent person. They are paid by the administering institution by calculating the monetary value.

#### **4. Other benefits**

No other benefits.

#### **Cash benefits**

Cash benefits may totally or partially replace benefits in kind (home care only).

The monetary value of the cash benefit amounts to € 25 per hour. The maximum weekly amount is € 262.50 (10.5 hours).

The dependent person must use the cash benefits to obtain the care and assistance provided in the care plan, outside contracted professional services. Since the Act of December 23, 2005, the cash benefit may only be used to »remunerate« the informal caregiver.

#### **Combination of benefits**

The possibility to combine benefits in kind and cash benefits (with the legal limitations mentioned above).

The person can choose the type of benefit which he or she would like to receive: benefits in kind, cash benefits or mixed benefits (combination of benefits in kind and in cash).

#### **Benefits for the carer**

The dependency insurance pays pension insurance contributions on behalf of the informal caregiver, who provides home care.

## MALTA

### **Applicable statutory basis**

Social Security Act (*Att dwar is-Sigurta' Socjali*) (Cap. 318).

State-Owned Institutions and Hostels Rates Regulations.

Transfer of Funds (Government Financed Beds) Regulations.

Specified State-Owned Institutions and Hostels Regulations.

### **Benefits in kind**

#### **1. Home care**

Home care helps to provide assistance to persons in need. It offers help of a personal and light domestic nature in order to allow older persons and/or persons with special needs, to continue living in their community in as much of an independent manner as is feasibly possible. It also provides respite and support for informal carers, and averts/delay demand for long-term residential care.

Benefits in-kind available as home care include:

- meals on wheel service (meals are supplied by a non-governmental organisation against a subsidised charge),
- handyman service (The objective of this service is to help older adults and persons with special needs to continue living as independently as possible in their own home. The Handyman Service offers a range of around seventy repair jobs that vary from electricity repairs to plumbing, carpentry and transport of items. The service is normally requested by phone.),
- home care help,
- incontinence service,
- community nurse service.

#### **2. Semi-residential care**

There are thirteen state-run day care centres that open daily from 8.30am to 4.00pm. Occupational therapy is offered in these centres.

#### **3. Residential care**

One central institution for permanent elderly residents, supplemented by seven regional residences – all state run. There are also private residential homes.

In addition, there is a state run central mental institution that provides treatment and care for mentally impaired persons who need psychiatric treatment.

Another central and state run institution/hospital provides long-term care for cancer patients and other malignant diseases.

#### **4. Other benefits**

The incontinence service: essentially a benefit-in-kind which provides adult nappies at a reduced cost.

### **Cash benefits**

There is no special benefit related solely to long-term care. Benefits are directly payable to person needing long-term care or his/her legal guardian.

Beneficiaries are free to use the money received as they deem to fit.

**Combination of benefits**

The same person can be entitled to both cash and in kind benefits.

Free choice between cash and benefits in kind is possible.

**Benefits for the carer**

A Carers' Pension is paid to a person who is either single or a widow/er and who takes full-time care of a sick relative who is bedridden or confined to a wheel-chair and living in the same household. The rate of benefit is € 95.58 per week and is paid to the carer.

A Carers' Allowance (*Pensjoni tal-Wens*) is paid to a person who is either single or a widow/er and who takes constant care of a sick relative living in the same household. The rate of benefit is € 69.24 per week and is paid to the carer.

## **THE NETHERLANDS**

### **Applicable statutory basis**

The General Exceptional Medical Expenses Act (*Algemene wet bijzondere ziektekosten, AWBZ*), of 14 December 1967.

According to the Note of the Dutch delegation, the government has started a program aimed at restructuring long term care in the Netherlands. The aims of this program are to improve the quality of LTC, to align the care as much as possible to the wishes of the recipients, to decrease the amount of regulations and to better control the costs of LTC.

### **Benefits in kind**

Care is provided in the form of “products”. For example home care, admission to a care home, nursing home, institution for the development or physically disabled are all products offered under the AWBZ. A product consists of a single function or a combination of functions.

Long-term care is defined in five broadly defined functions. Next to personal care, also nursing (e.g. administering injections), supportive guidance (assistance in managing daily activities), treatment (e.g. specific treatment by a geriatric specialist, a doctor for the developmentally disabled or a behavioural scientist) and accommodation are provided as benefits in kind.

#### **1. Home care**

Care provided at home by an institution to insured persons with a somatic, psychogeriatric or psychiatric condition or impediment, or a physical or mental disability. The activities in the field of personal care are supported or taken over, with a view to compensate for the (temporary) inability of the insured person to live independently.

Home care includes the loan of nursing equipment for a maximum period of 26 weeks.

#### **2. Semi-residential care**

Care provided by an institution to insured persons with a somatic, psychogeriatric or psychiatric condition or impediment, or a physical or mental disability. The care is aimed at the promotion or preservation of the ability to live independently and serves to prevent institutionalisation or neglect of the insured person.

#### **3. Residential care**

Care in an institution which is necessary due to the need for a protected living environment, therapeutic environment or permanent supervision of an insured person with a somatic, psychogeriatric or psychiatric condition or impediment, or a physical or mental disability.

#### **4. Other benefits**

Several specific benefits for specific kinds of patients such as psychiatric treatment and treatment for persons with visual or hearing impairments.

In addition to care functions, there is also entitlement to, for example, patient transport, nursing supplies, care and support related to sign language, hospital care after one year, rehabilitation care, prenatal care, research into certain congenital metabolic disorders, and vaccinations included as part of a vaccination programme.

## **Cash benefits**

Within the framework of an experiment, the insured person can opt not to obtain care provision in kind, but to receive a personal care budget (*persoonsgebonden budget, PGB*) to enable him or her to purchase care independently. The budget is only available for certain functional forms of care, such as nursing, general care and guidance; the budget is not available for treatment or institutional accommodation. The amount of the personal care budget is dependent on the required care.

Discretionary use.

The Netherlands' government has the intention to end this experiment and make the personal care budget an entitlement as a benefit in cash under the AWBZ.

## **Combination of benefits**

The AWBZ basically provides for benefits in kind. However, within the framework of an experiment, the insured persons have the choice between receiving the benefit in kind or in the form of a personal care budget (*persoonsgebonden budget, PGB*); a combination of the two is also possible.

Free choice between cash benefits and benefits in kind.

## **Benefits for the carer**

An amount of € 250 per year is granted to informal caregivers who provide long-term care at home to a person with an indication for long-term care.

## NORWAY

### Applicable statutory basis

- The Municipal Health Services Act (*lov om helsetjenesten i kommunene*) of 19 November 1982.
- The Social Services Act (*lov om sosiale tjenester*) of 13 December 1991.
- The National Insurance Act (*folketrygdsloven*) of 28 February 1997, Chapter 6.
- The new Act on Municipal Health and Care Services (*lov om kommunale helse- og omsorgstjenester mm.*) of 24 June 2011.

### Benefits in kind

#### 1. Home care

Practical assistance and care at home according to the need. Home care services are available day and night (round-the-clock). Community care housing is both a supplement and alternative to nursing homes and institutions.

#### 2. Semi-residential care

Short-term stays in nursing homes (weekends etc) are offered as a relief measure for the family of patients cared for at home. No time limit.

#### 3. Residential care

Provided in municipal nursing homes, day and night service flats, homes for elderly, housing for disabled children, etc.

#### 4. Other benefits

Both the nursing homes and the home care services are supported by other municipal health and social services, such as short-term technical aids (walker, etc). The home care services are also supported by long-term technical aids from the National Insurance Scheme (*folketrygden*), such as wheelchairs, telecommunication services, etc.

### Cash benefits

For the disabled: The Basic benefit (*grunnstønning*) and Attendance benefit (*hjelpetønning*) from the general National Insurance Scheme (*folketrygden*) are paid directly to the person who is in need of care.

The Basic benefit to cover extra expenses due to permanent illness, injury or deformity. There are 6 different rates of benefit according to the level of extra expenses, ranging from NOK 7 572 (€ 1 031) to NOK 37 860 (€ 5 157) per year.

The Attendance benefit to cover the need for special attention or nursing. The standard rate is NOK 13 572 (€ 1 849). For disabled children under 18, the benefit can be paid at 3 different higher rates, up to NOK 81 432 (€ 11 092).

A condition for the Attendance benefit is that the care is provided by an informal caregiver.

The Discretionary cash benefit (*omsorgslønn*) paid by the municipality to an informal carer who has a particular burdensome care work.

No discretionary use. The cash benefits are a supplement to the benefits in kind. **127 / 156**

**Combination of benefits**

Mainly benefits in kind.

Combined benefits are possible. It is for the local municipality authorities to decide how the person's needs can be fulfilled, with different combinations of benefits in kind and cash benefits. The cash benefits are a supplement to the benefits in kind.

No free choice between cash and/or benefits in kind.

**Benefits for the carer**

Discretionary cash benefit (*omsorgslønn*) paid by the municipality to an informal carer who has a particular burdensome care work.

It is for the local municipality authorities to decide in each single case if the caregiver has "a particular burdensome care work". The level (amount) of the benefit is also determined by the local authorities.

## POLAND

### Applicable statutory basis

In Poland there is no integrated long term care system regulated by single legal act.

People who need such care are entitled to certain benefits under various legal acts, such as e.g. from the field of social assistance, health care, family benefits or benefits for disabled persons. The amounts of benefits are the same for all regions of Poland.

- The Act on Health Care Services financed from Public Means (*Ustawa o świadczeniach opieki zdrowotnej finansowanych ze środków publicznych*) of 27 August 2004.
- The Act on Social Assistance (*Ustawa o pomocy społecznej*) of 12 March 2004.
- The Act on Family Benefits (*Ustawa o świadczeniach rodzinnych*) of 28 November 2003.
- The Act on Social Pension (*Ustawa o rencie socjalnej*) of 27 June 2003.
- The Act on Social Insurance Fund Pensions (*Ustawa o emeryturach i rentach z Funduszu Ubezpieczeń Społecznych*) of 17 December 1998.
- The Act on Vocational and Social Rehabilitation and Employment of Disabled Persons (*Ustawa o rehabilitacji zawodowej i społecznej oraz zatrudnianiu osób niepełnosprawnych*) of 27 August 1997.

In addition, some other legal acts might be mentioned:

- The Act of 24 January 1991 on veterans and some victims of war and post-war repressions
- The Act of 25 June 1999 on cash benefits from social insurance for sickness and maternity
- The Act of 30 October 2002 on social insurance for accidents at work and occupational diseases
- The Ordinance by the Ministry of Labour and Social Policy of 27 July 1999 on rules and procedures for medical certification under the social Insurance Institution
- The Ordinance by the Ministry of Labour and Social Policy of 14 December 2004 on certifying incapacity to work
- Ordinance No. 61/2007/DSOZ by the President of National Health Fund (NFZ) of 19 December 2007 on the contracts under the provisions on long-term care

### Benefits in kind

#### 1. Home care

Specialised care services, including those for people with mental disorders, are one of the basic forms of assistance in kind.

Bedridden and chronic patients who stay at home and who require systematic nursing services due to existing health problems may receive long-term nursing care in the home based environment. Persons with chronic diseases, aggravating disability, sick persons who are not eligible for hospitalisation but need permanent professional nursing, rehabilitation and care are eligible for this type of care. In such cases, long-term care is provided in the home based environment, as long-term nursing care at the patient's home.

#### 2. Semi-residential care

Support centres, which are organisational units of day care social assistance. Support centres include, among others: community mutual-aid houses for persons with mental disorders, day care assistance houses and mutual aid clubs.

### 3. Residential care

Social assistance centres, family-based assistance houses, social assistance houses, family support centres.

### 4. Other benefits

There is a possibility to award certain “accompanying measures” to persons who have the legal assessment of disability. Such measures include possibilities to obtain the co-financing of, for example,

- the participation of disabled persons and their attendants in rehabilitation stays,
- provision of rehabilitation equipment, orthopaedic equipment and auxiliary devices allocated to disabled persons under separate provisions,
- liquidation of architectural and technical barriers in connection with individual needs of disabled persons,
- rehabilitation of children and the young.

Disabled persons may also participate in occupational therapy workshops, which are organisationally and financially separated establishments allowing for social and vocational rehabilitation of disabled persons incapable of work, aimed at gaining or recovering skills required to pursue employment. Occupational therapy workshops may be organised by foundations, associations or other entities, and the costs of establishment and operation of such workshops, or resulting from the increased number of the workshop participants, are co-financed by the State Fund for Rehabilitation of Disabled Persons (*Państwowy Fundusz Rehabilitacji Osób Niepełnosprawnych, PFRON*), from the funds of local governments or other sources.

In addition, the Act on social assistance provides assistance in the form of protected housing (*mieszkania chronione*)

- For a person who, because of the difficult life situation, age, disability or illness needs support in everyday life, but does not require the services provided in the specialised, stationary care facilities, in particular, a person with a mental disorder, a person leaving the foster family, childcare facility, youth educational centre or youth detention centre, as well as foreigners who reside in Poland on the basis of a status of refugee or subsidiary protection.
- Protected housing is a form of social assistance that prepares its tenants, under the care of specialists, to live independently, or provides housing in lieu of a facility that assures 24-hour care. Protected housing provides the conditions for independent functioning in and integration into the local community.
- Protected housing can be conducted by any entity of social assistance or by a public benefit organisation.

The *National Health Fund* finances, inter alia, the provision of long-term care in the form of home care and residential care services:

- Care and treatment facilities, nursing and care facilities (*zakłady opiekuńczo-lecznicze i pielęgnacyjno-opiekuńcze*). They provide nursing, rehabilitation and pharmacological treatment (previously provided during hospital treatment) for patients who have completed the process of diagnosis, surgery or intensive medical treatment and do not need further hospitalisation, but are chronically ill, dependent and suffer from a partial or advanced

disability and therefore need permanent medical control, professional nursing and rehabilitation, which involves the necessity of staying in the care facilities.

- Long-term care homes for mechanically ventilated adults, children and youth (*zespoły długoterminowej opieki domowej dla dorosłych, dzieci i młodzieży wentylowanych mechanicznie*) provided for people with respiratory failures that need permanent or temporary respiratory therapy (either through tracheotomies or through other devices) without the necessity of being hospitalised on an intensive care unit, but they need a permanent, specialist and professional care, nursing and rehabilitation.
- Hospital departments for LTC and palliative services (*świadczenia w oddziale medycyny paliatywnej/hospicjum stacjonarnym*) for terminally ill with a progressive, life-threatening disease.
- Home care hospices for adults and children (*świadczenia realizowane w hospicjum domowym dla dorosłych i dzieci*) – doctors, nurses, psychologists and physiotherapists engaged in these hospices can help families in the care of a sick person who is staying at home.
- The provision of palliative care medicine in the clinic – (*świadczenia w poradni medycyny paliatywnej*) for the sick who are in a stable state of health and can come to the clinic.

### **Cash benefits**

The Medical Care Supplement (*Dodatek pielęgnacyjny*) - PLN 181.10 (€ 41.46) per month and Medical Care Allowance, (*Zasilek pielęgnacyjny*) – PLN 153.00 (€ 35.02) per month. Medical Care Allowance can be granted for disabled children up to the age of 16, disabled persons over the age of 16, persons over the age of 75.

The Training and Rehabilitation of Disabled Child supplement (*dodatek z tytułu kształcenia i rehabilitacji dziecka niepełnosprawnego*) – PLN 60 per child until the child is 5 or PLN 80 per child between 5 and 24.

Social Pension (*Renta socjalna*) – PLN 593.28. According to the Note of the Polish delegation, Social Pension under provisions of the Law of 27/6/2003 on Social Pension (also in Annex X of Regulation) is granted for adults (aged 18 years and over), and those whose invalidity began before the age of 18 years (25 years in the case of full-time students). It is financed from the State budget and granted to those who are totally incapable of work but they do not require (considerable) assistance/care from other persons to carry out essential daily activities. This benefit is similar to “normal” invalidity pension and could not be treated as LTC.

The Permanent Allowance (*Zasilek stały*) – awarded to an adult person keeping a single household and totally incapable of work due to age or disability, provided that the income of that person is lower than the income criterion for a person keeping a single household, and to an adult person staying with the family, completely incapable of work due to age or disability, provided that the income of that person, as well as the income per person in the family, is lower than the income criterion per person in the family. Amount: maximum PLN 444.

Earmarked allowance (*Zasilek celowy*) – awarded for the coverage, in full or in part, of the costs of the purchase of food, medicine and treatment, fuel, clothing, daily necessities, minor apartment repairs, and funeral costs. The amount depends on the individual situation.

The Periodic Allowance (*Zasilek okresowy*) – awarded due to any chronic disease or disability to a person keeping a single household whose income is lower than the income criterion for a person keeping a single household and to a family whose income is lower than the income criterion for the family. Amount: maximum PLN 418 (€ 95.69).

A form of financial assistance paid directly to persons in need of long-term care services are the Medical Care Allowance (*Zasilek pielęgnacyjny*) and the Medical Care Supplement (*Dodatek pielęgnacyjny*), which are granted for a partial coverage of expenses resulting from the need to provide a disabled person with care and assistance of another person due to his or her incapacity for independent existence. The person concerned has a free choice and can use the money for the services he or she prefers. There is no difference if a cash benefit is used for professional care providers or informal caregivers. The amount of the benefits does not relate to the level/scale of dependency.

In addition, some other cash benefits might be mentioned.

The Family allowance (*Zasilek rodzinny*): The entitlement to a family allowance is, among others, subject to means-testing. The right to the family allowance is awarded if the income per person in a family or if the average monthly income of a learning person does not exceed PLN 504. If there is a child with a certified disability or with a certified moderate or severe disability in the family, the family is entitled to a family allowance if the average monthly income per capita in the family or the average monthly income of a learning person does not exceed PLN 583.

Some benefits for *veterans* might be mentioned as well (although they are not necessarily linked to long-term care). They may include direct benefits and reduced transport tariffs.

The Care allowance (*Zasilek opiekuńczy*) granted on the basis of the Act on cash benefits payable for sickness and maternity from the social insurance of 25 June 1999.

The Care Allowance is granted when it is necessary to take care of:

- a. a child up to 8 years of age in case of:
- b. an unexpected closing of a day nursery, a kindergarten or a school which the child attends,
- c. childbirth or sickness of the insured person's spouse who permanently takes care of the child if the childbirth or sickness make them unable to take care of the child,
- d. a stay of the insured person's spouse who takes care of the child in a health care institution,
- e. a sick child is up to 14 years of age,
- f. any other sick member of the family (spouse, parents, parents-in-law, grandparents, grandchildren, siblings, and children over 14 – if they stay in the same household with the insured person).

If care is taken of the child up to 14 years of age, the care allowance is granted for the period of caretaking, which cannot exceed 60 days per calendar year. If a child is older or if care is taken of another member of the family care allowance is granted for a maximum period of 14 days in the calendar year.

Care allowances are jointly granted for taking care of children and other members of the family for the period not exceeding 60 days per calendar year.

The allowance is payable at the rate of 80% of the basis of contribution rates (average salary).

The incapacity to work pension (*Renta z tytułu niezdolności do pracy*) might be considered as a long-term care benefit only if a person has a certificate of the ZUS-authorized physician to

the medical commission of the social security institution about the total inability to perform any kind of work and in the case of finding that the ability of the organism has been impaired to a degree which makes it necessary for the person concerned to be under permanent or long-term care to satisfy her or his basic living needs and the inability to conduct independent existence is announced.

### **Combination of benefits**

Cash benefits and benefits in kind.

As a general rule, there is a free choice between cash benefits and benefits in kind.

Nevertheless, the cash benefits usually do not include the possibility to receive benefits in kind.

### **Benefits for the carer**

The nursing benefit (*Świadczenie pielęgnacyjne*) – established to support people who do not undertake or resign from employment or other paid work due to the necessity of taking care of a disabled child. The child (under 16 years old) must be in possession of a certificate confirming his or her disability with recommendations of constant or long-term care or help, related to a limited ability of the child to independent existence and a necessity of the everyday participation of a caretaker in the process of medical treatment, rehabilitation and education, or (if the child is older than 16 years) of a certificate confirming a considerable degree of disability. A caregiver can receive the nursing benefit only if he or she is one of the parents or the factual guardian of the child. The amount of money paid directly to the caregiver is PLN 520 (€ 119.04) per month. The caregiver can have his or her social insurance contributions paid from the state budget.

A social assistance centre pays the contribution to an old-age and pension insurance. The amount is subject to income criteria per person in the family, to a person that gives up employment due to the necessity to exercise direct, personal care for a member of the family suffering from a long-term or serious disease, and for a non-cohabiting mother, father, or for siblings, provided that the actual income per person in the family of the person exercising such care does not exceed 150% of the amount subject to income criteria per person in the family, and provided that the person exercising such a care is not covered by mandatory old-age or disability pension insurance under other titles and receives no old-age or disability pension. The above also refers to individuals who – due to the necessity to exercise such a care – are on unpaid leave. The contribution to old-age and pension insurance – in the amount specified under relevant provisions on the social insurance system – is paid for the duration of exercising such care.

### **Addendum: Social security coordination aspects**

According to the Note of the Polish delegation, the above listed *benefits in kind* represent a mix of sickness benefits and social services that are not considered as part of social security system (health care) in Poland but that belong to the sphere of social assistance.

The Polish delegation noted that according to their view only Medical Care Supplement (*Dodatek pielęgnacyjny*) and Medical Care Allowance for adults (*Zasilek pielęgnacyjny*) can be treated as LTC *cash benefits*.

They have emphasized that according to the Judgement of The Court (C-333/00 *Mahheimo*) a benefit such as the home child-care allowance is a *family benefit* within the meaning of Article 4(1)(h) of the Regulation 1408/71. That is why Medical Care Allowance should be treated as LTC only in the case of adults (not in case of children).

According to the view of the Polish delegation, *Supplement to family benefit* (Training and Rehabilitation of Disabled Child supplement, *dodatek z tytułu kształcenia i rehabilitacji dziecka niepełnosprawnego*) cannot be coordinated as sickness benefits. All supplements to family allowances in Poland are integral part of “main” family allowance (they cannot be granted separately). All supplements to family allowances are recognized as family benefits under the Regulation 883/2004.

The Polish delegation expressed their believe that *social assistance* benefits cannot be coordinated as LTC benefits, since the Regulation No 883/2004 does not apply to social assistance. In Poland the duty of guaranteeing the implementation of social assistance tasks rests upon territorial self-government units/communes and governments administration. They prepare an evaluation of social support resources based on an analysis of local social and demographic situation, which affects the assistance aimed at people in need. When granting assistance, family background interview shall be conducted to determine personal and financial situation, family income and assets of individuals and families.

The nursing benefit (*Świadczenie pielęgnacyjne*) is established to support people who do not undertake or resign from employment or other paid work due to the necessity of taking care of a disabled child. It is granted to the carer (not to a disabled child/person); the carer can have his/her social insurance contributions paid from the State budget. The carer’s activity is regarded as a gainful activity under Polish legislation, where the activity is exercised. In this situation we should treat this person (carer) in accordance with Article 1 and Title II of Regulation (EC) No. 883/2004.

## PORTUGAL

### Applicable statutory basis

#### **Social insurance:**

Statutory Decree 265/99 of 14 July 1999, amended by Statutory Decree 309-A/2000 of 30 November 2000.

#### **Guaranteeing sufficient resources:**

Statutory Decree 265/99 of 14 July 1999, amended by Statutory Decree 309-A/2000 of 30 November 2000.

#### **Social security system and National Health Service:**

Statutory Decree 101/06 of 6 June 2006.

### Benefits in kind

#### 1. Home care

Home care (*apoio domiciliário*).

Daily care, personal comfort, cleaning, meal delivery, accompaniment during medical visits etc.

Foster families (*famílias de acolhimento*).

Temporary or permanent integration of elderly persons or disabled adults (maximum 3) in foster families who ensure that their basic needs, including in terms of medical care, are met.

Integrated home care teams (*Equipas de Cuidados Continuados Integrados*) - Health and Social community multidisciplinary teams, for citizens in convalescence with functional dependence or terminal illness that do not need in-patient care.

#### 2. Semi-residential care

A Night Centre (*Centro de Noite*) for elderly people who are isolated and, accordingly, in need of assistance during the night (from 6pm to 8am);

Day care centres (*Centro de dia*) for elderly persons. At least 8 hours per day;

Centres for day care and promotion of autonomy (*Unidades de dia e de promoção da autonomia*): 8 hours per day;

Sheltered workshops (*centro de actividades ocupacionais*) for seriously disabled persons;

Centres for social and occupational measures (*forum sócio-ocupacional*) for persons with minor mental disorders;

Nursing homes for temporary stay (*lar temporário*) of disabled children and youngsters between the age of 6 and 16 years.

#### 3. Residential care

Nursing homes for permanent stay (*lar de idosos*) of elderly persons who are or risk to become severely dependent;

Homes (*residência*) for persons over the age of 16 years with permanent or temporary disabilities;

Centres for supported life (*unidade de vida apoiada*) for persons with permanent mental disabilities;

Centres for protected life (*unidade de vida protegida*) for adults who suffer from serious psychological problems likely to become permanent;

Centres for autonomous life (*unidade de vida autónoma*) for adults who suffer from serious psychological problems likely to become permanent, but who maintain a certain degree of autonomy;

Temporary Reception Centres for Emergencies (*Centro de Acolhimento Temporário de Emergência*) for elderly persons in a difficult social situation;  
Convalescent centres (*Unidades de convalescença*) for medical rehabilitation care following hospitalisation;  
Medium-term and rehabilitation centres (*Unidade de média duração e reabilitação*), in conjunction with the hospital, for medical rehabilitation care and social / psychological support;  
Long-term and maintenance centres (*Unidade de longa duração e manutenção*) for social support and maintenance treatment of persons suffering from chronic pathologies;  
Centres for palliative care (*Unidades de cuidados paliativos*) for the support, in a hospital environment, of seriously ill persons.

#### **4. Other benefits**

The provision of technical aids.

Premature intervention (*Intervenção Precoce*) integrated aid measure combining education, health and social assistance for children up to 6 years old with disabilities or with a serious risk of mental retardation.

#### **Cash benefits**

##### ***Social insurance:***

The Long-term care supplement (*complemento por dependência*): paid to recipients of invalidity, old-age and survivors' pensions who are reliant on care. A monthly amount is indexed to the amount of the social pension (*pensão social*) and annually updated. In 2012 this amount is € 97.70 regarding 1st degree of dependency and € 175.86 concerning 2nd degree of dependency.

14 benefits paid yearly. The Christmas and holiday bonus: amount equal to the benefit paid for the corresponding month.

The allowance for the assistance by a third party (*subsídio por assistência de terceira pessoa*) is a family benefit granted to severely disabled descendants who are incapable to carry out their basic needs and need the permanent help of a third person. In 2012 it amounts to € 88.37.

##### ***Guaranteeing sufficient resources:***

The long-term care supplement (*complemento por dependência*): paid to recipients of invalidity, old-age and survivors' social pensions who are in need of permanent assistance of a third party. Monthly amount indexed to the indexing reference of social support (indexante dos apoios sociais, IAS): € 94.77 or € 170.59 according to the degree (1st or 2nd) of dependency.

Allowance for assistance by a third party (*subsídio por assistência de terceira pessoa*): see above.

Discretionary use. However, the benefits are paid to the care provider in case the beneficiary is incapacitated or if she or he resides in a social support (or assimilated) institution.

#### **Combination of benefits**

No mixed benefits.

Not applicable. Accumulation possible.

**Benefits for the carer**

No specific benefits for the carer.

## ROMANIA

### Applicable statutory basis

Law 448 of 6 December 2006 on Protection and Promotion of the Rights of Persons with Handicap (*Legea privind protectia si promovarea drepturilor persoanelor cu handicap*), with subsequent amendments.

Law 17 of 6 March 2000 on Social Assistance of Senior Persons (*Legea privind asistenta sociala a persoanelor varstnice*), with subsequent amendments.

### Benefits in kind

#### 1. Home care

*Persons with handicap:*

Personal Assistant (*asistent personal*) – care and protection for a period longer than 24 hours.

*Senior persons:*

Caregiver (*persoana de ingrijire*) – social and socio-medical services for a period longer than 24 hours.

#### 2. Semi-residential care

*Persons with handicap:*

Qualified Personal Assistant (*asistent personal profesionist*) – care and protection for a period longer than 24 hours,

Day centres – social services integrated with medical, education, housing, labour force employment and other similar services up to 24 hours.

*Senior persons:*

Day, night, and other specialised centres for senior persons – socio-medical services up to 24 hours.

#### 3. Residential care

*Persons with handicap:*

Residential centres – social services integrated with medical, education, housing, labour force employment and other similar services for a period longer than 24 hours in:

Care and assistance centres,

Recovery and rehabilitation centres,

Integration centres providing vocational therapy,

Centres of training for an independent life,

Crisis centres,

Centres for community and training services,

Sheltered housing, etc.

*Senior persons:*

Homes for senior persons – social, socio-medical and medical services for a period longer than 24 hours.

#### 4. Other benefits

*Persons with handicap:*

e.g. Gratuities by Urban Transportation (*calatorii gratuite la transportul urban*). **138 / 156**

## **Cash benefits**

*Persons with handicap:*

The Indemnity (*indemnizatie*) which is an alternative to the Personal Assistant (*asistent personal*) is paid to the person with severe handicap. It is equal to the net wage for a certain category of social worker.

The amount is at his/her discretion.

*Senior persons:*

Not applicable.

## **Combination of benefits**

*Persons with handicap:*

Cash and in kind benefits.

The person with severe handicap may freely choose between Indemnity (*indemnizatie*) and Personal Assistant (*asistent personal*) (includes inter alia relatives and spouses).

*Senior persons:*

In kind benefits.

## **Benefits for the carer**

*Persons with handicap:*

As the Personal Assistant (*asistent personal*) (includes inter alia relatives and spouses) and the Qualified Personal Assistant (*asistent personal profesionist*) have employment contracts, they are covered for different risks.

The Personal Assistant and the Qualified Personal Assistant are entitled to benefits in kind such as free urban and inter-urban transportation, etc.

*Senior persons:*

As the Caregiver (*persoana de ingrijire*) has an employment contract, he/she is covered for different risks

## SLOVAK REPUBLIC

### Applicable statutory basis

The Act on Social Services (*Zákon o sociálnych službách*) No. 448/2008.

The Act on Financial Benefits for Compensation of Disabled Persons (*Zákon o peňažných príspevkoch na kompenzáciu ťažkého zdravotného postihnutia*) No. 447/2008.

The Act on Health Care and Services Related to Health Care (*Zákon o zdravotnej starostlivosti a službách súvisiacich s poskytovaním zdravotnej starostlivosti*) No. 576/2004.

The Act on Health Care Providers, Medical Workers and Professional Medical Associations (*Zákon o poskytovateľoch zdravotnej starostlivosti, zdravotníckych pracovníkoch a stavovských organizáciách v zdravotníctve*) No. 578/2004.

The Act on Subsistence Minimum (*Zákon o životnom minime*) No. 601/2003.

### Benefits in kind

#### 1. Home care

Attendance services to help with personal activities of daily living, with keeping up the household and with basic social activities.

#### 2. Semi-residential care

Semi-stationary care is provided in the social services facilities e.g. Daily Stationary Facility (*Denný stacionár*). It is provided as a daily or a weekly care (with persons returning home during the weekend). Different activities like specialised services, nursing etc., are provided there.

There are no exactly defined daily hours during which the recipient may attend the facility.

#### 3. Residential care

Nursing home care is provided in social services facilities: Shelter Facility (*Zariadenie chráneného bývania*), Social Service Home (*Domov sociálnych služieb*) and Home of Supported Inhabitation (*Zariadenie podporovaného bývania*). For a temporary period, the nursing home care is provided also in the Attendance Service Facility (*Zariadenie opatrovateľskej služby*) and in the Rehabilitation Centre (Rehabilitačné stredisko).

#### 4. Other benefits

Social Guidance (*Sociálne poradenstvo*), Interpretation (*Tlmočenie*), Social rehabilitation (*Sociálna rehabilitácia*). According to the Note of the Slovak delegation these benefits do not satisfy the aspects of LTC benefits.

The social services system, in which providers (self-government of municipalities and upper regional units, public and non-public providers) offer social services to persons in social need (disabled persons, elderly, single parents, homeless persons, etc).

### Cash benefits

For professional providers within home care the Personal Assistance Benefit (*Príspevok na osobnú asistenciu*) is set: the sum of 1.39% of the subsistence minimum per hour of assistance required (maximum of 7 300 hours per year). This benefit is granted to the person who is in need of care and whose income is lower than 3 times the subsistence minimum, otherwise the benefit is lower.

Personal assistant is not necessarily a professional caregiver. It can be any natural person who has reached 18 years of age, is legally competent and with whom the severely disabled person has concluded an agreement on the performance of personal assistance.

For informal carers (relatives) within home care the Attendance Service Benefit (*Príspevok na opatrovanie*) is set: up to the level of 111.32% of the subsistence minimum per month if only 1 person receives home care and up to the level of 148.42% of the subsistence minimum per month if 2 or more persons receive home care. The benefit is paid directly to the carer (obviously a family member) in the carer's own right. An increase of the benefit by the sum equivalent to € 49.80 per month is granted if a severely disabled child is in home care and the provider has no other income.

The Benefit for Purchasing, Repairing, Adjusting and Training of Utilisation Equipment (*peňažný príspevok na kúpu, úpravu alebo opravu pomôcky*): maximum benefit of € 8 630.42. Purchasing a Hoisting Device Benefit (*Peňažný príspevok na kúpu zdvihacieho zariadenia*): maximum benefit of € 11 617.88.

Purchasing and Adjusting a Car Benefit (*Peňažný príspevok na kúpu alebo úpravu osobného motorového vozidla*): maximum benefit of € 8 298.48.

Transportation Benefit (*Peňažný príspevok na prepravu*): maximum benefit is 51.02% of the subsistence minimum (*Životné minimumi*) per month.

Adaptation of a Residence or a Garage Benefit (*Peňažný príspevok na úpravu bytu, rodinného domu alebo garáže*): maximum benefit of € 8 298.48.

The Compensation of Enhanced Costs Benefit (*Peňažný príspevok na kompenzáciu zvýšených výdavkov*): monthly supplements for special dietary requirements (up to 18.56% of the subsistence minimum), personal and domestic hygiene, clothing, shoes and housing equipment (9.28% of the subsistence minimum), operation of a car (16.7% of the subsistence minimum), maintenance of a guide dog (22.27% of the subsistence minimum).

### **Combination of benefits**

Cash benefits as well as benefits in kind at home and in institutions can be combined; however, for selected benefits, the combination is not possible (e.g. the Attendance Service Benefit (*Príspevok za opatrovanie*) with the Personal Assistance Benefit (*Príspevok na osobnú asistenciu*)).

Free choice between cash benefit and benefit in kind possible.

### **Benefits for the carer**

The state pays contributions on the carer's old-age and invalidity insurance. It is possible to take a paid leave in order to care for a dependent person (relief service).

### **Addendum: Social security coordination aspects**

In the Note of the Slovak delegation it is stressed that for cash allowances the income and the assets of the person with a severe disability, as well as all the jointly assessed persons, are established, which is regularly reviewed once a year, indicating the fact that the allowances can be provided only to such a group of persons with severe disabilities that are at a lower social level. They are linked to the socio-economic situation in the Slovak Republic and their amount depends on the subsistence minimum.

Cash allowances are provided on the basis of individual and discretionary review of particular situation and circumstances of the applicant and his or her family (the social assessment

activity) for the purpose of compensating for the social consequences of severe disability. The cash allowances are not claimable, are not awarded automatically to persons meeting certain criteria, and are of the discretionary nature. Their aim is contributing to the support of autonomy as well as social integration of disabled persons, helping them to lead a life comparable with that of persons not having disabilities. Therefore care allowances should not be exportable.

According to the view of the Slovak delegation, expressed in their Note, cash benefits for compensation of a severe disability are social assistance benefits. If they were to be regarded as long-term care benefits, the list should give only two cash benefits that can have some of their features:

- the cash allowance for care, which is provided to the caregiver and
- the cash allowance for personal assistance, which is provided to a natural person with a severe disability but subject to monthly produced statements of the number of hours of personal assistance, as well as the receipts of the fees paid to the personal assistant, without which cash allowance cannot be paid out. For this reason it is debatable whether this cash allowance should not be regarded as an LTC benefit in kind.

## SLOVENIA

### Applicable statutory basis

No specific law related to long-term care.

Long-term care benefits are included in the following acts:

The Pension and Disability Insurance Act (*Zakon o pokojninskem in invalidskem zavarovanju, ZPIZ-1*) (Official Gazette of the Republic of Slovenia, No. 109/2006, official consolidated text).

The Social Assistance Act (*Zakon o socialnem varstvu, ZSV*) (Official Gazette of the Republic of Slovenia, No. 36/04)

Financial Social Assistance Act (*Zakon o socialno varstvenih prejemkih, ZSVarPre*) (Official Gazette of the Republic of Slovenia, No. 61/2010)

Rights Enforcement from Public Funds Act (*Zakon o uveljavljanju pravic iz javnih sredstev, ZUPJS*) (Official Gazette of the Republic of Slovenia, No. 62/2010)

The Parental Care and Family Benefits Act (*Zakon o starševskem varstvu in družinskih prejemkih, ZSDP*) (Official Gazette, No. 110/2003, 10/2008- official consolidated text)

The Mentally and Physically Handicapped Persons Act (*Zakon o družbenem varstvu duševno in telesno prizadetih oseb, ZDVDTP*) (Official Gazette SRS, No. 41/83)

The Health Care and Health Insurance Act (*Zakon o zdravstvenem varstvu in zdravstvenem zavarovanju, ZZVZZ*) (Official Gazette, No. 100/2005).

### Benefits in kind

#### 1. Home care

Home care is provided by the following services:

- *Community services* provide medical-social care at home. The user is provided nursing care services, preventive home visits and assistance in obtaining adequate social treatment. The costs of nursing care services are covered by the compulsory health insurance.
- Community psychiatry is a team approach to the treatment of patients after their discharge from treatment at the secondary (specialist) level into home care, providing their social inclusion, maintenance and follow-up of their health condition.
- *Social home help* is organised locally, provided within the public service network by the Social Work Centres, homes for elderly and special institutions for home care. Home help is available for a maximum of 4 hours a day or 20 hours a week.
- *Personal assistance* is a program ran by persons with disabilities themselves, and is financed by the state, local community and user funds (it is not available across the country).
- *Social alarms/telecare* is organised locally, not provided within the public service network; available only in some municipalities (currently there are essential changes).
- *Meals on wheels* is a commercial service unless when is being part of home help service package.
- *Sheltered housing* emerged in recent years and is funded by public sector (municipal housing funds, Pension Real Estate's Fund by private investors or as public-private partnership ventures).

#### 2. Semi-residential care

Day care centres are organised locally and include the following services: protection, food supply, health care, social integration, social activities and transport.

Day care is usually performed in the welfare employment centres, in homes for elderly (*domovi za starejše*) and in private institutions on a basis of a concession contract concluded between institutions performing day care and the state or on the basis of a work permit.

Group homes and day centers for people with mental health problems (*stanovanjske skupine*) are organised locally, not provided within the public service network; available only in some municipalities; financed by the state, local community and user funds (it is not available across the country).

### **3. Residential care**

Residential care is mainly a public responsibility: in terms of the establishing and maintaining facilities, of developing the network of social care homes. The system of financing the residential care is a combination of public and private responsibility: people have to cover the expenses of accommodation, food and social care services, but if income is insufficient, the state (municipality) supplements the payment up to the entire price.

Residential care in Slovenia is provided by:

- homes for the elderly,
- special social care homes,
- centres for care and training (residential institutions for people with learning disabilities),
- institutions for training of severe and profound mentally disabled children.

*Homes for the elderly* have the longest tradition in Slovenia and are operating in the public and private domain (private institutions with concessions). *Special social care homes* and *institutions for training of severe and profound mentally disabled children* are only public and there are no private partnerships. The *centres for care and training* operate in both the public and private domain. In the public sector the providers of homes for the elderly are municipalities and in the private sector the providers are private social institutions who have acquired a license or concession.

Health care is covered from the compulsory health insurance by the Health insurance Institute of Slovenia (HIIS) according to the contracts between the HIIS and above-mentioned institutions.

*Nursing hospitals* could also be mentioned. Although several Slovenian hospitals already operate departments for non-acute medical treatment, the first nursing hospital in Slovenia was opened in February 2011 in Ljubljana. Nursing hospitals should be opened in other cities as well. The purpose of such hospitals is to accept patients who have concluded an acute medical treatment, but are not yet ready to lead an independent live at their home or in a home for elderly. The nursing hospital is thus a transitional stage between a hospital treatment and living at home (again) or in the home for elderly. It is not intended for indefinite hospitalisations. The decision on the admittance is taken by the team of experts, according to the overall plan of treatment and care. In a nursing hospital the emphasis is on care activities, therefore a stable medical condition is one of the conditions to be accepted to a nursing hospital. Also the majority of staff are nurses, and only few are physicians.

Within the framework of *non-acute hospital care*, hospices perform the following services:

- *extended hospital treatment* (EHT) where patients are treated after completed acute therapy because they are unable to return to their home environment due to their current health condition; where they are provided with an adequate rehabilitation programme, a relatively rapid improvement of their condition may be expected, which enables them to return into their home environment (expected health improvement, a list of hospitals that offer such rehabilitation programmes);

- *nursing care* is provided for a short period of time when the health condition after completed acute therapy has deteriorated so that the patient's return to their previous environment is impossible while no improvement may be expected and therefore it is necessary to provide suitably adjusted conditions (social care; return into home care is not possible);
- *non-acute palliative care* (terminal stages – short-term conditions, in this case short life expectancy; no improvement of the condition may be expected; institutional care placement in such a short time is not feasible).

#### **4. Other benefits**

The right to technical aids (orthopaedic, hearing and other aids intended for home care – special beds, sanitary medical equipment, etc) available under compulsory health insurance. Costs are covered in full for children with severe and profound mental disabilities, the disabled and other persons who rely on the assistance of another person for all or most of their existential functions, disabled persons who have at least 70% physical disability according to regulations on pension and invalidity insurance, persons over 75 years, and social assistance recipients (for the latter co-payments are covered by the State).

#### **Cash benefits**

Cash benefits are paid directly to a person in need of care. Cash benefits are intended to cover additional costs arising from a need for care of another person (professional or informal caregiver).

The Supplement for Care and Assistance (*dodatek za tujo nego in pomoč*) granted to disabled persons who are incapable of performing basic life functions and for which they require the constant help of another person. This supplement amounts from 20% to a maximum of 30% of the national average net personal income per employee if a person needs assistance of another person in performing all of his or her basic life functions (€ 165.07), and 10% to 20% if help of another person is required in performing a majority of the basic life functions (€ 82.54).

The Assistance and Attendance Allowance (*dodatek za pomoč in postrežbo*): available to lawfully permanent resident recipients of old-age, invalidity, widow/widower's and survivor's pension, should they need permanent help to satisfy their vital necessities. It amounts to at least 70% of the minimum pension for a full pension qualifying period for persons, who are in need of assistance and attendance provided by a third person to help him/her with all of basic day-to-day activities (€ 290.15) or half of the amount for persons who need assistance in performing a majority of basic day-to-day activities (€ 145.08) or 100% of the minimum pension for a full pension qualifying period for the most severely handicapped (€ 414.50).

The Special Childcare Allowance (*dodatek za nego otroka, ki potrebuje posebno nego in varstvo*): provides financial assistance to a family with a child with special needs who are permanent residents, and is intended to cover the higher cost of caring for such a child. The benefit is paid until the age of 18 or 26 if the child is in education. The monthly amount is € 101.05; for children who are in need of special care 24 hours a day the monthly amount is € 202.17.

