INFORMATION NOTE

From: General Secretariat of the Council
To: Permanent Representatives Committee/Council

Subject: Proposal for a REGULATION OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL amending Regulation (EU) 2021/1119 establishing the framework for achieving climate neutrality
- Outcome of the European Parliament's first reading
(Strasbourg, 9 to 12 February 2026)

I. INTRODUCTION

In accordance with the provisions of Article 294 of the TFEU and the Joint declaration on practical arrangements for the codecision procedure¹, a number of informal contacts have taken place between the Council, the European Parliament and the Commission with a view to reaching an agreement on this proposal at first reading.

¹ OJ C 145, 30.6.2007, p. 5.

In this context, the Chair of the Committee on the Environment, Climate and Food safety (ENVI), Antonio DECARO (S&D, IT) presented on behalf of ENVI a compromise amendment (amendment number 69) to the abovementioned proposal for a Regulation, for which the rapporteur Ondřej KNOTEK (Pfe, CZ) had prepared a draft report. This amendment had been agreed during the informal contacts referred to above. In addition, three amendments were tabled by the Europe of Sovereign Nations (ESN) and the European Conservatives and Reformists (ECR) political groups (amendments number 70 and 71 by ESN and amendment number 72 by ECR).

II. VOTE

When it voted on 10 February 2026, the plenary adopted the compromise amendment (amendment number 69) to the abovementioned proposal for a Regulation. No other amendments were adopted. The Commission's proposal as thus amended constitutes the Parliament's first-reading position which is contained in its legislative resolution as set out in the Annex hereto².

The Parliament's position reflects what had been previously agreed between the institutions. The Council should therefore be in a position to approve the Parliament's position.

The act would then be adopted in the wording which corresponds to the Parliament's position.

² The version of the Parliament's position in the legislative resolution has been marked up to indicate the changes made by the amendments to the Commission's proposal. Additions to the Commission's text are highlighted in ***bold and italics***. The symbol "■" indicates deleted text.

P10_TA(2026)0031

Framework for achieving climate neutrality

European Parliament legislative resolution of 10 February 2026 on the proposal for a regulation of the European Parliament and of the Council amending Regulation (EU) 2021/1119 establishing the framework for achieving climate neutrality (COM(2025)0524 – C10-0137/2025 – 2025/0524(COD))

(Ordinary legislative procedure: first reading)

The European Parliament,

- having regard to the Commission proposal to Parliament and the Council (COM(2025)0524),
- having regard to Article 294(2) and Article 192(1) of the Treaty on the Functioning of the European Union, pursuant to which the Commission submitted the proposal to Parliament (C10-0137/2025),
- having regard to Article 294(3) of the Treaty on the Functioning of the European Union,
- having regard to the reasoned opinion submitted, within the framework of Protocol No 2 on the application of the principles of subsidiarity and proportionality, by the Italian Senate, asserting that the draft legislative act does not comply with the principle of subsidiarity,
- having regard to the opinion of the European Economic and Social Committee of 18 September 2025¹,
- after consulting the Committee of the Regions,
- having regard to the provisional agreement approved by the committee responsible under Rule 75(4) of its Rules of Procedure and the undertaking given by the Council representative by letter of 19 December 2025 to approve Parliament's position, in accordance with Article 294(4) of the Treaty on the Functioning of the European Union,
- having regard to Rule 60 of its Rules of Procedure,
- having regard to the opinion of the Committee on Industry, Research and Energy,
- having regard to the letter from the Committee on Agriculture and Rural Development,

¹ OJ C, C/2026/37, 16.1.2026, ELI: <http://data.europa.eu/eli/C/2026/37/oj>.

- having regard to the report of the Committee on the Environment, Climate and Food Safety (A10-0223/2025),
- 1. Adopts its position at first reading hereinafter set out²;
- 2. Calls on the Commission to refer the matter to Parliament again if it replaces, substantially amends or intends to substantially amend its proposal;
- 3. Instructs its President to forward its position to the Council, the Commission and the national parliaments.

² This position replaces the amendments adopted on 13 November 2025 (Texts adopted, P10_TA(2025)0262).

