No. Cion doc.:	15111/1/21 REV 1 + ADD 1 REV 1
Subject:	Proposal for a Directive of the European Parliament and of the Council on common rules for the internal markets in renewable and natural gases and in hydrogen (recast) - Letter sent to the Chair of the European Parliament Committee on Industry, Research and Energy (ITRE)

Following the Permanent Representatives Committee meeting of 20 December 2023 which endorsed the final compromise texts on the abovementioned proposal with a view to agreement, delegations are informed that the Presidency sent the attached letter, together with its Annex, to the Chair of the European Parliament Committee on Industry, Research and Energy (ITRE).

Council of the
European Union

SGS 23/5532

Brussels, 20 December 2023

Mr Cristian-Silviu BUȘOI

Chair, European Parliament Committee on Industry, Research and Energy
B-1047 Brussels

Subject: Proposal for a Directive of the European Parliament and of the Council on common rules for the internal markets in renewable and natural gases and in hydrogen (recast)

Dear Mr Cristian-Silviu BUȘOI,

Following the outcome of the informal trilogue between the representatives of the three institutions held on 27 November 2023 in the European Parliament regarding the Directive in subject, the draft compromise text was agreed today by the Permanent Representatives Committee.

I am therefore now in a position to confirm that, should the European Parliament adopt its position at first reading, in accordance with Article 294 paragraph 3 of the Treaty, in the exact form as set out in the compromise text contained in the Annex to this letter, but subject to revision by the legal linguists of both institutions, the Council would, in accordance with Article 294, paragraph 4 of the Treaty, approve the European Parliament's position and the act shall be adopted in the wording which corresponds to the European Parliament's position.

On behalf of the Council I also wish to thank you for your close cooperation and expert Chairmanship which should enable us to reach agreement on this dossier at first reading.

Yours sincerely,

Mr Raúl FUENTES MILANI
Chairman of the Permanent Representatives
Committee (Part 1)

copy to: Ms Kadri Simson, Commissioner
Mr Jens Geier, Rapporteur

2021/0425 (COD)

Proposal for a

DIRECTIVE (EU) .../...

OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL

of ...

**on common rules for the internal markets in renewable *gas* and natural *gas* and in hydrogen,
amending Directive 2012/27/EU and repealing Directive 2009/73/EC (recast)**

(Text with EEA relevance)

THE EUROPEAN PARLIAMENT AND THE COUNCIL OF THE EUROPEAN UNION,

Having regard to the Treaty on the Functioning of the European Union, and in particular Article 194(2) thereof,

Having regard to the proposal from the European Commission,

After transmission of the draft legislative act to the national parliaments,

Having regard to the opinion of the European Economic and Social Committee¹,

Having regard to the opinion of the Committee of the Regions²,

Acting in accordance with the ordinary legislative procedure³,

Whereas:

¹ OJ C 211 , 19.8.2008 , p. 23 .

² OJ C 172 , 5.7.2008 , p. 55 .

³ Position of the European Parliament of ... (not yet published in the Official Journal) and decision of the Council of

- (1) Directive 2009/73/EC of the European Parliament and of the Council⁴ has been substantially amended several times. Since further amendments are to be made, that Directive should be recast in the interests of clarity.
- (2) The internal market in natural gas, which has been progressively implemented throughout the Union since 1999, aims to deliver real choice for all consumers of the European Union, be they citizens or businesses, new business opportunities and more cross-border trade, so as to achieve efficiency gains, competitive prices, and higher standards of service, and to contribute to security of supply and sustainability.
- (3) Directive 2003/55/EC of the European Parliament and of the Council⁵ and Directive 2009/73/EC have made a significant contribution towards the creation of such an internal market *for* natural gas.
- (4) As part of the Package ‘Clean Energy for all Europeans’ proposed by the Commission on 30 November 2016, Regulation (EU) 2019/943⁶ *of the European Parliament and of the Council*⁶ and Directive (EU) 2019/944⁷ *of the European Parliament and of the Council*⁷ brought about a further step in the development of the internal market for electricity with citizens at its core and contributing to the Union’s objectives of transition to a clean energy system and reducing greenhouse gas emissions. The internal market *for* natural gas should be built on those same principles and, in particular, ensure an equal level of consumer protection. *In particular, Union energy policy should address vulnerable customers and tackle energy poverty.*

⁴ Directive 2009/73/EC of the European Parliament and of the Council of 13 July 2009 concerning common rules for the internal market in natural gas and repealing Directive 2003/55/EC (OJ L 211, 14.8.2009, p. 94).

⁵ Directive 2003/55/EC of the European Parliament and of the Council of 26 June 2003 concerning common rules for the internal market in natural gas and repealing Directive 98/30/EC (OJ L 176, 15.7.2003, p. 57).

⁶ Regulation (EU) 2019/943 of the European Parliament and of the Council of 5 June 2019 on the internal market for electricity (OJ L 158, 14.6.2019, p. 54).

⁷ Directive (EU) 2019/944 of the European Parliament and of the Council of 5 June 2019 on common rules for the internal market for electricity and amending Directive 2012/27/EU (OJ L 158, 14.6.2019, p. 125).

- (5) *By means of Regulation (EU) 2021/1119 of the European Parliament and of the Council ('European Climate Law')⁸, the Union has committed to cut greenhouse gas emissions. The internal market rules for gaseous fuels need to be aligned with this Regulation accordingly. The Union has set out how to update the energy markets in this context, including the decarbonisation of markets for gas, in the Commission Communication of 8 July 2020 entitled 'Powering a climate-neutral economy: An EU Strategy for Energy System Integration' (the 'EU Energy System Integration Strategy') and Commission Communication of 8 July 2020 entitled 'A hydrogen strategy for a climate-neutral Europe' (the 'EU Hydrogen Strategy'), as well as the European Parliament resolution of 10 July 2020 on a comprehensive European approach to energy storage⁹. This Directive should contribute to achieving the Union's objective to cut greenhouse gas emissions, whilst ensuring security of supply and well-functioning internal markets for natural gas and hydrogen.*
- (5a) *This Directive should be seen in conjunction with other policy and legislative instruments, notably those proposed under the European Green Deal, such as the reform and extension of the Union's Emission Trading System, the Effort Sharing Regulation, the Renewable Energy Directive, the Energy Efficiency Directive, the ReFuelEU Aviation, FuelEU maritime initiatives seek to incentivise the decarbonisation of the Union's economy and ensure that it remains on a trajectory towards a climate neutral European Union by 2050, as mandated by the European Climate Law. The main objective of this Directive is to enable and facilitate such transition by ensuring the ramp up of a hydrogen market and an efficient market for natural gas.*

⁸ *Regulation (EU) 2021/1119 of the European Parliament and of the Council of 30 June 2021 establishing the framework for achieving climate neutrality and amending Regulations (EC) No 401/2009 and (EU) 2018/1999 ('European Climate Law') (OJ L 243, 9.7.2021, p. 1).*

⁹ *OJ C 371, 15.9.2021, p. 58.*

- (5b) *The Commission Communication of 8 March 2022 entitled ‘REPowerEU: Joint European Action for more affordable, secure and sustainable energy’ (REPowerEU, COM(2022) 230 final) that was adopted after Russia’s unprovoked and unjustified military aggression against Ukraine, highlighted the importance of diversification of gas supplies to phase out Europe’s dependency on Russian energy. It recognised that scaling up sustainable biomethane and the roll-out of renewable hydrogen could play a decisive role and to this end called on the institutions to rapidly adopt this Directive and the Recast Gas Regulation as proposed in COM(2021) 804 final.*
- (5c) *Regulation (EU) No 1227/2011 of the European Parliament and the Council of 25 October 2011 on wholesale energy market integrity and transparency ensures a set of obligations on gas market participants. National regulatory authorities should be responsible for ensuring that this Regulation is enforced in the Member States. These provisions are key to ensure that trading for gas is subject to transparency obligations.*
- (6) This Directive aims to facilitate the penetration of renewable gas and low-carbon **gas and hydrogen** into the energy system enabling a shift from fossil gas and to allow **renewable gas and low-carbon gas and hydrogen** to play an important role towards achieving the Union’s 2030 climate objectives and climate neutrality in 2050. **This** Directive aims also to set up a regulatory framework which enables and incentivises all market participants to **shift away from** fossil gas **and plan** their activities to avoid lock-in effects and ensure gradual and timely phase-out of fossil gas notably in all relevant industrial sectors and for heating purposes.

- (6a) *The integration of sustainable biomethane according to the criteria set out in Directive (EU) 2018/2001 of the European Parliament and of the Council¹⁰ in the natural gas system supports the Union's climate objectives and helps to diversify the energy supply. Requests for the grid connection of renewable gas production should be assessed within reasonable time limits and monitored by the relevant regulatory authorities. It should be possible to prioritise connection requests at transmission and distribution level for renewable gas production over connection request for the production of natural gas and low-carbon gas.*
- (7) The EU Hydrogen strategy recognises that, as EU Member States have different potential for the production of renewable hydrogen, an open and competitive EU market with unhindered cross-border trade has important benefits for competition, affordability, and security of supply. Moreover, it stresses that moving towards a liquid market with commodity-based hydrogen trading would facilitate entry of new producers and be beneficial for deeper integration with other energy carriers. It would create viable price signals for investments and operational decisions. The rules laid down in this Directive should thus be conducive for hydrogen markets, commodity-based hydrogen trading and liquid trading hubs to emerge and any undue barriers in this regard should be eliminated by Member States. Whilst recognising the inherent differences, existing rules that enabled efficient commercial operations developed for the electricity and *natural gas* markets and trading should be *considered for a hydrogen market. Whilst this Directive sets out general principles according to which also a hydrogen market is to operate, it is appropriate to take account of the development stage of this market in their application.*

¹⁰ *Directive (EU) 2018/2001 of the European Parliament and of the Council of 11 December 2018 on the promotion of the use of energy from renewable sources (OJ L 328, 21.12.2018, p. 82).*

- (8) In line with the EU Hydrogen Strategy, renewable hydrogen is expected to be deployed on a large-scale ***basis*** from 2030 onwards for the purpose of decarbonising certain sectors, ranging from aviation and shipping to hard-to-decarbonise industrial sectors. All final customers connected to hydrogen systems ***should*** benefit from basic consumer rights applicable to final customers connected to the natural gas system such as the right to switch supplier and accurate billing information. In those instances where customers are connected to the hydrogen network, e.g. industrial customers, they ***should*** benefit from the same consumer protection rights applicable to natural gas customers. However, consumer provisions designed to encourage household participation on the market such as price comparison tools ***and*** active customers ***should*** not apply to the hydrogen system.
- (9) In line with the EU Hydrogen Strategy, the priority for the ***Union*** is to develop renewable hydrogen produced using mainly wind and solar energy. Renewable hydrogen ***produced using biomass energy falls under the definition of biogas, as defined in Directive (EU) 2018/2001. Renewable hydrogen*** is the most compatible ■ with the ***Union***'s climate neutrality and zero pollution goal in the long term and the most coherent with an integrated energy system. However, ***renewable hydrogen production is not likely to scale fast enough to meet the expected growth in demand for hydrogen in the Union. Therefore, low-carbon fuels ('LCFs'), such as low-carbon hydrogen ('LCH'), may play a role in the energy transition in line with the Union's climate targets, particularly in the short and medium term to rapidly reduce emissions of existing fuels, and support the transition of the Union's customers in hard-to-decarbonise sectors in which more energy or cost-efficient options are not available.*** In order to support the transition, it is necessary to establish a threshold for greenhouse gas emission reductions for low-carbon hydrogen and synthetic gaseous fuels. Such threshold should become more stringent for hydrogen produced in installations starting operations from 1 January 2031 to take into account technological developments and better stimulate the dynamic progress towards the reduction of greenhouse gas emissions from hydrogen production. The EU Energy System Integration Strategy highlighted the need to deploy an EU-wide certification system to also cover low-carbon fuels with the aim ***of enabling*** Member States to compare them with other decarbonisation options and consider them in their energy mix as a viable solution. ***Certification of LCFs should be done in a way that is coherent with the certification of renewable fuels. It is therefore appropriate to refer to the provisions set out for the certification of renewable fuels in Directive (EU) 2018/2001 and apply them in analogy***

for certification of LCFs. In order to ensure that **LCFs** have the same decarbonisation impact as compared to ■ renewable alternatives it is important that they are certified by applying a similar methodological approach based on a life cycle assessment of their total greenhouse gas emissions. *Such life cycle assessment should take into account emissions arising from the production of LCFs over the whole supply chain including emissions arising from the extraction of the primary energy, processing and transportation and take into account indirect emissions resulting from the diversion of rigid inputs and actual carbon capture rates. Upstream emissions of methane should be derived building on the measures included in Regulation (EU) .../... of the European Parliament and of the Council [2021/423 (COD)Methane Regulation].* This would allow deploying a comprehensive **Union-wide** certification system, covering the whole Union energy mix. Taking into consideration that **LCFs** and LCH are not renewable fuels, their terminology and certification could not be included in ■ the scope of Directive (EU) 2018/2001 ■ . Therefore, their inclusion in this Directive fills in this gap.

- (9a) *Methane and hydrogen contribute to global warming. Their leakage from the natural gas and hydrogen system should thus be avoided in line with the energy efficiency first principle and in order to minimise their climate impact. Natural gas transmission, distribution, underground storage and liquefied natural gas terminals need to comply with the relevant provisions of Regulation (EU) .../... [Methane regulation]. That Regulation [Methane Regulation] lays down rules for the accurate measurement, quantification, monitoring, reporting and verification of methane emissions in the energy sector in the Union, as well as the abatement of those emissions, including through leak detection and repair surveys, repair obligations and restrictions on venting and flaring. Moreover this Directive prescribes that hydrogen network, storage and terminal operators should take measures to prevent and minimise hydrogen emissions in their operations and carrying out, at regular intervals, a hydrogen leak detection and repair survey of all relevant components under the operator responsibility. Where appropriate, the Commission should report on the environmental and climate risks of hydrogen leakage and, where appropriate, submit proposals for measures including maximum hydrogen leakage rates to minimise possible risks of hydrogen leakage. Where such measures are adopted, they should be considered in the methodology for assessing greenhouse gas emissions savings from low-carbon fuels.*
- (9b) *Imports of renewable and low-carbon hydrogen are likely to complement domestically produced hydrogen with a view to ensuring the rapid availability of large quantities of hydrogen catering for the Union's demand. It would therefore be mutually beneficial for the Commission and the Member states, in line with their respective competences, to engage in an open and constructive dialogue in order to establish cooperation with third countries. Such cooperation could in particular contribute to promoting the creation of clean and new technology markets through the transfer of knowledge, and a high level of environmental protection, sustainability and mitigating climate change, while avoiding negative social or environmental effects. In that context, the Union could play a leading role in developing global standards for LCF certification and strengthen its role as a global climate leader, using its climate diplomacy to develop mutually beneficial cooperation with exporting partners.*

(10) The freedoms which the Treaty *on the Functioning of the European Union (TFEU)* guarantees the citizens of the Union — inter alia, the free movement of goods, the freedom of establishment and the freedom to provide services — are achievable only in a fully open market, which enables all consumers freely to choose their suppliers and all suppliers freely to deliver to their customers.

(10a) *In order to achieve the objective of the Union to become climate neutral by 2050, efforts to decarbonise the markets for gas should go hand-in-hand with the deployment of renewable energy sources in the framework of Union targets of the Directive [amended RED] and complementary decarbonisation efforts based on other non-fossil sources. Member States should, in respect of a fully open market, still be able to plan their energy mix, including the combined use of renewable fuels and low-carbon fuels in the context of their specific national circumstances.*

To that end, in designing support schemes, including financial support, for renewable or low-carbon fuels, the Union should support the achievement of Union targets while Member States retain their right to choose whether and which source of renewable or of low-carbon fuels they support, as long as such fuels comply with the criteria set out respectively in the Directive [amended RED] and this Directive and such support schemes are in line with the applicable legal State aid framework based on Art. 107 and 108 TFEU. In addition, Member States may decide to set additional requirements on the greenhouse gas emissions reduction for instance, in line with their national decarbonisation strategy.

- (11) Consumer interests should be at the heart of this Directive and quality of service should be a central responsibility of natural gas **and hydrogen** undertakings. Existing rights of consumers and rights for access to essential services, including energy, and **tackling** energy poverty, as stated in the ***communication of the Commission of 26 April 2017 establishing a European Pillar of Social Rights, proclaimed and signed on 17 November 2017 by the European Parliament, the Council and the Commission at the Gothenburg Social Summit***, need to be strengthened and guaranteed, and should include greater transparency. ***In that respect, cross-subsidisation of hydrogen network through natural gas or electricity network tariffs should be avoided.*** Consumer protection should ensure that all consumers in the wider remit of the Union benefit from a competitive **natural** gas market. Consumer rights should be enforced by Member States or, where a Member State has so provided, the regulatory authorities.
- (12) The European Pillar of Social Rights places energy among the essential services everyone shall have access to and calls for support measures for those in need (principle 20). UN Sustainable Development Goal number 7 (SDG7) also calls for ensuring access to affordable, reliable, sustainable and modern energy for all.
- (13) Public service requirements and the common minimum standards that follow from them need to be further strengthened to make sure that all consumers, especially vulnerable ones, can benefit from competition and fair prices. The public service requirements should be defined at national level, taking into account national circumstances; Union law should, however, be respected by the Member States.

- (13a) *To facilitate heat decarbonisation that is built on inclusiveness, consumers need to be informed about sustainable alternatives they can switch to and have access to suitable financing options and subsidies. Member States should take all measures necessary to minimise the adverse effect that fuel switches or district heating connections implemented pursuant to article 11a) have on final customers including those affected by energy poverty and vulnerable customers. Where applicable, Member States should make the best possible use of funding, including public funding and funding facilities established at Union level, with the aim of minimising adverse effects and ensuring a just and inclusive energy transition.*
- (14) Member States should have a wide discretion to impose public service obligations on *natural* gas undertakings in pursuing objectives of general economic interest *without hampering the transition to an integrated, highly energy efficient and on renewables-based energy system in accordance with the relevant Union targets, law and strategies*. However, public service obligations in the form of price setting for the supply of natural gas constitute a fundamentally distortive measure that often leads to the accumulation of tariff deficits, the limitation of consumer choice, poorer incentives for energy saving and energy efficiency investments, lower standards of service, lower levels of consumer engagement and satisfaction, and the restriction of competition, as well as to there being fewer innovative products and services on the market. Consequently, Member States should apply other policy tools, in particular targeted social policy measures, to safeguard the affordability of natural gas supply to their citizens. Public interventions in price setting for the supply of natural gas should be carried out only as public service obligations and should be subject to specific conditions. A fully liberalised, well-functioning retail natural gas market would stimulate price and non-price competition among existing suppliers and provide incentives to new *entrants on the market*, thereby improving consumer choice and satisfaction.

- (15) Public service obligations in the form of price setting for the supply of natural gas should be used without overriding the principle of open markets in clearly defined circumstances and beneficiaries and should be limited in duration. *Such circumstances might occur for example in where supply is severely constrained, causing significantly higher natural gas prices than normal or in the event of a market failure where interventions by regulatory authorities and competition authorities have proven to be ineffective. This would disproportionately affect households and, in particular, vulnerable customers who typically expend a higher share of their disposable income on energy bills compared to high-income consumers.* In order to mitigate the distortive effects of public service obligations in price setting for the supply of natural gas, Member States applying such interventions should put in place additional measures, including measures to prevent distortions of price setting in the wholesale market *or measures to support energy efficiency, in particular for vulnerable customers and customers affected by energy poverty.* Member States should ensure that all beneficiaries of regulated prices are able to benefit fully from the offers available on the competitive market when they choose to do so. To that end, they should be directly and regularly informed of the offers and savings available on the competitive market and should be provided with assistance to respond to and benefit from market-based offers.
- (16) Public interventions in price setting for the supply of natural gas should not lead to direct cross-subsidisation between different categories of customer. According to that principle, price systems must not explicitly make certain categories of customer bear the cost of price interventions that affect other categories of customer. *Public service obligations in price setting should only concern the supply of natural gas, as households are not expected to use hydrogen for heating purposes on a wide scale. The hydrogen market will mostly concern industry, which do not require such public interventions.*

- (17) Clear and comprehensible information should be made available to consumers concerning their rights in relation to the energy sector. The Commission has established, after consulting relevant stakeholders including Member States, regulatory authorities, consumer organisations and natural gas undertakings, an accessible, user-friendly energy consumer checklist providing consumers with practical information about their rights. That energy consumer checklist should be maintained to date, provided to all consumers and should be made publicly available.
- (18) Member States should take into account the fact that the successful transition requires enhanced investment in education, **training** and skills for workers in the **natural gas and hydrogen sectors**, including in relation to infrastructure development, **energy efficiency and end-user applications that employ other, more cost-effective and decarbonised alternatives**. Such mention would be in line with **Directive (EU) 2023/1791 of the European Parliament and of the Council¹¹**.
- (19) Market rules should protect and empower customers to make **the most energy efficient** choices, in order for new renewable **gas and hydrogen** and low carbon **gas and hydrogen** to be fully embedded in the energy transition.
- (20) Natural gas still plays a key role in energy supply, as household energy consumption from natural gas is still higher than from electricity. Although electrification is a key element of the green transition, in the future there will still be household natural gas consumption including increasing volumes of renewable gas, **in particular biomethane**.

¹¹ **Directive (EU) 2023/1791 of the European Parliament and of the Council of 13 September 2023 on energy efficiency and amending Regulation (EU) 2023/955 (OJ L 231, 20.9.2023, p. 1)**

- (21) As the natural gas sector, including the natural gas retail market, was not part of the Clean Energy for all Europeans Package, the related provisions on consumer engagement and protection have not been adapted to the needs of the energy transition, which corresponds instead to the situation of over a decade ago when the Third **legislative** Energy Package **for an internal gas and electricity market in the European Union** was adopted.
- (22) The natural gas market witnesses poor customer satisfaction and engagement as well as slow uptake of new renewable **gas** and low-carbon **gas**, which all reflect limited competition in many Member States. ■ Natural gas prices for household customers rose in the last decade resulting in household consumers paying two or three times more for their natural gas consumption than industrial customers.
- (23) As in the electricity sector, market flexibilities and an adequate Union **legal framework on consumer rights** ■ in the natural gas sector are essential to ensure that consumers can participate in the energy transition and benefit from affordable prices, good standards of service, and effective choice of offers mirroring technological developments.
- (24) The switch from fossil gas to renewable alternatives will concretise if energy from renewable sources becomes an attractive, non-discriminatory choice for consumers based on truly transparent information where the transition costs are fairly distributed among different groups of consumers and market players. **However, switching from natural gas to other technologies is usually not easy due to the lock-in effect related to the underpinning equipment. Where natural gas infrastructure is decommissioned, it should be accompanied by measures that address the adverse effects on final customers, in particular vulnerable customers and households in energy poverty, as well as measures that address inequalities resulting from the energy transition. Natural gas consumer should be protected from rising tariffs when natural gas assets have to be depreciated, from cross subsidisation between gas and hydrogen users and rising gas tariffs with a shrinking customer base.**

- (25) To address the current gaps in the retail *natural* gas market, it is necessary to tackle the existing competition and technical barriers to the emergence of *alternative, renewables-based energy supply*, new services, better levels of service, and lower consumer prices, whilst ensuring the protection of *vulnerable customers and customers affected by energy poverty*.
- (26) In order to ensure a high level of consumer protection and empowerment consistently across energy sectors, the legislative framework in the decarbonised *natural* gas market should reflect the electricity market customer protection and where relevant its empowerment provisions *and take into account the energy system efficiency, the Union's objectives on security of supply, energy efficiency and renewable energy*.
- (27) To be coherent and effective, this mirroring approach should encompass all consumer protection and empowerment provisions, whenever feasible and adaptable to the *natural* gas market. This should go from basic contractual rights to rules for billing information, switching energy provider, having at disposal reliable comparison tools, protecting vulnerable *customers and customers affected by energy poverty*, ensuring adequate data protection for smart meters and data management, and efficient alternative dispute resolution rules.
- (28) In pursuing the consistency of provisions across sectors, burdens for national administrations and businesses should be limited and proportionate by also building on the experience with the Clean Energy for All Europeans Package.
- (29) The modernisation of the *natural* gas sector is expected to lead to substantial economic *and environmental* benefits in terms of both improved retail competition and its social and distributional benefits and customer empowerment, including strengthened contractual rights and better available information on consumption and energy sources leading to greener choices *as well as uptaking energy efficiency measures and reducing or switching from fossil gas to other more sustainable energy sources*. Energy communities-of-interest should contribute to the uptake of renewable gas.

- (30) Switching is an important indicator of *customer* engagement as well as *an* important tool to boost competition on natural gas and hydrogen markets *and should therefore be guaranteed as a basic right to costumers. However*, switching rates remain inconsistent among Member States and consumers are discouraged from switching *both energy source and supplier* by exit and termination fees. Although removing such fees might limit *customer* choice by eliminating products based on rewarding *customer* loyalty, restricting their use further should improve consumer welfare, consumer engagement and competition in the market.
- (31) Shorter switching times are likely to encourage customers to search for better energy deals and switch supplier. With the increased deployment of information technology, by 2026, the technical switching process of registering a new supplier in a metering point at the market operator should typically be possible to complete within 24 hours on any working day. Ensuring that it is possible by that date for the technical process of switching to take place within 24 hours would minimise switching times, helping to increase consumer engagement and retail competition.
- (31a) *The 24 hour switching in natural gas and hydrogen procedure would mirror what already applies in the electricity market, which has similar back-end functionalities and IT database requirements. Harmonising switching times between both sectors would benefit all consumers, in particular those on dual fuel contracts. Shorter switching times for consumers should not affect a supplier balancing obligations.*
- (32) Several factors impede *customers* from accessing, understanding and acting upon the various sources of market information available to them. It follows that the comparability of offers should be improved, *through adequate customer information, comparison tools for customers, and unjustified* barriers to switching should be *removed without unduly limiting customer choice. It is also vital that suppliers provide customers with a clear and understandable pre-contractual information, so that they are fully aware about the details and consequences of the contract.*

- (33) Independent comparison tools, including websites, are an effective means for smaller customers to assess the merits of the different energy offers that are available on the market. They should aim to include the broadest possible range of available offers, and to cover the market as completely as is feasible so as to give the customer a representative overview. ***Where the environmental performance is promoted as an essential feature of the offer, comparison tools should also include a description of that environmental performance.*** It is crucial that smaller customers have access to at least one comparison tool and that the information given on such tools be trustworthy, impartial, ***transparent and easy to understand***. To that end, Member States could provide for a comparison tool that is operated by a national authority or a private company ***and consult criteria for comparison tools with relevant stakeholders, including organisations representing consumer's interests.***
- (34) Final customers should also be able to consume, to store and to sell self-generated renewable gas ***while complying with the legislation applicable to renewable gas production, in particular in relation to greenhouse gas emissions,*** and participate in all natural gas markets by providing ancillary services to the system, for instance through energy storage, ***while maintaining their rights as final customers. Such collective arrangements between active customers can provide opportunities for service providers and local businesses, in particular small and medium-sized enterprises ('SMEs'), to contribute to system balancing and flexibility.*** Member States should be able to have different provisions in their national law with respect to taxes and levies for individual and jointly-acting active customers.

- (35a) *Renewable energy communities pursuant to Directive (EU) 2018/2001 can contribute to the production, storage and supply of renewable gas, helping to decarbonise the energy system. In particular, renewable energy communities can help contribute to the development of a local circular economy, particularly in rural regions.*

- (37) Bills and billing information are an important means to inform and empower final customers. Energy bills remain the most common consumer concern and source of consumer complaints, a factor that contributes to the persistently low levels of consumer satisfaction and engagement in the *natural* gas sector. Provisions for billing information in the gas sector also lag behind rights granted to consumers in the electricity sector. It is therefore necessary to align them and to set minimum requirements for bills and billing information in the gas sector, so that consumers have access to transparent, *complete*, easy to understand information. Bills should convey information to the final *customers* on their consumption and costs, *carbon dioxide emissions, the share of renewable gas and low carbon gas*, thus facilitating comparison between offers and switching supplier *or energy sources*, as well as information on their consumer rights (such as on alternative dispute resolution). In addition, bills should be a tool to actively engage consumers in the market, so that consumers can manage their consumption patterns and make greener choices. *It is important to provide comprehensive and accurate information to consumers to ensure they are aware of their environmental impact and, thus, consumers can express their preference for the most sustainable energy carriers.*
- (38) The regular provision of accurate billing information based on actual *natural* gas consumption ■ is important to help customers to control their *natural* gas consumption and costs. Nevertheless, customers, in particular household customers, should have access to flexible arrangements for the actual payment of their bills.

- (39) A key aspect in supplying customers is access to objective and transparent consumption data. Thus, consumers should have access to their consumption data and associated prices and services costs, ***including the price of additional services such as insurances and energy efficiency services, where relevant***, so that they can invite competitors to make an offer based on that information. Consumers should also have the right to be properly informed about their energy consumption. Prepayments should not place a disproportionate disadvantage on their users, while different payment systems should be non-discriminatory. Information on energy costs provided to consumers frequently enough should create incentives for energy savings because it will give customers direct feedback on the effects of investment in energy efficiency and change of behaviour.
- (40) When deciding at national level on the deployment of natural gas smart metering systems, ***such decision shall be made after carrying out a cost-benefit*** assessment. That ■ assessment should take into account the long-term benefits of the deployment of smart metering systems to consumers and the whole value chain. Should that assessment conclude that the introduction of such metering systems is economically reasonable and cost-effective only for consumers with a certain amount of natural gas consumption, Member States should be able to take this into account when proceeding with deployment. However, such assessments should be reviewed regularly in response to significant changes in the underlying assumptions, or at least every four years, given the fast pace of technological developments. ***Limited implementations of smart metering systems, such as pilot projects and testing phases, are not considered as deployments of such systems within the meaning of this Directive.***

- (41) In order to assist final customers' active participation in the market, ***when deploying*** smart metering systems ***they*** should have due regard to the use of relevant available standards, including those enabling interoperability on the level of the data model and the application layer, to best practices and the importance of the development of data exchange, to future and innovative energy services. Moreover, the smart metering systems that are deployed should not represent a barrier to switching supplier in the case of natural gas consumers ■ and should be equipped with fit-for-purpose functionalities that allow final customers to have timely access to their consumption data, to modulate their energy behaviour, be rewarded for it, and obtain savings in their bills. ***Consumer groups should be advised on how to improve their energy efficiency by using smart meters.***
- (42) Member States that do not systematically deploy smart metering in the natural gas system should allow consumers to benefit from the installation of a smart meter, upon request, under fair and reasonable conditions ***while bearing the associated costs***, and should provide them with all the relevant information.
- (43) Currently, different models for the management of data have been developed or are under development in Member States following deployment of smart metering systems. Independently of the data management model it is important that Member States put in place transparent rules that data can be accessed under non-discriminatory conditions and ensure the highest level of cybersecurity and data protection as well as the impartiality of the entities which process data.
- (44) Greater consumer protection is guaranteed by the availability of effective means of dispute settlement for all consumers. Member States should provide for speedy and effective complaint handling procedures. ***Information on complaint handling should be provided in customer contracts and billing information.***

- (44a) *When assessing the functioning of their out-of-court dispute settlement mechanisms, Member States should take into account the participation and compliance of natural gas undertakings.*
- (45) Member States should take appropriate measures, such as providing benefits by means of their social security systems, to ensure the necessary supply to vulnerable customers, or providing for support for energy efficiency improvements, **renewable energy deployment, to sustainably** to address energy poverty where identified pursuant to Article 3(3), point (d), of Regulation (EU) 2018/1999, including in the broader context of poverty. Such measures could differ according to the particular circumstances in the Member States in question and could include social or energy policy measures relating to the payment of any **bills for natural gas and hydrogen**, to investment in the energy efficiency of residential buildings, or to consumer protection such as disconnection safeguards.
- (46) *The Commission Recommendations (EU) 2020/1563 of 14 October 2020² and (EU) 2023/2407 of 20 October 2023 on energy poverty set out good practices for defining energy poverty at national level, including appropriate indicators for measuring energy poverty, and for structural measures and improvements that Member States can take to address the root causes of energy poverty. Investments into structural measures to tackle the low energy performance of homes and appliances and decarbonisation and deployment of renewable sources are highlighted as well as other measures with the aim to provide information on how to decrease energy bills and introduce energy-saving practices, support citizens to join energy communities or encourage a shift towards renewable energy solutions* .

- (46a) *Disconnection significantly affects customers' access to the natural gas supply which they need especially to heat their homes. Customers affected by energy poverty and vulnerable customers are particularly adversely affected by natural gas disconnections and Member States should take measures which prevent disconnections of these customers for economic or commercial reasons. There are multiple tools and good practices available to Member States which include, but are not limited to, year-round or seasonal disconnection prohibitions, debt prevention and sustainable solutions to support customers in hardship paying for their energy bills. Member States should identify the most appropriate tools based on their national circumstances. Such measures should not affect temporary disconnections of customers by network operators in an emergency or, with prior notice, due to safety concerns, where feasible, or maintenance reasons.*
- (46b) *Consumers have the right to use complaint procedures managed by their suppliers as well as out of court dispute resolution procedures, in order to see their rights enforced effectively and not be disadvantaged in case of disagreement with suppliers, notably regarding bills or the amount due. Where customers use these procedures, suppliers should not terminate contracts on the basis of the facts which are still in dispute. Both suppliers and customers should continue to meet their contractual rights and obligations, notably to supply natural gas and to pay for that natural gas and complaint procedures should not become the ground for abuses allowing customers not to honour their contractual obligations, including paying their bills. Member States should put in place appropriate measures to avoid that these complaint or dispute resolution procedures are used in a distorted way.*

- (47) The simplification and streamlining of administrative permit granting processes and clear time limits for decisions to be taken by the authorities competent for issuing an authorisation should ensure that the deployment of hydrogen production facilities and hydrogen system infrastructure can occur at an adequate pace ***without hampering public consultations***. Member States should be requested to report on progress made.
- Grandfathering of authorisations (such as licences, permissions, concessions or approvals), granted under national law for the construction and operation of existing natural gas pipelines and other network assets, is needed once the transported gaseous energy carrier in a ***natural*** gas pipeline changes from natural gas to (pure) hydrogen. This ***grandfathering of authorisations should not affect the validity of technical safety requirements for hydrogen infrastructure, nor the possibility for competent authorities to monitor compliance with such requirements and to take appropriate and proportionate enforcement measures, including a possible revocation of the grandfathered authorisations, if justified***. This should prevent undue delay in repurposing existing natural gas pipelines and other networks assets for hydrogen transport. It should be avoided that conditions for granting authorisations for hydrogen system infrastructure are materially different unless sufficiently justified. Technical safety considerations might justify a differentiated approach in grandfathering existing or issuing new authorisations. The provisions on authorisation procedures should apply without prejudice to international and Union law, including provisions to protect the environment and human health. Where duly justified on the grounds of extraordinary circumstances, it should be possible to extend the time limits for authorisation procedures by up to one year.

- (48) Providing guidance to applicants throughout their administrative permit application and granting processes by means of an administrative contact point is intended to reduce complexity for project developers and increase efficiency and transparency. The availability for applicants to submit relevant documents in digital form and the availability of a manual of procedures for applicants could contribute to efficiency. Member States should ensure that the authorities implementing authorisation procedures are actively involved in the tackling of remaining barriers, including non-financial ones such as insufficient knowledge, digital and human resources that hinder their processing of a growing number of authorisation procedures.
- For the implementation of the connections to the transmission or distribution network it should be ensured that the associated permitting procedures are not hampered by a lack of administrative capacity. Furthermore, such permitting procedures should not establish hurdles in relation to the achievement of the national renewable energy target.***
- (49) Without effective separation of networks from activities of production and supply (effective unbundling), there is a risk of discrimination not only in the operation of the network but also in the incentives for vertically integrated undertakings to invest adequately in their networks.
- (50) The rules on legal and functional unbundling as provided for in Directive 2003/55/EC have not, however, led to effective unbundling of the transmission system operators. At its meeting on 8 and 9 March 2007, the European Council therefore invited the Commission to develop legislative proposals for the ‘effective separation of supply and production activities from network operations’ ■ .

- (51) Only the removal of the incentive for vertically integrated undertakings to discriminate against competitors as regards network access and investment can ensure effective unbundling. Ownership unbundling, which implies the appointment of the network owner as the system operator and its independence from any supply and production interests, is clearly an effective and stable way to solve the inherent conflict of interests and to ensure security of supply. For that reason, the European Parliament, in its resolution of 10 July 2007 on prospects for the internal gas and electricity market referred to ownership unbundling at transmission level as the most effective tool to promote investments in infrastructure in a non-discriminatory way, fair access to the network for new entrants and transparency in the market. Under ownership unbundling, Member States should therefore be required to ensure that the same person or persons are not entitled to exercise control over a production or supply undertaking and, at the same time, exercise control or any right over a transmission system operator or transmission system. Conversely, control over a transmission system or transmission system operator should preclude the possibility of exercising control or any right over a production or supply undertaking. Within those limits, a production or supply undertaking should be able to have a minority shareholding in a transmission system operator or transmission system.
- (52) Any system for unbundling should be effective in removing any conflict of interests between producers, suppliers and transmission system operators, in order to create incentives for the necessary investments and guarantee the access of new market entrants under a transparent and efficient regulatory regime and should not create an overly onerous regulatory regime for regulatory authorities.
- (53) The definition of the term ‘control’ is taken from Council Regulation (EC) No 139/2004
■¹⁰.

¹⁰ *Council Regulation (EC) No 139/2004 of 20 January 2004 on the control of concentrations between undertakings (the EC Merger Regulation)* (OJ L 24, 29.1.2004, p. 1).

- (54) In view of the vertical links between the electricity and *natural* gas sectors, the unbundling provisions should apply across the *sectors for natural gas, hydrogen and electricity as detailed in this Directive*.
- (55) ■ With regard to the hydrogen sector, *rules on vertical unbundling should be applied without delay*. This is preferable over costly ex-post unbundling *if the sector were to develop strong vertical integration*.
- (56) Under ownership unbundling, to ensure full independence of network operation from supply and production interests and to prevent exchanges of any confidential information, the same person should not be a member of the managing boards of both a transmission system operator or a transmission system and an undertaking performing any of the functions of production or supply. For the same reason, the same person should not be entitled to appoint members of the managing boards of a transmission system operator or a transmission system and to exercise control or any right over a production or supply undertaking.
- (57) The setting up of a system operator or a transmission operator that is independent from supply and production interests should enable a vertically integrated undertaking to maintain its ownership of network assets whilst ensuring an effective separation of interests, provided that such independent system operator or such independent transmission operator performs all the functions of a system operator and detailed regulation and extensive regulatory control mechanisms are put in place.
- (58) Where, on 3 September 2009, an undertaking owning a transmission system was part of a vertically integrated undertaking, Member States should therefore be given a choice between ownership unbundling and setting up a system operator or transmission operator which is independent from supply and production interests.

