SE	82.0	60.0	-15

Note: (*) The aggregate of the poverty reduction target for all Member States equals at least 15.6 million excluding Member States which do not express their target in terms of AROPE levels. (1) Denmark expresses its national poverty reduction target as a reduction in the number of persons living in households with very low work intensity (VLWI) by 30 000. (2) Germany expresses its national poverty reduction target as a reduction in the number of persons living in households with very low work intensity (VLWI) by 1.2 million, using 2020 as a baseline instead of 2019. (3) Hungary expresses its national poverty reduction target as a reduction of the material and social deprivation rate of families with children to 13%, and thereby a reduction of the number of people AROPE by 292 000. (4) Malta expresses its national poverty reduction target as a reduction of the AROPE rate by 3.1 percentage points.

Annex 2. Social scoreboard headline indicators

The analysis in the 2025 Joint Employment Report relies on the Social Scoreboard headline indicators endorsed by the Council.¹ Headline indicators respond to principles of parsimony, availability, comparability, and statistical robustness. The indicators, linked to each of the three Pillar chapters, are as follows:

- *Equal opportunities*
 - Adults' participation in learning during the last 12 months (age 25-64)
 - Early leavers from education and training (% of population aged 18-24)
 - Share of individuals who have basic or above basic overall digital skills (% of population aged 16-74)
 - Young people neither in employment nor in education and training (NEET) rate (% of population aged 15-29)
 - Gender employment gap (pps, population aged 20-64)
 - Income quintile ratio (S80/S20)
- *Fair working conditions*
 - Employment rate (% of population aged 20-64)
 - Unemployment rate (% of active population aged 15-74)
 - Long-term unemployment rate (% active population aged 15-74)
 - Gross disposable household income (GDHI) per capita growth (2008=100)²
- *Social protection and inclusion*
 - At-risk-of-poverty or social exclusion (AROPE) rate (% of total population)³
 - At-risk-of-poverty or social exclusion (AROPE) rate for children (% of population aged 0-17)⁴
 - Impact of social transfers (other than pensions) on poverty reduction (% reduction of AROP)⁵
 - Disability employment gap (pps, age 20-64)⁶

¹ The opinion by EMCO and SPC reporting on the agreement reached on the headline indicators of the revised Social Scoreboard was [endorsed by the Employment, Social Policy, Health and Consumer Affairs Council on 14 June 2021](#).

² GDHI is measured in real terms. As demanded by the Social Protection Committee, this indicator uses 'unadjusted income' (i.e. without including social transfers in kind) and dropping reference to the use of purchasing power standards (PPS) units, used in the original version of the Social Scoreboard, for consistency with the indicators based on EU-SILC.

³ Together with its three components: at risk of poverty, total population (AROP 0+), severe material and social deprivation, total population (SMSD 0+) and share of people living in households with very low work intensity (quasi-jobless households), age 0-64 (QJ 0-64). In 2021, the AROPE indicator was modified in view of the new EU 2030 headline target on reducing the number of persons at risk of poverty or social exclusion. In this context, two of its components were revised (the deprivation and the quasi-jobless households). The Severe material and social deprivation component replaces the component Severe Material Deprivation. The reference age group for quasi-jobless household changed from 0-59 to 0-64. For all the indicators that depend on income in EU-SILC, the income reference period is defined as a 12-month period. Therefore, income variables involved in the computation of the AROP and QJ indicators refer to the calendar year prior to the survey year except for Ireland (12 months preceding the survey response). The Severe material and social deprivation indicator does not have any income variable in its calculations; therefore, all the EU-SILC variables used to compute it refer to the survey year.

⁴ Together with its three sub-indicators: at risk of poverty, children (AROP 0-17), severe material and social deprivation, children (SMSD 0-17), and share of people living in households with very low work intensity (quasi jobless households), children (QJ 0-17). SMSD for children is a modified version of SMSD for the whole population, giving lower weight to adult items, in order to avoid making the indicator of children too sensitive to adult deprivations. Reference years are identical to those of indicators for the full population.

⁵ This is measured as the percentage reduction, for the total population, of the at-risk-of poverty (AROP) rate after compared to that before monetary social transfers (other than pensions). It does not include in-kind transfers related to healthcare for instance.