Position of the European Parliament adopted at first reading on 10 February 2026 with a view to the adoption of Regulation (EU) 2026/... of the European Parliament and of the Council amending Regulation (EU) 2021/1119 as regards the setting of a Union intermediate climate target for 2040

THE EUROPEAN PARLIAMENT AND THE COUNCIL OF THE EUROPEAN UNION,

Having regard to the Treaty on the Functioning of the European Union, and in particular Article 192(1) thereof,

Having regard to the proposal from the European Commission,

After transmission of the draft legislative act to the national parliaments,

Having regard to the opinion of the European Economic and Social Committee⁵,

After consulting the Committee of the Regions,

Acting in accordance with the ordinary legislative procedure⁶,

⁵ OJ C, C/2026/37, 16.1.2026, ELI: <http://data.europa.eu/eli/C/2026/37/oj>.

⁶ Position of the European Parliament of 10 February 2026.

Whereas:

- (1) The outcome of the first global stocktake under the Paris Agreement⁷, concluded at the United Nations Climate Change Conference at the end of 2023, found that Parties are putting increasingly effective climate policies in place, but that urgent additional action is needed to put the world fully on track for achieving the goals of the Paris Agreement.
- (2) Through the adoption of Regulation (EU) 2021/1119 of the European Parliament and of the Council⁸, the Union has enshrined in legislation a binding objective of economy-wide climate neutrality by 2050, thus reducing *greenhouse gas* emissions to net zero by that date, and the aim of achieving negative emissions thereafter. *That Regulation also* established a binding intermediate Union climate target for 2030 and *required* the setting of a Union-wide intermediate climate target for 2040.
- (3) Taking into account the scientific advice by the European Scientific Advisory Board on Climate Change (*the ‘Advisory Board’*) and based on a detailed impact assessment, the Commission presented, in its communication of 6 February 2024 entitled ‘Securing our future. Europe's 2040 climate target and path to climate neutrality by 2050 building a sustainable, just and prosperous society’, a recommended target of a 90 % net greenhouse gas emission reduction for 2040 compared to 1990 levels.

⁷ OJ L 282, 19.10.2016, p. 4.

⁸ Regulation (EU) 2021/1119 of the European Parliament and of the Council of 30 June 2021 establishing the framework for achieving climate neutrality and amending Regulations (EC) No 401/2009 and (EU) 2018/1999 (‘European Climate Law’) (OJ L 243, 9.7.2021, p. 1, ELI: <http://data.europa.eu/eli/reg/2021/1119/oj>).

- (4) In order to propose the Union 2040 climate target, the Commission considered the following elements: the best available and most recent scientific evidence, including the latest reports of the Intergovernmental Panel on Climate Change (IPCC) and the Advisory Board; the social, economic and environmental impacts, including the costs of inaction; the need to ensure a just and socially fair transition for all; cost-effectiveness and economic efficiency; competitiveness of the Union's economy, in particular that of small and medium-sized enterprises (SMEs) and of sectors most exposed to carbon leakage; best available cost-effective, safe and scalable technologies; energy efficiency, **including** the 'energy efficiency first' principle; energy affordability and security of supply **for all Member States**; fairness and solidarity between and within Member States; the need to ensure environmental effectiveness and progression over time; the need to maintain, manage and enhance natural sinks in the long term and protect and restore biodiversity, including in the marine environment; investment needs and opportunities; international developments and efforts undertaken to achieve the long-term objectives of the Paris Agreement and the ultimate objective of the United Nations Framework Convention on Climate Change; and existing information on the projected indicative Union greenhouse gas budget for the 2030-2050 period.
- (5) In order to achieve the 2040 climate target it is essential, inter alia, to fully implement the agreed 2030 *policy* framework; to ensure and provide support to **enhance and bolster** the competitiveness and resilience of the European industry; **to ensure sustainable food systems as well as the resilience of rural communities and food security through a sustainable and robust European agricultural sector**; to ensure transition pathways based on best available cost-effective, safe and scalable technologies; **and to** set a greater focus on a just transition **for affected regions, sectors and vulnerable households** that leaves no one behind, **for example through support from the Social Climate Fund⁹, in the transition to climate neutrality. Furthermore, it is essential to** ensure fair competition with international partners **and to make effective use of all Union economic instruments to deter and counter unfair trade practices, to** decarbonise the energy system with **a technologically neutral approach that includes** all zero- and low carbon energy solutions

⁹ Regulation (EU) 2023/955 of the European Parliament and of the Council of 10 May 2023 establishing a Social Climate Fund and amending Regulation (EU) 2021/1060 (OJ L 130, 16.5.2023, p. 1, ELI: <http://data.europa.eu/eli/reg/2023/955/oj>).