- (59) To fully preserve the interests of the shareholders of vertically integrated undertakings, Member States should have the choice of implementing ownership unbundling either by direct divestiture or by splitting the shares of the integrated undertaking into shares of the network undertaking and shares of the remaining supply and production undertaking, provided that the requirements resulting from ownership unbundling are complied with.
- (60) The full effectiveness of the independent system operator or independent transmission operator solutions should be ensured by way of specific additional rules. The rules on the independent transmission operator provide an appropriate regulatory framework to guarantee fair competition, sufficient investment, access for new market entrants and the integration of *natural* gas markets. Effective unbundling through the independent transmission operator provisions should be based on a pillar of organisational measures and measures relating to the governance of transmission system operators and on a pillar of measures relating to investment, connecting new production capacities to the network and market integration through regional cooperation. The independence of the transmission operator should also, inter alia, be ensured through certain ‘cooling-off’ periods during which no management or other relevant activity giving access to the same information as could have been obtained in a managerial position is exercised in the vertically integrated undertaking.
- (61) In order to develop competition in the internal market in *natural* gas, large non-household customers, engaged in large-scale commercial activities, should be able to choose their suppliers and enter into contracts with several suppliers to secure their *natural* gas requirements. Such customers should be protected against exclusivity clauses, the effect of which is to exclude competing or complementary offers.

- (62) A Member State should have the right to opt for full ownership unbundling in its territory. Where a Member State has exercised that right, an undertaking should not have the right to set up an independent system operator or an independent transmission operator, *unless otherwise provided by this Directive*. Furthermore, an undertaking performing any of the functions of production or supply should not directly or indirectly exercise control or any right over a transmission system operator from a Member State that has opted for full ownership unbundling.
- (63) Different types of market organisation exist in the internal market in natural gas. The measures that Member States could take in order to ensure a level playing field should be based on overriding requirements of general interest. The Commission should be consulted on the compatibility of the measures with the TFEU and *relevant* Union law.
- (64) The implementation of effective unbundling should respect the principle of non-discrimination between the public and private sectors. To that end, the same person should not be able to exercise control or any right, in violation of the rules of ownership unbundling or the independent system operator option, solely or jointly, over the composition, voting or decision of the bodies of both the transmission system operators or the transmission systems and the production or supply undertakings. With regard to ownership unbundling and the independent system operator solution, provided that the Member State in question is able to demonstrate that the requirement is complied with, two separate public bodies should be able to control production and supply activities on the one hand and transmission activities on the other.

- (65) Fully effective separation of network activities from supply and production activities should apply throughout the Union to both Union and non-Union undertakings. To ensure that network activities and supply and production activities throughout the Union remain independent from each other, regulatory authorities should be empowered to refuse certification to transmission system operators that do not comply with the unbundling rules. To ensure the consistent application of those rules across the Union, the regulatory authorities should take utmost account of the Commission's opinion when the former take decisions on certification. To ensure, in addition, respect for the international obligations of the Union and solidarity and energy security within the Union, the Commission should have the right to give an opinion on certification in relation to a transmission system owner or a transmission system operator which is controlled by a person or persons from a third country or third countries. *In making that assessment, the Commission should take into account commercial relationships that could negatively affect the incentives and ability of the operator to perform their tasks, as well as the international obligations of the Union and any other specific facts and circumstances of the case. These shall include the weaponised reductions of natural gas supplies and manipulation of the markets through intentional disruptions of natural gas flows with the clear potential of a direct and serious impact on the essential international security interests of Member States and the Union.*
- (66) Pipeline networks for hydrogen should constitute an important means of efficient and sustainable transport for hydrogen, both onshore and offshore. As a result of the high capital expenditure required for their construction, hydrogen pipeline networks could constitute natural monopolies. Experience with the regulation of natural gas markets has shown the importance of ensuring open and non-discriminatory access to pipeline networks with a view to safeguarding competition on commodity markets. Therefore, well-established principles of network operation, such as third-party access, should be applicable to onshore and offshore hydrogen networks in the Union.

- (66a) *The definitions of hydrogen transmission and hydrogen distribution should be based on the functions of the respective network categories and on the types of connected infrastructure.*
- (66b) *Hydrogen interconnectors, as hydrogen networks which serve the important purpose of connecting the national hydrogen networks of Member States, should be operated by hydrogen transmission network operators. In very limited cases and where a hydrogen distribution network is set out in the respective network development plan, it may be connected to a hydrogen transmission network in another Member State. As long as this distribution network is not additionally connected to a hydrogen transmission or distribution network in the Member State where the hydrogen distribution network is located, it should be operated as hydrogen distribution network.*
- (66c) *Hydrogen distribution networks, which mainly serve the purpose of supplying directly connected customers, should benefit from a lighter regulatory regime in relation to vertical unbundling and network planning. Such networks should not include hydrogen interconnectors or feature connections to major infrastructure, such as large-scale underground storage or terminals - unless the network in question is a repurposed natural gas network - or hydrogen interconnectors. In the connection between a large-scale underground storage and distribution system, which both have been repurposed for the use of hydrogen, a new short-distance connection pipeline for the transport of hydrogen between them may be built as extension of the existing distribution system. However, the connection of smaller underground or aboveground hydrogen storage installations, including easily replicable hydrogen storage tanks, to hydrogen distribution networks should not be restricted as they are expected to play a key role in balancing these networks.*

- (67) The operation of hydrogen networks should be separated from activities of energy production and supply in order to avoid the risk of conflicts of interest on behalf of the network operators. The structural separation of ownership of hydrogen networks and participations in energy production and supply guarantees the absence of such conflicts of interest. Member States should be able to rely on the alternative unbundling model of ‘integrated hydrogen network operator’ *for transmission system operators for natural gas subject to the ‘independent transmission operator’ unbundling model and* for existing vertically integrated hydrogen networks. *Transmission system operators for natural gas which benefit from a derogation pursuant to this Directive should be considered as certified for the purpose of determining their eligibility to use the integrated hydrogen transmission system operator model.* Member States should also be able to allow the use of the “independent hydrogen network operator” model to allow vertically integrated owners of hydrogen networks to retain ownership of their networks while ensuring the non-discriminatory operation of such networks after 2030.

(68) Whereas the joint operation of hydrogen networks and **natural** gas or electricity grids can create synergies and should thus be allowed, activities of hydrogen **transmission** network operation should be organised in a separate legal entity in order to ensure transparency regarding financing and the use of access tariffs. ***Derogations to this requirement of legal horizontal unbundling should only be granted on a temporary basis, subject to a positive cost-benefit analysis and an impact assessment by regulatory authorities. In view of their remote location and limited market size, such derogations should be automatically granted for Estonia, Latvia and Lithuania as from 2031. In any case, transparency regarding financing and the use of access tariffs should be ensured with a clear and transparent separation of accounts under the monitoring of the regulatory authorities. Where a hydrogen network operator is part of an undertaking active in transmission or distribution of natural gas or electricity, the network operator should submit to the regulatory authority a list detailing the infrastructure assets of the undertakings regarding the allocation of the grid to the use of hydrogen or natural gas aiming to ensure full transparency regarding the separation of the regulatory asset base. That list should be updated in line with the usual auditing procedures for accounts.***

(70) In order to ensure transparency with regard to the costs and financing of regulated activities, activities of hydrogen **transmission** network operation should be separated from other network operation activities for other energy carriers at least in relation to the legal form and accounts of network operators. ***For the sake of legal unbundling of hydrogen transmission network operators, the creation of a subsidiary or a separate legal entity within the group structure of the natural gas transmission or distribution system operator should be considered sufficient, without the need for a functional unbundling of governance or separation of management or staff. Transparency with regard to the costs and financing of regulated activities is thus achieved without losing the synergies and cost-advantages that operating several networks may be able to bring.***

- (71) Hydrogen networks should be subject to third-party access in order to ensure competition and a level playing field in the market for hydrogen supply. Regulated third-party access on the basis of regulated access tariffs should be the default rule in the long-term. In order to ensure the necessary flexibility for operators and to reduce administrative costs during the ramp-up phase of the hydrogen market, Member States should have the option to allow the use of negotiated third-party access until **31 December 2032**.
- (72) ***Only parts of the naturally occurring underground storages used for natural gas, such as salt caverns, aquifers and depleted natural gas fields can also be used for hydrogen.*** The availability of ***these*** large-scale underground hydrogen storage facilities is limited and distributed unevenly across Member States. In view of the potentially beneficial role for the functioning of hydrogen transport and markets, the access to such large-scale underground storages should ***ultimately*** be subject to regulated third party access in order to ensure a level playing field for market participants. ***However, in the ramp-up phase of hydrogen markets, there should be flexibility for Member States to use also negotiated access regimes until 31 December 2032.***
- (72a) ***It is to be expected that hydrogen and hydrogen derivatives (like ammonia) or liquid organic hydrogen carriers will be imported into and transported within the Union. However, it is as yet uncertain by what means and in what form hydrogen will be transported whilst various means and forms are likely to coexist and compete with each other. This Directive provides a regulatory framework for infrastructure and markets for gaseous hydrogen. Consequently, only where other forms of hydrogen or derivatives and the facilities that handle them are relevant to ensure the emergence of a competitive market for gaseous hydrogen the role and the rules that may apply to them should be defined in this Directive.***

- (73) Terminals for the *offloading and* conversion of liquid hydrogen or liquid ammonia *transported via ship* into gaseous hydrogen constitute a means of hydrogen import, but they compete with other means of hydrogen transport. While third-party access to such terminals should be ensured, Member States should have the choice of imposing a system of negotiated third-party access with a view to reducing administrative costs for operators and regulatory authorities. *The storage associated with the terminal and to which third-party access is granted should stand in proportion to the capacity of the terminal to convert and inject hydrogen into the network. However, implementation of third-party access to truck loading services may not be necessary, provided that such operation is not an ancillary service linked to the subsequent conversion and injection of hydrogen into the network.*
- (73a) *Member States may choose to phase-out natural gas in order to reach the climate-neutrality objective set out in Regulation (EU) 2021/1119 or for other technical reasons. It is important to provide a clear regulatory framework allowing for the refusal of access and the possible disconnection of network users to attain these policy objectives. Network users can be refused access or be disconnected if this concerns infrastructure that will be decommissioned in line with the network development plan at transmission level or decommissioning is envisaged at distribution level. At the same time, adequate measures should to be undertaken to protect network users in such circumstances and it is also important that the refusal of access and disconnection decisions are subject to objective, transparent and non-discriminatory criteria developed by regulatory authorities.*
- (74) Existing vertically integrated hydrogen networks should be *eligible to request derogations from the requirements of this Directive provided that these networks are not expanded significantly and for as long as such derogation does not have a detrimental effect on competition or hydrogen infrastructure or market development, which needs to be verified on a regular basis.*

- (75) Localised hydrogen clusters should be an important building block of the European hydrogen economy. Such clusters could benefit from simplified regulatory requirements during the ramp-up phase of the hydrogen market, *in particular as regards the application of ownership unbundling to networks supplying such clusters. The corresponding simplified regulatory requirements should address also the need for regulatory flexibility of direct pipeline connections between hydrogen producers and individual customers.*
- (76) Pipeline interconnectors with third countries can serve as a means of transport for imports or exports of hydrogen. The *applicability of this Directive to hydrogen pipeline lines to and from third countries should be confined to the territory of the Member States. The operating rules for hydrogen interconnectors with third countries*, should be enshrined in an *international agreement between the Union and the connected third country, or third countries. Such international agreement should not be considered necessary where the Member State connected or intending to be connected by the hydrogen interconnector negotiates and concludes an* intergovernmental agreement *with the third country or third countries concerned in accordance with the empowerment procedure provided for in this Directive*, to ensure a coherent regulatory framework and its consistent application for the entire infrastructure.
- (77) To ensure the efficient operation of the European hydrogen networks, hydrogen network operators should be responsible for the operation, maintenance and development of the network in close cooperation with other hydrogen network operators as well as with other system operators to which their networks are or can be connected with, including to facilitate energy system integration.

- (78) Hydrogen *transmission* network operators should **build** sufficient cross-border capacity for the *transport* of hydrogen accommodating all economically reasonable and technically feasible demands for such capacity, thereby enabling market integration.
- (78a) *In line with the Union's Hydrogen Strategy focus should be on the transport and use of hydrogen in its pure form. In this sense, the future hydrogen system should transport, store and handle hydrogen of a high grade of purity taking into account hydrogen end-users' quality requirements, as opposed to hydrogen blended into the natural gas system. Future applicable hydrogen quality standards for the hydrogen system will further define the commonly acceptable hydrogen purity levels. A bandwidth of acceptable hydrogen purity levels and other relevant hydrogen quality parameters (e.g. contaminants) should be defined in a technical standardisation process by European standardisation bodies.*
- (79) In some cases, depending among others on the topography of hydrogen networks and the population of end-users connected to the hydrogen networks, hydrogen quality management by hydrogen network operators could become necessary (e.g. purification). Therefore, regulatory authorities **should** task hydrogen network operators with ensuring efficient hydrogen quality management in their networks where necessary for system management. When undertaking such activities, hydrogen network operators should **ensure stable hydrogen quality for end-users, including in hard-to-decarbonise sectors by complying** with applicable hydrogen quality standards.
- (80) Where system operators for natural gas or hydrogen network operators refuse requests for access or connection due to a lack of capacity, ■ refusals should be duly substantiated, and operators should be required to enhance their system in order to enable the requested connections or access where it is economic to do so **and in line with the relevant planning exercise**.

- (81) Obstacles to the completion of the internal market in natural gas which result from the non-application of Union market rules to *natural* gas transmission lines to and from third countries should also be *addressed*. It is necessary to ensure that the rules applicable to *natural* gas transmission lines connecting two or more Member States are also applicable, within the Union, to *natural* gas transmission lines to and from third countries. This should establish consistency of the legal framework within the Union while avoiding distortion of competition in the internal energy market in the Union and negative impacts on the security of supply. It should also enhance transparency and provide legal certainty to market participants, in particular investors in *natural* gas infrastructure and system users, as regards the applicable legal regime.
- (82) Member States and the Contracting Parties to the Treaty establishing the Energy Community¹¹ should cooperate closely on all matters concerning the development of an integrated *natural* gas market and its decarbonisation and should take no measures that endanger the further integration of *natural* gas markets or the security of supply of Member States and Contracting Parties. This could include cooperation on storage capacities and invitation of experts to relevant regional *natural* gas risk groups.
- (83) Pipelines connecting a third-country oil or *natural* gas production project to a processing plant or to a final coastal landing terminal within a Member State should be considered to be upstream pipeline networks. Pipelines connecting an oil or *natural* gas production project in a Member State to a processing plant or to a final coastal landing terminal within a third country should not be considered to be upstream pipeline networks for the purpose of this Directive, since such pipelines are unlikely to have a significant impact on the internal energy market.

¹¹ OJ L 198, 20.7.2006, p. 18.

- (84) Transmission system operators should be free to conclude technical agreements with transmission system operators or other entities in third countries on issues concerning the operation and interconnection of transmission systems, provided that the content of such agreements is compatible with Union law.
- (85) Technical agreements regarding the operation of transmission lines between transmission system operators or other entities should remain in force provided that they comply with Union law and the relevant decisions of the regulatory authority.
- (86) When such technical agreements are in place, the conclusion of an international agreement between a Member State and a third country or of an agreement between the Union and a third country regarding the operation of the *natural* gas transmission line concerned is not required by this Directive.
- (87) The applicability of this Directive to *natural* gas transmission lines to and from third countries should be confined to the territory of the Member States. As regards offshore *natural* gas transmission lines, this Directive should be applicable in the territorial sea of the Member State where the first interconnection point with the Member States' network is located.
- (88) It should be possible for existing agreements concluded between a Member State and a third country on the operation of transmission lines to remain in force, in accordance with this Directive.

- (89) With regard to agreements or parts of agreements with third countries which may affect common rules of the Union, a coherent and transparent procedure should be established by which to authorise a Member State, upon its request, to amend, extend, adapt, renew or conclude an agreement with a third country on the operation of a transmission line or an upstream pipeline network between the Member State and a third country. The procedure should not delay the implementation of this Directive, should be without prejudice to the allocation of competence between the Union and the Member States, and should apply to existing and new agreements.
- (90) Where it is apparent that the subject matter of an agreement falls partly within the competence of the Union and partly within that of a Member State, it is essential to ensure close cooperation between that Member State and the Union institutions.
- (91) In order to ensure uniform conditions for the implementation of this Directive, implementing powers should be conferred on the Commission to adopt decisions authorising or refusing to authorise a Member State to amend, extend, adapt, renew or conclude an agreement with a third country. Those powers should be exercised in accordance with Regulation (EU) No 182/2011 of the European Parliament and of the Council¹².

¹² Regulation (EU) No 182/2011 of the European Parliament and of the Council of 16 February 2011 laying down the rules and general principles concerning mechanisms for control by Member States of the Commission's exercise of implementing powers (OJ L 55, 28.2.2011, p. 13).

- (92) The security of energy supply is an essential element of public security and is therefore inherently connected to the efficient functioning of the internal market in *natural* gas and the integration of the isolated *natural* gas markets of Member States. *Natural* gas can reach the citizens of the Union only through the network. Functioning open *natural* gas markets and, in particular, networks and other assets associated with *natural* gas supply are essential for public security, for the competitiveness of the economy and for the well-being of the citizens of the Union. Persons from third countries should therefore only be allowed to control a transmission system or a transmission system operator if they comply with the requirements of effective separation that apply inside the Union. Without prejudice to the international obligations of the Union, the Union considers that the *natural* gas transmission system sector is of high importance to the Union and therefore additional safeguards are necessary regarding the preservation of the security of supply of energy to the Union to avoid any threats to public order and public security in the Union and the welfare of the citizens of the Union. The security of supply of energy to the Union requires, in particular, an assessment of the independence of network operation, the level of the Union's and individual Member States' dependence on energy supply from third countries, and the treatment of both domestic and foreign trade and investment in energy in a particular third country. Security of supply should therefore be assessed in the light of the factual circumstances of each case as well as the rights and obligations arising under international law, in particular the international agreements between the Union and the third country concerned. Where appropriate the Commission should submit recommendations to negotiate relevant agreements with third countries addressing the security of supply of energy to the Union or to include the necessary issues in other negotiations with those third countries.

- (93) Further measures should be taken in order to ensure transparent and non-discriminatory tariffs for access to transport. Those tariffs should be applicable to all users on a non-discriminatory basis. Where a storage facility, linepack or ancillary service operates in a sufficiently competitive market, access could be allowed on the basis of transparent and non-discriminatory market-based mechanisms.
- (94) It is necessary to ensure the independence of storage system operators in order to improve third-party access to storage facilities that are technically or economically necessary for providing efficient access to the system for the supply of customers. It is therefore appropriate that storage facilities are operated through legally separate entities that have effective decision-making rights with respect to assets necessary to maintain, operate and develop storage facilities. It is also necessary to increase transparency in respect of the storage capacity that is offered to third parties, by obliging Member States to define and publish a non-discriminatory, clear framework that determines the appropriate regulatory regime applicable to storage facilities. That obligation should not require a new decision on access regimes but should improve the transparency regarding the access regime to storage. Confidentiality requirements for commercially sensitive information are particularly important where data of a strategic nature are concerned or where there is only a single user of a storage facility.
- (95) Non-discriminatory access to the distribution network determines downstream access to customers at retail level. The scope for discrimination as regards third party access and investment, however, is less significant at distribution level than at transmission level where congestion and the influence of production interests are generally greater than at distribution level. To lay down a level playing field at retail level, the activities of distribution system operators should be monitored so that they are prevented from taking advantage of their vertical integration as regards their competitive position on the market, in particular in relation to household and small non-household customers.

- (96) Member States should take concrete measures to assist the wider use of *sustainable biomethane, or other types of gas, that can technically and safely be injected into, and transported through, the natural gas system*, the producers of which should be granted non-discriminatory access to the gas system, provided that such access is compatible with the relevant technical rules and safety standards on an ongoing basis *and unless otherwise provided by this Directive*.
- (97) Producers of renewable *gas* and low-carbon *gas* are often connected to the distribution grid. To facilitate their uptake and market integration, it is essential that they obtain unhindered access to the wholesale market and the relevant virtual trading points. *The access of renewable gas and low-carbon gas to the wholesale market should be facilitated by providing a definition of an entry-exit system that allows for the inclusion of distribution systems and ultimately ensures that all production facilities have an access to the market irrespective of whether they are* connected to the distribution *or transmission system*. In addition, Regulation (EU) .../... *of the European Parliament and of the Council*¹²⁺ [the recast Gas regulation] provides that distribution system operators and transmission system operators are to work together to enable reverse flows from the distribution to the transmission network or alternative means to facilitate the market integration of renewable *gas* and low carbon *gas*.
- (98) To avoid imposing a disproportionate financial and administrative burden on small distribution system operators, Member States should be able, where necessary, to exempt the undertakings concerned from the legal unbundling requirements.

¹² *Regulation (EU) .../... of the European Parliament and of the Council of ... on the internal markets for renewable gas and natural gas and for hydrogen, amending Regulations (EU) No 1227/2011, (EU) 2017/1938 and (EU) 2019/942 and Decision (EU) 2017/684 and repealing Regulation (EC) No 715/2009 (OJ L, ..., ELI: ...).*

⁺ *OJ: Please insert in the text the serial number of Regulation contained in document PE .../... [2021/0424 (COD)] and insert in the corresponding footnote the serial number, date and publication reference for that Regulation.*

- (99) Where a closed distribution system is used to ensure the optimal efficiency of an integrated energy supply requiring specific operational standards, or a closed distribution system is maintained primarily for the use of the owner of the system, it should be possible to exempt the distribution system operator from obligations which would constitute an unnecessary administrative burden because of the particular nature of the relationship between the distribution system operator and the users of the system. Industrial, commercial or shared services sites such as train station buildings, airports, hospitals, large camping sites with integrated facilities or chemical industry sites could include closed distribution systems because of the specialised nature of their operations.
- (100) With the integration of growing volumes of renewable *gas* and low-carbon *gas* in the natural gas system, the quality of *gas* transported and consumed in Europe will change. To ensure the efficient operation of the natural gas system, transmission system operators should be responsible for gas quality management in their facilities. Where the injection of renewable *gas* and low-carbon *gas* takes place at distribution level and where necessary to manage their impact on gas quality, regulatory authorities can task distribution system operators with ensuring the efficient gas quality management in their facilities. When undertaking gas quality management tasks, transmission and distribution system operators should comply with applicable gas quality standards.
- (101) Energy regulators need to be able to take decisions in relation to all relevant regulatory issues if the internal market in natural gas is to function properly, and to be fully independent from any other public or private interests. The provisions relating to autonomy in the implementation of the allocated budget of the regulatory authority should be implemented within the framework defined by national budgetary law and rules. While contributing to the independence of the regulatory authority from any political or economic interest *or interference* through an appropriate rotation scheme, it should be possible for Member States to take due account of the availability of human resources and of the size of the board.

- (102) In order to ensure effective market access for all market players, including new entrants, non-discriminatory and cost-reflective balancing mechanisms are necessary. This should be achieved through the setting up of transparent market-based mechanisms for the supply and purchase of *natural* gas, needed in the framework of balancing requirements. Regulatory authorities should play an active role to ensure that balancing prices are non-discriminatory and cost-reflective. At the same time, appropriate incentives should be provided to balance the in-put and off-take of gas and not to endanger the system.
- (103) Regulatory authorities should be able to fix or approve tariffs, or the methodologies underlying the calculation of the tariffs, on the basis of a proposal by the transmission system operator or distribution system operator(s) or liquefied natural gas (LNG) system operator, or on the basis of a proposal agreed between those operators and the users of the network. In carrying out those tasks, regulatory authorities should ensure that transmission and distribution tariffs are non-discriminatory and cost-reflective, and should take account of the long-term, marginal, avoided network costs from demand-side management measures.
- (104) Regulatory authorities should promote, in close cooperation with the Agency for the Cooperation of Energy Regulators (ACER), established by Regulation ■ (EU) 2019/942 of the European Parliament and of the Council¹³, an open, competitive, secure and environmentally sustainable internal market in hydrogen with unhindered cross-border flows. Regulatory authorities need to be able to take decisions in relation to all relevant regulatory issues if the internal market in hydrogen is to function properly.

¹³ *Regulation (EU) 2019/942 of the European Parliament and of the Council of 5 June 2019 establishing a European Union Agency for the Cooperation of Energy Regulators (OJ L 158, 14.6.2019, p. 22).*

- (105) Energy regulators should have the power to issue binding decisions in relation to natural gas or hydrogen undertakings and to impose effective, proportionate and dissuasive penalties on natural gas or hydrogen undertakings which fail to comply with their obligations or to propose that a competent court impose such penalties on them. Energy regulators should also be granted the power to decide, irrespective of the application of competition rules, on appropriate measures ensuring customer benefits through the promotion of effective competition necessary for the proper functioning of the internal market in natural gas and in **hydrogen**. **The** establishment of gas-release programmes is one of the possible measures that can be used to promote effective competition and ensure the proper functioning of the market.
- (106) Energy regulators should also be granted the powers to contribute to ensuring high standards of public service in compliance with market opening, to the protection of vulnerable customers, and to the full effectiveness of consumer protection measures. Those provisions should be without prejudice to both the Commission's powers concerning the application of competition rules including the examination of mergers with a Union dimension, and the rules on the internal market such as the free movement of capital. The independent body to which a party affected by the decision of a regulatory authority has a right to appeal could be a court or other tribunal empowered to conduct a judicial review.
- (107) Any harmonisation of the powers of regulatory authorities should include the powers to provide incentives to undertakings and to impose effective, proportionate and dissuasive penalties on undertakings or to propose that a competent court impose such penalties. Moreover, regulatory authorities should have the power to request relevant information from undertakings, make appropriate and sufficient investigations and settle disputes.
- (108) The regulatory authorities and ACER should provide information on the hydrogen market to ensure transparency, including aspects such as supply and demand, transport infrastructure, quality of service, cross-border trade, investments, **wholesale and** consumer prices, market liquidity.

- (109) Transmission system operators play an important role in ensuring cost effective investments in *natural gas and hydrogen* networks. For an optimised planning across energy carriers and to bridge the gap between the diverse national and EU-wide network planning approaches, additional requirements for consistent planning are introduced. *To ensure a cost-effective infrastructure rollout and to avoid stranded assets*, the network planning should also take account of the increased interlinkages between natural gas and electricity, as well as hydrogen *and, where applicable, district heating*. *Apart from power to natural gas assets, interlinkages between hydrogen and electricity may include as well as hydrogen power plants. The network planning should be transparent and allow the relevant stakeholders to participate. To that effect, the operators should be required to conduct an extensive stakeholder consultation. The European Scientific Advisory Board on Climate Change, established under Regulation (EU) 2021/1119 may provide its opinion on the joint scenarios. The network development plan for hydrogen should target the use of hydrogen in hard-to-decarbonise sectors where no more energy and cost-efficient alternatives are available.*
- (109a) *By co-location, hydrogen production and consumption takes place in the same location or be located as close as possible, thus ensuring stable hydrogen quality as per end-use and minimizing costs, environmental impact as well as hydrogen leaks related to the transport. Hydrogen network operators should cooperate with connected and neighbouring hydrogen network operators to ensure the most efficient connection possible.*
- (110) When developing the network development plan, it is important that infrastructure operators take *into account* the energy efficiency first *and system efficiency principles established in the Commission Recommendation of 28 September 2021 entitled ‘Energy Efficiency First: from principles to practice. Guidelines and examples for its implementation in decision-making in the energy sector and beyond’*, in particular, the expected consumption used for the joint scenario development. *Demand-side solutions should be prioritised whenever they are more cost-effective than investments in infrastructure.*

- (111) The energy system integration strategy points out the importance of the coordinated planning and operation of the energy system in achieving the decarbonisation objectives. Therefore, it is necessary to draw up ■ network development *plans* based on a joint scenario developed on a cross-sectoral basis. While still *being able to identify* separate sectorial *network models and separate chapters in case of a joint network development plan*, infrastructure operators should work towards a higher level of integration taking into account system needs beyond specific energy carriers.
- (112) Network development plans are an important element to identify infrastructure gaps and provide information on infrastructure that either needs to be built or that can be decommissioned and could be used for other purposes, such as hydrogen transport. This is true irrespective of the unbundling model chosen for the network operators.
- (113) Providing information on infrastructure that can be decommissioned within the network development plan may mean *permanently taking out of the service* the infrastructure *by either leaving it* unused, dismantling it or *making it available for* using it for other purposes, such as hydrogen transport. The objective of this increased transparency on infrastructure takes into account that repurposed infrastructure is comparatively cheaper than newly built infrastructure and hence should enable a cost-effective transition.
- (114) In Member States where a hydrogen *distribution* network will be developed, *it should be ensured* that the *development of* hydrogen *infrastructure is* based on a realistic and forward-looking demand projections including potential needs from the perspective of the electricity system *and the hard to decarbonise sectors*. If Member States decide to allow for dedicated charges as a means of co-funding new hydrogen infrastructure, the plan should support the regulatory authority in its assessment of these charges. The plan should be submitted *every 4 years* to the regulatory authority *or, until 2032, to another competent* authority.

- (115) Information contained in the network development plan should enable a forecast on the impacts on tariffs based on planning, *decommissioning or repurposing* affecting the *regulatory* asset base ■ .
- (116) Instead of providing a national network development plan on individual Member State level, Member States should be allowed to choose to draw up a network development plan on regional level including more than one Member State and in line with voluntary regional *natural* gas market integration.
- (117) In contrast to electricity, the role of natural gas *will increasingly decline in the future*, which also affects the demand for infrastructure investments. The network development plan therefore needs to balance competition concerns and avoid stranded assets. Consequently, ownership unbundled transmission system operators should not be covered by Article 51(7).
- (117a) *Member States are able to choose to strategically close and adjust part of their distribution system in order to phase out the supply of natural gas to households to ensure the transition into a sustainable and effective system.*

- (117b) *Member States should require hydrogen distribution network operators to present the hydrogen network infrastructure they aim to develop and repurpose in hydrogen distribution network plans. Natural gas distribution network operators should be required to develop network decommissioning plans when a reduction in natural gas demand is expected that requires the decommissioning of natural gas distribution networks or parts of such networks. Natural gas distribution network operators and hydrogen distribution network operators can be allowed to develop joint plans if operating in the same area and parts of the network are to be repurposed. Those plans should be in line with the ten-year network development plans. The distribution network development plans and the decommissioning plans for natural gas should promote the energy efficiency and energy system integration taking into account the local heating and cooling plans. Those plans should contribute to the achievement of the Union's energy and climate targets and be based on reasonable assumptions about demand and production of natural gas and hydrogen. When preparing the plan, the operators should be required to conduct a consultation process involving all relevant stakeholders and make the draft plans publicly available. Member States should ensure guidance from the regulatory authorities where parts of the distribution system may require decommissioning, in particular before the end of their originally projected depreciation time.*
- (117c) *The framework governing the calculation and charging of connection costs and fees to biomethane producers plays an important role in enabling the integration of sustainable biomethane into European natural gas networks. Member States should provide a regulatory framework for facilitating an efficient connection of biomethane production facilities to the transmission or distribution networks. When setting or approving tariffs or the methodologies to be used by the transmission and distribution system operators, national regulatory authorities without prejudice to their independence on performing these tasks, should remain able to take into account the costs incurred and investments made by these system operators.*

- (119) It is necessary to progress towards interconnected hydrogen markets in the Union and thereby facilitate investments in cross-border hydrogen infrastructure. ■
- (120) Trust in the market, its liquidity and the number of market participants needs to increase, and, therefore, regulatory oversight of undertakings active in the supply of *natural* gas needs to be increased. Such requirements should be without prejudice to, and compatible with, existing Union law in relation to the financial markets. Energy regulators and financial market regulators need to cooperate in order to enable each other to have an overview of the markets concerned. ***Member States should be able to set the financial solidity of natural gas supply undertakings as a criterion to grant an authorisation for the sale, including resale, of natural gas. Such criterion should be fully transparent and non-discriminatory.***
- (121) Natural gas is mainly, and increasingly, imported into the Union from third countries. Union law should take account of the characteristics of natural gas, such as certain structural rigidities arising from the concentration of suppliers, the long-term contracts or the lack of downstream liquidity. Therefore, more transparency is needed, including in regard to the formation of prices.
- (122) Prior to the adoption by the Commission of guidelines defining further the record-keeping requirements, ACER and the Committee of European Securities Regulators (the ‘CESR’), established by Commission Decision 2009/77/EC¹⁵, should confer and advise the Commission in regard to their content. ACER and the CESR should also cooperate to investigate further and advise on whether transactions in gas supply contracts and gas derivatives should be subject to pre- and/or post-trade transparency requirements and, if so, what the content of those requirements should be.
- (123) Member States or, where a Member State has so provided, the regulatory authority, should encourage the development of interruptible supply contracts.

¹⁵ ***Commission Decision of 23 January 2009 establishing the Committee of European Securities Regulators*** (OJ L 25, 29.1.2009, p. 18).

- (124) Member States should ensure that, taking into account the necessary quality requirements, **biomethane** or other types of gas are granted non-discriminatory access to the *natural* gas system, provided that such access is permanently compatible with the relevant technical rules and safety standards. Those rules and standards should ensure that *biomethane, or other types of gas* can technically and safely be injected into and transported through the natural gas system and should also address their chemical characteristics.
- (125) Long-term contracts are an important part of the *natural* gas supply of Member States. However, they should not constitute a barrier to the entry of renewable *gas and low-carbon gas*, which is why the duration of contracts for the supply of fossil gas will not be able to run beyond 2049. Such contracts *should* always *comply* with the *objectives* of this Directive and **compatible** with the TFEU, including the competition rules. It is necessary to take into account long-term contracts in the planning of supply and transport capacity of undertakings. *While unabated fossil gas is still playing an important role, its relevance for securing the Union's energy supply will increasingly decline. Member States should ensure the phase-out of fossil gas, taking into account the availability of alternatives. Where foreseen in their National Energy and Climate Plans, Member States may decide on an earlier end-date for the duration of long-term contracts for unabated fossil gas before the end of 2049.*
- (126) In order to ensure the maintenance of high standards of public service in the Union, all measures taken by Member States to achieve the objectives of this Directive should be regularly notified to the Commission. The Commission should regularly publish a report analysing measures taken at national level to achieve public service objectives and comparing their effectiveness, with a view to making recommendations as regards measures to be taken at national level to achieve high public service standards.

- (127) Respect for the public service requirements is a fundamental requirement of this Directive, and it is important that common minimum standards, respected by all Member States, are specified in this Directive, which take into account the objectives of common protection, ***tackling energy poverty, price monitoring***, security of supply, environmental protection and equivalent levels of competition in all Member States. It is important that the public service requirements can be interpreted on a national basis, taking into account national circumstances and subject to the respect of Union law.
- (128) It should be possible for measures implemented by Member States to achieve the objectives of social and economic cohesion to include, in particular, the provision of adequate economic incentives, using, where appropriate, all existing national and Union tools. It should be possible for such tools to include liability mechanisms to guarantee the necessary investment.
- (129) To the extent to which measures taken by Member States to fulfil public service obligations constitute State aid under Article ***107(1) TFEU***, there is an obligation under Article 108(3) ***TFEU*** to notify them to the Commission.
- (130) Market prices should give the right incentives for the development of the network.

- (130a) *Certain Member States, due to the historical features and levels of maturity of their natural gas markets should have the possibility to derogate from specific rules established in this Directive to prevent unjustified penalization, and to favour an efficient development of natural gas markets in these countries. This specifically applies to Luxembourg, due to its specific market characteristics, and to all those Member States that are not yet connected to the interconnected system of any other Member State or that have not yet received the first commercial supply of their first long-term natural gas supply contract. In order to ensure a uniform application of Union law, derogations for Member States that are not yet connected to the interconnected system of any other Member State or that have not yet received the first commercial supply of their first long-term natural gas supply contract should be of a temporary nature, until those Member States are able to meet higher standards in terms of market opening and interconnectivity with the integrated natural gas system of the Union. Where such derogation applies, it should also cover any provisions in this Directive that are ancillary to, or that require the prior application of, any of the provisions from which a derogation has been granted.*
- (131) Promoting fair competition and easy access for different suppliers should be of the utmost importance for Member States in order to allow consumers to take full advantage of the opportunities of a liberalised internal market in *natural gas*.

I

- (133) With a view to creating an internal market in natural gas, Member States should foster the integration of their national markets and the cooperation of system operators at Union and regional level, also incorporating the isolated systems forming gas islands that persist in the Union.
- (134) Voluntary regional markets integration, notably market mergers, can provide various benefits, depending on the specificities of the markets. Market integration may be an opportunity to make best use of infrastructure provided it does not negatively impact neighbouring markets, for instance by increased cross-border tariffs. It is also a chance to increase competition, liquidity and trade to the benefit of the end-consumers in the region, by attracting suppliers which otherwise would not come due to the small market size. Market integration allows also to create bigger zones accessing more supply sources. Such diversification *could* have an impact on the wholesale market prices, thanks to an improved competition between sources, but may also improve security of supply if there is no remaining internal congestion in the new merged zone. Market integration could be a basis to further support the transformation of the natural gas market, including the deployment of renewable *gas* and low-carbon *gas*. Member States, regulatory authorities and transmission system operators should cooperate to facilitate regional integration.
- (135) The development of a true internal market in natural gas, through a network connected across the Union, should be one of the main goals of this Directive and regulatory issues on cross border interconnections and regional markets should, therefore, be one of the main tasks of the regulatory authorities, in close cooperation with ACER where relevant.
- (136) Securing common rules for a true internal market and a broad supply of *natural* gas should also be one of the main goals of this Directive. To that end, undistorted market prices would provide an incentive for cross-border trade while leading to price convergence.