The Partial Payments for Loss of Income (*delno plačilo za izgubljeni dohodek*):

Paid to one of the parents who has left his or her job in order to care for a child with special needs. The child and one of the parents must be permanent residents and EU citizens. The monthly amount equals to the national minimum wage (€ 734.15 – gross value).

The Assistance and attendance allowance (*dodatek za pomoč in postrežbo*) for social assistance recipients, who due to old-age, illness or invalidity are incapable of independent living and require the assistance of another person (Article 31.a of the Social Assistance Act of 1992 with later amendments). It is of a subsidiary (social assistance) legal nature. The same rules apply as for the assistance and attendance allowance as a supplement to an old-age, invalidity, widow's or family pension (described above). It is also foreseen in the new social assistance act, which should come into force in 2012.

The Assistance and attendance allowance for war invalids (of a certain degree), according to the War Invalids Act (of 1996 with later amendments, Article 22 and following). The same criteria as for the assistance and attendance allowance as a supplement to an old-age, invalidity, widow's or family pension apply (described above). There are some special provisions, mainly to the benefit of the allowance recipient. This allowance could be classified as an LTC benefit for victims of war.

The person has a free choice and can use the money at his own discretion. There is no control on how the money is spent.

### **Combination of benefits**

There is a combination of cash benefits and benefits in kind. Cash benefits are paid directly to the beneficiary.

Free choice between cash benefits and benefits in kind.

### **Benefits for the carer**

The benefit is paid to a carer in case a person entitled to residential care opts for the right to choose a family assistant (*družinski pomočnik*) instead. The locally competent Centre for Social Work awards the family assistant to a disabled person who requires help with performing all of the activities of daily living. A family assistant is paid by the local municipalities (€ 578.55 per month – gross value).

The Partial Payments for Loss of Income (*delno plačilo za izgubljeni dohodek*) have already been mentioned above. It is rather automatically transformed to a benefit for a family assistant when the child reaches maturity.

## **SPAIN**

### **Applicable statutory basis**

Act No. 39/2006 on the Promotion of Personal Autonomy and Assistance to persons in situations of dependence of 14 December 2006, as amended.

It seems that in Spain a formal criterion is followed, i.e. as long-term care benefits are considered only those regulated by the above-mentioned legislative act.

However, it is obvious that the “need of care” can be also protected by other social security benefits (partially also linked with long-term care):

- maternity benefits for parents while nursing their children
- Contributory and non-contributory invalidity pensions

Both branches only specifically guarantee financial help to persons in need of nursing care when they satisfy two requisites: to be legally qualified as disabled and to require the help of another person to carry out the most essential day-to-day activities, as a result of the loss of "functional or anatomical capacity", which should be determined by the medical services.

Under Spanish law, four different degrees of invalidity may be distinguished, depending on their consequences for the person’s capacity to work: partial permanent incapacity; total permanent incapacity; absolute incapacity, and extreme disability.

Extremely disabled is a worker or an employee, who not only suffers from a total permanent incapacity to perform any kind of job, but also needs the help of someone to perform the most essential acts of life such as eating, getting dressed, walking, or any other similar examples, due to their anatomical or functional shortcomings.

- Family benefits: there is only one example in which Spanish rules take into account the case of those young people suffering from an extreme incapacity that demands non-medical nursing care: when the person is 18 years old or over, he or she is affected by the loss of anatomical or functional capacity, at least for a degree of 75% and he or she needs the help of another person to carry out the daily activities.

### **Benefits in kind**

#### **1. Home care**

Different forms of assistance in the home of the person in a situation of dependence. Services aimed at promoting personal autonomy and preventing dependency are stipulated in Article 15(1)(a) of the Act 39/2006.

Tele-assistance and prevention are provided for.

#### **2. Semi-residential care**

Attendance at day and night care centres. The duration and the type of care depend on the individual need of the dependent person.

#### **3. Residential care**

Long-term care provided in institutions, mainly old-age homes and centres for the disabled.

#### **4. Other benefits**

No other benefits.

#### **Cash benefits**

The amounts are fixed by law and vary according to the degree of dependency. The maximum monthly amount: € 833.96.

With regard to cash benefits, the Act 39/2006 mentions three types of benefits, two of which, despite being monetary, are of the same nature as the benefits in kind for the coordination purposes.

In the Spanish note it is argued that two cash benefits should be considered as benefits in kind according to case law of the Court of Justice of the European Community (CJEU), Decision No 175 of 23 June 1999 of the Administrative Commission of the European Communities on Social Security for Migrant Workers on the interpretation of the concept of ‘benefits in kind’ in the event of sickness or maternity pursuant to Council Regulation (EEC) No 1408/71, and more recently, Decision No S5 of the Administrative Commission for the Coordination of Social Security Systems of 2 October 2009 on the interpretation of the concept of ‘benefits in kind’ as defined in Article 1(va) of Regulation (EC) No 883/2004 in the event of sickness or maternity.

a) Financial benefit linked to a service (Article 17)

This is periodical and is only granted when access to a public or organised care service is not possible, in accordance with the degree and level of dependency and economic situation of the beneficiary, pursuant to the provisions of the agreement between the General State Administration and the corresponding Autonomous Community.

This personal financial benefit is, in any case, linked to the acquisition of a service. Therefore, this financial benefit is of the same nature as a benefit in kind.

b) Financial benefit for personal care (Article 19).

The objective of the financial benefit for personal care is to encourage highly dependent persons to be more autonomous. The aim is for this benefit to contribute towards the hiring of a personal assistant for a number of hours, which will facilitate the beneficiary's access to education and work and will give them a more autonomous life in terms of pursuing basic, day-to-day activities.

Therefore, this financial benefit is of the same nature as a benefit in kind.

c) Financial benefit for care in the family and support for non-professional carers (Article 18).

In exceptional circumstances, when the beneficiary is being cared for in the family environment, financial benefit for care in the family is granted as long as certain conditions and requirements are met. The carer must adhere to the rules on Social Security registration, membership and contributions laid down by law.

The Spanish legislation on protection against dependency does *not provide* for any care allowance to pay for housing or to supplement the benefit.

With regard to the tax benefits in the *personal income tax*, there are a number of measures which exempt persons with disabilities from paying taxes, or deduct or reduce their tax rate. Some of these may benefit persons with disabilities in a recognised situation of dependency,

such as the measures to award net income from work or economic activities for contributions to listed heritage or for pension schemes, etc.

With regard to the personal income tax in the specific case of persons declared dependent under Act 39/2006, there are a number of measures in place which are set out in Act 35/2006 of 28 November 2006, as well as other implementing provisions.

**Combination of benefits**

The benefit compatibility scheme (mixed benefits) is regulated at territorial level by each of the Autonomous Communities.

**Benefits for the carer**

Cash benefits are payable to the beneficiary, who pays the informal caregiver. Compulsory inclusion of the informal caregiver in the Social Security System.

## SWEDEN

### Applicable statutory basis

The Social Services Act (*Socialtjänstlagen*) (2001:453) of 2002.

The Health Care Act (*Hälso- och sjukvårdslag*) (1982:763).

The Social Security Code (2010:110).

### Benefits in kind

#### 1. Home care

This is the most common service.

If a person is in need of medical care that does not involve hospital care he or she should, according to the Health Care Act, be given that kind of care in his or her own home. The assistance in the form of home help shall also be given in a person's own home. The municipality cannot refuse to give anyone in need assistance in their own home. There is no legal responsibility for spouses or children to care for their elderly relatives.

#### 2. Semi-residential care

Exists in the form of short-term stay, as a complement to home care.

#### 3. Residential care

Mainly for people with Alzheimer disease or persons with severe medical conditions or persons who suffer severely from anxiety and loneliness.

#### 4. Other benefits

Day care, rehabilitation, security alarms etc.

Persons with the lowest pension are entitled to a state financed income-tested housing supplement. Although, its purpose seems to be to top up the regular pension from an economic point of view, rather than a complement due to special care needs.

### Cash benefits

Based on individual assessment.

The amount depends on municipalities.

Cash benefits as an alternative to municipal provision are not intended to be used as payments to informal carers.

In addition, other benefits might be mentioned as well:

The care benefit (*vårdbidrag*), according to *Chapter 22* of the (2010:110) *Social Security Code*.

This is paid to the carer (normally the legal parent) of a disabled (or sick, in the need of care for at least six months) child from 0-19 years of age. It is a flat-rate benefit of SEK 107 000 a year (SEK 8 917 a month). There is also the possibility of extra cash benefits for extra expenses.

The occasional parental benefit (*tillfällig föräldrapenning*), *Chapter 11-13* of the (2010:110) *Social Security Code*.

This is paid to the carer of certain disabled children of 16-21 (23) years of age when the child is occasionally ill with a maximum of 120 days per year.

The disability benefit (*handikappersättning*), Chapter 50 of the (2010:110) Social Security Code.

This is paid to disabled persons of 19 years of age or older (at 19 the right to a care benefit, see above, expires). This is a benefit to cover extra expenses due to care of assistance.

Assistance benefit (*assistansersättning*), Chapter 51 of the (2010:110) Social Security Code

This is a cash benefit paid per hour of assistance to those who, due to a severe handicap, is in the need of assistance with a minimum of 20 hours per week concerning basic human needs.

Car benefit (*bilstöd*), Chapter 52 of the (2010:110) Social Security Code.

This is a special benefit for the disabled with permanent (at least 9 years ahead) difficulties to use public transportation.

### **Combination of benefits**

Benefits in kind.

Elderly care, such as home help is usually provided as a benefit in kind.

Cash benefits are allowed but not very common. A voucher-like system gives the individual a right to a certain amount of help related to a cost per hour or presumed result. This approach is considered to better target the quality issues.

Mixed benefits: could be possible, but are very uncommon.

Free choice between cash and/or benefits in kind is possible, but uncommon.

### **Benefits for the carer**

Support from the municipality, e.g. providing information, support groups for carers, relief on demand or scheduled relief, centres for carers with activities.

Cash benefits, including the allowance to a relative, are usually calculated according to the number of hours of care. The payment can also be based on other criteria than number of hours. There is no national framework for the cash benefits and they are not paid out in all municipalities. Care benefits and occasional parental benefits paid to the carer have been mentioned above among the cash benefits.

### **Addendum: Social security coordination aspects**

According to the Note of the Swedish delegation the aid and benefits granted in accordance with the Swedish Social Services Act (2001:453) are considered to cover benefits that clearly fall within the category of social assistance and therefore fall outside the material scope of Regulation 883/2004. Moreover, in Sweden, such benefits and measures are – with certain exceptions - established entirely at municipal level. It is only in the event of special obligations being imposed on the municipality by the Social Services Act that the municipalities' freedom to decide on their course of action in the said area is limited.

## SWITZERLAND

### Applicable statutory basis

1. The Federal Law on Sickness Insurance of 18 March 1994 (*Bundesgesetz über die Krankenversicherung, KVG/Loi fédérale sur l'assurance-maladie, LAMal/Legge federale sull'assicurazione malattie, LAMal*).
2. The Federal Law on Accident Insurance of 20 March 1981 (*Bundesgesetz über die Unfallversicherung, UVG/Loi fédérale sur l'assurance-accidents, LAA/Legge federale sull'assicurazione contro gli infortuni, LAINF*).
3. The Federal Law on Invalidity Insurance of 19 June 1959 (*Bundesgesetz über die Invalidenversicherung, IVG/Loi fédérale sur l'assurance-invalidité, LAI/Legge federale su l'assicurazione per l'invalidità, LAI*).
4. The Federal Law on Old-age and Survivors' Insurance of 20 December 1946 (*Bundesgesetz über die Alters- und Hinterlassenenversicherung, AHVG/Loi fédérale sur l'assurance-vieillesse et survivants, LAVS/Legge federale su l'assicurazione per la vecchiaia e per i superstiti, LAVS*).
5. The Federal Law on Supplementary Benefits to the Old-age, Survivors' and Invalidity Insurance of 6 October 2006 (*Bundesgesetz über Ergänzungsleistungen zur Alters-, Hinterlassenen- und Invalidenversicherung, ELG/Loi fédérale sur les prestations complémentaires à l'AVS et à l'AI, LPC/Legge federale sulle prestazioni complementari all'assicurazione per la vecchiaia, I superstiti et l'invalidità, LPC*).
6. The Federal Law on Military Insurance of 19 June 1992 (*Bundesgesetz über die Militärversicherung, MVG/Loi fédérale sur l'assurance militaire, LAM/Legge federale sull'assicurazione militare, LAM*).
7. 8. The Federal Law on Assistance for Victims of Crime of 23 March 2007 (*Bundesgesetz über die Hilfe an Opfer von Straftaten, OHG/Loi fédérale sur l'aide aux victimes d'infractions, LAVI/Legge federale concernente l'aiuto alle vittime di reati, LAV*).
9. Cantonal laws concerning the funding of long-term care.
10. Cantonal laws on social assistance.

### Benefits in kind

#### 1. Home care

- *KVG/LAMal*:

- examinations and treatment at the home of the patient by doctors and chiropractors;

- contribution to care at the home of the patient by nurses or home care organisations (= SPITEX), on the basis of a medical prescription and of an established need for care;

- *UVG/LAA/LAINF*:

- treatment at the home of the patient by doctors and chiropractors;

- care at the home of the patient, prescribed by a doctor and provided by nurses or home care organisations (= SPITEX) (on a discretionary basis<sup>30</sup> contribution for home care provided by other persons);

- *IVG/LAI* (medical measures of the IV/AI): treatment at home by a doctor or, on prescription, by paramedical staff;

- *MVG/LAM*:

30 H. Landolt, 'Soziale Sicherheit von pflegenden Angehörigen', (2009) *Aktuelle Juristische Praxis*, 1233 et seq (with an overview of the administrative practice concerning the care by family members on page 1237).

Examinations, treatment and care at home.

## 2. Semi-residential care

- *KVG/LAMal*:

- examinations and treatment of outpatients in a hospital or in a medico-social establishment, as well as outpatient care in hospitals by doctors, chiropractors, and persons providing services on prescription or according to medical orders (partly qualification as ambulant);

- contribution to outpatient care provided in day or night care facilities or in a medico-social establishment, on the basis of a medical prescription and of an established need for care.

Semi-residential care also exists as far as the *UVG/LAA/LAINF*, the *IVG/LAI* and the *MVG/LAM* are concerned (partly qualification as ambulant).

## 3. Residential care

- *KVG/LAMal*:

- examinations, treatment and care in a hospital by doctors, chiropractors and persons providing services on prescription or medical orders, and stay in the general ward of the hospital;

- examinations and treatment in a medico-social establishment by doctors, chiropractors, and persons providing services on prescription or medical orders;

- contribution to care provided in a medico-social establishment, on the basis of a medical prescription and of an established need for care;

- *UVG/LAA/LAINF*, *IVG/LAI* (medical measures of the IV/AI) and *MVG/LAM*: treatment, board and accommodation in the general ward of a hospital.

## 4. Other benefits

*Auxiliary equipment*

Simple and adequate model. Appear on a list (except for *MVG/LAM*).

- *KVG/LAMal*: diagnostic or therapeutic equipment prescribed by a doctor (reimbursement up to a maximum amount);

- *UVG/LAA/LAINF*: therapeutic equipment; auxiliary equipment to compensate for physical damage or loss of a function.

- *AHVG/LAVS*: auxiliary equipment necessary for the insured person in order to move about, establish contacts with her or his entourage or develop personal autonomy;
- *IVG/LAI* and *MVG/LAM*: therapeutic equipment; auxiliary equipment necessary for the insured person in order to move about, establish contacts with her or his entourage or develop personal autonomy.

### **Cash benefits**

#### *Helplessness allowance*

Depends on the degree of helplessness. Monthly amounts:

- *IVG/LAI*:

slight: CHF 464;

moderate: CHF 1 160;

severe: CHF 1 856.

The helplessness allowance paid to insured persons living in an institution is half these amounts.

Minors who need intense care and who are not living in an institution are entitled to a supplement to the helplessness allowance, which is CHF 1 392 a month if there is a need of care for 8 hours a day at least, CHF 928 if there is a need of care of 6 hours a day at least and CHF 464 if there is a need of care of 4 hours a day at least.

Probably from the 1st of January 2012: *assistance allowance* in addition to the helplessness allowance.

- *AHVG/LAVS*:

slight: CHF 232 (not for insured persons living in an institution);

moderate: CHF 580;

severe: CHF 928.

- *UVG/LAA/LAINF*:

slight: CHF 692;

moderate: CHF 1 384;

severe: CHF 2 076.

- *MVG/LAM*: also a sort of helplessness allowance in the form of supplementary allowances for persons receiving home care and facing supplementary costs for care (also by non-medical staff) or assistance.

#### *Yearly supplementary benefit (according to ELG/LPC)*

Also designed for covering the daily fee of a stay in a medico-social establishment or in a hospital. Paid monthly. The cantons can limit the amount to be taken into account (they can also provide more extensive benefits than those provided by the ELG/LPC).

#### *Reimbursement of special costs (according to ELG/LPC)*

Reimbursement (up to a maximum amount; in addition to supplementary benefits to the old-age, survivors' and invalidity insurance) of the costs for help, care, assistance and auxiliary equipment (home and semi-residential care; according to MISSOC cash benefit, according to national law benefits in kind). The cantons specify which costs are reimbursed (they can also provide more extensive benefits than those provided by the ELG/LPC).

The a priori bearing of part of the long-term care costs by cantons/municipalities according to *cantonal laws concerning the funding of long-term care* (not in the form of cash benefits to the persons in need of long-term care themselves). Of course, 26 cantonal legislations could not be analysed, but an example was found (Zürich) in a decision of the Federal Court of 24 March 2011, 2C\_864/2010. 33 Cf Konferenz der kantonalen Sozialdirektorinnen und Sozialdirektoren (ed.), *Empfehlungen der Schweizerischen Verbindungsstellen-Konferenz Opferhilfegesetz (SVK-OHG) zur Anwendung des Bundesgesetzes über die Hilfe an Opfer von Straftaten (OHG)* (21 January 2010).

Contributions according to the *OHG/LAVI/LAV*: contributions for long-term help of third persons and compensation by the canton<sup>33</sup> (both insofar as not covered particularly by social security or the author of damage).

*Social assistance* (cantonal legislation; insofar as not covered particularly by social security).

### **Combination of benefits**

The benefits are provided by several branches of social security: benefits in kind and cash benefits, which are often granted to a person for the same period of time. In general, the person does not have the freedom of choice as to whether he or she prefers a benefit in kind or a cash benefit.

### **Benefits for the carer**

A person caring for relations in ascending or descending line or for siblings who are entitled to an *AHV/AVS* or *IV/AI* helplessness allowance for a degree of helplessness which is at least moderate and who live with him or her in the same household may claim a bonus for caretaking. The yearly bonus corresponds to three times the amount of the minimum yearly old-age 1st pillar pension (in 2010: CHF 41 760). The bonus is part of the determining income for the calculation of the carer's 1st pillar pension.

See also above at footnotes 30 and 31.

Contributions according to the *OHG/LAVI/LAV* (see above).

## UNITED KINGDOM

Information in this Annex relates to England only. Competence for social care (benefits in kind) is devolved to Scotland, Wales and Northern Ireland.

Local authorities are responsible for identifying the needs of their local population and commissioning social care services to meet them. Services are delivered through the public, private and voluntary sector.

### **Applicable statutory basis**

The Health and Social Care Act 2008.

The Social Security Contributions and Benefits Act 1992.

### **Benefits in kind**

#### **1. Home care**

Local authorities can provide home care, meals on wheels and special aids and equipment.

#### **2. Semi-residential care**

Local authorities can provide attendance at day care centres.

#### **3. Residential care**

Local authorities can arrange the admission to residential and nursing homes.

#### **4. Other benefits**

Local authorities can provide adaptations to the home and temporary respite care.

People on low income may be able to get help with paying for prescriptions, dental treatment, sight tests and reasonable travel costs to and from hospital.

### **Cash benefits**

#### *Attendance Allowance:*

Higher rate: GBP £73.60 (€ 81.46). Lower rate: GBP £49.30 (€ 54.56).

A person receiving an Attendance Allowance may get *extra* money for severe disability paid as part of:

- a Pension Credit,
- a Housing Benefit,
- a Council Tax Benefit.

#### *The Disability Living Allowance:*

Three rates for care needs:

GBP £19.55 (€ 21.63), GBP £49.30 (€ 54.56) or GBP £73.60 (€ 81.46).

Two rates for mobility needs:

GBP £19.55 (€ 21.63) or GBP £51.40 (€ 56.88).

The receipt of a Disability Living Allowance might *increase* the amount of the following benefits that a person is entitled to:

- Income Support • Income-related Employment and Support Allowance;
- Income-based Jobseeker's Allowance;
- Pension Credit;
- Housing Benefit;

- Council Tax Benefit;
- Working Tax Credit;
- Child Tax Credit.

The Attendance Allowance and Disability Living Allowance are the cash benefits payable to people with care needs. The use is at the discretion of the claimant.

### **Combination of benefits**

No mixed benefits (but see above).

No free choice between cash benefits and benefits in kind.

### **Benefits for the carer**

The Carers' Allowance is payable to help people who look after someone who is disabled. They do not have to be related to or live with the person that they care for.

Amount: GBP 55.55 (€ 67) a week. Dependant additions are also available.

A person who receives a Carers' Allowance or who has an underlying entitlement to it will qualify for the carer premium in Income Support and income-based Jobseeker's Allowance, worth up to £31.00 (€ 34.30) per week and an increased entitlement to Pension Credit.

## **2. National social security schemes for unemployment<sup>2</sup>**

---

<sup>2</sup> The mapping is based on the sources at the Commission's disposal (see below) and additional desk research. It provides the state of play at the end of May 2013 and may not have taken into account most recent changes to national legislation.

**Table 1 – Overview of Social Security Coverage for Unemployment per Country**

Country	Compulsory/voluntary scheme?	Covers all <u>employed</u> persons?			Covers all <u>self-employed</u> persons?		
		Yes	No	Additional details	Yes	No	Additional details
Belgium	Compulsory	✓		Covers all employees and young persons who are unemployed following their training.		X	Does not cover any category of self-employed persons.
Bulgaria	Compulsory		X	- Employees who work for more than five working days or 40 hours per calendar month and assimilated groups (e.g. civil servants, employees in elective offices, judges, soldiers and military personnel, servants of the Bulgarian Orthodox Church and other registered religions having clerical rank). - Paid and active members of co-operatives legally engaged by the co-operative, - Management executives and those in control of commercial companies.		X	Does not cover any category of self-employed persons <sup>3</sup>
Czech Republic	Compulsory	✓			✓		
Denmark	Voluntary	✓		Voluntary - required that the person becomes a member of an unemployment insurance fund in order	✓		Voluntary - required that the person becomes a member of an unemployment

<sup>3</sup> Declaration by Bulgaria 2013 pursuant to Article 9 of Regulation (EC) No 883/2004.

Country	Compulsory/voluntary scheme?	Covers all <u>employed</u> persons?			Covers all <u>self-employed</u> persons?		
		Yes	No	Additional details	Yes	No	Additional details
				to be insured.  Persons who are resident in Denmark and aged between 18 and between 18 and two years below retirement age can join an unemployment insurance fund.			insurance fund in order to be insured.  Persons who are resident in Denmark and aged between 18 and two years below retirement age can join an unemployment insurance fund.
Germany	Compulsory  Voluntary		X	Covers all employees and trainees including young disabled persons.  No compulsory insurance if income from work is marginal, less than € 450 (2013).		X	Voluntary insurance is possible for self-employed persons working at least 15 hours per week.  No cover for self-employed farmers, craftsmen and retailers.
Estonia	Compulsory	✓				X	Does not cover any category of self-employed persons.  However, self-employed persons may be entitled to unemployment allowance (see table 2) <sup>4</sup> .
Ireland	Compulsory		X	Does not cover civil and public servants recruited before April 1995 or persons earning less than		X	No scheme for self-employed workers.

<sup>4</sup> trESS Think Tank Report (2012) on [Coordination of Unemployment Benefits](#), Annex III.

Country	Compulsory/voluntary scheme?	Covers all <u>employed</u> persons?			Covers all <u>self-employed</u> persons?

- (e) Employment and Support Allowance Income-related (Welfare Reform Act 2007 and Welfare Reform Act (Northern Ireland) 2007).

**ANNEX XXII - OVERVIEW OF CURRENT EU LEGAL FRAMEWORK**

## **ANNEX XXII - OVERVIEW OF CURRENT EU LEGAL FRAMEWORK**

Freedom of movement for workers is one of the four freedoms on which the Single Market is founded. The underlying principle is equal treatment – this is a safeguard against social dumping and protects national workers as much as it protects migrant workers. In the context of the free movement of workers in the EU, workers from one Member State working in another Member State should benefit from the same minimum level of protection.

But free movement would not be possible if the social security rights of mobile Europeans were not protected. Clearly, if people think they will lose out on their social security rights, they will be much less likely to move to another Member State. This means that social security coordination is essential if freedom of movement is to work in practice. Article 48 of the Treaty on the Functioning of the European Union (TFEU) assigns to the legislator the competence to make arrangements to secure the right to benefits and the payment of the benefits to persons resident in another EU Member State.

EU law in the field of social security provides for the co-ordination and not the harmonisation of social security schemes. This means that each Member State is free to determine the details of its own social security system, including which benefits shall be provided, the conditions of eligibility, how these benefits are calculated and how much contribution should be paid. EU law, in particular Regulation (EC) No 883/2004, establishes common rules and principles which must be observed by all national authorities when applying national law. These rules ensure that the application of the different national legislations respects the basic principles of equality of treatment and non-discrimination. By doing so, it is ensured that the application of the different national legislations does not adversely affect persons exercising their right to free movement within the EU. In order to attain this goal, the coordination system employs a number of key principles: the non-discrimination on grounds of nationality; the aggregation of periods of insurance, employment or residence; the waiving of residence rules; and the application of a single legislation in terms in respect of liability to contribute and entitlement to benefits.

Coordination of social security thus leaves unaffected the substantive and procedural differences between the national social security systems. The coordination rules offer no guarantee that transferring one's residence or professional activities to another Member State is neutral as regards social security. Given the disparities in social security legislation, such transfer may work to one's advantage or not, depending on the circumstance.

The material scope of the Regulation (EC) No 883/2004 extends to all legislation concerning the following branches of social security: sickness; maternity and equivalent paternity benefits; invalidity pensions; old-age pensions; survivors' benefits; benefits in respect of accidents at work and occupational diseases; death grants; unemployment benefits; pre-retirement benefits; and family benefits. This list is exhaustive. Consequently, a branch of social security which is not mentioned is in principle outside the scope of the regulation. This is the case, for instance, for housing allowances or social assistance.

Over and above these social security benefits, the coordination regulation also applies to special non-contributory cash benefits listed in an annex (Annex X to Regulation 883/2004).

A number of benefits are expressly excluded from the regulation's scope. First of all, it does not extend to social assistance. Furthermore, the regulation does not cover benefits in relation

to which a Member State assumes the liability for damages to persons and provides for compensation, such as benefits for victims of war or its consequences but also benefit schemes for victims of crime, assassination or terrorist acts, for victims of damage occasioned by State agents in the course of their duties and for victims of political or religious repression. Moreover, it does not apply to advances to maintenance payments and to special childbirth and adoption allowance.

### **LONG-TERM CARE BENEFITS**

The material scope of Regulation (EC) No 883/2004 stretches to the "traditional" social security risks as enshrined in ILO Convention No. 102 concerning minimum standards of social security, 1952. These include sickness, old-age, invalidity, death, accident at work or occupational disease, unemployment and raising a family.

Under Regulation (EC) No. 883/2004 Long-term care benefits are mentioned at several occasions; nevertheless there is no clear definition (leaving aside the clarification in Art. 1 (va) that also Long-term care benefits in kind have to be regarded as benefits in kind for the application of the health care chapter. Therefore, recourse has to be made to definitions already given by the Court of Justice.

Long-term care benefits for the purposes of the regulation are benefits intended to improve the state of health and quality of life of persons reliant on care and as such, have as their essential purpose the supplementing of sickness insurance benefits (although under national legislation this could be a system totally separated from the sickness insurance or health care system). If these benefits are granted objectively and on the basis of a legally defined position (i.e. in a non-discretionary way), they are covered by the regulation, for which they constitute sickness benefits. This implies that they are coordinated according to the regulation's rules governing sickness benefits. As a rule, long-term care benefits are designed to develop the independence of persons reliant on care, in particular from the financial point of view. Typically, they promote home care in preference to care provided in hospital but could also consist in granting aids or cost sharing for people staying in homes for people with disabilities.

The conditions for the grant of the benefit and the way in which it is financed do not affect the classification of a benefit as a long-term care benefit. The fact that the grant of the benefit is not necessarily linked to payment of a sickness insurance benefit, or the circumstance that the benefit is non-contributory, is of no importance for the qualification as a long-term care benefit.

Long-term care benefits can take different forms. Like sickness benefits, they can be in kind or in cash. Benefits consisting in the provision of home care services or the direct payment or reimbursement of the costs of a specialised home entailed by the insured person's reliance on care, constitute long-term care benefits in kind. Long-term care benefits in cash include allowances (of a fixed or differential amount) to compensate for the additional expenditure resulting from the recipients' condition of reliance on care, in particular the cost of the assistance it is necessary to provide them with (independently of the costs actually incurred by the persons concerned). An example would be financial aid which recipients may use to remunerate a member of their family or entourage who is assisting them on a voluntary basis. The payment of the old-age insurance of a third person to whom a person in need of care resorts for assistance at home is also to be categorised as a long-term care benefit in cash.

In an attempt to shed light on the diversity in long-term care benefits across the Member States, the trESS network grouped them according to the type of benefit and the organisation per Member State<sup>76</sup>:

Statutory organisation of long-term care benefits<sup>77</sup>

Statutory organisation	Classification	Member States
Global care system and/or unifying legislation	Social security*	BE (Flemish care insurance), LU, NL
	Social assistance	CY, EE, ES, UK**
	Combination of both social security and social assistance	DK, SE** (although social security element is by far the strongest)
Differentiated approach (disintegrated care system)	Social security	CZ
	Social assistance	LV, MT, RO
	Combination of both social security and social assistance	AT**, BE, BG, CH, FI**, FR, GR, HU, IS IE, IT, LI, LT, NO, PL, PT, SK, SI, DE**

\* Social security refers to benefits which fall under the material scope of Regulation (EC) No 883/2004

\*\* Some (or all) of the benefits of these states have been declared as "normal" sickness benefits for the purpose of the application of Regulation (EC) No. 8823/2004 by the ECJ or the EFTA Court.

Several Member States relate long-term care to the different branches of social security. The following table summarises the range of definitions that exist across Member States<sup>78</sup>:

Benefits in kind/cash or both	Organisation (choice of provider / spending / benefit)	Member States
Only benefits in kind	Only state-run	/
	Only private institutions and/or informal caregivers	/

Benefits in kind/cash or both	Organisation (choice of provider / spending / benefit)	Member States
	Combination of both public and private institutions and caregivers	EE, FR, IS, LV <sup>79</sup>
<b>Only benefits in cash</b>	Freedom of choice regarding the spending of the allowances	BE (Flemish care insurance) <sup>80</sup>
	No freedom of choice regarding the spending of the allowances	/
<b>Combination of both benefits in cash and in kind</b>	Possibility to choose and/or combine and/or substitute both types of benefits	AT, BE, CY, DK, HU, IE, LU, MT, NL, PL, RO, SK, SI, SE, DE
	No possibility to choose and/or combine and/or substitute both types of benefits	BG, CH, CZ, FI, GR, IT, LT, NO, PT, ES, UK, LI

As can be seen in the table, most Member States have implemented a combination benefits in cash and in kind. An anti-overlapping provision for long-term care benefits in case a person is entitled to these benefits in the state of insurance as well as the State of residence has been introduced in the Sickness Chapter in Article 34 of Regulation (EC) No 883/2004.

Under the Sickness Chapter, there are differences in competence between sickness benefits in cash and sickness benefits in kind. Sickness benefits in cash always have to be paid by the competent Member State, i.e. the State in which the person is insured under a health care scheme. Pensioners for example who receive a pension from their former State of work and who reside in another Member State are entitled to receive long-term cash benefits from the pension-granting Member State.

<sup>79</sup>It is remarkable that none of the Member States solely allow for the allocation of benefits in kind provided by state-run or only private institutions. The few Member States that only provide benefits in kind offer services through the combination of both public and private institutions.

<sup>80</sup> The Flemish care insurance is the only scheme that provides a fixed allowance to be spent freely by the beneficiary. Care is provided by private service providers, or informal caregivers.

**Example:** A person lives in Member State A and draws a pension from Member State B. Which State is responsible for providing long-term care benefits?

The answer to this question essentially depends on whether the legislations of the States concerned provide for long-term care benefits in kind or in cash (see the answer to the previous question).

In principle, an insured person is entitled to have a long-term care benefit in cash exported by the institution of Member State B, as if it were a sickness cash benefit. Please note, however, that if the legislation of Member State A provides for long-term care benefits in kind, and the person claims and receives these benefits, the amount of the cash benefit he/she receives from the institution of State B may be reduced by the amount of the benefit in kind he/she receives from the institution from State A (and the cost of which is to be borne by the institution of State B). This is an application of the principle that overlapping of benefits is in principle prohibited. The institution of State B must inform the person of this rule. Its application should not result in the benefits being lower than those to which he/she would be entitled if you resided in State B.

In case the legislation of the State paying the pension, i.e. State B, does not provide for long-term care benefits in cash, the person can nevertheless claim the long-term care benefits in kind provided for by the legislation of the State of residence, State A. The cost of these benefits will be reimbursed to the institution of the State A by its counterpart in State B. However, if no such benefits are provided for under the legislation of State A, he/she has no claim to long-term care benefits.

If only the legislation of the State where he/she resides provides for long-term care benefits, and these benefits are in cash and not subject to conditions of insurance, employment or self-employment, he/she might be able to rely on the status of EU citizen to claim a right to equal treatment as regards this long-term care benefit outside the rules of the Regulation which would not allow that. However, caution is needed. As the law on this point is still developing, the extent of the rights attached to the status of EU citizen is not yet clear. It is certain, however, that the social benefit rights stemming from EU citizenship are not unlimited.

### **Sickness benefits for frontier workers and their family members**

In common with other workers who reside outside the competent State (the State of insurance), frontier workers and their members are entitled to medical care in the Member State in which they reside, at the expense of the competent institution (Article 17 of Regulation (EC) No 883/2004). Benefits in cash are directly paid by the competent institution across the border (Article 21 of Regulation (EC) No 883/2004). In order to receive medical care in the State of residence, they must register with the institution of the place of residence. Upon the request or upon request of the institution of the place of residence, they will receive from the competent institution a document (portable document S1) certifying the entitlement to medical care in the State of residence. Note that, when the family members are entitled to medical care under the legislation of the Member State of residence and the spouse exercises a gainful activity there, the cost of the benefits provided to the family members is borne by the institution of that State.

### **Sickness benefits for pensioners and their family members**

Pensioners and their family members are entitled to medical care in the Member State in which they reside, provided in accordance with the legislation of that State. The cost of the medical care is always borne by a Member State which pays a pension. A distinction has to be made between three situations.

When a person receives a pension from the State in which he/she resides and is entitled to sickness benefits under that State's legislation, the cost of the care is borne by the institution of that State, even though the pensioner additionally draws a pension under the legislation of one or more other States.

**Example 1:** During his career, Mr. X has worked in Spain and in France. He is now retired and receives pensions from both these States. Mr. X lives in France. Mr. X may receive medical care in France, at the expense of the French institution. The same goes for his family members.

If a person receives a pension under the legislation of one or more Member States, and is not entitled to medical care under the legislation of the State in which he/she resides, the pensioner and his/her family members may nevertheless obtain medical care in the State of residence, provided they would be entitled to medical care if they were resident in (one of) the State(s) which is paying a pension. In those cases, the cost of the care is borne by the institution of the latter State (or, in case he/she receives pensions from two or more Member States, by the institution of the State where he/she has been insured for the longest time, or, in case of insurance of exactly the same length, by the institution where he/she have been insured lastly.

**Example 2:** During her career, Ms. Y has worked for 21 years in Member State B and then for 9 years in Member State C. Ms. Y is now retired and resides in Member State A. She draws pensions from States B and C. Ms. Y does not satisfy the conditions for entitlement to medical care in State A. If she were to reside there, Ms. Y would satisfy the conditions for entitlement to medical care in State C but not in State B. Ms. Y may obtain medical care in State A, at the expense of State C. Suppose, alternatively, that Ms. Y, if she were to reside there, would be entitled to medical care both in State B and State C. In that case, she could still obtain medical care in State A, but at the expense of State B, as she was insured there for the longest period of time.

Finally, if the pensioner receives a pension under the legislation of one or more Member States, but not under the legislation of the State in which he/she reside, he/she is entitled to medical care in the latter State on account of the fact that its legislation makes this entitlement subject only to residence on its territory, the same rules apply as in the second situation.

**Example 3:** During his career, Mr. Z has worked for 11 years in Member State E and then for 11 years in Member State F. Mr. Z is now retired and resides in Member State D. He draws pensions from State E and F. Despite the fact that he does not draw a pension from State D, he is entitled to medical care there, as State D operates a residence-based medical care system. Suppose that Mr. Z, if he were to reside there, would satisfy the conditions for entitlement to medical care in both State E and State F. Mr. Z may obtain medical care in State D, at the expense of State F, as he was last insured there.

If person is in the second or in the third situation, he/she and their family members must register with the institution of the State of residence in order to be able to receive care there. Their right to medical care in the State of residence shall be certified by a portable document S1, which is issued, at their request or at the request of the institution of the place of residence, by the institution responsible for bearing the costs of the care. The cost of the medical care provided to the pensioner and his/her family members is refunded by this institution to the institution of their place of residence on the basis of real costs, on production of proof of actual expenditure. However, in respect of several Member States listed in an annex to the regulation (Annex 3 to Regulation 987/2009), the reimbursement is made on the basis of fixed amounts (lump-sums), which are calculated by reference to average annual health care costs Regulation (EC) No 883/2004oken down by age group. The States claiming reimbursement on the basis of fixed amounts are Ireland, Spain, Italy, Malta, Cyprus, the Netherlands, Portugal, Finland, Sweden and the UK.

### **Rulings by the Court of Justice**

In a number of rulings the Court of Justice ruled that, in the absence of a specific legal regime for their coordination; long-term care benefits must be regarded as 'sickness benefits' within the meaning of the Regulation and coordinated as such. It made the following clarifications under Regulation (EEC) No. 1408/71 that are still valid under Regulation (EC) No 883/2004:

- As there is no mention of Long-term care benefits in the list of the risks covered by Regulation (EEC) No. 1408/71 but these benefits are without any doubt social security benefits covered by this Regulation they have to be coordinated under the rules concerning

one of the risks mentioned in this list. As the closest relationship exists to sickness these rules have to be applied.

- Long-term care benefits which are granted to all persons resident in the Member State concerned or to all persons insured against that risk under the legislation of a Member State cannot be regarded as special as it is a general risk which has been included into the social security schemes of many Member States. Therefore an inclusion in the list of special non-contributory benefits of Annex IIa of Regulation (EEC) No. 1408/71 is not correct. Due to these rulings Annex IIa had to be re-examined and Long-term care benefits had to be deleted from that list.
- Coordination has to be made under the general rules applicable to benefits provided for the risk of sickness. Therefore the Member State competent for the provision of health care benefits under Regulation (EEC) No. 1408/71 has also to grant Long-term care benefits. So there may be a different competence for benefits in cash and in kind. Benefits in cash have always to be granted by the competent Member State (which includes export of these benefits). The Member State for example, where the father works has to grant Long-term care benefits in cash also for disabled children resident in another Member State (if the first Member State is also competent to reimburse the health care benefits in kind in the Member State of residence (case C-286/03 *Hosse*). But also a pensioner receiving only a pension from one Member State and residing in another Member State is entitled to receive the Long-term care cash benefits from the pension-granting Member State (as this State is also competent to reimburse the health care benefits in the Member State of residence – case C-215/99 *Jauch*). Benefits in kind are only granted in the Member State of residence or stay in accordance with the legislation applicable there (no export), nevertheless the competent Member State (which would also have to grant the Long-term care benefits in cash) has to reimburse the tariffs of these benefits. In case the legislation of the Member State of residence does not provide for benefits in kind the person concerned cannot receive such benefits even if the legislation of the Member State competent for health care benefits has such benefits (case C-208/07 *Chamier-Glisczinski*).

## UNEMPLOYMENT BENEFITS

### **The general rules**

The general principle for determination of the legislation applicable is that a person pursuing a gainful activity should be affiliated to the social security scheme of the State in which territory he/she is employed or self-employed (*lex loci laboris principle*).

Article 65 of the Regulation derogates from this general principle by establishing a divergent unemployment status for frontier workers or persons other than frontier workers residing in a

Member State other than the competent State. For them it is the State of residence which has to be primarily addressed. The Community legislator chose to make an exception to the *lex loci laboris* principle for this particular group with the aim to ensure that they receive unemployment benefits under the most favourable conditions for finding new employment. The rules are explained in more detail below.

### **Partially unemployed workers**

The person who is partially or intermittently unemployed and who resides in a Member State other than the competent Member State must make himself or herself available to the employment services in the competent Member State. The latter is also responsible for providing unemployment benefits to the person in accordance with its legislation as if the worker were residing in that state (see Article 65(1) Regulation (EC) No 883/2004).

### **Wholly unemployed workers**

#### *Frontier workers*

A frontier worker, that is to say a person pursuing an activity as an employed or self-employed person in a Member State and who resides in another Member State to which he/she returns, as a rule, daily or at least once a week, has to claim unemployment benefits in the Member State of residence.

Article 65 (2) of Regulation (EC) No 883/2004 stipulates that this person shall make himself/herself available to the employment services in the Member State of residence.

If the amount of unemployment benefit depends on the salary or professional income of a jobseeker, the institution granting the benefit has to base its calculation on the salary or professional income actually received by the person concerned during his/her activity in the competent State (see Article 62 (3) of Regulation (EC) No 883/2004).

In order to increase the prospect of finding new employment and to facilitate the search for employment in various Member States, Regulation 883/2004 introduced an additional option for those cross-border workers (most probably frontier workers), to also register – as a supplementary step – with the employment services of the Member State in which they pursued their last activity. In cases where Luxembourg was the State of last employment, the option of simultaneous registration began on 1 May 2012 (see Article 87 (10).)

As a result, while the person concerned receives benefits from the Member State of residence, he/she can search for employment simultaneously in both the Member State of residence and the Member State of last activity. In such a case, the employment services of both Member States have a duty of mutual information with regard to the job-seeking activities of the person in the territory of each State.

The person who chooses to be registered with employment services of both Member States has to comply with the control procedures and obligations applicable in each State (Article 65 (3) of Regulation (EC) No 883/2004). However, as the benefits are paid by the Member State of residence, obligations and job-seeking activities in that State have priority. On the other hand, non-fulfilment of the obligations in the Member State of last activity does not affect the benefits awarded in the State of residence (Article 56 (2) of Regulation (EC) No 987/2009).

#### *Persons other than frontier workers (see Article 65(2) last subparagraph)*

These are persons who reside in a Member State other than the competent Member state, but are different from frontier workers in that they return to their home state less frequently than

once a week. Upon becoming unemployed, these persons have a right to choose – they can either remain available to the employment services in the State of their last activity (i.e. register with the unemployment office in the Member State where they worked) and receive unemployment benefits there, or they can register with the employment services and claim unemployment benefits in their Member State of residence if they return there.

If they decide to register as jobseekers and claim unemployment benefits in their Member State of residence, the calculation of benefits will also be based on the professional income they received during their last activity in the Member State where they worked.