(including renewables, nuclear, energy efficiency, storage, carbon capture and storage (CCS), carbon capture and utilisation (CCU), carbon removals, geothermal and hydro-energy, *sustainable bioenergy* and all other current and future net-zero energy technologies), *to reduce import dependencies and diversify the Union's sources of critical raw materials*, and to organise a strategic dialogue on the post-2030 framework with all relevant sectors ■ , including ■ industry *and transport*.

(6) *In its conclusions of 23 October 2025, the European Council stated that enhancing the Union’s competitiveness, bolstering its resilience and advancing the green transition are mutually reinforcing objectives that must be pursued together, and called for an urgent stepping up of efforts to secure the supply of affordable and clean energy and build a genuine Energy Union before 2030, including by leveraging the new Energy Union Task Force, as well as for accelerating work aimed at lowering energy prices and supporting sustainable energy production domestically in the Union. With a view to ensuring a cost-effective, fair and just, pragmatic and socially balanced transition towards climate neutrality, taking into account different national circumstances, both private and public sector investment, including through Union funding, will be a key enabler for the clean transition, for example by supporting and accelerating the deployment and commercialisation of innovative technologies across Member States, by supporting access to industrial renewal and decarbonisation, clean tech manufacturing and the modernisation of energy systems, and by providing affordable solutions across the economy and for citizens throughout the Union. The Clean Industrial Deal, launched in the Commission’s communication of 26 February 2025 entitled ‘The Clean Industrial Deal: A joint roadmap for competitiveness and decarbonisation’, is putting the conditions *in place* for a successful transition, focusing on both decarbonisation and industrial renewal, which will contribute to boosting demand for ‘made in Europe’, and support mechanisms for European industry, including an industrial decarbonisation bank and the new simplified State aid framework.*

- (7) *The European Council recalled in its conclusions of 23 October 2025 the urgent need to intensify collective efforts to ensure Europe's industrial renewal, modernisation and decarbonisation in a technologically neutral manner. It underlined in that context that particular attention should be paid to traditional industries, notably the automotive, shipping and aviation industries as well as energy-intensive industries, such as steel and metals, chemicals, cement, glass and ceramics, and pulp and paper, so that they remain resilient and competitive in a global market and a challenging geopolitical environment. In that regard, it welcomed the Commission proposal to protect the European steel sector from unfair impacts of global overcapacity. It also welcomed the Commission's intention to take forward the review foreseen under Regulation (EU) 2019/631 of the European Parliament and of the Council¹⁰, and it called for the swift presentation of that proposal, taking into account technological neutrality and European content. In that context, the European Council welcomed the letter from the President of the Commission on climate and competitiveness of 20 October 2025.*
- (8) *The Clean Industrial Deal focuses also on better access to public and private finance, an integrated and interconnected Union energy market ensuring energy security, promotion of a circular economy, a global level playing field including through the effective implementation and extension of the carbon border adjustment mechanism¹¹ to downstream goods, introducing anti-circumvention measures and action to address export carbon leakage, and clear enabling conditions such as streamlined permitting and the uptake and scaling of clean technologies, in order to strengthen the Union's competitive edge and industrial competitiveness and strengthen innovation in the Union, taking into account the challenging geopolitical environment.*

¹⁰ Regulation (EU) 2019/631 of the European Parliament and of the Council of 17 April 2019 setting CO2 emission performance standards for new passenger cars and for new light commercial vehicles, and repealing Regulations (EC) No 443/2009 and (EU) No 510/2011 (OJ L 111, 25.4.2019, p. 13, ELI: <http://data.europa.eu/eli/reg/2019/631/oj>).