- (137) The regulatory authorities should also provide information on the market to permit the Commission to exercise its role of observing and monitoring the internal market in natural gas and its short, medium and long-term evolution, including aspects such as supply and demand, transmission and distribution infrastructure, quality of service, cross-border trade, congestion management, investments, wholesale and consumer prices, market liquidity and environmental and efficiency improvements. Regulatory authorities should report to the competition authorities and the Commission those Member States in which prices impair competition and proper functioning of the market.
- (138) Since the objective of this Directive, namely the creation of a fully operational internal market in natural gas and in hydrogen, cannot be sufficiently achieved by the Member States but can rather, by reason of the scale or effects of such an action, be better achieved at Union level, the Union may adopt measures, in accordance with the principle of subsidiarity as set out in Article 5 of the Treaty on European Union. In accordance with the principle of proportionality as set out in that Article, this Directive does not go beyond what is necessary in order to achieve that objective.
- (139) Under Regulation (EC) No 715/2009 of the European Parliament and of the Council²², the Commission may adopt guidelines or network codes to achieve the necessary degree of harmonisation. Such guidelines or network codes, which constitute binding rules adopted as Commission **implementing** regulations, are, also with regard to certain provisions of this Directive, a useful tool which can be adapted quickly where necessary.
- (140) In particular, the Commission should be empowered to adopt the guidelines necessary for providing the minimum degree of harmonisation required to achieve the aim of this Directive.

- (141) In accordance with the Joint Political Declaration of 28 September 2011 of Member States and the Commission on explanatory documents, Member States have undertaken to accompany, in justified cases, the notification of their transposition measures with one or more documents explaining the relationship between the components of a directive and the corresponding parts of national transposition instruments. With regard to this Directive, the legislator considers the transmission of such documents to be justified, in particular following the judgment of the European Court of Justice in Case case C-543/17¹³.
- (142) This Directive respects the fundamental rights, and observes the principles, recognised in particular by the Charter of Fundamental Rights of the European Union. Accordingly, this Directive should be interpreted and applied in accordance with those rights and principles, in particular the right to the protection of personal data guaranteed by Article 8 of the Charter. It is essential that any processing of personal data under this Directive comply with Regulation (EU) 2016/679 of the European Parliament and of the Council¹⁶.
- (143) In order to provide the minimum degree of harmonisation required to achieve the **objectives** of this Directive, the power to adopt acts in accordance with Article 290 TFEU should be delegated to the Commission in respect of non-essential elements of certain specific areas which are fundamental for achieving the objectives of this Directive. It is of particular importance that the Commission carries out appropriate consultations during its preparatory work, including at expert level, and that those consultations be conducted in accordance with the principles laid down in the Interinstitutional Agreement of 13 April 2016 on Better Law-Making¹⁷. In particular, to ensure equal participation in the preparation of delegated acts, the European Parliament and the Council receive all documents at the same time as Member States' experts, and their experts systematically have access to meetings of Commission expert groups dealing with the preparation of the delegated acts.

¹³ *Judgment of the Court of Justice of 8 July 2019, European Commission v Kingdom of Belgium, C-543/17, ECLI:EU:C:2019:573.*

¹⁶ *Regulation (EU) 2016/679 of the European Parliament and of the Council of 27 April 2016 on the protection of natural persons with regard to the processing of personal data and on the free movement of such data, and repealing Directive 95/46/EC (General Data Protection Regulation) (OJ L 119, 4.5.2016, p. 1).*

¹⁷ OJ L 123, 12.5.2016, p. 1 ■

- (144) In order to ensure uniform conditions for the implementation of this Directive, implementing powers should be conferred on the Commission to determine interoperability requirements and non-discriminatory and transparent procedures for access to data. Those powers should be exercised in accordance with Regulation (EU) No 182/2011.
- (145) The obligation to transpose this Directive into national law should be confined to those provisions which represent a substantive amendment as compared to the *Directive 2009/73/EC*. The obligation to transpose the provisions which are unchanged arises under the *that* Directive.
- (145a) *Directive 2009/73/EC should be repealed.*
- (146) In order to ensure a smooth and effective implementation of the provisions laid down in this Directive, the Commission supports Member States through the Technical Support Instrument *established by Regulation (EU) 2021/240 of the European Parliament and of the Council¹⁸* and providing tailor-made technical expertise to design and implement reforms, including those promoting a competitive internal market in natural gas and in hydrogen, enabling the integration of *renewable gas* and low carbon *gas*, and increasing cooperation and coordination among transmission and distribution system operators. The technical support, for example, involves strengthening of administrative capacity, harmonising the legislative frameworks, and sharing of relevant best practices.
- (147) This Directive should be without prejudice to the obligations of the Member States relating to the time-limits for the transposition into national law and the date of application of the Directives set out in Annex III, Part B,

¹⁸ *Regulation (EU) 2021/240 of the European Parliament and of the Council of 10 February 2021 establishing a Technical Support Instrument (OJ L 57, 18.2.2021, p.1).*

HAVE ADOPTED THIS DIRECTIVE:

Chapter I

Subject matter, scope and definitions

Article 1

Subject matter and scope

- 1.** *This Directive establishes a common framework for the decarbonisation of the markets for gas, in order to contribute to the achievement of the Union's climate and energy targets.*
- 1.** This Directive establishes common rules for the transmission, distribution, supply and storage of *natural gas and hydrogen using the natural gas system defined in Article 2, point (4), and consumer protection provisions, with a view to creating an integrated, competitive and transparent gas market in the Union*. It lays down the rules relating to the organisation and functioning of that sector, access to the market, the criteria and procedures applicable to the granting of authorisations for transmission, distribution, supply and storage of *natural gas* using the natural gas system and the operation of systems.
- 2.** This Directive establishes rules for the transport, supply and storage of natural gas and the transition of the natural gas system *towards an integrated and highly efficient* system based on renewable *gas* and low-carbon *gas*.

3. This Directive establishes common rules for the transport, supply and storage of hydrogen using the hydrogen system. It lays down the rules relating to the organisation and functioning of this sector, access to the market, the criteria and procedures applicable to the granting of authorisations for networks, supply and storage of hydrogen and the operation of systems.
4. This Directive establishes rules for the progressive establishment of a Union-wide interconnected hydrogen system contributing to the *long-term flexibility of the electricity system and to the* reduction of net greenhouse gas emissions of difficult to decarbonise sectors *taking into account the greenhouse gas abatement potential and the energy and cost-efficiency in relation to other options* and thereby supporting ■ the decarbonisation of the *Union* energy system.

Article 2

Definitions

For the purposes of this Directive, the following definitions apply:

- (1) ‘natural gas’ means **gas** that primarily consist of methane, including ■ biomethane, or other types of gas, that can technically and safely be injected into, and transported through, the natural gas system;
- (2) ‘renewable gas’ means biogas as defined in Article 2, point (28), of Directive (EU) 2018/2001, including *biogas that has been upgraded to* biomethane, and renewable fuels of non-biological origins (‘*RFNBO*’) as defined in Article 2, point (36), of that Directive;

■

- (4) ‘natural gas system’ means a system of infrastructures, including pipelines, LNG terminals and storage facilities, which transports **gas**, that primarily consist of methane and include ■ biomethane, or other types of gas that can technically and safely be injected into, and transported through the natural gas pipeline system.
- (5) ‘hydrogen system’ means a system of infrastructure, including hydrogen networks, hydrogen storage, and hydrogen terminals, which contains hydrogen of a high grade of purity;
- (6) ‘hydrogen storage facility’ means a facility used for the stocking of hydrogen of a high grade of purity:
- (a) including the part of a hydrogen terminal used for storage but excluding the portion used for production operations ■ and facilities reserved exclusively for hydrogen network operators in carrying out their functions;
 - (b) including large, in particular underground, hydrogen storage but excluding smaller, easily replicable hydrogen storage installations.
- (6a) *‘hydrogen storage operator’ means a natural or legal person who carries out the function of storage of hydrogen and is responsible for operating a hydrogen storage facility;*
- (7) ‘hydrogen linepack’ means the storage of hydrogen of a high grade of purity by compression in hydrogen networks, excluding facilities reserved for hydrogen network operators carrying out their functions;
- (8) ‘hydrogen terminal’ means an installation used for the **offloading and** transformation of liquid hydrogen or liquid ammonia into gaseous hydrogen for injection into the hydrogen network or the **natural gas system or the** liquefaction of gaseous hydrogen **and its onloading**, including ancillary services and temporary storage necessary for the transformation process and subsequent injection into the hydrogen network, but not any part of the hydrogen terminal used for storage;

- (8a) *‘hydrogen terminal operator’ means a natural or legal person who carries out the function of offloading and transformation of liquid hydrogen or liquid ammonia into gaseous hydrogen for injection into the hydrogen network or the natural gas system or the liquefaction and onloading of gaseous hydrogen and is responsible for operating a hydrogen terminal;*
- (9) ‘hydrogen quality’ means hydrogen purity and contaminants in line with applicable hydrogen quality standards for the hydrogen system;
- (10) ‘low-carbon hydrogen’ means hydrogen the energy content of which is derived from non-renewable sources, which meets *the* greenhouse gas emission reduction threshold of 70% *compared to the fossil fuel comparator for renewable fuels of non-biological origin set out in the methodology adopted according to Article 29a(3) to Directive (EU) 2018/2001;*
- (11) ‘low-carbon gas’ means the part of gaseous fuels in recycled carbon fuels as defined in Article 2, point (35), of Directive (EU) 2018/2001, low-carbon hydrogen and synthetic gaseous fuels the energy content of which is derived from low-carbon hydrogen, which meet the greenhouse gas emission reduction threshold of 70% *compared to the fossil fuel comparator for renewable fuels of non-biological origin set out in the methodology adopted according to Article 29a(3) of Directive (EU) 2018/2001;*
- (12) ‘low-carbon fuels’ means recycled carbon fuels as defined in Article 2, *point (35)*, of Directive (EU) 2018/2001, low-carbon hydrogen and synthetic gaseous and liquid fuels the energy content of which is derived from low-carbon hydrogen, which meet the greenhouse gas emission reduction threshold of 70% *compared to the fossil fuel comparator for renewable fuels of non-biological origin set out in the methodology adopted according to Article 29a(3) of Directive (EU) 2018/2001;*

- (13) ‘hydrogen undertaking’ means a natural or legal person *who carries* out at least one of the following functions: hydrogen production, hydrogen transport, supply, purchase or storage of hydrogen, or operating a hydrogen terminal, and which is responsible for the commercial, technical or maintenance tasks related to those functions, *excluding* final customers;
- (14) ‘natural gas undertaking’ means a natural or legal person *who carries* out production, transmission, distribution, supply, purchase or storage of natural gas, including LNG, and which is responsible for the commercial, technical or maintenance tasks related to those functions, *excluding* final customers;
- (15) ‘upstream pipeline network’ means any pipeline or network of pipelines operated and/or constructed as part of an oil or natural gas production project, or used to convey natural gas from one or more such projects to a processing plant or terminal or final coastal landing terminal;
- (16) ‘transmission’ means the transport of natural gas through a network, which mainly contains high-pressure pipelines, other than an upstream pipeline network and other than the part of high-pressure pipelines primarily used in the context of local distribution of natural gas, with a view to its delivery to customers, *excluding* supply;
- (17) ‘transmission system operator’ means a natural or legal person who carries out the function of transmission and is responsible for operating, ensuring the maintenance of, and, if necessary, developing the transmission system in a given area and, where applicable, its interconnections with other systems, and for ensuring the long-term ability of the system to meet reasonable demands for the transport of natural gas;
- (18) ‘distribution’ means the transport of natural gas through local or regional pipeline networks with a view to its delivery to customers, *excluding* supply;

- (19) ‘distribution system operator’ means a natural or legal person who carries out the function of distribution and is responsible for operating, ensuring the maintenance of, and, if necessary, developing the distribution system in a given area and, where applicable, its interconnections with other systems, and for ensuring the long-term ability of the system to meet reasonable demands for the distribution of natural gas;
- (20) ‘hydrogen network’ means a network of *onshore and offshore* pipelines used for the transport of hydrogen of a high grade of purity with a view to its delivery to customers, *excluding* supply;
- (21) ‘hydrogen transport’ means the *transmission or distribution* of hydrogen through a hydrogen network with a view to its delivery to customers, but *excluding* supply ■ ;
- (21a) *‘hydrogen transmission network’ means a network of pipelines for the transport of hydrogen of a high grade of purity, in particular, networks which include hydrogen interconnectors, or which are directly connected to hydrogen storage, hydrogen terminals or two or more hydrogen interconnectors or which primarily serve the purpose of transporting hydrogen to other hydrogen networks, hydrogen storages or hydrogen terminals. Such networks may serve the purpose of supplying directly connected customers.*
- (21b) *‘hydrogen distribution network’ means a network of pipelines for the local or regional transport of hydrogen of a high grade of purity, which primarily serve the purpose of supplying directly connected customers, and do not include hydrogen interconnectors, and are not directly connected to hydrogen storage or to hydrogen terminals, unless the network in question was a natural gas distribution system on [entry into force of this Directive] and has been partially or fully repurposed for the transport of hydrogen, or to two or more hydrogen interconnectors.*

- (22) ‘hydrogen network operator’ means a natural or legal person who carries out the function of hydrogen transport and is responsible for operating, ensuring the maintenance of, and, if necessary, developing the hydrogen network in a given area and, where applicable, its interconnections with other hydrogen networks, and for ensuring the long-term ability of the system to meet reasonable demands for the transport of hydrogen;
- (22a) *‘hydrogen transmission network operator’ means a natural or legal person who is responsible for operating, ensuring the maintenance of, and, if necessary, developing a hydrogen transmission network in a given area and, where applicable, its interconnections with other hydrogen networks, and for ensuring the long-term ability of the network to meet reasonable demands for hydrogen transport;*
- (22b) *‘hydrogen distribution network operator’ means a natural or legal person who is responsible for operating, ensuring the maintenance of, and, if necessary, developing a hydrogen distribution network in a given area and, where applicable, its interconnections with other hydrogen networks, and for ensuring the long-term ability of the network to meet reasonable demands for hydrogen transport;*
- (23) ‘supply’ means the sale, including resale, of natural gas, including LNG, or hydrogen, including *in the form of liquid organic hydrogen carriers or liquid hydrogen and hydrogen derivatives including ammonia or methanol* to customers;
- (24) ‘supply undertaking’ means any natural or legal person who carries out the function of supply;

- (25) ‘storage facility’ means a facility used for the stocking of natural gas and owned and/or operated by a natural gas undertaking, including the part of LNG facilities used for storage but excluding the portion used for production operations, and excluding facilities reserved exclusively for transmission system operators in carrying out their functions;
- (26) ‘storage system operator’ means a natural or legal person who carries out the function of storage of natural gas and is responsible for operating a storage facility;
- (27) ‘LNG facility’ means a terminal which is used for the liquefaction of natural gas or the importation, offloading, and re-gasification of LNG, including ancillary services and temporary storage necessary for the re-gasification process and subsequent delivery to the transmission system, but not including any part of LNG terminals used for storage;
- (28) ‘LNG system operator’ means a natural or legal person who carries out the function of liquefaction of natural gas, or the importation, offloading, and re-gasification of LNG and is responsible for operating a LNG facility;
- (29) ‘system’ means any transmission networks, distribution networks, LNG facilities or storage facilities owned or operated by a natural gas undertaking, including linepack and its facilities supplying ancillary services and those of related undertakings necessary for providing access to transmission, distribution and LNG;

- (30) ‘ancillary services’ means all services necessary for access to and the operation of transmission networks, distribution networks, LNG facilities, or storage facilities, including load balancing, blending and injection of inert *gas*, ***excluding*** facilities reserved exclusively for transmission system operators carrying out their functions;
- (31) ‘natural gas linepack’ means the storage of natural gas by compression in gas transmission and distribution systems, but not including facilities reserved for transmission system operators carrying out their functions;
- (32) ‘interconnected system’ means a number of systems which are linked with each other;
- (33) ‘interconnector’ means a transmission line which crosses or spans a border between Member States for the purpose of connecting the national transmission system of those Member States or a transmission line between a Member State and a third country up to the territory of the Member States or the territorial sea of that Member State;
- (34) ‘hydrogen interconnector’ means a hydrogen network which crosses or spans a border between Member States ***for the purpose of connecting the national hydrogen networks of those Member States, or a hydrogen network*** between a Member State and a third country up to the territory of the Member States or the territorial sea of that Member State;
- (35) ‘direct line’ means a natural gas pipeline complementary to the interconnected system;

- (36) ‘integrated natural gas undertaking’ means a vertically or horizontally integrated undertaking;
- (37) ‘vertically integrated undertaking’ means a natural gas undertaking or a group of natural gas undertakings or a hydrogen undertaking or group of hydrogen undertakings where the same person or the same persons are entitled, directly or indirectly, to exercise control, and where the undertaking or group of undertakings perform at least one of the functions of transmission, distribution, hydrogen transport, hydrogen terminal operation, LNG or natural gas or hydrogen storage, and at least one of the functions of production or supply of natural gas or of hydrogen;
- (38) ‘horizontally integrated undertaking’ means an undertaking performing at least one of the functions of production, transmission, distribution, supply or storage of natural gas, and a ***non-natural*** gas activity;
- (39) ‘related undertaking’ means an affiliated undertaking ■ as defined in **Article 2**, point (12), of Directive 2013/34/EU of the European Parliament and of the Council¹⁹, or an undertaking which belongs to the same shareholders;
- (40) ‘system user’ means a natural or legal person supplying to, or being supplied by, the system;
- (41) ‘customer’ means a wholesale or final customer of ***natural gas or hydrogen*** or a natural gas or hydrogen undertaking which purchases ***natural gas or hydrogen***;

¹⁹ Directive 2013/34/EU of the European Parliament and of the Council of 26 June 2013 on the annual financial statements, consolidated financial statements and related reports of certain types of undertakings, amending Directive 2006/43/EC of the European Parliament and of the Council and repealing Council Directives 78/660/EEC and 83/349/EEC (OJ L 182, 29.6.2013, p. 19).

- (42) ‘household customer’ means a customer purchasing *natural gas or hydrogen* for his own household consumption;
- (43) ‘non-household customer’ means a customer purchasing *natural gas or hydrogen* which are not for his own household use;
- (44) ‘final customer’ means a customer purchasing *natural gas or hydrogen* for his own use;
- (45) ‘wholesale customer’ means a natural or legal person other than a transmission system operator or distribution system operator who purchases *natural gas or hydrogen* for the purpose of resale inside or outside the system where he is established;
- (46) ‘*microenterprise*’, ‘*small enterprise*’ and ‘*medium enterprises*’ mean enterprises as defined in Article 2 of Commission Recommendation of 6 May 2003 concerning the definition of micro, small and medium-sized enterprises^[1] OJ L 124, 20.5.2003, p. 36–41¹⁾

- (48) ‘security’ means both security of supply of natural gas and technical safety;
- (49) ‘gas supply contract’ means a contract for the supply of *natural gas or hydrogen*, but does not include a gas derivative;
- (50) ‘gas derivative’ means a financial instrument specified in *point 5, 6 or 7* of Section C of Annex I to Directive 2014/65/EU of the European Parliament and of the Council²⁰ where that *financial* instrument relates to gas;

²⁰ *Directive 2014/65/EU of the European Parliament and of the Council of 15 May 2014 on markets in financial instruments and amending Directive 2002/92/EC and Directive 2011/61/EU (OJ L 173, 12.6.2014, p. 349).*

- (51) ‘control’ means any rights, contracts or any other means which, either separately or in combination and having regard to the considerations of fact or law involved, confer the possibility of exercising decisive influence on an undertaking, in particular by:
- (a) ownership or the right to use all or part of the assets of an undertaking;
 - (b) rights or contracts which confer decisive influence on the composition, voting or decisions of the organs of an undertaking;
- (52) ‘long-term contract’ means a supply contract exceeding one year;
- (53) ‘entry-exit system’ means *an access model for natural gas where system users book capacity rights independently on entry- and exit points. The entry-exit system includes the transmission system and may include the distribution system or parts of a distribution system.*
- (54) **■** ‘balancing zone’ means *a system to which a specific balancing regime is applicable and which includes the transmission system and may include distribution systems or parts of such distribution systems;*
- (55) ‘virtual trading point’ means a non-physical commercial point within an entry-exit system where *natural gas and hydrogen* are exchanged between a seller and a buyer without the need to book capacity;
- (55a) *‘network user’ means a customer or a potential customer of a system operator, and system operators themselves in so far as it is necessary for them to carry out their functions in relation to transport of natural gas and hydrogen;*
- (56) ‘entry point’ means a point subject to booking procedures by network users **■** providing access to an entry-exit system;

- (57) ‘exit point’ means a point subject to booking procedures by network users enabling gas flows out of the entry exit system;
- (58) ‘interconnection point’ means a physical or virtual point connecting adjacent entry-exit systems or connecting an entry-exit system with an interconnector, in so far as these points are subject to booking procedures by network users;
- (59) ‘virtual interconnection point’ means two or more interconnection points which connect the same two adjacent entry-exit systems, integrated together for the purposes of providing a single capacity service;
- (60) ‘market participant’ means a natural or legal person who buys, sells or produces *natural gas or hydrogen* or who is an operator of storage services including through the placing of orders to trade in one or more *natural gas or hydrogen* markets including balancing markets;
- (61) ‘contract termination fee’ means a charge or penalty imposed on customers by suppliers or market participants, for terminating a gas supply or service contract;
- (62) ‘switching-related fee’ means a charge or penalty for changing suppliers or market participants, including contract termination fees, that is directly or indirectly imposed on customers by suppliers, market participants or system operators;
- (63) ‘billing information’ means the information provided on a final customer's bill, apart from a request for payment;

- (64) ‘conventional meter’ means an analogue or electronic meter with no capability to both transmit and receive data;
- (65) ‘smart metering system’ means an electronic system that is capable of measuring *natural* gas *or hydrogen* fed into the grid or *natural* gas *or hydrogen* consumed from the grid, providing more information than a conventional meter, and that is capable of transmitting and receiving data for information, monitoring and control purposes, using a form of electronic communication;
- (66) ‘interoperability’ means, in the context of smart metering, the ability of two or more energy or communication networks, systems, devices, applications or components to interwork to exchange and use information in order to perform required functions;
- (67) ‘most recent available’ means, in the context of smart metering data, that it is provided within a period matching the shortest settlement period in the national market;
- (68) ‘best available techniques’ means, in the context of data protection and security in a smart metering environment, the most effective, advanced and practically suitable techniques for providing, in principle, the basis for complying with the Union data protection and security rules;
- (69) ‘energy poverty’ means energy poverty as defined in **Article 2**, point (49), 2 of Directive (EU) **2023/1791** COD of the European Parliament and of the Council¹⁴;

■

¹⁴ *Directive (EU) 2023/1791 of the European Parliament and of the Council of 13 September 2023 on energy efficiency and amending Regulation (EU) 2023/955 (OJ L 231, 20.9.2023, p. 1).*

(71) ‘active customer’ means a final **customer of** natural gas, or a group of jointly acting final **customers of** natural gas, who consumes or stores renewable gas **which is** produced within its premises located within confined boundaries or, where permitted by **the** Member State **concerned**, within other premises, or who sells self-produced renewable gas using the natural gas system, or **who participates in flexibility or** participates in energy efficiency schemes, provided that those activities do not constitute **the final customer’s** primary commercial or professional activity **and comply with the legislation applicable to renewable gas production, in particular in relation to greenhouse gas emissions;**

(71a) ‘energy efficiency first’ means energy efficiency first as defined in Article 2, point (18), of Regulation (EU) 2018/1999;

(71b) ‘repurposing’ means repurposing as defined in Article 2, point (18), of Regulation (EU) 2022/869 of the European Parliament and of the Council¹⁵

¹⁵ **Regulation (EU) 2022/869 of the European Parliament and of the Council of 30 May 2022 on guidelines for trans-European energy infrastructure, amending Regulations (EC) No 715/2009, (EU) 2019/942 and (EU) 2019/943 and Directives 2009/73/EC and (EU) 2019/944, and repealing Regulation (EU) No 347/2013 (OJ L 152, 3.6.2022, p. 45).**

Chapter II

General rules for the organisation of the market

Article 3

Competitive, customer-centred, flexible and non-discriminatory markets for *natural gas and hydrogen*

1. Member States shall ensure that all customers are free to purchase *natural gas and hydrogen* from the supplier of their choice and shall ensure that all customers are free to have more than one supply contract for natural gas or hydrogen at the same time, provided that the required connection and metering points are established.
2. Member States shall ensure that their national law does not unduly hamper cross-border trade in *natural gas and hydrogen*, the functioning and emergence of liquid trading for *natural gas and hydrogen*, consumer participation, investments into, in particular, renewable *gas* and low carbon *gas*, or energy storage between Member States, and shall ensure that prices for *natural gas and hydrogen* reflect actual demand and supply.
3. Member States shall ensure that no undue barriers exist within the internal market for *natural gas and hydrogen* as regards market entry and exit, trading and operation.
4. Member States shall ensure that energy undertakings are subject to transparent, proportionate and non-discriminatory rules, fees and treatment, in particular with *regard to connection to the network*, access to wholesale markets, access to data, switching processes and billing regimes and, where applicable, licensing.
5. Member States shall ensure that market participants from third countries, when operating within the internal market for *natural gas and hydrogen*, comply with applicable Union and national law *including in the fields of environment and safety*.

- 5a. *Member States shall ensure a customer-centred and energy efficient approach in the hydrogen market. The use of hydrogen shall be targeted for customers in hard-to-decarbonise sectors with a high greenhouse gas abatement potential where no more energy and cost-efficient options are available.*
- 5b. *Member States shall ensure that this Directive is implemented in a manner which fosters energy system integration while not unduly discriminating against more energy efficient solutions, such as direct electrification, in line with the energy efficiency first principle.*

Article 4

Market based supply prices

1. Suppliers shall be free to determine the price at which they supply *natural gas and hydrogen* to customers. Member States shall take appropriate actions to ensure effective competition between suppliers *and to ensure reasonable prices for the final customers*.
2. Member States shall ensure the protection of *customers affected by* energy poverty and vulnerable household customers pursuant to Articles 25, *25a, 25b and 25c* by social policy or by other means than public interventions in the price setting for the supply of *natural gas and hydrogen*.
3. By way of derogation from paragraphs 1 and 2, Member States may apply public interventions in the price setting for the supply of natural gas to *customers affected by* energy poverty or vulnerable household customers. Such public interventions shall be subject to the conditions set out in paragraphs 4 and 5.

4. Public interventions in the price setting for the supply of natural gas shall:
- (a) pursue a general economic interest and not go beyond what is necessary to achieve that general economic interest;
 - (b) be clearly defined, transparent, non-discriminatory and verifiable;
 - (c) guarantee equal access for Union natural gas undertakings to customers;
 - (d) be limited in time and proportionate as regards their beneficiaries;
 - (e) not result in additional costs for market participants in a discriminatory way.
- (ea) *not hamper the gradual and timely phase-out of fossil gas in order to reach the 2030 climate target and the climate-neutrality objective set out in Regulation (EU) 2021/1119.*
5. Any Member State applying public interventions in the price setting for the supply of natural gas in accordance with paragraph 3 of this Article shall also comply with of Article 3(3), point (d) and with Article 24 of Regulation (EU) 2018/1999, regardless of whether the Member State concerned has a significant number of households in energy poverty. *Prior to the removal of public interventions in the price setting for the supply of natural gas, Member States shall ensure adequate support measures for customers affected by energy poverty and vulnerable household customers in accordance with paragraph 2.*
6. For the purpose of a *transitional* period to establish effective competition for natural gas supply contracts between suppliers, and to achieve fully effective market-based *and affordable* retail pricing of *natural* gas in accordance with paragraph 1 *of this Article*, Member States may apply public interventions in the price setting for the supply of natural gas to household customers ■ that do not benefit from public interventions pursuant to paragraph 3 *and to microenterprises*.

7. Public interventions pursuant to paragraph 6 shall comply with the criteria set out in paragraph 4 and shall:
- (a) be accompanied by a set of measures to achieve effective competition and a methodology for assessing progress with regard to those measures;
 - (b) be set using a methodology that ensures non-discriminatory treatment of suppliers;
 - (c) be set at a price that is above cost, at a level where effective price competition can occur;
 - (d) be designed to minimise any negative impact on the wholesale natural gas market;
 - (e) ensure that all beneficiaries of such public interventions have the possibility to choose competitive market offers and are directly informed at least every quarter of the availability of offers and savings in the competitive market, and shall ensure that they are provided with assistance to switch to a market-based offer;
 - (f) ensure, *in case the Member State proceeds with the deployment of smart metering systems in accordance with Article 16, that all beneficiaries of such public interventions* are directly informed of the possibility of installing smart meters and are provided with necessary assistance;
 - (g) not lead to direct cross-subsidisation between customers supplied at free market prices and those supplied at regulated supply prices.

8. Member States shall notify the measures taken in accordance with paragraphs 3 and 6 to the Commission within one month after their adoption and may apply them immediately. The notification shall be accompanied by an explanation of why other instruments were not sufficient to achieve the objective pursued, of how the requirements set out in paragraphs 4, 5 and 7 are fulfilled and of the effects of the notified measures on competition. The notification shall describe the scope of the ***beneficiaries, in particular customers affected by energy poverty and vulnerable household customers, as well as potential other*** beneficiaries, the duration of the measures and the number of household customers affected by the measures, and shall explain how the regulated prices have been determined.
9. From 15 March 2025, and every two years thereafter, as part of the integrated national energy and climate progress reports, Member States shall submit reports to the Commission on the implementation of this Article, the necessity and proportionality of public interventions under this Article, and an assessment of the progress towards achieving effective competition between suppliers and the transition to market-based prices. Member States that apply regulated prices in accordance with paragraph 6 shall report on the compliance with the conditions set out in paragraph 7, including on compliance by suppliers that are required to apply such interventions, as well as on the impact of regulated prices on the finances of those suppliers.
10. The Commission shall review and submit a report to the European Parliament and to the Council on the implementation of this Article for the purpose of achieving market-based retail pricing of natural gas, together with or followed by a legislative proposal, if appropriate. ***That report shall, where appropriate, include an assessment of the impact of those measures on the progress in achieving the Union's climate neutrality objective and the other energy and climate objectives. That report may be combined with the report on the implementation of Article 5 of Directive (EU) 2019/944. That legislative proposal may include an end date for regulated prices.***

Article 4a¹⁶

Access to affordable energy during a natural gas price crisis

1. *A regional or Union-wide natural gas price crisis may be declared where the conditions in Article 66a(1) of Directive (EU) 2019/944 are fulfilled. The decision declaring a regional or Union-wide natural gas price crisis shall be taken according to the procedure set out in Article 66a of Directive (EU) 2019/944 and shall specify the period of validity of that decision.*
2. *Where a crisis has been declared pursuant to paragraph 1, Member States may, for the duration of the validity of that decision and subject to the conditions referred to in Article 66a(3) of Directive (EU) 2019/944, apply targeted public interventions in price setting for the supply of natural gas to customers referred to in Art 66a(3) of Directive (EU) 2019/944, households and essential social services as defined in Regulation (EU) 2017/1938 of the European Parliament and of the Council¹⁷ concerning measures to safeguard the security of gas supply.*
3. *Where a crisis has been declared pursuant to paragraph 1, Member States may for household customers and microenterprises referred to in Article 4(6) of this Directive or for customers referred to in paragraph 2 of this Article, exceptionally and temporarily, set a price below cost for the duration, and subject to the conditions, referred to in Article 66a(4) of Directive (EU) 2019/944.*
4. *For the purposes of this Article, any references to ‘electricity’ in Directive (EU) 2019/944 shall be construed as references to ‘natural gas’.*

¹⁶ It is understood that the inclusion of this article is subject to timely agreement on EMD and that it is agreed that this Article will be aligned with Article 66a of the EMD, replacing references to “electricity” by references to “gas” and making necessary technical adjustments to reflect this change.

¹⁷ *Regulation (EU) 2017/1938 of the European Parliament and of the Council of 25 October 2017 concerning measures to safeguard the security of gas supply and repealing Regulation (EU) No 994/2010 (OJ L 280, 28.10.2017, p. 1).*

Article 5

Public service obligations

1. Member States shall ensure, on the basis of their institutional organisation and with due regard to the principle of subsidiarity, that, without prejudice to paragraph 2, natural gas and hydrogen undertakings are operated in accordance with the principles of this Directive with a view to achieving a competitive, secure and environmentally sustainable market in ***natural gas and hydrogen***. ***Member States*** shall not discriminate between those undertakings as regards their rights or obligations.
2. Having full regard to the relevant provisions of the TFEU, in particular Article 106 thereof, Member States may impose on natural gas and hydrogen undertakings, in the general economic interest, public service obligations which may relate to security, including security of supply, regularity, and quality of supplies, and environmental protection, including energy efficiency, energy from renewable sources and climate protection ***and to the price of natural gas supply***. Such obligations shall be clearly defined, transparent, non-discriminatory, verifiable and shall guarantee equality of access for natural gas undertakings and hydrogen undertakings of the Union to national consumers. ***Public service obligations which concern public interventions in the price setting for the supply of natural gas shall comply with the requirements set out in Articles 4 and 4a.***
3. Public service obligations related to the security of gas supply shall ***ensure compliance of natural gas undertakings*** with the gas supply standards pursuant to Article 6 of Regulation (EU) 2017/1938 and shall be coherent with the results of the national risk assessments carried out pursuant to Article 7(3) of that Regulation, as detailed in the preventive action plans prepared pursuant to Article 9(1), points (c), (d) and (k), of that Regulation. ***Public service obligations going beyond what is necessary to ensure compliance with Article 6 of Regulation (EU) 2017/1938 shall be compliant with the criteria set out in Article 8(1) of that Regulation.***

4. Where financial compensation or other forms of compensation are granted by a Member State for the fulfilment of the obligations set out in this Article, it shall be done in a non-discriminatory and transparent way.
5. Member States shall, upon implementation of this Directive, inform the Commission of all measures adopted to fulfil public service obligations, including consumer and environmental protection, and their possible effect on national and international competition, whether or not such measures require a derogation from the provisions of this Directive. They shall notify the Commission subsequently every two years of any changes to such measures, whether or not they require a derogation from this Directive.
- 5a. *When imposing public service obligations pursuant to paragraph 2 of this article, Member States shall consult relevant stakeholders at an early stage and in an open, inclusive and transparent manner. All official documents related to the consultations and documents used for development of the public service obligation shall be made public while preserving the confidentiality of commercially sensitive information and data protection.*

Article 6

Promotion of regional cooperation and integration

1. Member States as well as the regulatory authorities shall cooperate with each other for the purpose of integrating their national markets at one and more regional levels, towards the creation of regional markets, where Member States as well regulatory authorities so decided, and further towards the creation of a fully liberalised internal market. In particular, the regulatory authorities where Member States have so provided or Member States shall promote and facilitate the cooperation of natural gas transmission system operators and hydrogen *transmission* operators at a regional level, including on cross-border issues *and on the decommissioning of assets*, with the aim of *ensuring cost-effective decarbonisation in line with the Union's climate neutrality objective and* creating a competitive internal market for *natural gas and hydrogen*, foster the consistency of their legal, regulatory and technical framework and facilitate integration of the isolated systems forming *natural* gas islands that persist in the Union. The geographical areas covered by such regional cooperation shall include cooperation in geographical areas defined in accordance with Article 28(3) of (EU) .../...⁺ [Recast Gas Regulation]. Such cooperation may cover other geographical areas. Where the Commission considers that the rules at Union level are relevant for the regional integration of markets for *natural gas and hydrogen*, it shall provide appropriate *non-binding* guidance taking into account the specificities of these markets and the impact on neighbouring markets.
2. The Agency for the Cooperation of Energy Regulators ('ACER') shall cooperate with regulatory authorities and transmission system operators *and hydrogen transmission operators* to ensure the compatibility of regulatory frameworks between and within the regions with the aim of creating a competitive internal market in *natural gas and hydrogen*. Where ACER considers that binding rules on such cooperation are required, it shall make appropriate recommendations.

⁺ *OJ: Please insert in the text the serial number of Regulation contained in document PE .../... [2021/0424 (COD)].*

3. Where vertically integrated transmission system operators participate in a joint undertaking established for implementing such cooperation, the joint undertaking shall establish and implement a compliance programme which sets out the measures to be taken to ensure that discriminatory and anticompetitive conduct is excluded. That compliance programme shall set out the specific obligations of employees to meet the objective of excluding discriminatory and anticompetitive conduct. It shall be subject to the approval of ACER. Compliance with the programme shall be independently monitored by the compliance officers of the vertically integrated transmission system operators.

Article 7

Authorisation procedure

1. In circumstances where an authorisation (for example, a licence, permission, concession, consent or approval) is required for the construction or operation of natural gas facilities, hydrogen production facilities and hydrogen system infrastructure, the Member States or any competent authority they designate shall grant authorisations to build and/or operate such facilities, infrastructure, pipelines and associated equipment on their territory, in accordance with paragraphs 2 to 11. Member States or any competent authority they designate may also grant authorisations on the same basis for the supply of *natural gas and hydrogen* and for wholesale customers.

2. Where Member States have a system of authorisation, they shall lay down objective and non-discriminatory criteria, **and transparent procedures** which shall be met **when** an undertaking **applies** for an authorisation to supply **natural gas and hydrogen** or to construct and/or operate natural gas facilities, hydrogen production facilities or hydrogen system infrastructure. The non-discriminatory criteria and procedures for the granting of authorisations shall be made **publicly available**. Member States shall ensure that authorisation procedures for such facilities, infrastructure, pipelines and associated equipment take into account the importance of the project for the internal market for **natural gas and hydrogen** where appropriate. **Member States shall ensure consistency of the system of authorisation for hydrogen system infrastructure with the network development plans for hydrogen transmission and distribution networks adopted pursuant to Article 51 and Article 52 respectively.**
- 2a. **For natural gas suppliers, Member States may assess financial strength and technical capabilities of applicants as a criterion for authorization. Such criterion should be fully transparent and non-discriminatory.**
- 2b. **Member States shall ensure that any national rules concerning the authorisation procedure referred to in this Article are proportionate, necessary and contribute to the implementation of the general rules for the organisation of the markets for natural gas and hydrogen and infrastructure access, the energy efficiency first principle and, to achieving the Union's climate and energy targets and the Member State's integrated national energy and climate plan as well as to their long-term strategies adopted under Regulation (EU) 2018/1999.**
3. The authorisation procedures for the activities referred to in paragraph 1 shall not exceed two years, including all relevant procedures of competent authorities. Where duly justified on the grounds of extraordinary circumstances, that two-year period may be extended by up to one year.