These persons have also the option to make themselves available first in the state of last employment and claim benefits there and later return to the state of residence while exporting the unemployment benefits in the state of last activity under the conditions laid down in Article 64 Regulation (EC) No 883/2004 (period of 3 months which may be extended to maximum of 6 months). In such a case, the provision of unemployment benefits in the Member State of residence is suspended for the period during which the person receives benefits from the Member State which was last competent (see Article 65(5)(b) Regulation (EC) No 883/2004).

#### *Self-employed frontier workers*

Regulation (EC) No 883/2004, and Article 65 in particular, also apply to self-employed persons. However, there used to be a gap in cases where a formerly self-employed frontier worker contributed to an unemployment scheme in the country of last activity but resided in a Member State where there was no unemployment insurance for the self-employed. There are 10 EU Member States that do not have an unemployment benefit scheme for self-employed people. When applying the rules stipulated in Article 65 Regulation (EC) No 883/2004, on becoming unemployed, a former self-employed frontier worker residing in one of these 10 countries was left without any unemployment benefit. This was an obstacle to free movement of workers.

Therefore, by Regulation (EU) No 465/2012, a new provision (Article 65a) was inserted in Regulation 883/2004. Article 65a is a derogation from Article 65 and applies to wholly unemployed persons who, as a frontier worker, have most recently completed periods of insurance as a self-employed person or periods of self-employment recognised for the purposes of granting unemployment benefits in a Member State other than the Member State of residence where the Member State of residence has made a notification that there is no possibility for any category of self-employed persons to be covered by an unemployment benefits system of that Member State. In all other cases, rules set out in Article 65 apply.

Under Article 65a, the unemployed person must register with the employment services and fulfil job-seeking activities in the country of last activity in order to be fully entitled to an unemployment benefit there. This way, the person concerned will receive a return on the contributions paid. When he/she applies for unemployment benefits, he/she must continuously meet the conditions laid down under the legislation of the Member State of last activity. The person may, as a supplementary step, register with the employment services of the Member State of residence.

Paragraph 3 of the new provision provides that if the unemployed person to which Article 65a applies does not wish to become or remain available to the employment services of the Member State of last activity after having registered there, and wishes to seek work in the Member State of residence only, the person can export the unemployment benefits under

Article 64 Regulation (EC) No 883/2004. In this situation, the person shall not be obliged to have remained available in the Member State of last activity for at least four weeks after becoming unemployed (ie. condition set out in Article 64(1)(a) does not apply). In addition, the competent institution may extend the period of export to the person who looks for job in his/her Member State of residence up to the end of the period of the person's entitlement to benefits under its legislation. Of course, the unemployed person may also request export of unemployment benefits to other Member State that the State of residence under the conditions set out in Article 64 Regulation (EC) No 883/2004.

**Which Member State is responsible for granting sickness benefits, pensions, family benefits etc. to wholly unemployed workers receiving unemployment benefits in the Member State of residence?**

Those persons who become subject to the social security legislation of the State of residence are also covered by Regulation 883/2004 with regard to other social security branches, as stipulated in Article 11(3)(c) of Regulation (EC) No 2004.

**Aggregation of periods**

A general provision on aggregation of periods (Article 6 Regulation (EC) No 883/2004) is valid for all chapters of the Regulation. In addition, for the reasons of legal certainty, special provision has been included in the unemployment chapter (Article 61 Regulation (EC) No 883/2004).

According to Article 61 Regulation (EC) No 883/2004, periods of insurance, employment or self-employment completed under the legislation of another Member State shall be taken into account, to the extent necessary, by the competent Member State as though they were completed under the legislation it applies.

Aggregation in the unemployment field has two particular features:

1) First, there are differences between the national schemes as in some Member States an entitlement to unemployment benefits is based upon completion of periods of insurance and, in others it is conditional upon completion of periods of employment or self-employment. This is reflected in Article 61(1).

**A. Aggregation of insurance periods**

'Periods of insurance' means periods of contribution, employment or self-employment as defined or recognised as periods of insurance by the legislation under which they were completed or considered as completed, and all periods treated as such, where they are regarded by the said legislation as equivalent to periods of insurance (Article 1(t) Regulation (EC) No 883/2004).

The term 'periods of insurance' must be therefore understood as referring not only to periods in which contributions to an unemployment insurance scheme were paid but also to periods of employment or self-employment considered by the legislation under which they were completed as equivalent to periods of insurance, that is to say, periods in which insurance covered by such a scheme is guaranteed. Such periods must be taken into account by the institution of the competent Member State, even if they would not have been considered as periods of insurance under the legislation of that State.

It follows from Article 61(1) Regulation (EC) No 883/2004 that all periods of insurance, without any further examination of their nature by the competent institution, must be taken

into account for assessing entitlement to unemployment benefits by the competent state. This is irrespective of whether they were based on employment, self-employment, or they were other periods equal to insured (self-)employment (for example, periods of sickness, maternity, education, military service).

#### B. Aggregation of periods of employment or self-employment

'Periods of employment' or 'periods of self-employment' mean periods so defined or recognised by the legislation under which they were completed, and all periods treated as such, where they are regarded by the said legislation as equivalent to periods of employment or to periods of self-employment (Article 1(u) Regulation (EC) No 883/2004).

The Court of Justice confirmed that the classification of a period of work as a 'period of employment' is dependent on the national legislation under which it was completed.

The competent institution is not bound to take into account such periods of employment or self-employment completed in another Member State, unless, according to the legislation of the State where benefits have been requested, those periods are to be regarded as periods affording cover under an unemployment insurance scheme.

2). Secondly, aggregation is applied only to those workers who have completed their most recent periods of insurance, employment or self-employment in the State where the benefit is claimed. This condition does not apply in the case of cross-border workers who resided in a state other than the last competent Member State (see Article 61(2)). In this case, the Member State of residence, when it is the competent State for providing unemployment benefits, must aggregate periods of insurance, employment or self-employment completed in another Member States even if the unemployed person has never completed any periods in the State of residence.<sup>81</sup>

A questionnaire launched in the Administrative Commission showed a significant divergence of opinions on the proper interpretation of the principle of aggregation of periods for the entitlement to unemployment benefits.

Regulation (EC) No 883/2004 does not specify when a period of insurance, employment or self-employment is completed.

As stated above, the aim behind Article 61(2) Regulation (EC) No 883/2004 is that the State in which the unemployed person last worked or paid contributions should bear the burden of providing unemployment benefits. Therefore, the rule ensures that it is the competent Member State that provides the unemployment benefits.

Under the rules of Regulation (EC) No 883/2004 (Title II), a migrant worker becomes subject to the legislation of a Member State as soon as he starts to work there. Consequently, the provisions on aggregation of periods of insurance, employment or self-employment are fully applicable as of that moment. In other words, the link between the person and the competent State is created as of day one of the economic activity of the person.

Any other interpretation would deprive migrant workers, who became unemployed during this period, of any entitlement to unemployment benefits in the EU, despite having completed

---

<sup>81</sup> The Member State of residence, which then provides unemployment benefits on the basis of Article 65(5) REGULATION (EC) NO 883/2004, shall then be reimbursed by the Member State to whose legislation the person was last subject (see Article 65(6) and (7) REGULATION (EC) NO 883/2004).

periods of insurance or (self-) employment in the EU. This would lead to the loss of social security protection of a migrant worker and create an effect that is clearly contrary to the purpose of Article 48 TFEU and Regulation (EC) No 883/2004.

### **Examples**

#### *Example 1:*

Mr X had completed periods of insurance as a self-employed person in Member State A. After, he moved to Member State B and completed periods of insurance as an employed person there. Mr X loses his job and claims unemployment benefits in Member State B.

Member State B must aggregate periods of insured self-employment completed in Member State A. Pursuant to Article 61(1) Regulation (EC) No 883/2004, all periods of insurance for entitlement to unemployment benefits in the Member State where they were completed should always be taken into account for the purposes of aggregation, without further examination.

#### *Example 2:*

Mr Y had completed a period of employment in Member State A. After, he moved to Member State B and completed periods of employment there. Mr Y loses his job and claims unemployment benefits in Member State B.

Pursuant to the second para of Article 61(1) Regulation (EC) No 883/2004, periods of employment or self-employment completed in Member State A should be aggregated by Member State B only if those periods would have been considered to be periods of insurance had they been completed in Member State B.

#### *Example 3:*

Ms Z, employed in Member State A, went on maternity leave. Under the legislation of Member State A, the maternity leave period is considered to be a period of insurance. Afterwards Ms Z moved to Member State B and completed periods of insured employment there. She loses her job and claims unemployment benefit in Member State B.

Member State B must aggregate all insurance periods, which come within the definition of insurance period under Article 1(t) Regulation (EC) No 883/2004 (without questioning or examining its nature). If Member State A notifies periods of insurance that were neither employment nor self-employment periods (e.g. periods of sickness, maternity, deprivation of liberty, education or military service) as periods of insurance, the competent institution in Member State B must take them into account for the purposes of aggregation.

### **Export of unemployment benefits**

For persons who intend to look for a job abroad while maintaining their right to unemployment benefits can do so for a period of 3 months. The competent institution may extend this period up to six months. National institutions reported substantial differences in the application of this provision.

The aggregation rules complement the fundamental aim of Article 48 TFEU: to contribute to the establishment of the greatest possible freedom of movement for migrant workers in the EU. To this end, arrangements must be made to secure for employed and self-employed migrant workers aggregation, for the purpose of acquiring and retaining the right to benefit and of calculating the amount of benefit, of all periods taken into account under the laws of several countries.

## **SPECIAL NON CONTRIBUTORY CASH BENEFITS (SNCBs)**

SNCBs are defined as benefits which are provided under legislation which, because of its personal scope, objectives and/or conditions for entitlement, has characteristics both of the social security legislation and of social assistance (Article 70(1) Regulation 883/2004).

SNCBs can either provide supplementary, substitute or ancillary cover against the risks covered by the branches of social security, and which guarantee the persons concerned "a minimum subsistence income having regard to the economic and social situation in the Member State concerned" or "solely specific protection for the disabled, closely linked to the said person's social environment in the Member State concerned" (Article 70(2)(a) Regulation 883/2004).

The financing of SNCBs derives exclusively from compulsory taxation intended to cover general public expenditure and the conditions for providing and for calculating the benefits are not dependent on any contribution in respect of the beneficiary. However, benefits provided to supplement a contributory benefit shall not be considered to be contributory benefits for this reason alone (Article 70(2)(b) Regulation 883/2004).

Benefits meeting the regulation criteria and listed in Annex X follow the rules applicable to SNCBs. Both conditions are cumulative. It implies that benefits which are not listed in Annex X are subject to standard rules of coordination and in particular to the principle of export unless they would fall exclusively within the scope of 'social assistance': in this case, coordination rules do not apply.

If all conditions for belonging to the SNCB category are satisfied and if the claimant falls within the personal scope of Regulation (EC) No 883/2004, SNCBs are provided exclusively in the Member State where the persons concerned reside, in accordance with its legislation, and are provided by and at the expense of the institution of the place of residence (Article 70(4) Regulation 883/2004).

## **FAMILY BENEFITS**

The concept of family benefits is a broad one. Family benefits means all benefits in kind or in cash intended to meet family expenses under the social security legislation of a Member State, excluding advance of maintenance payments and special childbirth and adoption allowances which are listed in Annex I of Regulation 883/2004.

Family benefits further encompass child-raising allowances or parental benefits, intended to enable one of the parents to devote him- or herself to the raising of a young child, and designed to remunerate the service of bringing up a child, to meet the other costs of caring for and raising a child and, as the case may be, to mitigate the financial disadvantages entailed in giving up income from an occupational activity.

The person concerned is entitled, in respect of the family members, to the family benefits provided for by the legislation of the State to which s/he is subject according to the rules determining the applicable legislation.

The family benefits will be provided by the competent institution in accordance with the legal provisions administered by that institution (amount, age limits, number and/or ranking of children, etc.).

### ***A. Family members of the beneficiary reside in the state where the beneficiary is covered***

If the members of the family of the beneficiary reside in the state under whose legislation he is covered as an employed or self-employed person, this state will always be competent for the payment of family benefits. He is entitled to exactly the same amount of benefits as nationals of that state.

### ***B. Family members of the beneficiary do not reside in the state where he is covered***

Family benefits are exportable. This means they must be awarded, even if the person concerned and/or his/her family reside in another Member State. In essence, the members of the family are treated as if they resided in the State of (self-) employment (the State to whose legislation the person concerned is subject). The coordination regulation effectively overrules any residency requirement in national legislation regarding family benefits.

### ***C. Cases where there is simultaneous entitlement to family benefits under legislation of two Member States***

Situations of overlapping entitlements to family benefits are very common when members of family live and work in different Member States. As a matter of principle, the parents cannot receive family benefits twice over the same period and for the same child. The Regulation 883/2004 provides for priority rules in cases of overlapping entitlements.

- If the beneficiary is entitled to family benefits under the legislation of more than one state, his family will, in principle, receive the highest amount of benefits provided for in the legislation of one of these states. In other words, his family is treated as if all persons concerned reside and are insured in the state with the most favourable legislation.
- The beneficiary cannot receive family benefits twice over the same period and for the same family member. There are priority rules which provide for suspension of benefits of one state up to the amount of the benefits of the other state which is primarily competent for payment of the family benefits.

According to these priority rules, entitlement to family benefits under the legislation of one of the States will be suspended. However, this suspension is not total. Rather, benefits due under the legislation of one State will be suspended up to the amount of the benefits due under the legislation of the State that takes priority. Thus, if the amount of family benefit provided for by the legislation of the former State is higher than that provided in accordance with the legislation of the other State, the former State will pay a supplement corresponding to the difference between the two benefits.

**Example:** The father works in Member State A. The mother works in Member State B and lives there with the children. In this case, where the parents work in different States and the children reside in one of these States, there is a situation of overlapping entitlements on the same basis, i.e. on the basis of an activity as an employed or self-employed person. Priority is given to the right available under the legislation of the State of residence of the children (State B). Entitlement to family benefits in State A where the father works – and where the children do not reside – is suspended up to the amount of benefits provided for in the legislation of the State B, where the other parent works. If the amount of benefits is lower in State B than in the State A, the difference between the two amounts is payable by the institution of the State A in the form of a differential supplement.

The substance of the priority rules is the following: if there are overlapping entitlements (i.e. entitlements under two or more legislations in respect of the same family member and for the same period) on different bases, the order of priority is as follows:

1. rights available on the basis of an activity as an employed or self-employed person,
2. rights available on the basis of receipt of a pension and
3. rights obtained on the basis of residence.

In the case of rights available on the same basis, the Member State where the children reside shall be competent by priority right, if work is carried out there (in case of overlapping entitlements on the basis of an activity as an employed or self-employed person) or if a pension is payable under that legislation (in case of overlapping entitlements on the basis of receipt of a pension).

The differential supplement does not need to be provided for children residing in another Member State when entitlement to the benefit is based on the residence only. It means that if the father in the example above lost the job in State A and stayed there without any

unemployment benefits or pension payable under State A's legislation, State A does not need to provide any family benefits (differential supplement) even if State A benefits were higher than those available in State B.

#### **D Family benefits as a benefit for the entire family**

Family benefits are considered to be benefits for the family. In the joined cases *Hoever Zachow* (C-245/94 and C-312/94) determined under Regulation (EEC) No 1408/71, the CJEU held that where an employed person is subject to the legislation of a Member State and lives with his or her family in another Member State, the family is entitled to receive a benefit such as a child-raising allowance (parental allowance) from the State of employment, regardless of which parent factually fulfils the conditions of entitlement under national law. The logic of this is that as the purpose of a family benefit is to meet the expenses of the entire family it may therefore may be exercised by either parent. This principle was affirmed in the case of *Dodl Oberhollenzer* (C-543/03). To support this concept the Regulations contain two provisions: Article 68a Regulation (EC) No 883/2004 (which permits family benefits to be reassigned to the person actually maintaining the family in cases where the actual beneficiary is not using the benefit for this purpose) and Article 60(1) Regulation third indent (EC) No 987/2009 which requires competent institutions to recognise an application for family benefit from either parent.

**ANNEX XXIII - GLOSSARY OF TERMS**

## ANNEX XXIII GLOSSARY OF TERMS

Term	Explanation
<b>Administrative Commission for the Coordination of Social Security Systems</b>	The Administrative Commission for the Coordination of Social Security Systems (AC) is attached to the Commission and made up of a government representative from each Member State. The AC deals with administrative questions and questions of interpretation, facilitates the uniform application of EU law, fosters and develops cooperation between Member States and can make relevant proposals to the Commission for improving and modernising the acquis.
<b>Aggregation (general)</b>  <b>(unemployment)</b>	<p>A general principle of social security coordination meaning that periods of insurance completed in another Member State shall also be taken into account for the purpose of acquisition, retention, recovery or duration of a right to benefits in a given Member State.</p> <p>As regards unemployment, however, aggregation is only permitted if the person concerned has most recently completed periods of insurance, employment or self-employment in the competent Member State. Under this rule, there is no aggregation without previous insurance in the competent Member State. A required length of previous insurance is not laid down in Regulation (EC) No 883/2004, but it is understood by most Member State that one day of unemployment insurance is sufficient</p>
<b>Export benefits of</b>	A general principle of social security coordination laid down in the Treaty, according to which benefits are paid to a person residing in another MS than the one competent for paying the benefit. The Court only allowed exceptions to this principle with regard to the period of export of unemployment benefits and special non-contributory cash benefits.
<b>Family benefits</b>	All benefits in kind or in cash intended to meet family expenses under the social security legislation of a Member State. This is a broad concept which includes income-replacement benefits such as child-raising or child care allowances but expressly excludes advance of maintenance payments and special childbirth and adoption allowances, where listed in the Regulation. They also exclude study grants, which are social advantages falling under the scope of Regulation 492/2011
<b>Family member</b>	<p>(i) any person defined or recognised as a member of the family or designated as a member of the household by the legislation under which benefits are provided;</p> <p>(ii) with regard to benefits in kind pursuant to Title III, Chapter 1 on sickness, maternity and equivalent paternity benefits, any person defined or recognised as a member of the family or designated as a member of the household by the legislation of the Member State in which he/she resides;</p> <p>2. If the legislation of a Member State which is applicable under subparagraph 1 does not make a distinction between the members of the family and other persons to whom it is applicable, the spouse, minor children, and dependent children who have reached the age of majority shall be considered members of the family;</p> <p>3. If, under the legislation which is applicable under subparagraphs 1 and 2, a</p>

	person is considered a member of the family or member of the household only if he/she lives in the same household as the insured person or pensioner, this condition shall be considered satisfied if the person in question is mainly dependent on the insured person or pensioner;
<b>Dependant</b>	A person having a derived right to a social security benefit from an insured person.
<b>Differential supplement</b>	A concept specific to family benefits. The <b>priority rules</b> provide that entitlement to family benefits under the legislation of one of the States will be suspended up to the amount of the benefits due under the legislation of the State that takes priority. However, to ensure the family does not lose out, if the amount of family benefit provided for by the legislation of the secondary competent State is higher than that provided under the primary competent State, the former State will pay a supplement or "top up" corresponding to the difference between the two benefits. This concept has been upheld by the Court as a requirement of the Treaty.
<b>Insured person</b>	In relation to the social security branches covered by Title III, Chapters 1 and 3, means any person satisfying the conditions required under the legislation of the Member State competent under Title II to have the right to benefits, taking into account the provisions of Regulation (EC) No 883/2004.
<b>Frontier workers</b>	Workers pursuing their activity in one Member State while residing in another Member State. The term 'cross-border workers' is larger as it comprises e.g. also seasonal workers staying in another Member State for more than a week, whereas the term 'frontier workers' in its strictest sense only comprises those cross-border workers who return to their country of residence as a rule daily or at least once a week.
<b>Member State</b>	Member State of the European Union. In relation to EU rules on social security coordination, the term "Member State" also refers to EEA countries (Iceland , Liechtenstein and Norway) and Switzerland.
<b>Competent Member State</b>	The Member State in which the institution with which the person is insured is located, or the institution paying the social security benefit.
<b>Member State of residence</b>	Member State where the institution which is competent to provide benefits in the place where the person resides is located.
<b>Third country national</b>	Nationals of a non-EU Member State
<b>Social security benefits</b>	Social security benefits are granted, without any individual and discretionary assessment of personal needs, to recipients on the basis of a legally defined position and relate to one of the risks expressly covered by Regulation No 883/2004. Those risks are sickness, maternity, invalidity, old age, death, accidents at work, unemployment, pre-retirement, maintenance of a family
<b>Social assistance benefits</b>	Social assistance benefits are means-tested, intended to guarantee a person's minimum subsistence income and not related to any specific social security risk mentioned above. Therefore, they are not covered by Regulation (EC) No 883/2004. However, the Court clarified that special non-contributory cash benefits which are falling under the social security Regulations are also social assistance within the meaning of the Free Movement Directive (2004/38/EC).

<b>Social advantage</b>	Are advantages which are provided to workers due to their status as worker or on the basis of their residence. The term social advantage also includes all social security benefits, such as family benefits, as far as they are related to workers. Regulation (EU) No 492/2011 on the free movement of workers provides for equal treatment for all social and tax advantages.
<b>Special non-contributory cash benefits</b>	<p>Benefits which present characteristics of both social security benefits and social assistance. They are linked to social security in that they create legally-defined rights connected to a social security benefit and relate to one of the risks covered by the coordination rules. At the same time, they have links with social assistance, in the sense that they are non-contributory and closely linked to the social-economic environment of a country (= minimum subsistence).</p> <p>In order for a benefit to be a special non-contributory cash benefit, it must fulfil the following conditions:</p> <ul style="list-style-type: none"> <li>• First, it must be special. The special character is defined by its purpose. In particular, the benefit must be intended to provide either: <ul style="list-style-type: none"> <li>◦supplementary, substitute or ancillary cover against one of the risks covered by the branches of social security and it must guarantee the persons concerned a minimum subsistence income having regard to the economic and social situation in the Member State concerned (e.g. supplements to old-age pensions)</li> </ul> </li> <li><i>or</i></li> <li>◦specific protection for disabled people, closely linked to the social environment of the said person in the Member State concerned.</li> <li>•Second, it must be non-contributory, which essentially depends on the way in which the benefit is financed. In particular, the benefit must be financed from compulsory taxation intended to cover general public expenditure. The conditions for providing and calculating the benefit should not be dependent on any contribution in respect of the beneficiary. The fact that a benefit is provided to supplement a contributory benefit does not necessarily imply that it is itself contributory in nature.</li> <li>•Third, it must be listed in an Annex to the Regulation (Annex X to Regulation 883/2004).</li> </ul>
<b>Sickness benefits in kind/cash</b>	<p>The distinction between benefits in cash and benefits in kind depends on their purpose: benefits in kind are benefits that consist of medical care, or a reimbursement thereof. Cash benefits are paid, as a rule, periodical and fixed in advance and their amount is not subject to certain expenditure actually incurred by the recipients.</p> <p>While sickness benefits in kind are provided under the legislation of the State of residence at the expense of the competent State, the cash benefits are calculated in accordance with the legislation applied by the competent State and are at its expense so in case of residence in another Member State they remain unchanged and are exported.</p>
<b>Long-term care benefits</b>	Benefits intended to improve the state of health and quality of life of persons reliant on care who on account of old-age, disease or incapacity require assistance

	<p>from other person or considerable help in carrying out essential daily activities.</p> <p>Long-term care benefits are designed to develop the independence of such persons reliant on care, in particular from the financial point of view, including benefits granted to the persons providing such care (carers). Currently, they are coordinated according to the EU rules governing sickness benefits and similarly to sickness benefits, they can be in kind or in cash.</p>
<b>Member State of last employment</b>	The Member State where an unemployed person had been employed or self-employed before he moved to another Member State.
<b>Unemployment benefits</b>	<p>All benefits payable in case of unemployment. They are generally subject to the condition</p> <ul style="list-style-type: none"> <li>- that the unemployed person had been insured against this risk for a certain 'qualifying' period,</li> <li>- that the unemployed person in person registers with the employment service of his region as being available for work, i.e. as being ready to accept any suitable employment at any time.</li> <li>- For this purpose, it might also be required that the unemployed person regularly shows up in order to underline that s/he is still actively looking for employment.</li> </ul>
<b>Residence</b>	'Habitual' residence, i.e. the place where a person has his or her 'centre of interest'. Under the coordination Regulations, insured persons can only have one place of habitual residence, even when they have acquired or rented a house in more than one Member State.

## EXECUTIVE SUMMARY

In the *Hoever and Zachow* judgment,<sup>82</sup> family benefits are described as benefits in kind or in cash intended to meet family expenses. More specifically, family benefits *in cash* are explained as being paid solely to a family comprised of one child or more, the amount of which varies (partly) according to the children's age and the number of children, as well as according to the parents' income. In addition, family benefits *in cash* are intended to enable one of the parents to devote him or herself to the raising of (a) child(-ren) and thus meet the costs of caring for and bringing up a child. As confirmed in the *Hoever and Zachow* judgment, (salary-related) child-raising (cash) benefits are qualified as family benefits in accordance with Regulation (EC) No 883/2004.

Despite the aforementioned finding by the Court of Justice of the European Union (CJEU) however, it appears that controversy remains as to the qualification of salary-related child-raising allowances as being either family benefits or maternity/paternity benefits. The distinction between a family benefit vis-à-vis a maternity/paternity benefit is not to be underestimated when applying Regulation (EC) No 883/2004. In particular, it need be noted that whilst family benefits may give rise to entitlement of derived rights as confirmed by the *Hoever and Zachow* case, this is not the case for maternity/paternity benefits, which are deemed as being *personal* rights. In addition, when applying Regulation (EC) No 883/2004, it becomes clear that Article 68 thereof is limited in its application to family benefits, thus excluding maternity/paternity benefits. This is relevant because the provision concerned allows for differential supplements to be disbursed in case of overlapping family benefits based upon the legislation of two or more Member States. Entitlement to such differential supplements is not possible however, for maternity/paternity benefits. Clearly, the classification of a salary-related child-raising benefit as being either a family benefit or a maternity/paternity benefit will thus impact access thereto, as well as the modalities thereof. Within this context, it need be noted though, that despite the definition of maternity/paternity benefits encompassed in CJEU case law<sup>83</sup> as well as Recital 19 of Regulation (EC) No 883/2004, *de facto* issues remain when attempting to distinguish family benefits from maternity/paternity benefits. Whereas in some national Member State legislations, a distinction is clearly made, other Member States do not distinguish between these two types of benefits. Hence it remains a difficult yet crucial exercise to determine the qualification of a salary-related child-raising benefit as being one or the other.

The request at hand concerns the existence and qualification of salary-related child-raising benefits in individual Member States, which would thus be subject to the respective rules in Regulation (EC) No 883/2004. Salary-related child-raising benefits specifically are defined as '*any benefit calculated with reference to employment or professional income regardless of whether a worker is engaged under a contract of employment or engages in a self-employed activity*' and intended to meet the costs of caring for and bringing up a child, as well as mitigating the financial disadvantages entailed in giving up income from full-time employment.

In view of the upcoming Labour Mobility Package and envisaged proposals to amend Regulation (EC) No 883/2004, as well as the debate surrounding (salary-related) child-raising benefits, an overview of such benefits in the various Member States is necessary. In what follows an overview will be given as to the history of such benefits (Section 2), a description of the benefits (Section 3) and the application thereof in view of the *Hoever and Zachow* judgment (Section 4). Lastly, a schematic overview will be given of salary-related child-raising benefits – insofar possible – in the Member States via individualised country sheets.

---

<sup>82</sup> Judgment in *Hoever and Zachow v Land Nordrhein-Westfalen*, C-245/94 and C-312/94, EU:C:1996:379.

<sup>83</sup> Judgment in *Commission v Luxembourg*, C-519/03, EU:C:2005:234

## 1. INTRODUCTION

With a view to defining what constitutes a salary-related child-raising benefit, several preliminary observations need be made. Whilst many Member States do provide benefits which are intended to meet the costs of caring for and raising a child, as well as to mitigate the financial disadvantages entailed in giving up income from full-time employment, these benefits are not infrequently qualified as maternity and paternity benefits as opposed to family benefits. Within this vein, case law by the Court of Justice of the European Union (CJEU) need be recalled, and the *Hoever and Zachow* judgment in particular, whereby family benefits under Regulation (EC) No 883/2004 are not to be distinguished from other benefits by reference to their classification in national legislation. Rather they are to be distinguished by reference to their respective purpose and conditions of entitlement. Consequently, despite various Member States qualifying similar salary-related child-raising benefits as maternity and paternity benefits in national law, they will nevertheless be included in what follows, as there is no certitude as to their classification as a family benefit under Regulation (EC) No 883/2004 absent further rulings by the CJEU. In addition to the foregoing, note need also be made of the fact that the salary-related child-raising benefits discussed below are oftentimes not clearly identifiable as a distinct benefit. Consequently, these benefits often cannot be identified as either paternity/maternity benefits or, alternatively, family benefits. Again, such benefits will nevertheless be taken into consideration in what follows. Consequently, the report will focus upon those salary-related child-raising benefits that are related to the individual salary of the beneficiary concerned.

Currently, various Member States provide for distinct salary-related child-raising benefits (**AT, BG, HR, EE, DE, HU, IT, LV, LT, RO, SI, ES and SE**). Within this context, **Austria, Croatia, Germany, Estonia, Finland, Italy, Romania, and Spain** clearly distinguish the salary-related child-raising benefits from maternity and paternity benefits.<sup>84</sup> Contrary thereto, **Bulgaria, Denmark, Finland, Hungary, Greece, Portugal, Slovenia and Sweden** seemingly qualify the respective salary-related child-raising benefits in national legislation as maternity and paternity benefits. As concerns **Latvia and Lithuania** it appears that the benefits concerned are not explicitly qualified as either maternity/paternity benefits or family benefits. As indicated, however, the delineation of what constitutes a salary-related child-raising benefit and whether it is provided for in national legislation as a family benefit, or alternatively as a maternity/paternity benefit, is not as unambiguous as could be hoped. Several Member States have provided for benefits which, if regarded independently, would in all likelihood not be considered as salary-related child-raising benefits. However – as is the case in Greece and Portugal – certain maternity/paternity benefits have been complemented by additional protective paid leave, which highly resembles a salary-related child-raising benefit. In Greece for example, the standard maternity benefit is complemented by a six-month special maternity protection leave, which is indeed salary-related. Similarly in Portugal, extended parental leave is provided for, which equally so is salary-related.

Various other Member States simply do not provide for salary-related child-raising benefits (**BE, CY, CZ, FR, IS, IE, LI, LU, MT, NL, NO, PL, SK, CH and UK**). The absence of salary-related child-raising benefits in national legislation of respective Member States does not necessarily entail that no child-raising benefits exist. Rather, as is the case in a number of the aforementioned States, exclusively flat-rate child-raising benefits are provided for, as opposed to salary-related child-raising benefits. Flat-rate child-raising benefits as such can be found in **Belgium, the Czech Republic, France, Luxembourg, Norway and Poland**. In **Cyprus, Iceland, Ireland, Liechtenstein, Malta, the Netherlands, Slovakia, Switzerland and the United Kingdom** on the other hand, such benefits simply do not exist.

---

<sup>84</sup> **Spanish** legislation in particular, however, only reserves such benefits intended for the raising of a child with a serious illness.

In what follows, a schematic overview is given, indicating the various Member States which have introduced a salary-related child-raising benefit, the various Member States who do not have a salary-related child-raising benefit and lastly, those Member States which require a somewhat more nuanced approach in addressing the notion of salary-related child-raising benefits.

Salary-related child-raising benefits <sup>85</sup>	
AT, BG, HR, DK, EE, FI, DE, EL, HU, IT, LV, LT, PT, RO, SI, ES, SE	
No salary-related child-raising benefits	
Flat-rate child-raising benefits	No child-raising benefits
BE, CZ, FR, LU, NO, PL	CY, IS, IE, LI, MT, NL, SK, CH, UK

## 2. THE HISTORY OF SALARY-RELATED CHILD-RAISING BENEFITS

As the history of salary-related child-raising benefits differs substantially amongst the States concerned, a schematic overview thereof cannot be given. To exemplify the latter, it suffices to refer to the history of salary-related child-raising benefits in **Austria** and **Germany**. The salary-related child-raising benefit in Austria was introduced by Federal Gazette No 116/2009, which entered into force in 2010. The historical aim of this benefit is to help claimants who just want to interrupt their employment for a short time and have a high level of income to maintain their standard of living. In 2011 (Federal Gazette No 139/2011) the conditions of entitlement were modified. The level of income, which can be earned while drawing the benefit, was raised from € 5,800 to € 6,100. Furthermore, the condition of at least six months of employment before drawing the benefit was introduced. By this amendment also the present formula for the calculation of the benefit was introduced. In 2013 the level of income was raised again up to € 6,400 (Federal Gazette No 117/2013).

In **Germany** on the other hand there is only one benefit which seeks to replace income during child-raising periods and which is calculated wholly or partially with reference to a salary or professional income, namely *Elterngeld* as encompassed in the BEEG. The BEEG entered into force on 1 January 2007. The *Elterngeld* is the successor of the child-raising allowance *Erziehungsgeld*, which was paid according to the Child-Raising Allowance Act.

In view of the substantial differences concerning the history of salary-related child-raising benefits in the respective Member States, the history can be found in the Country Sheets attached in the Annex. Where possible, statistics have been added concerning the use thereof.

## 3. DESCRIPTION OF THE SALARY-RELATED CHILD-RAISING ALLOWANCE

### 3.1. Conditions of entitlement

Mindful of the fact that various Member States (**BE, CY, CZ, FR, IS, IE, LI, LU, MT, NL, NO, PL, SK, CH** and **UK**) simply do not provide for a salary-related child-raising benefit, solely the entitlement conditions for those Member States (**AT, BG, HR, EE, FI, EL, DE,**

<sup>85</sup> The table includes all the Member States which have a salary-related child-raising benefit irrespective of the qualification thereof in the respective national legal order.

**HU, IS, IT, LV, LT, PT, RO, SI, ES** and **SE**) that do provide for a benefit as such will be discussed.

Of the foregoing Member States, several merely require *previous insurance*. In **Bulgaria, Croatia, Finland, Hungary, Italy** and **Lithuania** (previous) insurance suffices in order to be entitled to the salary-related child-raising benefit. In **Lithuania** the individual concerned must have been covered by sickness and maternity insurance specifically. In **Croatia**, the individual seeking the benefit must have been insured for a minimum period of 12 months or, alternatively, 18 months with interruptions in the last two years. Croatian legislation furthermore stipulates that insofar these conditions have not been met, entitlement may nevertheless arise albeit limited to 50% of the benefit. Conversely, several Member States (**LV, SE**) require previous insurance with additional conditions to be met, in order to be entitled to salary-related child-raising benefits.

Other Member States have imposed seemingly more stringent conditions in order to be entitled to salary-related child-raising benefits. Amongst these Member States, **Austria, Estonia** and **Portugal** (albeit to a limited extent) impose *residence requirements* upon which entitlement to such benefits are conditioned.

In addition to the foregoing entitlement conditions, various Member States require a specific period of *previous employment* (**AT, DK, EL, LV, PT, RO, ES, SE**) as well as *adherence to fiscal and tax obligations* (**RO**). Furthermore, in **Austria, Germany** and **Romania**, it is explicitly obliged for the recipient of the benefit to be *living together* with the child concerned. Lastly, in **Greece** the recipient must also have been receiving *maternity allowance* as a precondition to receiving salary-related child-raising benefits. In order to determine the individual conditions of entitlement for the respective Member States, see Annex.

### 3.2. Level of the benefit

Not inconceivably, the level of the salary-related child-raising benefit is affected by a number of factors, not to mention the means of calculation thereof (see *infra* Calculation of the Benefit). Consequently, the level of the benefit differs greatly from Member State to Member State. Recalling that various Member States (**BE, CY, CZ, DK, FR, IS, IE, LI, LU, MT, NL, NO, PL, SK, CH** and **UK**) do not provide for a benefit as such, it is interesting to note that the remaining Member States predominately provide limitations as to the level of the benefit. In particular, several Member States (**AT, BG, DK, DE, EE** and **EL**) impose both maximum and/or minimum *nominal* ceilings concerning the permitted level of the benefit to be disbursed (see Annex for exact figures).

Similarly, other Member States impose ceilings by reference to permitted percentages of previous remuneration that the benefit may represent. In particular, **Bulgarian** legislation provides that the minimum benefit may not be below the minimum wage, whilst declaring that the maximum permitted benefit received may not exceed 90% of previous pay. Similarly, in **Slovenia** the benefit constitutes 90% of the basis from which contributions for parental protection insurance have been calculated in the past 12 consecutive months. In addition, Slovenian legislation imposes a maximum ceiling and a minimum floor whereby the benefit cannot be higher than twice the average monthly wage and cannot be less than 55% of the minimum wage as set in 2006. In **Italy**, the salary-related child-raising benefit may only amount to 30% of previous or standard pay. Within this same vein, the benefit provided for by the extended parental leave in **Portugal** amounts to 25% of previous pay. **Sweden** sets an 80% ceiling with an additional nominal ceiling. Interestingly, **Croatia** provides for a benefit representing 100% of previous remuneration, albeit subject to the nuance that a maximum ceiling and minimum floor have also been incorporated. Similarly, **Finland** allows for a salary-related child-raising benefit representing 70% of previous remuneration with a nominal floor of € 24,02 per day. **Hungary** also makes use of an approach as such, and provides that the benefit amounts to 70% of average gross earnings with a ceiling amounting to 70% of the minimum wage doubled. Lastly, **Spanish** legislation provides that the benefit may

constitute 100% of the contribution base for professional risks, with a maximum and minimum limit of € 3,606 and € 756, respectively.

In **Latvia, Lithuania** and **Romania** the percentages vary depending on the duration of the benefit. Whilst in **Latvia**, the permitted level of the benefit amounts to 60% of previous remuneration if taken for the first year following birth, the permitted level of the benefit will be reduced to 43.75% if taken for a year and a half. Similarly, in **Lithuania**, the benefit for the first year will represent 100% of previous pay, but will be reduced to 70% for the first year and 40% of compensatory salary during the second year. In **Romania**, the permitted percentage of previous remuneration received is 85% for the first and second year. However, the maximum permitted nominal ceiling insofar the benefit is taken for the second year is lower than if only called upon for the first year.

**3.3. Calculation of the benefit**

As previously indicated, certain Member States (**BE, CY, CZ, FR, IS, IE, LI, LU, MT, NL, NO, PL, SK, CH** and **UK**) do not have the benefits concerned. This is to be attributed to the fact that some of these Member States (**BE, CZ, FR, LU, NO, PL**) do provide similar benefits, but make use of flat-rate amounts as opposed to salary-related amounts to determine the level of the benefit. Other Member States (**CY, IS, IE, LI, MT, NL, SK, CH** and **UK**) simply do not provide for benefits in national legislation, which resembles a child-raising benefit as such, irrespective of its means of calculation.

Of the Member States that *do* provide for salary-related child-raising benefits, the majority (**AT, BG, HR, DK, FI, DE, HU, IT, LV, LT, RO, SI** and **ES**) calculate the amount of the benefit with *exclusive* reference to the salary of the recipient. It need be noted that **Croatia** – as do **Finland, Germany** and **Hungary** – opts for a maximum ceiling and a minimum floor that the benefit is permitted to amount to (see Annex for exact figures). For the remaining Member States (**EL, PT, EE** and **SE**), the salary-related child-raising benefits are calculated in part with reference to the salary of the recipient. In **Greece** and **Portugal** in particular, the benefit, which may be qualified as a salary-related child-raising benefit, is in fact an extension of maternity leave and parental leave respectively, whereby solely the calculation of the extension is salary-related. In **Estonia** the calculation of the benefit will depend upon whether the individual seeking the benefit had a previous income which was subject to taxation. Insofar this is the case, he or she will be entitled to a salary-related child-raising benefit. If the person concerned did not have a salary as such, however, he or she will be entitled to a flat-rate child-raising benefit. Lastly, in **Sweden**, the child-raising benefit itself is made up of a flat-rate element, which lasts for 90 days, and a salary-related component, which is applied for the remaining 390 days.

Exclusively salary-related	
AT, BG, DK, HR, FI, DE, HU, IT, LV, LT, RO, SI, ES	
Partially salary-related	
EE, EL, PT, SE	
Not applicable	
<b>Flat-rate benefits</b>	<b>No benefits</b>
BE, CZ, FR, LU, NO, PL	CY, IS, IE, LI, MT, NL, SK, CH, UK

### 3.4. Maximum duration of the right to the benefit<sup>86</sup>

As is to be expected, the maximum permitted duration during which parents can make use of the respective salary-related child-raising benefits differs from State to State. However, several general observations can be made. A number of Member States (**AT, HR, DE, EL, IT, PT** and **ES**) limit the entitlement to the salary-related child-raising benefits after the expiration of a number of months. In particular, the salary-related child-raising benefits in **Austria** can be received for 12 months, extendable to 14 months insofar shared between the parents. Similarly, **Germany** allows for the benefit to be claimed for a duration of 12 months, which is extendable to 14 months. Additional extensions remain possible in specific circumstances (see Annex). **Croatian** legislation on the other hand stipulates that the benefit may be claimed for a period ranging between 8-30 months upon expiry of the first six months after birth, depending upon the number of children in the respective family. In **Italy**, the benefits are available to both parents for six months each. In **Greece** on the other hand, they are available for a maximum duration of six months, whereas in **Portugal** the benefit is available for three months. Lastly, in **Spain**, as it concerns a specific salary-related child-raising benefit for children with a serious illness only, the maximum duration of entitlement is one month, with consecutive possible extensions by two months, should the situation require this.

In **Bulgaria, Hungary, Latvia, Lithuania** and **Romania** on the other hand, the maximum duration of entitlement of salary-related child-raising benefits is expressed in terms of years, and can in all three cases be extended. Specifically, in **Bulgaria** and **Hungary** the salary-related child-raising benefit may be claimed until the child concerned reaches the age of two. In **Latvia** in particular, the benefit can either be made use of for one full year, or, alternatively, a year and a half – with the due impact upon the calculation of the level of the benefit (see *supra*). Similarly, in **Lithuania** and **Romania** the benefit can be provided for a duration of one year, and can be extended for an additional year. **Romanian** legislation furthermore provides for an additional extension of one year, insofar the child-raising concerns a child with a disability.

Lastly, **Estonia, Finland, Slovenia** and **Sweden** provide for a maximum duration of salary-related child-raising benefits in terms of days. In **Estonia** the benefit is provided for 435 days following the expiry of the maternity benefit, whilst in **Sweden** the benefit may be provided for 480 days (of which 390 are salary-related). In **Slovenia**, the benefits are available for 130 days for each parent concerned, amounting to a total of 260 days, of which the benefits are to a certain extent, transferable. In Finland the benefit may be made use of for a period of 158 days. Finally, in **Denmark** the maximum duration of the benefit is referred to in terms of weeks and allows for the benefit to be received for a total duration of 32 weeks.

### 3.5. Who can claim the benefit?

The overwhelming majority of Member States (**AT, HR, DK, EE, FI, DE, HU, IT, LT, PT, RO, SI** and **SE**) which provide for salary-related child-raising benefits, allow for both parents – albeit not always simultaneously – to make use thereof. In **Austria**, insofar both parents claim the benefit, the permitted duration thereof will be extended from 12 months to 14 months. The choice of who enjoys the child-raising benefit may be altered twice. This is also the case in **Lithuania**, where the parent enjoying the benefit may also be changed twice. In **Italy** both parents are entitled to the benefit for a maximum duration of six months each before the child concerned reaches the age of six. In **Romania**, the benefit may be shared between the respective parents, albeit subject to the condition that the minimum duration of the benefit per parent must be at least one month. Similarly to the foregoing, **Swedish** legislation allows for the sharing of the benefit by the parents with the one condition that 60 days are effectively reserved for the

---

<sup>86</sup> Henceforth, the report will be limited to those Member States which have indicated that salary-related child-raising benefits are provided for.

father. Most Member States (**AT, HR, EE, FI, HU, LT, RO** and **SE**) which allow for the child-raising benefit to be shared by parents, do explicitly note, however, that this right is not to be exercised simultaneously. In **Germany, Portugal** and **Slovenia** on the other hand, such simultaneous use is possible. Seemingly this is also the case in **Denmark**.

