COMMISSION

Brussels, 30.9.2021
SWD(2021) 278 final

COMMISSION STAFF WORKING DOCUMENT

Accompanying the

**REPORT FROM THE COMMISSION TO THE EUROPEAN PARLIAMENT AND
THE COUNCIL**

**on the implementation in 2017-2018 of Regulation (EC) No 561/2006 on the
harmonisation of certain social legislation relating to road transport and of Directive
2002/15/EC on the organisation of the working time of persons performing mobile road
transport activities**

**(30th report from the Commission on the implementation of the social legislation
relating to road transport)**

{COM(2021) 610 final}

1. Social legislation in road transport – objectives and key provisions

The EU social rules in road transport are established by four interrelated acts: Regulation (EC) No 561/2006, which establishes rules on driving times, breaks and rest periods for professional drivers, Regulation (EU) No 165/2014 on recording equipment in road transport, Directive 2002/15/EC, which sets out complementary provisions on the organisation of the working time of persons performing mobile road transport activities and Directive 2006/22/EC, which determines minimum requirements for enforcement of these rules.

Regulation (EC) No 561/2006, also known as the Driving Time Regulation, applies to employed and self-employed drivers engaged in the carriage by road of goods where the maximum permissible mass of the vehicle exceeds 3.5 tonnes and of passengers by vehicles carrying more than nine persons including the driver. The maximum weekly driving time of a driver should not exceed 56 hours (provided that no more than 90 hours are driven in any two consecutive weeks). The total daily driving time should not exceed 9 hours, although twice a week it can be extended to 10 hours. Breaks should last for at least 45 minutes (which may be separated into a break of 15 minutes followed by 30 minutes) and should be taken not later than after 4.5 hours of driving. The daily rest period is determined at the level of minimum 11 hours, which can be reduced three times a week to 9 hours.

Regulation (EU) No 165/2014 on tachographs in road transport, also known as the Tachograph Regulation, sets out obligations and requirements in relation to the construction, installation, use, testing and control of tachographs used in road transport, in order to verify compliance with the provisions of Regulation (EC) No 561/2006. It also aims at reducing administrative burden and making fraud to the tachograph more difficult. The smart tachograph has to be fitted in vehicles registered for the first time as of 15 June 2019. It features a new set of advanced communication capabilities with respect to the current digital tachograph, such as satellite geo-localisation or short-range communication for the transmission of information to enforcement authorities. Those communication capabilities broaden the areas of enforcement where the tachograph is applied, extending it to, for instance, the control of cabotage operations or the application of the rules on the posting of drivers.

Directive 2002/15/EC, also known as the “Road Transport Working Time Directive”, applies to mobile workers such as drivers, crew and other travelling staff, both with the employment or self-employment status. The Directive complements Regulation (EC) No 561/2006 by putting in place limitations on the maximum weekly and maximum average weekly working time of workers in the road transport sector as well as adequate breaks and night work provisions.

Working time is defined in the Directive as time devoted to all road transport activities, including driving, loading and unloading, assisting passengers boarding and disembarking from the vehicle, cleaning and technical maintenance and all other work intended to ensure the safety of transport operation. Specific time limits are set out in relation to weekly working time (excluding breaks and periods of availability) which amounts to maximum 48 hours a week, which may be extended to 60 hours, provided that over four months, an average of 48 hours a week is maintained. Moreover, a limitation to 10 hours on daily working time is introduced in case of night work. Each mobile worker is obliged to take a break after working

consecutively for 6 hours, which should be at least 30 minutes, if working hours range from six to nine hours and at least 45 minutes, if working time equals to more than nine hours.

Directive 2006/22/EC, also called the "Enforcement Directive", lays down rules to verify compliance and ensure application of rules for driving time and rest periods established by Regulation (EC) No 561/2006 and Regulation (EU) No 165/2014. The Directive promotes harmonised enforcement of the social rules in road transport by means of minimum requirements for the uniform and effective checks to be carried out by Member States. The minimum threshold of checks of the total number of days worked by drivers falling under the scope of Regulation (EC) No 561/2006 and Regulation (EU) No 165/2014 is set at 3 % from 2010. In addition, the total number of working days checked should be carried out in a proportional manner for checks at the roadside and at the premises of transport undertakings - 30 % and 50 % respectively. An obligation of minimum six concerted roadside checks per year undertaken by two or more enforcement authorities was introduced in order to encourage cooperation between Member States.

At the time of writing this report, Mobility Package I was adopted amending Regulation (EC) No 561/2006 and Regulation (EU) 165/2014¹, and introducing a Lex specialis on posting of drivers in the road transport sector². Taking into account the date of application of the new provisions, the information on their implementation will be provided in the implementation report covering a period 2021-2022.

This Staff Working Document is accompanying the Report and provides more national figures and details as well as updates on other relevant aspects in the field.

2. Checks

The total number of working days checked in the EU continuously decreased since 2011-2012. However, the decrease by -5% in 2017-2018 is less apparent compared to the decrease of around -13% in the reporting period 2015-2016. Nevertheless, looking at the national figures the decrease of working days checked seemed to mainly result from the lower number of working days checked reported by France³.

Overall, the majority of Member States performed significantly more working days checks than required. If 100% represents the minimum threshold percentage of 3%, then seven Member States performed significantly more checks than the threshold: Austria (10.1%), Latvia (9.9%), Bulgaria (9.6%), France (9.4%), Romania (9.3%), Portugal (9.3%), and

¹ Regulation (EU) 2020/1054 of the European Parliament and of the Council of 15 July 2020 amending Regulation (EC) No 561/2006 as regards minimum requirements on maximum daily and weekly driving times, minimum breaks and daily and weekly rest periods and Regulation (EU) No 165/2014 as regards positioning by means of tachographs (OJ L 249, 31.7.2020, p. 1–16).

