COVER NOTE

From: Secretary-General of the European Commission, signed by Ms Martine DEPREZ, Director

date of receipt: 1 March 2023

To: Ms Thérèse BLANCHET, Secretary-General of the Council of the European Union

No. Cion doc.: SWD(2023) 129 final

Subject: COMMISSION STAFF WORKING DOCUMENT EXECUTIVE SUMMARY OF THE IMPACT ASSESSMENT REPORT Accompanying the documents Proposal for a DIRECTIVE OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL on driving licences, amending Directive (EU) 2022/2561 of the European Parliament and of the Council, Regulation (EU) 2018/1724 of the European Parliament and of the Council and repealing Directive 2006/126/EC of the European Parliament and of the Council and Commission Regulation (EU) No 383/2012 and Proposal for a DIRECTIVE OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL on the Union-wide effect of certain driving disqualifications

Delegations will find attached document SWD(2023) 129 final.

COMMISSION STAFF WORKING DOCUMENT
EXECUTIVE SUMMARY OF THE IMPACT ASSESSMENT REPORT

Accompanying the documents

Proposal for a DIRECTIVE OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL

on driving licences, amending Directive (EU) 2022/2561 of the European Parliament and of the Council, Regulation (EU) 2018/1724 of the European Parliament and of the Council and repealing Directive 2006/126/EC of the European Parliament and of the Council and Commission Regulation (EU) No 383/2012

and

Proposal for a DIRECTIVE OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL

on the Union-wide effect of certain driving disqualifications

{COM(2023) 127 final} - {SEC(2023) 350 final} - {SWD(2023) 128 final}

Executive Summary Sheet

Impact assessment on a proposal for a revision of Directive on driving licences and a legislative proposal for a Directive on the Union wide effect of certain driving disqualifications, which was planned as an integral part of the DL Directive but due to legal considerations has been separated and is presented as an integral, separate legislative proposal for a new directive.

A. Need for action

What is the problem and why is it a problem at EU level?

The ex-post evaluation of Directive (EU) 2006/126, concluded in 2022 (SWD(2022)17 final), found that the Directive is not fully effective in achieving its objectives.

The implementation of the Directive has led to an improvement of road safety, thus contributing to the ambitious EU targets (Vision Zero and Valletta Declaration). However, more efforts are needed to meet these targets.

As regards the free movement of citizens in the EU, the Directive was considered to have had a positive impact, but certain provisions still result in administrative burden or obstacles to the free movement of persons in specific cases. Finally, the evaluation also identified digitalisation as an area for possible further simplification.

What should be achieved?

The general objectives are to improve road safety and facilitate the free movement of persons.

For road safety, this should be brought about through the improvement of drivers' skills and knowledge, a change in the behaviour of drivers and reducing the number of physically or mentally unfit drivers on Union roads. At the same time, unnecessary barriers to free movement resulting from administrative procedures should be removed.

What is the value added of action at the EU level (subsidiarity)?

Without EU intervention, cooperation on driving licences between Member States would be ensured by means of bi- or multilateral agreements which would result in higher complexity of the licencing system and a higher administrative burden for the licence holders. Moreover, the conditions to obtain a driving licence would vary, resulting in an unequal treatment of EU citizens and less effectiveness in terms of road safety.

B. Solutions

What are the various options to achieve the objectives? Is there a preferred option or not? If not, why?

The retained policy measures have been grouped in three policy options (PO-A, PO-B and PO-C).

PO-A is the update of the Directive considering lessons learnt and integrating societal, technological and scientific evolutions. It does not change the scope of the Directive and it contains measures which are also in PO-B and PO-C.

PO-B includes additional efforts to meet the EU targets on road safety targeting all drivers (including novice drivers) in the domains of skills and knowledge, medical fitness, and dangerous behaviour. It also removes some barriers on free movement faced by holders of foreign licences and applicants.

Finally, PO-C mainly reinforces the road safety measures introduced by PO-B regarding medical fitness and dangerous behaviour. It also extends the scope of the Directive to new vehicles such as tractors.

PO-B was selected as the preferred policy option because it is more effective in reaching the policy objectives than PO-A and PO-C. PO-B has the highest net benefits, and is more efficient than PO-C, also

due to much lower adjustment costs for citizens. PO-B is also legally easier to implement than PO-C regarding Member States rules and procedures.

What are different stakeholders' views? Who supports which option?

There is widespread support across stakeholders as regards the need for further action at EU level to improve road safety.