4. Member States shall assess which ***national*** legislative and non-legislative measures are necessary to streamline authorisation procedures, including, ***without hampering***, any procedural steps related to environmental impact assessment procedures ***and public consultations***. Member States shall report to the **■** Commission on the results of such an assessment as part of their integrated national energy and climate plans as referred to in, and in accordance with, the procedure set out in Article 3 and Articles 7 to 12 of Regulation (EU) 2018/1999, and as part of their integrated national energy and climate progress reports pursuant to Article 17 of ***that*** Regulation.
5. The ***time limits*** established in paragraph 3 ***of this Article*** shall apply without prejudice to obligations under applicable Union environmental ***and energy law, including Directive (EU) 2018/2001***, to judicial appeals, remedies and other proceedings before a court or tribunal, and to alternative dispute resolution mechanisms, including complaints procedures, non-judicial appeals and remedies, and may be extended for the duration of such procedures.
6. Member States shall set up or designate one or more contact points. Those contact points shall, upon request by the applicant, and free of charge, guide through and facilitate the entire authorisation procedure for the activities referred to in paragraph 1 up to the delivery by the responsible authorities at the end of the procedure. The applicant shall not be required to contact more than one contact point for the entire process.
7. Member States shall ensure that authorisations under national law for the construction and operation of natural gas ***system infrastructure also apply to hydrogen system infrastructure. This is without prejudice to the right of Member States to revoke these authorisations if the hydrogen infrastructure does not comply with technical safety rules for hydrogen system infrastructure set out in Union or national law.***

8. Member States shall ensure that existing land-use rights for the construction and operation of natural gas pipelines and other network assets shall be *also applied to* pipelines and other network assets for the transport of hydrogen.
- 8a. *In the event of a transfer of infrastructure ownership within the same undertaking to meet the requirements of Article 63, the authorisations and land-use rights pertaining to that infrastructure shall equally be transferred to the new owner.*
9. Member States shall ensure that the reasons for any refusal to grant an authorisation are objective and non-discriminatory and that they are given to the applicant. Reasons for such refusals shall be notified to the Commission for information. Member States shall establish a procedure enabling the applicant to appeal against such refusals.
10. For the development of newly supplied areas and efficient operation generally, and without prejudice to Article 30, Member States may decline to grant a further authorisation to build and operate distribution pipeline systems for natural gas in any particular area, once such pipeline systems have been or are authorised to be built in that area and if existing or proposed capacity is not saturated.
- 10a. *Member States shall decline to grant an authorisation to construct and operate a transmission or a distribution infrastructure for natural gas in areas where the network development plan pursuant to Article 51 envisages the decommissioning of the transmission system or relevant parts thereof or a distribution network decommissioning plan has been approved pursuant to Article 52b.*
- 10b. *Where an authorisation within the meaning of paragraph 1 falls within the scope of application of Articles 15 to 17 of Directive (EU) 2018/2001, only those provisions shall apply.*

Article 8

Certification of renewable *fuels and low-carbon fuels*

1. Renewable **gas** shall be certified in accordance with Articles 29, **29a** and 30 of Directive (EU) 2018/2001. ***Low-carbon fuels shall be certified in accordance with this Article.***
2. In order to ensure that the greenhouse gas emissions savings from the use of **low-carbon** fuels and **low-carbon** hydrogen are at least 70% in accordance with the definitions in Article 2, points (10) and (12), ***of this Directive***, Member States shall require economic operators to show that this threshold and the requirements established in the methodology referred to in paragraph 5 of this Article have been complied with. For those purposes, they shall require economic operators to use a mass balance system in line with Article **30(1)** and (2) of Directive (EU) 2018/2001.
3. Member States shall ensure that economic operators submit reliable information regarding the compliance with the 70% greenhouse gas emissions savings threshold set in paragraph 2 and with the greenhouse gas emissions saving methodology referred to in paragraph 5, and that economic operators make available to the relevant Member State, upon request, the data that were used to develop the information. Member States shall require economic operators to put in place an adequate standard of independent auditing of the information submitted, and to provide evidence that this has been done. The auditing shall verify that the systems used by economic operators are accurate, reliable and protected against fraud.
4. The obligations laid down in paragraph 2 shall apply regardless of whether low carbon fuels are produced within the Union or are imported. Information about the geographic origin and feedstock type of low carbon fuels or low carbon hydrogen per fuel supplier shall be made available to consumers on the websites of operators, suppliers or the relevant competent authorities and shall be updated on an annual basis.

5. *By ... [12 months after the date of entry into force of this Directive], the Commission shall adopt delegated acts in accordance with Article 83 to supplement this Directive by specifying the methodology for assessing greenhouse gas emissions savings from **low-carbon** fuels. The methodology shall ensure that credit for avoided emissions is not given for carbon dioxide **from fossil sources** the capture of which has already received an emission credit under other provisions of law **and shall cover the life-cycle greenhouse gas emissions and consider indirect emissions resulting from the diversion of rigid inputs. The methodology shall be consistent with the methodology for assessing greenhouse gas emissions savings from renewable liquid and gaseous transport fuels of non-biological origin and from recycled carbon fuels including the treatment of emissions due to the leakage of hydrogen and take into account methane upstream emissions and actual carbon capture rates.***
- 5b. *Where appropriate, the Commission shall submit a report to the European Parliament and to the Council that evaluates hydrogen leakage, including environmental and climate risks, technical specificities and adequate maximum hydrogen leakage rates. On the basis of that report, the Commission shall, if appropriate, submit a legislative proposal to introduce measures to minimise possible risks of hydrogen leakage, set maximum hydrogen leakage rates and compliance mechanisms. Relevant maximum hydrogen leakage rates shall be included in the methodology referred to in paragraph 5.*

6. The Commission may decide that voluntary national or international schemes setting standards for the production of low carbon fuels or low carbon hydrogen provide accurate data on greenhouse gas emission savings for the purposes of this Article and demonstrate compliance with the methodology referred to in paragraph 5 *of this Article. The Commission shall adopt decisions only if the scheme in question meets adequate standards of reliability, transparency and independent auditing in line with the requirements set out in Commission Implementing Regulation (EU) 2022/996¹⁸ for the certification of renewable fuels.*
7. Where an economic operator provides evidence or data obtained in accordance with a scheme that has been the subject of a recognition pursuant to paragraph 6, a Member State shall not require the economic operator to provide further evidence of compliance with the criteria for which the scheme has been recognised by the Commission.
8. Competent authorities of the Member States shall supervise the operation of certification bodies that are conducting independent auditing under a voluntary scheme. Certification bodies shall submit, upon the request of competent authorities, all relevant information necessary to supervise the auditing, including the exact date, time and location of audits. Where Member States find issues of non-conformity, they shall inform the voluntary scheme without delay.

¹⁸ *Commission Implementing Regulation (EU) 2022/996 of 14 June 2022 on rules to verify sustainability and greenhouse gas emissions saving criteria and low indirect land-use change-risk criteria (OJ L 168, 27.6.2022, p. 1).*

9. At the request of a Member State, which may be based on the request of an economic operator, the Commission shall, on the basis of all available evidence, examine whether the greenhouse gas emissions saving criteria laid down in this Article, the methodology developed in line with paragraph 5 of this Article, and the greenhouse gas emissions savings thresholds set in Article 2, points **(10)**, **(11)** and **(12)**, have been met. Within six months of receipt of such a request, the Commission shall decide whether the Member State concerned may:
- (a) accept the evidence already provided to show compliance with the greenhouse gas emissions saving criteria for low carbon fuels; or
 - (b) by way of derogation from paragraph 7, require suppliers of the source of low carbon fuels to provide further evidence of their compliance with the greenhouse gas emissions saving criteria and the 70% greenhouse gas emissions savings threshold.
10. Member States shall **■** require the relevant economic operators to enter into the Union database ***regulated in Article 31a of Directive (EU) 2018/2001, or into national databases that are linked to the Union database, as allowed in Article 31a (2) of that Directive,*** information on the transactions made and the sustainability characteristics of ***renewable gas and low-carbon*** fuels in line with the requirements ***for renewable fuels*** established in Article 31a of Directive (EU) 2018/2001. ***Where guarantees of origin have been issued for the production of a consignment of low-carbon gas, these shall be subject to the same rules as those set out in in Article 31a of Directive (EU) 2018/2001 for guarantees of origin issued for the production of renewable gas.***
11. ***The Commission shall adopt implementing acts concerning decisions under paragraph 6 of this Article. Those implementing acts shall be adopted in accordance with the examination procedure referred to in Article 84(3). Such decisions shall have a limited period of validity, not exceeding five years.***

Article 9

Technical rules

1. The regulatory authorities where Member States have so provided or Member States shall ensure that technical safety criteria are defined and that technical rules establishing the minimum technical design and operational requirements for the connection to the system of LNG facilities, storage facilities, other transmission or distribution systems, direct lines, as well as to the hydrogen system, are developed and made public. Those technical rules shall ensure the interoperability of systems and shall be objective and non-discriminatory. ACER may make appropriate recommendations towards achieving compatibility of those rules, where appropriate. Those rules shall be notified to the Commission in accordance with Article 5 of Directive (EU) 2015/1535 of the European Parliament and of the Council²¹.
2. Where relevant, *the regulatory authorities, where so provided, or* Member States shall require transmission system operators, distribution system operators and hydrogen network operators in their territory to publish technical rules in accordance with Article 9, in particular regarding network connection rules that include gas quality, gas odourisation and gas pressure requirements. Member States shall also require transmission and distribution system operators to publish the connection tariffs to connect gas from renewable sources based on objective, transparent and non-discriminatory criteria.

²¹ Directive (EU) 2015/1535 of the European Parliament and of the Council of 9 September 2015 laying down a procedure for the provision of information in the field of technical regulations and of rules on Information Society services (OJ L 241, 17.9.2015, p. 1).

CHAPTER III

CONSUMER EMPOWERMENT AND PROTECTION AND RETAIL MARKETS

Article 10

Basic contractual rights

1. Member States shall ensure that all final customers are entitled to have *natural gas and hydrogen* provided by a supplier, subject to the supplier's agreement, regardless of the Member State in which the supplier is registered, provided that the supplier follows the applicable trading, *balancing and security of supply* rules *and requirements resulting from Article 7(2)*. In that regard, Member States shall take all measures necessary to ensure that administrative procedures do not discriminate against suppliers already registered in another Member State.
2. Without prejudice to Union rules on consumer protection, in particular Directive 2011/83/EU of the European Parliament and of the Council¹⁹ and Council Directive 93/13/EEC²⁰, Member States shall ensure that final customers have the rights provided for in paragraphs 3 to *II* of this Article.

¹⁹ *Directive 2011/83/EU of the European Parliament and of the Council of 25 October 2011 on consumer rights, amending Council Directive 93/13/EEC and Directive 1999/44/EC of the European Parliament and of the Council and repealing Council Directive 85/577/EEC and Directive 97/7/EC of the European Parliament and of the Council (OJ L 304, 22.11.2011, p. 64).*

²⁰ *Council Directive 93/13/EEC of 5 April 1993 on unfair terms in consumer contracts (OJ L 95, 21.4.1993, p. 29).*

3. Final customers shall have the right to a contract with their supplier that specifies:
- (a) the identity and **contact details** of the supplier, **including address, email address and a consumer support hotline**;
 - (b) the services provided (**including the product and tariff name**), **its main features**, the service quality levels offered, as well as the time for the initial connection;
 - (c) the types of maintenance service offered;
 - (d) the means by which up-to-date information on all applicable tariffs, maintenance charges and bundled products or services may be obtained;
 - (e) the duration of the contract, the conditions for renewal and termination of the contract and services, including products or services that are bundled with those services, and whether terminating the contract without charge is permitted;
 - (f) any compensation and the refund arrangements which apply if contracted service quality levels are not met, including inaccurate or delayed billing;
 - (fa) **where the environmental performance, including where relevant CO2 emissions, is promoted as an essential feature, then this shall be supported by clear, objective, publicly available and verifiable commitments provided by the supplier. In the case of supply of renewable gas and low-carbon gas, the supply shall be certified according to Article 8**;
 - (g) the method of initiating an out-of-court dispute settlement procedure in accordance with Article 24;
 - (h) information relating to consumer rights, including **clear and understandable** information on complaint handling and **how and where a complaint can be submitted and** all the information referred to in this paragraph, clearly communicated on the bill or the hydrogen or natural gas undertaking's web site;
 - (ha) **where relevant, information on the provider and the price of products or services that are tied to or, bundled with, natural gas or hydrogen supply.**

The contractual conditions shall be fair and well known in advance. In any case, the information shall be provided *in consumer friendly, clear and unambiguous language*, prior to the conclusion or confirmation of the contract. Where contracts are concluded through intermediaries, the information referred to *in this paragraph shall also be provided prior to the conclusion of the contract*. *Information on the provider of products or services, and the price of those products or services, that are tied to or bundled with gas supply shall* be provided prior to the conclusion of the contract.

Final customers shall be provided with a *single* summary of the key contractual conditions in a prominent manner and in concise and simple language. *Member States shall require the supplier the use of common terminology. The Commission shall provide non-binding guidance in this regard.*

4. Final customers shall be given adequate notice of any intention to modify contractual conditions and shall be informed about their right to terminate the contract when the notice is given. Suppliers shall notify their final customer directly and in a transparent and comprehensible manner, of any adjustment in the supply price and of the reasons and preconditions for the adjustment and its scope, no later than two weeks, or no later than one month in the case of household customers, before the adjustment comes into effect. Member States shall ensure that final customers are free to terminate contracts if they do not accept the new contractual conditions or adjustments in the supply price notified to them by their supplier.
5. Suppliers shall provide final customers with transparent information on applicable prices, tariffs, standard terms and conditions, in respect of access to and use of *services, for natural gas and hydrogen, in particular whether the price is fixed or variable and, where relevant, with information on promotions and discounts*. *Key contractual information shall be highlighted by the supplier.*

6. Suppliers shall offer final customers a wide choice of payment methods. Such payment methods shall not ■ discriminate between customers. ***Vulnerable customers and customers affected by energy poverty may be granted a more favourable treatment.*** Any difference in charges related to payment methods or prepayment systems shall be objective, non-discriminatory and proportionate and shall not exceed the direct costs borne by the payee for the use of a specific payment method or a prepayment system, in accordance with Article 62 of Directive (EU) 2015/2366 of the European Parliament and of the Council²¹.
7. Household customers who have access to prepayment systems shall not be placed at a disadvantage by the prepayment systems.
8. Suppliers shall offer final customers fair and transparent general terms and conditions, which shall be provided in plain and unambiguous language and shall not include non-contractual barriers to the exercise of customers' rights, such as excessive contractual documentation. Customers shall be protected against unfair or misleading selling methods.
9. Final customers shall have the right to a good standard of service and complaint handling by their suppliers. Suppliers shall handle complaints in a simple, fair and prompt manner.
10. Suppliers shall provide natural gas household customers with adequate information on alternative measures to ***avoid*** disconnection sufficiently in advance of any planned disconnection. Such alternative measures may include information about sources of support to avoid disconnection, prepayment systems, energy audits, energy consultancy services, alternative payment plans, debt management advice or disconnection moratoria and shall not entail an extra cost to the customers facing disconnection.
11. Suppliers shall provide final customers with a final closure account after any switch of supplier no later than six weeks after such a switch has taken place.

²¹ ***Directive (EU) 2015/2366 of the European Parliament and of the Council of 25 November 2015 on payment services in the internal market, amending Directives 2002/65/EC, 2009/110/EC and 2013/36/EU and Regulation (EU) No 1093/2010, and repealing Directive 2007/64/EC (OJ L 337, 23.12.2015).***

Right to switch and rules on switching-related fees

1. Customers shall have the right to switch *suppliers for natural gas and hydrogen or natural gas and hydrogen* market participants. Member States shall ensure that a customer wishing to switch suppliers or market participants, while respecting contractual conditions, is entitled to such a switch within *the shortest possible time, and in any case within* maximum of three weeks from the date of the request. By **1 January 2026** at the latest, the technical process of switching supplier or market participant shall take no longer than 24 hours and shall be possible on any working day.
2. Member States shall ensure that the right to switch supplier or market participant is granted to customers in a non-discriminatory manner as regards cost, effort and time.
3. Member States shall ensure that at least household customers, *microenterprises* and small enterprises are not charged any switching-related fees for *natural gas and hydrogen, included where gas supply is tied to or bundled with other services, equipment or products*. However, Member States may allow suppliers or market participants to charge customers contract termination fees where those customers voluntarily terminate fixed-term, fixed-price supply contracts before their maturity, provided that such fees:
 - (a) are part of a contract that the customer has voluntarily entered into; and
 - (b) are clearly communicated to the customer before the contract is entered into.

Such fees shall be proportionate and shall not exceed the direct economic loss to the supplier or the market participant resulting from the customer's termination of the contract. ***In case of bundled offers, customers shall be able to terminate individual services of a*** contract. The burden of proving the direct economic loss shall be on the supplier or market participant. The permissibility of contract termination fees shall be monitored by the regulatory authority, or by another competent national authority.

4. Household customers for *natural gas and hydrogen* shall be entitled to participate in collective switching schemes. Member States shall remove all regulatory or administrative barriers for collective switching, and provide a framework that ensures the consumer protection to avoid any abusive practices.
- 4a. *Member States shall ensure that information on supplier switching is provided to final customers in a user-friendly format, including through the single points of contact referred to in Article 23.*
- 4b. *Member States shall ensure that customers are granted the right to terminate their gas supply contracts at short notice.*

Article 11a

Consumer rights and protection in relation to the phasing out of natural gas

Where the disconnection of network users pursuant to Article 34(4) is allowed, Member States shall ensure that:

- (a) the affected network users and other relevant stakeholders, notably consumer organisations, have been consulted;*
- (b) network users, final customers and relevant stakeholders are informed sufficiently in advance of the planned date, the procedure how this will be done, what steps are planned, and the relevant timeline;*
- (c) final customers receive information on and have access to sufficient advice on sustainable heating options, as well as information on financial support through relevant bodies to be identified by national authorities, including the one stop shop procedure established in accordance with Articles 21 and 22 of Directive (EU) 2023/1791, Article 15a of Directive (EU) .../... [Directive of the European Parliament and of the Council on the energy performance of buildings (recast) 2021/0426 (COD)], and Article 16(3) of Directive (EU) 2018/2001.*

- (d) *when planning and carrying out the phase out of natural gas, specific needs of vulnerable customers, customers affected by energy poverty are duly taken into account. Where applicable, Member States shall take appropriate measures with the aim of removing adverse effects of the natural gas phase out taking into account the guidance as set out in Article 25a of this Directive. Those measures may include the use of public funding and funding facilities established at Union level.*
- (e) *any financial transfer between regulated services follows the rules set out in Article 4 of (EU) .../...⁺ [recast gas Regulation] and that there is no discrimination between different categories of customers and between energy carriers.*

Article 12

Comparison tools for natural gas

1. Member States shall ensure that at least natural gas household customers, and microenterprises *and small enterprises with an expected yearly consumption of below 100 000 kWh* have access, free of charge, to at least one tool comparing the offers of suppliers, including bundled offers. Customers shall be informed of the availability of such tools in or together with their bills or by other means. The tools shall meet at least the following requirements:
 - (a) they shall be independent from market participants and ensure that natural gas undertakings are given equal treatment in search results;
 - (b) they shall clearly disclose their owners and the natural or legal person operating and controlling the tools, as well as information on how the tools are financed;

⁺ *OJ: Please insert in the text the serial number of Regulation contained in document PE .../... [2021/0424 (COD)].*

- (c) they shall set out clear and objective criteria on which the comparison is to be based, including services, and disclose them;
 - (d) they shall use plain and unambiguous language;
 - (e) they shall provide accurate and up-to-date information and state the time of the last update on the information;
 - (f) they shall be accessible to persons with disabilities, by being perceivable, operable, understandable and robust;
 - (g) they shall provide an effective procedure for reporting incorrect information on published offers;
 - (h) they shall perform comparisons, while limiting the personal data requested to that strictly necessary for the comparison.
- (ha) they shall clearly indicate whether the price is fixed or variable and the contract length.***

Member States shall ensure that at least one tool covers the entire natural gas market. Where multiple tools cover the market, those tools shall include, as complete as practicable, a range of ***natural*** gas offers covering a significant part of the market and, where those tools do not completely cover the market, a clear statement to that effect, before displaying results.

Suppliers and relevant intermediaries shall provide their relevant offers to at least one price comparison tool that covers the entire market.

Suppliers shall ensure that the information provided to the operator of the comparison tool is accurate and up to date.

2. The tools may be operated by any entity, including private companies and public authorities or bodies.
3. Member States may require comparison tools referred to in paragraph 1 to include comparative criteria relating to the nature of the services offered by the suppliers, *including, the single unit price, all charges and information on discounts, and, where applicable, environmental performance.*

When establishing those criteria, Member States shall consult relevant stakeholders.

4. Member States shall appoint a competent authority to be responsible for issuing trust marks for comparison tools that meet the requirements set out in paragraph 1, and for ensuring that comparison tools bearing a trust mark continue to meet those requirements. That authority shall be independent of any market participants and comparison tool operators.
5. Any tool comparing the offers of market participants shall be eligible to apply for a trust mark in accordance with this Article on a voluntary and non-discriminatory basis.
6. By way of derogation from paragraphs 4 and 5, Member States may choose not to provide for the issuance of trust marks to comparison tools if a public authority or body provides a comparison tool that meets the requirements set out in paragraph 1.

Article 13

Active customers on the natural gas market

1. Member States shall ensure that final customers, *in particular from the agricultural or public sector, while maintaining their rights as final customers as established in this Directive*, are entitled to act as active customers without being subject to disproportionate or discriminatory technical requirements, administrative requirements, procedures and charges, and to network charges that are not cost-reflective.
2. Member States shall ensure that active customers are:
 - (a) entitled to operate directly;
 - (b) entitled to sell self-produced renewable natural **gas** using the natural gas system;
 - (c) entitled to participate in energy efficiency *and demand shifting* schemes;
 - (d) entitled to delegate to a third party the management of the installations required for their activities, including installation, operation, data handling and maintenance, without that third party being considered to be an active customer;
 - (e) subject to cost-reflective, transparent and non-discriminatory network charges, ensuring that they contribute in an adequate and balanced way to the overall cost sharing of the system;
 - (f) are financially responsible for the imbalances they cause in the natural gas system or shall delegate their balancing responsibility in accordance with Article 3, *point* (e), of (EU) .../...⁺ [Recast Gas Regulation].

⁺ *OJ: Please insert in the text the serial number of Regulation contained in document PE .../... [2021/0424 (COD)].*

3. Member States may have different provisions applicable to individual and jointly-acting active customers in their national law, provided that all rights and obligations under this Article apply to all active customers. Any difference in the treatment of jointly-acting active customers shall be proportionate and duly justified.
4. Member States shall ensure that active customers that own facilities that store renewable gas:
 - (a) have the right to a grid connection within a reasonable time after they made a request to that effect, provided that all necessary conditions, such as balancing responsibility, are fulfilled;
 - (b) are not subject to any double charges, including network charges, for stored renewable gas remaining within their premises;
 - (c) are not subject to disproportionate licensing requirements or fees;
 - (d) are allowed to provide several services simultaneously, if technically feasible.

I

Article 15

Bills and billing information

1. Member States shall ensure that bills and billing information are accurate, easy to understand, clear, concise, user-friendly and presented in a manner that facilitates comparison by final customers and that they fulfil the minimum requirements set out in Annex I. On request, final customers shall receive a clear and understandable explanation of how their bill was derived, especially where bills are not based on actual consumption.
2. Member States shall ensure that final customers receive all their bills and billing information free of charge.
3. Member States shall ensure that final customers are offered the option of electronic bills and billing information and are offered flexible arrangements for the actual payment of the bills.
4. Where the contract provides for a future change of the product or price, or a discount, this shall be indicated on the bill together with the date on which the change takes place.
5. Member States shall consult consumer organisations when they consider changes to the requirements for the content of bills.

Smart metering systems in the natural gas system

1. In order to *complement* energy efficiency *measures adopted pursuant to Directive (EU) 2023/1791 and Directive (EU) .../... [Directive of the European Parliament and of the Council on the energy performance of buildings (recast) 2021/0426 (COD)]* and to *further* empower final customers, Member States or, where a Member State has so provided, the regulatory authority shall strongly recommend that natural gas undertakings optimise the use of natural gas, inter alia, by providing energy management services, and introducing smart metering systems *in accordance with paragraph 2 of this Article* that are interoperable, in particular with consumer energy management systems and with smart grids, in accordance with the applicable Union data protection rules.
2. Member States shall *proceed with the* deployment in their territories of smart metering systems *only after a* cost-benefit assessment which shall be undertaken in accordance with the principles laid down in Annex II *identifying the net benefits to customers that arise from the use of smart meters and of signing up for smart meter-enabled offers. In their cost-benefit assessment, Member States may make separate assessments and evaluate the impacts of deploying smart metering systems for different categories of customers and customer groups, such as households, small and medium-sized enterprises and industry.*
3. Member States that proceed with the deployment of smart metering systems shall adopt and publish the minimum functional and technical requirements for the smart metering systems to be deployed in their territories, in accordance with Article 18 and Annex II. Member States shall ensure the interoperability of those smart metering systems, as well as their ability to provide output for consumer energy management systems. In that respect, Member States shall have due regard to the use of the relevant available standards, including those enabling interoperability, to best practices and to the importance of the development of smart grids and the development of the internal market for natural gas.

- 3a. *Member States that proceed with the deployment of smart metering systems shall ensure the provision of clear and understandable information and advice to customers about the benefits of smart meters after consulting consumer bodies and other relevant organisations. This information shall at least:*
- (a) *include advice on how customer groups can use their smart metering system to improve their energy efficiency;*
 - (b) *address the specific needs of customers affected by customers affected by energy poverty or vulnerable customers, such as persons with a visual or hearing impairment, and persons with low levels of literacy also via engagement strategies as defined in Article 2, point 50a, of Directive (EU) 2023/1791;*
4. Member States that proceed with the deployment of smart metering systems shall ensure that final customers contribute to the associated costs of the deployment in a transparent and non-discriminatory manner, while taking into account the long-term benefits to the whole value chain, ***including the benefits to network operations, when calculating the network charges applicable to or fees paid by customers***. Member States or, where a Member State has so provided, the designated competent authorities, shall regularly monitor such deployment in their territories to track the delivery of benefits to ***customers***.
5. Where the deployment of smart metering systems has been negatively assessed as a result of the cost-benefit assessment referred to in paragraph 2, Member States shall ensure that the assessment is revised ■ in response to significant changes in the underlying assumptions and in response to technological and market developments. Member States shall notify to the Commission the outcome of their updated cost-benefit assessment as it becomes available.
6. The provisions in this Directive concerning smart metering systems shall apply to future installations and to installations that replace older smart meters. Smart metering systems that have already been installed, or for which the ‘start of works’ began, before [date of entry into force], may remain in operation over their lifetime. However, smart metering systems that do not meet the requirements of Article 18 and Annex II, shall not remain in operation after ...[12 years after the date of enter into force of this Directive].

7. For the purpose of paragraph 6, ‘start of works’ means either the start of construction works on the investment or the first firm commitment to order equipment or other commitment that makes the investment irreversible, whichever is the first in time. Buying of land and preparatory works such as obtaining permits and conducting preliminary feasibility studies shall not **be** considered as start of works. For take-overs, ‘start of works’ means the moment of acquiring the assets directly linked to the acquired establishment.

Article 17

Smart metering systems in the hydrogen system

1. Member States shall ensure the deployment of smart metering systems that can accurately measure consumption, provide information on actual time of use, and are capable to transmit and receive data for information, monitoring and control purposes, using a form of electronic communication.
 - 1a. ***Notwithstanding the first subparagraph, such obligation to deploy shall be subject to a cost-benefit assessment at least for households, which shall be undertaken in accordance with the principles laid down in Annex II.***
2. Member States shall ensure the security of the metering systems and respective data communication, and the privacy of final customers, in compliance with relevant Union data protection and privacy legislation, as well as their interoperability and having regard to the use of appropriate standards.
3. The Commission shall adopt, by means of implementing acts, interoperability requirements for smart metering and procedures to ensure, for those eligible, access to data coming from those metering systems. Those implementing acts shall be adopted in accordance with the advisory procedure referred to in Article 4 of Regulation (EU) No 182/2011.

- 3a. *Member States that proceed with the deployment of smart metering systems shall ensure that final customers contribute to the associated costs of the deployment in a transparent and non-discriminatory manner, while taking into account the long-term benefits to the whole value chain, including the benefits to network operations, when calculating the network charges applicable to or fees paid by customers. Member States shall regularly monitor such deployment in their territories to track the delivery of benefits to customers.*
- 3b. *Where the deployment of smart metering systems has been negatively assessed as a result of the cost-benefit assessment referred to in paragraph 1, Member States shall ensure that the assessment is revised periodically in response to significant changes in the underlying assumptions and in response to technological and market developments. Member States shall notify to the Commission the outcome of their updated cost-benefit assessment as it becomes available.*

Article 18

Functionalities of smart metering systems in the natural gas system

Where the deployment of smart metering systems is positively assessed as a result of the cost-benefit assessment referred to in Article 16(2), or where smart metering systems are systematically deployed after ...[the date of entry into force of this Directive], Member States shall deploy those systems in accordance with European standards, the following requirements, and Annex II:

- (a) the smart metering systems shall accurately measure actual natural gas consumption and shall be capable of providing to final customers information on actual time of use, including validated historical consumption data which shall be made easily and securely available and visualised to final customers on request and at no additional cost, and non -validated most recent available consumption data which shall also be made easily and securely available to final customers at no additional cost, through a standardised interface or through remote access, in order to support automated energy efficiency programmes, and other services;
- (b) the security of the smart metering systems and data communication shall comply with relevant Union security rules, having due regard to the best available techniques for ensuring the highest level of cybersecurity protection while bearing in mind the costs and the principle of proportionality;
- (c) the privacy of final customers and the protection of their data shall comply with relevant Union data protection and privacy rules;
- (d) if final customers request it, their natural gas consumption data shall be made available to them, in accordance with the implementing acts adopted pursuant to Article 22, through a standardised communication interface or through remote access, or to a third party acting on their behalf, in an easily understandable format allowing them to compare offers on a like-for-like basis;
- (e) appropriate advice and information shall be given to final customers prior to or at the time of installation of smart meters, in particular concerning their full potential with regard to the management of meter reading and the monitoring of energy consumption, and concerning the collection and processing of personal data in accordance with the applicable Union data protection rules;
- (f) smart metering systems shall enable final customers to be metered and settled at the same time resolution as the shortest settlement period in the national market.

For the purposes of point (d) of the first subparagraph, it shall be possible for final customers to retrieve their metering data or transmit them to another party at no additional cost and in accordance with their right to data portability under Union data protection rules.

Article 19

Entitlement to a smart meter for natural gas

1. Where the deployment of smart metering systems has been negatively assessed as a result of the cost-benefit assessment referred to in Article 16(2) and where smart metering systems are not systematically deployed, Member States shall ensure that every customer is entitled, on request, while bearing the associated costs, to have installed or, where applicable, to have upgraded, under fair, reasonable and cost-effective conditions, a smart meter that:
 - (a) is equipped, where technically feasible, with the functionalities referred to in Article 18, or with a minimum set of functionalities to be defined and published by Member States at national level in accordance with Annex II;
 - (b) is interoperable and able to deliver the desired connectivity of the metering infrastructure with consumer energy management systems.

2. Where a customer requests a smart meter pursuant to paragraph 1, Member States or, where a Member State has so provided, the designated competent authorities shall:
- (a) ensure that the offer to the ■ customer requesting the installation of a smart meter explicitly states and clearly describes:
 - (i) the functions and interoperability that can be supported by the smart meter and the services that can be provided as well as the benefits that can be realistically attained by having that smart meter at that moment in time;
 - (ii) any associated costs to be borne by the ■ customer;
 - (b) ensure that the smart meter is installed within a reasonable time, and in any case no later than four months after the customer's request;
 - (c) regularly, and at least every two years, review and make publicly available the associated costs, and trace the evolution of those costs as a result of technology developments and potential metering system upgrades.

Article 20

Conventional meters for natural gas

1. Where final natural gas customers do not have smart meters, Member States shall ensure that final customers are provided with individual conventional meters that accurately measure their actual consumption. *Member States may exempt household customers that do not use natural gas for heating purposes from this requirement, where the deployment is not technically possible, financially reasonable or proportionate to the potential energy savings. The exemption may also be extended to non-household consumers located in buildings where the majority of consumers are households eligible for exemption, if such deployment is not technically feasible.*
2. Member States shall ensure that final natural gas customers are able to easily read their conventional meters, either directly or indirectly through an online interface or through another appropriate interface.

Article 21

Data management

1. When laying down the rules regarding the management and exchange of data, Member States or, where a Member State has so provided, the designated competent authorities shall specify the rules on the access to data of the final customer by eligible parties in accordance with this Article and the applicable Union legal framework. For the purpose of this Directive, data shall be understood to include metering and consumption data as well as data required for customer switching, and other services.

2. Member States shall organise the management of data in order to ensure efficient and secure data access and exchange, as well as data protection and data security.

Independently of the data management model applied in each Member State, the parties responsible for data management shall provide access to the data of the final customer to any eligible party, in accordance with paragraph 1. Eligible parties shall have the requested data at their disposal in a non-discriminatory manner and simultaneously. Access to data shall be easy and the relevant procedures for obtaining access to data shall be made publicly available.

3. The rules on access to data and data storage for the purpose of this Directive shall comply with the relevant Union law.

The processing of personal data within the framework of this Directive shall be carried out in accordance with Regulation (EU) 2016/679.

4. Member States or, where a Member State has so provided, the designated competent authorities, shall authorise and certify or, where applicable, supervise the parties responsible for the data management, in order to ensure that they comply with the requirements of this Directive.

Without prejudice to the tasks of the data protection officers under Regulation (EU) 2016/679, Member States may decide to require that parties responsible for the data management appoint compliance officers who shall be responsible for monitoring the implementation of measures taken by those parties to ensure non-discriminatory access to data and compliance with the requirements of this Directive.

Member States may appoint compliance officers or bodies referred to in *Article 42(2), point (d)*, of this Directive to fulfil the obligations under this paragraph.

5. No additional costs shall be charged to final customers for access to their data or for a request to make their data available.

Member States shall be responsible for setting the relevant charges for access to data by eligible parties.

Member States shall ensure that any charges imposed by regulated entities that provide data services are reasonable and duly justified.

Article 22

Interoperability requirements and procedures for access to data *in the natural gas market*

1. In order to promote competition in the natural gas retail market and to avoid excessive administrative costs for the eligible parties, Member States shall facilitate the full interoperability of energy services within the Union.
2. The Commission shall adopt, by means of implementing acts, interoperability requirements and non-discriminatory and transparent procedures for access to data referred to in Article 21(1) *of this Directive*. Those implementing acts shall be adopted in accordance with the advisory procedure referred to in Article 4 of Regulation (EU) No 182/2011.
3. Member States shall ensure that natural gas undertakings apply the interoperability requirements and procedures for access to data referred to in paragraph 2. Those requirements and procedures shall be based on existing national practices.

Article 23

Single points of contact

Member States shall ensure that single points of contact are established to provide *all* customers, *including those without access to internet*, with all necessary information concerning their rights, *certified comparison tools, available support measures, including those targeted at vulnerable customers*, the applicable law and dispute settlement mechanisms available to them in the event of a dispute. Such single points of contact may be part of general consumer information points and may be the same entities as the single contact points for electricity referred to in Article 26 of Directive 2019/944/EU *or contact points established under Article 16 of Directive (EU) 2018/2001 and one-stop-shop established under Article 22 Directive (EU) 2023/1791*. *Member States shall promote alignment between the single points of contact and bodies under the instruments listed in this paragraph.*

Article 24

■ Out-of-court dispute settlement

1. Member States shall ensure that final customers have access to simple, fair, *reasonable*, transparent, independent, *cost-effective* and efficient out-of-court mechanisms for the settlement of disputes concerning rights and obligations established under this Directive, through an independent mechanism such as an energy ombudsman or a consumer body, or through a regulatory authority. Where the final customer is a consumer within the meaning of Directive 2013/11/EU of the European Parliament and of the Council²², such out-of-court dispute settlement mechanisms shall comply with the quality requirements of that Directive and shall provide, where warranted, for systems of reimbursement and compensation.

²² *Directive 2013/11/EU of the European Parliament and of the Council of 21 May 2013 on alternative dispute resolution for consumer disputes and amending Regulation (EC) No 2006/2004 and Directive 2009/22/EC (Directive on consumer ADR) (OJ L 165, 18.6.2013, p. 63).*

2. Where necessary, Member States shall ensure that alternative dispute resolution entities cooperate to provide simple, fair, transparent, independent, effective and efficient out-of-court dispute settlement mechanisms for any dispute that arises from products or services that are tied to, or bundled with, any product or service falling under the scope of this Directive.
3. The participation of *natural* gas undertakings in out-of-court dispute settlement mechanisms for household customers shall be mandatory unless the Member State concerned demonstrates to the Commission that other mechanisms are equally effective.
- 3a. *Without prejudice to Directive 2013/11/EU, Member States shall assess the functioning of their out-of-court dispute settlement mechanisms referred to in this Article.*

Article 25

Protection of vulnerable and customers affected by energy poverty

1. Member States shall take appropriate measures to protect final customers, and shall, in particular, ensure that there are adequate safeguards to protect vulnerable customers *and customers affected by energy poverty*. In this context, each Member State shall define the concept of vulnerable customers which may refer to energy poverty. *The definition of vulnerable customers shall be consistent with the definition of vulnerable customer in electricity adopted by the Member State pursuant to Article 28 of Directive (EU) 2019/944.*
2. In particular, Member States shall take appropriate measures to protect final customers in remote areas who are connected to the natural gas or hydrogen systems. Member States shall ensure high levels of consumer protection, particularly with respect to transparency regarding contractual terms and conditions, *and competitive, transparent and non-discriminatory prices*, general information and dispute settlement mechanisms.

Article 25a

Energy poverty and decommissioning of the natural gas network

The Commission shall provide guidance on the protection of vulnerable and customers affected by energy poverty when planning and carrying out the phase out of natural gas or when gas distribution networks are being decommissioned, in particular to ensure that the specific needs of such customers are duly taken into account in accordance with Article 11a(1), point (d).

Article 25b

Protection from disconnections

1. *Member State shall take measures in order to prevent disconnection to vulnerable and customers affected by energy poverty. In relation to vulnerable customers, this shall be provided as part of the concept of vulnerable customers pursuant to Article 25.*

When notifying the Commission about the transposition of this Directive into national law, Member State shall demonstrate how the first subparagraph of this paragraph is implemented.

