|      |                         | <p>Alexei Navalny's activities were closely monitored by the authorities of the Russian Federation during his journey to Siberia in August 2020. On 20 August 2020, he was taken seriously ill and admitted to a hospital in Omsk, Russian Federation. On 22 August 2020, he was transported to a hospital in Berlin, Germany. A specialised laboratory in Germany subsequently found clear evidence, also corroborated by laboratories in France and Sweden, that Alexei Navalny had been poisoned with a toxic nerve agent of the Novichok group. This toxic agent is accessible only to State authorities in the Russian Federation. In these circumstances, it is reasonable to conclude that the poisoning of Alexei Navalny was only possible with the consent of the Presidential Executive Office. Given his senior leadership role in that Office, Andrei Yarin is therefore responsible for inducing and providing support to the persons who carried out or were involved in the poisoning of Alexei Navalny with the Novichok nerve agent, which constitutes a use of chemical weapons under the Chemical Weapons Convention.</p> |                 |