Public authorities generally favour an improvement of the effectiveness of the Directive and its extension to matters related to novice drivers. They also often highlight the legal challenges to overcome regarding the introduction of measures addressing the dangerous behaviour of drivers.

The private sector, and more generally road users, are generally calling for simplification.

C. Impacts of the preferred option

What are the benefits of the preferred option (if any, otherwise of main ones)?

Under PO-B, positive societal effects are expected in terms of impacts on road safety and on the free movement of persons.

1,153 lives are estimated to be saved and 11,020 serious injuries avoided over 2025-2050, relative to the baseline, that in monetary terms amounts to around EUR 7.1 billion, expressed as the reduction in the external costs of accidents.

In addition, the measures are expected to remove unjustified or unnecessary obstacles to obtain, have recognised or renew driving rights. Most notably for residents in the European Union and holders of foreign driving licences obtained in another Member State than their country of citizenship, drivers of alternatively fuelled vans and campervans, persons suffering from diabetes mellitus and professional drivers.

Finally, positive effects are expected for the public administrations (EUR 4.8 billion cost savings), the private sector (EUR 1.5 billion cost savings) and citizens (EUR 6.6 billion cost savings) relative to the baseline, expressed as present value over the 2025-2050 period, notably thanks to the proposed simplifications.

What are the costs of the preferred option (if any, otherwise of main ones)?

The changes to the procedures for determining the medical fitness to drive are expected to result in adjustment costs for citizens aged 50 years old or less of EUR 716.2 to 1159.1 million relative to the baseline, expressed as present value over the 2025-2050 period.

For the private sector, adjustment costs for general practitioners are estimated at EUR 57.7 million relative to the baseline, expressed as present value over the 2025-2050 period, for (online) training courses.

Adjustment costs for the European Commission are estimated at EUR 0.7 to 1.1 million relative to the baseline, while those for Member States administrations at EUR 63.2 million. In addition, enforcement costs of EUR 26.3 million are expected for Member States administrations, relative to the baseline, expressed as present value over the 2025-2050 period, for the cross-border enforcement of driving disqualifications.

What are the impacts on SMEs and competitiveness?
<p>The impacts on SMEs are expected to be positive.</p> <p>Road transport operators, mainly SMEs, are expected to benefit from the relaxation of rules. The hassle costs savings and the administrative costs savings are estimated, respectively, at EUR 600 and 900 million relative to the baseline, expressed as present value over the 2025-2050 period.</p> <p>The preferred policy option is expected to lead to 4,515 additional (online) training courses for general practitioners in 2030 and 5,057 in 2050, relative to the baseline. The resulting adjustment costs for general practitioners are estimated at EUR 57.7 million relative to the baseline, expressed as present value over the 2025-2050 period.</p> <p>Finally, other SMEs to be affected by the initiative will be the driving schools due to further harmonisation of the different categories of driving licences and updated rules for zero-emissions vehicles.</p>
Will there be significant impacts on national budgets and administrations?
<p>The preferred policy option is expected to result in adjustment costs for the Commission for an amount between EUR 0.7 to 1.1 million relative to the baseline, expressed as present value over the 2025-2050 period, for the establishment of an information platform on physical and mental fitness to drive and the development of an (online) training programme for general practitioners.</p> <p>Adjustment costs for Member State administrations are estimated at EUR 48.9 million relative to the baseline, expressed as present value over the 2025-2050 period, for the mobile driving licences and the update of driving tests. Additional EUR 14.3 million one-off adjustment costs are expected for the mobile driving licences and the improvement of RESPER for the purpose of enforcement. Finally, enforcement costs of EUR 26.3 million, relative to the baseline, expressed as present value over the 2025-2050 period, are expected for the cross-border enforcement of driving disqualifications.</p>
Will there be other significant impacts?
<p>The introduction of the EU mobile driving licence is expected to result in positive environmental impacts, estimated at approximately 130 tons of plastic (polycarbonate) saved annually.</p> <p>The updated definition of vehicles for category B and the new rules related to automatic gear transmission are expected to facilitate the transition to zero-emissions vehicles.</p> <p>Finally, the increased harmonisation and the mutual recognition of driving disqualifications should make the treatment of EU residents more equal regarding driving licences.</p>
Proportionality
<p>The preferred policy option does not go beyond what is needed to achieve the objectives and address the identified problems.</p>
D. Follow up
When will the policy be reviewed?
<p>No review is planned at this stage.</p>