² Directive (EU) 2020/1057 of the European Parliament and of the Council of 15 July 2020 laying down specific rules with respect to Directive 96/71/EC and Directive 2014/67/EU for posting drivers in the road transport sector and amending Directive 2006/22/EC as regards enforcement requirements and Regulation (EU) No 1024/2012 (OJ L 249, 31.7.2020, p. 49–65).

³ France reported around 4 million less working days checked compared to the last report due to the reduction in checks carried out by the security forces of the Ministry of the Interior and less checks due to the impact of social movements in the last quarter of 2018.

Germany (9.2%)⁴. These Member States accounted for around one third of the working days checked in the EU (around 43 out of 125 million). Compared to the last report, Portugal and Romania increased the number of working days checked by more than 80% (from 6.7% to 9.3% in Portugal and from 6.9% to 9.3% in Romania).

Six Member States did not meet the minimum threshold, namely Denmark (2.9%), the Netherlands (1.5%), Finland (1.4%), Ireland (0.8%), Greece (0.7%), and Lithuania (0.2%). This is an increase since the last reporting period in which only three Member States did not meet the minimum threshold. Great decreases in the number of working days checked were observed in Ireland (-133%, i.e. from 4.8% to 0.8%) and Lithuania (-97%, i.e. from 3.1% to 0.2%).

Lithuania only included checks at the roadside, which may explain partly the significant overall decrease. Ireland had a significant increase in the number of vehicles subject to Regulation (EC) No 561/2006 with more than three times as many vehicles compared to the last reporting period. Finland did not include data from the national police in the standard reporting form, but based on additional data from the national police, customs and occupational health & safety authorities, they checked more than 1.7 million working days exceeding the 3 % threshold.

The Netherlands applied "monitoring based on trust", where a number of road transport undertakings have concluded an enforcement agreement with the Environment & Transport Inspectorate. The agreement covered over 2.4 million days worked by drivers during 2017-2018 in addition to the 877,454 working days checked by the Netherlands. By adding these figures together, the Netherlands meet the minimum threshold. The Dutch authorities informed the Commission that the continuous development and expansion of the risk analysis enables the Dutch inspectorates to focus its efforts on those road transport undertakings whose level of compliance is poor. Non-compliant undertakings will also fall under specialised enforcement subject to rigorously applied corrective procedure. This system will end in 2022 from when the focus is on having the right technology to better monitor and investigate drivers digitally onwards.

Directive 2006/22/EC also requires that at least 50% of the total number of working days checked should be done through checks at the premises of undertakings and at least 30% at the roadside. However, looking at the number of Member States, which have met the threshold, only the following eight Member States have the required balanced share between working days checked at the premises and at the roadside: Bulgaria (55% of working days checked at the premises), Cyprus (59%), Denmark (54%), Estonia (63%), Latvia (60%), Luxembourg (68%), Malta (63%), and Slovakia (57%). Bulgaria, Cyprus, Latvia, Luxembourg and Slovakia also met the ratio in the last reporting period⁵. Yet, this is an increase of two Member States compared to the last reporting period.

The increasing trend continues very modestly for the ratio of working days checked at the premises with the EU-average rising to 27% compared to 26% in 2015-2016, 23% in 2013-2014 and 18% in 2009-2010. The most significant improvements were reported by Denmark

⁴ This has changed since last reporting period (2015-2016), when it was France, Germany, Bulgaria, Austria and Latvia.

⁵ Bulgaria, Cyprus, Latvia, Luxembourg, Romania and Slovakia met the ratio in 2015-2016.

(from 39% to 54%) and Estonia (from 49% to 62%). Both Member States now meet the ratio. Also Greece (from 26% to 42%) and Hungary (from 13% to 36%) made significant improvements and are getting closer to the 50% ratio. On the other hand, the number of working days checked significantly decreased in Romania (from 51% to 17%) and they no longer meet the ratio.

Ireland (10%) and Finland (2%) are the only Member States, which have not met the threshold for roadside checks (30%). In Ireland, the reason seems to be that only few non-Irish, except British registered vehicles, are circulating on the Irish roads. In the case of Finland, this may be explained by the lack of reporting from the national police.

3. Checks compared to the number of enforcement officers and equipment to analyse tachographs

Based on the number of enforcement officers reported by Member States, the number of control officers involved in checks has slightly increased from 61,503 in 2015-2016 to 61,558 officers in 2017-2018⁶. The total number of enforcement officers trained to analyse the digital tachograph has continued to decrease by 9%, as well as the units of equipment provided to control officers to analyse the tachograph by 5.5% compared to the last report.

Table 1: Overview of national enforcement capacity in 2017-2018 per Member State

4. Roadside checks

In general, 33% of vehicles checked at the roadside are from another EU country, which is a 1% increase since 2015-2016. However, in some Member States the percentage of vehicles from another EU country constitutes more than half: namely Austria (66%), Belgium (57%), Denmark (51%), France (61%), Luxembourg (67%), the UK (54%), and the Netherlands (53%). These are the same Member States as named in the 2015-2016 report except from Denmark in which the share increased from 35 to 51%. The geographic location and volume of transit operations may in certain Member States play a factor. Member States whose share of checking vehicles registered in a non-EU country was the largest are Bulgaria (27%), Croatia (26%), Poland (25%), and Slovenia (22%). A complete overview per Member State can be found in Table 2 below.

Table 2: Share of checked vehicles at the roadside by country of registration

Member States	Nationals	Non-nationals	Third nationals
AT	30%	66%	4%

EU average	58%	33%	9%

5. Roadside checks – type of tachograph

According to Article 2 of Directive 2006/22/EC, the threshold of minimum checks of number of days worked by drivers of vehicles will be raised to 4% once 90% of vehicles checked are equipped with a digital tachograph.