A limited number of Member States (**BG, EL, LV, ES**) reserve salary-related child-raising benefits to one parent only. In **Greece**, by means of an example, the benefit is reserved solely for the mother. In **Latvia** and **Spain** the benefit is simply granted to one parent, without a distinction being made as such. Finally, in **Bulgaria** the mother is the recipient of the benefit. Only if the mother has passed away or has been deprived of her rights as a mother, will the father be accorded the benefit.

Shared entitlement	Single entitlement
AT, HR, DK, EE, FI, DE, HU, IT, LT, PT, RO, SI, SE	BG, EL, LV, ES

**3.6. Can the benefit be claimed in case of partial reduction of income pursuant to part-time/flexible working?**

As can be derived from the Country Sheets, an overwhelming majority of Member States (**AT, HR, DK, EE, FI, DE, EL, HU, IT, LV, LT, RO, SI, ES** and **SE**) allow for salary-related child-raising benefits to nevertheless be claimed in case of partial reduction of income pursuant to part-time/flexible working. However, it need be noted that various Member States explicitly make note of the fact that the benefit will subsequently be limited proportionally or in accordance with a given percentage. **Austria, Estonia** and **Slovenia** in particular note that the benefit will be decreased accordingly. Similarly, **German** and **Latvian** legislation impose a 50% and 30% threshold which the benefit may subsequently amount to, vis-à-vis a 'regular' salary-related child-raising benefit. **Lithuanian** legislation applies a different approach. During the first year the benefit will solely consist of the difference between the salary-related benefit and the salary itself, unless the salary proves to be higher. During the second year on the other hand, the benefit will be disbursed irrespective of the salary.

Contrary to the foregoing, in **Portugal** the salary-related benefit is not reconcilable with part-time working/flexible working. Similarly, it appears that in **Bulgaria** the receipt of salary-related child-raising benefits is *de facto* not reconcilable with part-time work/flexible working.

Reconcilable with part-time/flexible working	Not reconcilable with part-time/flexible working
AT, HR, DK, EE, FI, DE, EL, HU, IT, LV, LT, RO, SI, ES, SE	BG, PT

**3.7. Is the benefit intended to complement the exercise of parental leave rights (within the meaning of the Parental Leave Directive)?**

The majority of the Member States (**HR, EE, EL, DE, HU, IT, LV, LT, PT** and **SE**) which provide a salary-related child-raising benefit note that this is meant to complement parental leave as defined in the Parental Leave Directive. In addition, in **Austria**,

**Bulgaria, Denmark, Finland, Romania** and **Slovenia** the benefit effectively complements parental leave, albeit in a slightly more indirect and *de facto* manner.

Conversely, in **Spain** the benefit is regarded as being completely independent, and hence not meant to complement the Parental Leave Directive.

Complementary	De facto complementary	Not complementary
HR, EE, DE, EL, HU, IT, LV, LT, PT, SE	AT, BG, DK, FI, RO, SI	ES

**3.8. Are employers who offer pay during statutory periods of parental leave entitled to either "off-set" or claim reimbursement from the social security institution for salary paid to the employee during parental leave?**

In a majority of Member States (**AT, BG, EE, LV, PT and ES**), the employer cannot off-set or claim reimbursement for salaries paid to the employee. This is furthermore also the case in **Croatia, Germany, Greece, Hungary, Italy, Lithuania, Romania, Slovenia** and **Sweden** as the employer simply does not pay the employee during parental leave, or alternatively, as is the case in **Italy**, the employer pays on behalf of the competent authority INPS.

In **Denmark** and **Finland**, contrary to the foregoing, reimbursement may be claimed or off-set for salaries paid throughout the duration of the parental leave.

Off-set/reimbursement possible	Off-set/reimbursement not possible	Not applicable
DK, FI	AT, BG, EE, LV, PT, ES	HR, DE, EL, HU, IT, LT, RO, SI, SE

**4. CAN A PARENT RECEIVE A SALARY-RELATED CHILD-RAISING BENEFIT REGARDLESS OF WHICH PARENT FACTUALLY FULFILS THE CONDITIONS OF ENTITLEMENT UNDER NATIONAL LAW AND IF SO HOW?**

Finally, as concerns the factual fulfilment of the effective child-raising and subsequent access to the salary-related child-raising benefit in conformity with the *Hoever and Zachow* judgment – an overwhelming majority of the Member States (**AT, EE, EL, HU, IT, LV, LT, PT, RO, SI, ES** and **SE**) providing such benefits reserve these for the individual who is factually fulfilling the child-raising. In other words, in the large majority of Member States the salary-related child-raising benefit is a personal right and exclusively reserved for the person factually taking care of the child. It is unclear however, whether this entails that the entitlement is exclusively restricted to the person under the applicable legislation only.

Conversely, in **Bulgaria** the right may be granted to the individual concerned despite not factually fulfilling the child-raising activity. This is also the case in **Germany** as well as in **Finland** following an amendment dating from 1 January 2015. Furthermore, in **Croatia** the salary-related child-raising benefit is *de iure* a personal right, yet the practice surrounding the entitlement thereto is rather flexible, and may thus be interpreted in conformity with CJEU case law. However, as no such issues have arisen and the practice with respect thereto is highly limited, it is unsure whether the individual concerned must personally and factually engage in the child-raising activity.

Factual fulfilment required	Factual fulfilment not required	Uncertain
AT, EE, EL, HU, IT, LV, LT, PT, RO, SI, ES, SE	BG, DE, FI	HR, DK

## 5. ANNEX

## AUSTRIA

<b>REPLY</b>	
<b>HISTORY OF THE SALARY-RELATED CHILD-RAISING BENEFIT</b>	<p>The salary-related child-raising benefit was introduced by Federal Gazette Nr 116/2009, which got into force in the year 2010. The historical aim of this benefit is to help claimants who just want to interrupt their employment for a short time and have a high level of income to maintain their standard of living. In the year 2011 (Federal Gazette Nr 139/2011) the conditions of entitlement were modified. The level of income, which can be earned during drawing the benefit, was raised from € 5.800 to € 6.100. Furthermore the condition of at least six month of employment before drawing the benefit was introduced. By this amendment also the present formula for the calculation of the benefit was introduced. In the year 2013 the level of income was raised up again to € 6.400 (Federal Gazette Nr 117/2013).</p> <p>In July 2015 60.418 claimants (women: 58.833; men: 1.585) were drawing child-raising benefits in Austria. Therefrom 18.259 (women: 16.254; men: 2.005) were drawing salary-related child-raising benefits. So almost 1/3 of all claimants in July 2015 were drawing salary-related child raising benefits (cf statistics of the Austrian Federal Ministry for Families and Youth; <a href="http://www.bmfj.gv.at/familie/finanzielle-unterstuetzungen/kinderbetreuungsgeld/monatsstatistik.html">http://www.bmfj.gv.at/familie/finanzielle-unterstuetzungen/kinderbetreuungsgeld/monatsstatistik.html</a>).</p>
<b>DESCRIPTION OF THE SALARY-RELATED CHILD-RAISING BENEFIT</b>	<p>The salary-related child-raising benefit (called "einkommensabhängiges Kinderbetreuungsgeld") is calculated according to Section 24a Child Raising Benefit Code (Kinderbetreuungsgeldgesetz) as follows:</p> <p style="text-align: center;">Income x 0,62 + 4000/365</p> <p>The maximum amount however is € 66 per day.</p> <p>The "income" consists of the income according to the income tax assessment of the year prior to the year of the birth of the child, provided that child rising benefits were not drawn in this year. If so, the outcome of the income tax assessment of the previous year is used.</p> <p>According to Section 24 Child Raising Benefit Code (Kinderbetreuungsgeldgesetz) the entitlement to salary-related child-raising benefits is subject to the conditions that the claimant</p> <ul style="list-style-type: none"> <li>- Is entitled to family allowance and already draws family allowance</li> <li>- Lives together in one single household with the child</li> <li>- Has his/her centre of interests in Austria</li> <li>- Is legally residing in Austria</li> <li>- Was employed for the last six months previous to the birth of the child</li> </ul>
	<b>Level of the benefit</b>
	<b>Conditions of entitlement</b>

		<p>(excluding interruptions of less than two weeks) based on an employment contract, which constitutes inclusion into the Austrian social insurance system</p> <ul style="list-style-type: none"> <li>- Does not obtain an income during drawing child raising benefits exceeding € 6.400 per year</li> </ul>
	<p><b>Exclusively or partially calculated with respect to salary</b></p>	<p>Cf calculation of benefit</p>
	<p><b>Maximum duration of the benefit</b></p>	<p>12 months – in case that the father claims child-raising benefits as well (and takes parental leave) the maximum duration is extended up to 14 months</p>
	<p><b>Who can claim the benefit (one or both parents?) and for how long in case of split entitlement between the parents?</b></p>	<p>Both the mother and the father can claim the benefit. In this case the maximum duration lasts 14 months. The mother and the father can change two times. However the minimum duration of drawing child raising benefits is for each parent two months.</p>
	<p><b>Can the benefit be claimed in case of partial reduction of income pursuant to part-time/flexible working?</b></p>	<p>Salary-related child-raising benefits can only be claimed if the income of the claimant during drawing salary-related child-raising benefits does not exceed € 6.400 per year. So the claimant can perform part-time work, if his/her earnings do not exceed € 6.400 per year.</p>
	<p><b>Is the benefit intended to complement the exercise of parental leave rights (within the meaning of the Parental Leave Directive)?</b></p>	<p>Legally the entitlement to salary-related child-raising benefits is independent from exercising parental leave. However due to the fact that only an income up to a maximum of € 6.400 per year can be earned during drawing child-raising benefits almost every claimant takes parental leave. So in practice the benefits intend to complement the exercise of parental leave rights.</p>
	<p><b>Are employers who offer pay during statutory periods of parental leave entitled to either "off-set" or claim reimbursement from the social security institution for salary paid to the employee during parental leave?</b></p>	<p>No</p>
	<p><b>Is it possible that both parents claim salary-related child-raising benefits and if so, how are such rights divided between parents; can these be</b></p>	<p>Both the mother and the father can claim the benefit. In this case the maximum duration lasts 14 months. The mother and the father can change two times. However the minimum duration of drawing child-raising benefits is two months. Thus salary-related child-raising benefits cannot be exercised simultaneously.</p>

	<b>exercised simultaneously?</b>	
<b>CAN A PARENT RECEIVE A SALARY-RELATED CHILD-RAISING BENEFIT REGARDLESS OF WHICH PARENT ACTUALLY FULFILLS THE CONDITIONS OF ENTITLEMENT UNDER NATIONAL LAW AND IF SO HOW?</b>	No. Every parent who is claiming salary-related child-raising benefits must complete the conditions laid down by Section 24 Child Raising Benefit Code ("Kinderbetreuungsgeldgesetz"). Thus both mother and father must be employed in Austria, provided that inclusion into Austrian social insurance is a precondition for the entitlement to salary-related-child raising benefits.

## BULGARIA

	REPLY
<p data-bbox="858 1675 912 2056"><b>HISTORY OF THE SALARY-RELATED CHILD-RAISING BENEFIT</b></p>	<p data-bbox="389 250 533 1626">According to the Social Insurance Code of the Republic of Bulgaria, insured persons shall be entitled to a cash benefit for pregnancy and birth, if they have completed a contributory service of at least six months and are insured for all social risks, excluding occupational accident and occupational disease, or for all insured social risks excluding unemployment, of which three months during the period of 12 calendar months preceding the month when the pregnancy and childbirth leave started.</p> <p data-bbox="536 250 826 1626">Presently, the cash benefits for pregnancy and birth and for raising a small child are regulated in the Social Insurance Code (effective from 12.17.1999, amended and supplemented many times). Social security, social assistance and policy aimed at promoting and stimulating natality in Bulgaria is long-standing and was launched after 1968, when a significant reduction in fertility was registered. The adopted policies and legislative amendments covered everyone, because in that period there were no unemployed and uninsured persons and since they were aimed to increase the birth rate. In result, natality was encouraged, whereas cash benefits increased according to the number of born children up to three, then for each successive child the amount of cash benefit was equal to that for the first birth, i.ee the lowest amount of all. Another incentive policy was to increase the duration of maternity leave to raise a child up to the age of 3, with a guaranteed workplace for the mother, provision of affordable and flexible childcare services, etc.</p> <p data-bbox="829 250 1088 1626">At present, cash benefits for pregnancy, birth and child rearing largely follow an established practice of the past century. As a legacy of the generous financial benefits bestowed from national economy and social policy from socialist era and policy to promote natality and support childcare, in particular, is the relatively lengthy paid leave for child rearing - up to the age of 2 years, long pregnancy and birth leave - 45 days, among others. Recently, a parental leave was introduced, which is unpaid and in its major part (five of the six months) can be transferred between parents. In the context of Bulgaria, men are those who transfer the leave to women (mother or adoptive mother), which reinforces the unfair social distribution of functions by gender in child rearing and the consequent practice of impeded career fulfilment of women, gender-based discrimination in the workplace - in recruitment, pay and career.</p> <p data-bbox="1091 250 1145 1626">Along with cash benefits for employed mothers or fathers, inactive persons or families, respectively households, with very low income are entitled to social benefits for childbirth and child raising.</p> <p data-bbox="1149 250 1356 1626">The number of persons who receive benefits for pregnancy, birth and child rearing has declined significantly due to several key reasons: a sharp drop in the number of births and relatively low share of employed and insured young women. Data on age-specific unemployment and female employment demonstrates very low employment rates of two groups - women over the age of 50 and young women between 20 and 30 years of age. Another factor for the low number of births over the past 25 years is the high emigration rate, where emigrants were mainly young people, with very high rate of girls and young women, in some years exceeding the number of young male emigrant by respective age groups.</p> <p data-bbox="1359 250 1382 1626">In 2009, for example, the number of cash benefits for pregnancy and birth (i.e. maternity benefit) was 858 199.</p>

	<p>The gender-based structure of 'maternity' benefit is characterized by a predominance of women (97.8%) and a very small percentage of men (2.2%). In line with promotion of gender equality, the proportion of men accessing cash benefit in cases provided by law has increased slightly (2.2% in 2009). The structure of benefits for raising a child is similar - women predominate (99.2%) compared to men (0.8%). It is believed that a change of terminology is needed, e.g. insurance for pregnancy, childbirth and child rearing. Those terms were imposed with Title III of the Labour Code of 1951 and its Implementing Rules, and was transferred in the current Social Insurance Code. It is believed that a modern terminology, promoting and respecting gender equality, is needed in the field of social security and social assistance. For the first half of 2015, the National Social Security Institute (NSSI) paid BGN 142 million (appr. 73 million Euro) for pregnancy and childbirth benefits, which is over BGN 18 million more than for the previous year. The average benefit for women is BGN 365 (appr. € 183), which is 6.5 percent higher than last year. The amount paid for child rearing benefits is BGN 64 million.</p>
	<p>The daily cash benefit during pregnancy and childbirth is set at 90% of the average gross wage or insurance contributory income as defined in the respective regulation (Article 41 of the Social Insurance Code). The amount of the daily cash benefit cannot be lower than the statutory minimum wage for the country and cannot exceed the average net remuneration for the period for which the compensation is calculated.</p> <p>At least one of the parents should be insured in order to receive a benefit for raising of a small child. In the case of entitlement to maternity (pregnancy and birth) benefit, woman concerned shall be insured against the respective insurance risk.</p> <p>Exclusively</p> <p>A mother, who is insured against all social risks, is entitled to a cash benefit for pregnancy and birth for a period of 135 calendar days, of which 45 days before birth. Similar entitlement shall be granted to mother who is not insured against occupational accidents, occupational diseases and unemployment. When birth occurs before the expiry of 45 days from the benefit launch, the remainder up to 45 days is used after birth.</p> <p>When a child is stillborn, has died, was placed in a nursery school with full state subsistence allowance or was given up for adoption, mother shall be entitled to cash benefit until the expiry of 42 days from birth. If mother's performance in result of birth has not been recovered after 42 days, the duration of benefit is extended at discretion of the health authorities until she has restored her performance. Until expiry of that period, the aforementioned benefit shall be paid as pregnancy and childbirth cash benefit.</p> <p>When a child is given up for adoption, placed in a nursery school with full state subsistence allowance or dies after 42-nd day after birth, the benefit is terminated</p>
	<p><b>Level of the benefit</b></p>
	<p><b>Conditions of entitlement</b></p>
	<p><b>Exclusively or partially calculated with respect to salary</b></p>
<p><b>DESCRIPTION OF THE SALARY-RELATED CHILD-RAISING BENEFIT</b></p>	<p><b>Maximum duration of the benefit</b></p>

starting the next day.

Person insured against all social risks who adopts a child shall be entitled to cash benefit amounting to the difference of age of the child on the day of its surrender for adoption to the expiry of the due birth benefit.

*Benefit upon mother's death or severe illness.* Upon the death or serious illness of the mother (adoptive mother), which prevents her to take care of a small child, the person who takes leave as provided under the Labor Code shall receive the corresponding cash benefit therein.

*Benefit for Pregnancy and Child-Birth upon Termination of Social Insurance.* Upon termination of social insurance against general sickness and maternity during a period of entitlement to a benefit for pregnancy and child-birth, the insured person shall be paid a cash benefit until the lapse of the period of entitlement to a benefit for pregnancy and child-birth.

*Entitlement to Child-Care Benefit.* Persons insured against general sickness and maternity shall be entitled to a child-care benefit, if the said persons have logged a contributory service of six months as a person insured against all social risks, against all social risks excluding occupational accident and occupational disease, or against all social risks except unemployment, of which three months during the period of 12 calendar months preceding the month from which the leave for raising a child has started.

*Child-Care Benefit.* After the lapse of the period of entitlement to a benefit for pregnancy and child-birth during the additional paid childcare leave, the mother (adoptress) shall be paid a monthly cash benefit to an amount fixed by the Public Social Insurance Budget Act.

When the additional paid child-care leave is used by the father (adopter) instead of the mother (adoptress) or by the person responsible for caring of the child, a monthly cash benefit shall be paid to an amount fixed by the Public Social Insurance Budget Act. Such benefit shall be paid to the guardian where the said guardian uses the leave under Article 167 (2) of the Labour Code.

The payment of the cash benefit shall be terminated upon the death of the child, if the child is given up for adoption or placed in a nursery school with full state subsistence allowance.

*Benefit When Additional Paid Child-Care Leave Is Not Used*

(Since 2003) In cases where the additional paid child-care leave is not used or where the person who uses such leave interrupts the use thereof, mother (adoptress) shall be entitled to a cash benefit amounting to 50 per cent of the benefit, if she is insured against all insurance social risks, excluding occupational accident, occupational illness and unemployment. If the mother (adoptress) is deceased, has forfeited child custody, or the exercise of child custody has been awarded to the father (adopter), this benefit shall be paid to the father (adopter), and if he is deceased, to the

		<p>guardian. The benefit shall be paid if the person who has assumed responsibility for the care of the child is insured against general sickness and maternity. The benefit shall not be paid if the child is placed in a fully public financed child institution, as well as if the child is taken care of by an individual included in the Maternity Support Programme.</p> <p><i>Benefits for pregnancy and childbirth</i> are provisionally received by the expectant mother, as far as this process is still inherent in only one biological sex. Generally, the child-raising benefit is provided to be used by the mother, respectively adoptive mother, reflecting social practice and common understanding in society that it is the mother who takes care of the upbringing and education of child. Therefore the law (Social Insurance Code, hereafter CIS) provides child-raising benefit to be bestowed on the father if the mother (respectively, adoptive mother) dies or is deprived of these rights with decision of the court.</p> <p>There is no known practice of dividing the benefit between parents. The benefit is provided to that parent who raises the child (when parents are separated) and most often to the mother (adoptive mother, respectively).</p> <p>According to CIS, the amount of benefit depends on insurance income, i.e. of the amount of wages on which insurance contributions and benefits, respectively, are determined.</p> <p>Part-time work and various forms of flexible employment are less prevalent in Bulgaria and the majority of part-time workers are employed under a second employment contract and/or work without a contract and without insurance, respectively.</p> <p>Parental leave is used after the expiry of statutory pregnancy, childbirth and child rearing leaves. In Bulgaria, paid and unpaid leave for raising of a small child (where employer retains the workplace) are some of the longest in Europe (up to 3 years of child age). <i>Bulgarian labor law (the Labor Code) transposes the provisions of Directive 2010/18/EU of 08.03.2010 implementing a revised Framework Agreement on parental leave. The amendments came into force on 28.01.2012.</i></p> <p>The supplement to the Labour Code (Art. 167a para. 1) enables each parent (adoptive) of a child under the age of 8, to take up to five months from the statutory leave to the other parent (adoptive parent) with his or her consent. Before, i.e. from 01.01.2007 to 28.01.2012, the entitlement to unpaid parental leave was a personal right and could not be transferred. By 31.12.2006, there was an opportunity one of the parents to take the whole leave upon consent of the other parent. <i>At present, following the amendments to the Labour Code, each parent (adoptive parent) can transfer to the other parent (adoptive parent) up to 5 months 6 months unpaid leave to care for a child up to 8 years of age, of which one is entitled. Since most women</i></p>
	<p><b>Who can claim the benefit (one or both parents?) and for how long in case of split entitlement between the parents?</b></p>	
	<p><b>Can the benefit be claimed in case of partial reduction of income pursuant to part-time/flexible working?</b></p>	
	<p><b>Is the benefit intended to complement the exercise of parental leave rights (within the meaning of the Parental Leave Directive)?</b></p>	

		<p><i>are paid lower wages than men, the entitlement is most often taken by women.</i></p> <p>Under the provisions of the Labour Code (Art. 167a para. 1) after use of the leaves provided in Article 164 (1) and Article 165 (1) herein, each of the parents (adopter), if working under an employment relationship and the child has not been placed in a fully public-financed child-care institution, shall be entitled upon request to use <i>unpaid child-care leave in the amount of six months until the child's attainment of the age of 8 years.</i> The leave may be used only after the terms of child-caring leave have expired (Art. 164, para. 1 and Art. 165, para. 1 of the LC and no later than the date on which the child turns 8 years old).</p> <p>No, because in Bulgaria the parental leave is unpaid.</p> <p>Entitlement to parental leave: According to the provisions of the Labour Code (Art. 167a para. 1) after use of the leaves provided in Article 164 (1) and Article 165 (1) herein, each of the parents (adopter), if working under an employment relationship and the child has not been placed in a fully public-financed child-care institution, shall be entitled upon request to use <i>unpaid child-care leave in the amount of six months until the child's attainment of the age of 8 years.</i> Subject to certain conditions, other persons may be also entitled to that type of leave. The leave may be used only after the terms of child-caring leave have expired (Art. 164, para. 1 and Art. 165, para. 1 of LC and no later than the date on which the child turns 8 years old).</p> <p>Entitlement to leave for children up to 8 years of age shall have: child's parents, adoptive parents; guardian if the child's parents have died – who can be parent of the father or mother (grandmother or grandfather on the maternal or paternal line); a single parent who alone raises the child. Therefore, the Regulation on working time, breaks and holidays (RWTBH) contains provisions that establish conditions and requirements for use of the leave by any of those parties. Since cases are different, the Regulation establishes certain universal requirements for all parties. It also indicates the requirements that are specific to each individual case.</p> <p>The entitlement to child-raising benefit can be used by one of the parents.</p> <p>The entitlement to pregnancy and birth benefits is used only by pregnant women.</p> <p>Please see above.</p>

Yes

**CAN A PARENT RECEIVE A SALARY-RELATED CHILD-RAISING BENEFIT REGARDLESS OF WHICH PARENT FACTUALLY FULFILLS THE CONDITIONS OF ENTITLEMENT UNDER NATIONAL LAW AND IF SO HOW?**

## CROATIA

<b>REPLY</b>					
<b>HISTORY OF THE SALARY-RELATED CHILD-RAISING BENEFIT</b>	<p>The current system of maternity and parental benefits, including salary-related child-raising benefits was introduced in 2008, under the Act on Maternity and Parental Benefits (Official Gazette Narodne novine nos. 85/08, 110/08, 34/11, 54/13 and 152/14). This Act redefines, expands and attempts to flexibilize the already existing system of benefits established under the (old) Labour Act of 1995 (and its predecessors) and Act on Maternity Leave of self-employed and unemployed mothers of 1996. However, salary-related child-raising benefits were not a novelty in the Croatian legal system since it gained independence from the former SFRY in 1991, because Croatia inherited a relatively strong and developed system of maternity benefits, developed during socialism and taken over as an important instrument of family and population policy.</p> <p>In the last decade, the number of beneficiaries of maternity and parental benefits, in the form of paid maternity and parental leave as the most typical forms of salary-related child raising benefits revolves around 18 000 – 22 000. In February 2008, before the current system was implemented, there were 22 863 beneficiaries of maternity leave up to six months after child's birth and 16 686 beneficiaries of additional maternity leave (today: parental leave) from six months after child's birth until a child turns 1 year (source: Draft (No. 85) Act on Maternity and Parental Benefits; Croatian Health Insurance Fund). In December 2009, approximately one year after implementation of the new system, there were 17 194 beneficiaries of maternity leave up to six months after child's birth and 16 172 beneficiaries of parental leave from six months after child's birth until a child turns 1 year (source: Draft (No. 726) Act on Maternity and Parental Benefits; Croatian Health Insurance Fund).</p>				
<b>DESCRIPTION OF THE SALARY-RELATED CHILD-RAISING BENEFIT</b>	<table border="1"><thead><tr><th style="text-align: center;"><b>Level of the benefit</b></th></tr></thead><tbody><tr><td>Maternity benefit for employed or self-employed persons amounts to 100% of the monthly earnings of the insured person, calculated on the basis of average salary received in the six months preceding the maternity leave. The prescribed insurance period is the period that the person has accumulated on the basis of his/her employed or self-employed activity or on the basis of salary compensation after termination of employment. If this condition is not fulfilled, the insured person is entitled to salary compensation amounting to 50% of the budget calculation base currently HRK 1,663.00 (€217) per month).
<b>Level of the benefit</b>					
Maternity benefit for employed or self-employed persons amounts to 100% of the monthly earnings of the insured person, calculated on the basis of average salary received in the six months preceding the maternity leave. There is no ceiling. Parental benefit for employed or self-employed persons is 100% of the monthly earnings, but cannot exceed a maximum of 80% of budget calculation base (currently HRK 2,660.80 (€347) per month). It cannot be lower than 50% of the budget calculation base (currently HRK 1,663.00 (€217) per month).					
<b>Conditions of entitlement</b>					
Minimum period of insurance is required: 12 months of consecutive insurance or 18 months with interruptions during the last two years. The prescribed insurance period is the period that the person has accumulated on the basis of his/her employed or self-employed activity or on the basis of salary compensation after termination of employment. If this condition is not fulfilled, the insured person is entitled to salary compensation amounting to 50% of the budget calculation base currently HRK 1,663.00 (€217) per month).					

	<p><b>Exclusively or partially calculated with respect to salary</b></p>	<p>Maternity benefit: exclusively calculated with respect to salary, no ceiling applies. Parental benefit: in principle calculated with respect to salary, but upper and lower limits apply.</p>
	<p><b>Maximum duration of the benefit</b></p>	<p>Maternity benefit is paid during maternity leave: 28 days before confinement until the child turns six months. Exceptionally, maternity leave may start 45 days before confinement. Compulsory part of maternity leave covers a period of 70 days after confinement and it is not transferrable (only a mother is entitled to it). After expiration of compulsory part of maternity leave (i.e. from 71<sup>st</sup> day after confinement), additional maternity leave until a child turns six months is transferrable and may be used either by a mother or a father. Parental benefit is paid during parental leave. Parental leave starts when a child is six months, and may be used in duration of 8 months (for the first and second child) or 30 months (for twins, third and each consecutive child). If only one parent uses parental leave, it lasts 6 months (for the first and second child) or 30 months (for twins, third and each consecutive child).</p>
	<p><b>Who can claim the benefit (one or both parents?) and for how long in case of split entitlement between the parents?</b></p>	<p>Maternity benefit during compulsory part of maternity leave: only mother entitled to benefit. Maternity benefit after expiration of compulsory part of maternity leave (so-called additional maternity leave): either parent entitled to benefit (but not simultaneously). Parental benefit during parental leave: either parent (but not simultaneously).</p>
	<p><b>Can the benefit be claimed in case of partial reduction of income pursuant to part-time/flexible working?</b></p>	<p>Yes. The above calculation method applies. Benefit is calculated in relation to average salary received in the period of six months prior to taking the leave, i.e. later changes in salary do not affect it. Benefit cannot be lower than 50% of the budget calculation base (currently HRK 1,663.00 (€217) per month), regardless whether employed or self-employed parent works full or part-time.</p>
	<p><b>Is the benefit intended to complement the exercise of parental leave rights (within the meaning of the Parental Leave Directive)?</b></p>	<p>Yes.</p>

	<p><b>Are employers who have to pay the salary during statutory periods of parental leave entitled to either "offset" or claim reimbursement from the social security institution for salary paid to the employee during parental leave?</b></p>	<p>Cash benefits during maternity or parental leave are paid at the expense of the Croatian Health Insurance Fund.</p>
	<p><b>Is it possible that both parents claim salary-related child-raising benefits and if so, how are such rights divided between parents; can these be exercised simultaneously?</b></p>	<p>Both parents cannot claim salary-related child-raising benefits simultaneously. Compulsory maternity leave and pertaining benefit in the form of salary or income compensation can be claimed only by the mother. Additional maternity leave and parental leave, as well as pertaining benefits can be claimed either by a mother or a father.</p>
<p><b>CAN A PARENT RECEIVE A SALARY-RELATED CHILD-RAISING BENEFIT REGARDLESS OF WHICH PARENT FACTUALLY FULFILLS THE CONDITIONS OF ENTITLEMENT UNDER NATIONAL LAW AND IF SO HOW?</b></p>	<p>All rights under the Act on Maternity and Parental Benefits (leaves, cash benefits) depend on a person's status as insured person in compulsory health insurance. Where no such status exists (whether as employed, self-employed, unemployed, retiree, student, family member of insured person not otherwise insured under any other basis etc.), no right can be granted under the Act. Therefore, salary-related child-raising benefits are contributory benefits and personal rights granted to parents in accordance with their status as insured persons in compulsory health insurance. Under Article 10(2) of the Compulsory Health Insurance Act, a family member (spouse, child, etc.) of insured person acquires the (derived) status of insured person in compulsory health insurance if he/she is not compulsory insured under any other basis provided in that act and if he/she has residence or is granted the right of permanent stay in Croatia "unless otherwise prescribed by EU law or international agreements". Consequently, this provision does allow a certain amount of flexibility to interpret national provisions in line with the CJEU case law, but there is no practice to confirm this opinion.</p>	

**CYPRUS**

<b>REPLY</b>	
<p><b>HISTORY OF THE SALARY-RELATED CHILD-RAISING BENEFIT</b></p>	<p>No child-raising benefit is provided in the Cypriot legal order, i.e. a benefit that would be paid to mothers or fathers who take time off on a full or part-time basis with a view to caring their child/children – such benefit typically being triggered upon expiry of the maternity/paternity benefit, aiming at mitigating the financial disadvantage entailed in giving up income from employment.</p> <p>Related benefits (but with a different function than the child-raising benefit) which are provided for in Cyprus are the ‘classical’ maternity benefit, the maternity grant (βοήθημα τοκετού), which is provided after the child’s birth on certain insurance conditions, and the family benefit (in the last case, depending on revenues, to families whose habitual place of residence is in Cyprus for a defined period).</p>

<sup>87</sup> See the *Hoever Zachow* judgment (C-245/94 and C-312/94) as well as the *Dodl Oberholzenzer* judgment (C-543/03). As the current practice, pursuant to the aforementioned case law, is under review and potentially subject to amendments, we are interested in understanding whether a Member State which is competent for one parent, who factually speaking does not take the child-raising task upon him/herself, would grant the salary-related benefit in favour of the other parent, who is responsible for taking care of the child despite being subject to the legislation of another Member State.

## CZECH REPUBLIC

### Preliminary remark

As a preliminary remark, it should be noted, that in the Czech Republic, there is the main child-raising benefit called "parental allowance". However, this benefit makes part of state social support system and is not related to income. It's provided for up to 4 years of child's age in a flat-rate – 220 000 CZK (some 8150 EURO). In the Czech sickness insurance scheme (Act No. 187/2006 Coll., on sickness insurance), there is the maternity benefit (financial assistance during maternity). This benefit seeks indeed to replace income during first child-raising period, during the maternity leave, which lasts in general for max. 22 weeks after the birth. This maternity benefit will be tackled in following answers.

<b>REPLY</b>					
<b>HISTORY OF THE SALARY-RELATED CHILD-RAISING BENEFIT</b>	<p>The maternity benefit was launched in 1968 – that time it was a right of the mother only. The possibility of transferring this right to the father was introduced with the new law in 2006, which entered into force in 2007. Statistics concerning the number of claimants of maternity benefit are publically not available.</p>				
<b>DESCRIPTION OF THE SALARY-RELATED CHILD-RAISING BENEFIT</b>	<table border="1" style="width: 100%;"> <tr> <td style="text-align: center;"><b>Level of the benefit</b></td> <td>From the first calendar day, the maternity benefit amount is 70% of the daily basis of assessment per calendar day.</td> </tr> <tr> <td style="text-align: center;"><b>Conditions of entitlement</b></td> <td>A basic condition for entitlement to financial assistance while on maternity leave is participation in insurance (e.g., continuation of insured employment) at the time of commencement of maternity leave. The time is determined by the expectant mother herself between the eighth and sixth week prior to the expected date of birth, or the date of birth if the birth occurs prior to the time of commencement of maternity leave. The period of protection for women whose insurance (employment) terminated during pregnancy is 180 calendar days from the date of termination of the insurance. The insured person must have participated in the sickness insurance scheme for at least 270 calendar days over the last two years before the date of starting the maternity leave to have the right to this benefit. The period of participation in sickness insurance for the right to maternity benefit includes the period of studies at a secondary school, vocational college or university considered to be the systematic preparation for a future profession. An insured person who is the father of a child or husband of a woman who bore the child also has the right to maternity benefit, if the person has concluded a written agreement with the mother of the child that he will take care of the child. The agreement must include data laid down by law, and may</td> </tr> </table>	<b>Level of the benefit</b>	From the first calendar day, the maternity benefit amount is 70% of the daily basis of assessment per calendar day.	<b>Conditions of entitlement</b>	A basic condition for entitlement to financial assistance while on maternity leave is participation in insurance (e.g., continuation of insured employment) at the time of commencement of maternity leave. <b>Level of the benefit</b>	From the first calendar day, the maternity benefit amount is 70% of the daily basis of assessment per calendar day.				
<b>Conditions of entitlement</b>	A basic condition for entitlement to financial assistance while on maternity leave is participation in insurance (e.g., continuation of insured employment) at the time of commencement of maternity leave. The time is determined by the expectant mother herself between the eighth and sixth week prior to the expected date of birth, or the date of birth if the birth occurs prior to the time of commencement of maternity leave. The period of protection for women whose insurance (employment) terminated during pregnancy is 180 calendar days from the date of termination of the insurance. The insured person must have participated in the sickness insurance scheme for at least 270 calendar days over the last two years before the date of starting the maternity leave to have the right to this benefit. The period of participation in sickness insurance for the right to maternity benefit includes the period of studies at a secondary school, vocational college or university considered to be the systematic preparation for a future profession. An insured person who is the father of a child or husband of a woman who bore the child also has the right to maternity benefit, if the person has concluded a written agreement with the mother of the child that he will take care of the child. The agreement must include data laid down by law, and may				

		<p>be concluded with effect no sooner than the beginning of the 7th week after the childbirth.</p> <p>The maternity benefit is calculated exclusively with reference to salary, no flat-rate elements are envisaged. There is only a ceiling.</p> <p>The support period for the maternity benefit begins with the start of the maternity leave (no later than the beginning of the 6th week before the anticipated date of childbirth), and is 28 weeks for an insured woman who bears a child, even if she is an employee who is not married, is widowed, divorced, or alone for other serious reasons. For an insured woman who bears two or more children at the same time, the support period is 37 weeks and, after 28 weeks of the support period, the benefit will only be received if the insured woman continues to take care of at least two of these children. For an insured person who assumed the care of a child (on the basis of a decision of the relevant authority, due to the mother's death, or long-term serious disease, or on the basis of an agreement made with the mother of the child), the support period is 22 weeks. If this insured person takes care of two or more children at the same time, the support period is 31 weeks and, after 22 weeks of the support period, the maternity benefit will only be received if the insured person continues to take care of at least two of these children.</p> <p>If the income was partially reduced, the amount of the benefit will be adequately reduced. In general however, it's not possible to combine the entitlement to this maternity benefit with a gainful activity.</p> <p>As already explained, the benefit can be claimed by mother, or eventually by the father of the child, or by another insured person, who takes care after the child (e.g. an adoptive or foster parent). If parents want to make the above mentioned written agreement, that the father will take care after the child instead of the mother, such an agreement can be made only after 6 weeks after the child was born. The benefit will not be split, but it will be only one of the parents, who can claim it.</p> <p>Yes, only that the amount will be reduced.</p> <p>Not really, it's more a maternity benefit according to the Directive 92/85.<sup>88</sup></p>
<p><b>Exclusively or partially calculated with respect to salary</b></p>		
<p><b>Maximum duration of the benefit</b></p>

<p><b>Is the benefit intended</b></p>		

<sup>88</sup> Council directive 92/85/EEC of 19 October 1992 on the introduction of measures to encourage improvements in the safety and health at work of pregnant workers and workers who have recently given birth or are breastfeeding

	<p><b>to complement the exercise of parental leave rights (within the meaning of the Parental Leave Directive)?</b></p> <p><b>Are employers who offer pay during statutory periods of parental leave entitled to either "off-set" or claim reimbursement from the social security institution for salary paid to the employee during parental leave?</b></p>	<p>The maternity benefit is paid from the state budget; the employer is only obliged to employ the parent returning from maternity/parental leave. For this obligation, there is no compensation. No salary is paid during parental leave.</p>
<p><b>CAN A PARENT RECEIVE A SALARY-RELATED CHILD-RAISING BENEFIT REGARDLESS OF WHICH PARENT FACTUALLY FULFILLS THE CONDITIONS OF ENTITLEMENT UNDER NATIONAL LAW AND IF SO HOW?</b></p>	<p><b>Is it possible that both parents claim salary-related child-raising benefits and if so, how are such rights divided between parents; can these be exercised simultaneously?</b></p>	<p>As explained above, it's not possible. It's one or the other parent.</p> <p>As regards the above described maternity benefit, it's not possible, that such a benefit would be for a family as such. The person, who claims the benefit, must fulfil the conditions for entitlement under the sickness insurance act. As already mentioned, it's more a maternity benefit, than a family benefit, but still, it's replacing the income during the child-raising period and it's income-related.</p>

## DENMARK

<b>REPLY</b>																																																																	
	<p>An overall introductory comment is that the Danish child care allowance is in its current state defined by the law on child and youth care allowance (Lov om børne- og ungeydelse, LBK nr 964 af 19/09/2011) from 2011. This benefit is only related to salary in the way that since 2014, a recipient with a high salary (i.e. above the top-bracket tax level of 723.100 Danish kroner per year) will be offered a reduced benefit. In practice, the benefit is almost de facto universal as only a small share (about 10 percent, source: Ministry of Taxation: <a href="http://www.skm.dk/skattetal/statistik/generel-skattestatistik/bund-,-mellem-og-topskatteydere-1994-2015">http://www.skm.dk/skattetal/statistik/generel-skattestatistik/bund-,-mellem-og-topskatteydere-1994-2015</a>) of the total population of taxpayers earns above the top-bracket tax level. The following is based upon the Ministry of Taxation unless anything else is noted (<a href="http://www.skm.dk/skattetal/beregning/skatteberregning/boerne-og-ungeydelse-i-2015-og-2016">http://www.skm.dk/skattetal/beregning/skatteberregning/boerne-og-ungeydelse-i-2015-og-2016</a>). The child care allowance has been disbursed since 1987 and has undergone a series of changes throughout the years. In rough terms, the benefit can be characterised upon three time spans; from 1987 to 2010; from 2011 to 2013 and from 2014 onwards. The total expenses on the benefit from 1987 to 2015 are as follows</p> <p>In addition, a cash benefit is available to parents (<i>dagpenge ved barsef</i>)</p>

	<p style="text-align: center;"><b>Level of the benefit</b></p>	<p>The level of the child care benefit in 2015 is as follows (Source: The website borger.dk, which is the citizens' joint entry to public authorities in Denmark, <a href="https://www.borger.dk/Sider/Boerne-ungeydelse.aspx">https://www.borger.dk/Sider/Boerne-ungeydelse.aspx</a>): 0-2 years old: 4,443 Danish kroner per quarter of a year 3-6- years old: 3,519 Danish kroner per quarter of a year 7-14- years old: 2,769 Danish kroner per quarter of a year 15-17- years old: 923 Danish kroner per month</p> <p>The level can of the child-raising benefit is determined as follows:</p> <p><i>Employees:</i></p> <p>Calculation on the basis of the hourly wage of the employee with a maximum of DKK 4,135 (€556) per week or DKK 111.76 (€15) per hour (37 hours per week), and on the number of hours of work.</p> <p><i>Self-employed:</i></p> <p>Calculation on the basis of the earnings from the occupational activity of the self-employed person, with the same maximum as mentioned above.</p>
--	--	--

	<p style="text-align: center;"><b>Conditions of entitlement</b></p>	<p>Due to current Danish legislation, eligibility to the child care benefit is dependent on the following criteria (Source: The website borger.dk, which is the citizens' joint entry to public authorities in Denmark, <a href="https://www.borger.dk/Sider/Boerne-ungeydelse.aspx">https://www.borger.dk/Sider/Boerne-ungeydelse.aspx</a>):</p> <ul style="list-style-type: none"> <li>• residence in Denmark</li> <li>• fully liable to taxes aged above 18</li> <li>• the child is resident in Denmark* (see, however, note beneath)</li> <li>• the child is not provided for by public authorities</li> <li>• the child is unmarried</li> <li>• the recipient must have resided in Denmark for 2 years during the last 10 years in order to be eligible to the benefit</li> </ul> <p>Eligibility to the child-raising allowance is determined as follows:</p> <p><i>Employees:</i></p> <ul style="list-style-type: none"> <li>• Period of work of at least 120 hours in 13 weeks preceding the paid leave, or;</li> <li>• Unemployed entitled to benefits from unemployment insurance or similar benefits (activation measures), or;</li> <li>• Persons who within the last month have completed a vocational training course for a period of at least 18 months, or;</li> <li>• Pupils in a vocational training course regulated by law, or;</li> <li>• Persons in a "flexible job" with a private or public employer.</li> </ul> <p><i>Self-employed:</i></p> <ul style="list-style-type: none"> <li>• Professional activity on a certain scale (at least 18½ hours average weekly) for at least 6 months within the last 12-month period, of which 1 month immediately precedes the paid leave, or;</li> <li>• Receipt of flex wage subsidy (<i>flekslønstilskud</i>) (i.e. a benefit for self-employed who have a flexible job in their own company).</li> </ul>
	<p style="text-align: center;"><b>Exclusively or partially calculated with respect to salary</b></p>	<p>From January 1 2014, the child care benefit is made salary-related. This means that if the recipient or the recipient's spouse earns above the top-bracket tax level (723.100 Danish kroner per year), the benefit is reduced by 2 percent of the amount exceeds 723.100 Danish kroner (Source: The website borger.dk, which is the citizens' joint entry to public authorities in Denmark)</p> <p>The child-raising benefit is exclusively earnings-related.</p>