¹¹ Regulation (EU) 2023/956 of the European Parliament and of the Council of 10 May 2023 establishing a carbon border adjustment mechanism (OJ L 130, 16.5.2023, p. 52, ELI: <http://data.europa.eu/eli/reg/2023/956/oj>).

- (9) In light of the objective of climate neutrality by 2050, greenhouse gas emissions should, by 2040, be reduced and removals enhanced, to ensure that the net greenhouse gas emissions, that is emissions after deduction of removals, are reduced economy-wide by 90 % by 2040 compared to 1990 levels.
- (10) Priority should be given to domestic reductions in greenhouse gas emissions, complementing it by increased removals, including through both natural and technological solutions. In the development of the post-2030 policy package, due attention should be paid to the contribution of gross emission reductions versus natural and technological removals. *Natural removals have characteristics that should be taken into account, such as forest age structure, proportion of organic soils, natural variability, and uncertainties related to the impacts of climate change, to natural disturbances and to changes in methodologies.* Natural and industrial removals will play an increasing role in the Union's economy in the coming decades, in view of the need to balance greenhouse gas emissions and removals at the latest by 2050 and negative emissions thereafter. Incentives will be developed *in the context* of the review of Directive 2003/87/EC of the European Parliament and of the Council¹² in 2026, where the Commission envisages to provide for *the inclusion of* domestic permanent carbon removals in the *system* for greenhouse gas emission allowance trading within the Union (the 'EU ETS') to compensate for residual **hard to abate emissions.** *The land use, land- use change and forestry sector has a central role in a sustainable and circular bioeconomy and has the potential to provide long-term climate and environmental benefits, contributing to the clean transition of the Union economy and reducing dependencies by substituting fossil-based materials.*

¹² Directive 2003/87/EC of the European Parliament and of the Council of 13 October 2003 establishing a system for greenhouse gas emission allowance trading within the Union and amending Council Directive 96/61/EC (OJ L 275, 25.10.2003, p. 32, ELI: <http://data.europa.eu/eli/dir/2003/87/oj>).

- (11) *While some enabling policies have already been implemented and their impact is already visible, this is not yet the case for all such policies. The Commission should continue to strengthen the initiatives concerning the enabling framework and aim to accelerate their adoption to ensure that conditions are in place to support European industry and citizens throughout the transition, in full respect of Union law.*

(12) The Union has in place a regulatory framework to achieve the 2030 climate target. The legislation implementing that target consists, inter alia, of Directive 2003/87/EC, which establishes the EU ETS, Regulation (EU) 2018/842 of the European Parliament and of the Council¹³, which introduced national targets for reduction of greenhouse gas emissions by 2030, and Regulation (EU) 2018/841 of the European Parliament and of the Council¹⁴, which sets net carbon removal targets for the land-use sector. ***In order to ensure a smooth transition to the emissions trading system for buildings, road transport and additional sectors set out in Chapter IVa of Directive 2003/87/EC (the ‘ETS2’), the operation of emissions trading for those sectors should be postponed by one year and the rules set out in Article 30k(2), points (a) to (e), of Directive 2003/87/EC should apply.*** The Commission should assess how the relevant Union legislation would need to be amended in order to achieve the 2040 climate target, ***also taking into account declining natural sink capacity.*** When designing the ***post-2030 framework***, the Commission should prepare detailed impact assessments, ***taking into account its analysis of the integrated national energy and climate plans, the geopolitical environment, including the need to ensure the capacity of the Union and its Member States to rapidly increase and strengthen their defensive capacity by addressing possible burdens while maintaining incentives for industrial decarbonisation, the impacts on competitiveness, SMEs and energy intensive industries, and the impacts on energy costs and investment needs across Member States,*** and should consider taking necessary measures, including legislative proposals as appropriate. ■

¹³ Regulation (EU) 2018/842 of the European Parliament and of the Council of 30 May 2018 on binding annual greenhouse gas emission reductions by Member States from 2021 to 2030 contributing to climate action to meet commitments under the Paris Agreement and amending Regulation (EU) No 525/2013 (OJ L 156, 19.6.2018, p. 26, ELI: <http://data.europa.eu/eli/reg/2018/842/oj>).