2. *Member States shall ensure that suppliers do not terminate contracts and do not disconnect on grounds on which they are handling a complaint in accordance with Article 10(9) or which are the matter of out of court dispute settlement in accordance with Article 24, and shall not affect the parties contractual rights and obligations. Member States may take appropriate measures to avoid abuses of processes.*

3. *Member States shall take appropriate measures to enable customers to avoid disconnection, which may include:*

- (a) *promoting voluntary codes for suppliers and customers aimed at preventing and managing situations of customers in arrears; these arrangements may concern support to customers to manage their energy use and costs, including flagging unusual high energy spikes or usage, offering appropriate flexible payment plans, debt advice measures, improved communications with customers and support agencies;*

- (b) *promoting education and awareness of customers about their rights and debt management; and*
- (c) *access to finance, vouchers or subsidies to support payment of bills.*

Article 25c

Supplier of last resort

1. *Member States shall implement a supplier of last resort regime or equivalent measures to ensure continuity of supply at least for household customers. Suppliers of last resort shall be appointed in a fair, transparent and non-discriminatory procedure.*
2. *Final customers who are transferred to suppliers of last resort shall continue benefit from their rights as customers.*
3. *Member States shall ensure that suppliers of last resort promptly communicate the terms and conditions to transferred customers and ensure seamless continuity of service for those customers for the period needed to find a new supplier.*
4. *Member States shall ensure that final customers are provided with information and encouragement to switch to a market-based offer.*
5. *Member States may require a supplier of last resort to supply natural gas to household customers and small and medium-sized enterprises who do not receive market based offers, including in the context of Article 25b(3). In such cases, the conditions set out in Article 4 shall apply.*

Chapter IV

Third party access to infrastructure

SECTION I

ACCESS TO NATURAL GAS INFRASTRUCTURE

Article 26

Market access for renewable gas and low-carbon gas

Member States shall enable the access of renewable and low carbon gases to the market and infrastructure regardless whether the renewable and low carbon gases production facilities are connected to distribution or transmission networks, *taking into account the assumptions on the evolution of the production, supply and consumption of gases according to Article 51(2), point (e)*.

Article 27

Third-party access to natural gas distribution and transmission and LNG terminals

1. Member States shall ensure the implementation of a system of third-party access to the transmission and distribution system, and LNG facilities based on published tariffs, applicable to all customers, including supply undertakings, and applied objectively and without discrimination between system users. Member States shall ensure that those tariffs, or the methodologies underlying their calculation, are approved prior to their entry into force in accordance with Article 72 by a regulatory authority referred to in Article 70 and that those tariffs — and the methodologies, where only methodologies are approved — are published prior to their entry into force. ■

- 1a. Transmission system operators shall, if necessary for the purpose of carrying out their functions including in relation to cross-border transmission, have access to the network of other transmission system operators.*
2. The provisions of this Directive shall not prevent the conclusion of long-term contracts for renewable **gas and low-carbon gas** in so far as they comply with Union competition rules and contribute to decarbonisation. No long-term contracts for **the** supply of unabated fossil gas shall be concluded with a duration beyond the end of year 2049.

Article 28

Access to upstream natural gas pipeline networks

1. Member States shall take the necessary measures to ensure that natural gas undertakings and eligible customers, wherever they are located, are able to obtain access to upstream pipeline networks, including facilities supplying technical services incidental to such access, in accordance with this Article, except for the parts of such networks and facilities which are used for local production operations at the site of a field where the **natural** gas is produced. The measures shall be notified to the Commission in accordance with Article 88.
2. The access referred to in paragraph 1 shall be provided in a manner determined by the Member State in accordance with the relevant legal instruments. Member States shall apply the objectives of fair and open access, achieving a competitive market in natural gas and avoiding any abuse of a dominant position, taking into account security and regularity of supplies, capacity which is or can reasonably be made available, and environmental protection. The following needs may be taken into account:

- (a) the need to refuse access where there is an incompatibility of technical specifications which cannot reasonably be overcome;
 - (b) the need to avoid difficulties which cannot reasonably be overcome and could prejudice the efficient, current and planned future production of hydrocarbons, including that from fields of marginal economic viability;
 - (c) the need to respect the duly substantiated reasonable needs of the owner or operator of the upstream pipeline network for the transport and processing of *natural* gas and the interests of all other users of the upstream pipeline network or relevant processing or handling facilities who may be affected; and
 - (d) the need to apply their laws and administrative procedures, in conformity with Union law, for the grant of authorisation for production or upstream development.
3. Member States shall ensure that they have in place dispute-settlement arrangements, including an authority independent of the parties with access to all relevant information, to enable disputes relating to access to upstream pipeline networks to be settled expeditiously, taking into account the criteria in paragraph 2 and the number of parties which may be involved in negotiating access to such networks.
4. In the event of cross-border disputes, the dispute-settlement arrangements for the Member State having jurisdiction over the upstream pipeline network which refuses access shall be applied. Where, in cross-border disputes, more than one Member State covers the network concerned, the Member States concerned shall consult each other with a view to ensuring that the provisions of this Directive are applied consistently. Where the upstream pipeline network originates from a third country and connects to at least one Member State, the Member States concerned shall consult each other and the Member State where the first entry point to the Member States' network is located shall consult the third country concerned where the upstream pipeline network originates, with a view to ensuring, as regards the network concerned, that this Directive is applied consistently in the territory of the Member States.

Access to storage of natural gas

1. For the organisation of access to storage facilities and linepack when technically or economically necessary for providing efficient access to the system for the supply of customers, as well as for the organisation of access to ancillary services, Member States may choose either or both of the procedures referred to in paragraphs 3 and 4. Those procedures shall operate in accordance with objective, transparent and non-discriminatory criteria.

When choosing the procedure for access to storage under this Article, Member States shall take into account the results of the common and national risk assessments carried out under Article 7 of Regulation (EU) 2017/1938.

The regulatory authorities shall define and publish criteria according to which the access regime applicable to storage facilities and linepack may be determined. They shall make public, or oblige storage and transmission system operators to make public, which storage facilities, or which parts of those storage facilities, and which linepack is offered under the different procedures referred to in paragraphs 3 and 4.

2. Paragraph 1 shall not apply to ancillary services and temporary storage that are related to LNG facilities and are necessary for the re-gasification process and subsequent delivery to the transmission system.
3. In the case of negotiated access, the regulatory authorities shall take the necessary measures for undertakings and eligible customers either inside or outside the territory covered by the interconnected system to be able to negotiate access to storage facilities and linepack, when technically and/or economically necessary for providing efficient access to the system, as well as for the organisation of access to other ancillary services. The parties shall be obliged to negotiate access to storage, linepack and other ancillary services in good faith.

Contracts for access to storage, linepack and other ancillary services shall be negotiated with the relevant storage system operator. The regulatory authorities shall require storage system operators and natural gas undertakings to publish their main commercial conditions for the use of storage, linepack and other ancillary services on an annual basis.

When developing those conditions, storage operators shall consult system users.

4. In the case of regulated access, the regulatory authorities shall take the necessary measures to give natural gas undertakings and eligible customers either inside or outside the territory covered by the interconnected system a right to access to storage, linepack and other ancillary services, on the basis of published tariffs or other terms and obligations for use of that storage and linepack, when technically or economically necessary for providing efficient access to the system, as well as for the organisation of access to other ancillary services. The regulatory authorities shall consult system users when developing those tariffs or the methodologies for those tariffs. The right of access for eligible customers may be given by enabling them to enter into supply contracts with competing undertakings other than the owner or operator of the system or a related undertaking.

Article 30

Direct lines for natural gas

1. Member States shall take the necessary measures to enable:
 - (a) undertakings established within their territory to supply the eligible customers through a direct line; and
 - (b) any such customer within their territory to be supplied through a direct line by natural gas undertakings.

2. In circumstances where an authorisation for example, licence, permission, concession, consent or approval is required for the construction or operation of direct lines, the Member States or any competent authority they designate shall lay down the criteria for the grant of authorisations for the construction or operation of such lines in their territory. Those criteria shall be objective, transparent and non-discriminatory.
3. Member States may issue an authorisation to construct a direct line subject either to the refusal of system access *based on* Article 34 or to the opening of a dispute-settlement procedure under Article 73.

SECTION II

ACCESS TO HYDROGEN INFRASTRUCTURE

Article 31

Third-party access to hydrogen networks

1. Member States shall ensure the implementation of a system of regulated third party access to hydrogen networks based on published tariffs and applied objectively and without discrimination between any hydrogen network users.
2. Member States shall ensure that those tariffs, or the methodologies underlying their calculation, are approved prior to their entry into force in accordance with Article 72 by a regulatory authority referred to in Article 70 and that those tariffs - and the methodologies, where only methodologies are approved - are published prior to their entry into force.
3. Hydrogen network operators shall, where necessary for the purpose of carrying out their functions, including in relation to cross-border network transport of hydrogen, have access to the network of other hydrogen network operators.

4. Until 31 December **2032**, a Member State may decide not to apply paragraph 1. In such case, the Member State shall ensure the implementation of a system of negotiated third party access to hydrogen networks in accordance with objective, transparent and non-discriminatory criteria. The regulatory authorities shall take the necessary measures for hydrogen network users to be able to negotiate access to hydrogen networks ***and to ensure that*** the parties ***are*** obliged to negotiate access to hydrogen networks in good faith.
5. Where negotiated access ***as referred to in paragraph 4*** is used, regulatory authorities shall provide guidance to hydrogen network users on how negotiated tariffs will be affected when regulated third party access is introduced.

Article 32

Third-party access to hydrogen terminals

1. Member States shall ensure the implementation of a system of third-party access to hydrogen terminals based on negotiated access in an objective, transparent and non-discriminatory manner, whereby the regulatory authorities shall take the necessary measures for hydrogen terminal users to be able to negotiate access to such terminals. The parties shall be obliged to negotiate access in good faith.
2. Regulatory authorities shall monitor conditions for third party access to hydrogen terminals and their impact on hydrogen markets and, where necessary in order to safeguard competition, take measures to improve access in line with the criteria set out in paragraph 1.

Access to hydrogen storage

1. Member States shall ensure the implementation of a system of regulated third party access to hydrogen storage **and**, ■ when technically **and** ■ economically necessary for providing efficient access to the system for the supply of customers, **access to line pack**, as well as for the organisation of access to ancillary services ■ based on published tariffs and applied objectively and without discrimination between any hydrogen system users. Member States shall ensure that those tariffs, or the methodologies underlying their calculation, are approved **by the regulatory authority** prior to their entry into force in accordance with Article 72.
2. *Until 31 December 2032, a Member State may decide not to apply paragraph 1. In such case, the Member State shall ensure the implementation of a system of negotiated third party access to hydrogen storage and, when technically and economically necessary for providing efficient access to the system for the supply of customers, access to line pack, as well as for the organisation of access to ancillary services, in accordance with objective, transparent and non-discriminatory criteria. The regulatory authorities shall take the necessary measures for hydrogen storage users to be able to negotiate access to hydrogen storage and to ensure that the parties are obliged to negotiate access to hydrogen storage in good faith.*
3. *Member States may provide that capacity rights allocated before [end date of transposition of this Directive] under a system of negotiated third party access pursuant to paragraph 2 are respected until its expiry date and not affected by the implementation of a regulated third-party access pursuant to paragraph 1.*

SECTION III

REFUSAL OF ACCESS AND CONNECTION

Article 34

Refusal of access and connection

1. ***Transmission system operators and distribution system operators*** and hydrogen undertakings may refuse access or connection to the natural gas or hydrogen system on the basis of lack of capacity ***or a lack of connection***.
2. ***Without prejudice to*** national and Union decarbonisation objectives ***and existing requirements to reduce or switch from fossil gas consumption***, Member States shall take appropriate measures to ensure that the ***transmission system operator, distribution system operator*** or hydrogen undertaking refusing access or connection to the natural gas system or hydrogen system on the basis of lack of capacity or a lack of connection makes the necessary enhancements as far as it is economic to do so or when a potential customer is willing to pay for them.
3. Access to the system for renewable ***gas*** and low carbon ***gas*** may only be refused subject to the provisions of Article 18 and 33 of (EU) .../...⁺ [recast Gas Regulation].

⁺ ***OJ: Please insert in the text the serial number of Regulation contained in document PE .../... [2021/0424 (COD)].***

- 3a. *By way of derogation from paragraphs 1, 2 and 3 of this Article, a Member State shall ensure that transmission system operators and distribution system operators are allowed to refuse access or connection, or to disconnect, natural gas network users, notably to ensure compliance with the implementation of the climate-neutrality objective set out in Article 2(1) of Regulation (EU) 2021/1119, provided that:*
- (a) the network development plan pursuant to Article 51 envisages the decommissioning of the transmission system or relevant parts thereof;*
 - (b) the relevant national authority has approved the network decommissioning plan pursuant to Article 52b(3);*
 - (c) the relevant distribution network operator, exempted to submit a network decommissioning plan pursuant to article 52b(5), has informed to the relevant national authority of the decommissioning of the distribution network or relevant parts thereof.*
- 3b. *Member States allowing for the refusal of access and connection or for the disconnection of network users pursuant to this paragraph shall provide for a regulatory framework for those disconnections that is based on objective, transparent and non-discriminatory criteria defined by the national regulatory authority, taking into account the affected interests, the existing requirements to reduce or switch from natural gas consumption and the relevant local heating and cooling plans established pursuant to Article 25(6) of the Directive (EU) 2023/1791. Member States shall take adequate measures to protect network users in accordance with Article 11a of this Directive when allowing for disconnection.*
4. *Duly substantiated reasons shall be given for any refusal of access or connection and for any disconnection pursuant to this Article.*

Chapter V

Rules applicable to transmission, storage and LNG system operators of natural gas

Article 35

Tasks of transmission, storage or LNG system operators

1. Each transmission, storage or LNG system operator shall:
 - (a) operate, maintain, ***develop or decommission*** under economic conditions secure, reliable and efficient transmission, storage or LNG facilities to secure an open market, with due regard to the environment ***and the climate***, the obligations laid down in ***Regulation (EU) .../... of the European Parliament and of the Council***²³⁺, ensure adequate means to meet service obligations;
 - (b) not discriminate between system users or classes of system users, specifically in favour of its related undertakings;
 - (c) provide to any other transmission system operator, any other storage system operator, any other LNG system operator or any distribution system operator, sufficient information to ensure that the transport and storage of natural gas may take place in a manner compatible with the secure and efficient operation of the interconnected system;
 - (d) provide system users with the information they need for efficient access to the system.

²³ ***Regulation (EU) .../... of the European Parliament and of the Council of ... on methane emissions reduction in the energy sector and amending Regulation (EU) 2019/942 (OJ L ..., ..., ELI:...).***

⁺ ***OJ: Please insert in the text the serial number of the Regulation contained in document PE-CONS .../... [2021/0423 (COD)] and insert the serial number, date and publication reference in the corresponding footnote.***

2. Each transmission system operator shall build sufficient cross-border capacity to integrate European transmission infrastructure accommodating all economically reasonable and technically feasible demands for capacity and taking into account security of gas supply.
3. Transmission system operators shall cooperate with distribution system operators to ensure the effective participation of market participants connected to the grid in retail, wholesale and balancing *markets*.
4. Transmission system operators shall ensure efficient gas quality management in their facilities in line with applicable gas quality standards.
5. Rules adopted by transmission system operators for balancing the gas transmission system shall be objective, transparent and non-discriminatory, including rules for the charging of system users of their networks for energy imbalance. Terms and conditions, including rules and tariffs, for the provision of such services by transmission system operators shall be established pursuant to a methodology compatible with Article 72(7) in a non-discriminatory and cost-reflective way and shall be published.
6. The regulatory authorities where Member States have so provided or Member States may require transmission system operators to comply with minimum standards for the maintenance and development of the transmission system, including interconnection capacity.
7. Member States may provide that one or several responsibilities listed in paragraph 1 are assigned to a transmission system operator other than the one which owns the transmission system to which the responsibilities concerned would otherwise be applicable. The transmission system operator to which the tasks are assigned shall be certified under the ownership unbundling, the independent system operator or the independent transmission system operator model and fulfil the requirements provided for in Article 54, but shall not be required to own the transmission system it is responsible for.

8. A transmission system operator *which owns the transmission system* shall fulfil the requirements provided for in Chapter IX and be certified in accordance with Article 65. This shall be without prejudice to the possibility for transmission system operators which are certified under the ownership unbundling, the independent system operator or the independent transmission system operator model to delegate, on their own initiative and under their supervision, certain tasks to other transmission system operators which are certified under the ownership unbundling, the independent system operator or the independent transmission system operator model, where the delegation of tasks does not endanger the effective and independent decision-making rights of the delegating transmission system operator.
9. LNG, *transmission* and storage system operators shall cooperate, within one Member State and regionally, to ensure the most efficient use of facilities' capacities and synergies between these facilities, taking into account system integrity and operation *and avoiding creating constraints in operating LNG and storage facilities*.
10. Transmission system operators shall procure the energy they use for the carrying out of their functions according to transparent, non-discriminatory and market based procedures.

Confidentiality for transmission system operators and transmission system owners

1. Without prejudice to Article 68 or any other legal duty to disclose information, each transmission, storage or LNG system operator, and each transmission system owner, shall preserve the confidentiality of commercially sensitive information obtained in the course of carrying out its activities, and shall prevent information about its own activities which may be commercially advantageous from being disclosed in a discriminatory manner. *If the transmission, storage or LNG system operator, or the transmission system owner is part of a vertically integrated undertaking*, it shall not disclose, *in particular*, any commercially sensitive information to the remaining parts of the *vertically integrated* undertaking *other than transmission system operators, distribution system operators or hydrogen network operators*, unless this is necessary for carrying out a business transaction. In order to ensure the full respect of the rules on information unbundling, Member States shall ensure that the transmission system owner including, in the case of a combined operator, the distribution system operator, and the remaining part of the undertaking *which are not transmission or distribution system operators or hydrogen network operators* do not use joint services, such as joint legal services, apart from purely administrative or IT functions.
2. Transmission, storage or LNG system operators shall not, in the context of sales or purchases of natural gas by related undertakings, misuse commercially sensitive information obtained from third parties in the context of providing or negotiating access to the system.
3. Information necessary for effective competition and the efficient functioning of the market shall be made public. That obligation shall be without prejudice to protecting commercially sensitive information.

Decision-making powers regarding the connection of ■ production facilities for renewable gas and low carbon gas to the transmission system

1. The transmission system operator shall establish and publish transparent and efficient procedures for non-discriminatory connection of production installations of renewable *gas* and low carbon *gas*, *in line with the capacities identified in the ten-year network development plan referred to in Article 51*. Those procedures shall be subject to approval by the regulatory authorities. *Member States may grant production facilities for biomethane priority to connect.*
2. The transmission system operators shall not be entitled to refuse economically reasonable and technically feasible connection requests of a new *or of an existing, but not yet connected* production facility installation for renewable *gas* and low carbon *gas*, *except under the conditions set out in Article 34*.
3. *For the purpose of the swift implementation of grid connection of biomethane production, Member States shall endeavour to ensure that the transmission system operator complies with reasonable time limits to assess the requests for the injection of biomethane, make an offer and implement the connection, under the monitoring of the regulatory authorities carried out in accordance with Article 72(1), point (t).*

Decision-making powers regarding the connection to the transmission system and the hydrogen *transmission* network

1. The transmission system operator and the hydrogen *transmission* network operator shall establish and publish transparent and efficient procedures and tariffs for non-discriminatory connection of natural gas and hydrogen storage facilities, LNG regasification facilities, hydrogen terminals and industrial customers to the transmission system and the hydrogen *transmission* network. Those procedures shall be subject to approval by the regulatory authority.
2. The transmission system operator and the hydrogen *transmission* network operator shall not be entitled to refuse the connection of a new natural gas or hydrogen storage facility, LNG regasification facility, hydrogen terminal or industrial customer on the grounds of possible future limitations to available network capacities or additional costs linked with necessary capacity increase. The transmission system operator and hydrogen *transmission* network operator shall ensure sufficient entry and exit capacity for the new connection.

Chapter VI

Distribution system operation of natural gas *and hydrogen*

Article 39

Designation of distribution system operators *and hydrogen distribution network operators*

Member States shall designate, or shall require undertakings which own or are responsible for distribution systems *or hydrogen distribution networks* to designate, ***following a transparent procedure***, for a period of time to be determined by Member States, having regard to considerations of ***economic and energy*** efficiency, and economic balance, one or more distribution system operators *or hydrogen distribution network operators* and shall ensure that those operators act in accordance with Articles 40, 42, ***43 and 46***.

Article 40

Tasks of distribution system operators

1. Each distribution system operator shall be responsible for ensuring the long-term ability of the system to meet reasonable demands for the distribution of ***natural*** gas ***in accordance with Articles 51 and 52b of this Directive including for biomethane injection***, and for operating, maintaining and developing *or decommissioning* under economic conditions a secure, reliable and efficient system in its area, with due regard for the environment, the obligations laid down in Regulation (EU) 2022/ ...⁺ [Methane Regulation] and energy efficiency.

⁺ OJ: Please insert in the text the serial number of Regulation contained in document PE .../... [2021/423 (COD)] and insert in the corresponding footnote the serial number, date and publication reference for that Regulation.

2. When so decided by regulatory authorities, distribution system operators may be responsible for ensuring efficient gas quality management in their facilities in line with applicable gas quality standards, where necessary for system management due to the injection of renewable *gas* and low-carbon *gas*.
3. In any event, the distribution system operator shall not discriminate between system users or classes of system users, particularly in favour of its related undertakings.
4. Each distribution system operator shall provide any other distribution, transmission, LNG, and/or storage system operator with sufficient information to ensure that the transport and storage of natural gas takes place in a manner compatible with the secure and efficient operation of the interconnected system.
5. Each distribution system operator shall provide system users with the information they need for efficient access to, including use of the system.
6. Where a distribution system operator is responsible for balancing the distribution system, rules adopted by it for that purpose shall be objective, transparent and non-discriminatory, including rules for the charging of system users for energy imbalance. Terms and conditions, including rules and tariffs, for the provision of such services by distribution system operators shall be established pursuant to a methodology compatible with Article 72(7) in a non-discriminatory and cost-reflective way and shall be published.
7. Distribution system operators shall cooperate with transmission system operators to ensure the effective participation of market participants connected to their *infrastructure* in retail, wholesale and balancing *markets* in the entry-exit system to which the distribution system belongs to.

■

9. The distribution system operators shall not be entitled to refuse economically reasonable and technically feasible connection requests of a new *or existing but not yet connected* production facility for renewable *gas and low-carbon gas except under the conditions set out in Article 34*.

Article 41

Decision-making powers regarding the connection of **■** production facilities for renewable gas and low carbon gas to the distribution system

Regulatory authorities shall **require** the distribution system operator to publish transparent and efficient procedures for non-discriminatory connection of **■** production installations of renewable **gas** and low carbon **gas**. Those procedures shall be subject to approval by the regulatory authorities. *Member States may grant production facilities for biomethane priority to connect.*

For the purpose of the swift implementation of grid connection of biomethane production, Member States shall endeavour to ensure that the distribution system operator complies with reasonable time limits to assess the requests for the injection of biomethane, make an offer and implement the connection, under the monitoring of the regulatory authorities carried out in accordance with Article 72(1), point (t).

Article 42

Unbundling of distribution system operators and hydrogen distribution network operators

1. Where the distribution system operator **or the hydrogen distribution network operator** is part of a vertically integrated undertaking, it shall be independent at least in terms of its legal form, organisation and decision making from other activities not relating to distribution **or hydrogen distribution**. Those rules shall not create an obligation to separate the ownership of assets of the distribution system **or the hydrogen distribution network** from the vertically integrated undertaking. *Member States may provide that hydrogen distribution network operators may rent or lease hydrogen network assets from other natural gas distribution system owners, natural gas distribution operators or hydrogen distribution network operators within the same undertaking. Such leasing shall not lead to cross-subsidies between different operators.*

2. In addition to the requirements under paragraph 1, where the distribution system operator *or the hydrogen distribution network operator* is part of a vertically integrated undertaking, it shall be independent in terms of its organisation and decision-making from the other activities not related to *distribution or hydrogen* distribution. In order to achieve this, the following minimum criteria shall apply:
- (a) *management of the distribution system operator or the hydrogen distribution network* operator shall not participate in company structures of the integrated natural gas undertaking *or the vertically integrated undertaking* responsible, directly or indirectly, for the day-to-day operation of the production, transmission, *transport* and supply of *natural gas and hydrogen*;
 - (b) appropriate measures shall be taken to ensure that the professional interests of persons responsible for the management of the distribution system operator *or the hydrogen distribution network operator* are taken into account in a manner that ensures that they are capable of acting independently;
 - (c) the distribution system operator *or the hydrogen distribution network operator* shall have effective decision-making rights, independent from the integrated natural gas undertaking *or the vertically integrated undertaking*, with respect to assets necessary to operate, maintain or develop the network; in order to fulfil those tasks, the distribution system operator *or the hydrogen distribution network operator* shall have at its disposal the necessary resources including human, technical, financial and physical resources; this shall not prevent the existence of appropriate coordination mechanisms to ensure that the economic and management supervision rights of the parent company in respect of return on assets, regulated indirectly in accordance with Article 72(7) in a subsidiary are protected; in particular, this shall enable the parent company to approve the annual financial plan, or any equivalent instrument, of the distribution system *operator or the hydrogen distribution network* operator and to set global limits on the levels of indebtedness of its subsidiary; it shall not permit the parent company to give instructions regarding day-to-day operations, nor with respect to individual decisions concerning the construction or upgrading of distribution lines, that do not exceed the terms of the approved financial plan, or any equivalent instrument;

(d) the distribution system operator *or the hydrogen distribution network operator shall* establish a compliance programme, which sets out measures taken to ensure that discriminatory conduct is excluded, and ensure that observance of it is adequately monitored; the compliance programme shall set out the specific obligations of employees to meet that objective; an annual report, setting out the measures taken, shall be submitted by the person or body responsible for monitoring the compliance programme, the compliance officer of the distribution system operator *or the hydrogen distribution network operator*, to the regulatory authority referred to in Article 70(1) and shall be published; the compliance officer of the distribution system operator *or the hydrogen distribution network operator* shall be fully independent and shall have access to all the necessary information of the distribution system *operator or hydrogen distribution network* operator and any affiliated undertaking to fulfil his task.

3. Where the distribution system operator *or the hydrogen distribution network operator* is part of a vertically integrated undertaking, the Member States shall ensure that the activities of the distribution system operator *or the hydrogen distribution network operator* are monitored by regulatory authorities or other competent bodies so that it cannot take advantage of its vertical integration to distort competition. In particular, vertically integrated distribution system *operators or the hydrogen distribution network* operators shall not, in their communication and branding, create confusion in respect of the separate identity of the supply branch of the vertically integrated undertaking.
4. Member States may decide not to apply paragraphs 1, 2 and 3 *to distribution system operators which are part of an* integrated natural gas undertakings serving less than 100 000 connected customers. *Where a distribution system operator benefits from a derogation in accordance with this paragraph on [date of entry into force of this Directive] Member States may decide not to apply paragraphs 1, 2 and 3 to a hydrogen distribution network operator within the same undertaking as long as the combined number of connected customers of the distribution system operator and the hydrogen distribution network operator remains less than 100 000;*

Article 43

Confidentiality obligations of distribution system operators

1. Without prejudice to Article 68 or any other legal duty to disclose information, each distribution system operator shall preserve the confidentiality of commercially sensitive information obtained in the course of carrying out its business, and shall prevent information about its own activities which may be commercially advantageous from being disclosed in a discriminatory manner.
2. Distribution system operators shall not, in the context of sales or purchases of natural gas by related undertakings, abuse commercially sensitive information obtained from third parties in the context of providing or negotiating access to the system.

Article 44

Closed distribution systems of natural gas

1. Member States may provide for regulatory authorities or other competent authorities to classify a system which distributes natural gas within a geographically confined industrial, commercial or shared services site and does not, without prejudice to paragraph 4, supply household customers, as a closed distribution system if:
 - (a) for specific technical or safety reasons, the operations or the production process of the users of that system are integrated; or
 - (b) that system distributes natural gas primarily to the owner or operator of the system or to their related undertakings.

2. Member States may provide for regulatory authorities to exempt the operator of a closed natural gas distribution system from the requirement under Article 27(1) that tariffs, or the methodologies underlying their calculation, are approved prior to their entry into force in accordance with Article 72.
3. Where an exemption is granted under paragraph 2 *of this Article*, the applicable tariffs, or the methodologies underlying their calculation, shall be reviewed and approved in accordance with Article 72 upon request by a user of the closed natural gas distribution system.
4. Incidental use by a small number of households with employment or similar associations with the owner of the distribution system and located within the area served by a closed distribution system shall not preclude an exemption under paragraph 2 being granted.
5. Closed distribution systems shall be considered as distribution systems for the purposes of this Directive.

Article 45

Combined operator

1. Article 42(1) shall not prevent the operation of a combined transmission, LNG, storage and distribution system operator provided that the operator complies with Article 54(1), or Articles 55 and 56, or Chapter IX.
2. *Article 42(1) shall not prevent the operation of a combined hydrogen transmission, hydrogen terminals, hydrogen storage and hydrogen distribution network operator provided that the operator complies with Articles 62 and 63.*
3. *Paragraph 1 and 2 of this Article shall not prevent a combined operator across the natural gas and hydrogen systems, subject to the requirements of Article 63.*

Chapter VII

Rules applicable to the dedicated hydrogen networks

Article 46

Tasks of hydrogen network, storage and terminal operators

1. Each operator of hydrogen networks, storage or terminal shall be responsible for:
 - (a) operating, maintaining, developing, *including repurposing*, under economic conditions a secure and reliable infrastructure for hydrogen transport or storage with due regard to the environment, in close cooperation with connected and neighbouring hydrogen network operators *in order to optimise co-location of production and use of hydrogen and on the basis of the ten-year network development plan referred to in Article 51*;
 - (b) ensuring the long-term ability of the hydrogen system to meet reasonable demands *identified* for the transport and storage of hydrogen *in accordance with the ten-year network development plan referred to in Article 51*;
 - (c) ensuring adequate means to *meet* its obligations;
 - (d) providing to the operator of other networks or systems with which its system is interconnected sufficient information, *including on hydrogen quality*, to ensure the secure and efficient operation, coordinated development and interoperability of the interconnected system;
 - (e) not discriminating between *hydrogen* system users or classes of infrastructure users, specifically in favour of its related undertakings; and
 - (f) providing *hydrogen* system users with the information they need for efficient access to the infrastructure;

- (g) taking all reasonable measures available to prevent and minimise hydrogen emissions in their operations and carrying out, at regular intervals, a hydrogen leak detection and repair survey of all relevant components under the operator responsibility;
- (h) submitting a hydrogen leak detection report and, where necessary, a repair or replacement programme to the competent authorities, *making public statistical information on hydrogen leak detection and repair on an annual basis*;

2. **■** Hydrogen *transmission* network operators shall *aim to ensure* sufficient cross-border capacity to integrate European hydrogen infrastructure accommodating all economically reasonable and technically feasible demands for capacity *identified in the ten-year network development plan referred to in Article 51 of this Directive and the Union-wide network development plan referred to in Article 43 of Regulation (EU) .../...⁺ [recast Gas Regulation]* and taking into account security of hydrogen supply. *Upon their certification pursuant to Article 65 of this Directive and Article 13 of Regulation (EU) .../...⁺ [the recast Gas Regulation], competent authorities of Member States may decide to task one or a limited number of hydrogen transmission network operators with the responsibility for ensuring cross-border capacity.*
3. *Where appropriate for system management and end-users, the regulatory authority shall entrust* hydrogen network operators *with the responsibility* for ensuring efficient hydrogen quality management *and stable hydrogen quality* in their networks in line with applicable hydrogen quality standards **■** .
- 3a. *Hydrogen network operators shall be responsible for balancing in their networks as from 1 January 2033, or as from an earlier date where so provided by the regulatory authority. Rules adopted by hydrogen network operators for balancing the hydrogen network shall be objective, transparent and non-discriminatory, including rules for the charging of users of their networks for energy imbalance.*

⁺ *OJ: Please insert in the text the serial number of Regulation contained in document PE .../... [2021/0424 (COD)].*

⁺ *OJ: Please insert in the text the serial number of Regulation contained in document PE .../... [2021/0424 (COD)].*

Existing hydrogen networks

1. Member States may *provide for regulatory authorities* to grant a derogation from the requirements of *one or more of* Articles 31, **42, 62, 63, 64 and 65** of this Directive, and Articles 6 and 47 of **Regulation (EU) .../...**⁺ [recast Gas Regulation] to hydrogen networks that belonged to a vertically integrated undertaking on ... [date of entry into force of this Directive].
2. The derogation shall  expire:
 - (a) where the vertically integrated undertaking submits a request to the regulatory authority to end the derogation and such request is approved by the regulatory authority;
 - (b) where the hydrogen network benefitting from the derogation is connected to another hydrogen network;
 - (c) where the hydrogen network benefitting from the derogation or its capacity is expanded *by more than 5% in terms of length or capacity compared to ... [date of entry into force of this Directive]; or*
 - (d) *where the regulatory authority concludes by decision that the continued application of the derogation would carry the risk of impeding competition or adversely affecting the efficient deployment of hydrogen infrastructure or the development and functioning of the hydrogen market in the Member State or the Union.*

⁺ **OJ: Please insert in the text the serial number of Regulation contained in document PE .../... [2021/0424 (COD)].**

3. *Every seven years as from the date of granting of a derogation pursuant to paragraph 1, the regulatory authority shall publish an assessment of the derogation's impact on competition, hydrogen infrastructure as well as the development and functioning of the hydrogen market in the Member State or the Union.*
4. *Regulatory authorities may request operators of existing hydrogen networks to provide them with all information necessary for the execution of their tasks.*

Article 48

Geographically confined hydrogen networks

1. Member States may provide for regulatory authorities to grant a derogation from **Articles 62 and 65 or Article 42**, for hydrogen networks which transport hydrogen *within a geographically confined, industrial or commercial area*. *For the duration of the derogation, such network shall fulfil all following conditions:*
 - (a) *it shall not include hydrogen interconnectors;*
 - (b) *it shall not have direct connections to hydrogen storage facilities or hydrogen terminals, unless such storage facilities or terminals are also connected to a hydrogen network which does not benefit from a derogation under this Article or Article 47;*
 - (c) *it shall primarily serve the purpose of supplying hydrogen to customers directly connected to this network; and*
 - (d) *it shall not be connected to any other hydrogen network, except to networks also benefiting from a derogation under this article which are operated by the same hydrogen network operator.*

2. The *national regulatory authority shall adopt a decision to withdraw the derogation pursuant to paragraph 1 if it concludes that the continued application of the derogation would carry the risk of impeding competition or adversely affecting the efficient deployment of hydrogen infrastructure or the development and functioning of the hydrogen market in the Member State or the Union, or where any of the conditions listed under paragraph 1 is no longer fulfilled.*

Every seven years as from the granting of a derogation pursuant to paragraph 1, the regulatory authority shall publish an assessment of the derogation's impact on competition, hydrogen infrastructure as well as the development and functioning of the hydrogen market in the Member State or the Union.

■

■

Member States shall take the necessary measures to ensure that access requests *of hydrogen producers as well as connection requests of industrial customers* are notified to the regulatory authority, *made public and treated pursuant to Article 38. Publication of access requests shall preserve the confidentiality of commercially sensitive information.*

Hydrogen interconnectors with third countries

1. *The Union shall, for each hydrogen interconnector between Member States and third countries, conclude prior to its operation an international agreement in accordance with Article 218 TFEU with the connected third country, or third countries, setting out the operating rules for the hydrogen interconnector concerned, where necessary to ensure coherence and consistency with the rules applicable to hydrogen networks ■ set out in this Directive and ■ Regulation (EU) .../...⁺ [recast gas Regulation]. An international agreement shall not be considered necessary where the Member State connected or intending to be connected by a hydrogen interconnector negotiates and concludes an intergovernmental agreement with the connected third country or third countries concerned in accordance with Article 82 of this Directive, setting out the operating rules for the hydrogen interconnector concerned to ensure coherence and consistency with the rules applicable to hydrogen networks set out in this Directive and Regulation (EU) .../...⁺ [recast gas Regulation].*
2. ■ Paragraph 1 of this Article shall be without prejudice to Article 79 and to the allocation of competences between the Union and the Member States.
3. Paragraph 1 shall also be without prejudice to the possibility for the Union and the Member States, pursuant to their respective competences and in compliance with applicable procedures, to enter into dialogues with connected third countries, including to establish cooperation on matters relevant for the production of hydrogen such as social and environmental matters.

⁺ OJ: Please insert in the text the serial number of Regulation contained in document PE .../... [2021/0424 (COD)].

⁺ OJ: Please insert in the text the serial number of Regulation contained in document PE .../... [2021/0424 (COD)].

Confidentiality for operators of hydrogen networks, hydrogen storage facilities and hydrogen terminals

1. Without prejudice to legal duties to disclose information, each operator of a hydrogen network, hydrogen storage facility or hydrogen terminal, and each owner of a hydrogen network, shall preserve the confidentiality of commercially sensitive information obtained in the course of carrying out its activities, and shall prevent information about its own activities which may be commercially advantageous from being disclosed in a discriminatory manner. In particular, if the operator of a hydrogen network, hydrogen storage facility or hydrogen terminal, or the owner of a hydrogen network is part of a vertically integrated undertaking, it shall not disclose any commercially sensitive information to the remaining parts of the *vertically integrated* undertaking *other than transmission system operators, distribution system operators or hydrogen network operators*, unless this is necessary for carrying out a business transaction.
2. The operator of a hydrogen network, hydrogen storage facility or hydrogen terminal shall not, in the context of sales or purchases of hydrogen by related undertakings, misuse commercially sensitive information obtained from third parties in the context of providing or negotiating access to the system.
3. Information necessary for effective competition and the efficient functioning of the market shall be made public. That obligation shall be without prejudice to protecting commercially sensitive information.

Chapter VIII

Integrated network planning

Article 51

Network development for natural gas and hydrogen and powers to make investment decisions

1. At least every two years, all transmission system operators *and hydrogen transmission network operators* shall submit to the relevant regulatory authority a ten-year network development plan based on existing and forecast supply and demand after having consulted all relevant stakeholders *according to paragraph 2, point (e)*. There shall be *one single network development plan per Member State for natural gas and one single network development plan per Member State for hydrogen or one joint plan for natural gas and hydrogen per Member State. Member States allowing for one joint plan shall ensure that the plan is sufficiently transparent to allow the regulatory authority to clearly identify the specific needs of the natural gas sector and the specific needs of the hydrogen sector that the plan is addressing. Separate modelling shall be performed for the respective energy carriers and with separate chapters showing network maps for natural gas and network maps for hydrogen.*

Member States in which separate plans for natural gas and hydrogen are developed shall ensure that transmission system operators and hydrogen transmission network operators cooperate closely where decisions need to be made to ensure system efficiency, as defined in Article 2, point 4, of Directive (EU) 2023/1791, across energy carriers, such as for repurposing.

