NOTE

Origine:	Secrétariat général du Conseil
Destinataire:	délégations
N° doc. Cion:	10857/21 - COM (2021) 554 final
Objet:	Paquet "Ajustement à l'objectif 55" Proposition de règlement du Parlement européen et du Conseil modifiant le règlement (UE) 2018/841 en ce qui concerne le champ d'application, la simplification des règles de conformité, la fixation des objectifs des États membres pour 2030 et l'engagement dans la réalisation collective de la neutralité climatique d'ici à 2035 dans le secteur de l'utilisation des terres, de la foresterie et de l'agriculture, et le règlement (UE) 2018/1999 en ce qui concerne l'amélioration de la surveillance, des rapports, du suivi des progrès et de la révision – Orientation générale – Déclaration

National statement on behalf of Slovakia
concerning
the Proposal for a Regulation of the European Parliament and of the Council amending
Regulations (EU) 2018/841 as regards the scope, simplifying the compliance rules and setting
out the targets of the Member States for 2030 [...], and (EU) 2018/1999 as regards
improvement in monitoring, reporting, tracking of progress and review (LULUCF revision
regulation)

Forests represent an important part of the land use, land use change and forestry (LULUCF) sector. As highlighted in the Bratislava Ministerial Declaration “The Future We Want: The Forests We Need”¹, signed by European ministers responsible for forests at the Eighth FOREST EUROPE Ministerial Conference, forests play a vital role in providing multiple benefits for the environment, economic and social development, and livelihoods in Europe.

Slovakia is convinced that, in order to ensure those multiple benefits of forests, we need to promote and apply a holistic and long-term vision on our forests in line with the relevant international commitments that promote sustainable forest management, including those taken within the framework of the FOREST EUROPE process. Only such an approach will ensure the fulfilment of all forest functions demanded by European citizens, including carbon sequestration, in a balanced and integrated way and in a long run.

Carbon emissions and removals in forests may be and often are a subject to significant short-term (inter-annual) as well as long-term fluctuations. Similarly, removals in forests achieved in the past may be released back to the atmosphere in case of natural disasters or during longer natural cycles. Therefore, long-term stability and adaptive capacity of forests and thus long-term stability of carbon stored in forests is a matter of a priority that goes beyond of any specific LULUCF target set for any particular year. This is also what the above mentioned internationally agreed principles for sustainable forest management say, among many other things.

In addition, Slovakia is convinced that long-term fluctuations of carbon emissions and removals in forests influenced by changes in the forest age structure may also have significant effects on the capacities and the ability of the LULUCF sector in some Member States to meet their nationally determined targets already in the period before 2030. Therefore, we are of the view that those effects should be adequately and specifically taken into account in the period from 2026 to 2030.

Slovakia is of the view that only by respecting the above mentioned principles we will ensure that our forests and the forest sector can adequately contribute to the overall Union's objective of climate neutrality.