Compared to the last report, the share of vehicles checked at the roadside that were equipped with the digital tachograph remained stable at the level of 71%¹⁰. There is therefore no base to raise the threshold of minimum checks to 4% for the time being. The highest share of digital tachograph (more than 80%) was found during roadside check in Austria (96%), Denmark (96%), Belgium (94%), Luxembourg (90%), Slovakia (91%), Sweden (89%), Netherlands (85%), Spain (84%), Germany (83%), and Czech Republic (82%). The number of Member States meeting the share of 90% digital tachographs has increased from one¹¹ to five since the last reporting period. In contrast, the lowest percentage of digital tachograph was reported in Greece (39%) and Cyprus (29%). Table 3 below provides a full overview.

Table 3: Overview of the number of vehicles stopped for roadside checks by type of tachograph

6. Checks at the premises

The total share of working days checked at premises increased by 14% to an EU average of 40%¹⁴. In total, Member States checked around 641,000 drivers during 2017-2018, which confirms a decreasing trend regarding the amount of drivers checked at the premises with a 3% decrease since 2015-2016. The number of drivers checked at the premises decreased in a majority of the Member States, especially in Hungary (-60%) and Luxembourg (-60%). In Luxembourg, this may be explained by a 43% decrease in the number of undertakings checked while in Hungary the number of undertakings checked increased by 87%. However, some Member States covered significantly more drivers during their checks at the premises, namely in Ireland (+493%), Greece (+111%), and Germany (+47%). In Ireland, 51% fewer undertakings were checked, but a significant increase in drivers checked is observed. Greece checked 293% more undertakings following a significant decrease in the last reporting period, while a slight decrease in undertakings checked was observed in Germany in 2017-2018.

The share of drivers checked at the premises compared to all drivers controlled at premises and roadside, continued to increase throughout the years with a share of 11% (10% share in 2015-2016, 9% 2013-2014, 7% in 2011-2013 and 5% in 2009-2010).

The offence rate per undertaking was extremely high in Latvia (yet, decreased from 553 to 341 offences per undertaking checked), Poland (increased from 81 to 141 offences), Germany (decreased from 65 to 61 offences), Luxembourg (increased from 39 to 48 offences), Sweden (decreased from 76 to 40 offences), and Ireland (increased from 30 to 46 offences).

¹³ Data from Lithuania is not included due to its incompleteness.

¹⁴ Data from Finland and Lithuania is not included due to incompleteness.

Figure 1: Share of working days checked at the premises in 2011-2018

7. Offences – detection rate

Like in the last reporting period, it is almost the same group of Member States who detected over 1/5 (81%) of all offences detected. These countries are Germany (29% of total offences), Poland (22%), Austria (10%), France (5%), Spain (5%), Latvia (5%), and Italy (5%). The average share of offences detected is around 57% at the roadside and 43% at the premises of undertakings, which is stable from the last report.

Significant disparities continue to exist between Member States¹⁵. Almost the same Member States are marking the lowest offence rate in the EU: 0.06 in Bulgaria, 0.63 in Hungary, 0.82 in France, 0.74 in Romania and 0.88 in Belgium, where a large decrease is observed¹⁶. Yet, they are among the Member States with the highest working days checked in the EU. At the same time, the following Member States have very high offence rates: 18.72 in Lithuania, 11.12 in Latvia, 8.67 in Cyprus, 7.83 in Poland, 7.15 in Austria, and 5.82¹⁷ in Greece. Nevertheless, all the offence rates of these Member States slightly decreased compared to the last reporting period except from Poland, Lithuania, and Cyprus where they increased.

A significant increase in the offence rate can be observed in Cyprus (from 6.29 to 8.67), and Poland (from 6.01 to 7.83), whereas a drop was reported by Belgium (from 2.26 to 0.88), Greece (from 8.34 to 5.82), and Latvia (from 16.89 to 11.12) compared to the last report. Table 4 provides the breakdown of offences found at the roadside and premises in EU Member States in 2017-2018.

Table 4: Breakdown of offences found at the roadside and premises in 2017-2018

¹⁵ Data from Finland and Lithuania is not included due to incompleteness.

¹⁶ From 2.26 in the reporting period 2015-2016.

¹⁷ Greece has however only checked 0.7% instead of the 3% of checked working days required.

Checks at	Breaks	Rest periods	Driving time	Driving time records	Recording equipment	Lack/availability of records for other work
Roadside	15%	27%	18%	16%	17%	8%
Premises¹⁸	19%	16%	8%	40%	3%	3%
Total	17%	23%	14%	27%	12%	6%

Given these discrepancies, the enforcement practices across the EU should be aligned, leading to harmonised checks that have similar outcomes. The Commission is currently establishing a common training curriculum for EU enforcers to ensure that the training of enforcers in the EU adhere to a minimum standard, to ensure that enforcement practices are harmonised, and to integrate new elements from Mobility Package I. The European Labour Authority may also support Member States' education and training efforts.

8. Offences detected at the roadside

On average, 57% of offences were detected at the roadside in the EU, which is stable compared to 58% in the last report. The offence rates found at the roadside across the EU were very diverse. Compared to the EU average of 2.11 offences per 100 working days checked, offence rates are particularly high in Greece¹⁹ (9.93), Austria (8.37) and Lithuania (10.23), while significantly more than the EU average in Slovakia (3.97), Portugal (3.57), Czech Republic (3.53), and Luxembourg (3.51). Very low offence rates at the roadside were reported in Bulgaria (0.11), Belgium (0.33), Latvia (0.36), Denmark (0.45) Hungary (0.59), and Romania (0.81). A considerable increase in detection rate was observed in Lithuania (from 2.33 to 10.23), and Luxembourg (1.45 to 3.51), while a decrease was observed in Greece (from 11.17 to 9.93), Belgium (1.38 to 0.33), and Poland (3.21 to 2.15).

