ANNEX III

Benchmark values for more stringent emission limit values referred to in Article 5(4)

All emission limit values set out in this Annex are defined at a temperature of 273,15 K, a pressure of 101,3 kPa and after correction for the water vapour content of the waste gases and at a standardised O₂ content of 6 % for combustion plants using solid fuels, 3 % for combustion plants, other than engines and gas turbines, using liquid and gaseous fuels and 15 % for engines and gas turbines.

ANNEX IV

Emission monitoring

- 1. Periodic measurements of SO_2 , NO_x and particulate matter shall be required at least every three years for medium combustion plants the rated thermal input of which is greater than 1 MW and less than 20 MW, and at least annually for medium combustion plants the rated thermal input of which is equal to or greater than 20 MW but less than 50 MW.
- 2. Measurements are only required for pollutants for which an emission limit value is laid down in Annex II for the plant concerned.
- 3. The first measurements shall be carried out within three months following the registration of the plant.
- 4. As an alternative to the measurements of SO_2 referred to in point 1, other procedures, verified and approved by the competent authority, may be used to determine the SO_2 emissions.
- 5. Sampling and analysis of polluting substances and measurements of process parameters as well as any alternatives used as referred to under point 4, shall be carried out in accordance with CEN standards. If CEN standards are not available, ISO, national or other international standards which ensure the provision of data of an equivalent scientific quality shall apply.