- Housing cost overburden (% of total population)⁷
- Children aged less than 3 years in formal childcare (% of population aged 0-3)
- Self-reported unmet need for medical care (% of population 16+)⁸

The EMCO-SPC opinion indicates further steps for the full implementation of the revised Social Scoreboard.⁹ The ‘Disability employment gap’ headline indicator temporarily uses EU-SILC as the statistical source, but is set to switch to the EU LFS for improved accuracy. Commission services including Eurostat analysed data collected from the EU-LFS in 2022 and decided to continue monitoring its quality and review the indicator as 2024 LFS-based data are available. Eurostat will support further steps to improve cross-country comparability and explore the development of additional indicators in this area. The headline indicator ‘Adult participation in learning during the past 12 months’ is also set to use the EU-LFS later, after having been collected only through the Adult Education Survey before 2022. Following thorough quality and comparability checks of 2022 data from the AES and EU LFS by Eurostat¹⁰, in September 2024, the Indicators Group of the Employment Committee reached agreement on using AES data excluding guided on-the-job training for this headline indicator for the time being.

⁶ The disability employment gap indicator is currently computed from the EU-SILC and based on the disability status as given by the Global Activity Limitation Index (GALI). Survey respondents answer the following questions: 1) ‘Are you limited because of a health problem in activities people usually do? Would you say you are ... severely limited; limited, but not severely; or not limited at all?’ Is answer to question 1) is ‘severely limited’ or ‘limited but not severely’, respondents answer the question 2) ‘Have you been limited for at least for the past 6 months? Yes or No?’. A person is considered disabled if the answer is ‘Yes’ to the second question. As computed from EU-SILC, one observes a correlation between the prevalence of disability based on the GALI concept and the disability employment gap based on it in year 2023 across Member States of the EU (Pearson correlation coefficient = -0.4).

⁷ The indicator measures the share of the population living in households where the total housing costs represent more than 40% of disposable income (both ‘net’ of housing allowances). The [Methodological Guidelines and Description of EU-SILC variables \(version April 2020\)](#) describes allowances (only means-tested ones included) as including rent benefits and benefits to owner-occupiers, but excluding tax benefits and capital transfers. The document defines housing costs as monthly and actually paid, connected with the household’s right to live in the accommodation. They include structural insurance (for tenants: if paid), services and charges (sewage removal, refuse removal, etc.; mandatory for owners, for tenants: if paid), regular maintenance and repairs, taxes (for tenant: on the dwelling, if applicable) and the cost of utilities (water, electricity, gas and heating). For owners paying a mortgage, related interest payments are included (any tax relief deducted, but housing benefits not deducted). For tenants at market price or at reduced price, also rental payment is included. For rent free tenants, housing benefits should not be deducted from the total housing cost.

⁸ Self-reported unmet needs for medical care concern a person’s subjective assessment of whether he or she needed examination or treatment for a specific type of health care but did not have it or did not seek it because of the following three reasons: ‘financial reasons’, ‘waiting list’ and ‘too far to travel’. Medical care refers to individual healthcare services (medical examination or treatment excluding dental care) provided by or under direct supervision of medical doctors or equivalent professions according to national healthcare systems (Eurostat definition). The problems that people report in obtaining care when they are ill can reflect barriers to care.

⁹ See [Opinion of the Employment Committee and the Social Protection Committee for a revised Social Scoreboard](#).

¹⁰ See [Eurostat’s Information Note](#).

Annex 6. Methodological note on the classification of Member States based on the Social Scoreboard

In mid-2015 the European Commission, the Employment Committee and the Social Protection Committee agreed on a methodology for assessing Member States' performance on the scoreboard of key employment and social indicators. As part of the agreement, the methodology aimed at providing, for each indicator, a classification along with a colour code through a measure of the relative standing of each Member State. The related methodology is applied both to year-levels (levels) as well as to one-year changes (changes), thus enabling a comprehensive assessment of Member States' performance.

In 2017 the Commission, in agreement with the Employment Committee and the Social Protection Committee, decided to apply the methodology to the headline indicators of the Social Scoreboard accompanying the European Pillar of Social Rights.

To capture the relative position of Member States, for each indicator, levels (I) and changes of these from one year to the other (D) are converted to standard scores (also known as z-scores) to apply the same metric to all the indicators. This is achieved by standardising indicator values of both levels and changes (I and D , respectively) according to the formulas:

$$IS_{MS} = \frac{[I_{MS} - \text{average}(I_{MS})]}{\text{standard deviation}(I_{MS})} \quad \text{and} \quad DS_{MS} = \frac{[D_{MS} - \text{average}(D_{MS})]}{\text{standard deviation}(D_{MS})}$$

where I_{MS} is the value of the indicator in a given year and D_{MS} is its change from the previous year for Member State MS, while IS_{MS} and DS_{MS} are the respective z-scores.¹² This approach enables expressing for each Member State its indicator value in terms of how many standard deviations it deviates from the (unweighted) average.