¹⁴ Regulation (EU) 2018/841 of the European Parliament and of the Council of 30 May 2018 on the inclusion of greenhouse gas emissions and removals from land use, land use change and forestry in the 2030 climate and energy framework, and amending Regulation (EU) No 525/2013 and Decision No 529/2013/EU (OJ L 156, 19.6.2018, p. 1, ELI: <http://data.europa.eu/eli/reg/2018/841/oj>).

(13) *A number of elements to facilitate the achievement of the 2040 climate target should be appropriately reflected in those legislative proposals, including: an adequate contribution towards the 2040 climate target of high-quality international credits under Article 6 of the Paris Agreement from 2036 to 2040, in a way that is both ambitious and cost-efficient and in line with the accounting rules of the Paris Agreement, including a pilot period to initiate a high-quality and high-integrity international credit market from 2031 to 2035; the role of domestic permanent removals (such as biogenic emissions capture with carbon storage (BioCCS) and direct air capture with carbon storage (DACCS)) in the EU ETS, while ensuring the environmental integrity of the EU ETS, including the possibility to store CO₂ outside the Union, as appropriate, subject to the existence of international agreements and providing for conditions equivalent to those laid down in Union law; and enhanced and accessible flexibility across and within sectors and instruments to support a cost-effective approach whereby, for example, Member States' achievements in one sector can balance gaps in other sectors in a cost-efficient way while ensuring that each sector contributes to the efforts, and ensuring that possible shortfalls in one sector would not be at the expense of other economic sectors, without prejudice to each Member State's possibility to make use of the flexibilities. In operationalising the use of international credits, the Commission should take into account the need to ensure a level playing field across Member States and the opportunity to support strategic Union partnerships in line with the interests of the Union. The current EU ETS trajectory should be revised in the upcoming review of Directive 2003/87/EC to take into account the agreed 2040 target in a manner that would allow for a limited amount of emissions after 2039. The Commission should consider in a timely manner a slower phase-out pathway for free allocation of allowances from 2028 onwards to support decarbonisation, investment and employment in the Union, including through an industrial decarbonisation bank and a review of the market stability reserve¹⁵, while minimising the risk of carbon leakage. In order to assess the social, economic and environmental impacts, the post-2030 framework should be based on robust impact assessments. The post-2030 framework should also foster convergence*

¹⁵ Decision (EU) 2015/1814 of the European Parliament and of the Council of 6 October 2015 concerning the establishment and operation of a market stability reserve for the Union greenhouse gas emission trading scheme and amending Directive 2003/87/EC (OJ L 264, 9.10.2015, p. 1, ELI: <http://data.europa.eu/eli/dec/2015/1814/oj>).

while taking into account fairness and Member States' national circumstances and specificities, including those of islands, island Member States and outermost regions.

- (14) Since the objective of this Regulation, namely to set a Union intermediate climate target for 2040, cannot be sufficiently achieved by the Member States but can rather, by reason of its scale and effects, be better achieved at Union level, the Union may adopt measures, in accordance with the principle of subsidiarity as set out in Article 5 of the Treaty on European Union. In accordance with the principle of proportionality, as set out in that Article, this Regulation does not go beyond what is necessary in order to achieve that objective.
- (15) Regulation (EU) 2021/1119 should therefore be amended accordingly,

HAVE ADOPTED THIS REGULATION:

Article 1
Amendments to Regulation (EU) 2021/1119

Regulation (EU) 2021/1119 is amended as follows:

(1) in Article 1, second paragraph, the following sentence is added:

‘This Regulation also sets out a binding Union target for 2040.’;

(2) in Article 4, paragraphs 3, 4 and 5 are replaced by the following:

‘3. In order to reach the climate-neutrality objective set out in Article 2(1), the binding Union 2040 climate target shall be a reduction of net greenhouse gas emissions (emissions after deduction of removals) by 90 % compared to 1990 levels by 2040.

4. With a view to the period after 2030, the Commission shall review relevant Union legislation in order to enable the achievement of the target set out in paragraph 3 of this Article and the climate-neutrality objective set out in Article 2(1) and consider taking the necessary measures as appropriate and based on detailed impact assessments, in accordance with the Treaties.

