

ROADS to Health

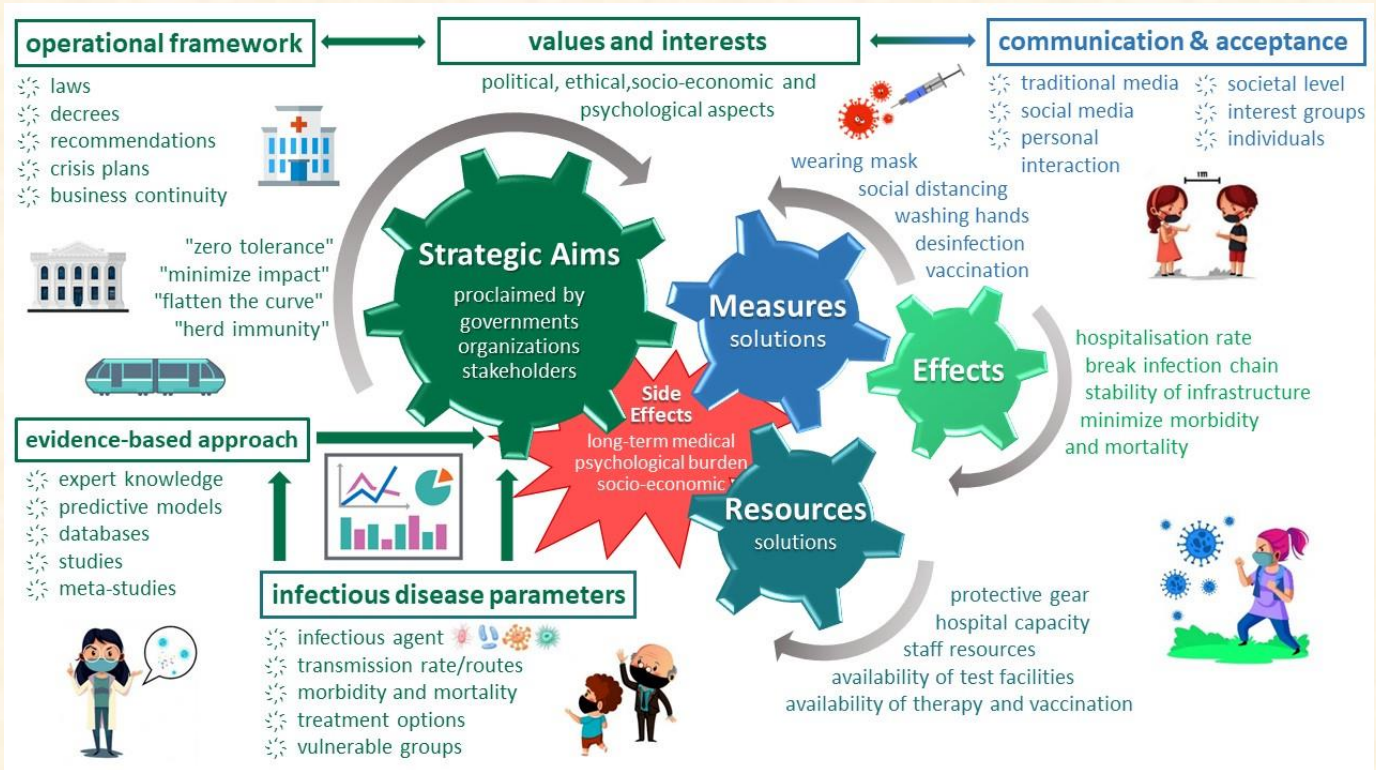

Decision support for future pandemic management

Abstract

ROADS aims to work out the need and basis for evidence-based measure matching in the event of a pandemic. In doing so, a technological concept (tool) will be developed that proposes respective steps in pandemic management in order to adapt measures to the given situation and probable scenarios.

Current status and conceptional background:

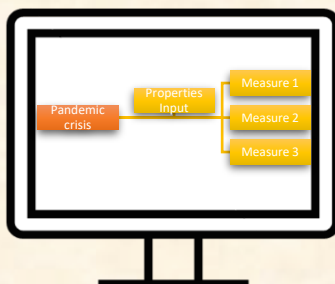

Expected project outcomes

- Review of the current state of experience in pandemic management
- Development of a decision support tool for future pandemics and health crises
- Increased cooperation between the relevant stakeholders in pandemic management
- Enhancement of know-how in the field of pandemic management
- Prospects for future cooperation with EU projects and initiatives

Project Overview

Start: 01.01.2023
Duration: 24 months
Budget (€): 619.230