Hydrogen transmission network operators shall closely cooperate with electricity transmission system operators and electricity distribution system operators if applicable in order to coordinate joint infrastructure requirements, such as the location of electrolyzers and the respective transmission infrastructure and take the utmost account their views.

Member States shall endeavour to ensure coordinated planning steps of the respective ten-year network development plans for natural gas, hydrogen and electricity.

Infrastructure operators, including LNG terminal operators, storage operators, distribution system operators as well as hydrogen *distribution network operators, hydrogen terminal operators and hydrogen storage operators*, district heating infrastructure and electricity operators shall be required to provide and exchange all relevant information to the transmission system operators *for the planning*. The network development plan *for natural gas* shall contain efficient measures in order to guarantee the adequacy of the natural gas system and the security of supply, in particular the compliance with the infrastructure standards under Regulation (EU) 2017/1938. The ten-year network development *plans* shall be published and accessible on a website *along with the outcome of the stakeholder's consultation*. *The website shall be update regularly so that all the relevant stakeholders have visibility on when, what and how will be consulted.*

2. The ten-year network development plan *or plans* shall, in particular:
 - (a) contain *comprehensive and detailed information on* the main infrastructure that needs to be built or upgraded over the next ten years *taking into account any infrastructure reinforcements needed for connecting renewable and low-carbon gas installations and including infrastructure developed to enable reverse flows to the transmission network*;
 - (b) contain all the investments already decided and identify new investments *and demand-side solutions not requiring new infrastructure investments* which have to be executed in the next three years;
 - (c) *in the case of natural gas*, include *comprehensive and detailed* information on infrastructure that can or will be decommissioned; and

- (ca) *in case of hydrogen include comprehensive and detailed information on infrastructure that can or will be repurposed for the transmission of hydrogen, in particular to deliver hydrogen to end-users in hard-to-decarbonise sectors taking into account the greenhouse gas abatement potential and the energy and cost-efficiency in relation to other options*
- (d) provide for a time frame for all investment and decommissioning projects;
- (e) be based on a joint scenario ■ developed *every two years* between the relevant infrastructure operators, including relevant distribution system operators, of at least *natural gas, hydrogen, electricity and, where applicable, district heating. Such scenarios shall be based on reasonable assumptions about the evolution of the production, supply and consumption, in particular the needs of hard-to-decarbonise sectors taking into account the greenhouse gas abatement potential and the energy and cost-efficiency in relation to other options, and shall take into account demand-side solutions not requiring new infrastructure investments. They shall also take into account cross-border exchanges, including with third countries and the role of hydrogen storage and the integration of hydrogen terminals. Infrastructure operators shall conduct an extensive consultation process on such scenarios open to all relevant stakeholders including the distribution system operators in natural gas and electricity, hydrogen distribution network operators, associations involved in electricity, natural gas and hydrogen markets, heating and cooling, supply and production undertakings, independent aggregators, demand-response operators, organisations involved in energy efficiency solutions, energy consumer associations, civil society representatives. The consultations shall take place at an early stage prior to the development of the ten-year network development plan in an open, inclusive and transparent manner. All documents provided by the infrastructure operators to facilitate the consultations shall be made public as well as the outcome of the stakeholders consultation. The website shall be updated in a timely manner when these documents are available so that all the relevant stakeholders have the required visibility to effectively participate in the consultation.*

The joint scenarios shall be in line with Union-wide scenarios established in accordance with Article 12 of Regulation (EU) 2022/869 and with the integrated national energy and climate plan and its updates, in accordance with Regulation (EU) 2018/1999 and support the climate-neutrality objective set out in Articles 2(1) and 4(1) of Regulation (EU) 2021/1119. The scenarios shall be approved by the competent national authority. The European Scientific Advisory Board on Climate Change established under Article 10a of Regulation (EC) No 401/2009 of the European Parliament and of the Council²⁴ may, on its own initiative, provide an opinion on the compatibility of joint scenarios with the Union's 2030 targets for energy and climate and its 2050 climate neutrality objective, which has to be taken into account by the competent national authority.;

- (f) *in the case of natural gas*, be consistent with the results of the common and national risk assessments under Article 7 of Regulation 2017/1938;
- (g) be in line with the integrated national energy and climate plan and its updates, and with the integrated national energy climate reports submitted in accordance with Regulation (EU) 2018/1999. *It shall also be consistent with targets set by Directive (EU) 2018/2011* and support the climate-neutrality objective set out in Articles 2(1) and 4(1) of Regulation (EU) 2021/1119.
- (ga) *be consistent with the Union-wide ten-year network development plan for natural gas referred to in Article 29 of Regulation (EU) .../...⁺ [recast Gas Regulation] and the Union-wide ten-year network development plan for hydrogen referred to in Article 43 of that Regulation [recast Gas Regulation], as applicable.*
- (gb) *take into account the hydrogen distribution network development plan referred to in Article 52 and the natural gas network decommissioning plans referred to in Article 52b.*

²⁴ *Regulation (EC) No 401/2009 of the European Parliament and of the Council of 23 April 2009 on the European Environment Agency and the European Environment Information and Observation Network (OJ L 126, 21.5.2009, p. 13).*

⁺ *OJ: Please insert in the text the serial number of Regulation contained in document PE .../... [2021/0424 (COD)].*

3. When elaborating the ten-year network development *plans*, the transmission system operator *and the hydrogen transmission network operator* shall fully take into account the potential for alternatives to system expansion, for instance the use of demand response, as well as expected consumption following the application of the energy efficiency first principle *in line with Article 27 of Directive (EU) 2023/1791*, trade with other countries and the Union-wide network development plan. *In view of the energy system integration*, the transmission system operator *and the hydrogen transmission network operator* shall assess how to address, where possible, a need across electricity, *heat where applicable and natural gas and hydrogen* systems including information on the optimal location and size of energy storage and power to gas assets *as well as the co-location of hydrogen production and consumption*. *The hydrogen transmission network operator shall include information on the location of end-users in hard-to-decarbonise sectors with a view to target the use of renewable and low-carbon hydrogen in those sectors.*
4. The regulatory authority shall consult all actual or potential system users on the ten-year network development plan in an open and transparent manner. Persons or undertakings claiming to be potential system users may be required to substantiate such claims. The regulatory authority shall publish the result of the consultation process, *including* possible needs for *investments, decommissioning of assets and demand-side solutions not requiring new infrastructure* investments.

5. The regulatory authority shall examine whether the ten-year network development plan ***complies with paragraphs 1, 2 and 3 of this Article***, covers all investment needs identified during the consultation process, and, where appropriate, whether it is consistent with the most recent Union wide simulation of disruption scenarios carried out by the ***European Network of Transmission System Operators for Gas*** (ENTSO for Gas) under Article 7 of Regulation (EU) 2017/1938, with the regional and national risk assessments and the non-binding Union -wide ten-year network development ***plans*** (Union -wide network development ***plans***) referred to in Article 30(1), point (b), of Regulation (EU) 2019/943, ***and with Articles 29 and 43 of Regulation (EU) .../...⁺ [the recast Gas regulation]***. If any doubt arises as to the consistency with the Union - wide network development plan, the regulatory authority shall consult ACER. The regulatory authority may require the transmission system operator to amend its ten-year network development plan.

The competent national authorities shall examine the consistency of the ten-year network development plan with the ***climate-neutrality objective set out in Article 2(1) of Regulation (EU) 2021/1119***, national energy and climate plan and its updates and with the integrated national energy climate reports submitted in accordance with Regulation (EU) 2018/1999 ***and, in case of inconsistency, may provide the regulatory authority a substantiated opinion setting out the inconsistency, to be taken duly into account.***

6. The regulatory authority shall monitor and evaluate the implementation of the ten-year network development plan.
7. In circumstances where the independent system operator or independent transmission operator, ***or the integrated hydrogen transmission network operator or independent hydrogen transmission network operator***, other than for overriding reasons beyond its control, does not execute an investment, which, under the ten-year network development plan, was to be executed in the following three years, Member States shall ensure that the regulatory authority is required to take at least one of the following measures to ensure that the investment in question is made if such investment is still relevant on the basis of the most recent ten-year network development plan:

⁺ ***OJ: Please insert in the text the serial number of Regulation contained in document PE .../... [2021/0424 (COD)].***

- (a) to require the transmission system operator *or the hydrogen transmission network operator* to execute the investments in question;
- (b) to organise a tender procedure open to any investors for the investment in question;
- (c) to oblige the transmission system operator *or the hydrogen transmission network operator* to accept a capital increase to finance the necessary investments and allow independent investors to participate in the capital.

Where the regulatory authority has made use of its powers under point (b) *of* the first subparagraph, it may oblige the transmission system operator *or the hydrogen transmission network operator* to agree to one or more of the following:

- (a) financing by any third party;
- (b) construction, *repurposing or decommissioning* by any third party;
- (c) building the new assets concerned itself;
- (d) operating the new assets concerned itself.

The transmission system operator *or the hydrogen transmission network operator* shall provide the investors with all information needed to realise the investment, shall connect new assets to the *transmission network or the hydrogen* transmission network and shall generally make its best efforts to facilitate the implementation of the investment project.

The relevant financial arrangements shall be subject to approval by the regulatory authority.

8. Where the regulatory authority has made use of its powers under paragraph 7, the relevant tariff regulations shall cover the costs of the investments in question.

Hydrogen distribution network development plan

1. Hydrogen *distribution* network operators shall submit to the regulatory authority *every four years a plan presenting the hydrogen network infrastructure they aim to develop. The plan shall be developed in close cooperation with distribution system operators for natural gas and electricity as well as district heating and cooling operators where applicable ensuring effective energy system integration taking the utmost account of their views. Member States may allow that hydrogen distribution network operators in accordance with this Article and distribution system operators in accordance with Article 52b that are active in the same region develop a joint plan. Member States allowing for one joint planning shall ensure that the plan is sufficiently transparent to clearly identify the specific needs of the natural gas sector and the specific needs of the hydrogen sector that the plan is addressing. Separate modelling shall be performed for the respective energy carriers if applicable and with separate chapters showing network maps for natural gas and network maps for hydrogen.*

Member States in which separate plans for natural gas and hydrogen are developed shall ensure that distribution system operators and hydrogen distribution network operators cooperate closely where decisions need to be made to ensure system-efficiency across energy carriers, such as for repurposing. That plan shall in particular:

- (a) *include information on capacity needs, both in volume and duration, as negotiated between hydrogen distribution network users and hydrogen distribution network operators, hydrogen supply as well as on capacity needs, both in volume and duration of existing and potential future hard-to-decarbonise end-users taking into account the greenhouse gas abatement potential and the energy and cost-efficiency in relation to other options and the location of those end-users with a view to target the use of renewable and low-carbon hydrogen those sectors;*

- (aa) *assess, taking into account the heating and cooling plans established pursuant to Article 25(6) of Directive (EU) 2023/1791 and the demand of sectors that are not covered by the heating and cooling plans, how the principle of energy efficiency first in line with Article 27 of that Directive is respected when considering hydrogen distribution network expansion in sectors where more energy efficient alternatives are available;*
- (b) *include information on the extent to which repurposed natural gas pipelines will be used for the transport of hydrogen, as well as the extent to which this repurposing is required to fulfil the capacity needs established in accordance with point (a);*
- (ba) *shall conduct a consultation process open to all relevant stakeholders when developing the plan in order to enable their early and effective participation in the planning process, including the provision and exchange of all relevant information.*
- (bb) *be published on the hydrogen distribution network operator's website as well as with the outcome of the stakeholders consultation and submit the results of the consultation and the network development plan to the regulatory authority. The website shall be updated regularly so that all the relevant stakeholders have the required visibility to effectively participate in the consultation.*
- (c) *be in line with the integrated national energy and climate plan and its updates, and with the integrated national energy and climate reports submitted in accordance with Regulation (EU) 2018/1999 and support the climate-neutrality objective set out in Article 2(1) of Regulation (EU) 2021/1119.*
- (ca) *be consistent with the Union-wide ten-year network development plan referred to in Article 43 of Regulation (EU) .../...⁺ [the Gas Regulation] and the national network development plans developed in accordance with Article 51 of this Directive.*

⁺ *OJ: Please insert in the text the serial number of Regulation contained in document PE .../... [2021/0424 (COD)].*

2. Hydrogen *distribution network* operators shall  exchange all relevant information required for developing the *plan with other* hydrogen network operators, *including* hydrogen network operators *in neighbouring Member States if there is a direct connection*.
3. The regulatory authority shall *assess whether the hydrogen distribution network plans comply with paragraph 1 of this Article. The national regulatory authority shall* examine the *plan and may request amendments to the plan in line with the assessment*. It shall take the overall energy-economic necessity of the hydrogen network into account in this examination as well as the joint scenario framework developed under Article 51(2), point (e). *With regard to overviews submitted in relation to hydrogen networks benefitting from a derogation pursuant to Article 47 or 48, the regulatory authority may abstain from examining the overview and making recommendations for amendments*.
4. The regulatory authority shall take the examination of the *plan* into account in its approval of dedicated charges within the meaning of Article 4 of *Regulation (EU) .../...*⁺ [recast Gas Regulation].

- 
6. *Until 31 December 2032, and without prejudice to the powers of the regulatory authority to supervise grid access rules, Member States may task another competent authority to examine the overview and to make recommendations for amendments to the overview by the hydrogen distribution network operator to ensure consistency with the integrated national energy and climate plans and its updates.*

- 
7. *Instead of applying this Article, Member States may decide to apply the requirements set out in Article 51 to hydrogen distribution network operators as of ... [the date of entry into force of this Directive].*

⁺ *OJ: Please insert in the text the serial number of Regulation contained in document PE .../... [2021/0424 (COD)].*

Article 52b

Network decommissioning plans for natural gas distribution system operators

1. *Member States shall ensure that distribution system operators develop network decommissioning plans when a reduction in gas demand requiring the decommissioning of natural gas distribution networks or parts of such networks is expected. Such plans shall be developed in close cooperation with hydrogen distribution network operators, distribution system operators for electricity, and district heating and cooling operators, ensuring effective energy system integration and reflecting the reduced use of natural gas for the heating and cooling of buildings where more energy and cost-efficient alternatives are available. Member States may allow that distribution system operators in accordance with this Article and hydrogen distribution network operators in accordance with Article 52 that are active in the same region develop a joint plan if parts of the natural gas infrastructure will be repurposed. Member States allowing for one joint plan shall ensure that the plan is sufficiently transparent to clearly identify the specific needs of the gas sector and the specific needs of the hydrogen sector that the plan is addressing. Separate modelling shall be performed if applicable for the respective energy carriers and with separate chapters showing network maps for natural gas and network maps for hydrogen.*

Member States in which separate plans for natural gas and hydrogen are developed shall ensure that distribution system operators and hydrogen distribution network operators cooperate closely where decisions need to be made to ensure system-efficiency across energy carriers, such as for repurposing.

2. *The distribution network decommissioning plans shall at least comply with the following principles:*
- (a) *the plans shall be based on the heating and cooling plans developed in accordance with Article 25(6) of Directive (EU) 2023/1791 and duly take in to account the demand of sectors that are not covered by the heating and cooling plans;*
 - (b) *the plans shall be based on reasonable assumptions about the evolution of production, injection and supply of natural gas, including biomethane, on the one hand and the consumption of natural gas in all sectors at distribution level on the other;*
 - (c) *distribution system operators shall identify required infrastructure adaptations, whilst demand-side solutions not requiring new infrastructure investments shall be prioritised. The network decommissioning plans shall list infrastructure that is to be decommissioned, also creating transparency with regard to the possible repurposing of such infrastructure for the transport of hydrogen;*
 - (d) *distribution system operators shall conduct a consultation process open to all relevant stakeholders when developing the plan in order to enable their early and effective participation in the planning process, including the provision and exchange of all relevant information. The results of the consultation and the network decommissioning plan shall be submitted to the relevant national authority;*
 - (e) *The network decommissioning plan shall be published on the distribution system operator website as well as the outcome of the stakeholder's consultation. The website shall be updated regularly so that all the relevant stakeholders have the required visibility to effectively participate in the consultation.*
 - (f) *The network decommissioning plans shall be updated at least every four years based on the latest projections for natural gas demand and supply in the relevant region. The plans shall cover a ten-year period.*

- (g) *Distribution system operators that are active in the same regional area may opt to develop one single joint network decommissioning plan.*
- (h) *The network decommissioning plans shall be consistent with the Union-wide ten-year network development plan referred to in Article 29 of Regulation (EU) .../...⁺ [the Gas Regulation] and the national network development plans developed in accordance with Article 51 of this Directive;*
- (i) *the plans shall be consistent with the Member State's integrated national energy and climate plan, national energy and climate report and long-term strategy submitted under Regulation (EU) 2018/1999 and support the climate-neutrality objective set out in Article 2(1) of Regulation (EU) 2021/1119.*
3. *Relevant national authorities shall assess whether the network decommissioning plans comply with the principles above. They shall approve or reject the distribution network plan and may require amendments to the plan.*
4. *The development of the network decommissioning plans shall facilitate the protection of final customers in accordance with Article 11a as well as taking into account rights pursuant to Article 34(4) and (5).*
5. *Member States may decide not to apply the obligations set out in paragraphs 1 to 4 to distribution system operator which serve less than 45 000 connected customers by ... [the date of entry into force of this Directive]. Where distribution system operators are exempted to submit a network decommissioning plan, they shall inform the regulatory authority of the decommissioning of the distribution networks or parts thereof.*
6. *Where parts of the natural gas distribution network may require decommissioning before their originally projected lifecycle, the regulatory authority shall set up guidelines for a structural approach to the depreciation of such assets and tariff setting in accordance with Article 72(7). When developing such guidelines regulatory authorities shall consult relevant stakeholders, notably distribution system operators and consumer organisations.*

⁺ *OJ: Please insert in the text the serial number of Regulation contained in document PE .../... [2021/0424 (COD)].*

Article 52c

Connection fees and costs for biomethane production facilities

1. *Member States shall provide an enabling regulatory framework for biomethane production facilities in relation to connection fees and costs resulting from their connection to the transmission or distribution networks. Such regulatory framework shall ensure that:*
 - (a) *connection fees and costs take into account the energy efficiency first principle applicable to network development enshrined in articles 3 and 27(2) of Directive (EU) 2023/1791.*
 - (b) *connection fees and costs are published as part of the procedures for the connection of new production facilities for renewable gas and low carbon gas to the transmission and distribution system established in Articles 37 and 41 of this Directive, respectively, and pursuant to Article 20(2) of Directive (EU) 2018/2001.*
 - (c) *The principles of transparency and non-discrimination, the need for stable financial frameworks for existing investments, the advancement of the roll-out of renewable gas and low-carbon gas in the Member State concerned and the existence of alternative support mechanisms for scaling up the use of renewable gas or low carbon gas, where appropriate, are taken into account.*
2. *When setting or approving tariffs or the methodologies to be used by transmission system operators and distribution system operators, regulatory authorities may take into account the costs incurred and investments made by these system operators to comply with their obligations and not directly recovered from the connection costs and fees, by insofar as the costs correspond to those of an efficient and structurally comparable regulated operator.*

Financing cross-border hydrogen infrastructure

1. Where Member States apply a system of regulated third party access to hydrogen networks pursuant to Article 31(1) and where a hydrogen interconnector project is **■** not a project of common interest as referred to in Chapter II *of*, and *point 3 of* Annex I *to* [Regulation xxx on Guidelines for trans-European energy infrastructure], adjacent and affected hydrogen *transmission* network operators shall ***bear the costs of the project and may include them within their respective tariff systems, subject to approval by the regulatory authority. If the hydrogen transmission network operators identify a substantial gap between benefits and costs, they may*** design a project plan, including a request for cross-border cost allocation, and submit it jointly to the concerned regulatory authorities for a joint approval.
 - 1a. ***Where hydrogen transmission network operators submit a project plan as set out in paragraph 1 of this Article, the following shall apply:***
2. The project plan and request for cross-border cost allocation shall be accompanied by a project-specific cost-benefit analysis, taking into account benefits beyond the borders of Member States concerned, and by a business plan evaluating the financial viability of the project, which shall include a financing solution and specify whether the hydrogen *transmission* network operators involved agree on a substantiated proposal for a cross-border cost allocation.
3. The concerned regulatory authorities shall **■** after consulting the hydrogen *transmission* network operators, take ***a joint decision*** on the allocation of investment costs to be borne by each *hydrogen transmission* network operator for the project.
■
5. After 31 December **2032**, all affected hydrogen *transmission* network operators shall negotiate a system of financial compensation to ensure financing for cross-border hydrogen infrastructure ***in the event that no tariffs are charged for access to hydrogen transmission networks at interconnection points between Member States pursuant to***

Article 6(7) of Regulation (EU) .../...⁺ [recast Gas Regulation]. When developing that system, hydrogen network operators shall conduct an extensive consultation process involving all relevant market participants.

6. The hydrogen *transmission* network operators concerned shall agree on the system of financial compensation *by 31 December 2035 and submit it to the regulatory authorities concerned for their joint approval*. If no agreement is reached within that period, the involved regulatory authorities shall decide jointly within *two* years. Where the relevant regulatory authorities cannot reach a joint agreement within *two* years, ACER shall take a decision, following the process pursuant to Article 6(10) of Regulation (EU) 2019/942.
7. The system of financial compensation shall be implemented in line with Article 72(1), point (b).
8. For the transition to a system of financial compensation mechanism, existing capacity contracts shall not be affected by the established financial compensation mechanism.
9. Further details required to implement the process set out in this Article, including required processes and time frames, process for reviewing and if necessary amending the compensation mechanism allowing taking into account tariff evolution and the development of the hydrogen networks, shall be set in a network code established *pursuant to* Article 54 of *Regulation (EU) .../...⁺ [recast Gas Regulation]*.

⁺ *OJ: Please insert in the text the serial number of Regulation contained in document PE .../... [2021/0424 (COD)].*

⁺ *OJ: Please insert in the text the serial number of Regulation contained in document PE .../... [2021/0424 (COD)].*

Chapter IX

Unbundling of transmission system operators

SECTION 1

OWNERSHIP UNBUNDLING

Article 54

Unbundling of transmission systems and transmission system operators

1. Member States shall ensure that:
 - (a) each undertaking which owns a transmission system acts as a transmission system operator;
 - (b) the same person or persons are entitled neither:
 - (i) directly or indirectly to exercise control over an undertaking performing any of the functions of production or supply, and directly or indirectly to exercise control or exercise any right over a transmission system operator or over a transmission system; nor
 - (ii) directly or indirectly to exercise control over a transmission system operator or over a transmission system, and directly or indirectly to exercise control or exercise any right over an undertaking performing any of the functions of production or supply;
 - (c) the same person or persons are not entitled to appoint members of the supervisory board, the administrative board or bodies legally representing the undertaking, of a transmission system operator or a transmission system, and directly or indirectly to exercise control or exercise any right over an undertaking performing any of the functions of production or supply;

- (d) the same person is not entitled to be a member of the supervisory board, the administrative board or bodies legally representing the undertaking, of both an undertaking performing any of the functions of production or supply and a transmission system operator or a transmission system.
2. The rights referred to in paragraph 1, points (b) and (c), shall include, in particular:
- (a) the power to exercise voting rights;
 - (b) the power to appoint members of the supervisory board, the administrative board or bodies legally representing the undertaking; or
 - (c) the holding of a majority share.
3. For the purpose of paragraph 1, point (b), the term ‘undertaking performing any of the functions of production or supply’ shall be understood as including ‘undertaking performing any of the functions of generation or supply’ within the meaning of Directive (EU) 2019/944, and the terms ‘transmission system operator’ and ‘transmission system’ shall be understood as including ‘transmission system operator’ and ‘transmission system’ within the meaning of that Directive.
4. The obligation set out in paragraph 1, point (a), of this Article shall be deemed to be fulfilled in a situation where two or more undertakings which own transmission systems have created a joint venture which acts as a transmission system operator in two or more Member States for the transmission systems concerned. No other undertaking may be part of the joint venture, unless it has been approved under Article 55 as an independent system operator or as an independent transmission operator for the purposes of Section 3.

5. For the implementation of this Article, where the person referred to in *paragraph 1*, points (b), (c) and (d), is the Member State or another public body, two separate public bodies exercising control over a transmission system operator or over a transmission system on the one hand, and over an undertaking performing any of the functions of production or supply on the other, shall be deemed not to be the same person or persons.
6. Member States shall ensure that neither commercially sensitive information referred to in Article 36 held by a transmission system operator which was part of a vertically integrated undertaking, nor the staff of such a transmission system operator, is transferred to undertakings performing any of the functions of production and supply.
7. Where on 3 September 2009 the transmission system belonged to a vertically integrated undertaking, a Member State may decide not to apply paragraph 1. As regards the part of the transmission system connecting a Member State with a third country between the border of that Member State and the first connection point with that Member State's network, where on 23 May 2019 the transmission system belongs to a vertically integrated undertaking, a Member State may decide not to apply paragraph 1.

In such case, the Member State concerned shall either:

- (a) designate an independent system operator in accordance with Article 55; or
- (b) comply with the provisions of Section 3.

8. Where on 3 September 2009 the transmission system belonged to a vertically integrated undertaking and arrangements are in place which guarantee more effective independence of the transmission system operator than the provisions of Section 3, a Member State may decide not to apply paragraph 1 of this Article.

As regards the part of the transmission system connecting a Member State with a third country between the border of that Member State and the first connection point with that Member State's network, where on 23 May 2019 the transmission system belongs to a vertically integrated undertaking and arrangements are in place which guarantee more effective independence of the transmission system operator than the provisions of Section 3, that Member State may decide not to apply paragraph 1 of this Article.

9. Before an undertaking is approved and designated as a transmission system operator under paragraph 9 of this Article, it shall be certified in accordance with the procedures laid down in Article 65(4), (5) and (6) of this Directive and in Article **13** of Regulation *(EU) .../...⁺ [recast Regulation]*. After that, the Commission shall verify that the arrangements in place clearly guarantee more effective independence of the transmission system operator than the provisions of Section 3.
10. Vertically integrated undertakings which own a transmission system shall not in any event be prevented from taking steps to comply with paragraph 1.
11. Undertakings performing any of the functions of production or supply shall not in any event be able to directly or indirectly take control over or exercise any right over unbundled transmission system operators in Member States which apply paragraph 1.

⁺ *OJ: Please insert in the text the serial number of Regulation contained in document PE .../... [2021/0424 (COD)].*

SECTION 2

INDEPENDENT SYSTEM OPERATORS

Article 55

Independent system operators

1. Where on 3 September 2009 the transmission system belonged to a vertically integrated undertaking, a Member State may decide not to apply Article **54(1)** and to designate an independent system operator upon a proposal from the transmission system owner.

As regards the part of the transmission system connecting a Member State with a third country between the border of that Member State and the first connection point with that Member State's network, where on 23 May 2019 the transmission system belonged to a vertically integrated undertaking, that Member State may decide not to apply Article **54(1)** and to designate an independent system operator upon a proposal from the transmission system owner.

The designation of an independent system operator shall be subject to approval by the Commission.

2. The Member State may approve and designate an independent system operator only where:
 - (a) the candidate operator has demonstrated that it complies with the requirements of Article 54(1), points (b), (c) and (d);
 - (b) the candidate operator has demonstrated that it has at its disposal the required financial, technical, physical and human resources to carry out its tasks under Article 35;

- (c) the candidate operator has undertaken to comply with a ten-year network development plan monitored by the regulatory authority;
 - (d) the transmission system owner has demonstrated its ability to comply with its obligations under paragraph 5, to which end, it shall provide all the draft contractual arrangements with the candidate undertaking and any other relevant entity;
 - (e) the candidate operator has demonstrated its ability to comply with its obligations under **Regulation (EU) .../...**⁺ [recast Gas regulation] including the cooperation of transmission system operators at European and regional level.
3. Undertakings which have been certified by the regulatory authority as having complied with the requirements of Article 66 and of paragraph 2 of this Article shall be approved and designated as independent system operators by Member States. The certification procedure in either Article 65 of this Directive and Article 3 of Regulation (EC) No 715/2009 or in Article 66 of this Directive shall be applicable.
4. Each independent system operator shall be responsible for granting and managing third-party access, including the collection of access charges and congestion charges, for operating, maintaining and developing the transmission system, as well as for ensuring the long-term ability of the system to meet reasonable demand through investment planning. When developing the transmission system the independent system operator shall be responsible for planning (including the authorisation procedure), construction and commissioning of the new infrastructure. For this purpose, the independent system operator shall act as a transmission system operator in accordance with this Chapter. The transmission system owner shall not be responsible for granting and managing third-party access, nor for investment planning.

⁺ ***OJ: Please insert in the text the serial number of Regulation contained in document PE .../... [2021/0424 (COD)].***

5. Where an independent system operator has been designated, the transmission system owner shall:
- (a) provide all the relevant cooperation and support to the independent system operator for the fulfilment of its tasks, including in particular all relevant information;
 - (b) finance the investments decided by the independent system operator and approved by the regulatory authority, or give its agreement to financing by any interested party including the independent system operator; the. The relevant financing arrangements shall be subject to approval by the regulatory authority; prior. Prior to such approval, the regulatory authority shall consult the transmission system owner together with other interested parties;
 - (c) provide for the coverage of liability relating to the network assets, excluding the liability relating to the tasks of the independent system operator;
 - (d) provide guarantees to facilitate financing any network expansions with the exception of those investments where, pursuant to point (b), it has given its agreement to financing by any interested party including the independent system operator.
6. In close cooperation with the regulatory authority, the relevant national competition authority shall be granted all relevant powers to effectively monitor compliance of the transmission system owner with its obligations under paragraph 5.

Unbundling of transmission system owners, *hydrogen network owners*, storage system operators and hydrogen storage operators

Transmission system and hydrogen network owners, where an independent system operator or an independent hydrogen *transmission* network operator has been appointed, and storage system operators or hydrogen storage facility operators which are part of vertically integrated undertakings shall be independent at least in terms of their legal form, organisation and decision making from other activities not relating to transmission, distribution, transport and storage of *natural gas and hydrogen*.

This Article shall apply only to natural gas storage facilities that are technically and/or economically necessary for providing efficient access to the system for the supply of customers pursuant to Article 29.

In order to ensure the independence of the transmission system or hydrogen network owner and storage system or hydrogen storage operator referred to in the first *sub-paragraph*, the following minimum criteria shall apply:

- (a) persons responsible for the management of the transmission system or hydrogen network owner and storage system or hydrogen storage operator shall not participate in company structures of the integrated natural gas undertaking responsible, directly or indirectly, for the day-to-day operation of the production and supply of *natural gas and hydrogen*;
- (b) appropriate measures shall be taken to ensure that the professional interests of persons responsible for the management of the transmission system or hydrogen network owner and storage system or hydrogen storage operator are taken into account in a manner that ensures that they are capable of acting independently;

- (c) the storage system or hydrogen storage operator shall have effective decision-making rights, independent from the integrated natural gas undertaking, with respect to assets necessary to operate, maintain or develop the storage facilities; this shall not preclude the existence of appropriate coordination mechanisms to ensure that the economic and management supervision rights of the parent company in respect of return on assets regulated indirectly in accordance with Article 72(7) in a subsidiary are protected; it shall enable in particular the parent company to approve the annual financial plan, or any equivalent instrument, of the storage system or hydrogen storage operator and to set global limits on the levels of indebtedness of its subsidiary; it shall not permit the parent company to give instructions regarding day-to-day operations, nor with respect to individual decisions concerning the construction or upgrading of storage facilities, that do not exceed the terms of the approved financial plan, or any equivalent instrument;
- (d) the transmission system or hydrogen network owner and the storage system or hydrogen storage operator shall establish a compliance programme, which shall set out measures taken to ensure that discriminatory conduct is excluded, and ensure that observance of it is adequately monitored; it shall also set out the specific obligations of employees to meet those objectives; an annual report, setting out the measures taken, shall be submitted by the person or body responsible for monitoring the compliance programme to the regulatory authority and shall be published.

The Commission is empowered to adopt delegated acts in accordance with Article 83 *to supplement* this Directive in order to set guidelines to ensure full and effective compliance of the transmission system or hydrogen network owner and of the storage system or hydrogen storage operator with paragraph 2 of this Article.

SECTION 3

INDEPENDENT TRANSMISSION OPERATORS

Article 57

Assets, equipment, staff and identity

1. Transmission system operators shall be equipped with all human, technical, physical and financial resources necessary for fulfilling their obligations under this Directive and carrying out the activity of *natural* gas transmission, in particular:
 - (a) assets that are necessary for the activity of *natural* gas transmission, including the transmission system, shall be owned by the transmission system operator;
 - (b) personnel necessary for the activity of *natural* gas transmission, including the performance of all corporate tasks, shall be employed by the transmission system operator;
 - (c) leasing of personnel and rendering of services, to and from any other parts of the vertically integrated undertaking shall be prohibited. A transmission system operator may, however, render services to the vertically integrated undertaking as long as:
 - (i) the provision of those services does not discriminate between system users, is available to all system users on the same terms and conditions and does not restrict, distort or prevent competition in production or supply;
 - (ii) the terms and conditions of the provision of those services are approved by the regulatory authority;

- (d) without prejudice to the decisions of the Supervisory Body under Article 60, appropriate financial resources for future investment projects or for the replacement of existing assets shall be made available to the transmission system operator in due time by the vertically integrated undertaking following an appropriate request from the transmission system operator.

2. The activity of *natural* gas transmission shall include at least the following tasks in addition to those listed in Article 35:

- (a) the representation of the transmission system operator and contacts to third parties and the regulatory authorities;
- (b) the representation of the transmission system operator within the ENTSO for Gas;
- (c) granting and managing third-party access on a non-discriminatory basis between system users or classes of system users;
- (d) the collection of all the transmission system related charges including access charges, balancing charges for ancillary services such as *natural* gas treatment, purchasing of services (balancing costs, energy for losses);
- (e) the operation, maintenance and development of a secure, efficient and economic transmission system;
- (f) investment planning ensuring the long-term ability of the system to meet reasonable demand and guaranteeing security of supply;
- (g) the setting up of appropriate joint ventures, including with one or more transmission system operators, *natural* gas exchanges, and the other relevant actors pursuing the objective to develop the creation of regional markets or to facilitate the liberalisation process;
- (h) all corporate services, including legal services, accountancy and IT services.

3. Transmission system operators shall be organised in a legal form as referred to in Annex II to Directive (EU) 2017/1132 of the European Parliament and of the Council²³.
4. The transmission system operator shall not, in its corporate identity, communication, branding and premises, create confusion in respect of the separate identity of the vertically integrated undertaking or any part thereof.
5. The transmission system operator shall not share IT systems or equipment, physical premises and security access systems with any part of the vertically integrated undertaking, nor use the same consultants or external contractors for IT systems or equipment, and security access systems.
6. The accounts of transmission system operators shall be audited by an auditor other than the one auditing the vertically integrated undertaking or any part thereof.

Article 58

Independence of the transmission system operator

1. Without prejudice to the decisions of the Supervisory Body under Article 60, the transmission system operator shall have:
 - (a) effective decision-making rights, independent from the vertically integrated undertaking, with respect to assets necessary to operate, maintain or develop the transmission system;
 - (b) the power to raise money on the capital market in particular through borrowing and capital increase.

²³ *Directive 2009/101/EC of the European Parliament and of the Council of 16 September 2009 on coordination of safeguards which, for the protection of the interests of members and third parties, are required by Member States of companies within the meaning of the second paragraph of Article 48 of the Treaty, with a view to making such safeguards equivalent (OJ L 258, 1.10.2009, p. 11).*

2. The transmission system operator shall at all times act so as to ensure it has the resources it needs in order to carry out the activity of transmission properly and efficiently and develop and maintain an efficient, secure and economic transmission system.
3. Subsidiaries of the vertically integrated undertaking performing functions of production or supply shall not have any direct or indirect shareholding in the transmission system operator. The transmission system operator shall neither have any direct or indirect shareholding in any subsidiary of the vertically integrated undertaking performing functions of production or supply, nor receive dividends or any other financial benefit from that subsidiary.
4. The overall management structure and the corporate statutes of the transmission system operator shall ensure effective independence of the transmission system operator in compliance with this **Section**. The vertically integrated undertaking shall not determine, directly or indirectly, the competitive behaviour of the transmission system operator in relation to the day to day activities of the transmission system operator and management of the network, or in relation to activities necessary for the preparation of the ten-year network development plan developed pursuant to Article 51.
5. In fulfilling their tasks listed in Article 35 and Article 57(2) of this Directive, and in complying with Article 15(1), Article 5(1)(a), Article 9(2), (3) and (5), Article 30(6) and Article 12(1) of **Regulation (EU) .../...**⁺ [recast Gas Regulation], transmission system operators shall not discriminate against different persons or entities and shall not restrict, distort or prevent competition in production or supply.

⁺ ***OJ: Please insert in the text the serial number of Regulation contained in document PE .../... [2021/0424 (COD)].***

6. Any commercial and financial relations between the vertically integrated undertaking and the transmission system operator, including loans from the transmission system operator to the vertically integrated undertaking, shall comply with market conditions. The transmission system operator shall keep detailed records of such commercial and financial relations and make them available to the regulatory authority upon request.
7. The transmission system operator shall submit for approval by the regulatory authority all commercial and financial agreements with the vertically integrated undertaking.
8. The transmission system operator shall inform the regulatory authority of the financial resources, referred to in Article 57(1), point (d), available for future investment projects or for the replacement of existing assets.
9. The vertically integrated undertaking shall refrain from any action impeding or prejudicing the transmission system operator from complying with its obligations in this **Section** and shall not require the transmission system operator to seek permission from the vertically integrated undertaking in fulfilling those obligations.
10. An undertaking which has been certified by the regulatory authority as being in compliance with the requirements of this **Section** shall be approved and designated as a transmission system operator by the Member State concerned. The certification procedure in either Article 65 of this Directive and Article 13 of **Regulation (EU) .../...⁺ [recast Gas Regulation]** or in Article 66 of this Directive shall apply.
11. The transmission system operator shall make public detailed information regarding the quality of the **natural gas** transported in its networks, based on Articles 16 and 17 of Regulation (EU) 2015/703 **of the European Parliament and of the Council**²⁵.