<p>18 years per child, i.e. from the child is born until (s)he turns 18 for the child care benefit (Source: The website borger.dk, which is the citizens' joint entry to public authorities in Denmark, <a href="https://www.borger.dk/Sider/Boerne-ungeydelse.aspx">https://www.borger.dk/Sider/Boerne-ungeydelse.aspx</a>).</p> <p>The maximum duration of the child-raising benefit is 32 weeks after the 14th week following birth.</p>	<p><b>Maximum duration of the benefit</b></p>	
<p>The child care benefit is automatically disbursed to the mother unless the father holds custody over the child. If the father holds custody but resides with the mother, however, the benefit is disbursed to her (Source: The website borger.dk, which is the citizens' joint entry to public authorities in Denmark, <a href="https://www.borger.dk/Sider/Boerne-ungeydelse.aspx">https://www.borger.dk/Sider/Boerne-ungeydelse.aspx</a>).</p> <p>In the case of a shared custody where the two parents live apart, the child care allowance is disbursed to the parent with whom the child has his or her permanent address (Source: Respondent in Udbetaling Danmark ('Disbursement Denmark'), Family Benefits, September 2015).</p> <p>The child-raising benefit may be shared between both parents. The modalities thereof is determined by the parents themselves.</p>	<p><b>Who can claim the benefit (one or both parents?) and for how long in case of split entitlement between the parents?</b></p>	
<p>Concerning the child care benefit this is possible, but since the disbursement is not dependent on a specific salary, this is not relevant in the Danish case. The child care allowance is reduced if the recipient earns above the top-bracket tax level (723.100 Danish kroner per year), cf. history section above.</p> <p>This is also possible for the child-raising benefit.</p>	<p><b>Can the benefit be claimed in case of partial reduction of income pursuant to part-time/flexible working?</b></p>	
<p>No, the child care benefit is disbursed irrespectively of other social benefits (Source: Respondent in Udbetaling Danmark ('Disbursement Denmark'), Family Benefits, September 2015).</p>	<p><b>Is the benefit intended to complement the exercise of parental leave rights (within the meaning of the Parental Leave Directive)?</b></p>	

	<p><b>Are employers who offer pay during statutory periods of parental leave entitled to either "off-set" or claim reimbursement from the social security institution for salary paid to the employee during parental leave?</b></p>	<p>No concerning the child care benefit (Source: Respondent in Udbetaling Danmark ('Disbursement Denmark'), Parental Leave, September 2015).</p> <p>Yes as concerns the child-raising benefit.</p>
<p><b>CAN A PARENT RECEIVE A SALARY-RELATED CHILD-RAISING BENEFIT REGARDLESS OF WHICH PARENT FACTUALLY FULFILLS THE CONDITIONS OF ENTITLEMENT UNDER NATIONAL LAW AND IF SO HOW?</b></p>	<p><b>Is it possible that both parents claim salary-related child-raising benefits and if so, how are such rights divided between parents; can these be exercised simultaneously?</b></p>	<p>No. As noted above, the child care allowance can only be disbursed to one parent.</p> <p>Yes concerning the child-raising allowance. The modalities thereof are to be determined by the parents.</p> <p>We perceive the question to concern whether Denmark would disburse the child care allowance to the parent who takes upon the child-raising task in practice and not the parent who officially applies to be the recipient of the child care allowance. In such case, the disbursement of the child care allowance would be to the mother unless the father holds custody over the child or, in case of shared custody, to the parent with whom the child officially resides (Source: Respondent in Udbetaling Danmark ('Disbursement Denmark'), Family Benefits, September 2015).</p> <p>In relation to the issue of which member state is responsible for disbursing the benefit, it can be noted that family benefits in general are disbursed according to lex loci laboris, i.e. depending on the country of employment (Source: Respondent in Udbetaling Danmark ('Disbursement Denmark'), Family Benefits, September 2015).</p> <p>Unclear concerning the child-raising benefit.</p>

## ESTONIA

	<b>REPLY</b>
<p><b>HISTORY OF THE SALARY-RELATED CHILD-RAISING BENEFIT</b></p>	<p>Firstly, a woman has the right for pregnancy and maternity leave for 140 days. For that period the Estonian Health Insurance Fund is paying the <i>maternity benefit</i>, which is calculated on the basis of the social tax paid for the worker in previous calendar year (e.g. if the maternity leave is taken out in 2015, the benefit is calculated according to the social tax paid in 2014). The level of the maternity benefit is 100% of the average daily income of previous calendar year.</p> <p>Secondly, a mother or father has the right to child care leave until his or her child reaches the age of three years (the right to child care leave starts after the right to pregnancy and maternity leave ends). Child care leave may be used by one person at a time. Child care leave may be used in one part or in several parts every year. During child care leave a parent has the right to parental benefit (see below, calculated with reference to previous income) or child care allowance (76 eur 70 cent per month, paid according to the state family benefits act). The child care allowance is paid after the right to parental benefit has ceased.</p> <p><i>Parental benefit</i>, which aim is to grant the previous income for persons whose income decreases due to the raising of a child, and to support the reconciliation of work and family life, was introduced in 1, January, 2004. The benefit is granted for the period of 435 days as of the date on which the right to receive the benefit arises. The amount of the benefit per calendar month shall be calculated on the basis of the average income of the applicant for the benefit per calendar month. The average income per calendar month is income which is subject to social tax paid for the person for previous calendar year. The maximum amount of the benefit per calendar month is three times the average income subject to social tax of the year before the previous calendar year prior to the date on which the right to receive the parental benefit arises. In year 2015 it is 2548 eur per month. In case a person has not had socially taxable income, then the rate of the parental benefit is determined by Parliament by state budget. In year 2015 it is 390 eur per month.</p> <p>One reason Estonian Parliament (Riigikogu) introduced the parental benefit, was the fact that the natural growth of Estonian population was poor. One of the reasons might have been also the fact that before parental benefit, the state support for child rising was poor as there was very little support for families after the maternity benefit ended (the child care allowance, mentioned above, has always been very low; the day care facilities are available for children usually after they are 1,5-2 years old).</p> <p>The parental benefit has worked out well, although, there are some discussions in society whether it is too generous. At the</p>

<p>same time the economically more strong women have had more children, as the parental benefit together with the maternity benefit gives them economic security after the child is 1 and half year old, and at this time it is more realistic to leave the child to kindergarten.</p> <p>Below I will bring the number of persons who have received the parental benefit (data from Statistics Estonia)</p> <table border="1"> <tr> <td>2004</td><td>2005</td><td>2006</td><td>2007</td><td>2008</td><td>2009</td><td>2010</td><td>2011</td><td>2012</td><td>2013</td><td>2014</td> </tr> <tr> <td>22569</td><td>23797</td><td>27172</td><td>24063</td><td>29534</td><td>33729</td><td>35356</td><td>34368</td><td>32489</td><td>31119</td><td>30759</td> </tr> </table> <p>Below I will give information how many persons have received the maximum amount of the benefit (data from Statistics Estonia)</p> <table border="1"> <tr> <td>2004</td><td>2005</td><td>2006</td><td>2007</td><td>2008</td><td>2009</td><td>2010</td><td>2011</td><td>2012</td><td>2013</td><td>2014</td> </tr> <tr> <td>913</td><td>831</td><td>1098</td><td>1016</td><td>1420</td><td>1695</td><td>1292</td><td>1038</td><td>1119</td><td>1184</td><td>1286</td> </tr> </table> <p>Below I will give information how many persons have received the minimum amount of the benefit (data from Statistics Estonia)</p> <table border="1"> <tr> <td>2004</td><td>2005</td><td>2006</td><td>2007</td><td>2008</td><td>2009</td><td>2010</td><td>2011</td><td>2012</td><td>2013</td><td>2014</td> </tr> <tr> <td>5381</td><td>5947</td><td>6314</td><td>5796</td><td>6898</td><td>6777</td><td>5888</td><td>5172</td><td>4876</td><td>5102</td><td>5337</td> </tr> </table> <p>Below I will describe the parental benefit.</p>	2004	2005	2006	2007	2008	2009	2010	2011	2012	2013	2014	22569	23797	27172	24063	29534	33729	35356	34368	32489	31119	30759	2004	2005	2006	2007	2008	2009	2010	2011	2012	2013	2014	913	831	1098	1016	1420	1695	1292	1038	1119	1184	1286	2004	2005	2006	2007	2008	2009	2010	2011	2012	2013	2014	5381	5947	6314	5796	6898	6777	5888	5172	4876	5102	5337	<p><b>Level of the benefit</b></p> <p>In year 2015 the minimum level of parental benefit is 390 EUR (hereinafter: benefit rate) and the maximum amount is 2548 EUR.</p> <p>The right to receive the benefit is for permanent residents of Estonia and aliens residing in Estonia on the basis of a temporary residence permit or temporary right of residence (hereinafter <i>residents of Estonia</i>). A resident of Estonia who has residence in several states has the right to receive the benefit if he or she is a resident within the meaning of subsection 6 (1) of the Income Tax Act or if he or she resides permanently in Estonia within the meaning of the Aliens Act or the Citizen of the European Union Act.</p> <p><b>Conditions of entitlement</b></p> <p>A parent, adoptive parent, step-parent, guardian or caregiver raising a child with respect to whom a written foster care contract has been entered into has the right to receive benefit. Before the child attains seventy days of age, the mother of the child who is raising the child has the right to receive the benefit except if the mother of the child is dead or fails to perform the obligation to raise and care for the child arising</p>

<p><b>DESCRIPTION OF THE SALARY-RELATED CHILD-RAISING BENEFIT</b></p>	<p><b>Level of the benefit</b></p> <p>In year 2015 the minimum level of parental benefit is 390 EUR (hereinafter: benefit rate) and the maximum amount is 2548 EUR.</p> <p>The right to receive the benefit is for permanent residents of Estonia and aliens residing in Estonia on the basis of a temporary residence permit or temporary right of residence (hereinafter <i>residents of Estonia</i>). A resident of Estonia who has residence in several states has the right to receive the benefit if he or she is a resident within the meaning of subsection 6 (1) of the Income Tax Act or if he or she resides permanently in Estonia within the meaning of the Aliens Act or the Citizen of the European Union Act.</p> <p><b>Conditions of entitlement</b></p> <p>A parent, adoptive parent, step-parent, guardian or caregiver raising a child with respect to whom a written foster care contract has been entered into has the right to receive benefit. Before the child attains seventy days of age, the mother of the child who is raising the child has the right to receive the benefit except if the mother of the child is dead or fails to perform the obligation to raise and care for the child arising</p>																																																																		

<p>from the Family Law Act. If one of the parents is on parental leave (child care leave (see above) after the child attains seventy days of age, that parent has the right to receive the benefit.</p>	
<p>For persons who have had salary from where the social tax has been calculated the previous year, the benefit is calculated with respect to the salary up to the maximum amount (the maximum amount of the benefit per calendar month is three times the average income subject to social tax of the year before the previous calendar year prior to the date on which the right to receive the parental benefit arises. In year 2015 it is 2548 eur per month).</p> <p>For persons who have not had income where social tax has been calculated, the parental benefit is paid in fixed sum (at benefit rate) which is determined every year by state budget (in 2015 it is 390 EUR).</p>	<p><b>Exclusively or partially calculated with respect to salary</b></p>
<p>435 days from the date when the right arises. The right to receive the benefit arises as of the date following the final date of the certificate for maternity leave or a certificate for adoption leave which grants the right to receive maternity benefit or adoption benefit provided for in the Health Insurance Act. If the mother of a child does not have the right to receive maternity benefit, the right to receive parental benefit arises as of the birth of the child.</p>	<p><b>Maximum duration of the benefit</b></p>
<p>See conditions of entitlement. After the child is 70 days old, both parents can claim the benefit. At a time, only one parent can receive the benefit. If one parent is on child care leave, this parent has the right to the benefit.</p>	<p><b>Who can claim the benefit (one or both parents?) and for how long in case of split entitlement between the parents?</b></p>
<p>If a person at a period when he receives parental benefit also receives income from where social tax is calculated, the benefit is reduced.</p> <p>More precisely, if the recipient of benefit receives income subject to social tax (including from another Contracting Party to the EEA Agreement or from the Swiss Confederation), except the income from self-employment, which exceeds the benefit rate (in 2015 it is 390 EUR), during the calendar month of payment of the benefit, the amount of income exceeding the rate of the benefit divided by two shall be deducted. The amount of the benefit shall be at least half of the benefit granted to the person but not smaller than the benefit rate.</p>	<p><b>Can the benefit be claimed in case of partial reduction of income pursuant to part-time/flexible working?</b></p>
<p>I would say yes.</p>	<p><b>Is the benefit intended to</b></p>

	<p><b>complement the exercise of parental leave rights (within the meaning of the Parental Leave Directive)?</b></p>	
<p>This scheme, that employer continues to offer pay during parental leave, is usually not in practice in Estonia. If it would be so, the employer is not entitled to off set the social tax nor the salary of the worker. If employer offers pay, the social tax is calculated from that pay, and for this reason the parental benefit is reduced.</p>	<p><b>Are employers who offer pay during statutory periods of parental leave entitled to either "off-set" or claim reimbursement from the social security institution for salary paid to the employee during parental leave?</b></p>	
<p>After the child is 70 days old, both parents can claim the benefit, but it is not possible to receive the benefit simultaneously. The benefit is available for one parent at a time. But parents can change their right every month during the period the benefit is available.</p>	<p><b>Is it possible that both parents claim salary-related child-raising benefits and if so, how are such rights divided between parents; can these be exercised simultaneously?</b></p>	
	<p>No.</p>	<p><b>CAN A PARENT RECEIVE A SALARY-RELATED CHILD-RAISING BENEFIT REGARDLESS OF WHICH PARENT FACTUALLY FULFILLS THE CONDITIONS OF ENTITLEMENT UNDER NATIONAL LAW AND IF SO HOW?</b></p>

FINLAND

REPLY

There is no salary-related child-raising benefits in spite of **maternal, paternal and parental allowances**. After those one can get a flat rate **child home care allowance, partial care allowance or flexible care allowance** or a **private day care allowance** to support one's child-raising and combining work and care, but they are not income related. However, one can get a **care supplement** to Child home care allowance and private day care allowance, which depends on the family's total income. Also the **fees in municipal day care** depend on the family's income and size. The maximum fee for one child is 283 € per month. (See <http://www.okm.fi/OPM/Koulutus/varhaiskasvatus/?lang=en> )

The idea behind the CHCA is that all children under school age – which is 7 – have a subjective right to municipal day care. CHCA was created to compensate those parents not able to use municipal day care (for example living in remoted areas) or not willing to do that. Private home care allowance compensates those willing to buy daycare from the market. Subjective right to day care as well as country wide right to CHCA were introduced in 1985 as well as a parents right to care leave from work. In addition to the national CHCA, many municipalities have encouraged parents to use CHCA instead of municipal day care services by offering an additional Municipal Home Care Allowance. The municipalities are free to decide on the criteria and the amount of this allowance independently. The use and amount of this allowance varies in time, but approximately half of the municipalities have used it (See Miettunen 2008, <https://helda.helsinki.fi/bitstream/handle/10250/7933/Tutkimuksia101.pdf?sequen> , of history of parental allowances and the encouraging of both parents to a more equal take-up of leaves see f. eg, Varjonen 2011, <https://helda.helsinki.fi/bitstream/handle/10138/27824/Tutkimuksia18.pdf?sequence=3> )

The other allowances are planned to help combining work and child raising. Flexible care allowance is for those parents of children under 3 and Partial care allowance is for parents of a child in the 1<sup>st</sup> or 2<sup>nd</sup> year of school, who are willing to work part time and care for part time. Parents have a right to partial leave from work and these allowances compensate the loss of earnings.

There were 159 244 children in the municipality's own services in 2014 (See Sotkanet: <https://www.sotkanet.fi/sotkanet/en/taulukko/?indicator=sy52ttY1szbVM7Q2TLY2BkMnta65kAxIGUWb2hibasnC5RLgsj5AeUA&region=s07MBAA=&year=sy4rtTBR0zUEAA=&gender=t&abs=f&color=f> ) while 133 548 children were taken care with the help of the CHCA and the Private day care allowance.

([http://raportit.kela.fi/ibi\\_apps/WFServlet](http://raportit.kela.fi/ibi_apps/WFServlet))

There are also other benefit to support families in child caring. Parents with whom the child lives are paid **child allowance** until the child turns 17. Seriously ill or disabled children may be entitled to **disability allowance**. Parents or other persons taking care of a seriously ill or disabled child may also get **Informal care support** from the local municipality. The care support is paid as stepped payments according to the binding natures and level of requirements of the care – not the previous salary of the carer. The minimum amount of care support is €310,44 per month.

**Single parent** families are often eligible for benefits at an increased rate: eg. single-parent supplement to child benefit. Single-parents may claim child maintenance allowance if one does not receive child support or it is too low or e.g. general housing allowance.

**Multiple-birth families** or families adopting two or more children at the same time get some of the benefits at higher rate or for longer period. Eg. parental allowance for additional 60 days and both parents can stay home at the same time.

**DESCRIPTION OF THE SALARY-RELATED CHILD-RAISING BENEFIT**

**Level of the benefit**

The sum of maternal, paternal and parental allowance is calculated according to previously taxed earnings. The amount of the parental allowance is usually about 70% of your earnings. The minimum allowance is always €24,02 per working day.

		<p>Child home care allowance is paid separately for every child eligible for the allowance. The amount of care allowance is € 342,53 per month for one child under 3 years of age; € 102,55 per month for each additional child under 3 years of age and € 65,89 per month for a child over 3 years of age but under school age (7 years). Care supplement depends on the size and gross income of the family. The maximum amount of care supplement is € 183,31 per month. It is paid for one child only. For example a family of 4 or more receives no care supplement if the income of the family is € 4020,32 or more. (See more closely <a href="http://www.kela.fi/families">www.kela.fi/families</a> )</p> <p>Flexible care allowance is € 244,18 if the recipient works no more than 22,5 hours per week or no more than 60% of normal full-time hours or € 162,78 per month if the recipient works more than 22,5 hours or more than 60% but no more than 80% of normal full-time hours. It is taxable income.</p> <p>Partial care allowance is €98,09 per month. It is paid for one child only even if there are more 1<sup>st</sup> and 2<sup>nd</sup> graders in the family. It is taxable income.</p>
	<p><b>Conditions of entitlement</b></p>	<p>Maternal allowance is for mothers, Paternal leave for fathers, Parental leave is for mother or father of a new born child. There is also Partial parental leave, which the father and the mother can take at the same time providing they both work part time.</p> <p>Child home care allowance is eligible to a parent or other legal guardian with a child under 3 years of age who is not in municipal day care. Also a sibling of a child under 3 years of age may be granted CHCA. According to the Employment Contracts Act a parent of a child under 3 years of age is also entitled to a care leave. One must notify one's employer at least 2 months before one plan to take the leave. One can take one's care leave in one or two periods – unless one's employer agrees to several periods. However, parents can also work and receive the allowance at the same time. Crucial is, that the child is not in municipal day care.</p> <p>Flexible care allowance can be paid to a parent who works no more than 30 hours per week on average or no more than 80% of normal full-time hours. Flexible care allowance is payable for one child at a time only.</p> <p>Partial care allowance is for employed parents of a child in the 1<sup>st</sup> or 2<sup>nd</sup> year of school, who work no more than 30 hours per week. One must have been with the same employer for at least 6 months over the past year. both parents can receive partial care allowance if they are not off work at the same time.</p> <p>Private day care allowance can be claimed by a family whose under-school-age child is looked after by a nanny hired by the family or by private day care provider – that is, the child do not have a place in municipal day care.</p>

<p>Maternal, paternal and parental allowances are calculated exclusively with one's salary. But if one doesn't have any income, there is a universal, flat rate compensation of € 24,02 per working day.</p> <p>Child home care allowance is a flat rate benefit, but one can get a Care supplement on top of it, which depends on the size and gross income of the family.</p> <p>Private day care allowance is also a flat rate benefit but can as well include a care supplement, which depends on the family's income. It is paid separately for each child eligible for the benefit.</p> <p>Flexible care allowance or private day care allowance are flat rate benefits.</p> <p>Parental allowance is paid for 158 working days (just over 6 months).</p> <p>One is entitled to CHCA or to the Flexible care allowance until the child turns 3 years of age. Private day care allowance is for children under school age. Partial care allowance is for parents of a child in the 1<sup>st</sup> or 2<sup>nd</sup> year of school.</p> <p>Either of the parent can receive CHCA but not at the same time. The CHCA is paid per child.</p> <p>Flexible care allowance can be paid to both parents at the same time if they make work arrangements that allow them to look after the child at different times (e.g. one parent on Mondays and the other on Fridays). Also a parent not living in the same household with the child can receive the allowance (f.ex. a divorced mother).</p> <p>Both parents can take partial care leave as long as they share the responsibility for looking after the child and are not off work at the same time. If both parents take partial care leave, both of them are also eligible for partial care allowance. Partial care allowance is also available to so-called non-resident parent, i.e. a parent who does not live in the same household with the children</p> <p>Parental leave can be taken by the mother or the father and the parental allowance is paid accordingly. The parents can also alternate the leave, but not take it at the same time – with exception of multiple birth families. If the parents share the leave they can each take up to 2 periods of leave divided between as they wish.</p> <p>Partial parental leave, which the father and the mother can take at the same time providing they both work part time and receive partial parental allowance.</p> <p>Both partial care leave and partial care allowance as well as partial parental leave with partial parental allowance are ment to make part-time/flexible working possible and to compensate the loss of earnings.</p>	<p><b>Exclusively or partially calculated with respect to salary</b></p>
<p><b>Maximum duration of the benefit</b></p>	<p><b>Who can claim the benefit (one or both parents?) and for how long in case of split entitlement between the parents?</b></p>
<p><b>Can the benefit be claimed in case of partial reduction of</b></p>	

	<p><b>income pursuant to part-time/flexible working?</b></p>	
	<p><b>Is the benefit intended to complement the exercise of parental leave rights (within the meaning of the Parental Leave Directive)?</b></p>	<p>After parental leave the child is about 9 months old. After the leave</p> <ul style="list-style-type: none"> <li>• father can take paternity leave and get allowance</li> <li>• mother, father or another carer may stay at home to look after the child or the family may hire a carer alone or together with other families until she/he turns three and receive child home care allowance (CHCA)</li> <li>• the child may be cared for by a private child care provider, in which case the family may claim private day care allowance</li> <li>• a family with under three years old child may work part time (no more than 30 hours per week) and receive flexible care allowance</li> <li>• the child may attend municipal day care.</li> </ul>
	<p><b>Are employers who have to pay the salary during statutory periods of parental leave entitled to either "off-set" or claim reimbursement from the social security institution for salary paid to the employee during parental leave?</b></p>	<p>According to the Employment Act an employer need not to pay salary during neither the maternal leave nor parental leave. However, many collective agreements provide for full salary during the maternity leave. Usually parents on paternal leave do not get paid but receive the paternal allowance only.</p> <p>The benefits can be paid directly to the employer in case it has paid salary during the employee's leave.</p>
	<p><b>Is it possible that both parents claim salary-related child-raising benefits and if so, how are such rights divided between parents; can these be exercised simultaneously?</b></p>	<p>As mentioned above:</p> <p>Either of the parent can receive CHCA but not at the same time. The CHCA is paid per child.</p> <p>Flexible care allowance can be paid to both parents at the same time if they make work arrangements that allow them to look after the child at different times (e.g. one parent on Mondays and the other on Fridays). Also a parent not living in the same household with the child can receive the allowance (f.ex. a divorced mother).</p> <p>Both parents can take partial care leave as long as they share the responsibility for looking after the child and are not off work at the same time. If both parents take partial care leave, both of them are also eligible for partial care allowance. Partial care allowance is also available to so-called non-resident parent, i.e. a parent who does not live in the same household with the children</p>

		<p>Parental leave can be taken by the mother or the father and the parental allowance is paid accordingly. The parents can also alternate the leave, but not take it at the same time – with exception of multiple birth families. If the parents share the leave they can each take up to 2 periods of leave divided between as they wish.          Partial parental leave, which the father and the mother can take at the same time providing they both work part time and receive partial parental allowance.</p>
<p><b>CAN A PARENT RECEIVE A SALARY-RELATED CHILD-RAISING BENEFIT REGARDLESS OF WHICH PARENT FACTUALLY FULFILLS THE CONDITIONS OF ENTITLEMENT UNDER NATIONAL LAW AND IF SO HOW?</b></p>	<p>Maternal or parental allowances are individual and the amount of them is considered according to the receivers income. The receiver must be insured her/himself.</p> <p>However, following an amendment to the law which became effective January 1<sup>st</sup> 2015, fathers and mothers can work during the parental leave. In practice this might enable a parent not insured in Finland to take care of a child. The allowance paid in these circumstance is, however, rather small: If a father or mother work during the parental leave, he or she will be paid parental allowance at the minimum rate.</p> <p>Child home care allowance is paid if the child is not in municipal day care to the eligible parent. It is not controlled who in practice takes care of the child. If Finland is the country responsible for the family benefits of the family, CHCA is paid for a child living in another EU-country.</p>	

FRANCE

REPLY	
<p><b>History</b></p> <p>France has a long history of child-raising benefits granted to parents who choose to interrupt their professional activity. The purpose of the last 30 years reforms has been to simplify the rules, make it financially sustainable and encourage a better splitting between parents:</p> <ul style="list-style-type: none"><li>- In 1985, the "allocation parentale d'éducation" is created</li><li>- In 2004, the "allocation parentale d'éducation" is replaced by the "Complément de libre choix d'activité".</li><li>- In 2015, the "Complément de libre choix d'activité" (CLCA) is replaced by the "prestation partagée d'éducation de l'enfant (PreParE)". The PreParE applies to children born after 1<sup>st</sup> January 2015. One of the objectives of this new benefit is to encourage the splitting between both parents.</li></ul> <p><b>Statistical elements</b></p> <ul style="list-style-type: none"><li>- In 2012, CLCA was granted to roughly 530 000 parents for an overall cost of 2.1 Billion €</li><li>- 96% of claimers were women. 45% of them claimed a reduced rate benefit corresponding to a part-time activity; 1/3 were exercising an activity between 50 and 80% of full-time; 10% an activity of less than 50%.</li><li>- Most CLCA (92%) are claimed for the 1<sup>st</sup>, 2<sup>nd</sup> or 3<sup>rd</sup> child. For the 1<sup>st</sup> child the average length is 5 months (compared to a max. of 6 months). Only 56% of the parents use up the maximum length</li></ul>	
<p><b>HISTORY OF THE SALARY-RELATED CHILD-RAISING BENEFIT</b></p>	
<p><b>DESCRIPTION OF THE SALARY-RELATED CHILD-RAISING BENEFIT</b></p>	<p><b>Level of the benefit</b></p> <p>See figures below</p> <p>To interrupt wholly or partially professional activity</p> <p><b>Conditions of entitlement</b></p> <p>To have a record of at least 8 trimesters of social security contribution at the moment of the claim</p> <p>To be in charge of a child under 3 years old (or under 20 years old if the child has been adopted)</p> <p>No means-test</p>

<p>Benefit amount not related to the salary.</p> <p>The benefit amount depends on whether the activity is wholly or partly interrupted: 390 €/month (full interruption), 252 €/ month (half-time interruption), 145 €/ month (interruption less than half time)</p> <p>A supplement "PreParE majorée" is granted if: at least 3 dependent children + full interruption of professional activity. If both conditions are met, the benefit amounts to 638 € / month</p>	<p><b>Exclusively or partially calculated with respect to salary</b></p>
<p>Duration depends on two criteria: number of dependent children; family structure.</p> <p>Example 1: for 1 dependent child raised by a single parent, duration is limited to one year (until 1<sup>st</sup> birthday of child).</p> <p>Example 2: for any additional dependent child raised by a couple, each parent is entitled to two years of benefit (until the youngest child reaches the age of 3).</p> <p>Example 3: for 3 children and more, each parent can claim the "PreParE majorée" for 8 months max. (until 1<sup>st</sup> birthday of youngest child)</p>	<p><b>Maximum duration of the benefit</b></p>
<p>Compared to the previous benefit (CLCA), the "PreParE" creates incentives for a better splitting of the benefit between parents (rules not applicable in case of lonely parents).</p> <p>Example 1: For the 1<sup>st</sup> child, each parent is entitled to the benefit for 6 months (until 1<sup>st</sup> birthday of child). The law does not allow to divide the 12 months differently (e.g. 4 months by one parent and 8 months by the other parent is not allowed). In the former system applicable to children born until 31<sup>st</sup> Dec.2014, the benefit was granted for 6 months max. and for only one parent.</p> <p>Example 2: if the couple has another child, each parent is entitled to the benefit for max. 24 months (until 3<sup>rd</sup> birthday of child). In the former system applicable to children born until 31<sup>st</sup> Dec.2014, one parent could be granted 36 months max.</p>	<p><b>Who can claim the benefit (one or both parents?) and for how long in case of split entitlement between the parents?</b></p>
<p>Yes (see above)</p>	<p><b>Can the benefit be claimed in case of partial reduction of income pursuant to</b></p>

	<p><b>part-time/flexible working?</b></p> <p><b>Is the benefit intended to complement the exercise of parental leave rights (within the meaning of the Parental Leave Directive)?</b></p> <p><b>Are employers who have to pay the salary during statutory periods of parental leave entitled to either "off-set" or claim reimbursement from the social security institution for salary paid to the employee during parental leave?</b></p> <p><b>Is it possible that both parents claim salary-related child-raising benefits and if so, how are such rights divided between parents; can these be exercised simultaneously?</b></p>	<p>Yes (see above system of splitting)</p> <p>The "PreParE" cannot be cumulated with work income. Even if a collective agreement provides for maintain of salary during the parental leave (to my knowledge, this situation does not exist), the employer would not be entitled to claim any reimbursement from social security.</p> <p>The "PreParE" cannot be cumulated with social security cash benefits. For example, unemployment benefits cannot be cumulated with the "PreParE", but it is possible to delay the granting of the unemployment benefits for the period of the "PreParE". By deoagation, a female civil servant is entitled to cumulate his/her full time salary during maternity leave and the "PreParE" at part-time rate</p> <p>The benefit can be claimed simultaneously or alternately by the parents. If the benefit is claimed simultaneously, the overall amount granted to both members of the couple is however limited to the "full interruption" rate (390 € / month)</p>
<p><b>CAN A PARENT RECEIVE A SALARY-RELATED CHILD-RAISING BENEFIT REGARDLESS OF WHICH PARENT FACTUALLY FULFILLS THE CONDITIONS OF ENTITLEMENT UNDER NATIONAL LAW AND IF SO HOW?</b></p>	<p>I don't think so. The benefit is an individual right: according to Art. L531-4 of the social security code, the "PreParE" is granted "to the person who chooses not to exercise a professional activity in order to take care of a child...". Further on, the same law stipulates that "<u>When both members of a couple are each entitled to the PreParE...and that each one claims the benefit...</u>".</p>	

## GERMANY

	REPLY
<b>HISTORY OF THE SALARY-RELATED CHILD-RAISING BENEFIT</b>	<p>In Germany, there is only one benefit, which seeks to replace income during child-raising periods and that is calculated wholly or partially with reference to a salary or professional income. It is the "Elterngeld" (literally: "parents' money"), paid according to § 1 Federal Child-Raising Allowance and Parental Leave Act (Bundeselterngeld- und Elternzeitgesetz, BEEG, from 5.12.2006, BGBl. I 2006, p. 2748). An English description of the complicated rules is given by the German ministry under <a href="http://www.bmfsfi.de/RedaktionBMFSFJ/Broschuerenstelle/Pdf-Anlagen/ElterngeldPlus-mit-Partnerschaftsbonus-englisch_property=pdf_bereich=bmfsfi_sprache=de_rwb=true.pdf">http://www.bmfsfi.de/RedaktionBMFSFJ/Broschuerenstelle/Pdf-Anlagen/ElterngeldPlus-mit-Partnerschaftsbonus-englisch_property=pdf_bereich=bmfsfi_sprache=de_rwb=true.pdf</a>.</p> <p>The BEEG entered into force on 1. January 2007. The "Elterngeld" is the successor of the child raising allowance "Erziehungsgeld", which was paid according to the Child-Raising Allowance Act (Bundserziehungsgeldgesetz, BErzGG, from 6.12.1985, BGBl. I 1985, p. 2154, entered into force on 1. January 1986. During the first three months of 2015, 835 000 persons received „Elterngeld“. 88 % (733 000) of them were mothers, and 12 % of them (102 000) were fathers (<a href="https://www.destatis.de/DE/PresseService/Presse/Pressemittelungen/2015/06/PD15_223_22922.html;jsessionid=B41947091A215C1737A96857EF26F923.cae4">https://www.destatis.de/DE/PresseService/Presse/Pressemittelungen/2015/06/PD15_223_22922.html;jsessionid=B41947091A215C1737A96857EF26F923.cae4</a>).</p>
<b>DESCRIPTION OF THE SALARY-RELATED CHILD-RAISING BENEFIT</b>	<p><b>Level of the benefit</b></p> <p>The minimum amount of parental benefits is 300 €, the maximum amount of parental benefits is 1.800 €, § 2 para. 1 s. 2, para. 4 s. 1 BEEG (details below, under 'Exclusively or partially calculated with respect to salary').</p> <p><b>Conditions of entitlement</b></p> <p>The BEEG requires the person entitled to live in one household with the child, to care for and raise the child and furthermore not to exercise any or no full rate employment (see § 1 para. 1 - 3 BEEG).</p> <p><b>Exclusively or partially calculated with respect to salary</b></p> <p>According to § 2 para. 1 BEEG the parental benefit is 67 % of the average monthly net wages the year before the childbirth. For the calculation of the monthly wages the income tax act, Einkommensteuergesetz (EStG) is partially referred to (§ 2 BEEG). The crucial element is the income of the entitled person, i.e. the parent responsible for raising the child.</p> <p>This 67 %-rule does only apply, if the average monthly net wages the year before the childbirth was between 1,000 € and 1,200 €.</p> <p>Regarding wages under 1,000 € there is an increase arranged, § 2 para. 2 s. 1 BEEG. The lower the income, the bigger the increase. It is 0.1% for every 2 €, with which the income differs from 1,000 €, up to 100%. That means e.g., that a person, who had a monthly net income of 700 €, receives 82% (67% plus 15%) of this sum, i.e. 574 €. A person, who had a</p>

		<p>monthly net income of 340 €, receives 100% (67% plus 33%) of this sum, i.e. 340 €.</p> <p>The minimum amount of parental benefits is 300 €, § 2 para. 4 s. 1 BEEG.</p> <p>Regarding wages of 1,200 € and more there is a decrease arranged, § 2 para. 2 s. 2 BBEG. The higher the income, the bigger the decrease. It is 0.1% for every 2 €, with which the income differs from 1,200 €, down to 65%. That means e.g., that a person, who had a monthly net income of 1.220 €, receives 66% (67% minus 1%) of this sum, i.e. 805.20 €. A person, who had a monthly net income of 1,240 €, receives 65% of this sum, i.e. 806 €. A person, who had a monthly net income of 1,500 €, receives 65% of this sum, i.e. 975 €.</p> <p>The maximum amount of parental benefits is 1.800 €, § 2 para. 1 s. 2 BEEG.</p> <p>There are no payments, if, according to income tax law, the income of the person was higher than 250,000 € in the last calendar year (couples: 500,000 €), § 1 para. 8 BEEG.</p> <p>Additional rules apply with multiples and other children, which were born in a short period of time, § 2a BEEG.</p>
	<p style="text-align: center;"><b>Maximum duration of the benefit</b></p>	<p>The benefits are paid up to twelve months and altogether no longer than 14 months. In the case of single-parent families and other instances it is possible for the single parent to get parental benefits for 14 months (§ 4 para 6 BEEG).</p> <p>For parents of children who are born after 30<sup>th</sup> June 2015, there exists the possibility to have "ElterngeldPlus". The entitlement may exist even if the person has only reduced his or her work time. In this case, according to § 4 para 3 BEEG, the entitlement period is extended by factor two, but the maximum of the Elterngeld is half of the "normal" Elterngeld for parents who do not work at all. Here, one Elterngeld month becomes two ElterngeldPlus months, and the ElterngeldPlus, like the Elterngeld, replaces the loss or the reduction in income by 65 to 100 percent in the described way (§ 4 para 3 s. 1 BEEG). But the sum of the ElterngeldPlus may not be more than the half of the Elterngeld, which would be paid, if the person had no income (§ 4 para 3 s. 2 BEEG).</p> <p><b>Example:</b> If a person, in the year before birth, had a netto income of 1,400 € and reduces it after the birth to 400 €, he or she has a right to receive ElterngeldPlus. According to the general rule (§ 4 para 3 s. 1, § 2 para 2 BEEG), it's amount is 65% of the reduction sum (1,000 €), i.e. 650 €. But according to § 4 para 3 s. 2 BEEG, the sum may not be more than the half of the Elterngeld, which would be paid, if the person had no income. This sum would be 910 € (65% of 1,400 €). So, the ElterngeldPlus will sum to the half of 910 €, i.e. 455 €</p>

		<p>(example according to <i>von Koppenfels-Spieß in Knickrehm e.a.</i>, Sozialversicherungsrecht, 4th edition, Munich 2015, § 4 BEEG, No. 13).</p> <p>Additionally, the time of 14 months can be exceeded for another two months according to § 4 para 4 s. 2 BEEG. This rule requires, that both parents care for the child and that (only) one parent has a reduction or a loss of income ("Partnermonate" partnership months). This time of two months gets exceeded to four months, if both parents do not work less than 25 and not more than 30 hours a week, § 4 para 4 s. 3 BEEG ("Partnerschaftsbonus" partnership bonus).</p> <p>For parents of children who are born before 1<sup>st</sup> July 2015, old law applies, which made a factor-two-extension possible, but - in a lot of cases - led to lower payments.</p>
	<p><b>Who can claim the benefit (one or both parents?) and for how long in case of split entitlement between the parents?</b></p>	<p>According to the BEEG, both parents have a right to Elterngeld, and both have the right to exercise it even simultaneously. The maximum duration for one person is 12 months. That means, that, e.g., the mother may take an off time period of four months with an Elterngeld-payment, and the father may take an off time of ten months with an Elterngeld-payment, simultaneously or later, but all within a period of 14 months after birth. Extensions with a factor two are possible under the half-payment-rule of "ElterngeldPlus", § 4 para 3 BEEG, and extensions for up to four months are possible, if both parents care for the child together, under the "Partnermonate"- and "Partnerschaftsbonus"-rule, § 4 para 4 BEEG (see above, under 'Maximum duration of the benefit').</p>
	<p><b>Can the benefit be claimed in case of partial reduction of income pursuant to part-time/flexible working?</b></p>	<p>Yes; see above, under 'Maximum duration of the benefit'.</p>
	<p><b>Is the benefit intended to complement the exercise of parental leave rights (within the meaning of the Parental Leave Directive)?</b></p>	<p>Parents are entitled by § 15 BEEG to an unpaid parental leave from work. According to § 15 para. 5 - 7 BEEG, they are entitled to a reduction of working hours in companies with more than 15 employees if there are no objections in the form of urgent operational reasons. That means, that parental leave rights within the meaning of the Parental Leave Directive are regulated in § 15 BEEG, and not in the above quoted §§ 1 - 4 BEEG. Nonetheless, the function of the parental leave benefit "Elterngeld" (§§ 1 - 4 BEEG) is, of course, to complement the exercise of parental leave rights within the meaning of the Parental Leave Directive.</p>

	<p><b>Are employers who have to pay the salary during statutory periods of parental leave entitled to either "offset" or claim reimbursement from the social security institution for salary paid to the employee during parental leave?</b></p>	<p>According to the BEEG, employers are not obliged to continue payments during statutory periods of parental leave. Thus, there is no need to entitle them to reimbursement.</p> <p>Such a reimbursement system exists only for employer's payments according to the Mutterschutzgesetz (MuSchG, Maternity Protection Act). In Germany during the period of not being employed due to MuSchG (normally six weeks before the birth of the child and eight weeks after childbirth), the woman continues to receive her former average wages. These maternity benefits are paid to a certain extent by health insurance (§§ 11, 13 MuSchG). The remaining amount is paid by the employer. In earlier days these maternity benefits resulted in the fact that employers were not willing to employ women presumed to be giving birth in the future. This situation was corrected in the beginning of 2006 by the Act on the Compensation of Employer Expenditures and to Amend Further Laws (Aufwendungsausgleichsgesetz, AAG from 22.12.2005, BGBl. I 2005, p. 3686). According to this law, every employer has to contribute with a certain percentage of the wages he or she pays. In the event of employing a pregnant employee or mother, the employer is then entitled to a compensation of these payments, as per § 1 Para. 2 AAG.</p>
<p><b>CAN A PARENT RECEIVE A SALARY-RELATED CHILD-RAISING BENEFIT REGARDLESS OF WHICH PARENT FACTUALLY FULFILLS THE CONDITIONS OF ENTITLEMENT UNDER NATIONAL LAW AND IF SO HOW?</b></p>	<p><b>Is it possible that both parents claim salary-related child-raising benefits and if so, how are such rights divided between parents; can these be exercised simultaneously?</b></p>	<p>Yes; see above, under 'Maximum duration of the benefit'.</p> <p>Yes. The BEEG entered into force on 1. January 2007. The "Elterngeld", which is paid according to §§ 1 ff. BEEG, is the successor of the child raising allowance "Erziehungsgeld", which was paid according to the Child-Raising Allowance Act (Bundserziehungsgeldgesetz, BERzGG, see above). In its <i>Hoever Zachow</i> judgment (C-245/94 and C-312/94), the ECJ decided, that the German "Erziehungsgeld" is a benefit, to which a family is entitled such as a child-raising allowance (parental allowance) from the State of employment, regardless of which parent factually fulfils the conditions of entitlement under national law in relation to the salary-related child-raising benefits. Under the new law (BEEG), this situation has not changed. There is a broad consensus in literature, that this is so (<i>Ottling</i> in Hauck/Noftz, EU-Sozialrecht, 2015, VO 883/04, K Art. 1, Note 68, K Art. 3, Note 42; <i>Spiegel</i> in Fuchs, Europäisches Sozialrecht, 6<sup>th</sup> edition 2012, Art. 1 VO 883/04, Notes 16, 41; even authors, who do not agree with the <i>Hoever Zachow</i> judgment in general, agree to this, see e.g. <i>Eichenhofer</i> in Hauck/Noftz, EU-Sozialrecht, 2015, E 010, Note 157).</p>

GREECE

<b>REPLY</b>	
<b>HISTORY OF THE SALARY-RELATED CHILD-RAISING BENEFIT</b>	<p>1. According to the National General Collective Labour Agreement of 2000/2001, insurance cover for child-raising is provided by IKA both for women who are insured directly with IKA and for indirectly insured women (non-working spouses of employed men). Directly insured women are protected both during the pregnancy and for the birth and a post-natal period. Indirectly insured women are protected only for the birth. The assistance is in the form of a maternity benefit. There are no available official statistics about the total number of the beneficiaries per year, but it is estimated that a big majority of insured women exercise this specific right.</p> <p>2. Moreover, May 2008 saw the publication of new legislation in Greece introducing six months of special maternity protection leave, in addition to normal maternity leave and the existing entitlement of working mothers to reduce their working hours. This initiative was seeking to promote the reconciliation of work and family life. More specifically, on 9 May 2008, a Ministerial Decision (No. 33891/606/2008) implementing and establishing the terms and conditions for the granting of the special maternity leave, introduced by Law 3655/2008 (article 142, as amended afterwards by article 36 Law No. 3996/2011), was published in the Greek Official Gazette (FEK). There are no available official statistics, but it is estimated that a minority of insured women exercises this specific right, as not adequate information or enough guidelines are given by the competent institutions about the time and the conditions of entitlement.</p>
<b>DESCRIPTION OF THE SALARY-RELATED CHILD-RAISING BENEFIT</b>	<p>1. The amount of the maternity benefit is 50% of the estimated daily wage of the insurance class she belongs to, based on the average wage of the last 30 days of the previous year, plus a child benefit of 10% of the above amount, for each child with a maximum of 40%. The minimum amount she can obtain is 2/3 of her wage.</p> <p>2. OAED has to pay to the working mother a monthly amount equal to the minimum wage, as determined each time in the National General Collective Labour Agreement (EGSEE), as well as the equivalent percentages of Christmas, Easter, and vacation bonuses, as these are determined on the basis of the aforementioned amount. In case the beneficiary works for up to 4 hours per day or up to 13 days per month on average during the six months before her pregnancy leave, the amount paid equals half the aforementioned amount.</p>
<b>Conditions of</b>	<p>1. The maternity benefit is paid to insured women who have worked at least</p>