In some of the Member States, the numbers of detected offences related to non-national vehicles prevail, namely in France (86%), Luxembourg (71%), Austria (68%), United Kingdom (66%), Sweden (65%), Bulgaria (62%), Denmark (61%), and Malta (64%). This may be explained by the fact that many Member States mentioned above²⁰ performed more controls on non-national vehicles.

9. Offences detected at the premises

Offence rates at the premises of undertakings in the EU are also significantly diverging²¹. Several Member States were well above the EU average of 4.35 with the highest detection rate in Latvia (18.34), Poland (16.68), Cyprus (13.55), the Netherlands (10.20), and Germany (8.94). This stands in contrast to countries with a very low detection rate such as Portugal (0)²², Bulgaria (0.02), Greece (0.17), United Kingdom (0.31), Romania (0.40), France (0.49), Denmark (0.53), Hungary (0.69), Austria (0.76), and Spain (0.83). These countries also reported low detection rates in the last report.

¹⁸ Latvia did not provide categorisation of offences at the premises.

¹⁹ Greece has not met the threshold of working days checked.

²⁰ France, Luxembourg, Austria, United Kingdom and Denmark.

²¹ Lithuania is not included, as working days checked at premises were not reported.

²² Portugal only registered offences at premises for carriage of passengers.

Compared to 2015-2016, there is a significant rise in detection rates in Cyprus (from 10.61 to 13.55) and Poland (12.04 to 16.68), while rates significantly decreased in Latvia (from 29.27 to 18.34), Germany (11.27 to 8.94), Luxembourg (6.69 to 4.40), and Italy (5.11 to 3.88).

10. Categories of infringements detected at roadside

The main types of infringements detected at the roadside by Member States remained on average relatively similar to the last report in terms of share of the total offences detected at the roadside with increases or decreases of no more than 1%.

Offences on the recording equipment, which comprise offences on incorrect functioning and misuse or manipulation of the tachograph, remained stable in 2017-2018. Manipulation and misuse of the tachograph constituted the majority of this category with 14% of the overall offences (16% in 2015-2016) at the roadside. In Germany (28%) and the UK (27%) manipulation and misuse even made up around a third of their offences found. Authorities informed the Commission that tachograph fraud and manipulation becomes increasingly sophisticated and more difficult to detect. Yet, the number of digital tachographs steadily increase with data stored in these, and thus reducing the possibility to conceal or falsify driver cards and commit fraud or manipulation, as reported by Slovak authorities.

Looking at national figures, the detected infringements on driving time were particularly high in Luxembourg (37%) and Finland (39%), while offences on breaks were high in Cyprus (significant increase from 31% to 48%), Ireland (significant increase from 30% to 47%), Sweden (38%) and Slovakia (35%). Offences in rest periods were significant in Belgium (43%), Croatia (41%), Malta (43%), Sweden (43%) and Spain (41%). In the Czech Republic (47%), Italy (46%) and Latvia (39%), the share of infringements related to driving records is significant compared to the majority of Member States. The EU average for infringements of providing records for other work is very low in the majority of Member States, but constitutes a greater share in the Member States such as Germany (14%), Estonia (14%), and Poland (12%).

11. Categories of infringements detected at premises

Compared to the last report, offences detected at the premises²³ of undertakings remain stable with a 1% decrease. Yet, the numbers decreased in far most Member States with significant decreases reported compared to the last reporting period by Portugal (-96%), United Kingdom (79%), and Latvia (63%). Large percentage increases were reported by Sweden (240%), Greece (195%), Malta (129%), and Poland (70%). Thus, the stable trend is mostly maintained based on 253,430 more infringements reported by Poland.

The number of infringements detected regarding breaks decreased from 26% to 19%, rest periods from 21% to 16%, and driving time from 10% to 8%. However, an increase was observed related to driving time records (from 33% to 40%), recording equipment and records for other work (both from 3% to 5%). An increasing number of infringements detected for driving time records, which have to be kept at least for one year by the transport undertakings, can also be observed since 2013-2014. This offence was significantly noticed at the premises of undertakings in Poland (83% of offences detected at premises), Italy (62%), and Hungary (46%). Italian authorities previously explained that the low fines for missing driving records

²³ Latvia did not provide a full or no breakdown of total offences at the premises.

would encourage drivers and operators to claim that they are not in possession of driving time records rather than risking to be fined for other offences that are subject to significantly higher fines.

A high number of driving time offences was detected in Greece (52%), Malta (50%)²⁴ Lithuania (33%), France (31%), and Portugal (30%). Offences on breaks were frequently detected in Ireland (59%), Denmark (49%), Cyprus (47%), Finland (46%), and Germany (45%). Infringements on rest periods constituted a great share in Estonia (56%), Romania (54%), Luxembourg (44%), Slovakia (44%), and Croatia (42%).

Offences on recording equipment constituted 3% and amounted to 49,308 in 2017-2018. Their national share was particularly high in United Kingdom (54%) and Netherlands (28%). Infringements on the lack and availability of records of other work were in particular high in Sweden where they constituted 33% of the national offences detected at the premises (decreased from 46%). The Swedish authorities explained that the numbers reported were higher because infringements related to not using manual input when required to do so were included²⁵.

12. Cooperation between Member States

According to Directive 2006/22/EC, Member States are obliged to undertake no less than six concerted roadside checks per year with at least one other Member State. Eight Member States²⁶ did not provide information on the number of concerted checks, while three others did not provide any information about concerted checks at all²⁷. Out of the 17 Member States that did provide information on checks, 12 Member States²⁸ met the required number of concerted checks per year. Thus, both the number of Member States providing data and that met the required number of concerted checks has decreased.