⁺ ***OJ: Please insert in the text the serial number of Regulation contained in document PE .../... [2021/0424 (COD)].***

²⁵ ***Commission Regulation (EU) 2015/703 of 30 April 2015 establishing a network code on interoperability and data exchange rules (OJ L 113, 1.5.2015, p. 13).***

Independence of the staff and the management of the transmission system operator

1. Decisions regarding the appointment and renewal, working conditions including remuneration, and termination of the term of office, of the persons responsible for the management or members of the administrative bodies of the transmission system operator shall be taken by the Supervisory Body of the transmission system operator appointed in accordance with Article 60.
2. The identity of, and the conditions governing the term, the duration and the termination of office of, the persons nominated by the Supervisory Body for appointment or renewal as persons responsible for the executive management and/or as members of the administrative bodies of the transmission system operator, and the reasons for any proposed decision terminating such term of office, shall be notified to the regulatory authority. Those conditions and the decisions referred to in paragraph 1 shall become binding only if the regulatory authority has raised no objections within three weeks of the notification.

The regulatory authority may object to the decisions referred to in paragraph 1 where:

- (a) doubts arise as to the professional independence of a nominated person responsible for the management and/or member of the administrative bodies; or
- (b) in the case of premature termination of a term of office, doubts exist regarding the justification of such premature termination.

3. No professional position or responsibility, interest or business relationship, directly or indirectly, with the vertically integrated undertaking or any part of it or its controlling shareholders other than the transmission system operator shall be exercised for a period of three years before the appointment of the persons responsible for the management or members of the administrative bodies of the transmission system operator who are subject to this paragraph.
4. The persons responsible for the management and/or members of the administrative bodies, and employees of the transmission system operator shall have no other professional position or responsibility, interest or business relationship, directly or indirectly, with any other part of the vertically integrated undertaking or with its controlling shareholders.
5. The persons responsible for the management or members of the administrative bodies, and employees of the transmission system operator shall hold no interest in or receive any financial benefit, directly or indirectly, from any part of the vertically integrated undertaking other than the transmission system operator. Their remuneration shall not depend on activities or results of the vertically integrated undertaking other than those of the transmission system operator.
6. Effective rights of appeal to the regulatory authority shall be guaranteed for any complaints by the persons responsible for the management or members of the administrative bodies of the transmission system operator against premature terminations of their term of office.
7. After termination of their term of office in the transmission system operator, the persons responsible for its management or members of its administrative bodies shall have no professional position or responsibility, interest or business relationship with any part of the vertically integrated undertaking other than the transmission system operator, or with its controlling shareholders for a period of not less than four years.

8. Paragraph 3 shall apply to the majority of the persons responsible for the management or members of the administrative bodies of the transmission system operator.

The persons responsible for the management or members of the administrative bodies of the transmission system operator who are not subject to paragraph 3 shall have exercised no management or other relevant activity in the vertically integrated undertaking for a period of at least six months before their appointment.

The first subparagraph of this paragraph and paragraphs 4 to 7 shall be applicable to all the persons belonging to the executive management and to those directly reporting to them on matters related to the operation, maintenance or development of the network.

Article 60

Supervisory Body

1. The transmission system operator shall have a Supervisory Body which shall be in charge of taking decisions which may have a significant impact on the value of the assets of the shareholders within the transmission system operator, in particular decisions regarding the approval of the annual and longer-term financial plans, the level of indebtedness of the transmission system operator and the amount of dividends distributed to shareholders. The decisions falling under the remit of the Supervisory Body shall exclude those that are related to the day to day activities of the transmission system operator and management of the network, and in relation to activities necessary for the preparation of the ten-year network development plan developed pursuant to Article 51.
2. The Supervisory Body shall be composed of members representing the vertically integrated undertaking, members representing third party shareholders and, where the relevant legislation of a Member State so provides, members representing other interested parties such as employees of the transmission system operator.

3. Article 59(2), first subparagraph, and Article 59(3) to (7) shall apply to at least half of the members of the Supervisory Body minus one.

Article 59(2), second subparagraph, point (b), shall apply to all the members of the Supervisory Body.

Article 61

Compliance programme and compliance officer

1. Member States shall ensure that transmission system operators establish and implement a compliance programme which sets out the measures taken in order to ensure that discriminatory conduct is excluded, and ensure that the compliance with that programme is adequately monitored. The compliance programme shall set out the specific obligations of employees to meet those objectives. It shall be subject to approval by the regulatory authority. Without prejudice to the powers of the national regulator, compliance with the program shall be independently monitored by a compliance officer.
2. The compliance officer shall be appointed by the Supervisory Body, subject to the approval by the regulatory authority. The regulatory authority may refuse the approval of the compliance officer only for reasons of lack of independence or professional capacity. The compliance officer may be a natural or legal person. Article 59(2) to (8) shall apply to the compliance officer.

3. The compliance officer shall be in charge of:
- (a) monitoring the implementation of the compliance programme;
 - (b) elaborating an annual report, setting out the measures taken in order to implement the compliance programme and submitting it to the regulatory authority;
 - (c) reporting to the Supervisory Body and issuing recommendations on the compliance programme and its implementation;
 - (d) notifying the regulatory authority on any substantial breaches with regard to the implementation of the compliance programme;
 - (e) reporting to the regulatory authority on any commercial and financial relations between the vertically integrated undertaking and the transmission system operator.
4. The compliance officer shall submit the proposed decisions on the investment plan or on individual investments in the network to the regulatory authority. This shall occur at the latest when the management or the competent administrative body of the transmission system operator submits them to the Supervisory Body.
5. Where the vertically integrated undertaking, in the general assembly or through the vote of the members of the Supervisory Body it has appointed, has prevented the adoption of a decision with the effect of preventing or delaying investments, which under the ten-year network development plan, was to be executed in the following three years, the compliance officer shall report this to the regulatory authority, which then shall act in accordance with Article 51.

6. The conditions governing the mandate or the employment conditions of the compliance officer, including the duration of its mandate, shall be subject to approval by the regulatory authority. Those conditions shall ensure the independence of the compliance officer, including by providing it with all the resources necessary for fulfilling its duties. During its mandate, the compliance officer shall have no other professional position, responsibility or interest, directly or indirectly, in or with any part of the vertically integrated undertaking or with its controlling shareholders.
7. The compliance officer shall report regularly, either orally or in writing, to the regulatory authority and shall have the right to report regularly, either orally or in writing, to the Supervisory Body of the transmission system operator.
8. The compliance officer may attend all meetings of the management or administrative bodies of the transmission system operator, and those of the Supervisory Body and the general assembly. The compliance officer shall attend all meetings that address the following matters:
 - (a) conditions for access to the network, as defined in Regulation (EU) .../...⁺ [recast Gas Regulation], in particular regarding tariffs, third party access services, capacity allocation and congestion management, transparency, balancing and secondary markets;
 - (b) projects undertaken in order to operate, maintain and develop the transmission system, including investments in new transport connections, in expansion of capacity and in optimisation of existing capacity;
 - (c) energy purchases or sales necessary for the operation of the transmission system.

⁺ ***OJ: Please insert in the text the serial number of Regulation contained in document PE .../... [2021/0424 (COD)].***

9. The compliance officer shall monitor the compliance of the transmission system operator with Article 36.
10. The compliance officer shall have access to all relevant data and to the offices of the transmission system operator and to all the information necessary for the fulfilment of his task.
11. After prior approval by the regulatory authority, the Supervisory Body may dismiss the compliance officer. It shall dismiss the compliance officer for reasons of lack of independence or professional capacity upon request of the regulatory authority.
12. The compliance officer shall have access to the offices of the transmission system operator without prior announcement.

SECTION 4

UNBUNDLING OF DEDICATED HYDROGEN NETWORK OPERATORS

Article 62

Unbundling of hydrogen *transmission* network operators

1. Member States shall ensure that from ... [*two years after the entry into force of this Directive*] hydrogen *transmission* network operators are unbundled in accordance with the rules for natural gas transmission system operators set out in Article 54.
2. For the purpose of this Article, of Articles 42 and 54 *of this Directive*, and of Articles 35 and 43 of Directive (EU) 2019/944, ‘production or supply’ shall include production and supply of hydrogen, and ‘transmission’ shall include transport of hydrogen.
3. *For* hydrogen *networks belonging* to a vertically integrated undertaking, a Member State may decide not to apply paragraph 1. In such case, the Member State concerned shall designate an independent hydrogen *transmission* network operator unbundled in accordance with the rules on independent system operators for natural gas set out *in* Article 55. Hydrogen *transmission* network operators and transmission system operators for *natural* gas unbundled in accordance with Article 54(1) *may* act as independent hydrogen *transmission* network operator, subject to the requirements pursuant to Article 63.
4. *Where a hydrogen transmission network belongs to one or more certified transmission system operators for natural gas, or where on ... [the date of entry into force of this Directive], a hydrogen transmission network belonged to a vertically integrated undertaking active in hydrogen production or supply, Member States may decide not to apply paragraph 1 of this Article and* designate an *entity under the sole control of the transmission system operator or the joint control of two or more transmission system operators, or under the sole control of the vertically integrated undertaking active in hydrogen production or supply as an integrated hydrogen transmission* network operator unbundled in accordance with the rules on independent transmission operators for natural gas set out in Section 3 of Chapter IX. ■

Notwithstanding the first subparagraph of this paragraph, where a Member State has granted a derogation from the requirements of Article 63, pursuant to Article 63(2) and a hydrogen transmission network belongs to one or more certified transmission system operators for natural gas unbundled in accordance with the rules on independent transmission operators for natural gas set out in Section 3 of Chapter IX, Member States may decide not to apply paragraph 1 and designate this entity or an entity under the joint control of two or more transmission system operators as an integrated hydrogen transmission network operator unbundled in accordance with the rules on independent transmission operators for natural gas set out in Section 3 of Chapter IX.

Where an undertaking includes a transmission system operator unbundled in accordance with Article 54(1) and an integrated hydrogen transmission network operator, this undertaking may be active in hydrogen production or supply, but not in the production or supply of natural gas or electricity. Where such undertaking engages in hydrogen production or supply, the transmission system operator for natural gas shall comply with the requirements set out in Section 3 of Chapter IX, and the undertaking and all parts thereof shall not book or use capacity rights to inject any hydrogen into a transmission or distribution system for natural gas operated by the undertaking.

5. The rules applicable to transmission system operators set out in Article 66 shall apply to hydrogen *transmission* network operators.

Horizontal unbundling of hydrogen *transmission* network operators

1. Where a hydrogen *transmission* network operator is part of an undertaking active in transmission or distribution of natural gas or electricity, it shall be independent at least in terms of its legal form.
2. *Member States may grant derogations, on the basis of a publicly available positive cost-benefit analysis, from the requirements of paragraph 1 to hydrogen transmission network operators, subject to a positive assessment by the regulatory authority in accordance with paragraph 4.*
3. *The derogation shall be published and notified to the European Commission, accompanied by the assessment referred to in paragraph, preserving the confidentiality of commercially sensitive information.*
4. *At the moment of granting a derogation pursuant to paragraph 2, or at a reasoned request by the European Commission, the regulatory authority of the Member State granting the derogation shall publish an assessment of the derogation's impact on transparency, cross subsidies, network tariffs and cross-border trade. Such assessment shall include at least the calendar of expected transfers of assets from the natural gas sector to the hydrogen sector.*

At least every seven years as from the granting of the derogation pursuant to paragraph 1, the NRA shall publish an assessment of the derogation's impact on transparency, cross-subsidies, network tariffs and cross border trade.

If the regulatory authority based on an assessment concludes that the continued application of the derogation would have a negative impact on transparency, cross-subsidies, network tariffs and cross border trade or when the transfer of assets from the natural gas sector to the hydrogen sector has concluded, the Member State shall withdraw the derogation.

5. *By way of derogation from paragraphs 2, 3 and 4, Estonia, Latvia and Lithuania may grant derogations from the requirements of paragraph 1 to hydrogen transmission network operators. Any such derogation shall be notified to the Commission and shall expire by 31 December 2030. After such date, Estonia, Latvia and Lithuania may grant derogations pursuant to paragraphs 2, 3 and 4.*

Article 64

Unbundling of accounts for hydrogen *network* operators

Member States shall ensure that the accounts of hydrogen ***network*** operators are kept in accordance with Article 69.

SECTION 5

DESIGNATION AND CERTIFICATION OF NATURAL GAS AND HYDROGEN NETWORK OPERATORS

Article 65

Designation and certification of transmission system operators and hydrogen network operators

1. Before an undertaking is approved and designated as transmission system operator or hydrogen network operator, it shall be certified according to the procedures laid down in paragraphs 4, 5 and 6 of this Article and in Article 13 of **Regulation (EU) .../...**⁺ [recast Gas Regulation].
2. Undertakings which have been certified by the regulatory authority as having complied with the requirements of Article 54 or 62, pursuant to the certification procedure, shall be approved and designated as transmission system operators or hydrogen network operators by Member States. The designation of transmission system operators and hydrogen network operators shall be notified to the Commission and published in the *Official Journal of the European Union*.
3. Certified undertakings shall notify to the regulatory authority any planned transaction which may require a reassessment of their compliance with the requirements of Article 54 or 62.
4. The regulatory authorities shall monitor the continuing compliance of certified undertakings with the requirements of Article 54 or 62. They shall open a certification procedure to ensure such compliance:
 - (a) upon notification by the of certified undertaking pursuant to paragraph 3 **of this Article**;

⁺ ***OJ: Please insert in the text the serial number of Regulation contained in document PE .../... [2021/0424 (COD)].***

- (b) on their own initiative where they have knowledge that a planned change in rights or influence over certified undertakings or transmission system owners may lead to an infringement of Article 54 or 62 or where they have reason to believe that such an infringement may have occurred; or
 - (c) upon a reasoned request from the Commission.
5. The regulatory authorities shall adopt a decision on the certification of a transmission system operator or a hydrogen network operator within 100 working days from the date of the notification by transmission system operator or the hydrogen network operator or from the date of the Commission request. After expiry of that period, the certification shall be deemed to be granted. The explicit or tacit decision of the regulatory authority shall become effective only after the conclusion of the procedure set out in paragraph 6.
6. The explicit or tacit decision on the certification shall be notified without delay to the Commission by the regulatory authority, together with all the relevant information with respect to that decision. The Commission shall act in accordance with the procedure laid down in Article 13 of *Regulation (EU) .../...*⁺ [recast Gas Regulation].
7. The regulatory authorities and the Commission may request from transmission system operators, hydrogen network operators and undertakings performing any of the functions of production or supply any information relevant for the fulfilment of their tasks under this Article.
8. The regulatory authorities and the Commission shall preserve the confidentiality of commercially sensitive information.

⁺ *OJ: Please insert in the text the serial number of Regulation contained in document PE .../... [2021/0424 (COD)].*

Certification in relation to third countries

1. Where certification is requested by a transmission system owner, a transmission system operator, a hydrogen network operator or a hydrogen network owner which is controlled by a person or persons from a third country or third countries, the regulatory authority shall notify the Commission.

The regulatory authority shall also notify to the Commission without delay any circumstances that would result in a person or persons from a third country or third countries acquiring control of a transmission system, a transmission system operator, a hydrogen network or a hydrogen network operator.

2. The transmission system operator or hydrogen network operator shall notify to the regulatory authority any circumstances that would result in a person or persons from a third country or third countries acquiring control of the transmission system or the transmission system operator or of the hydrogen network or the hydrogen network operator.
3. The regulatory authority shall adopt a draft decision on the certification of a transmission system operator or hydrogen network operator within 100 working days from the date of notification by the transmission system operator or hydrogen network operator. It shall refuse the certification if it has not been demonstrated:
 - (a) that the entity concerned complies with the requirements of Article **54 or 62**; and
 - (b) to the regulatory authority or to another competent authority designated by the Member State that granting certification will not put at risk the security of energy supply **or the essential security interests** of the Member State and the Union. In considering that question the regulatory authority or other competent authority so designated shall take into account:

- (i) the rights and obligations of the Union with respect to that third country arising under international law, including any agreement concluded with one or more third countries to which the Union is a party and which addresses the issues of security of energy supply;
- (ii) the rights and obligations of the Member State with respect to that third country arising under agreements concluded with it, insofar as they are in compliance with Union law;
- (*iii*) *ownership, supply or other commercial relationships that could negatively affect the incentives and the ability of the transmission system owner, the transmission system operator, the hydrogen transmission network owner or the hydrogen transmission network operator to deliver natural gas or hydrogen to the Member State or the Union*
- (iii) other specific facts and circumstances of the case and the third country concerned.

- 4. The regulatory authority shall notify the decision to the Commission without delay, together with all the relevant information with respect to that decision.
- 5. Member States shall provide for the regulatory authority or the designated competent authority referred to in paragraph 3, point (b), *of this Article* before the regulatory authority adopts a decision on the certification, to request an opinion from the Commission on whether:
 - (a) the entity concerned complies with the requirements of Article 54 or 62; and
 - (b) granting certification will not put at risk the security of energy supply to the Union.

6. The Commission shall examine the request referred to in paragraph 5 as soon as it is received. Within a period of 50 working days after receiving the request, it shall deliver its opinion to the regulatory authority or, if the request was made by the designated competent authority, to that authority.

In preparing the opinion, the Commission may request the views of ACER, the Member State concerned, and interested parties. In the event that the Commission makes such a request, the 50 working days period shall be extended by further 50 working days.

In the absence of an opinion by the Commission within the period referred to in the first and second subparagraphs, the Commission is deemed not to raise objections to the decision of the regulatory authority.

7. When assessing whether the control by a person or persons from a third country or third countries will put at risk the security of energy supply *or the essential security interests of the Union or of any Member State*, the Commission shall take into account:
- (a) the specific facts of the case and the third country or third countries concerned, *including evidence of the influence of the third country or third countries concerned over the situation described in the third subparagraph, point (b)(iia), of this Article*; and
 - (b) the rights and obligations of the Union with respect to that third country or third countries arising under international law, including an agreement concluded with one or more third countries to which the Union is a party and which addresses the issues of security of supply.

8. The regulatory authority shall, within a period of 50 working days after the expiry of the period referred to in paragraph 6, adopt its final decision on the certification. In adopting its final decision the regulatory authority shall take utmost account of the Commission's opinion. In any event Member States shall have the right to refuse certification where granting certification puts at risk the Member State's security of energy supply or the security of energy supply of another Member State. Where the Member State has designated another competent authority to assess paragraph 3, point (b), it may require the regulatory authority to adopt its final decision in accordance with the assessment of that competent authority. The regulatory authority's final decision and the Commission's opinion shall be published together. Where the final decision diverges from the Commission's opinion, the Member State concerned shall provide and publish, together with that decision, the reasoning underlying such decision.
9. Nothing in this Article shall affect the right of Member States to exercise, in compliance with Union law, national legal controls to protect legitimate public security interests.
10. The Commission is empowered to adopt delegated acts in accordance with Article 83 in order to *supplement this Directive by providing* guidelines setting out the details of the procedure to be followed for the application of this Article.

Article 67

Designation of operators of natural gas storage, hydrogen storage, LNG facilities and hydrogen terminals

Member States shall designate, or shall require undertakings which own natural gas storage, hydrogen storage, LNG facilities and hydrogen terminals to designate, for a period of time to be determined by Member States, having regard to considerations of efficiency and economic balance, one or more operators for these infrastructure.

SECTION 6

UNBUNDLING AND TRANSPARENCY OF ACCOUNTS

Article 68

Right of access to accounts

1. Member States or any competent authority they designate, including the regulatory authorities referred to in Article 70(1) and the dispute settlement authorities referred to in Article 24(3), shall, insofar as necessary to carry out their functions, have right of access to the accounts of natural gas and hydrogen undertakings as set out in Article 71.
2. Member States and any designated competent authority, including the regulatory authorities referred to in Article 70(1) and the dispute settlement authorities, shall preserve the confidentiality of commercially sensitive information. Member States may provide for the disclosure of such information where this is necessary in order for the competent authorities to carry out their functions.

Unbundling of accounts

1. Member States shall take the necessary steps to ensure that the accounts of natural gas and hydrogen undertakings are kept in accordance with paragraphs 2 to 5.
2. Natural gas and hydrogen undertakings, whatever their system of ownership or legal form, shall draw up, submit to audit and publish their annual accounts in accordance with the rules of national law concerning the annual accounts of limited liability companies adopted pursuant to Directive 2013/34/EU of the European Parliament and of the Council²⁴.

Undertakings which are not legally obliged to publish their annual accounts shall keep a copy thereof at the disposal of the public at their head office.

3. Undertakings shall, in their internal accounting, keep separate accounts for each of their transmission, distribution, LNG, hydrogen terminal, natural gas and hydrogen storage and hydrogen transport activities as they would be required to do if the activities in question were carried out by separate undertakings, with a view to avoiding discrimination, cross-subsidisation and distortion of competition. ***Infrastructure assets of the undertakings shall be clearly allocated to the respective accounts and regulatory asset bases separately for natural gas, electricity or hydrogen assets and shall be made transparent.*** They shall also keep accounts, which may be consolidated, for other activities not relating to transmission, distribution, LNG, hydrogen terminal, natural gas and hydrogen storage and hydrogen transport activities. Revenue from ownership of the transmission, distribution or hydrogen network shall be specified in the accounts. Where appropriate, they shall keep consolidated accounts for other, non-gas activities. The internal accounts shall include a balance sheet and a profit and loss account for each activity. ***The separation of accounts shall be audited in accordance with the rules laid down in paragraph 2 and reported to the regulatory authority concerned.***

²⁴ Directive 2013/34/EU of the European Parliament and of the Council of 26 June 2013 on the annual financial statements, consolidated financial statements and related reports of certain types of undertakings, amending Directive 2006/43/EC of the European Parliament and of the Council and repealing Council Directives 78/660/EEC and 83/349/EEC (OJ L 182, 29.6.2013, p. 19).

4. The audit referred to in paragraph 2 shall, in particular, verify that the obligation to avoid discrimination and cross-subsidies referred to in paragraph 3 *of this Article* is respected.
Without prejudice to Article 4 of Regulation (EU) .../...⁺ [recast Gas Regulation], there shall be no cross-subsidisation between current natural gas system users and the users of the future hydrogen network.
5. Undertakings shall specify in their internal accounting the rules for the allocation of assets and liabilities, expenditure and income as well as for depreciation, without prejudice to nationally applicable accounting rules, which they follow in drawing up the separate accounts referred to in paragraph 3. Those internal rules may be amended only in exceptional cases. Such amendments shall be mentioned and duly substantiated.
6. The annual accounts shall indicate in notes any transaction of a certain size conducted with related undertakings.

⁺ ***OJ: Please insert in the text the serial number of Regulation contained in document PE .../... [2021/0424 (COD)].***

Chapter X

Regulatory Authorities

Article 70

Designation and independence of regulatory authorities

1. Each Member State shall designate a single regulatory authority at national level.
2. Paragraph 1 *of this Article* shall be without prejudice to the designation of other regulatory authorities at regional level within Member States, provided that there is one senior representative for representation and contact purposes at Union level within the Board of Regulators of ACER in accordance with Article 7(1) of Regulation (EU) 2019/942.
3. By way of derogation from paragraph 1 *of this Article*, a Member State may designate regulatory authorities for small systems in a geographically separate region whose consumption, in 2008, accounted for less than 3 % of the total consumption of the Member State of which it is part. That derogation shall be without prejudice to the appointment of one senior representative for representation and contact purposes at Union level within the Board of Regulators of ACER in compliance with Article 7(1) of Regulation (EU) 2019/942.
4. Member States shall guarantee the independence of the regulatory authority and shall ensure that it exercises its powers impartially and transparently. For this purpose, Member States shall ensure that, when carrying out the regulatory tasks conferred upon it by this Directive and related *legal acts*, the regulatory authority:
 - (a) is legally distinct and functionally independent from any other public or private entity;

- (b) ensures that its staff and the persons responsible for its management:
 - (i) act independently from any market interest;
 - (ii) do not seek or take direct instructions from any government or other public or private entity when carrying out the regulatory tasks. That requirement is without prejudice to close cooperation, as appropriate, with other relevant national authorities or to general policy guidelines issued by the government and not related to the regulatory powers and duties under Article 72.

5. In order to protect the independence of the regulatory authority, Member States shall in particular ensure that:

- (a) the regulatory authority can take autonomous decisions, independently from any political body;
- (b) the regulatory authority has all the necessary human and financial resources it needs to carry out its duties and exercise its powers in an effective and efficient manner;
- (c) the regulatory authority has a separate annual budget allocation and autonomy in the implementation of the allocated budget;
- (d) the members of the board of the regulatory authority or, in the absence of a board, the regulatory authority's top management are appointed for a fixed term of five up to seven years, renewable once.
- (e) the members of the board of the regulatory authority or, in the absence of a board, the regulatory authority's top management are appointed based on objective, transparent and published criteria, in an independent and impartial procedure, which ensures that the candidates have the necessary skills and experience for any relevant position in the regulatory authority;

- (f) provisions on conflict of interest are in place and confidentiality obligations extend beyond the end of the mandate of the members of the board of the regulatory authority or, in the absence of a board, the regulatory authority's top management;
- (g) the members of the board of the regulatory authority or, in the absence of a board, the regulatory authority's top management may be dismissed only based on transparent criteria in place;
- (h) Member States may provide for the ex-post control of the regulatory authorities' annual accounts by an independent auditor.

In regard to the first subparagraph, point (d), Member States shall ensure an appropriate rotation scheme for the board or the top management. The members of the board or, in the absence of a board, members of the top management may be relieved from office during their term only if they no longer fulfil the conditions set out in this Article or have been guilty of misconduct under national law.

6. By 5 July 2022 and every four years thereafter, the Commission shall submit a report to the European Parliament and the Council on the compliance of national authorities with the principle of independence set out in this Article. ***The Commission shall make those reports publicly available.***

General objectives of the regulatory authority

In carrying out the regulatory tasks specified in this Directive, the regulatory authority shall take all reasonable measures in pursuit of the following objectives within the framework of their duties and powers as laid down in Article 72, in close consultation with other relevant national authorities, including competition authorities and authorities from neighbouring countries, including third countries, as appropriate, and without prejudice to their competencies:

- (a) promoting, in close cooperation with regulatory authorities of other Member States, the Commission and ACER, a competitive, flexible, secure and environmentally sustainable internal market in natural gas, renewable **gas** and low-carbon **gas** and hydrogen within the Union, and ensuring appropriate conditions for the effective and reliable operation of natural gas and hydrogen networks **and advancing energy system integration**, taking into account long-term objectives, thus contributing to the consistent, efficient and effective application of Union law in order to achieve the Union's climate and energy goals;
- (b) developing competitive and properly functioning regional cross-border markets within the Union in view of the achievement of the objectives referred to in point (a);
- (c) eliminating restrictions on trade in natural gas and hydrogen between Member States, including eliminating restrictions due to differences in the quality of **natural gas and hydrogen** or differences in the volume of hydrogen blended into the natural gas system or to differences in the quality of hydrogen in the hydrogen system, developing appropriate cross-border transmission and/or transport capacities to meet demand and enhancing the integration of national markets ensuring the interoperability of the interconnected **Union** natural gas system or Union hydrogen system, which may facilitate natural gas flow across the Union;

- (d) helping to achieve, in the most cost-effective way ***and while taking into account the energy efficiency first principle***, the development of secure, reliable and efficient non-discriminatory systems that are consumer oriented, and promoting system adequacy and, in accordance with general energy and climate policy objectives, energy efficiency as well as the integration of large and small scale production of gas from renewable sources and distributed production in both transmission and distribution networks and facilitating their operation in relation to other energy networks of electricity and heat;
- (e) facilitating ***connection and*** access to the network for new production capacity, in particular removing barriers that could prevent ***connection and*** access for new market entrants and of gas and hydrogen from renewable sources;
- (f) ensuring that system operators and system users are granted appropriate incentives, in both the short and the long term, to increase efficiencies, especially energy efficiency, in system performance and foster market integration;
- (g) ensuring that customers benefit through the efficient functioning of their national market, promoting effective competition and helping to ensure ***high levels of*** consumer protection in close cooperation with relevant consumer protection authorities ***and consultation with relevant consumer organisations***
- (h) helping to achieve high standards of public service for natural gas, contributing to the protection of vulnerable customers and contributing to the compatibility of necessary data exchange processes for customer switching.

Duties and powers of the regulatory authority

1. The regulatory authority shall have the following duties:
 - (a) fixing or approving, in accordance with transparent criteria, transmission or distribution tariffs or their methodologies, or both;
 - (ab) *approving the joint scenarios for the ten-year network development plans in accordance with Article 51(2), point (e), where so provided for by the Member State;*
 - (b) as of 1 January **2033** or as from the date of *application of* Article 31(1) of this Directive, fixing or approving, in accordance with transparent criteria, tariffs for hydrogen network access or their methodologies, or both;
 - (c) fixing or approving, in accordance with transparent criteria:
 - (i) the size and duration of the dedicated charge *and financial transfer or* their methodologies, or both;
 - (ii) the value of transferred assets and the destination of any profits and losses that may occur as a result; and
 - (iii) the *allocation of* contributions to the dedicated charge;

as referred in Article 4 of Regulation (EU) .../...⁺ [recast Gas Regulation].

⁺ *OJ: Please insert in the text the serial number of Regulation contained in document PE .../... [2021/0424 (COD)].*

- (d) ensuring compliance of transmission system operators and distribution system operators, and where relevant, system owners, hydrogen network operators as well as of any natural gas and hydrogen undertakings and other market participants ■ with their obligations under this Directive **and Regulation (EU) .../...**⁺ [the recast Gas Regulation], the network codes and guidelines adopted pursuant **Articles 52, 53 and 54 of Regulation (EU) .../...**⁺ [recast Gas Regulation], Regulation (EU) 2017/1938 and other relevant Union legislation, including as regards cross-border issues, as well as ACER's decisions;
- (e) in close coordination with the other regulatory authorities, ensuring the compliance of the ENTSO for Gas, the EU DSO entity and the ENNOH with their obligations under this Directive **and Regulation (EU) .../...**⁺ [recast Gas Regulation], the network codes and guidelines adopted pursuant to Articles 52 to 56 of **Regulation (EU) .../...**⁺ [the recast Gas Regulation], and other relevant Union law, including as regards cross-border issues, as well as with ACER's decisions, and jointly identifying non-compliance of the ENTSO for Gas, the EU DSO entity and the ENNOH with their respective obligations; where the regulatory authorities have not been able to reach an agreement within a period of four months after the start of consultations for the purpose of jointly identifying non-compliance, the matter shall be referred to the ACER for a decision, pursuant to Article 6(10) of Regulation (EU) 2019/942;

⁺ ***OJ: Please insert in the text the serial number of Regulation contained in document PE .../... [2021/0424 (COD)].***

⁺ ***OJ: Please insert in the text the serial number of Regulation contained in document PE .../... [2021/0424 (COD)].***

⁺ ***OJ: Please insert in the text the serial number of Regulation contained in document PE .../... [2021/0424 (COD)].***

⁺ ***OJ: Please insert in the text the serial number of Regulation contained in document PE .../... [2021/0424 (COD)].***

- (f) monitoring the development of gas qualities and gas quality management by transmission system operators and where relevant by distribution system operators, including monitoring the development of costs related to the management of gas quality by system operators and the developments related to the blending *and debland*ing of hydrogen into the natural gas system, *storage system operators and LNG facility operators. If in a Member State another competent authority is already mandated with collecting this information, the competent authority shall share this information with the regulatory authority.*
- (g) monitoring the development of hydrogen quality and hydrogen quality management by hydrogen network operators where relevant as referred to in Article 46, including monitoring the development of costs related to the management of hydrogen quality.

I

- (i) taking the examination and assessment of the overview of the development of the hydrogen transport infrastructure as requested under point (h) *of this paragraph* into account in its approval of dedicated charges within the meaning of Article 4 of *Regulation (EU) .../...⁺* [recast Gas Regulation];
- (j) cooperating with regard to cross-border issues with the regulatory authority or authorities of the Member States concerned and with the ACER, in particular through participation in the work of ACER's Board of Regulators pursuant to Article 21 of Regulation (EU) 2019/942. In respect of infrastructure to and from a third country, the regulatory authority of the Member State where the first interconnection point with the Member States' network is located may cooperate with the relevant authorities of the third country, including those of the Energy Community Contracting Parties, after consulting the regulatory authorities of other Member States concerned, aiming at, as regards that infrastructure, consistent application of this Directive in the territory of the Member States;

⁺ *OJ: Please insert in the text the serial number of Regulation contained in document PE .../... [2021/0424 (COD)].*

- (k) complying with, and implementing, any relevant legally binding decisions of ACER and of the Commission;
- (l) reporting annually on its activity and the fulfilment of its duties to the relevant authorities of the Member States, ACER and the Commission. Such reports shall cover the steps taken and the results obtained as regards each of the tasks listed in this Article;
- (m) ensuring that there are no cross-subsidies between transmission, distribution, hydrogen transport, natural gas and hydrogen storage, LNG and hydrogen terminals and natural gas and hydrogen supply activities *without prejudice to Article 4(2), point (db) of Regulation (EU) [XX/2024]*
- (n) monitoring investment plans of the transmission system operators *and hydrogen transmission network operators*, and providing in its annual report an assessment of the investment plans of the transmission system operators *and hydrogen transmission network operators* as regards their consistency with the Union -wide network development *plans* referred to in *Articles 29 and 43 of Regulation (EU) .../...⁺* [recast Gas Regulation]; such assessment may include recommendations to amend those investment plans;
- (o) monitoring compliance with and reviewing the past performance of network security and reliability rules and setting or approving standards and requirements for quality of service and supply or contributing thereto together with other competent authorities;
- (p) monitoring the level of transparency, including of wholesale prices, and ensuring compliance of natural gas and hydrogen undertakings with transparency obligations;

⁺ *OJ: Please insert in the text the serial number of Regulation contained in document PE .../... [2021/0424 (COD)].*

- (q) monitoring the level and effectiveness of market opening and competition at wholesale and retail levels, including on natural gas and hydrogen exchanges, prices for household customers including prepayment systems, *transparency of offers, price spikes and their impact on retail and consumer prices, the relationship between household prices and wholesale prices*, switching rates, disconnection rates, charges for and the execution of maintenance services and complaints by household customers, as well as any distortion or restriction of competition, including providing any relevant information, and bringing any relevant cases to the relevant competition authorities, *in particular with regard to vulnerable customers and customers who are affected by poverty*.
- (r) monitoring the occurrence of restrictive contractual practices, including exclusivity clauses which may prevent large non-household customers from contracting simultaneously with more than one supplier or restrict their choice to do so, and, where appropriate, informing the national competition authorities of such practices;
- (s) respecting contractual freedom with regard to long-term contracts provided that they are compatible with Union law and consistent with Union policies and provided they contribute to decarbonisation objectives. No long-term contracts for supply of unabated fossil gas shall be concluded with a duration beyond the end of year 2049;
- (t) monitoring the time taken by natural gas transmission and distribution system operators or hydrogen network operators to make connections and repairs *including network connection requests by biomethane production facilities*;

- (u) monitoring and reviewing the access conditions to storage, linepack and other ancillary services as provided for in Article **29 or 33**. In the event that the access regime to natural gas storage is defined *pursuant* to Article **29(3)**, that task shall exclude the reviewing of tariffs;
- (v) helping to ensure, together with other relevant authorities, that the consumer protection measures, including those set out in Annex I, are effective and enforced; *and in particular assessing the existence of barriers for customers to exercise their rights such as switching, termination of contract, and access to out-of-court dispute settlement mechanism;*
- (w) publishing recommendations, at least annually, in relation to compliance of supply prices with Article 6, and providing those to the competition authorities, where appropriate;
- (x) ensuring non-discriminatory access to customer consumption data, the provision for optional use, of an easily understandable harmonised format at national level for consumption data and prompt access for all customers to such data pursuant Articles 22 and 23;
- (y) monitoring the implementation of rules relating to the roles and responsibilities of transmission system operators, distribution system operators, hydrogen network operators, suppliers and customers and other market parties pursuant to **Regulation (EU) .../...**⁺ [recast Gas Regulation];
- (z) monitoring the correct application of the criteria that determine whether a natural gas storage facility falls under Article 29(3) or (4); ■

⁺ ***OJ: Please insert in the text the serial number of Regulation contained in document PE .../... [2021/0424 (COD)].***

- (aa) monitoring the implementation of safeguards measures as referred to in Article 77;
- (bb) contributing to the compatibility of data exchanges processes for the most important market processes at regional level;
- (cc) implementing the network codes and guidelines adopted pursuant Article 52 *of the Regulation (EU) .../...⁺ [recast Gas Regulation]* through national measures or, where so required, coordinated regional or Union-wide measures;
- (dd) ensuring *an open, transparent, efficient and inclusive* process for the setting up of the national network development plan in line with the requirements set out in *Article 51, of the hydrogen distribution network plan in line with the requirements set out in Article 52 and, where relevant, of the network decommissioning plan in line with the requirements set out in Article 52b*
- (eea) *examining and when applicable requiring amendments as referred to in Article 52(3)*
- (eeb) *set up guidelines as referred to in Article 52b(6) providing criteria and methodologies for a structural approach to the decommissioning of parts of the natural gas distribution network taking into account costs of decommissioning and the specific case of those assets that may require decommissioning before their originally projected lifecycle and provide guidance as regards tariff setting in such cases.*

█
█

⁺ *OJ: Please insert in the text the serial number of Regulation contained in document PE .../... [2021/0424 (COD)].*

(hh) monitoring the availability of comparison websites, including comparison tools that fulfil the criteria in Article 12;

(ii) monitoring the removal of unjustified obstacles to and restrictions on the development of consumption of self-generated renewable natural gas ■

(*iii*) *any other duties conferred to the regulatory authority pursuant to this Directive and [recast Gas] Regulation (EU) .../...⁺.*

2. Where a Member State has so provided, the monitoring duties set out in paragraph 1 may be carried out by other authorities than the regulatory authority. In such a case, the information resulting from such monitoring shall be made available to the regulatory authority as soon as possible.

While preserving their independence, without prejudice to their own specific competencies and consistent with the principles of better regulation, the regulatory authority shall, as appropriate, consult natural gas transmission system and hydrogen network operators and, as appropriate, closely cooperate with other relevant national authorities when carrying out the duties set out in paragraph 1.

Any approvals given by a regulatory authority or the ACER under this Directive are without prejudice to any duly justified future use of its powers by the regulatory authority under this Article or to any penalties imposed by other relevant authorities or the Commission.