The performance of each MS is assessed and classified based on the resulting z-scores against a set of pre-defined thresholds. After the analysis of the headline indicators of the Scoreboard, it was agreed to define five intervals of the z-scores by setting four symmetric thresholds at -1, -0.5, 0.5 and 1, both for levels and changes.¹³ Performance assessments relative to the EU-average were assigned to these as follows:

Value of the z-score	Relative performance	
	If high value = good	If low values = good
z-score < -1	Very low	Very high
-1 ≤ z-score < -0.5	Low	High
-0.5 ≤ z-score ≤ 0.5	Neutral	Neutral
0.5 < z-score ≤ 1	High	Low
1 < z-score	Very high	Very low

Combining the relative performance in terms of levels and changes it is possible to classify the overall relative performance of a country, as described on the following pages. To the definition of these seven categories are based on z-scores, while further conditions were added over time in terms of indicator values, to better classify cases with poor relative (z-score) but good absolute (improved or unchanged indicator value) performance in terms of changes. The corresponding colour coding is reflected in the overview in Chapter 1 and in the headline scatterplots in Chapter 2 of the report. The classification also supports the first-stage country analysis in Chapter 3 based on the principles of the Social Convergence Framework (SCF), as described in the related [EMCO-SPC Key Messages](#) and the underlying [Report of the EMCO-SPC joint Working Group](#).

¹² Calculation of the standard deviation does not use a small-sample correction.

¹³ Both normality and t-shaped distribution tests were carried out resulting in the rejection of the hypothesis of similarity to these distributions, thus no parametric assumption could be made about the distribution of the observed indicator values. Therefore, the approach taken to setting these thresholds is a common one using a 'rule of thumb'. In case of a standard normal distribution, the chosen cut-off points would roughly correspond to values of the cumulative distribution function at 15%, 30%, 50%, 70% and 85%.

The tables below provide the overall classification based on relative performance in terms levels and changes

Performance: level	Performance: change					
	Very high	High	On average	Low	Very low	
Very high					D↑	D↓
High					D↑	D↓
On average					D↑	D↓
Low						
Very low						

Note: the areas split in two-colours (dark-green - blue, light-green - blue and white - orange) in the last column ('Very low') indicate the effect of conditions on changes in (absolute) indicator values (D) as explained below.

Best performers	<i>Level:</i> very high performance; <i>Change:</i> very high to low performance. OR <i>Level:</i> very high performance; <i>Change:</i> very low performance with improving indicator value (↑)	Member States with indicator levels much better than the EU average and with the situation improving or not deteriorating much faster than the EU average, while the indicator value is not deteriorating
Better than average	<i>Level:</i> high performance; <i>Change:</i> very high to low performance OR <i>Level:</i> high performance; <i>Change:</i> very low performance with improving indicator value (↑). OR <i>Level:</i> average performance; <i>Change:</i> very high performance	Member States with levels better than the EU average and with the situation improving or not deteriorating much faster than the EU average, or much faster deteriorating than the EU average while the indicator value is not deteriorating
Good but to monitor	<i>Level:</i> high or very high performance; <i>Change:</i> very low performance with deteriorating or unchanged indicator value (↓)	Member States with levels better or much better than the EU average but with the situation deteriorating much faster than the EU average, also the indicator value deteriorating
On average / neutral	<i>Level:</i> average performance; <i>Change:</i> high to low performance OR <i>Level:</i> average performance; <i>Change:</i> very low performance with improving (↑) indicator value	Member States with levels on average and with the situation neither improving nor deteriorating much faster than the EU average
Weak but improving	<i>Level:</i> low performance; <i>Change:</i> very high performance OR <i>Level:</i> very low performance; <i>Change:</i> very high performance.	Member States with levels worse or much worse than the EU average but with the situation improving much faster than the EU average
To watch	<i>Level:</i> average performance; <i>Change:</i> very low performance with deteriorating or unchanged indicator value (↓) OR <i>Level:</i> low performance; <i>Change:</i> high to very low performance	This category groups two different cases when the indicator value deteriorates: i) Member States with levels in line with the EU average but with the situation deteriorating much faster than the EU average; ii) Member States with levels worse than the EU average and with the situation deteriorating or not improving sufficiently fast
Critical situations	<i>Level:</i> very low performance <i>Change:</i> high to very low performance	Member States with levels much worse than the EU average and with the situation deteriorating or not improving sufficiently fast

Note: deterioration implies decreasing values for indicators for which a high value indicates high (e.g. employment rate) and increasing values for those for which it indicates low performance (e.g. AROPE).