There are irregularities due to the fragmented data submitted. Some Member States include the total amount of concerted checks over a two-year period, which does not make it possible to conclude whether these Member States comply with the obligation to organise at least six concerted checks per year.

Most Member States participated in concerted checks through the European Traffic Police Network (TISPOL) and Euro Control Route (ECR) cooperation.

Table 5 below presents the number of concerted checks and exchange of experience carried-out by Member States in 2017-2018. It also provides an overview of the focus of these concerted checks and exchange of experience, as well as which Member States cooperated. Some Member States reported that concerted checks contribute to knowledge-sharing, and allows for reviewing and harmonising interpretations of provisions in European legislation²⁹.

Table 5: Overview of concerted checks per Member States

13. Penalties

Article 19 of Regulation (EC) No 561/2006 sets out that Member States shall lay down rules on penalties that are to be effective, proportionate, dissuasive and non-discriminatory. Member States shall notify the Commission of these measures and the rules on penalties. Most Member States reported in the area³⁰ and many reported no changes in 2017-2018³¹. For the current report, the Commission has been notified of the following:

³⁰ Croatia, Germany, Greece, Malta, and Poland. These countries also reported changes: Austria, Bulgaria, Czech Republic, Denmark, Estonia, Hungary, Sweden

³¹ Belgium, Cyprus, Finland, France, Ireland, Italy, Latvia, Lithuania, Luxembourg, Netherlands, Portugal, Romania, Slovakia, Slovenia, and United Kingdom.

Some Member States made changes to legislation to harmonise categories of infringements to Commission Regulation (EU) 2016/403³². In this manner, some penalties and categorisations of Very Serious Infringements (VSI) and Most Serious Infringements (MSI) were changed in e.g. Czech Republic, Denmark, Sweden, and Hungary.

The Czech Republic reduced the fines imposed and changed the categorisation of offences in 2017. For example, they impose fines of up to CZK 350,000 (approx. EUR 13,562) based on individual assessment of cases for tachograph related infringements.

Denmark reduced fines to 50 DKK for each time that the limit on driving time is exceeded by 1% for the driver and twice as much for the company, i.e. DKK 100 for each per cent. There is a scope for further reduction of the fines for infringement of Article 7, when there are mitigating circumstances. The changes were made on account of the particular interplay between driving times and breaks in the article, which means that taking break only a few minutes shorter than required can result in the maximum driving time being significantly exceeded. Denmark has a graded fines system in which the fee for the driver must be graduated with fees for minor infringements being DKK 2,000 and for very serious infringements DKK 4,000.

In Sweden, administrative fees were differentiated in accordance with the categorisation in Regulation (EU) 2016/403 and penalty fees were adjusted. Additionally, accumulated penalties regarding VSI and MSI under Regulation (EC) 561/2006 were introduced and adjusted. The maximum amount of penalty fees that can be imposed on a company was changed from 200,000 or equivalent to 10% of the company's annual revenue to 800,000 SEK or equivalent to 1% of the annual revenue.

Member States such as Bulgaria, Sweden and Hungary introduced increased penalty fees. The Bulgarian authorities comment that these increased sanctions have stronger deterrent effect, leading to a reduction in traffic offenses and an increase in road safety.

For example in Sweden, the accumulated penalties result in higher sanction fees depending on to what extent a driver breaks a rule. However, VSI and MSI have roughly the same fines, since, according to Swedish legislation, no individual driver should receive a fine exceeding SEK 10,000.

Moreover, Estonia made a number of changes to legislation regarding fines for violating requirements to tachographs, recording sheets and driver cards. Austria also made changes to legislation regarding working and rest times.

At the time of writing this report, a new Article 19(1) of Regulation (EC) No 561/2006 has been introduced with Mobility Package I. According to this Article, Member States are obliged to inform the Commission about changes to penalties, and the Commission is required to publish this information on a dedicated website in all official EU languages³³.

³² Commission Regulation (EU) 2016/403 of 18 March 2016 supplementing Regulation (EC) No 1071/2009 of the European Parliament and of the Council with regard to the classification of serious infringements of the Union rules, which may lead to the loss of good repute by the road transport operator, and amending Annex III to Directive 2006/22/EC of the European Parliament and of the Council

³³ Regulation (EU) 2020/1054 of the European Parliament and of the Council of 15 July 2020 amending Regulation (EC) No 561/2006 article 19(1).

Fig. 2: Offence rate at the roadside and premises checks by Member States in 2011-2018

14. Exceptions granted by Member States

According to Article 13 of Regulation (EC) No 561/2006, Member States may grant exceptions from the application of provisions on driving times, breaks and rest periods, provided that certain specific conditions are met and that the overall objectives of the Regulation are not prejudiced. Member States are obliged to inform the Commission of the exceptions granted.

The table below illustrates the exceptions, which have been introduced since the entry into force of Regulation (EC) No 561/2006. The information is also available on the Commission's website³⁴.