■ The Commission shall *continue to* strengthen *the initiatives concerning* the enabling framework *and aim to accelerate their adoption and implementation* to ensure that conditions are in place to support *affected legal and natural persons, such as* European industry and citizens, throughout the transition, *towards the targets set out in paragraphs 1 and 3 of this Article, the climate-neutrality objective set out in Article 2(1) and a climate-neutral economy.*

5. Within the framework of the review referred to in paragraph 4, first subparagraph, in order to facilitate the achievement of the target set out in paragraph 3, the Commission shall ensure that the following elements are appropriately reflected in the legislative proposals:

- (a) from 2036, *an adequate* contribution towards the 2040 *climate* target of high-quality international credits under Article 6 of the Paris Agreement of *up to 5 %* of 1990 Union net emissions, *corresponding to a domestic reduction of net greenhouse gas emissions by 85 % compared to 1990 levels by 2040, in a way that is both ambitious and cost-efficient*, supporting the Union and third countries in achieving net greenhouse gas reduction trajectories compatible with the Paris Agreement objective to hold the increase in the global average temperature to well below 2 °C and pursue efforts to limit the temperature increase to 1,5 °C above pre-industrial levels, *ensuring the environmental integrity of those credits, while promoting the Union’s technological leadership; a pilot period from 2031 to 2035 to initiate a high-quality and high-integrity international credit market may be considered*; the origin, quality criteria and other conditions concerning the acquisition and use of any such credits shall be regulated in Union law *to ensure that they are based on credible and transformative activities in partner countries with the aim of achieving climate targets and policies compatible with the long-term temperature goal laid down in the Paris Agreement, that they are subject to robust safeguards, including ensuring integrity, avoidance of double counting, additionality, permanence, transparent governance, strong monitoring, reporting and verification methodologies, that they ensure economic, social and environmental co-benefits and human rights safeguards, and have a high ambition for the share of proceeds for adaptation and the sharing of mitigation benefits with countries concerned; when establishing the quality criteria, the Commission shall consider, where appropriate, complementing the criteria laid down under Article 6(4) of the Paris Agreement to ensure the respect of those safeguards and the highest quality of international credits, in particular with regard to permanence and human rights*;

- (b) the role of domestic permanent removals under the system established by Directive 2003/87/EC of the European Parliament and of the Council* for greenhouse gas emission allowance trading within the Union (the ‘EU ETS’) to compensate for residual *hard-to-abate* emissions ■ ;
- (c) enhanced flexibility *within and* across sectors *and instruments*, to support the achievement of targets in a *simple and* cost-effective way;
- (d) *the realistic contribution of carbon removals to the overall emission reduction effort, while taking into account the uncertainties of natural removals and ensuring that possible shortfalls would not be at the expense of other economic sectors, without prejudice to the possibility for Member States to use surplus natural removals to compensate for their emissions in other sectors;*

- (e) *the need to maintain, manage and enhance, as appropriate, natural sinks in the long term and protect and restore biodiversity, to promote sustainable and circular bioeconomy, and to take into account the effects of differences in forest age structure, natural variability and uncertainties, especially those linked to the impacts of climate change and natural disturbances in the land use, land-use change and forestry sector;*
- (f) Member States' post-2030 targets and efforts should reflect cost efficiency and solidarity, *taking into account different national circumstances and specificities, including those of islands and outermost regions;*
- (g) the best available and most recent scientific evidence, including the latest reports of the IPCC and the Advisory Board;
- (h) the social, economic and environmental impacts *across Member States, including in relation to the objectives of decarbonisation and competitiveness for European industry;*
- (i) the costs of inaction and the benefits of action over the mid-term to long-term;

- (j) the need to ensure *and support a fair and just, pragmatic, cost-effective* and socially *balanced* transition for all, *taking into account different national circumstances and paying particular attention to impacts on consumer prices, energy poverty and transport poverty and to regions and sectors, including their investment capacity, small and medium-sized enterprises (SMEs), farmers and vulnerable households affected by the transition to climate neutrality;*
- (k) simplification *and reduction of administrative burden*, technology neutrality, cost-effectiveness, economic efficiency and economic security;
- (l) climate action as a driver for investment, innovation *and increased competitiveness;*
- (m) the need to strengthen the *resilience and* global competitiveness of the Union's economy *and reduce the risk of carbon leakage*, in particular *for* SMEs and industrial sectors *that are* most exposed to carbon leakage, *including in relation to exports*, so as to ensure fair competition;
- (n) best available cost-effective, safe and scalable technologies;