	<p>200 days in the two years prior to the expected delivery date.</p> <p>2. Under the rules, governing OAED benefit, the following conditions must be met:</p> <p>A) The insured woman must be in active employment at the time her maternity leave commences.</p> <p>B) She must also have received maternity allowances from IKA-ETAM or from the Special Hotel Employees Fund.</p> <p>The beneficiary, either in person or by representative, submits her application to the relevant OAED service, within a period of 60 days after the end of the maternity leave (labour and confinement), or the leave equivalent to part-time work or, finally, her annual leave.</p> <p><b><u>SUPPORTING DOCUMENTS</u></b></p> <p>I) An <u>employer's certificate</u> clearly indicating the active employment relationship existing at the commencement of the maternity leave, the type, form and duration of the beneficiary's employment relationship, her monthly salary, the average number of her part-time work hours, hiring date and, for fixed-term employment contracts, the expiry date, the number of annual leave days that may have been granted after the confinement leave or the leave equivalent to part-time work, as well as the beneficiary's supplementary insurance body, and the amounts of employer's and employee's social security contributions.</p> <p>II) A copy of the maternity allowance (pregnancy – confinement) certificate issued by IKA-ETAM or the Special Hotel Workers' Fund.</p> <p>III) Solemn declaration in which the beneficiary commits herself to notify the relevant OAED service within 8 days about any change in her employment relationship, and she also states her IKA registration number and her VAT number.</p> <p>IV) National Bank of Greece account number (IBAN), in which she must appear as the first beneficiary.</p> <p>Finally, this leave is not available to working mothers who are employed under private-law employment contracts in the public sector, in legal entities governed by public law or local administrative units.</p> <p>Women who already receive additional leave of equal duration under the terms of their employer's internal company regulations or a sectoral collective agreement are also excluded from the new entitlement.</p>
<p><b>entitlement</b></p>	

	<p><b>Exclusively or partially calculated with respect to salary</b></p>	<ol style="list-style-type: none"> <li>As described above, the maternity benefit is 50% of the estimated daily wage of the insurance class the insured woman belongs to, based on the average wage of the last 30 days of the previous year, so it can be noted that it is partially calculated with respect to salary (there are flat-rate elements).</li> <li>It can be said that OAED benefit is partially calculated with respect to salary, as the existence of a part-time/flexible working (e.g 4 hours per day/13 days per month), which is accompanied, of course, by a reduced salary, activates the relevant half reduction of the benefit to an amount of 295,00 Euros approximately, as a minimum level (from a maximum level of 586,00 Euros approximately).</li> </ol>
	<p><b>Maximum duration of the benefit</b></p>	<ol style="list-style-type: none"> <li>The maternity benefit applies to directly insured women for 56 days before the birth and for 63 days after the birth. Women who do not take the entire 56 days prior to the birth may take it after the birth.</li> <li>The OAED benefit is granted till six months after the expiry of the maternity leave.</li> </ol>
	<p><b>Who can claim the benefit (one or both parents?) and for how long in case of split entitlement between the parents?</b></p>	<ol style="list-style-type: none"> <li>Only women can claim the maternity benefit from IKA.</li> <li>Only women can claim the OAED benefit.</li> </ol>
	<p><b>Can the benefit be claimed in case of partial reduction of income pursuant to part-time/flexible working?</b></p>	<ol style="list-style-type: none"> <li>Yes, even in partial reduction, IKA maternity benefit must, at least, equal the earnings a directly insured woman would have received if she had worked during that period.</li> <li>Yes, in case of part-time/flexible working, OAED special benefit can be also claimed.</li> </ol>
	<p><b>Is the benefit intended to complement the exercise of parental leave rights (within the meaning of the Parental Leave Directive)?</b></p>	<p>The maternity benefit is indeed regarded to complement the exercise of parental leave rights (within the meaning of the Parental Leave Directive), as employed mothers are also entitled to an additional six months of maternity protection leave and reduced working hours leave at the end of their maternity leave. In other words, the receipt of the maternity benefit constitutes an obligatory, direct and unavoidable link to the receipt of a parental leave.</p>

	<p><b>Are employers who have to pay the salary during statutory periods of parental leave entitled to either "offset" or claim reimbursement from the social security institution for salary paid to the employee during parental leave?</b></p>	<p>According to IKA's Regulation, during the first year of work, the employer continues to pay the woman's wage for 15 days during her maternity leave, provided the woman has completed at least ten days of work.</p> <p>If the woman has completed the first year of work, the employer may continue to pay her wage for one month, during her maternity leave.</p> <p>The employer can deduct any amounts that the woman receives from her insurance fund for the same period.</p>
	<p><b>Is it possible that both parents claim salary-related child-raising benefits and if so, how are such rights divided between parents; can these be exercised simultaneously?</b></p>	<p>According to the current legislative framework, it is not possible for both parents to claim the above mentioned salary-related child-raising benefits.</p>
<p><b>CAN A PARENT RECEIVE A SALARY-RELATED CHILD-RAISING BENEFIT REGARDLESS OF WHICH PARENT FACTUALLY FULFILLS THE CONDITIONS OF ENTITLEMENT UNDER NATIONAL LAW AND IF SO HOW?</b></p>		<p>According to the current legislative framework, due to the fact that the beneficiaries of the already mentioned child-raising benefits are only women, it is not yet provided that a salary-related child-raising benefit can be granted in favour of the other parent, who is responsible for taking care of the child despite being subject to the legislation of another Member State.</p>

## HUNGARY

REPLY	
<b>HISTORY OF THE SALARY-RELATED CHILD-RAISING BENEFIT</b>	<p>In general, there are two types of financial subsidies for parents with children: the subsidies that are only eligible for parents being employed (insurance-based benefits), and those allowances (generally with smaller amounts) that are eligible for all parents irrespective of their employment status (universal-type, tax-financed benefits).</p> <p>More precisely, there are two forms of insurance-based family benefits and four universal-type family benefits.</p> <p>I. Social insurance type benefits: (legal source: Act LXXXIII of 1997 on the Benefits of Compulsory Health Insurance)</p> <ol style="list-style-type: none"><li>1. infant care allowance (in Hungarian: csecsemőgondozási díj) and</li><li>2. child-care fee (in Hungarian: gyermekgondozási díj)</li></ol> <p>II. Universal-type benefits [<i>These are not the topic for this survey. Just in case, to show the whole picture I inserted here.</i>]</p> <ol style="list-style-type: none"><li>1. family allowance (including the parental leave benefit, and education allowance for school aged children),</li><li>2. child home-care allowance (GYES),</li><li>3. child raising support (GYET) and</li><li>4. birth grant.</li></ol>
<b>DESCRIPTION OF THE SALARY-RELATED CHILD-RAISING BENEFIT</b>	<p><b>Level of the benefit</b></p> <ol style="list-style-type: none"><li>1. Infant care allowance is due to anyone who was insured for 365 days within two years prior to giving birth, and who gives birth during the insurance term or within 42 days after the termination of insurance. Infant care allowance is provided for 168 days (24 weeks). Infant care allowance equals 70 percent of the daily average gross salary; there is no upper limit to the allowance, tax and pension insurance contributions are deducted, and the disbursement term is deemed to be a period of</li></ol>
	<p><b>Conditions of entitlement</b></p>

service with pension entitlement.

## 2. Child-care fee (insurance-based)

Following expiry of the infant care allowance, the insured parent is entitled to a child-care fee. The child-care fee is provided for the period of insurance in the two years preceding birth, but no longer than until the child reaches the age of two.

The amount of the child care fee (*gyermekgondozási díj*): 70% of the daily average gross earnings. The amount depends on the average gross earnings in the previous 180-day period. Maximum 70% of the double of the minimum wage, i.e. 70% of HUF 210,000 (€666).

For higher education students (including MA students), 70% of the amount of the minimum wage, i.e. 70% of HUF 105,000 (€333) (in case of BA or PhD students, 70% of the amount of the guaranteed wage minimum, i.e. 70% of HUF 122,000 (€387)).

Child care fee (*gyermekgondozási díj*) is subject to pension insurance contribution as well as taxation.

## *Child-care fee extra (GYED Extra)*

Another important provision of the government in the field of the reconciliation of work and family life was the package of measures called "GYED Extra" which had been introduced since the 1st of January, 2014. This package contained a bunch of complex measures intended to foster livebirths, including that since that date, parents are no longer prohibited to work while receiving family allowances like the child-care allowance (called "GYES" in Hungarian) and the child care fee (called "GYED" in Hungarian, hence the name of the whole package) after the first birthday of their child. (Before that, employment was completely forbidden while receiving GYED, and only part-time work was possible during GYES.) This measure was a very important step forward in stimulating parents with young children to return to their workplaces in an earlier period; statistics show that in the second quarter of 2014 the number of women working while receiving child-care benefits increased by about 12,500, which means a growth of no less than 37 percent compared to the same period of 2013. It is also important to note that these women are working mostly in full-time employment.

		<p>Special rule for multiple benefits:          Since 1 January 2014, multiple child care benefits (infant care allowance, child care fee, child home care allowance) can be claimed in case of having more than one child within the eligibility period, provided that the youngest child in the family was born after 31 December 2013.</p> <p>Infant care allowance (<i>csecsemőgondozási díj</i>): 70% of the daily gross earnings, paid during 24 weeks. The amount depends on the gross earnings in the previous 180-day period. No ceiling. Subject to taxation. No contribution paid from this allowance.</p> <p>Child-care fee is equal to 70 percent of the average salary per calendar day, but not more than 70 percent of double the prevailing monthly minimum wage (currently HUF 130,200). It is exclusively calculated with respect of salary.</p> <p>Infant care allowance is provided for 168 days (24 weeks).</p> <p>The child-care fee is provided for the period of insurance in the two years preceding birth, but no longer than until the child reaches the age of two.</p> <p>The benefit is paid after the expiry of infant care allowance (<i>csecsemőgondozási díj</i>) until the child reaches 2 years of age, but not longer than the insurance period of the claimant. In case of twins the eligibility period is extended by one year.</p> <p>1. Infant care allowance (<i>csecsemőgondozási díj</i>): Employees and self-employed and assimilated groups.</p> <p>Basically, the insured woman (pregnant and after giving birth) are entitled to claim the infant care allowance.</p> <p>There are some exceptional cases:          a) father also can apply for it if the mother dies or (because of health reasons) cannot take care of the child          b) woman or man who adopted the child          c) guardian who is taking care of the child</p> <p>If the insured person receives his/her full salary, he/she is not entitled to the allowance. If he/she receives partial salary, the allowance will be reduced accordingly (proportionally).</p> <p>2. Child care fee (<i>gyermekgondozási díj</i>): Gainfully employed persons (employees</p>
	<p><b>Exclusively or partially calculated with respect to salary</b></p>	
	<p><b>Maximum duration of the benefit</b></p>	
	<p><b>Who can claim the benefit (one or both parents?) and for how long in case of split entitlement between the parents?</b></p>	

		<p>and self-employed) and assimilated groups.</p> <p>Basically both parents can claim the child care fee. At the same time only one parent can apply for the benefit. They cannot split the benefit.</p> <p>Students fulfilling certain conditions:          Mothers who would not be entitled to child care fee under the general rules, but who have completed at least two active semesters in higher education, and whose child is born after 31 December 2013 while the mother is studying or during the year after graduation are entitled to child care fee until the child reaches 1 year of age. The amount of the child care fee is equal to the yearly set guaranteed wage minimum.</p> <p>Fathers are entitled to this form of child care fee if the mother dies or is not entitled to the benefit.</p> <p>Yes.</p>
	<p><b>Can the benefit be claimed in case of partial reduction of income pursuant to part-time/flexible working?</b></p>	<p>Yes.</p>
	<p><b>Is the benefit intended to complement the exercise of parental leave rights (within the meaning of the Parental Leave Directive)?</b></p>	<p>Yes</p> <p>In case of maternity leave the complementing social security benefit is the <u>infant care allowance</u>.</p> <p>In case of unpaid leave at the times requested by the worker for the purpose of taking care of his/her child, until the child reaches the age of three the complementing social security benefit is the <u>child care fee</u>. <i>[NB.: there are more universal family benefits which can be claimed during the period, but they are not in the focus of this questionnaire.]</i></p>

In brief: employers do not pay any salary/wage during maternity leave. Maternity leave is provided by the Hungarian Labour Code: 24 weeks for the mother (4 weeks before and 20 weeks after planned date of birth, or 24 weeks after the date of birth, depending on the mothers' choice). The employer is obliged to provide this maternity leave, but he/she does not pay any salary/compensation, etc. during this period. Instead, the period of maternity leave (first 24 weeks by infant care allowance, after this child-care fee benefit) is covered by the social (health) insurance system.

The full range of the relevant provisions of the Labour Code is under Sections 127-130 of the Labour Code (hereinafter: LC).  
Section 127 says: mothers shall be entitled to twenty-four weeks of maternity leave. Maternity leave shall also be provided to a woman who has been given custody of a child for the purpose of adoption.

In the absence of an agreement to the contrary, maternity leave shall be allocated so as to commence four weeks prior to the expected time of birth.

If the child receives treatment in an institute for premature infants, the unused portion of the maternity leave may be used after the child has been released from the institute up to the end of the first year following birth.

The duration of maternity leave, except where entitlement is specifically connected to work, shall be recognized as time spent at work.

Complementing social security benefit is the infant care allowance.

Section 128 of LC: employees shall be entitled to unpaid leave at the times requested by the worker for the purpose of taking care of his/her child, until the child reaches the age of three.

Complementing social security benefit is the child care fee. [NB.: there are more universal family benefits which can be claimed during the period, but they are not in the focus of this questionnaire.]

Section 129 of LC: The periods of leave referred to in Sections 127-128 shall end:

- a) if the child is stillborn;
- b) if the child dies, on the fifteenth day following death;
- c) on the day following placement of the child - according to the provisions set out in specific other legislation - into temporary custody, temporary or permanent foster care, or in a social institution with room and board for over thirty days.

**Are employers who have to pay the salary during statutory periods of parental leave entitled to either "offset" or claim reimbursement from the social security institution for salary paid to the employee during parental leave?**

		<p>In the cases described above the period of leave shall be no less than six weeks from the date of birth.</p> <p>Section 130 of LC: In addition to what is contained in Section 128, employees shall be entitled to unpaid leave for providing care for a child in person until the child reaches the age of ten, during the period of receiving child-care allowance (tax financed, universal type benefit).</p> <p>Furthermore, according to the Labour Code, fathers are entitled to paternity leave: 5 working days and 7 working days in case of twins. This period is paid by the employer. He/she does not receive any compensation from the Health Insurance Fund. This is fully covered by the employer.</p> <p>Adoptive parents are entitled to the same paid maternity/paternity leave.</p>
	<p><b>Is it possible that both parents claim salary-related child-raising benefits and if so, how are such rights divided between parents; can these be exercised simultaneously?</b></p>	<p>If both parents fulfil the preconditions of the child care fee, theoretically both of them can claim the benefit. However, in practice only one parent can receive the benefit at the same time. They cannot split the benefit. If both parents are eligible (both have the required previous insurance period) they can claim from the relevant authority to terminate for the mother and start to pay to the father. They can replace each other. For example, the mother stays at home for a certain period and then the father will apply and stay with the child.</p>
<p><b>CAN A PARENT RECEIVE A SALARY-RELATED CHILD-RAISING BENEFIT REGARDLESS OF WHICH PARENT FACTUALLY FULFILLS THE CONDITIONS OF ENTITLEMENT UNDER NATIONAL LAW AND IF SO HOW?</b></p>		<p>Basically, only that parent can apply for child care fee who fulfils the required preconditions. For example, if the father is insured and fulfils the required eligibility conditions (insured at least for 365 days within the previous 2 years), he can claim the benefit. If the mother is not insured, she cannot claim the benefit. (This is an insurance based benefit.) Therefore, only the father will be entitled. In addition, the Hungarian legislation requires that the child must be raised in the household of the parents.</p> <p>However, in fact, Hungarian child care fee is falling under the scope of Article 1 (z) of the 883/2004/EC Regulation which says "family benefit means all benefits in kind or in cash intended to meet family expenses" therefore the social security coordination rules and EUCJ (ECJ) decisions are applicable for such benefit as well.</p>

<b>HISTORY OF THE SALARY-RELATED CHILD-RAISING BENEFIT</b>	<p>The history of salary related child raising benefits goes back to the year 1975. In 1984 benefits were calculated both by income and assets. In 1996 child benefits were calculated to income-related and the amount granted calculated to income of both parents or for single parent only the income of that parent. In 1998 an additional payment was authorized to parents with young children, under 7 years old. The situation today is that all child raising benefits are now only calculated by income but not to assets.</p>
<b>Level of the benefit</b>	The benefits are paid by the Directorate of Internal Revenue (Ríkisskattsjóri in Iceland)
<b>Conditions of entitlement</b>	Individual who has a) residence in Iceland a least 183 days per calendar year b ) income in Iceland c) and has a child to support, (child registered with same residence as the applicant)
<b>Exclusively or partially calculated with respect to salary</b>	All child benefits (100%) are exclusively calculated with respect to salary today.
<b>Maximum duration of the benefit</b>	Child benefits are paid to parents of children 18 years of age. Full benefits are paid for the year of birth of the child, but none is paid for the year which the child reaches 18 years of age.
<b>Who can claim the benefit (one or both parents?) and for how long in case of split entitlement between the parents?</b>	Parents can claim for benefits together but if the parents doesn´t live together the child benefits goes to the parent were the child lives and where the domicile of the child is registered.
<b>Can the benefit be claimed in case of partial reduction of income pursuant to part-time/flexible working?</b>	Benefit can be claimed in case of partial reduction of income.
<b>Is the benefit intended to complement the</b>	This is a special category of benefits.
<b>DESCRIPTION OF THE SALARY-RELATED CHILD-RAISING BENEFIT</b>	

	<p><b>exercise of parental leave rights (within the meaning of the Parental Leave Directive)?</b></p> <p><b>Are employers who have to pay the salary during statutory periods of parental leave entitled to either "offset" or claim reimbursement from the social security institution for salary paid to the employee during parental leave?</b></p> <p><b>Is it possible that both parents claim salary-related child-raising benefits and if so, how are such rights divided between parents; can these be exercised simultaneously?</b></p>	<p>Vinnamálastofnun (VMST) in Iceland is responsible for parental leave payments in Iceland. The parent apply directly to the VMST and in most cases the employer can claim reimbursement from VMST for salary paid during parental leave.</p> <p>According to Icelandic laws both parents can claim salary-related child raising benefits if the live together and they are both supporting the child. If the parents are divorced only the parent who is registered with the child can claim for salary-related child raising benefits.</p>
<p><b>CAN A PARENT RECEIVE A SALARY-RELATED CHILD-RAISING BENEFIT REGARDLESS OF WHICH PARENT FACTUALLY FULFILLS THE CONDITIONS OF ENTITLEMENT UNDER NATIONAL LAW AND IF SO HOW?</b></p>		<p>In Iceland child benefits are paid to parents of children under 18 years of age who do not have residence in Iceland but are supported by a citizen of the EEA, member states of EFTA and Faeroe Islands. Citizens of the EEA, member states of the EFTA Convention or the Faeroe Islands, who have been employed in Iceland and have children to support who do not have permanent residence in Iceland, may have right to child benefit in Iceland. This is only if they are taxable according to Article 1 of Act. No. 90/2003 (tax law) or are insured on the basis of Articles 12,13 or 14 of Act No. 100/2007 on the Icelandic social security system.</p>

<b>REPLY</b>	
	<p>There is no provision made currently for a salary- related child – raising benefit under Irish legislation. There is provision for a range of cash benefits for parents unrelated to parental leave. These include Maternity and Adoptive benefit, which are salary related to an extent, universal child benefit, payable monthly, weekly means tested payments mainly for lone parents and those with children with disabilities or long term illnesses and supplements for families on low incomes. I can provide details on these if required.</p> <p>There is provision for statutory parental leave. I provide details of these provisions below, in case they may be of assistance. Should salary – related child-raising benefit be introduced it is likely it would complement these provisions. However, the provision of such benefit does not appear to be in prospect at present. The main focus in this regard is on the possibility of extending State financed child care and after school care.</p> <p>Parental Leave            The Parental Leave Act 1998, as amended by the Parental Leave (Amendment) Act 2006, allows parents to take parental leave from employment in respect of certain children. A person acting in loco parentis with respect to an eligible child is also eligible.</p> <p>On 8 March 2013 the European Union (Parental Leave) Regulations 2013 increased the amount of leave to each parent per child from 14 to 18 working weeks per child. Where an employee has more than one child, parental leave is limited to 18 weeks in a 12 months period, but can be longer if the employer agrees. Parents of twins and triplets can take more than 18 weeks of parental leave in a year. Leave can be taken in respect of children up to 8 Years, which can be extended up to 16 years in the case of a child with a disability or long term illness.</p> <p>The 18 weeks per child can be taken in one continuous period or in 2 separate blocks of a minimum of 6 weeks. There must be a gap of at least 10 weeks between the 2 periods of parental leave per child. However, if the employer agrees the leave can be separated into periods of days or even hours. Both parents have an equal separate entitlement to parental leave. Unless both parents work for the same employer, each parent can only claim his/her own parental leave entitlement (18 weeks per child). If both parents work for the same employer and the employer agrees, one parent can transfer 14 weeks of his/her parental leave to the other parent.</p>
<p><b>HISTORY OF THE SALARY-RELATED CHILD-RAISING BENEFIT</b></p>	
<p><b>DESCRIPTION OF THE SALARY-RELATED CHILD-RAISING BENEFIT</b></p>	<p><b>Level of the benefit (parental leave)</b></p>
	<p>Parents are not entitled to pay from their employer while on parental leave nor are they entitled to any social insurance payment equivalent to Maternity Benefit or Adoptive Benefit. However, employment rights are retained, as if no parental leave had been taken. This means, for example, that time spent on parental leave can be used to accumulate an employee’s annual leave entitlement.</p>

<p>The legislation only provides for the minimum entitlement. An employee's contract may give more extensive rights.</p> <p>Social Welfare Regulations also provide for the preservation of social insurance (PRSI) records for employees who take parental leave, on application by the employer, by means of credited PRSI contributions.</p>	
<p>To qualify for the leave an employee must be working for an employer for at least 12 months. Pro rata arrangements can be made where this period is more than 3 months and the child is near the age threshold. This is one week's leave for each month of employment completed. In the case of a change of job where some parental leave had been taken in the previous job, the balance can be taken after 12 months in the new job provided the child is still under the qualifying age.</p> <p>An employer may postpone the leave for up to 6 months. Grounds for such a postponement include lack of cover for an absent employee or the fact that other employees are on parental leave. Normally one postponement is allowed, but it may be postponed twice if the reason is regional variations in the work.</p> <p>Parental leave can be used only to take care of the child concerned. If the parental leave is taken and used for another purpose the employer is entitled to cancel the leave.</p> <p>Employees are entitled to return to their own job, unless it is not practicable for the employer to allow for this. If this is the case, the employee must be offered a suitable alternative on terms no less favourable compared with the previous job including any improvement in pay or other conditions which occurred while the employee was on parental leave. Since 8 March 2013, an employee on return to work after taking parental leave, is entitled to ask for a change in work pattern or working hours for a set period. The employer must consider the request, but is not obliged to grant it.</p> <p>The legislation also protects parents who take parental leave for unfair dismissal.</p>	
<p><b>Conditions of entitlement (parental leave)</b></p>	
<p><b>Exclusively or partially calculated with respect to salary</b></p>	<p>N/A, as no cash benefit payable.</p>
<p><b>Maximum duration of the benefit</b></p>	<p>Details on the duration of parental leave are given in the first section above. As no benefit is payable, this question does not arise in relation to benefit payments.</p>

<p>This is explained in the first section above, in relation to parental leave.</p>	
<p>Different arrangements for the taking of parental leave outside the standard periods set down can be made with the agreement of the employer. (See sections 1 and 3 above)</p>	<p><b>Who can claim the benefit (one or both parents?) and for how long in case of split entitlement between the parents?</b></p>
<p>As no benefit is currently payable, this issue does not arise. However, if provision were to be made for parental cash benefits it is likely that they would complement the exercise of parental leave rights, which are well established at this stage.</p>	<p><b>Can the benefit be claimed in case of partial reduction of income pursuant to part-time/flexible working?</b></p>
<p>As there is no requirement on the part of employers to pay the salary during these statutory periods of parental leave, this question does not arise.</p>	<p><b>Is the benefit intended to complement the exercise of parental leave rights (within the meaning of the Parental Leave Directive)?</b></p>
	<p><b>Are employers who have to pay the salary during statutory periods of parental leave entitled to either "offset" or claim reimbursement from the social security institution for salary paid to the employee during parental leave?</b></p>

	<p><b>Is it possible that both parents claim salary-related child-raising benefits and if so, how are such rights divided between parents; can these be exercised simultaneously?</b></p>	<p>As no cash payments are made during periods of parental leave, this issue does not arise.</p>
<p><b>CAN A PARENT RECEIVE A SALARY-RELATED CHILD-RAISING BENEFIT REGARDLESS OF WHICH PARENT FACTUALLY FULFILS THE CONDITIONS OF ENTITLEMENT UNDER NATIONAL LAW AND IF SO HOW?</b></p>	<p>As no such benefit is payable in Ireland, this issue does not arise.</p>

<b>REPLY</b>	
<p><b>HISTORY OF THE SALARY-RELATED CHILD-RAISING BENEFIT</b></p>	<p>The optional supplementary parental leave (“<i>congedo parentale facoltativo</i>”) is intended to exempt parents from work in order to raise the child during the first months or years of his/her life. It was launched for the first time by the Law No. 860 of 1950.</p> <p>At the moment, it is regulated by Legislative Decree No. 151 of 26 March 2001 on protection in case of maternity and paternity (Articles 32-38), as amended by Law No. 92 of 28 June 2012 (Article 4, paragraphs 24 to 26) and lastly by Legislative Decree No. 80 of 15 June 2015 (Articles 7-10).</p> <p>Unfortunately, neither the ISTAT (<i>Istituto Nazionale di Statistica</i>, National Institute of Statistics) nor the INPS (<i>Istituto Nazionale della previdenza sociale</i>, National Institute for Social Security) publish data or statistics concerning the number of claimants of the optional supplementary parental leave.</p>
<p><b>DESCRIPTION OF THE SALARY-RELATED CHILD-RAISING BENEFIT</b></p>	<p>After the expiry of the compulsory paid maternity and paternity leaves, a reduced paid leave may be claimed by either the mother or the father.</p> <p>The optional supplementary parental leave is covered with a compensation amounting to 30% of pay or of “standard pay” and it is payable for an overall maximum, for both parents, of 6 months in the child’s first 6 years (for adopted and foster children, the first 6 years that the child is within the family).</p> <p>The benefit is subject to taxation, and it is also paid in case of adoption and fosterling.</p> <p>Once the 6 months have elapsed, the benefit can be claimed for further 5 months, at most, till the child is 12 years old, but the relevant cash benefit can only be paid upon condition that the claimant parent’s salary does not exceed 2,5 times the amount of the minimum retirement pension as established by law for the current year.</p> <p>In other words, each parent is entitled to a period up to 6 months, and the total period may not exceed 10 months (11 months if the father uses at least 3 months of optional supplementary parental leave), but the benefit is normally paid only for an overall maximum, for both parents, of 6 months.</p>

		<p>From 2012, vouchers are also granted to help meeting the additional expenses of raising children (baby-sitting or other child care services) after the expiry of the compulsory maternity leave (<i>congedo di maternità</i>), within 11 months following the compulsory maternity leave and as an alternative to the optional supplementary parental leave. Monthly amount of up to € 300,00 is granted for a maximum period of 6 months.</p> <p>Insured active population (employees and assimilated groups; self-employed) is entitled to claim the benefit.</p> <p>There are no qualifying conditions of entitlements, except for some specific categories of workers (farming industry employees, domestic workers, self-employed, professionals and atypical workers registered with the INPS separate pension fund).</p> <p>The optional supplementary parental leave is calculated exclusively with reference to salary (see box no. 1, Level of the benefit).</p> <p>The optional supplementary parental leave it is payable for an overall maximum, for both parents, of 6 months in the child's first 6 years (for adopted and foster children, the first 6 years that the child is with the family). Special conditions apply to self-employed.</p> <p>Both parents (who are in paid employment) are entitled to a total period of up to 6 months paid leave until a child is 12 years old, at the same time if they wish (this is also available to parents of adopted and foster children). In case of split entitlement between the parents, each parent can claim the benefit for a maximum of 6 months.</p> <p>Fathers can take leave even while the mother is on mandatory maternity leave or nursing leave.</p> <p>Applications for maternity, paternity and parental leaves are to be addressed to both the employer and to the INPS.</p> <p>The optional supplementary parental leave can also be claimed in relation to partial reduction of income (e.g. part-time working).</p>
	<p><b>Conditions of entitlement</b></p>	
	<p><b>Exclusively or partially calculated with respect to salary</b></p>	
	<p><b>Maximum duration of the benefit</b></p>	
	<p><b>Who can claim the benefit (one or both parents?) and for how long in case of split entitlement between the parents?</b></p>	
	<p><b>Can the benefit be claimed in case of partial reduction of income pursuant to part-time/flexible working?</b></p>	

	<p><b>Is the benefit intended to complement the exercise of parental leave rights (within the meaning of the Parental Leave Directive)?</b></p> <p><b>Are employers who have to pay the salary during statutory periods of parental leave entitled to either "offset" or claim reimbursement from the social security institution for salary paid to the employee during parental leave?</b></p> <p><b>Is it possible that both parents claim salary-related child-raising benefits and if so, how are such rights divided between parents; can these be exercised simultaneously?</b></p>	<p>The optional supplementary parental leave is intended to complement the exercise of parental leave rights within the meaning of the Parental Leave Directive.</p> <p>The continued payment of wages is made by the employer on behalf of the INPS (only in special cases the optional supplementary parental leave is directly paid by the INPS). The amount of the wages paid is then deducted from the owed contributions.</p> <p>Both parents (who are in paid employment) may claim salary-related child-raising allowance.</p> <p>The optional supplementary parental leave is payable for an overall maximum, for both parents, of 6 months in the child's first 6 years; each parent can claim the benefit for a maximum of 6 months.</p> <p>These rights can be exercised simultaneously.</p>
<p><b>CAN A PARENT RECEIVE A SALARY-RELATED CHILD-RAISING BENEFIT REGARDLESS OF WHICH PARENT FACTUALLY FULFILLS THE CONDITIONS OF ENTITLEMENT UNDER NATIONAL LAW AND IF SO HOW?</b></p>	<p>As we have seen (see box no. 8), the continued payment of wages is made by the employer on behalf of the INPS (only in special cases the optional supplementary parental leave is directly paid by the INPS). The amount of the wages paid is then deducted from the owed contributions.</p> <p>At the moment, the INPS practice does not provide the option of paying the optional supplementary parental leave in favour of the other parent, who is responsible for taking care of the child despite being subject to the legislation of another Member State.</p>

<p data-bbox="858 1675 911 2056"><b>HISTORY OF THE SALARY-RELATED CHILD-RAISING BENEFIT</b></p>	<p data-bbox="391 224 507 1626">Parental leave was covered by social insurance legislation in the first after the restoring of independence Lithuanian Law on State Social Insurance. The Law was adopted on May 21, 1991. Then the level of benefit was established as 100 percent of minimal subsistent level (MSL) during first 18 months after the child birth and 50 percent of MSL during following 18 months. It means that the benefit was not really "salary related".</p> <p data-bbox="539 224 624 1626">Amendment of the law from November 3, 1994 changed the benefit level to 60 percent of compensatory salary of one of parents who used the parental leave, but no less than minimal wage. The benefit was paid until the first birthday of the child.</p> <p data-bbox="655 224 772 1626">From year 2001 (by amendment of December 21, 2000) the benefit was defined by another Law on Sicknes and Maternity Insurance. It remained at the level of 60 percent of compensatory salary, but minimal amount was established as 1/3 of current "insured income" approved by Government. The law also established requirement of 7 months of recipient's insurance during last 24 months before parental leave.</p> <p data-bbox="804 224 888 1626">From the year 2004 the benefit level was increased to the level of 70 percent of compensatory salary. From July 1, 2007 the level was changed to 100 percent of compensatory salary during first 6 months and to 85 percent during following 6 months.</p> <p data-bbox="920 224 1005 1626">From the year 2008 (amendment of December 4, 2007) the period of payment of benefit was extended until second birthday of the child: 100 percent of compensatory salary during the first year and 85 percent during the second year. in the case of multiple birth the level of the benefit was multiplied accordingly.</p> <p data-bbox="1037 224 1153 1626">The abuse of benefit forced the legislators to calculate compensatory salary as an average of longer period (12 months instead of former one quarter) before parental leave, also the requirement of recipient's insurance period from October 1, 2009 was extended to 12 months during last 24 months before parental leave (amendment of December 18, 2008).</p> <p data-bbox="1185 224 1254 1626">The crisis forced to decrease the level of benefit: from July 1, 2010 it was granted 90 percent of compensatory salary during the first year and 75 percent during the second year (amendment of September 22, 2009)</p> <p data-bbox="1286 224 1355 1626">From July 1, 2011 the current way of payment of benefit (see below) was introduced (amendment of July 2, 2010).</p>

	<p>Average monthly number of beneficiaries in year 2009 was 45.9 thousand, in year 2010 – 47.8 thous., in year 2011 – 43.8 thous., in year 2012 – 38.8 thous., in year 2013 – 35.6 thous., in year 2014 – 36.3 thous., in the first half of year 2015 – 37.5 thousand. Percentage of men is increasing from around 6 per cent in 2009 until more than 20 per cent in mid 2015.</p>
<p><b>DESCRIPTION OF THE SALARY-RELATED CHILD-RAISING BENEFIT</b></p>	<p>Parents of the child are allowed to choose one of the two options how to receive the benefit.</p> <p>The first option is to receive benefit from the end of mother's maternity leave until the first birthday of the child. Then 100 percent of so-called compensatory salary is paid.</p> <p>The second option is to receive benefit from the end of mother's maternity leave until the second birthday of the child. Then 70 percent of compensatory salary is paid during the first year and 40 percent of compensatory salary is paid during the second year.</p> <p><b>Level of the benefit</b></p> <p>Compensatory salary is an average recipient's salary (in the law named as personal "insured income") of 12 months before the month preceding the month when parental leave begins. If this average is below 1/3 of actual co-called "insured income" approved by Government, the latter amount is applied as compensatory salary. If mentioned average is above 320 percent of "insured income" approved by Government, then this maximal amount is applied as compensatory salary.</p> <p>"insured income" approved by Government in August 2015 was €434.</p> <p>In the case of adoption of a child 70 percent of compensatory salary is paid during three months.</p> <p><b>Conditions of entitlement</b></p> <p>The basic conditions of entitlement are: a person must be insured by sickness and maternity insurance, has to take parental leave and must be insured during 12 months by sickness and maternity insurance during last 24 months before parental leave.</p> <p>Some exceptions are foreseen by law . Obligatory insurance period (12 months) is not required if a person is before 26 years old and had graduated from school or university 12 or less months before parental leave. Obligatory insurance period also is not required if a person recently changed insurance status from military or police system into general social insurance.</p>

		<p>A benefit is continued to pay even if in a time of payment the labour (or similar) contract ends. A benefit is also granted if the a labour contract is ended, but a person has required insurance period.</p> <p>Exclusively calculated with respect to salary, no flat-rate part.</p> <p>However, the "floor" of the benefit is not below than 1/3 of "insured income" approved by Government . The "ceiling" of the benefit is also applied due to the rule of "ceiling" on compensatory salary (see above).</p> <p>According to the choice of parents the benefit is paid from the end of mother's maternity leave until the first or second birthday of the child (see above).</p> <p>In the case of the adoption of the child the benefit is paid during three months.</p> <p>Both parents can claim the benefit, but only one of them can receive the benefit at the same time. During the payment period (one or two years) parents can change each other.</p> <p>If another child is born in the period of benefit payment, then both parent can receive the benefits: each for one child.</p> <p>Yes, but during the first year of the payment of benefit only the difference between benefit and salary is paid (if a salary is above the benefit, the latter is not paid at all).</p> <p>During the second year of benefit payment (if this option was chosen) the full amount of benefit is paid regardless of recipient's salary.</p> <p>Yes, the benefit can be seen as implementing Parental Leave Directive. The conditions of granting and paying parental benefit are quite generous and usually stimulate intention of employees to use parental leave: minimum compensabel parental leave period is almost one year; both parents can change in using parental leave and benefit at any time and unlimited number of times; the amount of benefit is high comparing to other benefits of social insurance.</p>
	<p><b>Exclusively or partially calculated with respect to salary</b></p>	
	<p><b>Maximum duration of the benefit</b></p>	
	<p><b>Who can claim the benefit (one or both parents?) and for how long in case of split entitlement between the parents?</b></p>	
	<p><b>Can the benefit be claimed in case of partial reduction of income pursuant to part-time/flexible working?</b></p>	
	<p><b>Is the benefit intended to complement the exercise of parental leave rights (within the meaning of the Parental Leave Directive)?</b></p>	

	<p><b>Are employers who have to pay the salary during statutory periods of parental leave entitled to either "offset" or claim reimbursement from the social security institution for salary paid to the employee during parental leave?</b></p>	<p>The employers are not obliged to pay salary during parental leave if an employee does not work.</p>
	<p><b>Is it possible that both parents claim salary-related child-raising benefits and if so, how are such rights divided between parents; can these be exercised simultaneously?</b></p>	<p>No. The benefit is granted only to one of parents at the same time.</p> <p>In the case of multiple birth one of parents can claim the benefit for one child, other parent for another child.</p>
<p><b>CAN A PARENT RECEIVE A SALARY-RELATED CHILD-RAISING BENEFIT REGARDLESS OF WHICH PARENT FACTUALLY FULFILLS THE CONDITIONS OF ENTITLEMENT UNDER NATIONAL LAW AND IF SO HOW?</b></p>		<p>According to Lithuanian legislation the right to parental benefit is strictly individual. Person who claims for benefit must fulfil requirements himself/herself.</p> <p>At the same time in order to take care of the child another parent can take his/her own parental leave but he/she has no right to benefit. And the other parent has no possibility to transfer his/her right to benefit. And only in case the first refuses his/her right to benefit, individual conditions and requirements of the second parent can be evaluated and benefit granted.</p>

## LUXEMBOURG

	REPLY
<b>HISTORY OF THE SALARY-RELATED CHILD-RAISING BENEFIT</b>	<p>Luxembourg transposed the Council Directive 96/34/EC of 3 June 1996 on the framework agreement on parental leave concluded by UNICE, CEEP and the ETUC by Law of 12 February 1999 on the national action plan for employment (in the framework of the European Employment Strategy) (Memorial A N°13 of 23 February 1999 - Website: <a href="http://www.legilux.public.lu/leg/a/archives/1999/0013/a013.pdf">http://www.legilux.public.lu/leg/a/archives/1999/0013/a013.pdf</a>). First, the Government asked the social partners to find a compromise and to negotiate an agreement on parental leave. As they did not succeed, the Government decided to include it into the NAPE.</p> <p>The legal regime of parental leave underwent an important reform in 2006 by Law of 22 December 2006 (Memorial A N°242 of 29 December 2006 p. 4838 - Website: <a href="http://www.legilux.public.lu/leg/a/archives/2006/0242/a242.pdf">http://www.legilux.public.lu/leg/a/archives/2006/0242/a242.pdf</a>) and will undergo another reform in next months. Regarding future reform, a bill has not yet been introduced into the Parliament for discussion. But, orientations have been presented to the public in April 2015. <b>Especially, the new benefit will be calculated with reference to the salary of the beneficiary of the parental leave (salary of the last 12 months). It will be of a minimum of 1,9922.96 EU, which is the Minimum Wage, and of a maximum of 3,200 EU for a full-time job. In practice, it will also be much more flexible for the parents and for the employers.</b></p> <p>Parental leave is part of the Labour Code (Articles L. 234-43 to 234-49) regarding the relationship between parents and employers and part of the Social Security Code (Articles 306 to 308) regarding parental leave benefit.</p>
<b>DESCRIPTION OF THE SALARY-RELATED CHILD-RAISING BENEFIT</b>	<p><b>There is still a flat-rate parental leave benefit in Luxembourg.</b></p> <p>Monthly gross full-time benefit is 1,778.31 EU , whereas monthly net full-time benefit is 1,710.90 EU. Difference is due to the payment of health and long-term care contributions (48.01 EU and 19.40 EU).</p> <p>Monthly gross part-time benefit is 889.15 EU, whereas monthly net part-time benefit is 855.44 EU. Difference is due to the payment of health and long-term care contributions (24.01 EU and 9.70 EU).</p> <p>Notice that Minimum Wage was 1,922.96 EU per month (on 1st January 2015). Moreover, parental leave benefit is free from contributions and taxes, except for contributions regarding health insurance and long-term care insurance.</p> <p>It must be noted that parental leave is an individual right for each parent working in Luxembourg.</p>

		<p>There are two types of conditions:</p> <ol style="list-style-type: none"> <li>1. linked to the family situation of the claimant</li> <li>2. linked to the professional situation of the claimant</li> </ol> <p><b>1. Conditions linked to the family situation of the claimant.</b></p> <p><b>The claimant:</b></p> <ol style="list-style-type: none"> <li>1.1. must be the parent of a child under 5, who is entitled to family benefits</li> <li>1.2. must educate the child in the household since he/she is born (for the first parental leave - see below) or since at least 6 months (for the second parental leave) + must dedicate his/herself to the education of the child</li> <li>1.3. must have no other job during parental leave or only a part-time job in case of a part-time parental leave</li> <li>1.4. must reside in Luxembourg. Frontier workers are also entitled to parental leave if the work in Luxembourg.</li> </ol> <p><b>2. Conditions linked to the professional situation of the claimant.</b></p> <p><b>The claimant:</b></p> <ol style="list-style-type: none"> <li>2.1. must work in Luxembourg under a labour contract, as a civil servant or as a self-employed. This condition has to be fulfilled at the date when the child is born, at the moment of the claim, at the beginning of the parental leave and during the entire duration of the parental leave</li> <li>2.2. must work under the direction of an employer who is legally established in Luxembourg , must be registered under a health care regime and the job must take place in Luxembourg . In case of posting abroad, the worker is entitled to parental leave as if he/she would work in Luxembourg.</li> <li>2.3. The monthly duration of labour must be at least a half-time job (20 hours).</li> </ol> <p><b>Not calculated with respect to salary (see under level of the benefit and future reform)</b></p> <p>Parental leave and parental leave benefit are granted for 6 months per child. Partial parental leave and partial parental leave benefit may be granted for 12 months. There is no flexibility!</p> <p>Both parents can claim parental leave. The <b>first</b> parental leave has to be taken directly after maternal leave or <i>welcome leave (congé d'accueil)</i>, otherwise parental leave will be lost for both (except in case of lone parents). The <b>second</b> parental leave can be taken by the other parent until the child is 5 years old.</p>
<p><b>Exclusively or partially calculated with respect to salary</b></p>		
<p><b>Maximum duration of the benefit</b></p>		
<p><b>Who can claim the benefit (one or both parents?) and for how long in case of split entitlement between the parents?</b></p>		

