↓ 404/2014 Art. 1 and Annex pt. 1(a)

1.2. Vehicles approved in a multi-stage process and registered as N₁ vehicles

In the case of multi-stage vehicles registered as N₁ vehicles, Member States shall, for each calendar year, record the following detailed data with regard to:

(a) the base (incomplete) vehicle: the data specified in points (a), (b), (c), (d), (e), (g), (h), (i), (n) and (o) of point 1.1, or, instead of the data specified in (h) and (i), the default added mass provided as part of the type-approval information specified in point 2.17.2 of Annex I to Directive 2007/46/EC;

(b) the base (complete) vehicle: the data specified in points (a), (b), (c), (d), (e), (g), (h), (i), (n) and (o) of point 1.1;

(c) the completed vehicle: the data specified in points (a), (f), (g), (h), (j), (k), (l), (m) and (o) specified in point 1.1.

Where any of the data referred to in points (a) and (b) of this point cannot be provided for the base vehicle, the Member State shall provide data with regard to the completed vehicle instead.

The format set out in Section 2 of Part C shall be used for completed N₁ vehicles.

The vehicle identification number referred to in point (o) of point 1.1 shall not be made public.

↓ 510/2011 (adapted)
→₁ 205/2012 Art. 1 and Annex pt.1(a)

2. →₁ The details referred to in point 1 shall be taken from the certificate of conformity or be consistent with the certificate of conformity issued by the manufacturer of the relevant light commercial vehicle. Where the certificate of conformity is not used, Member States shall put the necessary measures in place to ensure adequate accuracy in the monitoring procedure. ← Where the certificate of conformity specifies both a minimum and a maximum mass for a light commercial vehicle, the Member States shall use only the maximum figure for the purpose of this Regulation. In the case of bi-fuelled vehicles (petrol/gas) the certificates of conformity of which bear specific CO₂ emission figures for both types of fuel, Member States shall use only the figure measured for gas.

↓ 404/2014 Art. 1 and Annex pt. 1(b)

3. Member States shall, for each calendar year, determine:

~~(a) the sources used for the collection of the detailed data referred to in point 1;~~

(ba) the total number of new registrations of new light commercial vehicles subject to EC type-approval;

(eb) the total number of new registrations of new light commercial vehicles subject to multi-stage type-approval, where available;

(ec) the total number of new registrations of new individually approved light commercial vehicles;

(ed) the total number of new registrations of new light commercial vehicles approved nationally in small series.

↓ 404/2014 Art. 1 and Annex pt. 2(a)

B. Methodology for determining CO₂ monitoring information for new light commercial vehicles

Monitoring information which Member States are required to determine in accordance with points 1 and 3 of Part A of this Annex shall be determined in accordance with the methodology in this Part.

1. Number of new light commercial vehicles registered

Member States shall determine the number of new light commercial vehicles registered within their territory in the respective monitoring year divided into vehicles subject to EC type-approval, individual approvals and national approvals of small series and, where available, the number of multi-stage vehicles.

↓ 510/2011 (adapted)
⇒ new

2. *Completed vehicles*

In the case of multi-stage vehicles, the specific emissions of CO₂ of completed vehicles shall be allocated to the manufacturer of the base vehicle.

In order to ensure that the values of CO₂ emissions, fuel efficiency and mass of completed vehicles are representative, without placing an excessive burden on the manufacturer of the base vehicle, the Commission shall come forward with a specific monitoring procedure and shall ⇒ where appropriate ⇐ ~~review and~~ make the necessary amendments to the relevant type-approval legislation ~~by 31 December 2011 at the latest.~~

~~When defining such a procedure, the Commission shall, if appropriate, determine how the mass and CO₂ values are monitored, based on a table of CO₂ values corresponding to different final inertia weight classes or based on only one CO₂ value derived from the base vehicle mass plus a default added mass differentiated by N₁ class. In the latter case, this mass would also be taken for Part C of this Annex.~~

~~The Commission shall also ensure that the manufacturer of the base vehicle has timely access to the mass and to the specific emissions of CO₂ of the completed vehicle.~~

↓ 404/2014 Art. 1 and Annex pt.2(c)
⇒ new

Notwithstanding that ⇒ for the purpose of the calculation of the 2020 target in accordance with point 2 of Part B of Annex I ⇐ the default added mass shall be taken ~~from~~ ~~for~~ Part C of this Annex, where that mass value cannot be determined, the mass in running order of the

completed vehicle may be used for the provisional calculation of the specific emissions target referred to in Article ~~8~~7 (4).

Where the base vehicle is a complete vehicle, the mass in running order of that vehicle shall be used for the calculation of the specific emissions target. However, where that mass value cannot be determined, the mass in running order of the completed vehicle may be used for the provisional calculation of the specific emissions target.