⁺ *OJ: Please insert in the text the serial number of Regulation contained in document PE .../... [2021/0424 (COD)].*

3. In addition to the duties conferred upon it under paragraph 1 of this Article, when an independent system operator or an independent hydrogen network operator has been designated under Article 55 or 62, the regulatory authority shall:
- (a) monitor the transmission system owner's and the independent system operator's and hydrogen network owner's and independent hydrogen network operator's compliance with their obligations under this Article, and issue penalties for non compliance in accordance with paragraph 4, point (d);
 - (b) monitor the relations and communications between the independent system operator and the transmission system owner or the hydrogen network owner and the independent hydrogen network operator, so as to ensure compliance of the independent system operator or the independent hydrogen network operator with its obligations, and in particular approve contracts and act as a dispute settlement authority between the independent system operator and the transmission system owner or the hydrogen network owner and the independent hydrogen network operator in respect of any complaint submitted by either party pursuant to paragraph 11;
 - (c) without prejudice to the procedure under Article 55(2), point (c), for the first ten-year network development plan, approve the investments planning and the multi-annual network development plan presented annually by the independent system operator or the independent hydrogen network operator;
 - (d) ensure that network access tariffs collected by the independent system operator or the independent hydrogen network operator include remuneration for the network owner or network owners, which provides for adequate remuneration of the network assets and of any new investments made therein, provided they are economically and efficiently incurred;
 - (e) have the powers to carry out inspections, including unannounced inspections, at the premises of transmission system owner and independent system operator, or of the hydrogen network owner and the independent hydrogen network operator.

4. Member States shall ensure that regulatory authorities are granted the powers enabling them to carry out the duties referred to in paragraphs 1, 3 and 6 in an efficient and expeditious manner. For this purpose, the regulatory authority shall have at least the following powers:
- (a) to issue binding decisions on natural gas and hydrogen undertakings;
 - (b) to carry out investigations into the functioning of the markets for *natural gas and hydrogen*, and to decide upon and impose any necessary and proportionate measures to promote effective competition and ensure the proper functioning of the markets for *natural gas and hydrogen* and, where appropriate, the regulatory authority shall also have the power to cooperate with the national competition authority and the financial market regulators or the Commission in conducting an investigation relating to competition law;
 - (c) to require any information from natural gas and hydrogen undertakings relevant for the fulfilment of its tasks, including the justification for any refusal to grant third-party access, and any information on measures necessary to reinforce the network;
 - (d) to impose effective, proportionate and dissuasive penalties on natural gas and hydrogen undertakings not complying with their obligations under this Directive or any relevant legally binding decisions of the regulatory authority or of ACER, or to propose to a competent court to impose such penalties, including the power to impose or propose the imposition of penalties of up to 10 % of the annual turnover of the transmission system operator or hydrogen network operator or of up to 10 % of the annual turnover of the vertically integrated undertaking on the transmission system operator or hydrogen network operator or on the vertically integrated undertaking, as the case may be, for non-compliance with their respective obligations pursuant to this Directive;
 - (e) appropriate rights of investigations and relevant powers of instructions for dispute settlement under paragraphs 11 and 12.

5. The regulatory authority located in the Member State in which the ENTSO for Gas, the European Network of Network Operators for Hydrogen or the EU DSO entity has its seat shall have the power to impose effective, proportionate and dissuasive penalties on those entities where they do not comply with their obligations under this Directive, **Regulation (EU) .../...**⁺ [the recast Gas Regulation] or any relevant legally binding decisions of the regulatory authority or of ACER, or to propose that a competent court impose such penalties.
6. In addition to the duties and powers conferred on it under paragraphs 1 and 4 of this Article, when an independent transmission operator or an integrated hydrogen network operator has been designated in accordance with Chapter IX, Section 3, the regulatory authority shall be granted at least the following duties and powers:
- (a) to issue penalties in accordance with paragraph 4, point (d) for discriminatory behaviour in favour of the vertically integrated undertaking;
 - (b) to monitor communications between the transmission system operator or an integrated hydrogen network operator and the vertically integrated undertaking so as to ensure compliance of the transmission system operator or the integrated hydrogen network operator with its obligations;
 - (c) to act as dispute settlement authority between the vertically integrated undertaking and the transmission system operator or the integrated hydrogen network operator in respect of any complaint submitted pursuant to paragraph 11;
 - (d) to monitor commercial and financial relations including loans between the vertically integrated undertaking and the transmission system operator or the integrated hydrogen network operator;

⁺ ***OJ: Please insert in the text the serial number of Regulation contained in document PE .../... [2021/0424 (COD)].***

- (e) to approve all commercial and financial agreements between the vertically integrated undertaking and the transmission system operator or the integrated hydrogen network operator, on the condition that they comply with market conditions;
- (f) to request justification from the vertically integrated undertaking when notified by the compliance officer in accordance with Article 64(4), in particular including evidence to the end that no discriminatory behaviour to the advantage of the vertically integrated undertaking has occurred;
- (g) to carry out inspections, including unannounced inspections, on the premises of the vertically integrated undertaking and the transmission system operator or the integrated hydrogen network operator;
- (h) to assign all or specific tasks of the transmission system operator or the integrated hydrogen network operator to an independent system operator or an independent hydrogen network operator, appointed in accordance with Article 64 in case of a persistent breach by the transmission system operator or the integrated hydrogen network operator of its obligations under this Directive, in particular in case of repeated discriminatory behaviour to the benefit of the vertically integrated undertaking.

7. The regulatory authorities shall be responsible for fixing or approving sufficiently in advance of their entry into force at least the methodologies used to calculate or establish the terms and conditions for:

- (a) connection and access to national natural gas networks, including transmission and distribution tariffs, and terms, conditions and tariffs for access to LNG facilities, whereby tariffs or methodologies shall allow the necessary investments in the networks and LNG facilities to be carried out in a manner allowing those investments to ensure the viability of the networks and LNG facilities;

- (b) connection and access to national hydrogen networks, including hydrogen network tariffs, where applicable, and terms and conditions and tariffs for access to for hydrogen storage and hydrogen terminals;
 - (c) the provision of balancing services which shall be performed in the most economic manner and provide appropriate incentives for network users to balance their input and off-takes in a fair and non-discriminatory manner and be based on objective criteria;
 - (d) approving and monitoring dedicated charges in accordance with Article 4 of **Regulation (EU) .../...**⁺ [recast Gas Regulation].
 - (e) access to cross-border infrastructures, including the procedures for the allocation of capacity and congestion management.
8. The methodologies or the terms and conditions referred to in paragraph 7 shall be published.
9. In fixing or approving the tariffs or methodologies and the balancing services, the regulatory authorities shall ensure that transmission and distribution system operators and, as from 1 January **2033 or as from the date of application of Article 31(1)**, hydrogen network operators are granted appropriate incentive, over both the short and long term, to increase efficiencies, foster market integration and security of supply and support the related research activities.
10. The regulatory authorities shall monitor congestion management of national transmission networks and hydrogen **transmission** networks including interconnectors **and hydrogen interconnectors**, and the implementation of congestion management rules. To that end, transmission system operators, hydrogen **transmission** network operators or market operators shall submit their congestion management rules, including capacity allocation, to the regulatory authorities. Regulatory authorities may request amendments to those rules.

⁺ **OJ: Please insert in the text the serial number of Regulation contained in document PE .../... [2021/0424 (COD)].**

Decisions and complaints

1. Regulatory authorities shall have the authority to require natural gas transmission, storage, LNG and distribution system operators, hydrogen storage and terminal operators, and, hydrogen network operators if necessary, to modify the terms and conditions, including tariffs and methodologies referred to in this Article, to ensure that they are proportionate and applied in a non-discriminatory manner. In the event that the access regime to storage is defined according to Article 29(3), ***that task shall exclude the modification of tariffs. In the event that the access regime to hydrogen networks, hydrogen facilities or hydrogen storage is based on negotiated third-party access in accordance with Article 31(4), Article 32(1) or Article 33(2),*** that task shall exclude the modification of tariffs. In the event of delay in the fixing of natural gas transmission and distribution tariffs and, where appropriate, hydrogen network tariffs, regulatory authorities shall have the power to fix or approve provisional transmission and distribution tariffs or methodologies and hydrogen network tariffs and methodologies and to decide on the appropriate compensatory measures if the final tariffs or methodologies deviate from those provisional tariffs or methodologies.
2. Any party having a complaint against a natural gas transmission, storage, LNG or distribution system operator or a hydrogen network, storage or terminal operator in relation to that operator's obligations under this Directive may refer the complaint to the regulatory authority which, acting as dispute settlement authority, shall issue a decision within a period of two months after receipt of the complaint. That period may be extended by two months where additional information is sought by the regulatory authorities. That extended period may be further extended with the agreement of the complainant. The regulatory authority's decision shall have binding effect unless and until overruled on appeal.

3. Any party who is affected and who has a right to complain concerning a decision on methodologies taken pursuant to this Article or, where the regulatory authority has a duty to consult, concerning the proposed tariffs or methodologies, may, at the latest within two months, or a shorter time period as provided by Member States, following publication of the decision or proposal for a decision, submit a complaint for review. Such a complaint shall not have suspensive effect.
4. Member States shall create appropriate and efficient mechanisms for regulation, control and transparency so as to avoid any abuse of a dominant position, in particular to the detriment of consumers, and any predatory behaviour. Those mechanisms shall take account of the provisions of the TFEU, and in particular Article 102 thereof.
5. Member States shall ensure that the appropriate measures are taken, including administrative action or criminal proceedings in conformity with their national law, against the natural or legal persons responsible where confidentiality rules imposed by this Directive have not been respected.
6. Complaints referred to in paragraphs 2 and 3 shall be without prejudice to the exercise of rights of appeal under Union or national law.
7. Decisions taken by regulatory authorities shall be fully reasoned and justified to allow for judicial review. The decisions shall be available to the public while preserving the confidentiality of commercially sensitive information.
8. Member States shall ensure that suitable mechanisms exist at national level under which a party affected by a decision of a regulatory authority has a right of appeal to a body independent of the parties involved and of any government.

Regional cooperation between regulatory authorities on cross-border issues

1. Regulatory authorities shall closely consult and cooperate with each other, and in particular within ACER, and shall provide each other and ACER with any information necessary for the fulfilment of their tasks under this Directive. In respect of the information exchanged, the receiving authority shall ensure the same level of confidentiality as that required of the originating authority.
2. Regulatory authorities shall cooperate at least at a regional level to:
 - (a) foster the creation of operational arrangements in order to enable an optimal management of the network, promote joint *natural* gas and hydrogen exchanges and the allocation of cross-border capacity, and to enable an adequate level of interconnection capacity, including through new interconnections, within the region and between regions to allow for development of effective competition and improvement of security of supply without discriminating between supply undertakings in different Member States;
 - (b) coordinate the development of all network codes for the relevant transmission system operators, hydrogen network operators and other market actors;
 - (c) coordinate the development of the rules governing the management of congestion;
 - (d) to ensure regulatory compliance of legal entities fulfilling transmission operators' and network operators' tasks at cross-border or regional level.
3. Regulatory authorities shall have the right to enter into cooperative arrangements with each other to foster regulatory cooperation.

4. The actions referred to in paragraph 2 shall be carried out, as appropriate, in close consultation with other relevant national authorities and without prejudice to their specific competencies.
5. The Commission is empowered to adopt delegated acts in accordance with Article 83 in order to supplement this Directive by establishing guidelines on the extent of the duties of the regulatory authorities to cooperate with each other and with ACER.
6. Regulatory authorities, or where appropriate other competent authorities, may consult and cooperate with the relevant authorities of third countries, including Energy Community Contracting Parties, in relation to the operation of *natural* gas and hydrogen infrastructure to and from third countries with a view to ensuring, as regards the infrastructure concerned, that this Directive is applied consistently in the territory and territorial sea of a Member State.

Compliance with the network codes and guidelines

1. Any regulatory authority and the Commission may request the opinion of ACER on the compliance of a decision taken by a regulatory authority with the network codes and the guidelines referred to in this Directive or in **Regulation (EU) .../...**⁺ [recast Gas Regulation].
2. ACER shall provide its opinion to the regulatory authority which has requested it or to the Commission, respectively, and to the regulatory authority which has taken the decision in question within three months from the date of receipt of the request.
3. Where the regulatory authority which has taken the decision does not comply with ACER's opinion within four months from the date of receipt of that opinion, ACER shall inform the Commission accordingly.
4. Any regulatory authority may inform the Commission where it considers that a decision relevant for cross border-trade taken by another regulatory authority does not comply with the network codes and guidelines referred to in this Directive or in **Regulation (EU) .../...**⁺ [recast Gas Regulation] within two months from the date of that decision.

⁺ ***OJ: Please insert in the text the serial number of Regulation contained in document PE .../... [2021/0424 (COD)].***

⁺ ***OJ: Please insert in the text the serial number of Regulation contained in document PE .../... [2021/0424 (COD)].***

5. Where the Commission, within two months of having been informed by ACER in accordance with paragraph 3, or by a regulatory authority in accordance with paragraph 4, or on its own initiative within three months from the date of the decision, finds that the decision of a regulatory authority raises serious doubts as to its compatibility with the network codes and the guidelines referred to in this Directive or in **Regulation (EU) .../...**⁺ [recast Gas Regulation], the Commission may decide to examine the case further. In such a case, it shall invite the regulatory authority and the parties to the proceedings before the regulatory authority to submit observations.
6. Where the Commission takes a decision to examine the case further, it shall, within four months of the date of such decision, issue a final decision:
- (a) not to raise objections against the decision of the regulatory authority; or
 - (b) to require the regulatory authority concerned to withdraw its decision on the basis that the network codes and the guidelines have not been complied with.
7. Where the Commission has not taken a decision to examine the case further or a final decision within the time-limits set in paragraphs 5 and 6 respectively, it shall be deemed not to have raised objections to the decision of the regulatory authority.
8. The regulatory authority shall comply with the Commission decision to withdraw its decision within a period of two months and shall inform the Commission accordingly.
9. The Commission is empowered to adopt delegated acts in accordance with Article 83 **to supplement** this Directive by establishing guidelines setting out the details of the procedure to be followed for the application of this Article.

⁺ ***OJ: Please insert in the text the serial number of Regulation contained in document PE .../... [2021/0424 (COD)].***

Article 76

Record keeping

1. Member States shall require supply undertakings to keep at the disposal of the national authorities, including the regulatory authority, the national competition authorities and the Commission, for the fulfilment of their tasks, for at least five years, the relevant data relating to all transactions in natural gas and hydrogen supply contracts and natural gas and hydrogen derivatives with wholesale customers and transmission system operators, as storage and LNG operators as well as hydrogen network, storage and terminal operators.
2. The data shall include details on the characteristics of the relevant transactions such as duration, delivery and settlement rules, the quantity, the dates and times of execution and the transaction prices and means of identifying the wholesale customer concerned, as well as specified details of all unsettled natural gas and hydrogen supply contracts and natural gas and hydrogen derivatives.
3. The regulatory authority may decide to make available to market participants elements of this information provided that commercially sensitive information on individual market players or individual transactions is not released. This paragraph shall not apply to information about financial instruments which fall within the scope of Directive 2014/65/EU.
4. The Commission is empowered to adopt delegated acts *to supplement* this Directive in accordance with Article 83, by establishing guidelines which define the methods and arrangements for record keeping as well as the form and content of the data that shall be kept.

5. With respect to transactions in natural gas and hydrogen derivatives of supply undertakings with wholesale customers and natural gas transmission system operators, storage and LNG operators as well as hydrogen network, storage and terminal operators, this Article shall apply only once the Commission has adopted the guidelines referred to in paragraph 4.
6. The provisions of this Article shall not create additional obligations towards the authorities referred to in paragraph 1 for entities falling within the scope of Directive 2014/65/EU.
7. In the event that the authorities referred to in paragraph 1 need access to data kept by entities falling within the scope of Directive 2014/65/EU, the authorities responsible under that Directive shall provide them with the required data.

Chapter XI

Final provisions

Article 77

Safeguard measures

In the event of a sudden crisis in the energy market or where the physical safety or security of persons, apparatus or installations or system integrity is threatened, a Member State may *take the measures foreseen in the national emergency plan and* declare, *if applicable*, an emergency state pursuant to Article 11 of Regulation (EU) **2017/1938**.

Article 78

Level playing field

1. Measures that the Member States may take pursuant to this Directive in order to ensure a level playing field shall be compatible with the TFEU, notably Article **36** thereof, and with *Union law*.
2. The measures referred to in paragraph 1 shall be proportionate, non-discriminatory and transparent. Those measures may be put into effect only following the notification to and approval by the Commission.
3. The Commission shall act on the notification referred to in paragraph 2 within two months of the receipt of the notification. That period shall begin on the day following receipt of the complete information. In the event that the Commission has not acted within that two-month period, it shall be deemed not to have raised objections to the notified measures.

Article 79

Technical agreements regarding the operation of natural gas and hydrogen pipeline lines with third countries

This Directive *shall* not affect the freedom of transmission system operators, hydrogen network operators or other economic operators to maintain in force or to conclude technical agreements on issues concerning the operation of pipelines between a Member State and a third country, insofar as those agreements are compatible with Union law and relevant decisions of the regulatory authorities of the Member States concerned. Such agreements shall be notified to the regulatory authorities of the Member States concerned.

Article 80

Derogations for natural gas system

1. Member States which are not directly connected to the interconnected system of any other Member State may *derogate* from *Article 3, 7, 30 or 54 or Article 27(1)*. Any such derogation shall expire from the moment when the first interconnector to the Member State is completed. *Any such derogation shall be notified to the Commission.*
2. Member States may apply to the Commission for derogations from applying *Article 3, 7, 54 or 27* to outermost regions within the meaning of Article 349 TFEU or to other geographically isolated areas. Any such derogation shall expire from the moment a connection from the region or area to a Member State with an interconnected system is completed.
- 2a. *Luxembourg may derogate from Article 54. Any such derogation shall be notified to the Commission.*
3. The Commission shall inform the Member States of applications for derogations referred to in *paragraph 2* before taking a decision, taking into account justified requests for confidentiality of commercially sensitive information.

4. Derogations granted by the Commission *pursuant paragraph 2 of this Article* shall be limited in time and subject to conditions that aim to increase competition in and the integration of the internal market and to ensure that the derogations do not hamper the transition towards renewable energy or the application of the energy efficiency first principle within the meaning of Article 2, point (18), of Regulation (EU) 2018/1999.
5. Derogations pursuant to Directive 2009/73/EC without an expiry date *or without defined period of application* shall expire on 31 December 2025. Member States that at the time of entry into force of this Directive are still benefitting from these derogations may *decide for a new derogation pursuant paragraph 1 or 5a, or they may* apply to the Commission for a new derogation in accordance with the conditions established in *paragraph 2*.
- 5a. *Member States that receive the first commercial supply of their first long-term natural gas supply contract after the entry into force of this Directive may derogate from Article 3(1) to (4), Article 4(1), Article 7, Article 27(1), Article 28(1), Article 30, Article 35(1) to (5), Article 39, Article 40(6) and Articles 42, 54, 55 and 69. Any such derogation shall be notified to the Commission. The derogation shall expire 10 years after the reception of the first commercial supply of their first long-term natural gas supply contract.*
6. *Notifications of derogations as well as* decisions to grant derogations *referred to in paragraphs 1, 2, 2a and 5a* shall be published in the *Official Journal of the European Union*.

Article 80b

Hydrogen networks in isolated regions

1. *Member States may grant derogations from the requirements of one or more of Articles 42, 62 and 65 to hydrogen networks located in the outermost regions listed in Article 349 TFEU and in the isolated regions with the following NUTS 2 and NUTS 3 codes:*
 - (i) *Cyprus (NUT2 CY00)*
 - (ii) *Kainuu (NUTS 3 FI1D8)*
 - (iii) *Lapland (NUTS 3 FI1D7)*
 - (iv) *Malta (NUT2 MT00)*
 - (v) *Northern Ostrobothnia (NUTS 3 FI1D9)*
 - (vi) *Upper Norrland (NUTS 2 SE33)*
2. *The derogation shall be published and notified to the European Commission.*
3. *Derogations pursuant paragraph 1 shall expire 15 years after they are granted, and in any case by 2045 at the latest. Derogations shall not be renewed. Where a hydrogen network benefitting from a derogation is extended beyond the isolated region or becomes connected to hydrogen networks located outside of the regions, the Member State shall withdraw the derogation.*

4. *Every seven years as from the granting of a derogation pursuant to paragraph 1, or at a reasoned request by the European Commission, the regulatory authority of the Member State granting the derogation shall publish an assessment of the derogation's impact on competition, infrastructure development and market functioning. If the regulatory authority concludes that the continued application of the derogation would carry the risk of impeding competition or adversely affecting the efficient deployment of hydrogen infrastructure or the development of the hydrogen market in the Member State or the Union, the Member State shall withdraw the derogation.*

Article 81

Derogations in relation to natural gas transmission lines to and from third countries

1. In respect of *natural* gas transmission lines between a Member State and a third country completed before 23 May 2019, the Member State where the first connection point of such a transmission line with a Member State's network is located may decide to derogate from Articles 54, 65, 66 and 27 and Article 72(7) *and* (9) and *Article* 73(1) for the sections of such *natural* gas transmission line located in its territory and territorial sea, for objective reasons such as to enable the recovery of the investment made or for reasons of security of supply, provided that the derogation is not detrimental to competition on or the effective functioning of the internal market in natural gas, or to security of supply in the Union.

The derogation shall be limited in time up to 20 years based on objective justification, renewable if justified and may be subject to conditions which contribute to the achievement of the conditions in the first subparagraph.

Such derogations shall not apply to transmission lines between a Member State and a third country which has the obligation to transpose this Directive and which effectively implements this Directive in its legal order under an agreement concluded with the Union.

2. Where the transmission line concerned is located in the territory of more than one Member State, the Member State in the territory of which the first connection point with the Member States' network is located shall decide whether to grant a derogation for that transmission line after consulting all the Member States concerned.

Upon request by the Member States concerned, the Commission may decide to act as an observer in the consultation between the Member State in the territory of which the first connection point is located and the third country concerning the consistent application of this Directive in the territory and territorial sea of the Member State where the first interconnection point is located, including the granting of derogations for such transmission lines.

3. Decisions pursuant to paragraphs 1 and 2 shall be adopted by 24 May 2020. Member States shall notify any such decisions to the Commission and shall publish them.
4. ***The Commission shall, by ... [two years after the date of entry into force of this Regulation] submit a report to the European Parliament and to the Council on derogations granted under this Article. The report shall, in particular, assess the impact of these derogations on the effective functioning of the internal market in natural gas as well as on security of energy supply and the essential security interests of the Union and the Member States.***

Empowerment procedure

1. Without prejudice to other obligations under Union law, and to the allocation of competence between the Union and the Member States, existing agreements between a Member State and a third country on the operation of a transmission line or an upstream pipeline network may be maintained in force until the entry into force of a subsequent agreement between the Union and the same third country or until the procedure under paragraphs 2 to 15 of this Article applies.
2. Without prejudice to the allocation of competence between the Union and the Member States, where a Member State intends to enter into negotiations with a third country in order to amend, extend, adapt, renew or conclude an agreement on the operation of a transmission line with a third country **or a hydrogen interconnector with a third country** concerning matters falling, entirely or partly, within the scope of this Directive **or of the Regulation (EU) .../...⁺ [recast Gas Regulation]**, it shall notify the Commission of its intention in writing.

Such a notification shall include the relevant documentation and an indication of the provisions to be addressed in the negotiations or to be renegotiated, the objectives of the negotiations and any other relevant information, and shall be transmitted to the Commission at least five months before the intended start of the negotiations.

3. Further to any notification pursuant to paragraph 2, the Commission shall authorise the Member State concerned to enter into formal negotiations with a third country for the part which may affect Union common rules unless it considers that the opening of such negotiations would:
 - (a) be in conflict with Union law other than the incompatibilities arising from the allocation of competence between the Union and the Member States;

⁺ ***OJ: Please insert in the text the serial number of Regulation contained in document PE .../... [2021/0424 (COD)].***

- (b) be detrimental to the functioning of the internal market in natural gas *or hydrogen*, competition or security of supply in a Member State or in the Union, *taking into account the principle of solidarity between Member States pursuant to Article 194(1) TFEU*;
 - (c) undermine the objectives of pending negotiations of *international* agreements by the Union with a third country;
 - (d) be discriminatory.
4. When carrying out the assessment under paragraph 3, the Commission shall take into account whether the intended agreement concerns a transmission line or an upstream pipeline that contributes to the diversification of natural gas supplies and suppliers by means of new natural gas sources.
5. Within 90 days of receipt of the notification referred to in paragraph 2, the Commission shall adopt a decision authorising or refusing to authorise a Member State to enter into negotiations in order to amend, extend, adapt, renew or conclude an agreement with a third country. Where additional information is needed to adopt a decision, the 90-day period shall run from the date of receipt of such additional information.
6. In the event that the Commission adopts a decision refusing to authorise a Member State to enter into negotiations in order to amend, extend, adapt, renew or conclude an agreement with a third country, it shall inform the Member State concerned accordingly and shall give the reasons therefor.
7. Decisions authorising or refusing to authorise a Member State to enter into negotiations in order to amend, extend, adapt, renew or conclude an agreement with a third country shall be adopted, by means of implementing acts, in accordance with the procedure referred to in Article 83(2).

8. The Commission may provide guidance and may request the inclusion of particular clauses in the agreement envisaged, in order to ensure compatibility with Union law in accordance with Decision (EU) 2017/684 of the European Parliament and of the Council²⁵.
9. The Commission shall be kept informed of the progress and results of the negotiations to amend, extend, adapt, renew or to conclude an agreement throughout the different stages of such negotiations and may request to participate in such negotiations between the Member State and the third country in accordance with Decision (EU) 2017/684.
10. The Commission shall inform the European Parliament and the Council of the decisions adopted pursuant to paragraph 5.
11. Before signing an agreement with a third country, the Member State concerned shall notify the Commission of the outcome of negotiations and shall transmit the text of the negotiated agreement to the Commission.
12. Upon notification pursuant to paragraph 11, the Commission shall assess the negotiated agreement pursuant to paragraph 3. Where the Commission finds that the negotiations have resulted in an agreement which complies with paragraph 3, it shall authorise the Member State to sign and conclude the agreement.
13. Within 90 days of receipt of the notification referred to in paragraph 11, the Commission shall adopt a decision authorising or refusing to authorise a Member State to sign and conclude the agreement with a third country. Where additional information is needed to adopt a decision, the 90-day period shall run from the date of receipt of such additional information.

²⁵ Decision (EU) 2017/684 of the European Parliament and of the Council of 5 April 2017 on establishing an information exchange mechanism with regard to intergovernmental agreements and non-binding instruments between Member States and third countries in the field of energy, and repealing Decision No 994/2012/EU (OJ L 99, 12.4.2017, p. 1).

14. Where the Commission adopts a decision pursuant to paragraph 13, authorising a Member State to sign and conclude the agreement with a third country, the Member State concerned shall notify the Commission of the conclusion and entry into force of the agreement, and of any subsequent changes to the status of that agreement.
15. In the event that the Commission adopts a decision refusing to authorise a Member State to sign and conclude the agreement with a third country pursuant to paragraph 13, it shall inform the Member State concerned accordingly and shall give the reasons therefor.

Article 83

Exercise of the delegation

1. The power to adopt delegated acts is conferred on the Commission subject to the conditions laid down in this Article.
2. The power to adopt delegated acts referred to in Articles 8, 56, 66, 74, 75 and 76 shall be conferred on the Commission for an indeterminate period of time from ... [date of entry into force *of this Directive*].
3. The delegation of power referred to in Articles 8, 56, 66, 74, 75 and 76 may be revoked at any time by the European Parliament or by the Council. A decision to revoke shall put an end to the delegation of power specified in that decision. It shall take effect on the day following the publication of the decision in the *Official Journal of the European Union* or at a later date specified therein. It shall not affect the validity of any delegated act already in force.
4. Before adopting a delegated act, the Commission shall consult experts designated by each Member State in accordance with the principles laid down in the Interinstitutional Agreement of 13 April 2016 on Better Law-Making *as well as all relevant stakeholders*.

5. As soon as it adopts a delegated act, the Commission shall notify it simultaneously to the European Parliament and to the Council.
6. A delegated act adopted pursuant to Articles 8, 56, 66, 74, 75 and 76 shall enter into force only if no objection has been expressed either by the European Parliament or by the Council within a period of two months of notification of that act to the European Parliament and the Council or if, before the expiry of that period, the European Parliament and the Council have both informed the Commission that they will not object. That period shall be extended by two months at the initiative of the European Parliament or of the Council.

Article 84

Committee procedure

1. The Commission shall be assisted by a committee. That committee shall be a committee within the meaning of Regulation (EU) No 182/2011.
2. Where reference is made to this paragraph, Article 4 of Regulation (EU) No 182/2011 shall apply.
3. Where reference is made to this paragraph, Article 5 of Regulation (EU) No 182/2011 shall apply.

Review and reporting

By 31 December 2030 the Commission shall review this Directive and shall submit a report to the European Parliament and to the Council, *accompanied, if necessary, by appropriate legislative proposals*. The review shall in particular examine the application of Article 8, and related definitions in Article 2, to assess whether facilities that begin operation from 1 January 2031 should demonstrate higher greenhouse gas emission savings from the use of low carbon fuels and low carbon hydrogen to receive certification pursuant to that Article. ■

By ... [11 years after the date of entry into force of this Directive], the Commission shall publish a communication assessing the implementation of Article 42 with regard to hydrogen distribution network operators, and the implementation of Articles 62 and 63 with regard to hydrogen transmission network operators. To this end, ACER shall publish by 10 years after the date of entry into force of this Directive a report on the impact of these Articles on hydrogen market functioning, competition, liquidity, hydrogen infrastructure development and transparency. ACER's report shall include a consultation of relevant stakeholders.

Article 86

Amendments to Directive ■ (EU) 2023/1791

Directive ■ (EU) 2023/1791 is amended as follows:

- (1) *Articles 17, and 19 are repealed;*
- (2) *Annex VIII is repealed;*
- (3) *Article 39(2) is replaced by the following: “Articles 13, 14, 15, 16, 18 and 20 and Annexes II, IX, XII, XIII and XIV shall apply from 12 October 2025”.*

Article 87

Transposition

1. Member States shall bring into force the laws, regulations and administrative provisions necessary to comply with *Articles 2 to 5, Articles 7 to 27, Article 29, Article 31 to 34, Article 35(1), point (a), Article 35(3), (4), (7),(8) and (9), Articles 37 and 38, Article 40 (1), (2), (7), (8), and (9), Article 41, Article 42(2), Articles 46 to 53, Articles 56, Article 58(11), Articles 62 to 69, Article 70(5) and (6), Articles 71 to 73, Article 75(1), (5), (6) and (9), Articles 76 and 77, Annexes I and II by ... [two years after the date of entry into force of this Directive].* They shall immediately communicate the text of those measures to the Commission.

When Member States adopt those measures, they shall contain a reference to this Directive or be accompanied by such a reference on the occasion of their official publication. Member States shall determine how such reference is to be made and how that statement is to be formulated.

2. Member States shall communicate to the Commission the text of the main provisions of national law which they adopt in the field covered by this Directive.

Article 88

Repeal

Directive 2009/73/EC, as amended by the acts listed in Annex III, Part A, is repealed with effect from 1 January 2023, without prejudice to the obligations of Member States concerning relating to the time-limits for the transposition into national law and the date of application of the Directives set out in Annex III, Part B.

References to the repealed Directive shall be construed as references to this Directive and shall be read in accordance with the correlation table in Annex IV.

Article 89

Entry into force

1. This Directive shall enter into force on the twentieth day following that of its publication in the Official Journal of the European Union.
2. *Article 86 shall apply from [two years after entry into force of this Directive].*

Article 90

Addressees

This Directive is addressed to the Member States.

Done at Brussels,

For the European Parliament
The President

For the Council
The President

Annex I

MINIMUM REQUIREMENTS FOR BILLING AND BILLING INFORMATION FOR *NATURAL GAS AND HYDROGEN*

1. Minimum information to be contained on the bill and in the billing information for *natural gas and hydrogen*
- 1.1. The following key information shall be prominently displayed to final customers in their bills, distinctly separate from other parts of the bill:
 - (a) the price to be paid and a breakdown of the price where possible, together with a clear statement that all energy sources may also benefit from incentives that were not financed through the levies indicated in the breakdown of the price;
 - (b) the date on which payment is due.
- 1.2. The following key information shall be prominently displayed to final customers in their bills and billing information, distinctly separate from other parts of the bill and billing information:
 - (a) consumption of *natural gas and hydrogen* for the billing period;
 - (b) the name and contact details of the supplier, including a consumer support hotline and email address;
 - (c) the tariff name;
 - (d) the end date of the contract, if applicable;
 - (e) the information on the availability and benefits of switching;
 - (f) the final customer's switching code or unique identification code for the final customer's supply point;

- (g) information on final customers' rights as regards out-of-court dispute settlement, including the contact details of the entity responsible pursuant to Article 24;
- (h) the single point of contact referred to in Article 23;
- (i) for natural gas only, a link or reference to where comparison tools referred to in Article 12 can be found.

1.3. Where bills are based on actual consumption or remote reading by the operator, the following information shall be made available to final customers in, with or signposted to within their bills and periodic settlement bills:

- (a) comparisons of the final customer's current consumption of *natural gas and hydrogen* with the final customer's consumption for the same period in the previous year in graphic form;
- (b) contact information for consumer organisations, energy agencies or similar bodies, including website addresses, from which information may be obtained on available energy efficiency improvement measures for energy-using equipment;
- (c) comparisons with an average normalised or benchmarked final customer in the same user category.

2. Frequency of billing and the provision of billing information:

- (a) billing on the basis of actual consumption shall take place at least once a year;
- (b) where the final customer does not have a meter that allows remote reading by the operator, or where the final customer has actively chosen to disable remote reading in accordance with national law, accurate billing information based on actual consumption shall be made available to the final customer at least every six months, or once every three months, if requested or where the final customer has opted to receive electronic billing;

- (c) where the final customer does not have a meter that allows remote reading by the operator, or where the final customer has actively chosen to disable remote reading in accordance with national law, the obligations in points (a) and (b) may be fulfilled by means of a system of regular self-reading by the final customer, whereby the final customer communicates readings from the meter to the operator; billing or billing information may be based on estimated consumption or a flat rate only where the final customer has not provided a meter reading for a given billing interval. ***The estimated consumption shall be based on the previous year consumption and/or on the consumption of a comparable final customer;***
- (d) where the final customer has a meter that allows remote reading by the operator, accurate billing information based on actual consumption shall be provided at least every month; such information may also be made available via the internet, and shall be updated as frequently as allowed by the measurement devices and systems used.

3. Breakdown of the final customer's price

The customer's price is the sum of the following three components: the energy and supply component, the network component (transmission, distribution, transport) and the component comprising taxes, levies, fees and charges.

Where a breakdown of the final customer's price is presented in bills, the common definitions of the three components in that breakdown established under Regulation (EU) 2016/1952 of the European Parliament and of the Council¹ shall be used throughout the Union.

¹ ***Regulation (EU) 2016/1952 of the European Parliament and of the Council of 26 October 2016 on European statistics on natural gas and electricity prices and repealing Directive 2008/92/EC (OJ L 311, 17.11.2016, p. 1).***

4. Access to complementary information on historical consumption

Member States shall require that, to the extent that complementary information on historical consumption is available, such information is made available, at the request of the final customer, to the supplier or service provider designated by the final customer.

Where the final customer has a meter that allows remote reading by the operator installed, the final customer shall have easy access to complementary information on historical consumption allowing detailed self-checks.

Complementary information on historical consumption shall include:

- (a) cumulative data for at least the three previous years or the period since the start of the gas supply contract, if that period is shorter. The data shall correspond to the intervals for which frequent billing information has been produced; and
- (b) detailed data according to the time of use for any day, week, month and year, which is made available to the final customer without undue delay via the internet or the meter interface, covering the period of at least the previous 24 months or the period since the start of the gas supply contract, if that period is shorter

5. Disclosure of energy sources

Suppliers shall specify in bills the share of renewable and separately **low-carbon** gas purchased by the final customer in accordance with the supply contract for **natural gas and hydrogen** (product level disclosure). In case of a mixture the supplier shall provide the same information separately for different categories of **gas**, including renewable **gas** or low-carbon gas.

The following information shall be made available to final customers in, with, or signposted to within their bills and billing information:

- (a) the share of renewable **gas and low-carbon gas** in the mix of the supplier (at national level, namely in the Member State in which the supply contract for **gas** has been concluded, as well as at the level of the supplier if the supplier is active in several Member States) over the preceding year in a comprehensible and clearly comparable manner;
- (b) information on the environmental impact, in at least terms of CO₂ emissions resulting from the **natural gas or hydrogen** supplied by the supplier over the preceding year.

As regards point (a) of the second subparagraph, with respect to **natural gas and hydrogen** obtained via a gas exchange or imported from an undertaking situated outside the Union, aggregate figures provided by the exchange or the undertaking in question over the preceding year may be used.

The disclosure of the share of renewable gas purchased by the final customers shall be done by using guarantees of origin **based on Directive (EU) 2018/2001**. *When a customer consumes natural gas or hydrogen from a hydrogen or natural gas network, including gaseous renewable fuels of non-biological origin and biomethane, as demonstrated in the commercial offer by the supplier, Member States shall ensure that the guarantees of origin that are cancelled correspond to the relevant network characteristics.*

The regulatory authority or another competent national authority shall take the necessary steps to ensure that the information provided by suppliers to final customers pursuant to this point is reliable and is provided at a national level in a clearly comparable manner.

Annex II

SMART METERING SYSTEMS IN NATURAL GAS *AND HYDROGEN*

1. Member States shall ensure *that* deployment of smart metering systems in their territories *happens only after a* economic assessment of all the long-term costs and benefits to the market and the individual consumer or which form of smart metering is economically reasonable and cost-effective and which timeframe is feasible for their distribution.
 - 1a. *Such an economic assessment shall take into account network development plans referred to in Article 51, in particular, paragraph 2, point (c) thereof, on decommissioning of networks.*
2. Such assessment shall take into consideration the methodology for the cost-benefit analysis and the minimum functionalities for smart metering systems provided for in Commission Recommendation 2012/148/EU¹ to the extent that they are applicable for natural gas *and hydrogen*, as well as the best available techniques for ensuring the highest level of cybersecurity and data protection.

Such assessment shall also duly consider potential synergies with an already rolled-out electricity smart metering infrastructure, or options for selective rollouts to cases that can quickly return net benefits to keep costs in check.
3. Subject to that assessment, Member States, shall prepare a timetable with a target of up to ten years for the deployment of smart metering systems. Where the deployment of smart metering systems is assessed positively, at least 80 % of final customers shall be equipped with smart meters within seven years of the date of the positive assessment.

¹ Commission Recommendation 2012/148/EU of 9 March 2012 on preparations for the roll- out of smart metering systems (OJ L 73, 13.3.2012, p. 9).