		<p>It must be noted that employers cannot refuse a full-time parental leave.</p> <p>Full-time parental leaves cannot be taken at the same time by both parents. But <b>half-time parental leaves can be taken at the same time by both parents</b>, under the condition that they educate alternatively the child. Half-time parental leave must be accepted by the employer.</p> <p>If one parent does not work in Luxembourg, the parent working in Luxembourg may choose between the first parental leave and the second one.</p> <p>Yes</p> <p>Not applicable</p> <p>Employers do not have to compensate parental leave by paying a child-raising benefit to the parent. This is paid directly by CNPF, the National Fund for Family Benefits.</p>
	<p><b>Can the benefit be claimed in case of partial reduction of income pursuant to part-time/flexible working?</b></p>	<p>Yes</p>
	<p><b>Is the benefit intended to complement the exercise of parental leave rights (within the meaning of the Parental Leave Directive)?</b></p>	<p>Not applicable</p>
	<p><b>Are employers who have to pay the salary during statutory periods of parental leave entitled to either "offset" or claim reimbursement from the social security institution for salary paid to the employee during parental leave?</b></p>	<p>Employers do not have to compensate parental leave by paying a child-raising benefit to the parent. This is paid directly by CNPF, the National Fund for Family Benefits.</p>

	<p><b>Is it possible that both parents claim salary-related child-raising benefits and if so, how are such rights divided between parents; can these be exercised simultaneously?</b></p>	<p>Yes, both parents can claim a parental leave benefit. Rights cannot be divided, because both parents are entitled to a benefit on their own. If one parent does not take a leave, it cannot be transferred to the other one (see also under <i>who can claim the benefit?</i>)</p>
<p><b>CAN A PARENT RECEIVE A SALARY-RELATED CHILD-RAISING BENEFIT REGARDLESS OF WHICH PARENT FACTUALLY FULFILLS THE CONDITIONS OF ENTITLEMENT UNDER NATIONAL LAW AND IF SO HOW?</b></p>		<p>If one parent works in Luxembourg and the other one does not work there, only the parent working in Luxembourg will be entitled to a parental leave benefit under Luxembourgish legislation. The parent working in Luxembourg has the right to choose either a first parental leave, directly connected to maternal leave, or a second parental leave until the child will be 5 years old.</p>

## THE NETHERLANDS

<b>REPLY</b>	
<p><b>HISTORY OF THE SALARY-RELATED CHILD-RAISING BENEFIT</b></p>	<p>The Dutch salary-related child-raising benefits consist of two kinds of benefits: A family benefits B benefits in the case of combining work and care.</p> <p>A. Family benefits</p> <p>The Dutch system provides for 4 family benefits: the child benefit, the child-related allowance, the child-care benefit and a tax credit for working parents caring for at least one child under the age of 12. The number of family benefits was recently reduced by the Act on the reform of family benefits (Wet hervorming kindregelingen). This act reduced the number of family benefits from 11 benefits to 4 benefits. A tax credit for employees taking parental leave was one of the benefits that was abolished as of 2015. For this ad hoc request the child related allowance and a special supplement of the child benefit are of interest.</p> <p>The Act on Child-related Allowance (Wet op het kindgebonden budget, WKB) was launched in November 2007. In 2015 an estimated number of 828.000 households will receive a child-related allowance for 1,5 million children in total.</p> <p>As of January 2015 the General Child Benefit Act (Algemene Kinderbijslagwet, AKW) provides for an income-related supplement for single parents or families with only one breadwinner. This supplement is only available for people who take care at home of a disabled child in the age of 3 – 18. Before January 2015 this supplement was part of the Regulations governing Contributions towards the Upkeep of Disabled Children living at Home (<i>Tegemoetkoming Onderhoudskosten Thuiswonende gehandicapte kinderen, TOG</i>). The AKW also provides for benefits that are not income-related, but a description of these benefits falls outside the scope of this ad hoc request. Less than 3000 people claim the income-related supplement in the AKW.</p> <p>B Benefits in the case of combining work and care</p> <p>The Work and Care Act (Wet arbeid en zorg, Wazo) lists different types of leave (paid and unpaid) that aim at a balanced combination of work and care. These concern measures granting leave related to pregnancy, childbirth, adoption and foster care; calamities and other sorts of short leave, including paternity leave; short- and long-term carer's or "filial" leave and parental leave. Here, two of these measures are relevant, namely paternity leave (kraamverlof) and the short-term carer's leave (kortdurend zorgverlof). Provisions granting leave related to pregnancy and childbirth are outside the scope of this request for information, as is long-term carer's or "filial" leave which is a type of unpaid leave.</p> <p>Parental leave (ouderschapsverlof) is, too, in principle a form of unpaid leave – and the Dutch government does</p>

	<p>not intend to change this. During the parliamentary debate on the legislative changes for the implementation of Directive 2010/18/EU, the government highlighted that concerning matters regarding income, provided for in Clause 5 of the Framework Agreement, these are for the determination either by the Member States or the social partners. In this respect, the Netherlands' position is that paid parental leave is to be categorised as a condition of employment (een arbeidsvoorwaardelijke regeling) and, therefore, something to be regulated by the social partners (<i>Parliamentary Proceedings/Kamerstukken II, 2011-2012, 33107, nr. 3, p. 8</i>). A recent study shows that 15% of the collective agreements in the Netherlands include such a provision stipulating that the salary will continue to be paid during the period of parental leave. The level of continued pay for hours of leave varies between 25% and 75% of the wage.</p> <p>Paternity leave (kraamverlof) following childbirth already exists for a long time. This refers to paid leave of two days. Since 1 January 2015, this legal right has been extended by 3 days – denoted as a specific form of parental leave (ouderschapsverlof), also referred to as "partner's leave" (partner verlof). For these three additional days of leave, there does not exist an obligation of continued wage payment. But the government has announced to reserve funds for this purpose in the budget for 2016.</p> <p>The right to paid, short-term carer's leave exists since 2001. This measure is intended for the care of sick persons provided by partners and children. Since 1 July 2015, it also applies to the care of siblings, grandparents, grandchildren, cohabitants and acquaintances.</p>
<p><b>DESCRIPTION OF THE SALARY-RELATED CHILD-RAISING BENEFIT</b></p>	<p><b>A. Family benefits</b></p> <p>The amount of the child-related allowance (<i>Wet op het kindgebonden budget, WKB</i>) depends on the income of the parent(s), the number of children and the age of the children. The basic amount of the child-related allowance is €1032 in the case of one child; €1823 in the case of two children, €2006 in the case of three children; in the case of more than three children: an additional amount of €106 is payable for every child that exceeds the number of three children. For children between 12 and 16 there is a supplement of € 231. For children aged 16 or 17 the amount of the supplement is €412. Single parents with a child aged up to 18 receive a supplement of €3050. These amounts of child-related allowance are all maximum amounts that are only payable when the collective income of the parent(s) does not exceed the threshold of € 19.767. If the collective income does exceed this threshold, the allowance is reduced if the by 6,75% of the difference between this collective income and € 19.767.</p> <p>The level of the supplement in the AKW is a fixed amount of €1460.</p> <p><b>B Benefits in the case of combining work and care</b></p> <p>The provision on paternity leave imposes an obligation upon employers to continue pay of the full salary.</p>

		<p>The provision on short-term carer's leave imposes an obligation upon employers to continue pay of 70% of the salary, curbed by a statutory ceiling.</p>
	<p style="text-align: center;"><b>Conditions of entitlement</b></p>	<p>A. Family benefits  One qualifies for child-related allowance if one meets the following requirements:</p> <ul style="list-style-type: none"> <li>- receiving child benefit;</li> <li>- having a household income below a certain ceiling;</li> <li>- not having capital exceeding €103,423 for a single person or €124,753 for partners (amounts differ for persons who have reached the retirement age).</li> </ul> <p>The right to a supplement in the AKW is restricted to single parents or families with only one breadwinner who receive twice the amount of child benefit because they take care of a disabled child in the age of 3 – 18 at home.</p> <p>B Benefits in the case of combining work and care  Paternity leave applies to the partner of the newborn's mother. Paternity leave can be taken within the 4 weeks following the childbirth after a home confinement (birth at home) and the 4 weeks from the day the baby has come home after a birth at the hospital. It is a legal right, which an employer must not deny.</p> <p>The right to short-term carer's leave applies to the necessary care required in case of sickness. This type of leave can only be taken when the applicant is the only person who can provide that care. It does not apply, if a sick child can be taken care of by the partner, another person or in the hospital. The right is hence explicitly intended for situations where there is no alternative solution. An employer must honor a request for such a leave (or the continuation thereof), unless he demands the employee's availability because of a pressing business interest which he has reasonably weighed against the employee's interest.</p>
	<p style="text-align: center;"><b>Exclusively or partially calculated with respect to salary</b></p>	<p><b>Family benefits</b></p> <p>The child-related allowance and the supplement in the AKW are exclusively calculated with respect to the income of the parent(s). They do not comprise a flat-rate element.</p> <p><b>Benefits in the case of combining work and care</b></p> <p>Paternity leave: only the full salary.</p>

	<p>Short-term carer's leave: only 70% of the salary</p> <p><b>Family benefits</b></p> <p>The maximum duration of the child-related allowance is linked to the age of the youngest child. A parent can qualify for an allowance until the youngest child is 18 years of age.</p> <p>The supplement in the AKW is also linked to the age of the child. The supplement is payable for a disabled child in the age of 3 – 18.</p> <p><b>Benefits in the case of combining work and care</b></p> <p>Paternity leave: maximum 2 days of paid leave (afterwards 3 days of unpaid leave).</p> <p>Short-term carer's leave: 2 times the weekly working hours for every period of 12 months. This type of leave does not have to be taken at once, it can be spread out.</p>
<p><b>Maximum duration of the benefit</b></p>	<p><b>Family benefits</b></p> <p>Only one parent can claim the child-related allowance and the supplement in the AKW. This right is linked to the parent that receives child benefit. In the case of co-parenting arrangements parents can split the payment of the entitlement to child benefit, but they cannot split their entitlement to child-related allowance or to the supplement in the AKW (only one co-parent can claim the child-related allowance and the supplement in the AKW).</p> <p><b>Benefits in the case of combining work and care</b></p> <p>Paternity leave applies exclusively to the partner of the woman who has given birth, i.e. the husband, the registered partner, the non-marital cohabiting partner and persons who have legally recognised the child.</p> <p>Short-term carer's leave can be taken for a child with whom the applicant has a legal family relationship or parentage; namely, the child of the husband, registered partner or the non-marital cohabiting partner, and for a foster child who lives at the same address. The right to take this paid leave exists for both parents.</p>
<p><b>Who can claim the benefit (one or both parents?) and for how long in case of split entitlement between the parents?</b></p>	<p><b>Family benefits</b></p>
	<p><b>Can the benefit be claimed in case of</b></p>

<p>The child-related allowance and the supplement in the AKW are payable regardless of the type of contract and the number of working hours.</p> <p><b>Benefits in the case of combining work and care</b></p> <p>Paternity leave applies to 2 days on which work is habitually conducted.</p> <p>Short-term carer's leave applies to those days on which work is habitually conducted.</p>	<p><b>partial reduction of income pursuant to part-time/flexible working?</b></p>
<p><b>Family benefits</b></p> <p>The child-related allowance and the supplement in the AKW are not linked to the exercise of parental leave rights.</p> <p><b>Benefits in the case of combining work and care</b></p> <p>Paid paternity leave (kraamverlof) is different from parental leave (ouderschapsverlof). The additional 3 days (partner's leave) represent a specific form of parental leave (which is equally unpaid). Since the partner's leave is classified as a form of parental leave, the Act stipulates that those three days will be subtracted from the total amount of statutory parental leave (which amounts to 26 times of the weekly working hours).</p> <p>Short-term carer's leave: only 70% of the salary</p>	<p><b>Is the benefit intended to complement the exercise of parental leave rights (within the meaning of the Parental Leave Directive)?</b></p>
<p>An employer's recourse to the social security system for reimbursement for salary paid during leave is NOT possible in any case. This is because with regard to parental leave the Netherlands do not have a legal right to paid parental leave.</p>	<p><b>Are employers who have to pay the salary during statutory periods of parental leave entitled to either "offset" or claim reimbursement from the social security institution for salary paid to the employee during parental leave?</b></p>

	<p><b>Is it possible that both parents claim salary-related child-raising benefits and if so, how are such rights divided between parents; can these be exercised simultaneously?</b></p>	<p><b>Family benefits</b></p> <p>The payment of one right to child benefit can split in the case of co-parenting arrangements, but split payment of the child-related allowance or the supplement in the AKW is not possible.</p> <p><b>Benefits in the case of combining work and care</b></p> <p>Paternity leave: not applicable.</p> <p>Short-term carer's leave can be taken by both parents, but not simultaneously. Please refer to the eligibility criteria.</p>
<p><b>CAN A PARENT RECEIVE A SALARY-RELATED CHILD-RAISING BENEFIT REGARDLESS OF WHICH PARENT FACTUALLY FULFILLS THE CONDITIONS OF ENTITLEMENT UNDER NATIONAL LAW AND IF SO HOW?</b></p>	<p><b>Family benefits</b></p> <p>The right to child-related allowance and the supplement in the AKW is linked to the parent that receives child benefit. In the case of a child that lives in a household with both parents, the parents can decide for themselves which parent will actually receive the child benefit. This means that it's also possible for the parent who does not take the child-raising task upon him/herself, to receive the child-related allowance and the supplement in the AKW. However, if the parents live separately the child benefit will be paid to the parent that lives in a household with the child.</p> <p><b>Benefits in the case of combining work and care</b></p> <p>Paternity leave: not applicable.</p> <p>Short-term carer's leave can be taken by both parents.</p>	

## NORWAY

		REPLY
<b>HISTORY OF THE SALARY-RELATED CHILD-RAISING BENEFIT</b>		<p>Norway does not have a <i>salary related</i> child benefit (nor any other income related Due to the universal citizenship nature of the Norwegian welfare state, the child benefit has, since its introduction, been a flat rate benefit. The information given relates to this scheme.</p> <p>The Norwegian Child Benefit was introduced in 1946. According to the rules only lone parents were entitled to receive benefit for the first born child and onwards, while married parents were entitled to benefits for the second child and onwards. In 1970, the law was changed, married or cohabiting parents were now entitled to receive the benefit for the first child as well in accordance with the national insurance Act, and the allowance rates was considerably increased.</p> <p>Since 2006 the Norwegian Labour and Welfare Administration administer the social security benefits. In all 671 763 persons receive</p>
	<b>Level of the benefit</b>	<p>In Norway the benefit is a <i>standard rate</i> for each child. The ordinary child benefit amounts to NOK 970 per child per month for married and cohabiting parents. The extended benefit for lone parents amounts to NOK 970 extra per child per month</p>
	<b>Conditions of entitlement</b>	<p>The ordinary child benefit is <i>non-income tested</i> (i.e. not salary-related) but varies with family type. Parents registered in the population register are granted the child benefit automatically, as a general rule. To be entitled the child must live in Norway. A child is generally regarded as living in Norway if he/she has been in Norway for at least 12 consecutive months</p> <p>Parents that arrive from an EEA country however and have paid work in Norway, are entitled to receive the child benefit even if they have been residing in Norway for less than 12 months. The child benefits are assessed according to the rules of the EEA agreement and other national insurance agreements.</p> <p>Lone parents are entitled to the 'extended child benefit' if they are separated, divorced, widowed or unmarried and do not live with the child's other parent. A mediation certificate must be produced in the event of cohabitants with joint children under the age of 16 years splitting up.</p> <p>Both the ordinary child benefit and the extended benefit for lone parents is non-income tested and therefore not salary-related, but <i>varies with family type</i>.</p>
<b>DESCRIPTION OF THE SALARY-RELATED CHILD-RAISING BENEFIT</b>	<b>Exclusively or partially calculated with respect to salary</b>	
	<b>Maximum</b>	Members of the National Insurance Scheme are entitled to child benefit for children up to the age of 18.

	<p><b>duration of the benefit</b></p> <p><b>Who can claim the benefit (one or both parents?) and for how long in case of split entitlement between the parents?</b></p>	<p>Most parents do not need to apply for the ordinary child benefit. If the child is born in Norway, the mother is automatically granted entitlement to child benefit from NAV roughly two months after the child is born. Both the child's mother and father can claim the extended child benefit if they are lone parents.</p> <p>If the child's parents have a dual domicile agreement for the child, the benefit can be split equally between them the whole period (0-18 years).</p> <p>Foster parents, another carer or a child-care institution may claim the child benefit if the child lives there permanently (for more than three months).</p> <p>The child benefit is non-income related and thus not affected by any changes in working hours or income.</p>
	<p><b>Can the benefit be claimed in case of partial reduction of income pursuant to part-time/flexible working?</b></p>	<p>No. The Norwegian child benefit is not intended to complement the exercise of parental leave rights.</p>
	<p><b>Is the benefit intended to complement the exercise of parental leave rights (within the meaning of the Parental Leave Directive)?</b></p>	<p>The parental leave rights are exclusive and offered in terms of a "child home care allowance" (kontantstønad) or through the paid paternity leave benefit that is linked to previous earnings (a pensionable income for at least six of the ten months prior to the benefit period). These parental benefits are intended to ensure parents an income in connection with the birth or adoption of a child and independent of the national child benefit.</p>
	<p><b>Are employers who have to pay the salary during statutory periods of parental leave entitled to either "off-set" or claim reimbursement from the social security institution for</b></p>	

	<p><b>salary paid to the employee during parental leave?</b></p>	
	<p><b>Is it possible that both parents claim salary-related child-raising benefits and if so, how are such rights divided between parents; can these be exercised simultaneously?</b></p>	<p>If the child's parents have a dual domicile agreement for the child, the ordinary (non-income) child benefit can be split equally between them the whole period (0-18 years).</p>
<p><b>CAN A PARENT RECEIVE A SALARY-RELATED CHILD-RAISING BENEFIT REGARDLESS OF WHICH PARENT FACTUALLY FULFILLS THE CONDITIONS OF ENTITLEMENT UNDER NATIONAL LAW AND IF SO HOW?</b></p>	<p>Any changes in the family situation or moving abroad may affect the payment and must be reported to the Labour and welfare administration, if not the recipients of benefits may be charged the wrong amount and the payment will stop.</p> <p>The entitlement to receive the extended child benefits for lone parents is family related and therefore needs documentation. In the case of changes in marital status marriage or cohabiting with a new partner for more than 12 months, the lone parent no longer fulfil the conditions of entitlement according to the national Insurance Act and loose the access to benefit allowances.</p>	

## POLAND

REPLY	
<p>It has to be mentioned that Polish legal system distinguishes two kinds of benefits which role is to replace income during child-raising periods. The essential difference between them relates to sources of financing.</p> <p>1. The maternity allowance (<i>zasiłek macierzyński</i>) during the parental leave (<i>urlop rodzicielski</i>) which has been introduced to the Polish legal system in 17 June 2013. The maternity allowance is a part of a compulsory social insurance scheme. The conditions and principles of granting this benefit are regulated by the Act on Social Insurance Cash Benefits in Cases of Sickness and Maternity (<i>Ustawa o świadczeniach pieniężnych z ubezpieczenia społecznego w razie choroby i macierzyństwa</i>) of 25 June 1999. The maternity allowance is payable during the 26 weeks' parental leave.</p> <p>2. There is also the child-raising supplement allowance (<i>dodatek z tytułu opieki nad dzieckiem w okresie korzystania z urlopu wychowawczego</i>) paid to people on childcare leave (<i>urlop wychowawczy</i>), regulated by the Act on Family Benefits (<i>Ustawa o świadczeniach rodzinnych</i>) of 28 November 2003. This benefit is a part of a tax financed universal scheme providing a flat-rate benefit as a supplement to Family Allowance. In 2013 was granted in average 68,5 thousands supplements per month (16% less than in 2012 – 81,6 thousand). In 2012 the number of people using the child-raising leaves has decreased by 16%. Decrease of number of people exercising the child-raising leave is due to the introduction of parental leave from social insurance<sup>89</sup>.</p>	
<p><b>HISTORY OF THE SALARY-RELATED CHILD-RAISING BENEFIT</b></p>	<p>Monthly maternity allowance during the parental leave (<i>zasiłek macierzyński</i>) amounts to 60% or 80% of the 'reference wage' per month. The reference wage is calculated on the basis of gross earnings during the 12 months preceding the start of the maternity leave (<i>urlop macierzyński</i>) for which contributions were paid.</p> <p>The child-raising supplement allowance is tax financed universal scheme providing a flat-rate benefit as a supplement to Family Allowance. The allowance amounts to 400 PLN per month (€93) and is not subject of any differentiation.</p>
<p><b>DESCRIPTION OF THE SALARY-RELATED CHILD-RAISING BENEFIT</b></p>	<p><b>Level of the benefit</b></p> <p>The maternity allowance is a part of a compulsory social insurance scheme providing earnings-related benefits to all employees. Voluntary membership for self-employed</p>
	<p><b>Conditions of entitlement</b></p>

		<p>women and other assimilated groups (eg. contractors).  Maternity allowance is granted to an insured woman who <u>within the period of sickness insurance or within the period of child care leave</u>:</p> <ul style="list-style-type: none"> <li>• gave birth to a child,</li> <li>• took in a child under 1 year of age and applied for a legal adoption at the custody court,</li> <li>• took in a child under 1 year of age to be raised in a foster family.</li> </ul> <p>The conditions for eligibility for maternity allowance during the parental leave are, in principle, to use:</p> <ol style="list-style-type: none"> <li>1. the maternity allowance during the maternity leave (urlop macierzyński) which lasts 20 weeks (31 to 37 for multiple births, depending on the number of children born),</li> <li>2. the maternity allowance during the additional maternity leave (<i>dodatkowy urlop macierzyński</i>) which may last: <ul style="list-style-type: none"> <li>• up to 6 weeks - in case of birth of one child during one delivery,</li> <li>• up to 8 weeks - in case of a multiple birth.</li> </ul> </li> </ol> <p>The child-raising supplement (means tested) is granted during the child-raising leave, which may be taken by an employee employed for at least 6 months, in order to take care of her/his child personally. The right to the child-raising leave is envisaged in the Polish Labour Code.</p> <p>The child-raising supplement may be claimed by a person who meets following conditions:</p> <ul style="list-style-type: none"> <li>• will reside within Poland for the period for which she/he will receive the benefits;</li> <li>• family income does not exceed PLN 539.00 (€ 124) per person in the family, or PLN 623.00 (€ 144) if one of the family members is a disabled child.</li> </ul> <p>The maternity allowance is calculated exclusively with respect to salary. As it was mentioned, the maternity allowance is calculated on the basis of gross earnings during the 12 months preceding the start of the maternity leave (<i>urlop macierzyński</i>) for which contributions were paid.</p> <p>The child-raising supplement is tax-financed, means tested and provides a flat-rate</p>
	<p><b>Exclusively or partially calculated with respect to salary</b></p>	

	benefit as a supplement to Family Allowance. It has no relation to remuneration.
<p><b>Maximum duration of the benefit</b></p>	<p>The maternity allowance during the parental leave is paid to either parent for 26 weeks following the end of maternity leave (the maternity leave of 20 weeks [or 31-37 for multiple births] and additional maternity leave).</p> <p>The child-raising supplement may be granted for a period of up to 24 months, extended to 36 months where the person concerned provides care for more than one child delivered in the same multiple birth, or to 72 months for a disabled child. Not every day of parental leave may be a day of exercising the right to the child-raising supplement. The maximum duration of child-raising leave is up to 36 months while the supplement may be granted for a maximum period of – in principle – 24 months.</p>
<p><b>Who can claim the benefit (one or both parents?) and for how long in case of split entitlement between the parents?</b></p>	<p>Parents using their parental leave corresponding to 26 weeks, receive during this period the maternity allowance. The maternity allowance can be taken either at once by one of the parents or in two or three parts following each other directly and not shorter than 8 weeks. Mother and father may share it between themselves.</p> <p>The maternity allowance during the parental leave both parents may use in the same time provided that the total length of parental leave and allowance granted to both parents do not exceed the period of 26 weeks. It means that if parents use the parental leave and maternity allowance during the parental leave at the same time, both parents can take such leave and allowance up to 13 weeks (13 weeks of parental leave and allowance paid during this period for mother and 13 weeks of parental leave and allowance paid during this period for father, which makes 26 weeks).</p> <p>The child-raising leave is granted on the employee's request. Such leave can be taken in separate parts, maximum 5. The use of child-raising leave by both parents in the same time is possible for uninterrupted period of maximum 4 months. If the child-raising leave is used by both parents, they have right to only one child-raising supplement. Each parent has an exclusive right to one month of child-raising leave during the period of child-raising leave. This right might not be transferred to the other parent or guardian.</p>
<p><b>Can the benefit be claimed in case of partial reduction of income pursuant to</b></p>	<p>Act on Social Insurance Cash Benefits in Cases of Sickness and Maternity allows an employee on parental leave to undertake paid work for an employer who granted that leave of not more than half time employment. In this case, the amount of maternity allowance during the parental leave is decreased proportionally to the</p>

	<p><b>part-time/flexible working?</b></p>	<p>working time in which employee works during the use of parental leave. This applies to employees only and does not apply to insured persons who are not employees (eg. self-employed).</p> <p>The Act on Family Benefits (<i>Ustawa o świadczeniach rodzinnych</i>) allows an employee on child-raising leave, who receives a supplement at this time, to undertake paid work for current or a different employer or to undertake other gainful activity, as well as education and training, <u>if it does not exclude the possibility of personal care of the child.</u></p>
	<p><b>Is the benefit intended to complement the exercise of parental leave rights (within the meaning of the Parental Leave Directive)?</b></p>	<p>Both maternity allowance during the parental leave and child-raising benefit are intended to take care of a child and – when needed – to combine childcare with work.</p>
	<p><b>Are employers who have to pay the salary during statutory periods of parental leave entitled to either "offset" or claim reimbursement from the social security institution for salary paid to the employee during parental leave?</b></p>	<p>The maternity allowance during the parental leave is paid from the social insurance fund by the Social Insurance Institution (ZUS), not by an employer.</p> <p>The child-raising supplement is tax financed and paid by public authorities.</p>

**CAN A PARENT RECEIVE A SALARY-RELATED CHILD-RAISING BENEFIT REGARDLESS OF WHICH PARENT FACTUALLY FULFILLS THE CONDITIONS OF ENTITLEMENT UNDER NATIONAL LAW AND IF SO HOW?**

during – broadly speaking – the child-raising periods: the maternity allowance which is a part of a compulsory social insurance scheme and may be granted exclusively to insured person – both employees and other related groups.

The last amendments to the Act on Social Insurance Cash Benefits in Cases of Sickness and Maternity introduced the possibility of exercising the right to maternity allowance by an insured father of the child (or other immediate insured family member) in cases of:

- death of mother of the child;
- abandonment of the child by a mother;
- if the mother is unable to take care of the child in a situation when she is unable to eg. live independently also in a situation when a mother of the child is not insured.

Still, a person acquiring the allowance must be the subject of social insurance in Poland.

Family benefits, including the child-raising supplement, are of a different nature. They are means tested and has no connection with the previous remuneration and professional activity of the beneficiary. The child-raising supplement may be granted only to an employee using the child-raising leave.

## PORTUGAL

REPLY	
<p>In Portugal, until 1984, the parental allowance was restricted to mothers and the leave was for a short period. The institution of a first form of child's raising benefit occurred in 1937, when a short leave of 30 days was created to female workers: the leave, though, was optional and could be given by the employer to the worker being entirely supported by him. With the reform of the welfare system in 1962, a truthfully maternity allowance, relying in a social insurance scheme, was instituted (60 days of leave fully paid). Mothers could also enjoy a half hour per day of work as breastfeeding period. After the democratic revolution of 1974, and with the new Constitution of 1976, the maternity allowance was finally considered a universal right of the female workers, and the leave entirely paid by the Social Security System increased up to 90 days.</p> <p>After 1984, with the approval of the Decree 4/84 (the new legal regime of maternity and paternity allowances), fathers were able to share the maternity allowance, but only in case of death or incapacity of the mother after giving birth. Only in 1995, this possibility of sharing the initial maternity leave was extended to fathers, irrespectively of the cause, although mothers should necessarily take a period of 14 days within the overall 90 days leave. In this occasion, fathers were also given the possibility of enjoying two days after the child's birth, of absence from work, but this was not mandatory. Also notice that in 1984 had also been created a new special leave of six months/two years that could be taken until the child completed 3 years old, but this new leave was not paid by Social Security.</p> <p>In 1998-99, the maternity leave was increased up to 120 days, being entirely paid by the Social Security given that six weeks of that leave should be an exclusive right of mothers.</p> <p>In 1999, it was created a leave of paternity of 5 days, fully paid by Social Security, and created a subsequent parental leave of 15 days (to the fathers), entirely paid by Social Security, as long as taken immediately after the end of the maternity leave. Other special parental leaves were also created and could be taken in the first years of the child's life.</p> <p>With the Labour Code of 2003-2004, the paternity allowance of 5 days became mandatory, and the maternity leave could now be of 120 days, being fully paid (100% of the worker's salary), or of 150 days, with a reduction (80% of the worker's salary).</p> <p>The current system, described <i>infra</i>, results from the new Labour Code (approved by Law 7/2009) and of Decree 91/2009. Both have suffered changes in the last years. The latest alterations were most recently approved in the Portuguese Parliament, the 1<sup>st</sup> September of 2015.</p> <p>A significant innovation introduced by the new Labour Code is that the current regime does not distinguishes, as in the past, between maternity and paternity leaves, but uses commons expressions of 'parental leaves' that can be shared, within certain conditions, between mothers and fathers. The idea of equal treatment between women and men was hence reinforced in the Portuguese regime.</p>	
<p><b>HISTORY OF THE SALARY-RELATED CHILD-RAISING BENEFIT</b></p>	
<p><b>DESCRIPTION OF THE SALARY-RELATED</b></p>	<p><b>Level of the benefit</b> Parental leave in Portugal is understood to be the period of time during which</p>

**CHILD-RAISING BENEFIT**

working mothers and fathers are entitled to stay at home following the birth or adoption of a child.

The amount of the benefits corresponding to each form of parental leave is as follows:

For initial parental leave (after birth or adoption) as selected by the parents:

- 100% of the reference salary for leave of 120 days;
- 80% of the reference salary for leave of 150 days;
- 100% of the reference salary for leave of 120 days with an additional 30 days in the event of sharing (120+30);
- 83% of the reference salary for leave of 150 days with an additional 30 days also in the event of sharing (150+30).

For parental leave exclusive to the father (10 mandatory days plus 10 optional days) this sum is:

- 100% of the reference salary.

For extended parental leave (that integrates the so-called supplementary leave to care for a child under the age of 6) is paid by the social security in the following circumstances and as follows:

- The daily amount of the extended child benefit corresponds to 25 % of the worker's reference salary as long as taken immediately after the period during which they were receiving the initial child benefit or during which the other parent was receiving the extended child benefit.

The Portuguese social security system does not pay for any other benefits for child raising leaves, even though non paid special leaves or part-time work, or both, are allowed to workers by the Labour Code. In fact, once they have exhausted their entitlement to supplementary parental leave, parents are entitled to take up to two years (consecutively or interspersed) of leave for childcare. For third and subsequent children, this leave is limited to three years. There is, though, a special leave to care for children with a disability or chronic illness, whose benefit corresponds to 65% of the beneficiary's reference salary, capped at twice the IAS (*indexante dos apoios sociais*, Index of Social Support). The IAS corresponds to € 419.22.

The Decree 91/2009 has also created the so-called social parental (initial) leaves, whose amounts are as follows:

- 80% of 1xIAS (€419,22), for leave of 120 days;
- 64% of 1xIAS (€419,22), for leave of 150 days;
- 80% of 1xIAS (€419,22), for leave of 120 days with an additional 30 days in the event of sharing (120+30);
- 66% of 1xIAS (€419,22), for leave of 150 days with an additional 30 days

		<p>also in the event of sharing (150+30).</p> <p><b>For parental leaves</b></p> <p>Only workers may be recognised as being entitled to take leave, unpaid leave or equivalent periods of absence under the Labour Code. This is different from the social protection scheme, which requires the beneficiary to have been in gainful employment for a guarantee period of six calendar months, consecutive or interspersed, at the date of the occurrence justifying the benefit. When counting the six months we take into account the non-overlapping periods of gainful employment under other social protection schemes, completed in Portugal or elsewhere, that cover this form of benefit, including for workers in the public services.</p> <p>Self-employed workers and persons covered by the voluntary social security scheme must have paid their social security contributions in full up until the end of the third month immediately preceding the month of the occurrence preventing them from working.</p> <p><b>For social parental leaves</b></p> <p>For workers who do not work or pay for the Social Security system, or for those that, although paying, haven't fulfilled the abovementioned guarantee period of six months.</p> <p>Conditions:</p> <ul style="list-style-type: none"> <li>- Legal residence in Portugal;</li> <li>- These are means-tested benefits.</li> </ul> <p>Parental leaves are exclusively calculated with respect to salary. Social parental leaves are partially calculated with respect to salary (which may not even exist), because since they the benefits are means-tested they consider other sources of income.</p> <p>For initial parental leave (including social leave), the maximum duration of the benefit is of 180 days, which is given in case of shared leave. For extended parental leave the benefit is paid for a period of three months.</p> <p>Both can claim the benefit. Notwithstanding, there are exclusive periods of paid leave (mothers are exclusively entitled to take parental leave of up to 30 days before the birth, but must take 6 consecutive weeks of leave following the birth; fathers are required to take ten working days of parental leave, five of which must be consecutive, within the 30 days immediately following the birth of the child, the</p>

## ROMANIA

	<b>REPLY</b>
<b>HISTORY OF THE SALARY-RELATED CHILD-RAISING BENEFIT</b>	<p>The child-raising benefit was established in Romania in January 1990 and faced in last 25 years several changes. By Decree-Law 31 / 01.19.1990 is established the right to the child-raising benefit and leave for the child aged up to 1 year, after the end of the maternity benefit of 112 days. Women affiliated to the social insurance scheme were entitled. The amount of the benefit was 65% of the monthly wage rate. The benefit was paid by the social insurance scheme. No specific contribution was established for finance the benefit.</p> <p>The Law 120 / 07.09.1997 on child-raising benefit bring some changes:</p> <ul style="list-style-type: none"><li>-women affiliated to the social insurance scheme received a leave for the child aged up to 2 years and the amount of the child-raising benefit was raised to 85% of the basic salary and other salary income;</li><li>- women affiliated to the farmers insurance scheme received a benefit of 80% of the average monthly insured income calculated for the last 6 months of contribution paid.</li></ul> <p>Financial unsustainability of this benefit makes the Law no.19/ 2000 on public pension system and other social insurance rights to change the calculation basis. The monthly amount child –raising benefit was 85% applied to the average monthly income in the last 6 months and may not exceed the ceiling of 3 times the gross average salary per economy. No specific contribution was collected for this benefit.</p> <p>A new change appears by GEO (Government Emergency Ordinance) 9/2003 amending and supplementing Law no. 19/2000 on public pensions and other social insurance rights by extending the calculation basis and increases the ceiling. Thus, the condition for entitlement was raised at last 10 months preceding the child birth, on which was paid individual contribution to social insurance system. The amount of the benefit could not be less than 85% of the average net annual forecast by the state social insurance budget law and not exceed the ceiling of 5 times the average gross wage.</p> <p>Two months later, by GEO no. 23 of 10 April 2003 amending and supplementing Law no. 19/2000, rights, are established after 31 December 2003 the amount of the benefit was set at 85% of gross average wage in the state social insurance budget and approved by the state social insurance budget law.</p> <p>Due to the deficit of the pension budget, through GEO 148/2005, the child raising benefit was financed by the state budget and removed from the scope of the social insurance system. The eligibility criterion was 12 months of professional income subject to income tax according to Law no. 571/2003 on the Fiscal Code, before the child birth. There were taken into account and assimilated periods (unemployment, sick leave, college attending, etc.). The amount of the benefit was set at 800 RON in 2006. In 2007 the amount of the benefit was split as: 600 RON the child-raising benefit and 200 RON the state allowance for children up to 2 (3, for disabled children) years. A new benefit was introduced, in the form of monthly incentive of 100 RON lei for parents who return to work before the child turns the age of 2 or 3 years, if disabled.</p>

	<p>In 2008, two changes of GEO 148/2005, Law no. 257/2008 of 1 January 2009 changes the amount of benefit fixed at of 85% of the average net monthly income of the person entitled and by GEO 226/2008, a ceiling is set at 4,000 RON.</p> <p>Due to the financial crisis, by Law no.118 / 2010 the amount of the benefit is reduced by 15%, but not less than 600 RON.</p> <p>The last important change was through the Government Emergency Ordinance no.111 / 2010 on child raising benefit which introduced the possibility of option for the duration and accordingly for the amount of the benefit until the child is aged 1 year, 2 years or 3 years for a child with disabilities. Thus, if the parent chooses to stay in the child -raising leave until the child is ages 1 year, he/she received a monthly allowance of 75% of the average net income of the last 12 months, which cannot be less than RON 600 or more than RON 3,400. If the parent returns at work until the child turns 1 year of age, the incentive was 500 RON and is paid until the child turns 2 years old. If the parent does not return to the labor market, it may choose to grant unpaid leave to care for children aged 1 year and 2 years. If the parent chooses to stay in the parental leave until the child is aged 2 years, the parent receive a monthly allowance of 75% of the average net income of the last 12 months, but not less than 600 RON and a maximum of 1,200 RON; In this case the incentive for work returning is not available. If a parent has twins, the amount of the benefit is supplemented with 600 RON.</p> <p>Number of beneficiaries:</p> <p>2006: 186,342  2007: 189,990  2008: 179,070  2009: 191,174  2010: 206,264  2011: 196,680  2012: 160,028  2013: 142,170  2014: 130,579</p>
<p><b>DESCRIPTION OF THE SALARY-RELATED CHILD-RAISING BENEFIT</b></p>	<p><b>Level of the benefit</b></p> <p>The beneficiary is entitled to opt for the duration of the benefit:</p> <ul style="list-style-type: none"> <li>- child-raising leave and indemnity for the child aged up to one year, or</li> <li>- child-raising leave and indemnity for the child aged up to two years.</li> </ul> <p>The amount of the benefit varies according to the duration of the benefit and the previous incomes of the claimant.</p> <p>1) If the option is child-raising leave and indemnity for the child aged up to one year, the amount of the benefit is 85% of the average net income earned during the last 12 months preceding the contingency, but not less than 1.2 RSI and not more than 6.8 RSI, where RSI = Reference Social Indicator = RON 500 (EUR 111)  The amount of the benefit is between 600 and 3400 RON (EUR 133-756)</p>

		<p>2) If the option is child-raising leave and indemnity for the child aged up to two years, the amount of the benefit is 85% of the average net income earned during the last 12 months preceding the contingency, but not less than 1.2 RSI and not more than 2.4 RSI, where RSI = Reference Social Indicator = RON 500 (EUR 111)</p> <p>The amount of the benefit is between 600 and 1200 RON (EUR 133-267)</p> <p>If the child is disabled, the benefit is paid until the child aged up to three years. In this case the amount is 85% of the average net income earned during the last 12 months preceding the contingency, but not less than 1.2 RSI and not more than 6.8 RSI, where RSI = Reference Social Indicator = RON 500 (EUR 111). The amount of the benefit is between 600 and 3400 RON (EUR 133-756).</p> <ul style="list-style-type: none"> <li>• 12 months period of taxable personal income before the child birth,</li> <li>• take leave to raise the child,</li> <li>• living with the child, being responsible for him/her</li> <li>• fulfilment of the fiscal obligations owed to the local budgets (this requirement does not apply to single-parent families).</li> </ul>
	<p><b>Conditions of entitlement</b></p>	<p>For entitlement, there are taken into account assimilated periods when the persons:</p> <ul style="list-style-type: none"> <li>- Received social security benefits (unemployment, pensions, sickness, child raising benefits)</li> <li>- temporary interrupted the activity, at the employer's initiative, without termination of the contract</li> <li>- 3 months between the date of termination of an employment contract for a definite term and the date of beginning of another employment contract of limited duration;</li> <li>- accompanied the husband / wife sent in permanent mission abroad;</li> <li>- performed military service on a voluntary basis, were concentrated, mobilized or prisoner;</li> <li>- attended without interruption day courses of postgraduate education or, if applicable, graduate level university masters, organized by law in the country or in another Member State of the European Union in a recognized field Ministry of Education, Research, Youth and Sports, unless discontinuation rates for medical reasons;</li> <li>- had the status of doctoral student, as provided by art. 20 and 21 of Government Decision no. 567/2005 on the organization and development of doctoral studies, with subsequent amendments;</li> <li>- was in the period between the end of a primary and secondary education and start in the same calendar year to another form of school education, at day</li> </ul>

<p>courses organized by law, frequented without interruption;  - was in vacation between the study years;  - received professional incomes in other EU Member State</p> <p>The benefit is calculated taking into account professional incomes (salary, incomes as self-employed and incomes from agricultural activity).</p>	
<p>If the child is disabled, the benefit is paid until the child is aged three years.</p>	
<p>Both parents can claim the benefit, if they fulfil the conditions, but not simultaneously.  The benefit has to be split between the two parents, at least one month. Is the option of the parents how they split the benefit.</p>	
<p>Yes, all the incomes received are taken into account.</p>	
<p>The benefit is intended to help the family raising the child, improve the reconciliation of work, private and family life, improve the natality and exercise the parental leave rights.</p>	
<p>The benefit is paid directly by the local authorities, from the state budget. It is not considered a social insurance benefit.</p>	<p><b>Exclusively or partially calculated with respect to salary</b></p> <p><b>Maximum duration of the benefit</b></p> <p><b>Who can claim the benefit (one or both parents?) and for how long in case of split entitlement between the parents?</b></p> <p><b>Can the benefit be claimed in case of partial reduction of income pursuant to part-time/flexible working?</b></p> <p><b>Is the benefit intended to complement the exercise of parental leave rights (within the meaning of the Parental Leave Directive)?</b></p> <p><b>Are employers who have to pay the salary during statutory periods of parental leave entitled to either "offset" or claim reimbursement from the social security institution for salary paid to the employee</b></p>

	<p><b>during parental leave?</b></p>	
<p><b>CAN A PARENT RECEIVE A SALARY-RELATED CHILD-RAISING BENEFIT REGARDLESS OF WHICH PARENT FACTUALLY FULFILLS THE CONDITIONS OF ENTITLEMENT UNDER NATIONAL LAW AND IF SO HOW?</b></p>	<p><b>Is it possible that both parents claim salary-related child-raising benefits and if so, how are such rights divided between parents; can these be exercised simultaneously?</b></p>	<p>It is possible for each parent to claim the benefit, if they are entitled, but not simultaneously.</p> <p>It is the option of the parents how they split the benefit.</p> <p>When a parent take the child-raising benefit, during that period (1 year or 2 years), the other parent has to take at least 1 month child-raising benefit. If not, that month cannot be claimed by the long term beneficiary of the benefit.</p> <p>In case that the mother takes child raising leave for the child aged up to 1 year, she is entitled to only 11 month of benefit. If the father doesn't claim the benefit, 1 month of the benefit is lost.</p> <p>Each parent receives the benefit according to his/her previous incomes.</p> <p>The entitlement to the benefit is individual.</p> <p>Conditions to entitlement for the parent are to leave the professional activity in order to raise the child and to live with the child, to be responsible for his/her maintenance.</p>

	<p><b>Is the benefit intended to complement the exercise of parental leave rights (within the meaning of the Parental Leave Directive)?</b></p>	<p>The benefit is increasing – period and amount – and the plan is further increase to 75% from monthly earnings. There is additional payment to the Maternity benefit up to amount of the Parental Allowance if the amount of the maternity benefit is less than the Parental Allowance</p>
<p><b>Are employers who have to pay the salary during statutory periods of parental leave entitled to either "offset" or claim reimbursement from the social security institution for salary paid to the employee during parental leave?</b></p>		<p>For the purposes of extended care of children, employers are obliged to grant women and men who so request, parental leave until the day the child turns three years old (it can be requested at any time up to the age of 3 years, (in case of children with long-term poor health requiring special care until six years), even if the mother/father has been working after the maternity/paternity leave). An employer must excuse the employee's absence from work on the grounds of incapacity for work due to illness or injury, periods of maternity and parental leave, quarantine, attending to a sick family member or caring for a child younger than 10 years of age who for important reasons, cannot be left in the care of a childcare establishment or school that the child normally attends, or in case of medical examination of the person who otherwise takes care of the child. An employer has to contribute to sickness insurance (maternity) 3% of covered monthly earnings . Equalisation benefit during the pregnancy and maternity: - Affiliation to the sickness insurance system - Transfer to another job in respect of pregnancy or maternity - Reduced earnings as a consequence of the transfer. Equalisation Benefit during pregnancy and maternity: - 55% of the difference between previous and actual wage after transferring to another job ( up to 55% of the national average wage). The benefit is granted for a period of pregnancy or maternity, at longest until the end of the 9<sup>th</sup> month after confinement</p>

	<p><b>Is it possible that both parents claim salary-related child-raising benefits and if so, how are such rights divided between parents; can these be exercised simultaneously?</b></p>	<p>Parental leave – maternity benefit can be taken by the mother or the father until the child is three years old. For children with long-term health problems, parental leave can be extended until the child reaches six years of age. Who will use parental leave depends on parent’s decision.          Father has a right for 28 months for maternity benefit. After 34 or 43 weeks of maternity benefit for mother, father can start with parental leave maximum 28 weeks (condition is sickness insurance, and mother is not apply for parental allowance.). So, together maximum is 62 – 71 weeks on maternity benefit (without parental allowance). So both parents can use maternity benefit, but not simultaneously, but continuously. After this period parent can claim parental allowance.          The parental leave is to a great extent used by women (1 – 2% of men take parental leave)</p>
<p><b>CAN A PARENT RECEIVE A SALARY-RELATED CHILD-RAISING BENEFIT REGARDLESS OF WHICH PARENT FACTUALLY FULFILLS THE CONDITIONS OF ENTITLEMENT UNDER NATIONAL LAW AND IF SO HOW?</b></p>	<p>Yes, under the conditions of voluntary sickness insured person</p>

They are granted</p> <ul data-bbox="743 259 855 1621" style="list-style-type: none"><li>- at birth of a child as parental allowance, (<i>starševski dodatek</i>) and birth grant (<i>pomoč ob rojstvu otroka</i>),</li><li>- for raising of a child as child benefit (<i>otroški dodatek</i>) and large family supplement (<i>dodatek za veliko družino</i>),</li><li>- for disabled children child as child-care supplement (<i>dodatek za nego otroka</i>), and partial payment for lost income (<i>delno plačilo za izgubljeni dohodek</i>).</li></ul> <p data-bbox="887 230 943 1621">Some of family benefits are salary-related. Salary (or proportion of it) is used either as a qualifying condition or for calculating the benefit level.</p> <p data-bbox="951 230 1031 1621"><i>Parental allowance</i> (for those not entitled to parental care insurance benefits) is calculated as a flat-rated amount set at 55% of minimum salary, but should from 2016 onward be set as a fixed amount of 252.04 euro monthly, which fully corresponds to 55% of minimum salary).</p> <p data-bbox="1038 230 1110 1621"><i>Birth grant</i> (otherwise excluded from coordination rules) was transformed from universal to selective benefit during the crisis. It is provided to families whose income per family member does not exceed 64% of average salary in Slovenia</p> <p data-bbox="1118 230 1238 1621">There are 8 income brackets (during the times of crisis only 6, i.e. without the two highest) for the entitlement to a <i>child benefit</i>. They are set with the relation to average salary in Slovenia (the highest income bracket, i.e. the 8<sup>th</sup> bracket is for families whose income does not exceed 99% of average salary per family member, if it does, there is no entitlement; during the crisis the 6<sup>th</sup> bracket, i.e. 64% of average salary, is applied).</p> <p data-bbox="1246 230 1294 1621">Also <i>large family supplement</i> was transformed from universal to selective benefit during the crisis. It is provided to families whose income per family member does not exceed 64% of average salary in Slovenia.</p> <p data-bbox="1302 230 1382 1621"><i>Partial payment for lost income</i> is paid to one of the parents who leaves the labour market or works part-time. It amounts to 734.15 euro (or its proportionate part in case of part-time work). This amount corresponds exactly to the minimum wage in the first half of 2010. <i>Child-care supplement</i> is a flat-rate benefit, not salary-related.</p>

Family benefits will not be explained further, since they are not related to the individual salary, but rather to minimum or average salary in Slovenia.