1. The following Member State introduced additional restrictions:
 - a. The United Kingdom: a vehicle does not fall within the description specified unless the vehicle:
 - (a) is being used for the provision of ambulance services- (i) by a relevant National Health Service (NHS) body, or (ii) in pursuance of arrangements made by or at the request of a relevant NHS body, or made with the Secretary of State or with the Welsh or Scottish Ministers;
 - (b) is being used for the transport of organs, blood, equipment, medical supplies or personnel - (i) by a relevant NHS body, or (ii) in pursuance of arrangements of the kind mentioned in paragraph (a)(ii)
 - (c) is being used by a local authority to provide, in exercise of social services functions - (i) services for elderly people, or (ii) services for persons to whom section 29 of the National Assistance Act 1948 (welfare arrangement for physically and mentally handicapped persons) applies;
 - (d) is being used by Her Majesty's Coastguard, a general lighthouse authority or a local lighthouse authority;
 - (e) is being used for the purpose of maintaining railways by the British Railways Board, any holder of a network licence (within the meaning of Part 1 of the Railways Act 1993) which is a company wholly owned by the Crown (within the meaning of that Act), Transport for London, any wholly owned subsidiary of Transport for London, a Passenger Transport Executive or a local authority
 - (f) is being used by the British Waterways Board for the purpose of maintaining navigable waterways
2. The following Member States introduced additional restrictions:
 - a. Estonia - within a radius of 50 km of the place where the vehicle is usually based, including towns within this area
 - b. France - only vehicles or combinations of vehicles up to 7,5 tonnes and only within a radius of 50 km
 - c. Slovenia – within a radius of up to 50 km
 - d. Spain – agriculture etc. own activity within a range < 50 km
 - e. The United Kingdom - a vehicle which is being used by a fishery undertaking does not fall within the description specified unless the vehicle is being used:
 - (a) to carry live fish, or

(b) to carry a catch of fish from the place of landing to a place where it is to be processed

3. The following Member States introduced additional restrictions:
 - a. Slovenia - within a radius of up to 50 km
4. The following Member States introduced additional restrictions:
 - a. Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Finland, France, Hungary, Italy, Latvia, Lithuania, Luxembourg, the Netherlands, Poland, Portugal, Slovakia, Spain – within a radius < 50km
 - b. The United Kingdom – vehicles between 3.5 - 7.5 tonnes used by universal service providers within a 50 km radius of the base of the undertaking require a tachograph
5. The following Member States introduced additional restrictions:
 - a. France - operating on islands <400 square km
 - b. Spain – operating on islands < 250 square km
6. The following Member States introduced additional restrictions:
 - a. Croatia, Cyprus, Czech Republic, Estonia, Finland, France, Hungary, Lithuania, Poland, Portugal, Slovakia, Spain – within a radius < 50km
7. The following Member States introduced additional restrictions:
 - a. Italy - it refers only to the obligation of equipping and using tachograph
 - b. Luxembourg - exception only for the (learning) driver, instructor must respect Regulation (EC) No 561/2006
8. The following Member States introduced additional restrictions:
 - a. Austria:
 - (a) vehicles used by the regional authorities' road construction offices and driven by employees of the provinces or municipalities are entirely exempted
 - (b) vehicles used in connection with sewerage, flood protection, water, gas and electricity supply, telegraph and telephone services, radio and television broadcasting, and the detection of radio or television transmitters or receivers are entirely exempted where driving of vehicles does not constitute the driver's main activity
 - (c) vehicles used by household refuse collection authorities are exempted only from the rules on breaks under Article 7 of Regulation (EC) No 561/2006
 - (d) vehicles used in winter by road construction offices, where not covered by the exemption under point 9 a.(a), are exempted only from the rules on breaks under Article 7 of Regulation (EC) No 561/2006
 - b. France - for door-to-door household refuse collection and disposal, only within a radius of 100 km
9. The following Member States introduced additional restrictions:
 - a. Estonia - owner/authorised user of a vehicle with 10-17 seats who is a parent of 4/more children, respective entry made on a registration certificate of the vehicle and the vehicle is used for non-commercial passenger transport
 - b. France - not for the transport of children
10. The following Member State introduced additional restrictions:
 - a. Spain - only when own activity
11. The following Member States introduced additional restrictions:
 - a. Austria - vehicles used to collect raw milk from farms exempted only from the rules on breaks under Article 7 of Regulation (EC) No 561/2006

- b. Estonia, Latvia and Lithuania, as of 1/01/2008, mutually apply the exception from Articles 5 to 9 to vehicles used for milk collection from farms,...etc., only in cases where the service radius does not exceed 100 km
- c. France - within a radius of up to 150 km of the base of the undertaking
- d. Germany – within a radius of 100km
- e. Spain – milk/animal feed from /to farms within a range < 100 km

12. The following Member States introduced additional restrictions:

- a. Austria – exception only from the rules on breaks under Article 7 of Regulation (EC) No 561/2006
- b. Ireland - vehicles specially designed for mobile banking, exchange and saving transactions

13. The following Member State introduced additional restrictions:

- a. Germany - within a radius of up to 250 km of the base of the undertaking

14. The following Member State introduced additional restrictions:

- a. The Netherlands – on or between hub facilities within a range of 5 km

15. The following Member State introduced additional restrictions:

- a. Belgium, Croatia, Cyprus, Czech Republic, Estonia, Finland, France, Hungary, Latvia, Lithuania, the Netherlands, Poland, Portugal, Slovakia, Spain, Sweden – within a radius < 50km

15. Comments and proposals

A number of Member States provided comments and proposals related to the enforcement of the EU road transport social rules.

Some Member States referred to the training of enforcers at national level with comments from Austria, Portugal, Greece and Italy. Austrian authorities shared the fact that the training programme of their Federal Ministry of the Interior and the Federal Ministry of Labour, Social Affairs and Consumer Protection includes regular courses for the inspection bodies. This covers social legislation and the detection of manipulation based on the TRACE project³⁵. Austria introduced further training of officers in September 2016, while Portuguese authorities await approval of their training programme at the time of reporting.

Member States introduced new systems to check compliance. Luxembourg introduced a specific system for driving times and rest periods for drivers of vehicles used for carriage of passengers, while the Netherlands brought attention to further knowledge enrichment and, where appropriate, purchased materials. The Netherlands focuses on attaining the right technology e.g. on desk tacho in order to better monitor and investigate more drivers digitally in the beginning of 2022. The recently adopted Mobility Package I shall encourage further harmonisation of enforcement. The Commission will also elaborate common criteria for training of enforcers across the EU, which would allow for a more consistent approach to enforcement throughout the EU.