Cut-off points translated to indicator values

		Very low	Low	On average	High	Very high
Adult participation in learning (during the last 12 months, excl. guided on the job training, % of the population aged 25-64)	Levels	less than 23.0%	between 23.0% and 30.4%	between 30.4% and 45.1%	between 45.1% and 52.5%	more than 52.5%
	Changes	less than -6.3 pps	between -6.3 pps and -3.1 pps	between -3.1 pps and 3.4 pps	between 3.4 pps and 6.6 pps	more than 6.6 pps
Early leavers from education and training (% of population aged 18-24)	Levels	less than 5.0%	between 5.0% and 6.6%	between 6.6% and 9.8%	between 9.8% and 11.4%	more than 11.4%
	Changes	less than -0.9 pps	between -0.9 pps and -0.4 pps	between -0.4 pps and 0.6 pps	between 0.6 pps and 1.1 pps	more than 1.1 pps
Individuals who have basic or above basic overall digital skills (% of population aged 16-74)	Levels	less than 45.2%	between 45.2% and 51.4%	between 51.4% and 63.8%	between 63.8% and 70.0%	more than 70.0%
	Changes	less than -2.4 pps	between -2.4 pps and -0.6 pps	between -0.6 pps and 3.2 pps	between 3.2 pps and 5.1 pps	more than 5.1 pps
Youth NEET (% of total population aged 15-29)	Levels	less than 7.4%	between 7.4% and 9.0%	between 9.0% and 12.2%	between 12.2% and 13.8%	more than 13.8%
	Changes	less than -1.3 pps	between -1.3 pps and -0.8 pps	between -0.8 pps and 0.3 pps	between 0.3 pps and 0.9 pps	more than 0.9 pps
Gender employment gap (percentage points)	Levels	less than 3.6 pps	between 3.6 pps and 6.1 pps	between 6.1 pps and 11.1 pps	between 11.1 pps and 13.6 pps	more than 13.6 pps
	Changes	less than -1.3 pps	between -1.3 pps and -0.9 pps	between -0.9 pps and -0.1 pps	between -0.1 pps and 0.3 pps	more than 0.3 pps
Income quintile ratio (S80/S20)	Levels	less than 3.8	between 3.8 and 4.3	between 4.3 and 5.2	between 5.2 and 5.6	more than 5.6
	Changes	less than -0.2	between -0.2 and -0.1	between -0.1 and 0.2	between 0.2 and 0.3	more than 0.3
Employment rate (% population aged 20-64)	Levels	less than 72.2%	between 72.2% and 74.5%	between 74.5% and 79.2%	between 79.2% and 81.5%	more than 81.5%
	Changes	less than 0.0 pps	between 0.0 pps and 0.2 pps	between 0.2 pps and 0.8 pps	between 0.8 pps and 1.1 pps	more than 1.1 pps
Unemployment rate (% active population aged 15-74)	Levels	less than 3.5%	between 3.5% and 4.7%	between 4.7% and 6.9%	between 6.9% and 8.0%	more than 8.0%
	Changes	less than -0.6 pps	between -0.6 pps and -0.3 pps	between -0.3 pps and 0.2 pps	between 0.2 pps and 0.5 pps	more than 0.5 pps
Long-term unemployment rate (% active population aged 15-74)	Levels	less than 0.7%	between 0.7% and 1.3%	between 1.3% and 2.6%	between 2.6% and 3.3%	more than 3.3%
	Changes	less than -0.5 pps	between -0.5 pps and -0.4 pps	between -0.4 pps and 0.0 pps	between 0.0 pps and 0.2 pps	more than 0.2 pps
Real GDHI per capita (2008 = 100)	Levels	less than 101.3	between 101.3 and 110.7	between 110.7 and 129.7	between 129.7 and 139.2	more than 139.2
	Changes	less than -1.2%	between -1.2% and 0.2%	between 0.2% and 1.9%	between 1.9% and 2.9%	more than 2.9%
At risk of poverty or social exclusion rate (% of total population)	Levels	less than 15.9%	between 15.9% and 18.2%	between 18.2% and 22.9%	between 22.9% and 25.2%	more than 25.2%
	Changes	less than -1.0 pps	between -1.0 pps and -0.6 pps	between -0.6 pps and 0.4 pps	between 0.4 pps and 0.8 pps	more than 0.8 pps
At risk of poverty or social exclusion rate for children (% of total population aged 0-17)	Levels	less than 15.9%	between 15.9% and 19.2%	between 19.2% and 25.7%	between 25.7% and 29.0%	more than 29.0%
	Changes	less than -1.0 pps	between -1.0 pps and -0.2 pps	between -0.2 pps and 1.5 pps	between 1.5 pps and 2.4 pps	more than 2.4 pps
Impact of social transfers (other than pensions) on poverty reduction (% reduction of AROP)	Levels	less than 23.1%	between 23.1% and 28.4%	between 28.4% and 38.9%	between 38.9% and 44.2%	more than 44.2%
	Changes	less than -3.1 pps	between -3.1 pps and -1.9 pps	between -1.9 pps and 0.7 pps	between 0.7 pps and 1.9 pps	more than 1.9 pps
Disability employment rate gap (percentage points)	Levels	less than 17.9 pps	between 17.9 pps and 21.4 pps	between 21.4 pps and 28.5 pps	between 28.5 pps and 32.0 pps	more than 32.0 pps
	Changes	less than -4.0 pps	between -4.0 pps and -1.9 pps	between -1.9 pps and 2.3 pps	between 2.3 pps and 4.4 pps	more than 4.4 pps
Housing cost overburden rate (% of total population)	Levels	less than 3.1%	between 3.1% and 5.9%	between 5.9% and 11.5%	between 11.5% and 14.3%	more than 14.3%
	Changes	less than -1.2 pps	between -1.2 pps and -0.2 pps	between -0.2 pps and 1.8 pps	between 1.8 pps and 2.8 pps	more than 2.8 pps
Children aged less than 3 years in formal childcare (% of population under 3-years-old)	Levels	less than 17.1%	between 17.1% and 27.0%	between 27.0% and 46.7%	between 46.7% and 56.6%	more than 56.6%
	Changes	less than -1.6 pps	between -1.6 pps and 0.4 pps	between 0.4 pps and 4.4 pps	between 4.4 pps and 6.4 pps	more than 6.4 pps
Self-reported unmet need for medical care (% of population 16+)	Levels	less than -0.2%	between -0.2% and 1.5%	between 1.5% and 4.8%	between 4.8% and 6.4%	more than 6.4%
	Changes	less than -0.4 pps	between -0.4 pps and 0.1 pps	between 0.1 pps and 1.0 pps	between 1.0 pps and 1.5 pps	more than 1.5 pps