### **Historical development**

Family benefits were introduced in 1993 with the Family Benefits Act (*Zakon o družinskih prejemkih, ZDPpre*). Family benefits were:

- benefit during the maternity leave (leave was regulated under labour law). It was an insurance based benefit, since (low, but nevertheless) contributions had to be paid, and it was salary-related (calculated as 100% of beneficiary's average salary in the preceding 12 months),
- parental allowance,
- birth grant,
- child benefit (at first envisaged as universal benefit, but at first deferred and later amended, so it was never universal in practice, but the threshold was rather high).

In the year 2001 the Parental Care and Family Benefits Act (*Zakon o starševskem varstvu in družinskih prejemkih-ZSDP*) was introduced. It was composed of two parts. In the first parental care insurance was regulated and in the second one family benefits. Parental care insurance provided the rights to:

- parental leave (composed of maternity, paternity, and child-care leaves),
  - parental benefit (composed of maternity, paternity, and child-care leaves),
  - part-time work due to parenthood with partial payment of social security contributions.
- All these benefits were individualised and salary-related.

Family benefits were provided:

- at birth: parental allowance and birth grant,
  - for raising of a child: child benefit and large family supplement,
  - for disabled children: child-care supplement and partial payment for lost income.
- Average or minimum salary was used to either set the entitlement conditions or for calculating the benefit.

In the year 2014 new Parental Care and Family Benefits Act (*Zakon o starševskem varstvu in družinskih prejemkih- ZSDP-I*, Official Gazette of the Republic of Slovenia, no. 26/2014) was passed. It follows the structure of former ZSDP (affected also with several anti-crisis laws), with some modifications. The latter concern different names of benefits, longer paid paternity benefit (after the crisis), transferability of parental benefit and some other. Benefits are described above (under Introduction).

No statistical data is available yet for the new benefit or payment of social security contributions during breast-feeding break.

**DESCRIPTION OF THE SALARY-RELATED CHILD-RAISING BENEFIT**

**Level of the benefit**

Maternity benefit is 100% of the basis from which the contributions for parental protection insurance have been calculated in consecutive 12 months, by taking into account a month before the last month prior to the submission of the first application for parental leave. The payment of maternity benefit may not be higher than two times the average monthly wage and cannot be less than 55% of minimum wage as set in 2006 and adjusted by the Act Regulating Adjustments of Transfers to Individuals and Households in the Republic of Slovenia (such minimum wage is lower than then the actual minimum wage in 2015).

Paternity benefit and parental benefit (also for adoptive parents) are: 90% of the basis from which the contributions for parental protection insurance have been calculated in consecutive 12 months, by taking into account a month before the last month prior to the submission of the first application for parental leave (100% when the basis does not exceed €763.06).  
Payment of paternity and parental benefit may not be higher than two times the

		<p>average monthly wage and cannot be less than 55% of minimum wage as set in 2006 and adjusted by the Act Regulating Adjustments of Transfers to Individuals and Households in the Republic of Slovenia (such minimum wage is lower than then the actual minimum wage in 2015).</p> <p>Social security contributions during part-time work due to parenthood, or for leaving the labour market in case of four or more children are paid from minimum salary (or its proportionate part in case of part-time work).</p> <p>Benefit or payment of social security contributions during breast-feeding break is provided as proportionate part of minimum salary (for one hour daily), until the child reaches nine months. From nine to 18 months only contributions from the proportionate part of minimum salary are paid (by the State).</p>
	<p><b>Conditions of entitlement</b></p>	<p>The beneficiaries of maternity benefit, paternity benefit or parental benefit must be covered by the Parental Care Insurance and be insured prior to the first day of the leave.</p> <p>To maternity/paternity/parental benefit are entitled also persons not entitled to the leave, if they were insured for at least 12 months in the last three years before claiming the benefit. This is advantageous for the persons with career breaks.</p> <p>One of the parents taking care of a child is entitled to payment of social security contributions during part-time work due to parenthood or for leaving the labour market in case of four or more children. In the latter case parental care insurance in the last 12 months is required.</p> <p>Benefit/contributions for breast-feeding break are provided to full-time employed mothers.</p>
	<p><b>Exclusively or partially calculated with respect to salary</b></p>	<p>Exclusively calculated with respect to salary: 100% (maternity benefit) and 90% (parental and paternity benefit, could be 100% when the basis does not exceed €763.06) of the basis from which the contributions for parental protection have been calculated in consecutive 12 months, by taking into account a month before the last month prior to the submission of the first application for parental leave.</p> <p>Calculated with respect to minimum salary are (proportionate) social security contributions during part-time work due to parenthood or for leaving the labour market in case of four or more children and benefit/contributions for breast-feeding break.</p>

**Maternity benefit**

105 calendar days, of which 28 days before the confinement. Use of 15 days before and/or after the birth is mandatory.

**Paternity Benefit**

Paid leave of 15 days, to be used during the first 6 months of the child's life. Exceptionally during the first 12 months when: a child is continuously in a hospital; father is continuously absent due to work assignments; adoption is after six months of child age. Further unpaid leave of 75 days, to be used until the child's 3rd birthday, during which the State pays social security contributions for the father. When the GDP rises above 2,5% the paternity leave for the fathers will last 30 days (15 days until the age of the child of six/in some cases 12 months and 15 days after the parental leave-until the end of child's first grade of elementary school), all with wage compensation.

**Parental benefit**

The right to parental leave/benefit may be exercised by both parents and under legally specified conditions also by other persons. Each parent has the right to 130 days of parental leave (together 260 days). Mother can transfer to a father 100 days of parental leave and a father can transfer to a mother 130 days of parental leave. Parental leave follows immediately after maternity leave and is intended for the further care and protection of the child. Parental leave shall be used in a continuous series in the form of full or partial absence from work.

In exceptional cases, parental leave may be prolonged:

- leave is extended by 90 days for the birth of twins,
- for each additional live born child, leave is extended by a further 90 days,
- for a premature birth, leave is extended by the number of days that the pregnancy was shorter than 260 days,
- for the birth of a child needing special care and protection leave is extended by 90 days (on the basis of the opinion of a medical commission),
- in a case in which the parents at the time of the birth are already providing care and protection to 2 children, not finished the first grade of elementary school, leave is extended by 30 days,
- in a case in which the parents at the time of the birth are already providing care and protection to 3 children, not finished the first grade of elementary school, leave is extended by 60 days,

**Maximum duration of the benefit**

		<ul style="list-style-type: none"> <li>• in a case in which the parents at the time of birth are already providing care and protection to 4 or more children, not finished the first grade of elementary school, leave is extended by 90 days.</li> </ul> <p>Part of the parental leave of children lasting a maximum of 75 days may be transferred and used up until the child finishes the first grade of elementary school.</p> <p>Adoptive parents have the right to parental leave, under same conditions as biological parents.</p> <p>Social security contributions during part-time work due to parenthood are paid until one child reaches three years of age, or in case of two or three children the youngest finishes the first grade of elementary school. Contributions for leaving the labour market in case of four or more children are paid until the youngest child finishes the first grade of elementary school.</p> <p>Benefit/contributions for breast-feeding break are paid until the child reached nine months or 18 months, respectively.</p>
	<p><b>Who can claim the benefit (one or both parents?) and for how long in case of split entitlement between the parents?</b></p>	<p>Maternity leave/benefit is intended for preparation for giving birth and care and protection of the child immediately after birth. The mother has the right to maternity leave. This right may only exceptionally be exercised by the father or another person, e.g. if the mother dies, leaves the child or is temporarily/permanently unable to care for a child). This right is as a rule not transferable.</p> <p>Paternity leave/benefit is intended for fathers to be able to share with the mother the child's care and protection during the child's most sensitive period. Exceptionally it may be used by another person, mother's spouse or extramarital or same-sex partner, if s/he is actually carrying for a child and up to the duration not yet used by the father. This right is as a rule not transferable.</p> <p><b>Parental leave</b></p> <p>The right to parental leave/benefit may be exercised by both parents and under legally specified conditions also by other persons. Each parent has the right to 130 days of parental leave (together 260 days). This right is transferable. Mother can transfer to a father 100 days of parental leave and a father can transfer to a mother 130 days of parental leave.</p> <p>One of the parents (a mother or a father) taking care of a child may claim the payment of social security contributions during part-time work due to parenthood or</p>

		<p>for leaving the labour market in case of four or more children. In case of two children payment of contributions for part-time work is non-transferable for one year (mother) and one year (father).</p> <p>Benefit/contributions for breast-feeding break may be claimed by a mother.</p>
	<p><b>Can the benefit be claimed in case of partial reduction of income pursuant to part-time/flexible working?</b></p>	<p>Maternity leave/benefit has to be used in a form of in a continuous series with full time absence from work.</p> <p>Paternity and pa parental leaves/benefits may be used in the form of full or partial absence from work. In the latter case, there is a possibility to work-part time and receive corresponding part of the benefit.</p> <p>One of the parents taking care of a child may claim the payment of social security contributions during part-time work due to parenthood.</p>
	<p><b>Is the benefit intended to complement the exercise of parental leave rights (within the meaning of the Parental Leave Directive)?</b></p>	<p>Maternity, paternity and parental benefits are paid during maternity, paternity and parental leave. New law has been adopted in 2014 (ZSDP-1) also to meet the requirements on (non-) transferability of benefits. Although the Parental Leave Directive leaves social security matters to the Member States, in Slovenia, social security benefits are provided during mentioned leaves.</p>
	<p><b>Are employers who have to pay the salary during statutory periods of parental leave entitled to either "off-set" or claim reimbursement from the social security institution for salary paid to the employee during parental leave?</b></p>	<p>Employers do not have to pay salary during maternity, paternity and parental leave. Benefits are financed by contributions and taxes and are paid from the social security system (parental care insurance) directly to the beneficiaries.</p>

	<p><b>Is it possible that both parents claim salary-related child-raising benefits and if so, how are such rights divided between parents; can these be exercised simultaneously?</b></p>	<p>Parental benefit can be exercised simultaneously by both parents only for the periods, that the parental benefit is prolonged (for example 90 days extension is provided for the birth of twins, of which both parents can exercise simultaneously 45 days each).</p>
<p><b>CAN A PARENT RECEIVE A SALARY-RELATED CHILD-RAISING BENEFIT REGARDLESS OF WHICH PARENT FACTUALLY FULFILLS THE CONDITIONS OF ENTITLEMENT UNDER NATIONAL LAW AND IF SO HOW?</b></p>	<p>No. Maternity, paternity and parental benefits are personal benefits. The parent, who is entitled to the benefit, must be insured prior to the first day of the leave (or at least 12 months in the preceding three years).</p>	

## SPAIN

REPLY	
<b>HISTORY OF THE SALARY-RELATED CHILD-RAISING BENEFIT</b>	<p>In Spain, since 2011, there has been a salary-related (income replacement) child-raising benefit.<sup>90</sup> The purpose of the benefit is to support parents that take care of children (under 18 years) affected by cancer or any other serious illness. The benefit allows one of the working parents to reduce his/her working hours for said reason. The proportional reduction in salary is compensated by this benefit.</p> <p>Obviously the scope of this benefit is not raising every child only sick children, but it is the only child raising benefit with an income replacement goal in Spain.<sup>91</sup></p> <p>This benefit is rarely used. The last available statistics (July 2015<sup>92</sup>) show that currently there are merely 1970 active beneficiaries. The average duration of the benefit is less than one year (308 days).</p>
<b>DESCRIPTION OF THE SALARY-RELATED CHILD-RAISING BENEFIT</b>	<p><b>Level of the benefit</b></p> <p>Up to 100% of the contribution base for professional risks (the benefit is proportional to the reduction of the working hours). The contribution base for professional risks is the monthly proportional share of the gross annual salary including overtime. The base is capped up and down (the current minimum contribution base is 756,00 €/month and the maximum is 3.606,00 €/month).</p>

<sup>90</sup> Codified Text of the General Law on Social Security (Royal Legislative Decree 1/1994 Article 135 quarter) developed by Royal Decree 1148/2011.

<sup>91</sup> The following benefits have not been considered relevant to the purpose of this questionnaire:

- non contributory flat rate family benefits
- maternity benefit linked with parental leave (normally 16 weeks for one of the parents although it can be shared)
- paternity benefit (usually 13 days for the father for attending the mother and/or the baby)
- breastfeeding benefit (in case that there is a breastfeeding health risk because of the type of work performed by the mother during the first 9 months of the baby's life)

<sup>92</sup> [http://www.seg-social.es/Internet\\_1/Estadistica/Est/Otras\\_Prestaciones\\_de\\_la\\_Seguridad\\_Social/EstadisticasCUME/Riesgoadurantelembarazo2015/index.htm](http://www.seg-social.es/Internet_1/Estadistica/Est/Otras_Prestaciones_de_la_Seguridad_Social/EstadisticasCUME/Riesgoadurantelembarazo2015/index.htm)

	<p style="text-align: center;"><b>Conditions of entitlement<sup>93</sup></b></p>	<p>The conditions of entitlement are the following</p> <ul style="list-style-type: none"> <li>- Being a parent<sup>94</sup> (by birth or adoption) of a child under 18 years of age that suffers cancer or any other serious illness, requires long term hospitalization and direct and continuous care.</li> <li>- Both parents are active workers insured in a Social Security scheme and up to date on her/his contribution obligations</li> <li>- The beneficiary (only one parent) reduces the working hours at least by 50% of the full time working hours and fulfills the minimum contribution period requirement.<sup>95</sup></li> </ul>
<p style="text-align: center;"><b>Exclusively or partially calculated with respect to salary</b></p>	<p>It is not calculated with respect to salary but with respect to the reference contribution base instead.</p> <p>The reference contribution base is the one for professional risks.</p> <p>The contribution base for professional risks is the monthly proportional share of the gross annual salary including overtime. The base is capped up and down (the current minimum contribution base is 756,00 €/month and the maximum is 3.606,00 €/month).</p>	
<p style="text-align: center;"><b>Maximum duration of the benefit</b></p>	<p>The benefit is granted initially for 1 month and extended on a 2 months period basis as long as the illness persists, the beneficiary wants to maintain the reduction of the working hours and the child is under 18 years of age.</p>	
<p style="text-align: center;"><b>Who can claim the benefit (one or both parents?) and for how long in case of split entitlement between the parents?</b></p>	<p>Only one of the working parents can claim the benefit (but both parents have to be active workers)</p>	
<p style="text-align: center;"><b>Can the benefit be claimed in case of</b></p>	<p>Yes precisely it is necessary a minimum reduction of the working hours (50%) to be entitled to this benefit.</p>	

<sup>93</sup> Royal Decree 1148/2011 Articles 2, 3 y 4

<sup>94</sup> Or have the child under pre-adoption or permanent fostering

<sup>95</sup> The period varies depending on the age of the worker. For workers over the age of 26, the minimum contribution period is 180 days in the last 7 years or 360 days in total

	<p><b>partial reduction of income pursuant to part-time/flexible working?</b></p> <p><b>Is the benefit intended to complement the exercise of parental leave rights (within the meaning of the Parental Leave Directive)?</b></p> <p><b>Are employers who offer pay during statutory periods of parental leave entitled to either "off-set" or claim reimbursement from the social security institution for salary paid to the employee during parental leave?</b></p> <p><b>Is it possible that both parents claim salary-related child-raising benefits and if so, how are such rights divided between parents; can these be exercised simultaneously?</b></p>	<p>The benefit only covers for the proportional reduction of the salary (top ups apply) Part time workers could be also entitled to this benefit but only if the working hours are no less than the 25% of the fulltime working hours. For fulfilling this requirement, in case the part time worker is simultaneously hired by different employers, it is necessary to have into account total amount of working hours.</p> <p>No, this is an independent benefit.</p> <p>No. On the one hand, as stated in the previous answer, parental leave benefit and raising an ill child benefit are independent. On the other hand, during parental leave payment is made by the Social Security. The collective agreement may oblige the employer to complement the statutory benefit when the salary tops the contribution base, but compensation or reimbursement by the Social Security is not envisaged.</p> <p>Both parents cannot claim the benefit simultaneously. If both parents fulfill the entitlement requirements, they can alternate the right.</p>
<p><b>CAN A PARENT RECEIVE A SALARY-RELATED CHILD-RAISING BENEFIT</b></p>	<p>Only the parent that fulfils the requirements is entitled to the benefit.</p>	

**REGARDLESS OF WHICH PARENT

OF ENTITLEMENT UNDER NATIONAL LAW  
AND IF SO HOW?**

## SWEDEN

	REPLY
<b>HISTORY OF THE SALARY-RELATED CHILD-RAISING BENEFIT</b>	<p>Salary-related maternity benefit was introduced in the mid 1950:s, containing 90 days of income-related benefit ( Act on maternity support 1954:266). When the Act on social insurance (1962:381) was launched in 1962, the number of days with income-related benefit increased to 180. In 1974, maternity benefit was replaced by parental benefit, which still today is the salary-related child-raising benefit. The main novelty was that the parent taking care of the child, irrespective of gender, was entitled to benefit. The number of days with income-related benefit was initially the same (180), but gradually increased during the years to come.</p> <p>In 2014, 425 067 women received parental benefit and 344 947 men. The average number of days taken out by women was 94 and the average number of days taken out by men was 39. The average amount paid to men was 35 per cent higher than for women (Social Insurance Agency: Socialförsäkringen i siffor 2015).</p>
	<p><b>Level of the benefit</b></p> <p>80 per cent of the income of the parent, with a ceiling for income at 445 000 SEK (10 times the price base amount of 44 500 SEK) Chapter 12, paragraphs 25-26 of the Social Security Code, SCC</p>
	<p><b>Conditions of entitlement</b></p> <p>In order to be granted salary-related benefit for the first 180 days, the parent must have been insured for sickness benefit at a level exceeding 180 SEK per day for at least 240 days before the birth of the child. Being insured for sickness benefit presupposes having income in Sweden.</p> <p>In order to be granted the following days of salary-related benefit, the parent must be insured in the work-based insurance (having income from work in Sweden). There is thus no qualification time for these days (Chapter 12 paragraphs 35, 39 SCC).</p>
<b>DESCRIPTION OF THE SALARY-RELATED CHILD-RAISING BENEFIT</b>	<p><b>Exclusively or partially calculated with respect to salary</b></p> <p>Partially; 390 of 480 days are calculated with respect to salary (for those with no salary, flat-rate guaranteed benefit is granted for these days, amounting to 225 SEK per day). 90 days of flat-rate basic benefit, amounting to 180 SEK per day, are granted to all residents (Chapter 12 paragraphs 18-24 SCC).</p>
	<p><b>Maximum duration of the benefit</b></p> <p>The total number of days with parental benefit is 480, but the number of days with salary-related benefit is 390. 96 days may be taken out after the child is 4 years old and may be taken out until the child is 12 years old (Chapter 12 paragraphs 12,13 and 19 SCC).</p>
	<p><b>Who can claim the benefit (one or both parents?) and for how</b></p> <p>The parent taking care of the child can claim benefit. Days may be transferred between parents, except for 60 days (so called fathers months) (Chapter 12 paragraphs 15, 17 SCC).</p>

	<p><b>long in case of split entitlement between the parents?</b></p>	<p>Yes, the benefit may be taken out in parts: 1/8, 1/4, 1/2 and 3/4. It is thus common to reduce working hours and claim parental benefit part time (Chapter 12 paragraph 9 SCC)</p>
<p><b>Can the benefit be claimed in case of partial reduction of income pursuant to part-time/flexible working?</b></p>		<p>According to the Act on parental leave (1995:584) a person has a right to parental leave when taking out parental benefits, full-time or in parts (paragraphs 5-6).</p> <p><i>The right to leave during the first 18 months is however irrespective of taking out parental benefit. Also, a parent always has a right to reduce working hours up to 1/4 for a child under eight years old (paragraphs 5 and 7).</i></p>
<p><b>Is the benefit intended to complement the exercise of parental leave rights (within the meaning of the Parental Leave Directive)?</b></p>		<p>No issues.</p>
<p><b>Are employers who have to pay the salary during statutory periods of parental leave entitled to either "offset" or claim reimbursement from the social security institution for salary paid to the employee during parental leave?</b></p>		<p>The parents may take out benefit for one child each. Also, 30 days of benefit may be taken out by the parents at the same time for the same child during the child's first year (Chapter 12 paragraph 4a SCC).</p>
<p><b>Is it possible that both parents claim salary-related child-raising benefits and if so, how are such rights divided between parents; can these be exercised simultaneously?</b></p>		

**CAN A PARENT RECEIVE A SALARY-RELATED CHILD-RAISING BENEFIT REGARDLESS OF WHICH PARENT FACTUALLY FULFILLS THE CONDITIONS OF ENTITLEMENT UNDER NATIONAL LAW AND IF SO HOW?**

According to national law, the right to salary-related benefit is strictly connected to the parent him/herself fulfilling the conditions.

As parental benefit is classified as a maternity/paternity benefit as of September 1, 2011, the view is that it is only when the family members are not entitled to any equivalent benefits in the other Member State that they may receive parental benefit from Sweden (article 67 of R 883/2004 is not applicable), see Social Insurance Board Legal guidance 2011:01 .

<b>REPLY</b>	
<b>HISTORY OF THE SALARY-RELATED CHILD-RAISING BENEFIT</b>	<p>There have been some tries to introduce benefits for child-raising benefits in Switzerland. The most recent was a proposal, which was made by a member of the Federal parliament (see 11.3492 - Postulat "Congé parental et prévoyance familiale facultatifs" introduced by Anita Fetz); this proposal had no success. The Federal legislation only includes maternity leave benefits for women during 14 weeks (introduced on July 1<sup>st</sup> 2005); men cannot claim maternity leave benefits (Federal court ATF 140 I 305). In certain enterprises and public administrations (federal and community level) parents are allowed to take an unremunerated paternity leave (Report of the Government from October 2013 as a response to the above mentioned proposal 11.3492, p. 12: "Congé de paternité et conge parental - état des lieux et présentation de divers modèles").</p>

<b>REPLY</b>	
<b>HISTORY OF THE SALARY-RELATED CHILD-RAISING BENEFIT</b>	<p><b>Statutory Maternity Pay (SMP)</b> was introduced in 1987.</p> <p>The principal statutory provisions for Statutory Maternity Pay are contained in:</p> <ul style="list-style-type: none"><li>• The Social Security Contributions and Benefits Act 1992 (as amended). Part XII of the Act covers SMP</li><li>• The Statutory Maternity Pay (General) Regulations 1986 (SI 1986 No 1960)</li><li>• The Statutory Maternity Pay (Compensation of Employers) and Miscellaneous Amendment Regulations 1994 (SI 1994 No 1882)</li><li>• The Statutory Maternity Pay and Statutory Adoption Pay (Curtailment) Regulations 2014</li></ul> <p>Employees may have a right to 1 or 2 weeks paternity leave and <b>Statutory Paternity Pay</b>.</p> <p>Prior to 5 April 2015 employees were eligible for Statutory Additional Paternity Leave and <b>Additional Statutory Paternity Pay</b> if their partner returned to work before the end of their maternity (or adoption) leave or pay period. On 1 December 2014, the government introduced Shared Parental Leave (SPL) and <b>Shared Parental Pay (ShPP)</b> and abolished Statutory Additional Paternity Pay. This change applies to mothers whose babies are due on or after 5 April 2015 (see below).</p>
<b>DESCRIPTION OF THE SALARY-RELATED CHILD-RAISING BENEFIT</b>	<p><b>Statutory Maternity Pay</b> is paid at 90% of a person's average weekly earnings (before tax) for the first 6 weeks</p> <p>£139.58 or 90% of average weekly earnings (whichever is lower) for the next 33 weeks</p> <p>SMP is paid in the same way as wages (e.g. monthly or weekly). Tax and National Insurance are deducted.</p> <p><b>Statutory Paternity Pay</b> is paid at either £139.58 a week or 90% of their average weekly earnings (whichever is lower). Tax and National Insurance are deducted.</p>

To be eligible for **Statutory Maternity Pay** it is necessary to satisfy two conditions: The Continuous Employment Rule and the Earnings Rule.

To satisfy the continuous employment rule a person must have been employed by their employer for a continuous period of at least 26 weeks into the qualifying week (which is the 15th week before the week in which the baby is due). This period must include at least one day in the qualifying week. Although continuous employment usually means employment by the same employer without a break, there are some circumstances when breaks in employment can be disregarded. The employment rule may be modified slightly if the baby is born prematurely.

To satisfy the earnings rule a person's average weekly earnings must be at least equal to the lower earnings limit for National Insurance (NI) purposes (£112 a week for 2015/16 before tax).

Further qualifying conditions for Statutory Maternity Leave are that the woman must: be an employee not a 'worker' give her employer at least 28 days notice and proof of pregnancy.

### Conditions of entitlement

If employed by an agency, in each of the 26 weeks into the qualifying week, a person will satisfy the continuous employment rule as long as they did some work during any week which counts as a full week. Whether continuity of employment is deemed to be broken if weeks are not worked when working for an agency depends in general on whether the agency was able to offer work that week.

If a person changes jobs during pregnancy they are unlikely to be able to meet the SMP continuous employment rule although there are exceptions.

A person who has a visa that allows them to live and work in the United Kingdom but includes the condition that they have "no recourse to public funds" may still get SMP if they satisfy the qualifying conditions as SMP is not defined as public funds.

To be eligible for **Statutory Paternity Pay** an employee must be either the baby's biological father or the partner of the mother, and take responsibility for the child's upbringing. SPP is only payable while the employee is on paternity leave.

The conditions of entitlement to **Statutory Paternity Pay** require that a father must:

<p>- have worked for their employer continuously for at least 26 weeks by the end of the 15th week before the expected week of childbirth</p> <p>- be employed by their employer up to the date of birth</p> <p>- have average weekly earnings that are at least equal to the lower earnings limit for National Insurance (NI) purposes (£112 a week for 2015/16 before tax).</p>	
<p><b>Statutory Maternity Pay</b> is paid at 90% of average weekly earnings (before tax) for the first 6 weeks and</p> <p>£139.58 or 90% of average weekly earnings (whichever is lower) for the next 33 weeks.</p> <p><b>Statutory Paternity Pay</b> is paid at either £139.58 a week or 90% of their average weekly earnings (whichever is lower).</p>	<p><b>Exclusively or partially calculated with respect to salary</b></p>
<p><b>Statutory Maternity Pay (SMP)</b> is paid for up to 39 weeks.</p> <p><b>Statutory Paternity Pay</b> is payable for a maximum of 2 weeks but see below for Additional Statutory Paternity Pay (now abolished) and <b>Shared Parental Pay (ShPP)</b> effective since 5 April 2015.</p>	<p><b>Maximum duration of the benefit</b></p>
<p>On 1 December 2014, the government abolished Additional Statutory Paternity Pay and introduced Shared Parental Leave (SPL) and <b>Shared Parental Pay (ShPP)</b>. This change applies to mothers whose babies are due on or after 5 April 2015.</p> <p>Mothers can convert a portion of their Statutory Maternity Leave and Statutory Maternity Pay into ShPP to share with the other qualifying parent. Similar changes have been introduced with reference to adoption.</p> <p>Each parent qualifies separately for Shared Parental Leave (SPL) and Statutory Shared Parental Pay (ShPP). A person can get ShPP if they're an employee and one of the following applies. They are:</p> <p>eligible for Statutory Maternity Pay (SMP) (or Statutory Adoption Pay (SAP))</p> <p>eligible for Statutory Paternity Pay (SPP) and their partner is eligible for SMP, Maternity Allowance (MA) or SAP</p>	<p><b>Who can claim the benefit (one or both parents?) and for how long in case of split entitlement between the parents?</b></p>

<p>A person can also get ShPP if they're a worker and they're eligible for SMP or SPP.</p> <p>A couple who choose to take Shared Parental Leave receive Statutory Shared Parental Pay (ShPP). ShPP is £139.58 a week or 90% of average weekly earnings, whichever is lower.</p>		
<p>A person may work under their contract of service for the employer paying their <b>Statutory Maternity Pay</b> for up to 10 days during their Maternity Pay Period without losing any SMP. These days are known as Keep In Touch (KIT) days.</p> <p>Any work done as a KIT day, however brief, will count as a whole day for KIT purposes. Once the 10 KIT days have been used any further work undertaken will incur a loss of a week's SMP for the week in the Maternity Pay Period in which that work has been undertaken.</p>	<p><b>Can the benefit be claimed in case of partial reduction of income pursuant to part-time/flexible working?</b></p>	
<p>Maternity leave and pay are two separate entitlements.</p>	<p><b>Is the benefit intended to complement the exercise of parental leave rights (within the meaning of the Parental Leave Directive)?</b></p>	
<p>Employers can reclaim 92 per cent of the <b>Statutory Maternity Pay</b> they pay to an employee. This is usually through deduction from payments of tax and National Insurance contributions to HMRevenue and Customs (the tax authority). Small employers who qualify for Small Employers' Relief can recover 103 per cent which includes compensation for employer's National Insurance contributions paid on the Statutory Maternity Pay.</p>	<p><b>Are employers who have to pay the salary during statutory periods of parental leave entitled to either "off-set" or claim reimbursement from the social security institution for salary paid to the employee during parental leave?</b></p>	

	<p><b>Is it possible that both parents claim salary-related child-raising benefits and if so, how are such rights divided between parents; can these be exercised simultaneously?</b></p>	<p>Each parent qualifies separately for Shared Parental Leave (SPL) and <b>Statutory Shared Parental Pay (ShPP)</b>. If the mother gives notice to reduce her entitlement before she has received it for the full 39 weeks then any remaining weeks could become available as ShPP. To be qualify for ShPP the mother must be eligible for Statutory Maternity Pay, Maternity Allowance or Statutory Adoption Pay and the partner must be eligible for Statutory Paternity Pay. If both parents qualify for ShPP they can decide who will receive it, or how it will be divided. SPL and ShPP can be taken in three separate blocks and the arrangements can be changed for each block of leave/pay.</p>
<p><b>CAN A PARENT RECEIVE A SALARY-RELATED CHILD-RAISING BENEFIT REGARDLESS OF WHICH PARENT FACTUALLY FULFILLS THE CONDITIONS OF ENTITLEMENT UNDER NATIONAL LAW AND IF SO HOW?</b></p>		<p>Each parent qualifies separately for Shared Parental Leave (SPL) and <b>Statutory Shared Parental Pay (ShPP)</b>. ## INTRODUCTION

The "Revision of Regulation (EC) No 883/2004 and Regulation (EC) No 987/2010" forms part of the Labour Mobility Package, included in the Commission's 2015 Work Programme.

Already in 2013 and 2014 an impact assessment and a draft proposal for legislation was prepared. The proposal was drafted in response to the 2011 Council's call for a revision of the rules on unemployment benefits in order to strengthen the link between contributions and benefits, and in view of the need to respond to the introduction of a new type of "long-term care benefit" at national level in view of population change. The adoption of the proposal was originally scheduled for spring 2014. However, in view of the European Parliament elections and the need for a political level playing field, the initiative was put 'on hold' and action to follow it up was left to the new Commission. In its Work Programme for 2015, the Commission announced to adopt a 'Labour Mobility Package', of which the revision of Regulation (EC) No 883/2004 forms part. In this revision, the elements that were under consideration in 2014 will be combined with new policy initiatives.

As the studies were delivered in 2013, the figures used therein may call for an update in the light of newly available data. The purpose of the assignment is to provide the European Commission with updated data and statistics for the impact assessment report for the Revision of Regulation (EC) No 883/2004 and Regulation (EC) No 987/2010, in the fields of long-term care benefits, coordination of unemployment benefits for frontier workers and export of unemployment benefits, which can be directly integrated in the analytical part of the Impact Assessment Report.

The original Impact Assessment Report was based on three studies, which provided among others socio-economic data and indicators to evaluate the mobility trends of the insured persons and their family members, as well as the related (administrative) costs for the Member States' social security schemes:

- Doherty R., Vandresse B., Bulté S., Bardaji Horno M., Ulrich M., Pacolet J., De Wispelaere F. 2013. *Study for an impact assessment for revision of Regulations (EC) Nos 883/2004 and 987/2009*. DG EMPL **(see also Annex V)**
- Pacolet J., De Wispelaere F. 2013. *Additional analysis for the partial revision of the provision on the coordination of social security systems in Regulation (EC) No 883/2004*. DG EMPL **(see also Annex IX)**
- Pacolet J., De Wispelaere F. 2013. *Analysis of the characteristics and the duration of employed activity by cross-border and frontier workers for the purposes of coordinating unemployment benefits*. DG EMPL **(see also Annex X)**

The original calculation of the different options was not based on available administrative information but based on the composition of different variables (number of cross-border workers, unemployment rates, average annual unemployment benefit, number of pensioners living abroad, number of dependents receiving LTC benefits in kind and/or in cash, LTC spending per user in kind and/or in cash, etc.) coming from different data sources such as the Labour Force Survey, Eurostat, Eurostat Migration and migration population statistics, the 2012 Ageing Report and a limited ad hoc survey with 11

Member States. Most of the data applied to 2010 or 2011. In this report, we make an update of the different options by using data for 2013 or even 2014. In the meantime, also administrative information became available on the export of unemployment benefits (PD U2 Questionnaire) and a new Ageing Report (2015) has been published.

This report provides an overview of the updated tables by referring to the original numbering of the tables. The footnotes of these updated tables refer to the Annexes where these original tables are published. Moreover, the original tables are published in the Annexes of this report.

## UNEMPLOYMENT BENEFITS

Based on Labour force Survey (LFS) data, an estimation of the number of cross-border workers has been made. In the further analysis we considered all workers who worked in another country than the country of residence as cross-border workers. Workers who worked in a neighbouring country are considered as frontier workers. This is different from the legal definition. National unemployment rates were applied to the number of cross-border workers in order to estimate the number of unemployed cross-border workers. The unemployment rates of the country of employment and not of the country of residence have been applied on the number of cross-border workers. In order to estimate the budgetary impact of the baseline scenario, the estimated number of unemployed cross-border workers are multiplied by the annual unemployment benefit per unemployed by taking into account the annual average duration of the payment of the unemployment benefit.

**Table 2.2a UB: Main parameters for estimating the baseline scenario and the different options, 2013/2014**

## LONG-TERM CARE BENEFITS

The fact there is no specific coordination regime and a common definition, made it difficult to collect data on LTC. Member States did not explicit collect data on LTC and had no common understanding of LTC benefits. Administrative data on LTC are only available in specific forms dealing with the coordination rules of the sickness chapter. The number of those insured for health care living in another country than the competent country – which sometimes includes long-term care or to which LTC-insurance is closely linked – can be calculated based on the number of PD S1. However, no data are currently collected on the number of PD S1 within the framework of the Administrative Commission. The number of PD S1 was estimated by the sum of 3 categories:

- Cross-border workers (and their family members);
- Retired former cross-border workers (and their family members);
- Other mobile pensioners (and their family members).

Firstly, by way of using the LFS, the number of cross-border workers were estimated. Secondly, we assumed in the calculation model that 20% of the cross-border workers will have an insured family member. Thirdly, to estimate the total number of retired former cross-border workers, we applied the percentage of cross-border workers on the labour market to the number of pensioners in 2013 and this by individual (former) working Member State and assumed that 1 in 5 retired cross-border workers always had worked in the same Member State of employment. Fourthly, an estimation of the number of migrant pensioners was calculated by using the LFS. Finally, we assumed in the calculation model that 25% of the pensioners will have also an insured family member. The sum of all these categories results in an estimate of the number of PD S1. As next step we have estimated the cross-border expenditure on long-term care in kind and in cash based on figures from the 2015 Ageing Report. Here we have applied the average LTC benefits in cash and in kind per dependent user. It is as mobile citizens (workers, pensioners, their family members) are using this system of LTC as if they were nationals. This involves a 'potential' overestimation of the number of users of cross-border LTC benefits and the related expenditure due to fact some Member States consider their LTC benefit as not exportable. At the same time these estimates assume a complete 'take-up' of rights by mobile citizens which will not be the case in the baseline scenario.

**Table 2.17 LTC: Estimated number of PD S1 issued and received, by category, in ,000, 2013/2014**

	Competent Member State				Member State of residence			
	Incoming cross-border workers + 20% family members	Retired cross-border workers only worked abroad + 25% family members	Migrant pensioners + 25% family members	Estimated number of PD S1 issued	Outgoing cross-border workers + 20% family members	Retired cross-border workers only worked abroad + 25% family members	Migrant pensioners + 25% family members	Estimated number of PD S1 received

\* The assumptions made in order to estimate the number of 'retired cross-border workers' differs from the assumptions reported in Annexes V and IX. We assumed that 1 in 5 retired cross-border workers always had worked in the same Member State of employment while the original calculation assumes that all retired cross-border workers have worked in the same Member State of employment. This new assumption is based on administrative data from Luxembourg and avoids an overestimation of the number of retired cross-border workers with a PD S1. As a result, the number of retired cross-border workers taken into consideration is much lower compared to the original table (127 thousand compared to 503 thousand).

**Source** Estimate based on data LFS and 2015 Ageing Report. For the original Table 2.17 see Annex IX but also Table 21 Annex V

\* Please notice that the user percentages have changed for some Member States based on the 2015 Ageing Report compared to the 2012 Ageing Report. For instance, on the basis of the 2012 Ageing Report none of the Member States had a user percentage of zero for LTC benefits in cash while on the basis of the 2015 Ageing Report Belgium, Bulgaria, the Netherlands, Ireland and Hungary have apparently no LTC benefits in cash.

**Source** Estimate based on data LFS, 2015 Ageing Report and additional data provided by DG ECFIN.

\* In option 3.1 LTC benefits in cash are provided by the MS of residence. This will cause an important budgetary increase for some competent MS without or with few national social rights related to LTC benefits in cash (e.g. RO, SK, BG ...). This explains the high percentages of these MS.

Source Estimate based on data LFS and 2012 Ageing Report (See Annex IX p. 36)

## HOW TO OBTAIN EU PUBLICATIONS

### Free publications:

- one copy:  
via EU Bookshop (<http://bookshop.europa.eu>);
- more than one copy or posters/maps:  
from the European Union's representations ([http://ec.europa.eu/represent\\_en.htm](http://ec.europa.eu/represent_en.htm));  
from the delegations in non-EU countries  
([http://eeas.europa.eu/delegations/index\\_en.htm](http://eeas.europa.eu/delegations/index_en.htm));  
by contacting the Europe Direct service ([http://europa.eu/europedirect/index\\_en.htm](http://europa.eu/europedirect/index_en.htm))  
or calling 00 800 6 7 8 9 10 11 (freephone number from anywhere in the EU) (\*).

(\*) The information given is free, as are most calls (though some operators, phone boxes or hotels may charge you).

### Priced publications:

- via EU Bookshop (<http://bookshop.europa.eu>).

### Priced subscriptions:

- via one of the sales agents of the Publications Office of the European Union  
([http://publications.europa.eu/others/agents/index\\_en.htm](http://publications.europa.eu/others/agents/index_en.htm)).