- (o) energy *availability and* affordability, security of supply, energy *security and energy* efficiency, *including* the ‘energy efficiency first’ principle, *as well as the strengthening of electricity grids and interconnections with a view to building a genuine Energy Union and promoting domestically produced energy*;
- (p) *the role of zero-, low carbon and renewable fuels in the decarbonisation of transport, including road transport beyond 2030 and concrete measures to assist manufacturers of heavy-duty vehicles to reach their targets, taking into account European content*;
- (q) fairness and solidarity between and within Member States;
- (r) the need to ensure environmental effectiveness and progression over time, *while also safeguarding social cohesion and ensuring food security and a just transition*;

■

- (s) investment needs and opportunities, including access to public and private finance *as well as support for innovation and access to innovative technologies across all Member States, taking into account geographical balance*;
- (t) international developments and efforts undertaken to achieve the long-term objectives of the Paris Agreement and the ultimate objective of the *United Nations Framework Convention on Climate Change* (UNFCCC), as well as the support of the Union to its partners in addressing climate change and its impacts.

* *Directive 2003/87/EC of the European Parliament and of the Council of 13 October 2003 establishing a system for greenhouse gas emission allowance trading within the Union and amending Council Directive 96/61/EC (OJ L 275, 25.10.2003, p. 32, ELI: <http://data.europa.eu/eli/dir/2003/87/oj>).*;

(3) *in Article 4, the following paragraph is added:*

'8. From ... [one year from the adoption of this amending Regulation] and every two years thereafter, the Commission shall assess and report on the implementation of the intermediate targets and decarbonisation trajectories set out in this Regulation, taking into account the latest scientific evidence, technological advances and evolving challenges to and opportunities for the Union's global competitiveness. That assessment may be accompanied, where appropriate, by legislative proposals.'

(4) *in Article 11, first paragraph, the following points are added:*

- ‘(c) the evolving challenges to, and opportunities for, global competitiveness of European industries across Member States, in particular of energy-intensive industries and of SMEs;*
- (d) the evolution of energy prices and its impact on European industries and households;*
- (e) the socioeconomic impacts, including the effects on employment;*
- (f) technological advances and deployment across Member States and sectors of innovative technologies;*
- (g) the estimated level of net removals at Union level in relation to the targets set out in this Regulation; if the Commission finds that the estimated level of net natural removals for 2040 is significantly diverging from what would be required to achieve the 2040 intermediate target, including where that divergence is due to natural disturbances, the Commission shall propose, where appropriate, measures at Union level, including, if necessary, an adjustment of the 2040 intermediate target corresponding to, and within the limits of, the possible shortfalls, and ensure that possible shortfalls will not be at the expense of other economic sectors;*
- (h) the progress towards the intermediate targets set out in this Regulation;*
- (i) the flexibility for Member States to use high-quality international credits to fulfil up to 5 % of their post-2030 targets and efforts.’;*

(5) *in Article 11, the second paragraph is replaced by the following:*

‘The Commission’s report shall be accompanied, where appropriate, by legislative proposals to revise this Regulation, including the intermediate 2040 target, and by additional measures to strengthen the initiatives concerning the enabling framework supporting the continued effective implementation of this Regulation, in line with Article 4(5), and securing Union competitiveness, prosperity and social cohesion.’

Article 2

Postponement of the operation of emissions trading for buildings, road transport and additional sectors

The operation of emissions trading for buildings, road transport and additional sectors set out in Chapter IVa of Directive 2003/87/EC shall be postponed until 2028. The rules set out in Article 30k(2), points (a) to (e), of Directive 2003/87/EC shall apply. The provisions of Article 10a(8b) of Directive 2003/87/EC shall apply also in 2026.

Article 3
Entry into force

This Regulation shall enter into force on the twentieth day following that of its publication in the *Official Journal of the European Union*.

This Regulation shall be binding in its entirety and directly applicable in all Member States.