Annex 7: Summary overview of the ‘employment trends to watch’ and number of Member States with deterioration or improvement as identified by the 2024 Employment Performance Monitor (EPM)

Note: 2022-2023 changes, except 2021-2022 for at-risk-of poverty rate of unemployed and gender pay gap, job vacancy rate (average over 3 years). The indicator used for life long learning is ‘Participation rate in education and training (last 4 weeks)’.

Source: [Employment Performance Monitor 2024](#).

Annex 8: Summary overview of the number of Member States with deterioration ('social trends to watch') or improvement over 2022-2023 (or latest year available) as identified by the October 2024 update of the Social Protection Performance Monitor

Note: Changes generally refer to the period 2022-2023 (although for income and household work intensity indicators the changes actually refer to 2021-2022). At-risk-of-poverty rate (AROP), severe material and social deprivation rate (SMSD) and the share of the population in (quasi-)jobless households indicators are components of the AROPE indicator. Figures for healthy life years at 65 and real change in gross household disposable income refer to 2021-2022 as no 2023 figures available. For HR, large break in series in 2023 for income-related indicators (and also AROPE), so latest year changes for HR for these not reflected.

Source: [Social Protection Performance Monitor 2024](#).

Annex 9: Potential risks identified through the Social Scoreboard in various JER editions and counts of ‘critical’/‘to watch’ situations for Member States in the first-stage country analysis based on the principles of the Social Convergence Framework

Note: Following agreement in the EMCO-SPC Working Group, JER categorisations are computed using the Social Scoreboard as appearing in the respective JER editions with data available at the data cutoff date for the current edition of the JER. If this was not possible due to missing categorisations but a former one was available within the JER editions considered, that is used to fill in the missing categorisation (marked with red in top right corner of the cell). Shaded cells indicate JER categorisations that could be neither computed nor filled in as just indicated.

Annex 9 (continued): Potential risks identified through the Social Scoreboard in various JER editions and counts of ‘critical’/’to watch’ situations for Member States in the first-stage country analysis based on the principles of the Social Convergence Framework (SCF)