Italy and Slovakia consider that the digitalisation of tachographs will facilitate the enforcement of social legislation. Indeed, Member States reported that the data recorded in the digital tachographs significantly reduces the possibility of concealing or falsifying and to a greater degree forces the drivers to comply with the social legislation. The new smart tachograph 2, whose technical specifications should be adopted in 2021, will allow for the recording of even more data to facilitate enforcement of the new social legislation, such as border crossings and loading and unloading. This combined with increased awareness, should lead to better and smarter enforcement of the social legislation in road transport. Other Member States reported that increasing the amount of sanctions would have a deterrent effect and would result in less offences.

Italian authorities reported difficulties due to the complexity and detailed rules of the controls, which entails a considerable effort with extensive human and material resources. They examine the challenges in reaching the required ratio of checks at the premises.

Swedish authorities commented on the content of this biennial report. They emphasised that the report should reflect all infringements in accordance with appendix III of Regulation (EU) No 2016/403, as infringements towards other specific articles are not included, e.g. with reference to the number of infringements on the availability of records of other work.

16. Interpretation of Regulation (EC) No 561/2006 and Directive 2002/15/EC

In the recent years, the Court of Justice of the European Union (CJEU) shed light on interpretation of Regulation (EC) No 561/2006 by means of the rulings in cases Case C-231/18 NK and Joined Cases C-203/18 and C-374/18. These cases related to the

³⁵https://ec.europa.eu/transport/sites/transport/files/modes/road/social_provisions/doc/trace_explanatory_text_en.pdf

interpretation of the two exceptions provided in Article 13(1) of Regulation (EC) No 561/2006.

In Case C-231/18 NK, the Court ruled on the interpretation of the term '*local markets*' in the exception related to the transport of live animals from farms to local markets provided for in Article 13(1)(p)³⁶. In its judgment of 7 February 2019³⁷, the CJEU ruled that the term '*local markets*' must be interpreted as referring neither to the transaction carried out between a livestock wholesaler and a farmer nor to the livestock wholesaler themselves. Thus, the exception must be narrowly applied and cannot be extended to include vehicles transporting live animals directly from the farm to the slaughterhouse.

In Joined cases C-203/18 and C-374/18, the interpretation of the exception referred to in Article 13(1)(d)³⁸ related to the transport by universal service providers to deliver items as part of the universal service. The question at stake was whether the exception set out in Article 13(1)(d) of Regulation (EC) No 561/2006 should be interpreted as covering only vehicles or combinations of vehicles that are used exclusively for the purpose of delivering packages in the context of the universal service, or can it additionally be applied where the vehicles or combinations of vehicles are used, predominantly or to a degree determined in some other way, also for the purpose of delivering packages in the context of the universal service. The CJEU adopted a strict interpretation of this exception and ruled that Article 13(1)(d) of Regulation (EC) No 561/2006 must be interpreted as meaning that the exception which it lays down covers only vehicles or combinations of vehicles that are used exclusively, during a particular transport operation, for the purpose of delivering items as part of the universal postal service.

Regarding judicial interpretation by national courts, the Member States reported few national Court decisions interpreting Directive 2002/15/EC during 2017-2018. Most ruling regarded the interpretation of breaks and rest periods.

The Supreme Court of Greece ruled that the provisions of Directive 2002/15/EC, which lay down that break and rest periods are not considered working time, do not prevent the enactment of national regulations to better regulate these time periods for tourist bus drivers³⁹. The Swedish authorities indicated that they were waiting for a ruling in a case related to the possibility of concluding a collective agreement derogating from parts of the legal act implementing Directive 2002/15/EC.

Spain had a number of court cases related to collective agreements, holiday pay, travelling time, and carriage of passengers. One particular case⁴⁰ related to the event of a change in the working day - regular working day, continuous hours, rest periods and their nature and

³⁶ According to Article 13(1)(p), national exceptions may be granted to vehicles used for the carriage of live animals from farms to local markets and vice versa or from markets to local slaughterhouses within a radius of up to 100 km.

³⁷ <http://curia.europa.eu/juris/document/document.jsf?text=&docid=210562&pageIndex=0&doclang=en&mode=req&dir=&occ=first&part=1&cid=2820408>

³⁸ According to Article 13(1)(d), national exceptions may be granted to vehicles with a maximum permissible mass not exceeding 7,5 tonnes used by universal service providers as defined in Article 2(13) of Directive 97/67/EC to deliver items as part of the universal service.

³⁹ Judgments nos. 1064/2014 and 601/2017 related to Article 10 of Presidential Decree 167/2006.

⁴⁰ Judgment No 758/2018 of 14 September of the High Court of Justice of Madrid (Social Chamber, Section 1a) (AS 2019\ 925).

services at night - and the impact on the structure of the wage in passenger transport. The trade union and work council took the position that a technical stop must be counted as part of the day (either as working time or time of presence), while the undertaking considered it neither working time nor time of presence. The court ruled that these periods of compulsory rest for drivers of the company are neither time of presence nor working time.

Estonia reported that legal disputes concerning the implementation of Directive 2002/15/EC had been settled by courts of first instance. In Slovenia, doubts regarding the hierarchy of legal acts on the issue of whether or not lunch breaks should be counted as working time were interpreted.

17. Monitoring and control arrangements of Directive 2002/15/EC in Member States

All Member States implemented Directive 2002/15/EC. The monitoring of implementation of the Directive is ensured at national level by different authorities depending on the Member State. The bodies responsible for the monitoring and control arrangements of Directive 2002/15/EC can be the labour inspectorate, road transport agency, occupational health and safety authority, police, road safety authorities and road transport inspections.

18. Issues in relation to enforcement of Directive 2002/15/EC

A majority of Member States did not report having experienced issues in relation to enforcement of Directive 2002/15/EC. Some Member States shared specific issues they face at the national level.

The Cypriot authorities reported difficulties when checking compliance with the provisions of Directive 2002/15/EC in the situation where drivers frequently switch vehicles. These difficulties arise for instance when a driver uses different generations of tachographs on each of the vehicles, or when he or she drives both vehicles covered under Directive 2002/15/EC and vehicles benefitting from an exemption from working time rules. Similarly, the Slovenian authorities reported having met difficulties when checking the working time of drivers employed simultaneously by several undertakings. Notwithstanding the increasing share of vehicles equipped with a digital tachograph, according to the Slovenian authorities this means that checks must still be carried out comparing data from various sources. Several Member States⁴¹ reported a lack of human resources to secure adequate enforcement of their national regulations stemming from Directive 2002/15/EC.

The feedback from Member States shed light upon a need for further clarification of some of the definitions contained in the Directive. In particular, the Portuguese authorities called for further clarification on the definition of ‘periods of availability’, as also addressed in judicial interpretations by e.g. Spain. Likewise, Germany reported experiencing difficulties assessing which activities can be counted as ‘working time’ when reading digital data. As in the previous reporting period, Slovakia reported its infrastructure network to be lagging behind considering the growth of road freight transport, and stressed that this could have adverse implications for road safety. The Slovak authorities mentioned the drivers’ lack of knowledge of EU social rules as a significant obstacle to enforcement. According to the Slovak authorities, there is therefore a crucial need for better training of the drivers in this area.

⁴¹ Germany and Luxembourg.

Sweden also reported low awareness of the existing legal framework, in particular among employers and self-employed drivers.

Two Member States formulated direct suggestions to improve the current regulatory framework. The Hungarian authorities suggested examining the possibility of integrating Directive 2002/15/EC and Regulation (EC) No 561/2006 into a single regulatory framework. The Slovak suggestions revolved around the development of stricter sanction mechanisms, including mandatory payment of fines for foreign drivers during roadside checks and new recovery procedures for sanctions linked to serious infringements following EU classification. The Slovak authorities also recommended harmonising the cost of penalties across the EU.

19. Stakeholders' views on implementation of Directive 2002/15/EC in Member States

Only 12 Member States⁴² clearly indicated that social partners had been consulted for the purpose of this reporting exercise. This number is slightly higher compared to the last report with 10 Member States, but still low compared to the previous two reporting periods. In all Member States, this consultation consisted in getting the views of representatives of employers and trade unions. In five out of 12 Member States⁴³, the views of social partners were not reflected in a separate section or paragraph, and in three of these⁴⁴, it was indicated that there was no distinct feedback from social partners. In these Member States, the feedback was rather incorporated throughout the document, indistinctly from the views of national authorities. However, the feedback from social partners was an important element of the report from seven Member States⁴⁵. Therefore, opinions from social partners cannot be analysed as they do not constitute a representative sample. The received feedback from national social partners can be found in the table below. The Commission would like to remind Member States that Article 13(1) of Directive 2002/15/EC requires them to include the views of both sides of industry as part of this reporting exercise.

Feedback from national social partners

- In Germany, the social partners asked for better cooperation between the supervisory authorities in Europe. They stressed that these authorities should be adequately staffed to improve control frequency, and be given more effective monitoring competences. They also raised the issue of working time other than driving time not being sufficiently covered by Directive 2002/15/EC.
- In Italy, the social partners deplored that Directive 2002/15/EC had fallen short of restoring fair competition. They also called for enhanced cooperation between national authorities, in particular as regards the payment of fines. They consider that there is a need for further clarification of certain definitions of the Directive, in particular that of “working time” and that of “time devoted to all road transport activities”. They suggested the creation of a specific status for mobile workers.
- The Slovak Confederation of Trade Unions reported that the general lack of knowledge of the

⁴² Cyprus, Estonia, Germany, Greece, Italy, Lithuania, Poland, Portugal, Slovakia, Slovenia, Sweden and the United Kingdom.

⁴³ Cyprus, Estonia, Lithuania, Poland and Portugal.

⁴⁴ Cyprus, Lithuania and Poland.

⁴⁵ Germany, Greece, Italy, Slovakia, Slovenia, Sweden and the United Kingdom.

legislation on occupational health and safety of both employees and employers resulted in a lack of compliance with these rules.

- In Slovenia, a trade union complained that the non-inclusion of LCVs (vehicles under 3,5 tonnes) in the scope of the social rules created distortions of competition and endangered road safety. The same trade union also complained that there was a lack of labour inspectors to curb the offence rate effectively. They reported on the specific case of drivers involved in the carriage of passengers, who work both on long and short (<50 km) lines - the latter not being covered by the same provisions on working time. A Slovene haulier association argued that self-employed drivers should be excluded from the scope of the Directive, especially since it had failed to curb the rise of bogus self-employment.
- In Sweden, feedback from the industry was generally positive. In particular, hauliers reported that they appreciated the absence of direct sanctions and the possibility to adjust their behaviour in order to comply with the rules on working time.
- In the United Kingdom, employers' associations reported the implementing regulations to be effective and that there was no need for change. Only one reported that the whole Directive should be repealed as it was nothing but burdensome. British trade unions either had no outstanding issues, or reported that existing exemptions from the rules on working time were exploited to the detriment of the driver. They also reported that seasonal peaks of work could lead to situations in which drivers would exceed the allowed average number of working hours over the reference period of four months. To respect the 48 hours average, some drivers will simply have to stop working, and in some cases the employers would force them to use annual leave.

20. Statistics on working days checked at the roadside and premises in 2017-2018
